WHAT IS AN INSTITUTIONAL REPOSITORY?

An institutional repository is an online archive that collects the intellectual output of researchers at a university and makes this work freely accessible online.

Repositories promote the visibility and accessibility of scholars’ work, help researchers comply with grant mandates for open access data, and provide valuable resources for learning, teaching, and research.

The types of materials repositories collect include, but are not limited to: open educational resources, open access journals, theses and dissertations, university archives, data sets, images, conferences and symposia, scholarly papers, and articles.

2. The eGrove, The University of Mississippi’s institutional repository, launched in October 2018. It provides worldwide open access to the scholarship of researchers at the University of Mississippi.

A QUICK GUIDE TO...

3. OPEN ACCESS

“Open Access (OA) literature is digital, online, free of charge, and free of most copyright and licensing restrictions.”
- Peter Suber, “Open Access”

Open access publication allows academic research to be freely available to all, increasing the visibility of scholarship and promoting information exchange.

For more information, read “Open Access” by Peter Suber, available through the Library.

4. COPYRIGHT

When a work is added to an institutional repository, copyright is maintained by the owner. In order to add a work to eGrove, you must hold the copyright to that work, or have the approval of the copyright holder to do so.

Not sure whether you hold the copyright to your published work? Want to post your already-published article? Email eGrove@olemiss.edu
