.27 An enterprise sells equipment with an estimated remaining economic life of 15 years. At the same time, the seller leases back the equipment for 12 years. All profit on the sale would be deferred and amortized in relation to the amortization of the leased asset because the leaseback of all of the property sold covers a period in excess of 75 percent of the remaining economic life of the property, and thus, meets one of the criteria of *FASB Statement No. 13* [section 4053] for classification as a capital lease.
Determining Contingent Rentals
an amendment of section 4053

[Source: FASB Statement No. 29.]

INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked whether lease payments that depend on changes in a factor that is measurable at the inception of the lease should be included in minimum lease payments for purposes of lease classification, accounting, and reporting under FASB Statement No. 13 [section 4053], "Accounting for Leases." Examples of factors upon which lease payments can be based include sales volume in a lease facility, an interest rate such as the prime rate, or an index such as a construction cost index or consumer price index.

.02 Paragraph 16(a)(iv) of FASB Statement No. 13 [section 4053.016(a)(iv)] refers to contingent rentals as "rentals on which the amounts are dependent on some factor other than the passage of time." Footnote 13 of Statement No. 13 [section 4053, footnote 13] further states that "the term 'contingent rentals' includes all or any portion of the stipulated rental that is contingent."

.03 In specifying the accounting for capital leases by lessees, paragraph 12 of FASB Statement No. 13 [section 4053.012] states that "contingent rentals, . . . including rentals based on variables such as the prime interest rate, shall be charged to expense when actually incurred." Paragraphs 17(b) and 18(b) of Statement No. 13 [section 4053.017(b) and 4053.018(b)] include similar reference to contingent rentals in specifying the accounting by lessors for sales-type leases and direct financing leases.

.04 The Board has been advised that diverse accounting practices have developed with respect to determining contingent rentals. The following three practices have been identified: (a) all lease payments that depend on factors that can change are considered contingent rentals and are excluded from minimum lease payments in their entirety, (b) lease payments that depend on such factors are included in minimum lease payments to the extent that payment by the lessee is assessed as probable, and (c) only the amounts based on
a measurable factor existing at the inception of the lease are included in minimum lease payments. Under the last approach, lease payments that depend on a factor like future sales volume of a leased facility are contingent rentals in their entirety and are excluded from minimum lease payments because future sales do not exist at the inception of the lease. Supporters of this approach point out that lease payments based on future sales should be excluded from minimum lease payments because those payments would terminate if the lessee discontinues use of the leased facility.

.05 The diverse accounting practices described in the preceding paragraph cause different amounts to be included in minimum lease payments for similar leases. Because the amount of minimum lease payments affects the classification and accounting for leases, such diverse practices result in similar leases being classified and accounted for differently. For example, a lease may be classified as a capital lease by one lessee and a similar lease classified as an operating lease by another lessee because of differing views about the definition of contingent rentals.

.06 An Exposure Draft of a proposed Statement on "Determining Contingent Rentals" was issued for public comment on December 21, 1978. The Board received 37 letters of comment in response to the Exposure Draft.

.07 Several respondents stated that contingent rentals should be included in minimum lease payments to the extent that payment by the lessee is probable. The Board rejected that approach primarily because of the subjectivity inherent in estimating probable contingent rentals. However, the Board noted that, if certain rental payments to the lessor were required rather than probable under the terms of the lease or other agreement, FASB Statement No. 13 [section 4053] requires that such payments be included in minimum lease payments.

.08 The Board has considered various accounting practices with respect to determining contingent rentals and has concluded that lease payments that depend on factors that exist and are measurable at the inception of the lease should be included in minimum lease payments. The Board believes that the term contingent rentals contemplates an uncertainty about future changes in the factors on which lease payments are based. Accordingly, the Board has concluded that FASB Statement No. 13 [section 4053] should be amended to identify the contingency in that way.
.09 The Board has concluded that it can reach an informed decision on the basis of existing data without a public hearing and that the effective date and transition specified in paragraph .14 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Amendments to Section 4053

.10 The following footnote is added to the end of the first sentence of paragraph 5(j) (i) of FASB Statement No. 13 [section 4053.005(j)(i)]:

Contingent rentals as defined by paragraph 5(n) of FASB Statement No. 13 [section 4053.005(n)] shall be excluded from minimum lease payments.

.11 Paragraph 5 of FASB Statement No. 13 [section 4053.005] is amended by adding the following subparagraph:

n. Contingent rentals. The increases or decreases in lease payments that result from changes occurring subsequent to the inception of the lease in the factors (other than the passage of time) on which lease payments are based, except as provided in the following sentence. Any escalation of minimum lease payments relating to increases in construction or acquisition cost of the leased property or for increases in some measure of cost or value during the construction or pre-construction period, as discussed in FASB Statement No. 23 [section 4056], “Inception of the Lease,” shall be excluded from contingent rentals. Lease payments that depend on a factor directly related to the future use of the leased property, such as machine hours of use or sales volume during the lease term, are contingent rentals and, accordingly, are excluded from minimum lease payments in their entirety. However, lease payments that depend on an existing index or rate, such as the consumer price index or the prime interest rate, shall be included in minimum lease payments based on the index or rate existing at the inception of the lease; any increases or decreases in lease payments that result from subsequent changes in the index or rate are contingent rentals and thus affect the determination of income as accruable.

.12 Footnote 13 [section 4053, footnote 13] and the parenthetical phrase following contingent rentals in paragraph 16(a)(iv) of FASB Statement No. 13 [section 4053.016(a)(iv)] are deleted.
.13 The last sentence of paragraphs 12, 17(b), and 18(b) of FASB Statement No. 13 [section 4053.012, 4053.017(b) and 4053.018(b)] is superseded by the following:

Contingent rentals shall be included in the determination of income as accruable.

Effective Date and Transition

.14 The provisions of this amendment to FASB Statement No. 13 [section 4053] shall be effective for leasing transactions recorded and lease agreement revisions (see paragraph 9 of Statement No. 13 [section 4053.009]) recorded as of October 1, 1979 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Statement shall be applied retroactively at the same time and in the same manner as the provisions of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [section 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Statement may, but are not required to, apply the provisions of this Statement retroactively.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

ILLUSTRATIONS OF THE APPLICATION OF THE PROVISIONS OF THIS STATEMENT

.15 This Appendix illustrates the application of the provisions of paragraphs .10-.13 of this Statement in determining contingent rentals. The examples do not comprehend all possible combinations of circumstances.

.16 Paragraph .11 of this Statement indicates that lease payments that depend on an existing index or rate, such as the prime interest rate, shall be included in minimum lease payments based on the index or rate existing at the inception of the lease. As an example, an equipment lease could stipulate a monthly base rental of $2,000 and a monthly supplemental rental of $15 for each percentage point in the prime interest rate in effect at the beginning of each month. If the prime interest rate at the inception of the lease is 10%, minimum lease payments would be based on a monthly rental of $2,150 \[\$2,000 + (\$15 \times 10) = \$2,150\]. If the lease term is 48 months and no executory costs are included in the rentals, minimum lease payments would be $103,200 \[\$2,150 \times 48\]. If the lease is classified as a capital lease and the prime interest rate subsequently increases to 11%, the $15 increase in the monthly rentals would be a contingent rental included in the determination of income as it accrues. If the prime interest rate subsequently decreases to 9%, the $15 reduction in the monthly rentals would affect income as accruable. In the case of either the increase or decrease, minimum lease payments would continue to be $103,200.

.17 Paragraph .11 of this Statement also indicates that lease payments that depend on a factor directly related to the future use of the leased property, such as machine hours of use or sales volume during the lease term, are contingent rentals and, accordingly, are excluded from minimum lease payments in their entirety. For example, a lease agreement for retail store space could stipulate a monthly base rental of $200 and a monthly supplemental rental of one-fourth of one percent of monthly sales volume during the lease term. Even if the lease agreement is a renewal for store space that had averaged monthly sales of $25,000 for the past two years, minimum lease payments would include only the $200 monthly base rental; the supplemental rental is a contingent rental that is excluded from minimum lease payments. The future
sales for the lease term do not exist at the inception of the lease, and future rentals would be limited to $200 per month if the store were subsequently closed and no sales were made thereafter.
INTRODUCTION

.001 This Statement establishes standards of financial accounting and reporting for leases by lessees and lessors. For purposes of this Statement, a lease is defined as an agreement conveying the right to use property, plant, or equipment (land and/or depreciable assets) usually for a stated period of time. It includes agreements that, although not nominally identified as leases, meet the above definition, such as a “heat supply contract” for nuclear fuel.1 This definition does not include agreements that are contracts for services that do not transfer the right to use property, plant, or equipment from one contracting party to the other. On the other hand, agreements that do transfer the right to use property, plant, or equipment meet the definition of a lease for purposes of this Statement even though substantial services by the contractor (lessor) may be called for in connection with the operation or maintenance of such assets. This Statement does not apply to lease agreements concerning the rights to explore for or to exploit natural resources such as oil, gas, minerals, and timber. Nor does it apply to licensing agreements for items such as motion picture films, plays, manuscripts, patents, and copyrights.

11 Heat supply (also called “burn-up”) contracts usually provide for payments by the user-lessee based upon nuclear fuel utilization in the period plus a charge for the unrecovered cost base. The residual value usually accrues to the lessee, and the lessor furnishes no service other than the financing.
.003 This Statement applies to regulated enterprises in accordance with the provisions of the Addendum to *APB Opinion No. 2* [section 6011], "Accounting for the 'Investment Credit'."

.004 Appendix A provides background information. Appendix B sets forth the basis for the Board's conclusions, including alternatives considered and reasons for accepting some and rejecting others. Illustrations of the accounting and disclosure requirements for lessees and lessors called for by this Statement are contained in Appendixes C and D. An example of the application of the accounting and disclosure provisions for leveraged leases is provided in Appendix E.

**STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING**

**Definitions of Terms**

.005 For purposes of this Statement, certain terms are defined as follows:

a. *Related parties in leasing transactions.* A parent company and its subsidiaries, an owner company and its joint ventures (corporate or otherwise) and partnerships, and an investor (including a natural person) and its investees, provided that the parent company, owner company, or investor has the ability to exercise significant influence over operating and financial policies of the related party, as significant influence is defined in *APB Opinion No. 18*, paragraph 17 [section 5131.17]. In addition to the examples of significant influence set forth in that paragraph, significant influence may be exercised through guarantees of indebtedness, extensions of credit, or through ownership of warrants, debt obligations, or other securities. If two or more entities are subject to the significant influence of a parent, owner company, investor (including a natural person), or common officers or directors, those entities shall be considered related parties with respect to each other.

b. *Inception of the lease.* The date of the lease agreement or commitment, if earlier. For purposes of this definition, a commitment shall be in writing, signed by the parties in interest to the transaction, and shall specifically set forth the principal provisions of the transaction. If any of the prin-
Principal provisions are yet to be negotiated, such a preliminary agreement or commitment does not qualify for purposes of this definition. [As amended, effective December 1, 1978 by FASB Statement No. 23.] (See section 4056.)

c. *Fair value of the leased property.* The price for which the property could be sold in an arm’s-length transaction between unrelated parties. (See definition of related parties in leasing transactions in paragraph .005(a).) The following are examples of the determination of fair value:

i. When the lessor is a manufacturer or dealer, the fair value of the property at the inception of the lease (as defined in paragraph .005(b)) will ordinarily be its normal selling price, reflecting any volume or trade discounts that may be applicable. However, the determination of fair value shall be made in light of market conditions prevailing at the time, which may indicate that the fair value of the property is less than the normal selling price and, in some instances, less than the cost of the property.

ii. When the lessor is not a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its cost, reflecting any volume or trade discounts that may be applicable. However, when there has been a significant lapse of time between the acquisition of the property by the lessor and the inception of the lease, the determination of fair value shall be made in light of market conditions prevailing at the inception of the lease, which may indicate that the fair value of the property is greater or less than its cost or carrying amount, if different. (See paragraph .006(b).)

d. *Bargain purchase option.* A provision allowing the lessee, at his option, to purchase the leased property for a price which is sufficiently lower than the expected fair value of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured.

e. *Bargain renewal option.* A provision allowing the lessee, at his option, to renew the lease for a rental sufficiently lower than the fair rental\(^2\) of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured.

\(^2\) “Fair rental” in this context shall mean the expected rental for equivalent property under similar terms and conditions.
exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured.

f. Lease term. The fixed noncancelable term of the lease plus (i) all periods, if any, covered by bargain renewal options (as defined in paragraph .005(e)), (ii) all periods, if any, for which failure to renew the lease imposes a penalty on the lessee in an amount such that renewal appears, at the inception of the lease, to be reasonably assured, (iii) all periods, if any, covered by ordinary renewal options during which a guarantee by the lessee of the lessor's debt related to the leased property is expected to be in effect, (iv) all periods, if any, covered by ordinary renewal options preceding the date as of which a bargain purchase option (as defined in paragraph .005(d)) is exercisable, and (v) all periods, if any, representing renewals or extensions of the lease at the lessor's option; however, in no case shall the lease term extend beyond the date a bargain purchase option becomes exercisable. A lease which is cancelable (i) only upon the occurrence of some remote contingency, (ii) only with the permission of the lessor, (iii) only if the lessee enters into a new lease with the same lessor, or (iv) only upon payment by the lessee of a penalty in an amount such that continuation of the lease appears, at inception, reasonably assured shall be considered "noncancelable" for purposes of this definition.

g. Estimated economic life of leased property. The estimated remaining period during which the property is expected to be economically usable by one or more users, with normal repairs and maintenance, for the purpose for which it was intended at the inception of the lease, without limitation by the lease term.

h. Estimated residual value of leased property. The estimated fair value of the leased property at the end of the lease term (as defined in paragraph .005 (f)).

i. Unguaranteed residual value. The estimated residual value of the leased property (as defined in paragraph .005(h)) exclusive of any portion guaranteed by the lessee or by a third party unrelated to the lessor.

3 A guarantee by a third party related to the lessee shall be considered a lessee guarantee.

4 If the guarantor is related to the lessor, the residual value shall be considered as unguaranteed.
j. **Minimum lease payments.**

i. From the standpoint of the lessee: The payments that the lessee is obligated to make or can be required to make in connection with the leased property.\(^4a\) However, a guarantee by the lessee of the lessor's debt and the lessee's obligation to pay (apart from the rental payments) executory costs such as insurance, maintenance, and taxes in connection with the leased property shall be excluded. If the lease contains a bargain purchase option, only the minimum rental payments over the lease term (as defined in paragraph .005(f)) and the payment called for by the bargain purchase option shall be included in the minimum lease payments. Otherwise, minimum lease payments include the following:

a. The minimum rental payments called for by the lease over the lease term.

b. Any guarantee by the lessee\(^5\) of the residual value at the expiration of the lease term, whether or not payment of the guarantee constitutes a purchase of the leased property. When the lessor has the right to require the lessee to purchase the property at termination of the lease for a certain or determinable amount, that amount shall be considered a lessee guarantee. When the lessee agrees to make up any deficiency below a stated amount in the lessor's realization of the residual value, the guarantee to be included in the minimum lease payments shall be the stated amount, rather than an estimate of the deficiency to be made up.

c. Any payment that the lessee must make or can be required to make upon failure to renew or extend the lease at the expiration of the lease term, whether or not the payment would constitute a purchase of the leased property. In this connection, it should be noted that the definition of lease term in paragraph .005(f) includes "all periods, if any, for which failure to renew the lease imposes a penalty on the lessee in an amount such that renewal appears, at the inception of the lease, to be reasonably assured." If the lease term has been extended because of that provision, the related penalty shall not be included in minimum lease payments.

[As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

ii. From the standpoint of the lessor: The payments described in (i) above plus any guarantee of the residual value or of rental payments beyond the lease term by a third party

\(^4a\) Contingent rentals as defined by paragraph .005(n) shall be excluded from minimum lease payments.

\(^5\) See footnote 3.
unrelated to either the lessee\textsuperscript{6} or the lessor,\textsuperscript{7} provided the third party is financially capable of discharging the obligations that may arise from the guarantee.

\textit{k. Interest rate implicit in the lease.} The discount rate that, when applied to (i) the minimum lease payments (as defined in paragraph .005(j)), excluding that portion of the payments representing executory costs to be paid by the lessee, together with any profit thereon, and (ii) the unguaranteed residual value (as defined in paragraph .005(i)) accruing to the benefit of the lessor,\textsuperscript{8} causes the aggregate present value at the beginning of the lease term to be equal to the fair value of the leased property (as defined in paragraph .005(c)) to the lessor at the inception of the lease, minus any investment tax credit retained by the lessor and expected to be realized by him. (This definition does not necessarily purport to include all factors that a lessor might recognize in determining his rate of return, e.g., see paragraph .044.)

\textit{l. Lessee's incremental borrowing rate.} The rate that, at the inception of the lease, the lessee would have incurred to borrow over a similar term the funds necessary to purchase the leased asset.

\textit{m. Initial direct costs.} Those costs incurred by the lessor that are directly associated with negotiating and consummating completed leasing transactions. Those costs include, but are not necessarily limited to, commissions, legal fees, costs of credit investigations, and costs of preparing and processing documents for new leases acquired. In addition, that portion of salespersons' compensation, other than commissions, and the compensation of other employees that is applicable to the time spent in the activities described above with respect to completed leasing transactions shall also be included in initial direct costs. That portion of salespersons' compensation and the compensation of other employees that is applicable to the time spent in negotiating leases that are not consummated shall not be included in initial direct costs. No portion of supervisory and administrative expenses or other indirect expenses, such as rent and facilities costs, shall be included in initial direct costs. \[\text{As amended, effective for leasing transactions and lease agreement revisions entered into on or after January 1, 1978, by FASB Statement No. 17.}\] (See section 4054.)

\textsuperscript{6} See footnote 3.
\textsuperscript{7} See footnote 4.
\textsuperscript{8} If the lessor is not entitled to any excess of the amount realized on disposition of the property over a guaranteed amount, no unguaranteed residual value would accrue to his benefit.
n. Contingent rentals. The increases or decreases in lease payments that result from changes occurring subsequent to the inception of the lease in the factors (other than the passage of time) on which lease payments are based, except as provided in the following sentence. Any escalation of minimum lease payments relating to increases in construction or acquisition cost of the leased property or for increases in some measure of cost or value during the construction or pre-construction period, as discussed in FASB Statement No. 23 [section 4056], "Inception of the Lease," shall be excluded from contingent rentals. Lease payments that depend on a factor directly related to the future use of the leased property, such as machine hours of use or sales volume during the lease term, are contingent rentals and, accordingly, are excluded from minimum lease payments in their entirety. However, lease payments that depend on an existing index or rate, such as the consumer price index or the prime interest rate, shall be included in minimum lease payments based on the index or rate existing at the inception of the lease; any increases or decreases in lease payments that result from subsequent changes in the index or rate are contingent rentals and thus affect the determination of income as accruable.

[As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

Classification of Leases for Purposes of this Statement

.006 For purposes of applying the accounting and reporting standards of this Statement, leases are classified as follows:

a. Classifications from the standpoint of the lessee:

i. Capital leases. Leases that meet one or more of the criteria in paragraph .007.

ii. Operating leases. All other leases.

b. Classifications from the standpoint of the lessor:

i. Sales-type leases. Leases that give rise to manufacturer's or dealer's profit (or loss) to the lessor (i.e., the fair value of the leased property at the inception of the lease is greater or less than its cost or carrying amount, if different) and that meet one or more of the criteria in paragraph .007 and both of the criteria in paragraph .008. Normally, sales-type leases will arise when manufacturers or dealers use leasing as a means of marketing their products. Leases involving lessors that are
primarily engaged in financing operations normally will not be sales-type leases if they qualify under paragraphs .007 and .008, but will most often be direct financing leases, described in paragraph .006(b)(ii) below. However, a lessor need not be a dealer to realize dealer's profit (or loss) on a transaction, e.g., if a lessor, not a dealer, leases an asset that at the inception of the lease has a fair value that is greater or less than its cost or carrying amount, if different, such a transaction is a sales-type lease, assuming the criteria referred to are met. A renewal or extension⁹ of an existing sales-type or direct financing lease that otherwise qualifies as a sales-type lease shall be classified as a direct financing lease unless the renewal or extension occurs at or near the end of the original term⁹a specified in the existing lease, in which case it shall be classified as a sales-type lease. (See paragraph .017(f).)

[As amended, effective September 1, 1979, by FASB Statement No. 27.] (See section 4046.)

ii. Direct financing leases. Leases other than leveraged leases that do not give rise to manufacturer's or dealer's profit (or loss) to the lessor but that meet one or more of the criteria in paragraph .007 and both of the criteria in paragraph .008. In such leases, the cost or carrying amount, if different, and fair value of the leased property are the same at the inception of the lease. An exception arises when an existing sales-type or direct financing lease is renewed or extended¹⁰ during the term of the existing lease. In such cases, the fact that the carrying amount of the property at the end of the original lease term is different from its fair value at that date shall not preclude the classification of the renewal or extension as a direct financing lease. (See paragraph .017(f).)

[As amended, effective September 1, 1979, by FASB Statement No. 27.] (See section 4046.)

iii. Leveraged leases. Leases that meet the criteria of paragraph .042.

⁹ As used here, renewal or extension includes a new lease under which the lessee continues to use the same property.

⁹a A renewal or extension that occurs in the last few months of an existing lease is considered to have occurred at or near the end of the existing lease term.

¹⁰ See footnote 9.
iv. Operating leases. All other leases.

Criteria for Classifying Leases (Other Than Leveraged Leases)

.007 The criteria for classifying leases set forth in this paragraph and in paragraph .008 derive from the concept set forth in paragraph .060. If at its inception (as defined in paragraph .005(b)) a lease meets one or more of the following four criteria, the lease shall be classified as a capital lease by the lessee. Otherwise, it shall be classified as an operating lease. (See Appendix C for an illustration of the application of these criteria.)

a. The lease transfers ownership of the property to the lessee by the end of the lease term (as defined in paragraph .005(f)).

b. The lease contains a bargain purchase option (as defined in paragraph .005(d)).

c. The lease term (as defined in paragraph .005(f)) is equal to 75 percent or more of the estimated economic life of the leased property (as defined in paragraph .005(g)). However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

d. The present value at the beginning of the lease term of the minimum lease payments (as defined in paragraph .005(j)), excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, including any profit thereon, equals or exceeds 90 percent of the excess of the fair value of the leased property (as defined in paragraph .005(c)) to the lessor at the inception of the lease over any related investment tax credit retained by the lessor and expected to be realized by him. However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease. A lessor shall compute the present value of the minimum lease payments using the interest rate implicit in the lease (as defined in paragraph .005(k)). A lessee shall compute the present value of the minimum lease payments using his incremental borrowing rate (as defined in paragraph .005(l)), unless (i) it is practicable for him to learn the implicit rate computed by the lessor and (ii) the implicit rate computed by the lessor is less than the lessee's
incremental borrowing rate. If both of those conditions are met, the lessee shall use the implicit rate.

.008 From the standpoint of the lessor, if at inception a lease meets any one of the preceding four criteria and in addition meets both of the following criteria, it shall be classified as a sales-type lease or a direct financing lease, whichever is appropriate (see paragraphs .006(b)(i) and .006(b)(ii)). Otherwise, it shall be classified as an operating lease.

a. Collectibility of the minimum lease payments is reasonably predictable. A lessor shall not be precluded from classifying a lease as a sales-type lease or as a direct financing lease simply because the receivable is subject to an estimate of uncollectibility based on experience with groups of similar receivables.*

b. No important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease.* Important uncertainties might include commitments by the lessor to guarantee performance of the leased property in a manner more extensive than the typical product warranty or to effectively protect the lessee from obsolescence of the leased property. However, the necessity of estimating executory costs such as insurance, maintenance, and taxes to be paid by the lessor (see paragraphs .017(a) and .018(a)) shall not by itself constitute an important uncertainty as referred to herein. [As amended, effective December 1, 1978 by FASB Statement No. 23.] (See section 4056.)

* If the property covered by the lease is yet to be constructed or has not been acquired by the lessor at the inception of the lease, the classification criterion of paragraph .008(b) shall be applied at the date that construction of the property is completed or the property is acquired by the lessor.
However, a lease involving real estate that would otherwise be classified as of the inception date as a sales-type lease giving rise to a manufacturer's or dealer's profit as described in paragraph .006(b)(i) shall be classified as an operating lease unless at the beginning of the lease term it also meets the requirements that a sale of the same property would have to meet for full and immediate profit recognition under the AICPA Industry Accounting Guide, "Accounting for Profit Recognition on Sales of Real Estate." Those requirements relate to the adequacy of the buyer's initial and continuing investment in the property acquired and the conditions relating to the seller's continued involvement with the property sold. [As amended, effective August 1, 1979 by FASB Statement No. 26.] (See section 4057.)

.009 If at any time the lessee and lessor agree to change the provisions of the lease, other than by renewing the lease or extending its term, in a manner that would have resulted in a different classification of the lease under the criteria in paragraphs .007 and .008 had the changed terms been in effect at the inception of the lease, the revised agreement shall be considered as a new agreement over its term, and the criteria in paragraphs .007 and .008 shall be applied for purposes of classifying the new lease. Likewise, except when a guarantee or penalty is rendered inoperative as described in paragraphs .012 and .017(e), any action that extends the lease beyond the expiration of the existing lease term (see paragraph .005(f)), such as the exercise of a lease renewal option other than those already included in the lease term, shall be considered as a new agreement, which shall be classified according to the provisions of paragraphs .006-.008. Changes in estimates (for example, changes in estimates of the economic life or of the residual value of the leased property) or changes in circumstances (for example, default by the lessee), however, shall not give rise to a new classification of a lease for accounting purposes.

Accounting and Reporting by Lessees

Capital Leases

.010 The lessee shall record a capital lease as an asset and an obligation at an amount equal to the present value at the beginning of the lease term of minimum lease payments during the lease term, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, together with any profit thereon. However, if the amount so determined exceeds the fair value of the leased property at the inception of the lease, the amount recorded as the asset and
obligation shall be the fair value.* If the portion of the minimum lease payments representing executory costs, including profit thereon, is not determinable from the provisions of the lease, an estimate of the amount shall be made. The discount rate to be used in determining present value of the minimum lease payments shall be that prescribed for the lessee in paragraph .007(d). (See Appendix C for illustrations.) [As amended, effective

*If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of “fair value of the leased property at the inception of the lease” for purposes of this paragraph.
.011 Except as provided in paragraphs .025 and .026 with respect to leases involving land, the asset recorded under a capital lease shall be amortized as follows:

a. If the lease meets the criterion of either paragraph .007(a) or .007(b), the asset shall be amortized in a manner consistent with the lessee's normal depreciation policy for owned assets.

b. If the lease does not meet either criterion .007(a) or .007(b), the asset shall be amortized in a manner consistent with the lessee's normal depreciation policy except that the period of amortization shall be the lease term. The asset shall be amortized to its expected value, if any, to the lessee at the end of the lease term. As an example, if the lessee guarantees a residual value at the end of the lease term and has no interest in any excess which might be realized, the expected value of the leased property to him is the amount that can be realized from it up to the amount of the guarantee.

.012 During the lease term, each minimum lease payment shall be allocated between a reduction of the obligation and interest expense so as to produce a constant periodic rate of interest on the remaining balance of the obligation.11 (See Appendix C for illustrations.) In leases containing a residual guarantee by the lessee or a penalty for failure to renew the lease at the end of the lease term,12 following the above method of amortization will result in a balance of the obligation at the end of the lease term that will equal the amount of the guarantee or penalty at that date. In the event that a renewal or other extension of the lease term or a new lease under which the lessee continues to lease the same property renders the guarantee or penalty inoperative, the asset and the obligation under the lease shall be adjusted by an amount equal

* The amount chargeable to interest expense is eligible for inclusion in the amount of interest cost capitalizable in accordance with FASB Statement No. 34, Capitalization of Interest Cost. [As modified, effective for fiscal years beginning after December 15, 1979, by FASB Statement No. 34]. (See section 5155.)

"This is the "interest" method described in the first sentence of paragraph 15 of APB Opinion No. 21 [section 4111.14], "Interest on Receivables and Payables," and in paragraphs 16 and 17 of APB Opinion No. 12 [section 5361.01-.02], "Omnibus Opinion—1967."

Residual guarantees and termination penalties that serve to extend the lease term (as defined in paragraph .005(f)) are excluded from minimum lease payments and are thus distinguished from those guarantees and penalties referred to in this paragraph.
Revenue and Expense

to the difference between the present value of the future minimum lease payments under the revised agreement and the present balance of the obligation. The present value of the future minimum lease payments under the revised agreement shall be computed using the rate of interest used to record the lease initially. In accordance with paragraph .009, other renewals and extensions of the lease term shall be considered new agreements, which shall be accounted for in accordance with the provisions of paragraph .014. Contingent rentals shall be included in the determination of income as accruable. [As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

.013 Assets recorded under capital leases and the accumulated amortization thereon shall be separately identified in the lessee's balance sheet or in footnotes thereto. Likewise, the related obligations shall be separately identified in the balance sheet as obligations under capital leases and shall be subject to the same considerations as other obligations in classifying them with current and noncurrent liabilities in classified balance sheets. Unless the charge to income resulting from amortization of assets recorded under capital leases is included with depreciation expense and the fact that it is so included is disclosed, the amortization charge shall be separately disclosed in the financial statements or footnotes thereto.

.014 Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a capital lease (see FASB Statement No. 22 [section 4055]), a change in the provisions of a lease, a renewal or extension 14 of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows:

a. If the provisions of the lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (i) does not give rise to a new agreement under the provisions of paragraph .009 or (ii) does give rise to a new agreement but such agreement is also classified as a capital lease, the present balances of the asset and the obligation shall be adjusted by an amount equal to the difference between the present value of the future minimum lease payments under the revised or new agreement and the present balance of the obligation. The present value of the future minimum lease payments under the revised or new agreement

14 See footnote 9.
shall be computed using the rate of interest used to record the lease initially. If the change in the lease provisions gives rise to a new agreement classified as an operating lease, the asset and obligation under the lease shall be removed, gain or loss shall be recognized for the difference, and the new lease agreement shall thereafter be accounted for as any other operating lease.

b. Except when a guarantee or penalty is rendered inoperative as described in paragraph .012, a renewal or an extension\(^\text{15}\) of an existing lease shall be accounted for as follows:
   i. If the renewal or extension is classified as a capital lease, it shall be accounted for as described in subparagraph (a) above.
   ii. If the renewal or extension is classified as an operating lease, the existing lease shall continue to be accounted for as a capital lease to the end of its original term, and the renewal or extension shall be accounted for as any other operating lease.

c. A termination of a capital lease shall be accounted for by removing the asset and obligation, with gain or loss recognized for the difference.

[As amended, effective July 1, 1978, by FASB Statement No. 22.] (See section 4055.)

Operating Leases

.015 Normally, rental on an operating lease shall be charged to expense over the lease term as it becomes payable. If rental payments are not made on a straight-line basis, rental expense nevertheless shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit is derived from the leased property, in which case that basis shall be used.

Disclosures

.016 The following information with respect to leases shall be disclosed in the lessee's financial statements or the footnotes thereto (see Appendix D for illustrations).

a. For capital leases:
   i. The gross amount of assets recorded under capital leases as of the date of each balance sheet presented by major classes according to nature or function. This information may be combined with the comparable information for owned assets.

\(^{15}\) See footnote 9.
ii. Future minimum lease payments as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years, with separate deductions from the total for the amount representing executory costs, including any profit thereon, included in the minimum lease payments and for the amount of the imputed interest necessary to reduce the net minimum lease payments to present value (see paragraph .010).

iii. The total of minimum sublease rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

iv. Total contingent rentals actually incurred for each period for which an income statement is presented. [As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

b. For operating leases having initial or remaining noncancelable lease terms in excess of one year:

i. Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

ii. The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

c. For all operating leases, rental expense for each period for which an income statement is presented, with separate amounts for minimum rentals, contingent rentals, and sublease rentals. Rental payments under leases with terms of a month or less that were not renewed need not be included.

d. A general description of the lessee's leasing arrangements including, but not limited to, the following:

i. The basis on which contingent rental payments are determined.

ii. The existence and terms of renewal or purchase options and escalation clauses.

iii. Restrictions imposed by lease agreements, such as those concerning dividends, additional debt, and further leasing.
Accounting and Reporting by Lessors

Sales-Type Leases

.017 Sales-type leases shall be accounted for by the lessor as follows:

a. The minimum lease payments (net of amounts, if any, included therein with respect to executory costs such as maintenance, taxes, and insurance to be paid by the lessor, together with any profit thereon) plus the unguaranteed residual value (as defined in paragraph .005(i)) accruing to the benefit of the lessor shall be recorded as the gross investment in the lease. The estimated residual value used to compute the unguaranteed residual value accruing to the benefit of the lessor shall not exceed the amount estimated at the inception of the lease except as provided in footnote*. [As amended, effective December 1, 1978 by FASB Statement No. 23.]

b. The difference between the gross investment in the lease in (a) above and the sum of the present values of the two components of the gross investment shall be recorded as unearned income. The discount rate to be used in determining the present values shall be the interest rate implicit in the lease. The net investment in the lease shall consist of the gross investment less the unearned income. The unearned income shall be amortized to income over the lease term so as to produce a constant periodic rate of return on the net investment in the lease. However, other methods of income recognition may be used if the results obtained are not materially different from those which would result from the prescribed method. The net investment in the lease shall be subject to the same considerations as other assets in classification as current or noncurrent assets in a classified balance sheet. Contingent rentals shall be included in the determination of income as accruable.[As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

* If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of “the estimated residual value of the leased property at the inception of the lease” for purposes of this paragraph.

16 See footnote 11.
c. The present value of the minimum lease payments (net of executory costs, including any profit thereon), computed at the interest rate implicit in the lease, shall be recorded as the sales price. The cost or carrying amount, if different, of the leased property, plus any initial direct costs (as defined in paragraph .005(m)), less the present value of the unguaranteed residual value accruing to the benefit of the lessor, computed at the interest rate implicit in the lease, shall be charged against income in the same period.

d. The estimated residual value shall be reviewed at least annually. If the review results in a lower estimate than had been previously established, a determination must be made as to whether the decline in estimated residual value is other than temporary. If the decline in estimated residual value is judged to be other than temporary, the accounting for the transaction shall be revised using the changed estimate. The resulting reduction in the net investment shall be recognized as a loss in the period in which the estimate is changed. An upward adjustment of the estimated residual value shall not be made.

e. In leases containing a residual guarantee or a penalty for failure to renew the lease at the end of the lease term, following the method of amortization described in (b) above will result in a balance of minimum lease payments receivable at the end of the lease term that will equal the amount of the guarantee or penalty at that date. In the event that a renewal or other extension of the lease term renders the guarantee or penalty inoperative, the existing balances of the minimum lease payments receivable and the estimated residual value shall be adjusted for the changes resulting from the revised agreement (subject to the limitation on the residual value imposed by subparagraph (d) above) and the net adjustment shall be charged or credited to unearned income.

f. Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a direct financing lease (see FASB Statement No. 22 [section 4055]), a change in the provisions of a lease, a renewal or extension of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows:

---

17 See footnote 12.
18 See footnote 9.
19 See footnote 9.
Accounting for Leases

i. If the provisions of a lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (a) does not give rise to a new agreement under the provisions of paragraph .009 or (b) does give rise to a new agreement but such agreement is classified as a direct financing lease, the balance of the minimum lease payments receivable and the estimated residual value, if affected, shall be adjusted to reflect the change (subject to the limitation on the residual value imposed by subparagraph (d) above), and the net adjustment shall be charged or credited to unearned income. If the change in the lease provisions gives rise to a new agreement classified as an operating lease, the remaining net investment shall be removed from the accounts, the leased asset shall be recorded as an asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period. The new lease shall thereafter be accounted for as any other operating lease.

ii. Except when a guarantee or penalty is rendered inoperative as described in subparagraph (e) above, a renewal or an extension of an existing lease shall be accounted for as follows:
   a. If the renewal or extension is classified as a direct financing lease, it shall be accounted for as described in subparagraph (f)(i) above.
   b. If the renewal or extension is classified as an operating lease, the existing lease shall continue to be accounted for as a sales-type lease to the end of its original term, and the renewal or extension shall be accounted for as any other operating lease.
   c. If a renewal or extension that occurs at or near the end of the term of the existing lease is classified as a sales-type lease, the renewal or extension shall be accounted for as a sales-type lease.

[As amended, effective September 1, 1979, by FASB Statement No. 27.] (See section 4046.)

iii. A termination of the lease shall be accounted for by removing the net investment from the accounts, recording the leased asset at the lower of its original cost, present fair value, or present carrying amount, and the net adjustment shall be charged to income of the period.

---

20 See footnote 9.

20a See footnote 9a.
Direct Financing Leases

.018 Direct financing leases shall be accounted for by the lessor as follows (see Appendix C for illustrations):

a. The minimum lease payments (net of amounts, if any, included therein with respect to executory costs such as maintenance, taxes, and insurance to be paid by the lessor, together with any profit thereon) plus the unguaranteed residual value accruing to the benefit of the lessor shall be recorded as the gross investment in the lease. The estimated residual value used to compute the unguaranteed residual value accruing to the benefit of the lessor shall not exceed the amount estimated at the inception of the lease except as provided in footnote*. [As amended, effective December 1, 1978 by FASB Statement No. 23.] (See section 4056.)

b. The difference between the gross investment in the lease in (a) above and the cost or carrying amount, if different, of the leased property shall be recorded as unearned income. The net investment in the lease shall consist of the gross investment less the unearned income. Initial direct costs (as defined in paragraph .005(m)) shall be charged against income as incurred, and a portion of the unearned income equal to the initial direct costs shall be recognized as income in the same period. The remaining unearned income shall be amortized to income over the lease term so as to produce a constant periodic rate of return on the net investment in the lease. However, other methods of income recognition may be used if the results obtained are not materially different from those which would result from the prescribed method in the preceding sentence. The net investment in the lease shall be subject to the same considerations as other assets in classification as current or noncurrent assets in a classified balance sheet.

* If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of this paragraph.

21 See footnote 11.
Contingent rentals shall be included in the determination of income as accruable. [As amended, effective October 1, 1979, by FASB Statement No. 29.] (See section 4048.)

c. In leases containing a residual guarantee or a penalty for failure to renew the lease at the end of the lease term, the lessor shall follow the accounting procedure described in paragraph .017(e). The accounting provisions of paragraph .017(f) with respect to renewals and extensions not dealt with in paragraph .017(e), terminations, and other changes in lease provisions shall also be followed with respect to direct financing leases.

d. The estimated residual value shall be reviewed at least annually and, if necessary, adjusted in the manner prescribed in paragraph .017(d).

Operating Leases

a. The leased property shall be included with or near property, plant, and equipment in the balance sheet. The property shall be depreciated following the lessor's normal depreciation policy, and in the balance sheet the accumulated depreciation shall be deducted from the investment in the leased property.

b. Rent shall be reported as income over the lease term as it becomes receivable according to the provisions of the lease. However, if the rentals vary from a straight-line basis, the income shall be recognized on a straight-line basis unless another systematic and rational basis is more representative of the time pattern in which use benefit from the leased property is diminished, in which case that basis shall be used.

c. Initial direct costs shall be deferred and allocated over the lease term in proportion to the recognition of rental income. However, initial direct costs may be charged to expense as incurred if the effect is not materially different from that which would have resulted from the use of the method prescribed in the preceding sentence.

Participation by Third Parties

The sale or assignment of a lease or of property subject to a lease that was accounted for as a sales-type lease or direct financ-

\[\text{See footnote 12.}\]
Warning lease shall not negate the original accounting treatment accorded the lease. Any profit or loss on the sale or assignment shall be recognized at the time of the transaction except that (a) when the sale or assignment is between related parties, the provisions of paragraphs .029 and .030 shall be applied, or (b) when the sale or assignment is with recourse, the profit or loss shall be deferred and recognized over the lease term in a systematic manner (e.g., in proportion to the minimum lease payments).
.021 The sale of property subject to an operating lease, or of property that is leased by or intended to be leased by the third-party purchaser to another party, shall not be treated as a sale if the seller or any party related to the seller retains substantial risks of ownership in the leased property. A seller may by various arrangements assure recovery of the investment by the third-party purchaser in some operating lease transactions and thus retain substantial risks in connection with the property. For example, in the case of default by the lessee or termination of the lease, the arrangements may involve a formal or informal commitment by the seller to (a) acquire the lease or the property, (b) substitute an existing lease, or (c) secure a replacement lessee or a buyer for the property under a remarketing agreement. However, a remarketing agreement by itself shall not disqualify accounting for the transaction as a sale if the seller (a) will receive a reasonable fee commensurate with the effort involved at the time of securing a replacement lessee or buyer for the property and (b) is not required to give priority to the re-leasing or disposition of the property owned by the third-party purchaser over similar property owned or produced by the seller. (For example, a first-in, first-out remarketing arrangement is considered to be a priority.)

.022 If a sale to a third party of property subject to an operating lease or of property that is leased by or intended to be leased by the third-party purchaser to another party is not to be recorded as a sale because of the provisions of paragraph .021 above, the transaction shall be accounted for as a borrowing. (Transactions of these types are in effect collateralized borrowings.) The proceeds from the “sale” shall be recorded as an obligation on the books of the “seller.” Until that obligation has been amortized under the procedure described herein, rental payments made by the lessee(s) under the operating lease or leases shall be recorded as revenue by the “seller,” even if such rentals are paid directly to the third-party purchaser. A portion of each rental shall be recorded by the “seller” as interest expense, with the remainder to be recorded as a reduction of the obligation. The interest expense shall be calculated by application of a rate determined in accordance with the provisions of APB Opinion No. 21, “Interest on Receivables and Payables,” paragraphs 13 and 14 [section 4111.12-.13]. The leased property shall be accounted for as prescribed in paragraph .019(a) for an operating lease, except that the term over which the asset is depreciated shall be limited to the estimated amortization period of the obligation. The sale or assignment by the lessor of lease payments due under an operating lease shall be accounted for as a borrowing as described above.
Disclosures

.023 When leasing, exclusive of leveraged leasing, is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the following information with respect to leases shall be disclosed in the financial statements or footnotes thereto (see Appendix D for illustrations):

a. For sales-type and direct financing leases:
   i. The components of the net investment in sales-type and direct financing leases as of the date of each balance sheet presented:
      a. Future minimum lease payments to be received, with separate deductions for (i) amounts representing executory costs, including any profit thereon, included in the minimum lease payments and (ii) the accumulated allowance for uncollectible minimum lease payments receivable.
b. The unguaranteed residual values accruing to the benefit of the lessor.
c. Uncurred income (see paragraphs .017(b) and .018(b)).

ii. Future minimum lease payments to be received for each of the five succeeding fiscal years as of the date of the latest balance sheet presented.

iii. The amount of unearned income included in income to offset initial direct costs charged against income for each period for which an income statement is presented. (For direct financing leases only.)

iv. Total contingent rentals included in income for each period for which an income statement is presented.

b. For operating leases:

i. The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented.

ii. Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding fiscal years.

iii. Total contingent rentals included in income for each period for which an income statement is presented.

c. A general description of the lessor's leasing arrangements.

Leases Involving Real Estate

.024 For purposes of this Statement, leases involving real estate can be divided into four categories: (a) leases involving land only, (b) leases involving land and building(s), (c) leases involving equipment as well as real estate, and (d) leases involving only part of a building.

Leases Involving Land Only

.025 If land is the sole item of property leased and the criterion in either paragraph .007(a) or .007(b) is met, the lessee shall account for the lease as a capital lease; otherwise, as an operating lease. If the criteria set forth in paragraph .008 are also met, the lessor shall account for the lease as a sales-type or direct financing lease, whichever is appropriate (see paragraphs .006(b)(i) and .006(b)(ii)); otherwise, as an operating lease. Criteria .007(c) and .007(d) are not applicable to land leases.
Because ownership of the land is expected to pass to the lessee if either criterion .007(a) or .007(b) is met, the asset recorded under the capital lease would not normally be amortized.

Leases Involving Land and Building(s)

.026 Leases involving both land and building(s) shall be accounted for as follows:

a. Lease meets either criterion .007(a) or .007(b):

i. Lessee's accounting: If either criterion (a) or (b) of paragraph .007 is met, the land and building shall be separately capitalized by the lessee. For this purpose, the present value of the minimum lease payments after deducting executory costs, including any profit thereon, shall be allocated between the two elements in proportion to their fair values at the inception of the lease.* The building shall be amortized in accordance with the provisions of paragraph .011(a). As stated in paragraph .025, land capitalized under a lease that meets criterion (a) or (b) of paragraph .007 would not normally be amortized. [As amended, effective December 1, 1978 by FASB Statement No. 23.] (See section 4056.)

ii. Lessor's accounting: If either criterion (a) or (b) of paragraph .007 is met and the criteria of paragraph .008 are also met, the lessor shall account for the lease as a single unit, either as a sales-type lease or as a direct financing lease as appropriate under paragraphs .006(b)(i) and .006(b)(ii). If the criteria of paragraph .008 are not met, the lessor shall account for the lease as an operating lease.

b. Lease meets neither criterion .007(a) nor .007(b):

i. If the fair value of the land is less than 25 percent of the total fair value of the leased property at the inception of the lease: Both the lessee and the lessor shall consider the land and the building as a single unit for purposes of apply-

* If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of “fair value of the leased property at the inception of the lease” for purposes of this paragraph.
Accounting for Leases

...ing the criteria of paragraphs .007(c) and .007(d). For purposes of applying the criterion of paragraph .007(c), the estimated economic life of the building shall be considered as the estimated economic life of the unit.

a. Lessee’s accounting: If either criterion (c) or (d) of paragraph .007 is met, the lessee shall capitalize the land and building as a single unit and amortize it in accordance with the provisions of paragraph .011(b); otherwise, the lease shall be accounted for as an operating lease.

b. Lessor’s accounting: If either criterion (c) or (d) of paragraph .007 and the criteria of paragraph .008 are met, the lessor shall account for the lease as a single unit, either as a sales-type lease or as a direct financing lease as appropriate under paragraphs .006(b)(i) and .006(b)(ii); otherwise, the lease shall be accounted for as an operating lease.

ii. If the fair value of the land is 25 percent or more of the total fair value of the leased property at the inception of the lease: Both the lessee and lessor shall consider the land and the building separately for purposes of applying the criteria of paragraphs .007(c) and .007(d). The minimum lease payments after deducting executory costs, including any profit thereon, applicable to the land and the building shall be separated both by the lessee and the lessor by determining the fair value of the land and applying the lessee’s incremental borrowing rate to it to determine the annual minimum lease payments applicable to the land element; the remaining minimum lease payments shall be attributed to the building element.

a. Lessee’s accounting: If the building element of the lease meets criterion (c) or (d) of paragraph .007, the building element shall be accounted for as a capital lease and amortized in accordance with the provisions of paragraph .011(b). The land element of the lease shall be accounted for separately as an operating lease. If the building element of the lease meets neither criterion (c) nor (d) of paragraph .007, both the building element and the land element shall be accounted for as a single operating lease.

b. Lessor’s accounting: If the building element of the lease meets criterion (c) or (d) of paragraph .007 and
the criteria of paragraph .008, the building element shall be accounted for as a sales-type lease or a direct financing lease as appropriate under paragraphs .006(b)(i) and .006(b)(ii). The land element of the lease shall be accounted for separately as an operating lease. If the building element of the lease meets neither criterion (c) nor (d) of paragraph .007 or does not meet the criteria of paragraph .008, both the building element and the land element shall be accounted for as a single operating lease.

Leases Involving Equipment as Well as Real Estate

.027 If a lease involving real estate also includes equipment, the portion of the minimum lease payments applicable to the equipment element of the lease shall be estimated by whatever means are appropriate in the circumstances. The equipment shall be considered separately for purposes of applying the criteria in paragraphs .007 and .008 and shall be accounted for separately according to its classification by both lessees and lessors.

Leases Involving Only Part of a Building

.028 When the leased property is part of a larger whole, its cost (or carrying amount) and fair value may not be objectively determinable, as for example, when an office or floor of a building is leased. If the cost and fair value of the leased property are objectively determinable, both the lessee and the lessor shall classify and account for the lease according to the provisions of paragraph .026. Unless both the cost and the fair value are objectively determinable, the lease shall be classified and accounted for as follows:

a. Lessee:

i. If the fair value of the leased property is objectively determinable, the lessee shall classify and account for the lease according to the provisions of paragraph .026.

ii. If the fair value of the leased property is not objectively determinable, the lessee shall classify the lease according to the criterion of paragraph .007(c) only, using the estimated economic life of the building in which the leased premises are located. If that criterion is met, the leased property shall be capitalized as a unit and amortized in accordance with the provisions of paragraph .011(b).
b. Lessor: If either the cost or the fair value of the property is not objectively determinable, the lessor shall account for the lease as an operating lease.

Because of special provisions normally present in leases involving terminal space and other airport facilities owned by a governmental unit or authority, the economic life of such facilities for purposes of classifying the lease is essentially indeterminate. Likewise, the concept of fair value is not applicable to such leases. Since such leases also do not provide for a transfer of ownership or a bargain purchase option, they shall be classified as operating leases. Leases of other facilities owned by a governmental unit or authority wherein the rights of the parties are essentially the same as in a lease of airport facilities described above shall also be classified as operating leases. Examples of such leases may be those involving facilities at ports and bus terminals.

**Leases Between Related Parties**

.029 Except as noted below, leases between related parties (as defined in paragraph .005(a)) shall be classified in accordance with the criteria in paragraphs .007 and .008. Insofar as the separate financial statements of the related parties are concerned, the classification and accounting shall be the same as for similar leases between unrelated parties, except in cases where it is clear that the terms of the transaction have been significantly affected by the fact that the lessee and lessor are related. In such cases the classification and/or accounting shall be modified as necessary to recognize economic substance rather than legal form. The nature and extent of leasing transactions with related parties shall be disclosed.

.030 In consolidated financial statements or in financial statements for which an interest in an investee is accounted for on the equity basis, any profit or loss on a leasing transaction with the related party shall be accounted for in accordance with the principles set forth in *ARB No. 51* [section 2051], “Consolidated Financial Statements,” or *APB Opinion No. 18* [section 5131], whichever is applicable.

.031 The accounts of subsidiaries (regardless of when organized or acquired) whose principal business activity is leasing property or facilities to the parent or other affiliated companies shall be consolidated. The equity method is not adequate for fair presentation of those subsidiaries because their assets and liabilities are significant to the consolidated financial position of the enterprise.
Sale-Leaseback Transactions

.032 Sale-leaseback transactions involve the sale of property by the owner and a lease of the property back to the seller. A sale of property that is accompanied by a leaseback of all or any part of the property for all or part of its remaining economic life shall be accounted for by the seller-lessee in accordance with the provisions of paragraph .033 and shall be accounted for by the purchaser-lessee in accordance with the provisions of paragraph .034. [As amended, effective September 1, 1979, by FASB Statement No. 28.] (See section 4047.)

.033 If the lease meets one of the criteria for treatment as a capital lease (see paragraph .007), the seller-lessee shall account for the lease as a capital lease; otherwise as an operating lease. Any profit or loss on the sale shall be deferred and amortized in proportion to the amortization of the leased asset, if a capital lease, or in proportion to the related gross rental charged to expense over the lease term, if an operating lease, unless:

a. The seller-lessee relinquishes the right to substantially all of the remaining use of the property sold (retaining only a minor portion of such use), in which case the sale and the leaseback shall be accounted for as separate transactions based on their respective terms. However, if the amount of rentals called for by the lease is unreasonable under market conditions at the inception of the lease, an appropriate amount shall be deferred or accrued, by adjusting the profit or loss on the sale, and amortized as specified in the intro-

22a "Profit or loss on the sale" is used in this paragraph to refer to the profit or loss that would be recognized on the sale if there were no leaseback. For example, on a sale of real estate subject to the AICPA Industry Accounting Guide, "Accounting for Profit Recognition on Sales of Real Estate," the profit on the sale to be deferred and amortized in proportion to the leaseback would be the profit that could otherwise be recognized in accordance with the Guide.

23 If the leased asset is land only, the amortization shall be on a straight-line basis over the lease term.

23a "Substantially all" and "minor" are used here in the context of the concepts underlying the classification criteria of this Statement. In that context, a test based on the 90 percent recovery criterion of this Statement could be used as a guideline; that is, if the present value of a reasonable amount of rental for the leaseback represents 10 percent or less of the fair value of the asset sold, the seller-lessee could be presumed to have transferred to the purchaser-lessee the right to substantially all of the remaining use of the property sold, and the seller-lessee could be presumed to have retained only a minor portion of such use.
duction of this paragraph to adjust those rentals to a reasonable amount.

b. The seller-lessee retains more than a minor part but less than substantially all\textsuperscript{23b} of the use of the property through the leaseback and realizes a profit on the sale\textsuperscript{23c} in excess of (i) the present value of the minimum lease payments over the lease term, if the leaseback is classified as an operating lease, or (ii) the recorded amount of the leased asset, if the leaseback is classified as a capital lease. In that case, the profit on the sale in excess of either the present value of the minimum lease payments or the recorded amount of the leased asset, whichever is appropriate, shall be recognized at the date of the sale. For purposes of applying this provision, the present value of the minimum lease payments for an operating lease shall be computed using the interest rate that would be used to apply the 90 percent recovery criterion of paragraph .007(d).

c. The fair value of the property at the time of the transaction is less than its undepreciated cost, in which case a loss shall be recognized immediately up to the amount of the difference between undepreciated cost and fair value.

[As amended, effective September 1, 1979, by \textit{FASB Statement No. 28}.] (See section 4047.)

.034 If the lease meets the criteria in paragraphs .007 and .008, the purchaser-lessor shall record the transaction as a purchase and a direct financing lease; otherwise, he shall record the transaction as a purchase and an operating lease.

\textbf{Accounting and Reporting for Subleases and Similar Transactions}

.035 This section deals with the following types of leasing transactions:

a. The leased property is re-leased by the original lessee to a third party, and the lease agreement between the two original parties remains in effect (a sublease).

\textsuperscript{23b} "Substantially all" is used here in the context of the concepts underlying the classification criteria of this Statement. In that context, if a leaseback of \textit{the entire property sold} meets the criteria of this Statement for classification as a capital lease, the seller-lessee would be presumed to have retained substantially all of the remaining use of the property sold.

\textsuperscript{23c} See footnote 22a.

\begin{flushright}
\textbf{AICPA Professional Standards AC § 4053.035}
\end{flushright}
b. A new lessee is substituted under the original lease agreement. The new lessee becomes the primary obligor under the agreement, and the original lessee may or may not be secondarily liable.

c. A new lessee is substituted through a new agreement, with cancellation of the original lease agreement.

**Accounting by the Original Lessor**

.036 If the original lessee enters into a sublease or the original lease agreement is sold or transferred by the original lessee to a third party, the original lessor shall continue to account for the lease as before.

.037 If the original lease agreement is replaced by a new agreement with a new lessee, the lessor shall account for the termination of the original lease as provided in paragraph .017(f) and shall classify and account for the new lease as a separate transaction.

**Accounting by the Original Lessee**

.038 If the nature of the transaction is such that the original lessee is relieved of the primary obligation under the original lease, as would be the case in transactions of the type described in paragraphs .035(b) and .035(c), the termination of the original lease agreement shall be accounted for as follows:

a. If the original lease was a capital lease, the asset and obligation representing the original lease shall be removed from the accounts, gain or loss shall be recognized for the difference, and, if the original lessee is secondarily liable, the loss contingency shall be treated as provided by FASB Statement No. 5 [section 4311], "Accounting for Contingencies." Any consideration paid or received upon termination shall be included in the determination of gain or loss to be recognized.

b. If the original lease was an operating lease and the original lessee is secondarily liable, the loss contingency shall be treated as provided by FASB Statement No. 5 [section 4311].

.039 If the nature of the transaction is such that the original lessee is not relieved of the primary obligation under the original lease, as would be the case in transactions of the type described in paragraph .035(a), the original lessee, as sublessor, shall account for the transaction as follows:
a. If the original lease met either criterion (a) or (b) of paragraph .007, the original lessee shall classify the new lease in accordance with the criteria of paragraphs .007 and .008. If the new lease meets one of the criteria of paragraph .007 and both of the criteria of paragraph .008, it shall be accounted for as a sales-type or direct financing lease, as appropriate, and the unamortized balance of the asset under the original lease shall be treated as the cost of the leased property. If the new lease does not qualify as a sales-type or direct financing lease, it shall be accounted for as an operating lease. In either case, the original lessee shall continue to account for the obligation related to the original lease as before.

b. If the original lease met either criterion (c) or (d) but not criterion (a) or (b) of paragraph .007, the original lessee shall, with one exception, classify the new lease in accordance with the criteria of paragraphs .007(c) and .008 only. If it meets those criteria, it shall be accounted for as a direct financing lease, with the unamortized balance of the asset under the original lease treated as the cost of the leased property; otherwise, as an operating lease. In either case, the original lessee shall continue to account for the obligation related to the original lease as before. The one exception arises when the timing and other circumstances surrounding the sublease are such as to suggest that the sublease was intended as an integral part of an overall transaction in which the original lessee serves only as an intermediary. In that case, the sublease shall be classified according to the criteria of paragraphs .007(c) and .007(d), as well as the criteria of paragraph .008. In applying the criterion of paragraph .007(d), the fair value of the leased property shall be the fair value to the original lessor at the inception of the original lease.

c. If the original lease is an operating lease, the original lessee shall account for both it and the new lease as operating leases.

Accounting by the New Lessee

.040 The new lessee shall classify the lease in accordance with the criteria of paragraph .007 and account for it accordingly.

Accounting and Reporting for Leveraged Leases

.041 From the standpoint of the lessee, leveraged leases shall be classified and accounted for in the same manner as non-leveraged leases. The balance of this section deals with leveraged leases from the standpoint of the lessor.
.042 For purposes of this Statement, a leveraged lease is defined as one having all of the following characteristics:

a. Except for the exclusion of leveraged leases from the definition of a direct financing lease as set forth in paragraph .006(b)(ii), it otherwise meets that definition. Leases that meet the definition of sales-type leases set forth in paragraph .006(b)(i) shall not be accounted for as leveraged leases but shall be accounted for as prescribed in paragraph .017.

b. It involves at least three parties: a lessee, a long-term creditor, and a lessor (commonly called the equity participant).

c. The financing provided by the long-term creditor is nonrecourse as to the general credit of the lessor (although the creditor may have recourse to the specific property leased and the unremitted rentals relating to it). The amount of the financing is sufficient to provide the lessor with substantial "leverage" in the transaction.

d. The lessor's net investment, as defined in paragraph .043, declines during the early years once the investment has been completed and rises during the later years of the lease before its final elimination. Such decreases and increases in the net investment balance may occur more than once.

A lease meeting the preceding definition shall be accounted for by the lessor using the method described in paragraphs .043-.047; an exception arises if the investment tax credit is accounted for other than as stated in paragraphs .043 and .044, in which case the lease shall be classified as a direct financing lease and accounted for in accordance with paragraph .018. A lease not meeting the definition of a leveraged lease shall be accounted for in accordance with its classification under paragraph .006(b).

.043 The lessor shall record his investment in a leveraged lease net of the nonrecourse debt. The net of the balances of the following accounts shall represent the initial and continuing investment in leveraged leases:

a. Rentals receivable, net of that portion of the rental applicable to principal and interest on the nonrecourse debt.

It is recognized that the investment tax credit may be accounted for other than as prescribed in this section, as provided by Congress in the Revenue Act of 1971.
b. A receivable for the amount of the investment tax credit to be realized on the transaction.

c. The estimated residual value of the leased asset. The estimated residual value shall not exceed the amount estimated at the inception of the lease except as provided in footnote *.

[As amended, effective December 1, 1978 by FASB Statement No. 23.] (See section 4056.)

d. Unearned and deferred income consisting of (i) the estimated pretax lease income (or loss), after deducting initial direct costs, remaining to be allocated to income over the lease term and (ii) the investment tax credit remaining to be allocated to income over the lease term.

The investment in leveraged leases less deferred taxes arising from differences between pretax accounting income and taxable income shall represent the lessor's net investment in leveraged leases for purposes of computing periodic net income from the lease, as described in paragraph .044.

.044 Given the original investment and using the projected cash receipts and disbursements over the term of the lease, the rate of return on the net investment in the years\(^25\) in which it is positive shall be computed. The rate is that rate which when applied to the net investment in the years in which the net investment is positive will distribute the net income to those years (see Appendix E, Schedule 3) and is distinct from the interest rate implicit in the lease as defined in paragraph .005(k). In each year, whether positive or not, the difference between the net cash flow and the amount of income recognized, if any, shall serve to increase or reduce the net investment balance. The net income recognized shall be composed of three elements: two, pretax lease income (or loss) and investment tax credit, shall be allocated in proportionate amounts from the unearned and deferred income included in net investment, as described in paragraph .043; the third element is the tax effect of the pretax lease income.

* If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of this paragraph.

\(^25\) The use of the term "years" is not intended to preclude application of the accounting prescribed in this paragraph to shorter accounting periods.
(or loss) recognized, which shall be reflected in tax expense for the year. The tax effect of the difference between pretax accounting income (or loss) and taxable income (or loss) for the year shall be charged or credited to deferred taxes. The accounting prescribed in paragraph .043 and in this paragraph is illustrated in Appendix E (see paragraph .123).
.045 If the projected net cash receipts 26 over the term of the lease are less than the lessor's initial investment, the deficiency shall be recognized as a loss at the inception of the lease. Likewise, if at any time during the lease term the application of the method prescribed in paragraphs .043 and .044 would result in a loss being allocated to future years, that loss shall be recognized immediately. This situation might arise in cases where one of the important assumptions affecting net income is revised (see paragraph .046).

.046 Any estimated residual value and all other important assumptions affecting estimated total net income from the lease shall be reviewed at least annually. If during the lease term the estimate of the residual value is determined to be excessive and the decline in the residual value is judged to be other than temporary or if the revision of another important assumption changes the estimated total net income from the lease, the rate of return and the allocation of income to positive investment years shall be recalculated from the inception of the lease following the method described in paragraph .044 and using the revised assumption. The accounts constituting the net investment balance shall be adjusted to conform to the recalculated balances, and the change in the net investment shall be recognized as a gain or loss in the year in which the assumption is changed. An upward adjustment of the estimated residual value shall not be made. The accounting prescribed in this paragraph is illustrated in Appendix E (see paragraph .123).

.047 For purposes of presenting the investment in a leveraged lease in the lessor's balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment), as prescribed in APB Opinion No. 11, "Accounting for Income Taxes," paragraphs 57, 59, and 64 [sections 4091.56, 4091.58, and 4091.63]. In the income statement or the notes thereto, separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period. When leveraged leasing is a significant part of the lessor's business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases as set forth in paragraph .043 shall be disclosed in the footnotes to the financial statements. Appendix E contains an illustration of the balance sheet, income statement, and footnote presentation for a leveraged lease.

26 For purposes of this paragraph, net cash receipts shall be gross cash receipts less gross cash disbursements exclusive of the lessor's initial investment.
Effective Date and Transition

.048 The preceding paragraphs of this Statement shall be effective for leasing transactions and lease agreement revisions (see paragraph .009) entered into on or after January 1, 1977. However, leasing transactions or revisions of agreements consummated on or after January 1, 1977 pursuant to the terms of a commitment made prior to that date and renewal options exercised under agreements existing or committed prior to that date shall not be considered as leasing transactions or lease agreement revisions entered into after January 1, 1977 if such commitment is in writing, signed by the parties in interest to the transaction, including the financing party, if any, when specific financing is essential to the transaction, and specifically sets forth the principal terms of the transaction. The disclosures called for in the preceding paragraphs of this Statement shall be included in financial statements for calendar or fiscal years ending after December 31, 1976. Earlier application of the preceding paragraphs of this Statement, including retroactive application to all leases regardless of when they were entered into or committed is encouraged but, until the effective date specified in paragraph .049, is not required. If applied retroactively, financial statements presented for prior periods shall be restated according to the provisions of paragraph .051.

.049 For purposes of financial statements for calendar or fiscal years beginning after December 31, 1980, paragraphs .001-.047 of this Statement shall be applied retroactively, and any accompanying financial statements presented for prior periods shall be restated as may be required by the provisions of paragraph .051.

.050 If paragraphs .001-.047 are not applied initially on a retroactive basis, as permitted by paragraph .048, those leases existing or committed at December 31, 1976 shall be subject to the following provisions until such time as paragraphs .001-.047 are applied retroactively to all leases.

a. For purposes of applying the presentation and disclosure requirements of this Statement applicable to lessees, those leases existing or committed at December 31, 1976 that are capitalized in accordance with the provisions of superseded APB Opinion No. 5 shall be considered as capital leases, and those leases existing or committed at December 31, 1976 that are classified and accounted for as operating leases shall be con-
sidered as operating leases. For those leases that are classified and accounted for as operating leases but that meet the criteria of paragraph .007 for classification as capital leases, separate disclosure of the following information shall be made for purposes of financial statements for the year ending December 31, 1977 and for years ending thereafter:

i. The amounts of the asset and the liability that would have been included in the balance sheet had those leases been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for balance sheets as of December 31, 1976 and thereafter when such balance sheets are included in the financial statements referred to in paragraph .050(a) above.

ii. The effect on net income that would have resulted if those leases had been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for income statements for periods beginning after December 31, 1976 when such income statements are included in the aforementioned financial statements.

b. For purposes of applying the presentation and disclosure requirements of this Statement applicable to lessors, those leases existing or committed at December 31, 1976 that are accounted for as sales, financing leases, and as operating leases in accordance with superseded APB Opinion Nos. 7 and 27 shall be considered as sales-type leases, as direct financing leases, and as operating leases, respectively. (Refer to (c) below for provisions applicable to leveraged leases.) For those leases existing or committed at December 31, 1976 that are classified and accounted for as operating leases but that meet the criteria of paragraphs .007 and .008 for classification as direct financing leases or sales-type leases, separate disclosure of the following information shall be made for purposes of financial statements for the year ending December 31, 1977 and for years ending thereafter:

i. The amount of the change in net worth that would have resulted had the leases been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for balance sheets as of December 31, 1976 and thereafter when such balance
sheets are included in the foregoing financial statements referred to in paragraph .050(b) above.

ii. The effect on net income that would have resulted if the leases had been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for income statements for periods beginning after December 31, 1976 when such income statements are included in the aforementioned financial statements.

c. For those leases that meet the criteria of paragraph .042 (leveraged leases) but that are accounted for other than as prescribed in paragraphs .001-.047, separate disclosure of the following information shall be made for purposes of lessors' financial statements for the year ending December 31, 1977 and for years ending thereafter:

i. The amounts of the net changes in total assets and in total liabilities that would have resulted had the leases been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for balance sheets as of December 31, 1976 and thereafter when such balance sheets are included in the financial statements referred to in paragraph .050(c) above.

ii. The effect on net income that would have resulted if the leases had been classified and accounted for in accordance with the provisions of paragraphs .001-.047. This information shall also be disclosed for income statements for periods beginning after December 31, 1976 when such income statements are included in the aforementioned financial statements.

.051 Paragraph .049 requires retroactive application of paragraphs .001-.047 for purposes of financial statements for calendar or fiscal years beginning after December 31, 1980, and paragraph .048 encourages earlier retroactive application. If after retroactive application is adopted, financial statements for earlier periods and financial summaries or other data derived from them are presented, they shall be restated in accordance with the following requirements to conform to the provisions of paragraphs .001-.047:
a. Such restatements shall include the effects of leases that were in existence during the periods covered by the financial statements even if those leases are no longer in existence.

b. Balance sheets presented as of December 31, 1976 and thereafter and income statements presented for periods beginning after December 31, 1976 and financial summaries and other data derived from those financial statements shall be restated to conform to the provisions of paragraphs .001-.047.

c. Balance sheets as of dates before December 31, 1976 and income statements for periods beginning before December 31, 1976 shall, when presented, be restated to conform to the provisions of paragraphs .001-.047 for as many consecutive periods immediately preceding December 31, 1976 as is practicable. Summaries or other data presented based on such balance sheets and income statements shall be treated in like manner.

d. The cumulative effect of applying paragraphs .001-.047 on the retained earnings at the beginning of the earliest period restated shall be included in determining net income of that period (see paragraph 20 of APB Opinion No. 20 [section 1051.20], "Accounting Changes"). The effect on net income of applying paragraphs .001-.047 in the period in which the cumulative effect is included in determining net income shall be disclosed for that period, and the reason for not restating the prior periods presented shall be explained.

The provisions of this Statement need not be applied to immaterial items.

Appendix A begins on page 8429.
BACKGROUND INFORMATION

.052 The growing importance of leasing as a financing device was recognized by the accounting profession as early as 1949, when the AICPA issued Accounting Research Bulletin No. 38, "Disclosure of Long-Term Leases in Financial Statements of Lessees." In early 1960, the newly formed APB recognized the importance of the matter by including lease accounting as one of the first five topics to be studied by the AICPA’s Accounting Research Division. That project culminated in 1962 with the publication of Accounting Research Study No. 4, "Reporting of Leases in Financial Statements," and shortly thereafter the APB took up the subject. In all, during the ten years ending June 30, 1973, the APB issued four Opinions (No. 5, 7, 27, and 31) dealing with leases. They were supplemented by three AICPA Accounting Interpretations. The last of the APB Opinions, APB Opinion No. 31, "Disclosure of Lease Commitments by Lessees," as its name implies, dealt only with disclosure. The APB had previously acknowledged that certain questions remained in connection with Opinions 5 and 7 and had publicly announced its intention to give those questions further consideration. The APB decided, however, to deal only with additional disclosure requirements. In paragraph 5 of APB Opinion No. 31, which was approved in June 1973, the APB noted that:

. . . disclosure of lease commitments is part of the broad subject of accounting for leases by lessees, a subject which has now been placed on the agenda of the Financial Accounting Standards Board. The Board [APB] also recognizes that the forthcoming report of the Study Group on the Objectives of Financial Statements may contain recommendations which will bear on this subject and which the FASB may consider in its deliberations. Accordingly, the Board is refraining from establishing any disclosure requirements which may prejudge or imply any bias with respect to the outcome of the FASB's undertaking, particularly in relation to the questions of which leases, if any, should be capitalized and how such capitalization may influence the income statement. Nevertheless, in the meantime the Board recognizes the need to improve the disclosure of lease commitments in order that users of financial statements may be better informed.

.053 The SEC, too, has issued a number of pronouncements on accounting for leases, including three Accounting Series Releases:
Revenue and Expense

No. 132, 141, and 147, adopted on October 5, 1973. The latter Release imposes essentially the same disclosure requirements with respect to total rental expense and minimum rental commitments as APB Opinion No. 31. However, it makes mandatory the disclosure of the present value of certain lease commitments (defined differently from the optional present value disclosure included in APB Opinion No. 31). In addition, it requires disclosure of the impact on net income had “financing” leases been capitalized, a disclosure not called for by APB Opinion No. 31.

.054 Despite the attention that the accounting profession has given to the matter of accounting for leases, inconsistencies remain in lease accounting practices, and differences of opinion as to what should be done about them remain. In recognition of that fact, the FASB placed on its initial agenda a project on Accounting for Leases. In October 1973, a task force of 11 persons from industry, government, public accounting, the financial community, and academia was appointed to provide counsel to the Board in preparing a Discussion Memorandum analyzing issues related to the project.

.055 As indicated above, accounting for leases is a subject which has been thoroughly studied over a long period of time and on which numerous pronouncements have been made. Extensive research has been carried out; several public hearings have been held for which position papers were filed by many interested parties and groups; especially appointed committees, not only of the Accounting Principles Board, but of a number of other organizations, have analyzed and debated the issues. A considerable number of the studies and articles on lease accounting were available to the Board, many of which are summarized or identified in the Discussion Memorandum. In addition, the FASB staff surveyed the accounting and reporting practices of a number of lessee and lessor companies, the results of which are set forth in Appendix C to the Discussion Memorandum. The staff also met on a number of occasions with representatives of various organizations interested in leasing for the purpose of obtaining specialized information helpful to the Board’s consideration of the various issues involved in accounting for leases.

.056 The Board issued its Discussion Memorandum on July 2, 1974, and on November 18-21, 1974 held a public hearing on the subject. The Board received 306 position papers, letters of comment, and outlines of oral presentations in response to the
Discussion Memorandum, and 32 presentations were made at the public hearing.

.057 On August 26, 1975, the Financial Accounting Standards Board issued an Exposure Draft of a Proposed Statement of Financial Accounting Standards on Accounting for Leases that, if adopted, would have been effective for leasing transactions entered into on or after January 1, 1976. Two hundred and fifty letters of comment were received in response to that Exposure Draft. The Board announced on November 25, 1975 that, because of the need to analyze the large number of responses and the complexity of the issues involved, it would be unable to issue a final Statement in 1975 but expected to do so early in 1976. A further announcement made by the Board on June 2, 1976 stated that a number of modifications were being made to the Exposure Draft and that a second Exposure Draft would be issued for public comment preparatory to the expected issuance of a final Statement in 1976.

.058 The Board issued the second Exposure Draft of a Proposed Statement of Financial Accounting Standards on Accounting for Leases on July 22, 1976. Two hundred and eighty-two letters of comment were received in response to that Exposure Draft.
Appendix B

BASIS FOR CONCLUSIONS

.059 This Appendix discusses factors deemed significant by the Board in reaching the conclusions in this Statement, including various alternatives considered and reasons for accepting some and rejecting others.

.060 The provisions of this Statement derive from the view that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee and as a sale or financing by the lessor. All other leases should be accounted for as operating leases. In a lease that transfers substantially all of the benefits and risks of ownership, the economic effect on the parties is similar, in many respects, to that of an installment purchase. This is not to say, however, that such transactions are necessarily “in substance purchases” as that term is used in previous authoritative literature.

.061 The transfer of substantially all the benefits and risks of ownership is the concept embodied in previous practice in lessors’ accounting, having been articulated in both APB Opinion No. 7, “Accounting for Leases in Financial Statements of Lessors,” and APB Opinion No. 27, “Accounting for Lease Transactions by Manufacturer or Dealer Lessors,” as a basis for determining whether a lease should be accounted for as a financing or sale or as an operating lease. However, a different concept has existed in the authoritative literature for lessees’ accounting, as evidenced by APB Opinion No. 5, “Reporting of Leases in Financial Statements of Lessee.” That Opinion required capitalization of those leases that are “clearly in substance installment purchases of property,” which it essentially defined as those leases whose terms “result in the creation of a material equity in the property.” Because of this divergence in both concept and criteria, a particular leasing transaction might be recorded as a sale or as a financing by the lessor and as an operating lease by the lessee. This difference in treatment has been the subject of criticism as being inconsistent conceptually, and some of the identifying criteria for classifying leases, particularly those applying to lessees’ accounting, have been termed vague and subject to varied interpretation in practice.
The Board believes that this Statement removes most, if not all, of the conceptual differences in lease classification as between lessors and lessees and that it provides criteria for such classification that are more explicit and less susceptible to varied interpretation than those in previous literature.

Some members of the Board who support this Statement hold the view that, regardless of whether substantially all the benefits and risks of ownership are transferred, a lease, in transferring for its term the right to use property, gives rise to the acquisition of an asset and the incurrence of an obligation by the lessee which should be reflected in his financial statements. Those members nonetheless support this Statement because, to them, (i) it clarifies and improves the guidelines for implementing the conceptual basis previously underlying accounting for leases and (ii) it represents an advance in extending the recognition of the essential nature of leases.

Definition of a Lease

Some respondents took the position that nuclear fuel leases, sometimes called "heat supply" or "burn up" contracts, should be excluded from the definition of a lease on the grounds that such agreements are of the same nature as take-or-pay contracts to supply other types of fuel such as coal or oil which are excluded. The Board's conclusion that nuclear fuel leases meet the definition of a lease as expressed in paragraph .001 is based on the fact that under present generally accepted accounting principles a nuclear fuel installation constitutes a depreciable asset. Thus, a nuclear fuel lease conveys the right to use a depreciable asset whereas contracts to supply coal or oil do not. The fact that the latter contracts may be take-or-pay, in the Board's view, is irrelevant to this central point.

Classification of Leases

The Board believes that the characteristics of a leasing transaction should determine its classification in terms of the appropriate accounting treatment by both the lessee and lessor; this is to say that the characteristics that identify a lease as a capital lease, as distinct from an operating lease, from the standpoint of the lessee should, with certain exceptions identified in this Statement, be the same attributes that identify a direct financing or sales-type lease, as distinct from an operat-
ing lease, from the standpoint of the lessor. The principal exceptions referred to are those stated in paragraph .008.

.066 The Board considered and rejected, for the reason set forth in paragraph .065, the argument that the difference in the nature of the lessor's and lessee's businesses is often sufficient to warrant different classification of a lease by the two parties.

.067 Some respondents to the Discussion Memorandum and Exposure Drafts, while agreeing generally with the premise that the nature of the transaction should govern its classification by both the lessee and lessor, pointed out that there is no assurance that the transaction will be discerned identically by both parties. However, the Board believes that by adopting essentially the same criteria for classification of leases by both parties (see paragraph .065), as contrasted with the difference in criteria previously existing between APB Opinion No. 5, concerning lessee accounting, and APB Opinions No. 7 and 27, concerning lessor accounting; and, by virtue of the fact that the criteria adopted are in some respects more explicit than those referred to in those Opinions, that a significant improvement in consistency of classification can be achieved.

.068 A large number of respondents favored capitalization by lessees of only those leases that they would classify as "in substance installment purchases." A wide range of preferences was expressed as to the criteria to be used to identify such leases. Most prominent among these was the "material equity" criterion that is the basic criterion of APB Opinion No. 5 and that is discussed in paragraph .073. Most of those favoring this concept would apply it only to the lessee rather than to both parties.

.069 The Board considered the concept for capitalization by the lessee of those leases that are "in substance installment purchases." Such leases, if identifiable, would be encompassed within the concept described in paragraph .060, but, by itself, the installment purchase concept, in the Board's view, is too limiting as a basis for lease capitalization. Taken literally, the concept would apply only to those leases that automatically transfer ownership. All other leases contain characteristics not found in installment purchases, such as the reversion of the property to the lessor at the termination of the lease.
.070 Some respondents advocated capitalization of leases that give rise to what they term "debt in a strict legal sense." A number of the respondents in this group were also represented in the group referred to in paragraph .068, indicating that they view the two concepts as not being mutually exclusive. The argument advanced is essentially that some leases contain clauses that make the lessee's obligation absolute and unconditional, and because the obligation is absolute, such clauses should be made the determinant for capitalization of leases containing them. Those advancing this view generally appeared to be focusing on the liability aspect of the transaction rather than on the nature of the corresponding asset to be recorded. Few had any comment to offer concerning cases in which the "legal debt" assumed by the lessee represents only a portion of the asset's cost; nor was it clear from the comments how, if at all, the concept of "legal debt" standing alone should affect accounting for the lease by the lessor.

.071 The Board noted that the determination of whether a lease obligation represents debt in the strict legal sense would of necessity rest primarily on court decisions, and that such decisions have arisen almost entirely from litigation involving bankruptcy, reorganization, or taxation. The Board concluded that legal distinctions of this nature were apt to be neither relevant nor practical in application to the accounting issue of lease capitalization. The Board believes further that, in most instances where the lessee has assumed an unconditional obligation that the courts might hold to be legal debt, it is reasonable to assume that he will have protected his interest through other features in the agreement that are likely to meet one or more of the criteria for capitalization stated in paragraph .007. The Board accordingly rejected the concept of "legal debt" as a determinant for lease capitalization.

Criteria for Classification

.072 The Discussion Memorandum listed 14 criteria as having some support for use in classifying leases by lessees. A number of criteria, including some of the 14, were also listed for possible use in classifying leases by lessors. Among the respondents, opinion was divided as to the criteria that identify leases that should be capitalized by the lessee as well as to those criteria that identify leases that should be recorded as sales or financing leases by lessors. The Board concluded that many of the listed criteria were overlapping, i.e., that the basic idea contained in one also was
embodied in others designed to identify the same attribute. The Board believes that the criteria stated in paragraphs .007 and .008 contain the essence of the listed criteria except those that the Board did not consider relevant or suitable. The basis for the Board's adoption or rejection of individual criteria is the concept discussed in paragraph .060, namely, the transfer of substantially all of the benefits and risks incident to the ownership of property. The following discusses the Board's conclusions with respect to each of the 14 criteria listed in the lessee section of the Discussion Memorandum together with 5 other criteria that were dealt with in the lessor section. These last 5 are discussed in paragraphs .087-.090.

.073 Lessee builds up a material equity in the leased property. Many of the respondents favored the material equity criterion as contained in APB Opinion No. 5 as the principal basis for lease capitalization by the lessee. Of the criteria selected by the Board, the criterion stated in paragraph .007(b) wherein the lease contains a bargain purchase option is evidential that a material equity is being established. The criterion stated in paragraph .007(a) wherein ownership is transferred by the end of the lease term may in some circumstances be evidential that a material equity is being established. However, in relating material equity to the concept discussed in paragraph .060, the Board concluded that leases in which no material equity is established by the lessee may effectively transfer substantially all of the benefits and risks of ownership. For example, a lease whose term extends over the entire economic life of the asset and thus transfers all of the benefits and risks of ownership need not give rise to a material equity. Accordingly, the Board rejected material equity as a separate criterion and considered it too limiting to represent the central basis for lease capitalization by lessees.

.074 Leased property is special purpose to the lessee. The Board rejected this criterion for two reasons. First, "special purpose property" is a relative concept that is hard to define objectively. Second, the fact that the leased property is special purpose does not, of itself, evidence a transfer of substantially all of the benefits and risks of asset ownership. Although it is expected that most lessors would lease special purpose property only under terms that transfer substantially all of those benefits and risks to the lessee, nothing in the nature of special purpose property necessarily entails such lease terms. The Board concluded that, if the lease, in fact, contains such terms, it is likely that one or more of the adopted criteria in paragraph .007 would be met.
.075 Lease term is substantially equal to the estimated useful life of the property. This criterion was modified as adopted in criterion (c) of paragraph .007 as follows:

The lease term (as defined in paragraph .005(f)) is equal to 75 percent or more of the estimated economic life of the leased property (as defined in paragraph .005(g)).

In the Board's view, the fact that the lease term need be for only 75 percent of the economic life of the property is not inconsistent with the concept discussed in paragraph .060 for the following reasons:

Although the lease term may represent only 75 percent of the economic life of the property in terms of years, the lessee can normally expect to receive significantly more than 75 percent of the total economic benefit to be derived from the use of the property over its life span. This is due to the fact that new equipment, reflecting later technology and in prime condition, can be assumed to be more efficient, and hence yield proportionately more use benefit, than old equipment which has been subject to obsolescence and the wearing-out process. Moreover, that portion of use benefit remaining in the equipment after the lease term, in terms of the dollar value that may be estimated for it, when discounted to present worth, would represent a still smaller percentage of the value of the property at inception.

As a result of comments received in response to the second Exposure Draft, the following qualification has been added to paragraph .007(c):

However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

The Board found persuasive the argument that it would be inconsistent to require that a lease covering the last few years of an asset's life be recorded as a capital lease by the lessee and as a sales-type or direct financing lease by the lessor when a lease of the asset for a similar period earlier in its life would have been classified as an operating lease. Without the above qualification, in the case of a tank car having an estimated economic life of 25
years and placed under five successive 5-year leases, the first four leases would be classified as operating leases under this criterion and the last lease would be classified as a capital lease. The Board considered such a result illogical.

.076 Lessee pays costs normally incident to ownership. This criterion was rejected by the Board since it can be presumed that, one way or another, the lessee bears the costs of ownership in virtually all lease agreements.

.077 Lessee guarantees the lessor's debt with respect to the leased property. The Board concluded that this criterion does not necessarily evidence a lease that transfers substantially all of the benefits and risks of property ownership; the amount guaranteed may represent only a portion of the fair value of the property. When there is a guarantee, the Board believes it likely that the lessee will have protected his interest through other features in the agreement that may meet one or more of the adopted criteria stated in paragraph .007. In this regard, any periods covered by renewal options in which a lessee guarantee is expected to be outstanding are to be included in the lease term, as provided by paragraph .005(f), and the corresponding renewal rentals are to be included in minimum lease payments, as provided by paragraph .005(j). Thus, such periods would be recognized in applying criterion .007(c) to the property’s economic life, and both the periods and the corresponding rentals would be recognized in applying the 90 percent recovery criterion (paragraph .007(d)).

.078 Lessee treats the lease as a purchase for tax purposes. The Board rejected this criterion. There are many instances in which tax and financial accounting treatments diverge, and the question of a possible need for conformity between them is beyond the scope of this Statement.

.079 Lease is between related parties. The Board did not consider this criterion as suitable, in itself, for determining lease classification. Leases between related parties are discussed in paragraphs .029-.031.

.080 Lease passes usual risks and rewards to lessee. The Board considered this to be a concept rather than a criterion. It is closely related to the basic concept underlying the conclusions of this Statement, described in paragraph .060.
.081 **Lessee assumes an unconditional liability for lease rentals.** This criterion was rejected by the Board for the reasons given in paragraph .071.

.082 **Lessor lacks independent economic substance.** The Board considered the argument advanced by some that, if the lessor has no economic substance, the lessor serves merely as a conduit in that the lender looks to the lessee for payment and thus, it is asserted, the lessee is, in fact, the real debtor and purchaser. Whether the lessee is judged to be a debtor does not, in the Board's view, constitute a suitable criterion for determining lease classification for the reasons expressed in paragraph .071. The Board finds unpersuasive the argument that the lessee's accounting for a leasing transaction should be determined by the economic condition of an unrelated lessor. If a lease qualifies as an operating lease because it does not meet the criteria in paragraph .007, the Board finds no justification for requiring that it be accounted for as a capital lease by the lessee simply because an unrelated lessor lacks independent economic substance. In such a case, it probably means that someone else, presumably the lender, is in substance the lessor, but this circumstance, per se, should not alter the lessee's accounting. Accordingly, the Board rejected this criterion.

.083 **Residual value at end of lease is expected to be nominal.** Some respondents recommended that such a criterion, if adopted, should be based on the present value of the residual, which, because of the long-term nature of many leases, would represent a much smaller percentage of asset value at inception than the undiscounted residual value. However, other respondents who favored the addition of a recovery criterion based on the relationship of the present value of the lease payments to the fair value of the leased property argued that a criterion based on residual value would be redundant in that it would essentially measure the complement of that relationship. Since, for the reasons set forth in paragraph .084 below, the Board favored the recovery criterion, it was adopted in lieu of a criterion based on residual values.

.084 **Lease agreement provides that the lessor will recover his investment plus a fair return (a) guaranteed by the lessee or (b) not so guaranteed.** A variation of this criterion was adopted as criterion (d) of paragraph .007. In the form adopted, the criterion is met when the present value of the minimum lease payments, de-

---

30 If the lessee and the lessor are related parties, the provisions of paragraphs .029-.031 apply.
fined in paragraph .005(j), excluding executory costs, equals or exceeds 90 percent of the excess of the fair value of the leased property, defined in paragraph .005(c), to the lessor at the inception of the lease over any related investment tax credit retained by the lessor and expected to be realized by him. The Board concluded that if the present value of the contractual receipts of the lessor provide for recovery of substantially all (defined as 90 percent or more) of his net investment in the fair value of the leased asset, the lessor has transferred substantially all of the benefits and risks of asset ownership. Likewise, if the present value of the lessee’s lease obligations provide for that degree of recovery by the lessor, the conclusion was that the lessee has acquired those benefits and risks. Some respondents pointed out that a recovery criterion more clearly evidences the transfer of risks than of benefits since a substantial residual value may revert to the lessor at the end of the lease term. However, the Board concluded that, in leases meeting the recovery criterion, the residual amount, when discounted to its present value at the inception of the lease, is likely to represent only a small percentage of the fair value of the property. For the reasons cited above, the Board adopted a criterion based on recovery of substantially all (defined as 90 percent or more) of the fair value of the leased property. A lessee guarantee of recovery to the lessor is recognized through inclusion in the definition of minimum lease payments. Thus, such guarantees are taken into account in the application of the 90 percent recovery criterion. As a result of comments received in response to the second Exposure Draft, the following qualification has been added to paragraph .007(d):

However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

The above qualification is the same as that added to criterion .007(c) and the reasons are the same as those discussed in paragraph .075.

.085 Lessee has the option at any time to purchase the asset for the lessor's unrecovered investment. The Board concluded that the existence of a purchase option is significant only if it is a bargain purchase option as defined in paragraph .005(d) and as adopted in paragraph .007(b); otherwise, there is no presumption that the lessee will exercise the option. Accordingly, the Board rejected this criterion.
.086 Lease agreement is noncancelable for a "long term." This criterion was rejected by the Board in favor of criterion (c) of paragraph .007.

.087 Lease transfers title (ownership) to the lessee by the end of the lease term. This criterion was adopted by the Board as criterion (a) of paragraph .007. Such a provision effectively transfers all of the benefits and risks of ownership and, thus, the criterion is consistent with the concept discussed in paragraph .060.

.088 Lease provides for a bargain purchase or a renewal option at bargain rates. The existence of a bargain purchase option was adopted by the Board as criterion (b) of paragraph .007. Such a provision effectively transfers all of the benefits and risks of ownership and, thus, the criterion is consistent with the concept discussed in paragraph .060. The period covered by a bargain renewal option is included in the lease term, as defined in paragraph .005(f), and the option rentals are included in minimum lease payments, as defined in paragraph .005(j). Thus, a bargain renewal option enters into the determination of whether the lease meets either criterion (c) or criterion (d) of paragraph .007. Accordingly, the Board rejected the existence of a bargain renewal option as a separate criterion.

.089 Collection of the rentals called for by the lease is reasonably assured. This criterion relates only to lessors. It has been restated as follows and adopted by the Board as a necessary criterion (paragraph .008(a)) : "Collectibility of the minimum lease payments is reasonably predictable." The wording change reflects the Board's view that lessors should not be precluded from classifying leases as direct financing or sales-type leases, when they meet one of the criteria for such classification in paragraph .007, if losses are reasonably predictable based on experience with groups of similar receivables. When other than normal credit risks are involved in a leasing transaction, it was the Board's conclusion that collectibility is not reasonably predictable and classification as a sales-type or direct financing lease, in such cases, is therefore not appropriate.

.090 No important uncertainties surround costs yet to be incurred by lessor. The matter of uncertainties surrounding future costs was dealt with in the Discussion Memorandum as one of the risks of ownership relevant to the classification of leases by lessors. This criterion is essentially equivalent to one of the criteria set forth in APB Opinion No. 27, paragraph 4, as a requirement for treating a
lease by a manufacturer or dealer lessor as a sale. In adopting this as a necessary criterion, the Board believes that if future unreimbursable costs to be incurred by the lessor under the lease are not reasonably predictable, the risks under the lease transaction may be so great that it should be accounted for as an operating lease instead of as a sales-type or direct financing lease.

**Accounting by Lessees**

.091 *APB Opinion No. 5*, paragraph 15, prescribed accounting for leases that were to be capitalized as “in substance installment purchases” as follows:

Leases which are clearly in substance installment purchases of property . . . should be recorded as purchases. The property and the obligation should be stated in the balance sheet at an appropriate discounted amount of future payments under the lease agreement. . . . The method of amortizing the amount of the asset to income should be appropriate to the nature and use of the asset and should be chosen without reference to the period over which the related obligation is discharged.

As stated in paragraph .060, the concept underlying this Statement is that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee, and as a sale or financing by the lessor. The concept for capitalization by the lessee of only those leases that are “in substance installment purchases” was rejected by the Board as too limiting a basis for lease capitalization (see paragraph .069).

.092 Despite this difference in the concept for capitalization, the Board viewed the accounting prescribed by *APB Opinion No. 5* for capitalized leases as generally appropriate. While respondents expressed varying opinions as to the characteristics of leases that should be capitalized, there was little opposition to the method of accounting for such leases prescribed by *APB Opinion No. 5*. The accounting provisions of this Statement applicable to lessees, with the exceptions noted below, generally follow that Opinion; however, these provisions are more specific with respect to implementation.

.093 With respect to the rate of interest to be used in determining the present value of the minimum lease payments for recording the
asset and obligation under a capital lease, the Board concluded the rate should generally be that which the lessee would have incurred to borrow for a similar term the funds necessary to purchase the leased asset (the lessee’s incremental borrowing rate). An exception to that general rule occurs when (a) it is practicable for the lessee to ascertain the implicit rate computed by the lessor and (b) that rate is less than the lessee’s incremental borrowing rate; if both of those conditions are met, the lessee shall use the implicit rate. However, if the present value of the minimum lease payments, using the appropriate rate, exceeds the fair value of the leased property at the inception of the lease, the amount recorded as the asset and obligation shall be the fair value. A number of respondents pointed out that in many instances, the lessee does not know the implicit rate as computed by the lessor. Also, since the implicit rate is affected by the lessor’s estimate of the residual value of the leased property in which the lessee will usually have no interest, and may also be affected by other factors extraneous to the lessee, it may, if higher than the lessee’s incremental borrowing rate, produce a result that is less representative of the transfer of use benefit to the lessee than would be obtained from use of the lessee’s incremental borrowing rate. For those reasons, the Board concluded that the lessee’s use of the implicit rate for discounting purposes should be limited to circumstances in which he is able to ascertain that rate, as computed by the lessor, and it is less than his incremental borrowing rate. In the revised Exposure Draft, the Board had defined this rate as that which “the lessee would have incurred to borrow the funds necessary to buy the leased asset on a secured loan with repayment terms similar to the payment schedule called for in the lease.” A number of respondents objected to this definition pointing out that they would not have financed the asset on a secured loan basis and, hence, would be unable to determine such a theoretical rate. Those respondents suggested that the definition be revised to allow the lessee to use a rate consistent with the type of financing that would have been used in the particular circumstances. The Board found merit in those suggestions because it intended that the rate should be both determinable and reasonable. The definition of the lessee’s incremental borrowing rate has been revised accordingly. Some respondents pointed out that the use of the lessee’s incremental rate, however determined, would in some cases produce an amount to be capitalized that would be greater than the known fair value of the leased asset. It was suggested that in such cases the amount to be capitalized be limited to the fair value. The Board agreed with that recommendation.
The method of amortization of the capitalized asset prescribed in this Statement (see paragraph 0.011) differs from that called for in APB Opinion No. 5 in that, except for those leases that meet criterion 0.007(a) or 0.007(b), the period of amortization is limited to the lease term. APB Opinion No. 5 did not so limit the period of amortization since the leases to be capitalized were those that were considered "in substance installment purchases." The Board concluded that, for leases which are capitalized under criterion 0.007(c) or 0.007(d) of this Statement, the amortization period should be the lease term. It is presumed for accounting purposes that, in such leases, the lessee's period of use of the asset will end at the expiration of the lease term.

Some respondents asked for clarification and more specific treatment in the Statement with respect to the accounting to be followed in connection with the situations referred to in paragraph 0.009 having to do with changes in lease provisions that would have resulted in a different classification of the lease at its inception and renewals and extensions of existing leases. The clarification requested has been incorporated in paragraph 0.014. Additionally, respondents asked for clarification with respect to the accounting to be followed when a guarantee or penalty provision in a lease is rendered inoperative by a renewal or extension. That clarification has been provided in paragraph 0.012.

Disclosure by Lessees

Users of financial statements have indicated a strong desire for disclosure by lessees of information concerning leasing transactions whether leases are capitalized or not. In some cases, the information desired was similar to that now provided in accordance with APB Opinion No. 31 or SEC Accounting Series Release No. 147. However, some respondents objected to the requirement to disclose future minimum rental payments by periods beyond the next succeeding five years. It was contended that any such projections are apt to be misleading since the accumulating effect of new leases and lease renewals on future payments in those periods is not reflected. In addition, some users and many other respondents opposed requiring disclosure of the estimated effect on net income had certain leases been capitalized. The Board agreed with both of those views except that during the transition period until full retroactive application of this Statement is required, the Board decided that the disclosure called for in paragraph 0.050 is needed by users of financial statements pending retroactive applica-
Accounting for Leases

The Board concluded that the disclosures called for in paragraph .016(a) with respect to capital leases would provide information helpful to users of financial statements in assessing the financial condition and results of operations of lessees. In the Board's view, such disclosures are consistent with the information presently required to be disclosed with respect to owned property and to long-term obligations in general. The Board further concluded that users' assessments would be facilitated by the disclosures called for in paragraphs .016(b) and .016(c) with respect to operating leases. The requirement to disclose information concerning commitments for rental payments under operating leases during the succeeding five years is consistent with the similar requirement for capital leases.

Accounting by Lessors

.097 As stated in paragraph .061, the concept underlying the accounting for leases by lessors in this Statement is essentially the same as the concept embodied in APB Opinions No. 7 and 27; that is, a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as a sale or financing by the lessor. Accordingly, the accounting provisions of this Statement applicable to lessors, with the principal exceptions noted below, generally follow those of the two APB Opinions.

.098 In computing the manufacturer's or dealer's profit on a sales-type lease, the cost of the property leased will be reduced by the present value of the estimated residual value. This represents a liberalization of the provisions of APB Opinion No. 27, which did not permit recognition of any residual value in determining manufacturer's or dealer's profit. Some respondents favored continuing the provisions of Opinion 27 in this regard. Others believed that the present value of the residual should be recognized in profit determination and that the accounting for the financing element of a leasing transaction should be essentially the same in a sales-type lease as in a direct financing lease. The Board agreed with this latter view and concluded that the difference between the estimated residual and its present value should be included in unearned income and recognized in income over the lease term.

.099 This Statement calls for the estimated residual value, along with rentals and other minimum lease payments receivable, to be included in the balance sheet presentation of the investment in
sales-type and in direct financing leases. Under *APB Opinion No. 7*, the estimated residual value was to be included with property, plant, and equipment. Several respondents contended that inclusion of the residual with depreciable assets of the lessor would blur the distinction between property on lease and property used in the lessor's internal operations. Others pointed out that, in the vast majority of leases, the estimated residual value is realized by a sale or re-lease of the property and, for that reason, the residual should be looked upon as a last payment similar to the minimum lease payments. In addition, it was contended, presentation of the estimated residual value as part of the lease investment rather than as part of property, plant, and equipment is necessary to portray the proper relationship between the gross investment in leases and the related unearned income, since a portion of the unearned income relates to the residual value. The Board agreed with those views.

.100 This Statement requires that the selling price in a sales-type lease be determined by computing the present value of payments required under the lease. In this respect, it follows Opinion 27. However, this Statement is more specific than Opinion 27 in identifying the payments that are to be included in the computation, and it requires use of the rate of interest implicit in the lease for discounting instead of an interest rate determined in accordance with the provisions of *APB Opinion No. 21* [section 4111], as called for by Opinion 27. Use of the latter rate was rejected by the Board on the grounds that it would yield an amount to be recorded as the sales price that would be at variance with the known fair value of the leased asset (after adjusting that price for the present value of any investment tax credit or residual retained).

.101 This Statement requires different treatment of initial direct costs (see paragraph .005(m)) as between sales-type leases and direct financing and leveraged leases. In the case of sales-type leases, initial direct costs are to be charged against income of the period in which the sale is recorded, which is consistent with the general practice of accounting for similar costs incurred in connection with installment sales on the basis that such costs are incurred primarily to produce sales revenue. In this respect, the Statement follows *APB Opinion No. 27*, which, although not mentioning initial direct costs specifically, in paragraph 6 called for estimated "future costs" related to leases accounted for as sales to be charged to income of the period in which the sale is recorded. The second Exposure Draft called for initial direct costs incurred in connection with di-
rect financing leases to be accounted for in the manner that APB Opinion No. 7, paragraph 11, described as preferred, that is, to be deferred and allocated to future periods in which the related financing income is reported. This requirement recognized that, unlike the initial direct costs in sales-type leases, such costs in direct financing leases are not primarily related to income of the period in which the costs are incurred. A number of respondents objected to the deferral of initial direct costs incurred in connection with direct financing leases because it is at variance with predominant industry practice and would, it was reported, necessitate a major revision of existing record systems and computer programs with no appreciable effect on net income over the lease term. The predominant industry practice as cited by those respondents consists of expensing such costs as incurred and recognizing as income in the same period a portion of unearned income equal to the amount of the costs expensed. It was pointed out that this method produces essentially the same income effect as if the initial direct costs were deferred and amortized separately, as was called for by the revised Exposure Draft, or as if these costs were charged to unearned income, as is called for in the case of leveraged leases. The Board accepted this recommendation for practical considerations and has revised the accounting prescribed for initial direct costs incurred in connection with direct financing leases accordingly. In the case of leveraged leases, the accounting for initial direct costs is consistent with the central concept underlying the accounting for leveraged leases by the investment with separate phases method, that concept being that the net income should be recognized at a level rate of return on the investment in the lease in the years in which the investment is positive.

.102 As was the case with lessee accounting, respondents requested clarification and more specific guidance as to the accounting to be followed by lessors with respect to the situations referred to in paragraph .095. The requested guidance for lessor accounting for those situations has been provided in paragraphs .017(e) and .017(f). In addition, respondents objected to the provisions of the revised Exposure Draft allowing, in some instances, gain to be recognized immediately on renewals or extensions of sales-type or direct financing leases. Those who objected contended that gain recognition in those circumstances was equivalent to allowing upward revisions of residual value estimates, a practice specifically prohibited in the Statement. The Board found those objections persuasive and, accordingly, revised the accounting for renewals or extensions of sales-type or direct financing leases to prohibit immediate recognition of gain.
Disclosure by Lessors

.103 A number of those respondents who addressed the question of what information should be disclosed by lessors thought that the disclosures called for by APB Opinion No. 7 were adequate. Some, however, thought there should be consistency, where relevant, between the disclosure requirements for lessors and those for lessees and noted that disclosure requirements for lessees had been recently made more extensive by APB Opinion No. 31 and SEC Accounting Series Release No. 147. The Board agreed with this latter view. As in the case of lessees, the Board believes that the information required to be disclosed by paragraph .023 will be helpful to users of financial statements in assessing the financial condition and results of operations of lessors. Several respondents to the second Exposure Draft objected to the limitation of lessor disclosure requirements to those lessors for which leasing is the predominant activity. It was contended that the disclosures should be required whenever leasing is a significant part of the lessor’s business activities rather than only when leasing is predominant. Other respondents thought that a single test of predominance based on revenues was inappropriate and pointed to the difference in the nature of lease rentals as compared to sales revenue of a manufacturing concern. It was recommended that significance be determined in terms of revenue, net income, or assets as separate indicators. The Board found merit in these recommendations and revised the disclosure limitation accordingly.

.104 Some respondents recommended the elimination of the requirement in the Exposure Drafts that the cost or carrying amount of property on operating leases and that of property held for lease be separately disclosed. They contended that in companies having thousands of operating leases it would be difficult, if not impossible, to make such a split. Since the information would be based on one particular point in time, it may well be unrepresentative. The Board found those arguments persuasive and believes, moreover, that a better indication of the productivity of property on or held for lease is its relationship to the minimum future rentals by years and in the aggregate from noncancellable operating leases, which latter information is required by the Statement.

Leases Involving Real Estate

.105 The second Exposure Draft provided that criteria .007(c) and .007(d) were not applicable to leases of land and that, unless criterion .007(a) or .007(b) was met, leases of land should be
accounted for as operating leases. In a lease involving both land and building, if the land element represented 15 percent or more of the total fair value of the leased property, the land and building elements of the lease were required to be separated and each classified and accounted for as if it were a separate lease. Some respondents objected to this, contending that the recovery criterion, .007(d), should be applicable to land leases the same as to other leases. Others objected to the required separate treatment of the land and building elements in a lease involving both, contending that the property should be classified and accounted for as a unit and that to require separation would be inconsistent with the economic substance of the transaction. Some, particularly in the case of retail leases, cited the difficulties and cost involved in separating the land and building elements for companies with large numbers of such leases. They recommended that separation not be required and that all such leases be classified as operating leases. However, if separation were to continue to be required, some suggested that the 15 percent limitation be raised to permit treating as a unit a greater number of leases in which land would still not represent a major element. The Board's conclusion that, unless criterion .007(a) or .007(b) was met, leases of land should be classified as operating leases is based on the concept that such leases do not transfer substantially all the benefits and risks of ownership. Land normally does not depreciate in value over time, and rental payments for the use of land are not predicated on compensation for depreciation plus interest, as is the case with leases of depreciable assets, but are in the nature of interest only or, as some may prefer to say, interest plus whatever additional profit element may be included. The requirement for separation of the land and building elements in a lease involving both is based on this distinction. The Board found merit, however, in the recommendation that the 15 percent limitation be raised in order to reduce the practical problems involved in separating the land and building elements for large numbers of leases. The Board concluded that the 15 percent limitation established in the second Exposure Draft should accordingly be raised to 25 percent.

.106 A number of respondents pointed out that leases of facilities such as airport and bus terminals and port facilities from governmental units or authorities contain features that render the criteria of paragraph .007 inappropriate for classifying such leases. Leases of such facilities do not transfer ownership or contain bargain purchase options. By virtue of its power to abandon a facility during
the term of a lease, the governmental body can effectively control
the lessee's continued use of the property for its intended purpose,
thus making its economic life essentially indeterminate. Finally,
since neither the leased property nor equivalent property is avail­
able for sale, a meaningful fair value cannot be determined, thereby
invalidating the 90 percent recovery criterion. For those reasons,
the Board concluded that such leases shall be classified as operat­
ing leases by both the lessee and lessor.

**Sale-Leaseback Transactions**

.107 Of those respondents who addressed the issues of accounting
for sale-leaseback transactions, opinions were divided between those
who favored (a) treatment as a single transaction with deferral of
profit on the sale and (b) treatment as two independent trans­
actions unless the lease meets criteria for capitalization by the
lessee. Generally, those favoring treatment as a single transaction
would make certain exceptions, such as "leasebacks to accommo­
date a short-term property requirement of the seller" and "lease­
backs of only a relatively small part of the property sold." The
Board noted that most sale-leasebacks are entered into as a means
of financing, for tax reasons, or both and that the terms of the
sale and the terms of the leaseback are usually negotiated as a
package. Because of this interdependence of terms, no means
could be identified for separating the sale and the leaseback that
would be both practicable and objective. For that reason, the
Board concluded that the present general requirement that gains
and losses on sale-leaseback transactions be deferred and amortized
should be retained. An exception to that requirement arises when
the fair value of the property at the time of the transaction is less
than its undepreciated cost. In that case, the Board decided that
the loss should be recognized up to the amount of the difference
between the undepreciated cost and fair value.

**Accounting for Leveraged Leases by Lessors**

.108 The first issue concerning leveraged leases in the Discussion
Memorandum asked whether leveraged leases are unique in the
sense that special standards are required to recognize their eco­
nomic nature. The affirmative responses to this issue generally gave
as reasons the arguments stated in the Discussion Memorandum.
The essence of those arguments is that the combination of non-recourse financing and a cash flow pattern that typically enables the lessor to recover his investment in the early years of the lease and thereafter affords him the temporary use of funds from which additional income can be derived produces a unique economic effect. Those respondents who did not agree that leveraged leases are unique generally cited the contra argument in the Discussion Memorandum, namely, that each of the attributes of leveraged leases that serve to support the uniqueness claim has its counterpart in other types of business transactions. Information communicated by respondents, as well as that obtained through staff investigation, indicates that the use of a variety of accounting methods for leveraged leases has grown rapidly. The methods in use generally correspond, although frequently with variations, to those illustrated in the Discussion Memorandum. The Board noted with concern the increasing disparity in practice in accounting for leveraged leases. Despite the fact that each of the attributes of a leveraged lease is found in other types of transactions, the Board believes that in a leveraged lease those attributes are combined in a manner that produces an overall economic effect that is distinct from that of other transactions. Accordingly, the Board concluded that a leveraged lease, as defined in paragraph .042, should be accounted for in a manner that recognizes this overall economic effect. However, the Board emphasizes that the qualification "as defined in paragraph .042" is an important one since the term "leveraged lease" is used by some respondents to refer to any lease involving nonrecourse debt. There is further discussion of this distinction in paragraph .110.

.109 The Discussion Memorandum described and illustrated four different methods of accounting for leveraged leases. Three of those methods are designed to recognize what their adherents see as the economic effect of a leveraged lease, while the other method, the ordinary financing lease method, is that presently prescribed for financing leases by APB Opinion No. 7. The Board's conclusions and the reasons therefor concerning the four methods are as follows:

a. The ordinary financing lease method. This accounting method makes no distinction between a leveraged lease and an ordinary two-party financing lease. Even though the debt is nonrecourse to the lessor and the lessor has no claim on the debt service payments, the transaction is recorded "gross" with the lessor's investment based on the present value of the gross rentals plus
the residual value as prescribed by *APB Opinion No. 7*. In fact, however, the lessor's real investment is not a function of the amount of the future rental payments, which amount represents neither the funds he has at risk nor the asset from which he derives earnings. Further, no recognition is given to the separate investment phases of a leveraged lease as defined in paragraph .042. This method was rejected by the Board because it is incompatible with the essential features of the transaction.

b. *The three-party financing lease method.* This method does reflect the three-party nature of the transaction in that the lessor's investment is recorded net of the nonrecourse debt, and rental receipts are reduced by the debt service payments. However, it gives no recognition to the fact that a leveraged lease has separate investment phases, which is one of the characteristics included in the definition (see paragraph .042(d)). The lessor's unrecovered investment balance declines during the early years of a leveraged lease from the strong cash inflow in that period. Typically, the cumulative cash inflow during the early years exceeds the investment, producing a negative investment balance during the middle years. The investment returns to a positive balance again in the later years as funds are reinvested and then goes to zero with realization of the residual value at the termination of the lease. This pattern of cash flow results from the fact that income tax reductions from the investment tax credit, accelerated depreciation, and greater interest deductions in earlier years are replaced by additional income taxes in the later years after the investment tax credit has been utilized and as tax benefits from depreciation and interest diminish. By ignoring these separate investment phases, the three-party financing method shows a gradually declining investment balance throughout the years of the lease, with income recognized at a level rate of return on the declining balance. The Board believes that the accounting treatment for a leveraged lease should reflect these separate investment phases, which have different economic effects, and should provide for the recognition of income in appropriate relation to them. To do otherwise, in the Board's view, is to negate the reason for having a separate standard for leveraged leases, that reason being that leveraged leases have a distinct combination of economic features that sets them apart from ordinary financing leases. While the three-party financing lease method reflects the three-party nature of the transaction, it fails to recognize the other economic features referred to above; as a consequence, it produces results that are incon-
sistent with the manner in which the lessor-investor views the transaction. For those reasons, the Board rejected the three-party financing lease method.

c. *The investment with separate phases method.* This method recognizes the separate investment phases and the reversing cash flow pattern of a leveraged lease. By recognizing income at a level rate of return on net investment in the years in which the net investment is positive, it associates the income with the unrecovered balance of the earning asset in a manner consistent with the investor's view of the transaction. In the middle years of the lease term, the investment balance is generally negative, indicating that the lessor has not only recovered his initial investment but has the temporary use of funds that will be reinvested in the later years. The earnings on these temporary funds are reflected in income as and if they occur in the years in which the investment is negative. The income that is recognized at a level rate of return in the years in which the net investment balance is positive consists only of the so-called "primary" earnings from the lease, as distinct from the earnings on temporary funds to be reinvested, sometimes referred to as "secondary" earnings. The lessor-investor looks upon these secondary earnings from the temporarily held funds as one of the economic benefits inherent in the transaction. The integral investment method discussed in (d) below allocates both the primary and secondary earnings to annual income on a level rate of return basis. It is asserted by some that because of this feature, the integral investment method is more consistent with the manner in which the lessor-investor views the transaction. However, this feature involves estimation of the secondary earnings and recognition of a substantial portion of them in advance of their occurrence, which the Board did not favor for reasons stated below in the discussion of the integral investment method. The Board believes that secondary earnings should be recognized in income only as they occur (in the negative investment years), and that this treatment, coupled with the recognition of primary earnings in the positive investment years, appropriately portrays the economic effects of the separate investment phases. Accordingly, the Board concluded that the investment with separate phases method as prescribed in paragraphs .043-.047 is the appropriate method for accounting for leveraged leases.

d. *The integral investment method.* Several variations of the method illustrated in Schedule 7, page 126, of the Discussion
Memorandum were suggested by respondents who supported its concept. That concept looks upon the earnings from the use of temporarily held funds (discussed in (c) above) as constituting an integral part of the lease income, rather than as secondary earnings to be accounted for as they occur (the treatment called for in the separate phases method). Advocates of the integral method point out that the equity participant (lessor) in a leveraged lease is actually buying a series of cash flows consisting not only of the equity portion of the rental payments, the investment tax credit and other tax benefits, and the amount to be realized from the sale of the residual, but also including the earnings to be obtained from the use of temporarily held funds. Failure to include the latter in the calculation and recognition of lease income, in their view, understates lease income and is inconsistent with the manner in which the lessor-investor views the transaction. In considering these arguments, the Board noted (1) that the earnings in question, in effect, represent an estimate of interest expected to be earned (or interest cost to be saved) in future years through the application of the temporarily held funds; (2) although these earnings will not be realized until future years, their inclusion in lease income under the integral investment method would result in their recognition in substantial amounts beginning with the first year of the lease; and (3) the actual occurrence and amount of those earnings cannot be verified because this would involve tracing the source of specific investment dollars, generally acknowledged to be impractical. The Board noted further that the other cash flows that constitute the source of the primary earnings, with the exception of the residual value, are either contractual or based on existing tax law and thus provide a firmer basis for income recognition than the secondary earnings. Admittedly, there is uncertainty involved in the estimate of residual value to be realized; however, the Board noted that recognition of residual value is consistent with the accounting prescribed for ordinary financing leases, whereas the anticipation of future interest on funds expected to be held temporarily has no support in present generally accepted accounting principles. For the foregoing reasons, the Board rejected the integral investment method.

.110 Some respondents who objected to the inclusion of paragraph .042(d) in the definition of a leveraged lease argued that leveraged leases can have a variety of rental payment arrangements, some of which would not produce the separate investment phases specified as part of the definition, but that, nevertheless, such leases
should be accorded the accounting method prescribed in the Statement. The Board did not agree with this view, since the method prescribed is designed to recognize the unique economic aspects of the separate investment phases. It concluded that leases not having this characteristic should not be accounted for as leveraged leases and that the presence of nonrecourse debt in a leasing transaction is not by itself justification for special accounting treatment. Nonrecourse debt occurs in many types of transactions other than leases and, as discussed in paragraph .108, it is only the combination of attributes, not the presence of nonrecourse debt alone, that produces an overall economic effect that is distinct from that of other transactions.

.111 Some have contended that the inclusion of deferred taxes in the determination of the lessor's unrecovered investment is what gives rise to the separate investment phases, which is then used to justify the Board's adoption of the separate phases method and its rejection of the three-party financing method. The Board believes that the essential difference between the three-party financing method and the separate phases method is that the latter method closely follows the cash flow of the transaction, whereas the former does not. The three-party financing method portrays a gradually declining investment balance over the entire lease term, thus failing to recognize the short-term nature of the lessor's initial investment, which is typically recovered through the cash flow in the early years of the lease. That this early cash flow comes in large part from tax benefits does not alter the fact that the lessor has recovered his investment and is then provided with the temporary use of funds by which additional income can be generated. It is this feature which provides much of the incentive for the lessor to enter into the transaction in the first place and, in fact, without those tax benefits some leveraged leases would yield negative results. The Board concluded that leveraged leases should be accounted for in a manner that recognizes this cash flow pattern, both in determining the lessor's unrecovered investment balance and in the allocation of income relating to it. The assertion by some that the separate phases method results in an unwarranted "front ending" of income, in the Board's view, fails to take into account that the economic benefits of the transaction are themselves "front-ended," as has been described above. It is precisely this feature and the lack of recognition given it by the three-party financing method that caused the Board to reject that method.
.112 A number of respondents to the second Exposure Draft objected to the exclusion of the 90 percent recovery criterion, .007(d), in determining whether or not a lease meets the requirement of paragraph .042(a) as part of the definition of a leveraged lease. These respondents pointed out that the majority of leveraged leases would not meet any of the other criteria of paragraph .007 and that, if criterion .007(d) was not to be applicable, few leases would meet the definition of a leveraged lease. They took exception to the Board's reasons for having excluded criterion .007(d) as expressed in the second Exposure Draft. In their view, the determination of whether the lease would qualify as a direct financing lease, as required by paragraph .042(a), should be made in the same manner as with any other lease and that the presence of nonrecourse debt should thus not enter into such determination. The Board agreed with this reasoning and has changed the requirement of paragraph .042(a) accordingly.

.113 Some respondents asked that the Board reconsider its decision reflected in the second Exposure Draft that leases meeting the definition of sales-type leases should not be accounted for as leveraged leases. The argument was advanced that manufacturers and dealers often engage in leasing transactions that, except for the exclusion of sales-type leases, would otherwise meet the definition of a leveraged lease as set forth in paragraph .042. Specifically, it was asked why should not a manufacturer record manufacturing profit for a sales-type lease and then also account for it as a leveraged lease, if it otherwise meets the definition? In the Board's view, the recognition of manufacturing profit by the lessor at the beginning of the lease is incompatible with the concept underlying the accounting method prescribed by this Statement for leveraged leases. As stated in paragraph .109(c), that method recognizes income at a level rate of return on the lessor's net investment in the years in which the net investment is positive. The annual cash flow is thus allocated between that portion recognized as income and that applied as a reduction of net investment. Net investment at any point is considered to represent the lessor's unrecovered investment. If manufacturing profit is recognized at the beginning of the lease, an element of the overall profit in the transaction has been abstracted at the outset, thus changing the pattern of income recognition contemplated. The lessor's investment as recorded after recognition of manufacturing profit would not represent his unrecovered investment. That fact plus the deferral of income taxes related to the manufacturing profit recognized would alter both the investment base and the income to be allocated, thus
departing from the cash flow concept on which the prescribed method is based. For these reasons, the Board did not accept the recommendation.

.114 For much the same reason, the Board concluded that if the investment tax credit is accounted for other than as described in paragraphs .043 and .044, the leveraged lease should not be accounted for by the investment with separate phases method but, instead, by the method prescribed for a direct financing lease. Accounting for the credit other than as prescribed by the investment with separate phases method would abstract an important element of the overall profit in the transaction, thereby changing the lessor’s net investment and the pattern of income recognition contemplated by the investment with separate phases method and thus, in the Board’s view, rendering the use of that method inappropriate.

**Effective Date and Transition**

.115 The Board considered three methods of transition in the application of the Statement:

a. Retroactive application with restatement of prior period financial statements

b. Retroactive application without restatement

c. Prospective application

The first alternative maximizes comparability of a company’s financial statements with those of other companies and with its own statements for prior periods. However, respondents expressed concern that it would require the accumulation of a considerable amount of information about existing and expired leases and that some companies might have problems relating to restrictive covenants in loan indentures and other contracts. In addition, it requires estimates that in some cases would be made with after-the-fact knowledge. The second alternative reduces the problem of data accumulation but at the cost of impairing interperiod comparability of a company’s financial statements before and after the date of retroactive application. Depending on the particular circumstances, it may or may not mitigate the possible problems relating to loan indenture covenants. The third alternative avoids most of the problems of the other two but would result in noncomparability of financial statements, both as among different com-
companies and those of the same company for different periods, for years in the future.

.116 While the majority of respondents favored prospective application, others strongly urged that the Statement be applied retroactively with restatement. The long period of time that would ensue before comparability would be achieved was given as the prime reason by those advocating retroactivity. Some preparers, on the other hand, cited problems involving loan indenture restrictions should the Statement require retroactive application. Some companies with large numbers of leases stated in their responses that the task of gathering the necessary data for retroactive application would be onerous as well as time consuming for existing leases, and that it would be more difficult, if not impossible, to obtain the information on expired leases necessary for restatement.

.117 Included in the responses was the suggestion that a transition period be established during which companies would be given time both for the purpose of accumulating the necessary data for retroactive application and for taking steps toward resolving problems that might arise in connection with restrictive clauses in loan indentures or other agreements.

.118 In considering these conflicting recommendations, the Board was sympathetic to the problems of data accumulation for companies with large numbers of leases and to the problems that some companies believe might be associated with indenture restrictions. On the other hand, the objections raised, particularly by users of financial statements, to the long period of noncomparability of financial statements that would be entailed by prospective application concerned the Board. The Board concluded that the use of a transition period at the end of which full retroactive application would be required would best meet the needs of users while at the same time giving significant recognition to the problems referred to by preparers.

.119 The procedure adopted by the Board calls for immediate prospective application of the Statement (see paragraph .048), with retroactive restatement required after a four-year transition period (see paragraph .049). Thus, companies that might have problems arising from loan indenture restrictions are given at least four full years in which, depending on the nature of the restrictions, resolution of such problems may be possible. Further, restatement is required for periods beginning before December 31, 1976 only to
the extent that it is practicable (see paragraph .051), in recognition of the fact that some companies may be unable to obtain or reconstruct the necessary information about leases expiring in prior years. Finally, interim disclosures (see paragraph .050) are called for to facilitate comparability before retroactive application of the Statement is required; however, since the Board recognizes that the accumulation of information to make such disclosures may require time, companies are given at least one full year before such disclosure is called for. Although the Board recognizes that the period of time provided for transition will not completely eliminate the problems of retroactive restatement, it believes that those problems will be alleviated under the method outlined above and that the benefit to be gained through comparability of financial statements is substantial.

.120 Upon consideration of the relevant circumstances, the Board concluded that the interests of users of financial statements would be best served by making the statement effective for leasing transactions and lease agreement revisions entered into on or after January 1, 1977, as provided by paragraph .048.
Appendix C

ILLUSTRATIONS OF ACCOUNTING
BY LESSEES AND LESSORS

.121 This Appendix contains the following schedules illustrating the accounting requirements of this Statement as applied to a particular example (an automobile lease):

1. Lease example—terms and assumptions, Schedule 1

2. Computation of minimum lease payments (lessee and lessor) and lessor's computation of rate of interest implicit in the lease, Schedule 2

3. Classification of the lease, Schedule 3

4. Journal entries for the first month of the lease as well as for the disposition of the leased property at the end of the lease term, Schedule 4
SCHEDULE 1

Lease Example
Terms and Assumptions

Lessor's cost of the leased property (automobile) $5,000

Fair value of the leased property at inception of the lease (1/1/77) $5,000

Estimated economic life of the leased property 5 years

Lease terms and assumptions: The lease has a fixed noncancelable term of 30 months, with a rental of $135 payable at the beginning of each month. The lessee guarantees the residual value at the end of the 30-month lease term in the amount of $2,000. The lessee is to receive any excess of sales price of property over the guaranteed amount at the end of the lease term. The lessee pays executory costs. The lease is renewable periodically based on a schedule of rentals and guarantees of the residual values decreasing over time. The rentals specified are deemed to be fair rentals (as distinct from bargain rentals), and the guarantees of the residual are expected to approximate realizable values. No investment tax credit is available.

The residual value at the end of the lease term is estimated to be $2,000. The lessee depreciates his owned automobiles on a straight-line basis. The lessee's incremental borrowing rate is 10½ % per year. There were no initial direct costs of negotiating and closing the transaction. At the end of the lease term the asset is sold for $2,100.
SCHEDULE 2

Computation of Minimum Lease Payments (Lessee and Lessor)

In accordance with paragraph .005(j), minimum lease payments for both the lessee and lessor are computed as follows:

Minimum rental payments over the lease term  ($135 \times 30 \text{ months})  
\[
\begin{array}{l}
\text{Lessee guarantee of the residual value} \\
\text{at the end of the lease term}
\end{array}
\]

Total minimum lease payments

\[
\begin{array}{l}
\text{Lessee's Computation of Rate of Interest} \\
\text{Implicit in the Lease}
\end{array}
\]

In accordance with paragraph .005(k), the interest rate implicit in the lease is that rate implicit in the recovery of the fair value of the property at the inception of the lease ($5,000) through the minimum lease payments (30 monthly payments of $135 and the lessee's guarantee of the residual value in the amount of $2,000 at the end of the lease term). That rate is 12.036\% (1.003\% per month).
SCHEDULE 3

Classification of the Lease

Criteria set forth in paragraph

.007(a) Not met. The lease does not transfer ownership of the property to the lessee by the end of the lease term.

.007(b) Not met. The lease does not contain a bargain purchase option.

.007(c) Not met. The lease term is not equal to 75% or more of the estimated economic life of the property. (In this case, it represents only 50% of the estimated economic life of the property.)

.007(d) Met. In the lessee's case, the present value ($5,120) of the minimum lease payments using his incremental borrowing rate (10½%) exceeds 90% of the fair value of the property at the inception of the lease. (See computation on next page.) Even if the lessee knows the implicit rate, he uses his incremental rate because it is lower. The lessee classifies the lease as a capital lease. In the lessor's case, the present value ($5,000) of the minimum lease payments using the implicit rate also exceeds 90% of the fair value of the property. (See computation on next page.) Having met this criterion and assuming that the criteria of paragraph .008 are also met, the lessor will classify the lease as a direct financing lease (as opposed to a sales-type lease) because the cost and fair value of the asset are the same at the inception of the lease. (See paragraph .006(b)(ii).)
### SCHEDULE 3 continued

Criteria set forth in paragraph

|.007(d) continued Present Values |
|---------------------------------|-------------------------------|
| **Lessee's computation**        | **Lessor's computation**      |
| using his incremental           | using the implicit interest   |
| borrowing rate of 10½%          | rate of 12.036%               |
| (.875% per month)*             | (1.003% per month)            |

#### Minimum lease payments:

- **Rental payments**: $3,580, $3,517
- **Residual guarantee by lessee**: 1,540, 1,483
- **Total**: $5,120, $5,000

- **Fair value of the property at inception of the lease**: $5,000, $5,000

- **Minimum lease payments as a percentage of fair value**: 102%, 100%

---

* In this case, the lessee's incremental borrowing rate is used because it is lower than the implicit rate. (See paragraph .007(d).)
Journal Entries for the First Month of the Lease as Well as for the Disposition of the Leased Property at the End of the Lease Term

First Month of the Lease

**LESSEE**

1/1/77  Leased property under capital leases  5,000
        Obligations under capital leases  5,000

To record capital lease at the fair value of the property. (Since the present value of the minimum lease payments using the lessee's incremental borrowing rate as the discount rate (see paragraph .007(d) for selection of rate to be used) is greater than the fair value of the property, the lessee capitalizes only the fair value of the property. See paragraph .010.)

1/1/77  Obligations under capital leases  135
        Cash  135

To record first month's rental payment.
SCHEDULE 4 continued

First Month of the Lease

LESSEE continued

1/31/77 Interest expense 49
Accrued interest on obligations under capital leases 49*
To recognize interest expense for the first month of the lease. Obligation balance outstanding during month $4,865 ($5,000–$135) $1.003% (rate implicit in the liquidation of the $5,000 obligation through (a) 30 monthly payments of $135 made at the beginning of each month and (b) a $2,000 guarantee of the residual value at the end of 30 months)=$49. (See paragraph .012.)

1/31/77 Depreciation expense 100
Leased property under capital leases 100
To record first month's depreciation on a straight-line basis over 30 months to a salvage value of $2,000, which is the estimated residual value to the lessee. (See paragraph .011(b).)

* In accordance with paragraph .012, the February 1, 1977 rental payment of $135 will be allocated as follows: $86 (principal reduction) against obligations under capital leases and $49 against accrued interest on obligations under capital leases.
### SCHEDULE 4 continued

**First Month of the Lease**

**LESSOR**

To record the receipt of the amount of the lessee's guarantee.

* See note on next page.
Note to Disposition of Asset

Had the lessee elected at July 1, 1979 to renew the lease, it would render inoperative the guarantee as of that date. For that reason, the renewal would not be treated as a new agreement, as would otherwise be the case under paragraph .009, but would instead be accounted for as provided in paragraph .012. The lessee would accordingly adjust the remaining balances of the asset and obligation from the original lease, which at June 30, 1979 were equal, by an amount equal to the difference between the present value of the future minimum lease payments under the revised agreement and the remaining balance of the obligation. The present value of the future minimum lease payments would be computed using the rate of interest used to record the lease initially.

From the lessor's standpoint, the revised agreement would be accounted for in accordance with paragraph .017(e). Accordingly, the remaining balance of minimum lease payments receivable would be adjusted to the amount of the payments called for by the revised agreement, and the adjustment would be credited to unearned income.
ILLUSTRATIONS OF DISCLOSURE
BY LESSEES AND LESSORS

.122 This Appendix illustrates one way of meeting the disclosure requirements of this Statement, except for those relating to leveraged leases which are illustrated in Appendix E. The illustrations do not encompass all types of leasing arrangements for which disclosures are required. For convenience, the illustrations have been constructed as if the Statement had been in effect in prior years.

Note 1—Description of Leasing Arrangements

The Company conducts a major part of its operations from leased facilities which include a manufacturing plant, 4 warehouses, and 26 stores. The plant lease, which is for 40 years expiring in 1999, is classified as a capital lease. The warehouses are under operating leases that expire over the next 7 years. Most of the leases of store facilities are classified as capital leases. All of the leases of store facilities expire over the next 15 years.

Most of the operating leases for warehouses and store facilities contain one of the following options: (a) the Company can, after the initial lease term, purchase the property at the then fair value of the property or (b) the Company can, at the end of the initial lease term, renew its lease at the then fair rental value for periods of 5 to 10 years. These options enable the Company to retain use of facilities in desirable operating areas. The rental payments under a store facility lease are based on a minimum rental plus a percentage of the store’s sales in excess of stipulated amounts. Portions of store space and warehouse space are sublet under leases expiring during the next 5 years.

In addition, the Company leases transportation equipment (principally trucks) and data processing equipment under operating leases expiring during the next 3 years.

In most cases, management expects that in the normal course of business, leases will be renewed or replaced by other leases.

The plant lease prohibits the Company from entering into future lease agreements if, as a result of new lease agreements, aggregate annual rentals under all leases will exceed $XXX.
Note 2—Capital Leases

</tr>
</tbody>
</table>

Total minimum lease payments\(^1\) XXX

Less: Amount representing estimated executory costs (such as taxes, maintenance, and insurance), including profit thereon, included in total minimum lease payments (XXX)

Net minimum lease payments XXX

Less: Amount representing interest\(^2\) (XXX)

Present value of net minimum lease payments\(^3\) $ XXX

---

\(^1\) Minimum payments have not been reduced by minimum sublease rentals of $XXX due in the future under noncancelable subleases. They also do not include contingent rentals which may be paid under certain store leases on the basis of a percentage of sales in excess of stipulated amounts. Contingent rentals amounted to $XXX in 1976 and $XXX in 1975.

\(^2\) Amount necessary to reduce net minimum lease payments to present value calculated at the Company's incremental borrowing rate at the inception of the leases.

\(^3\) Reflected in the balance sheet as current and noncurrent obligations under capital leases of $XXX and $XXX, respectively.
Note 3—Operating Leases

The following is a schedule by years of future minimum rental payments required under operating leases that have initial or remaining noncancelable lease terms in excess of one year as of December 31, 1976:

Year ending December 31:

1977 $ XXX
1978 XXX
1979 XXX
1980 XXX
1981 XXX
Later years XXX

Total minimum payments required* $ XXX

The following schedule shows the composition of total rental expense for all operating leases except those with terms of a month or less that were not renewed:

<table>
<thead>
<tr>

FOOTNOTES

Note 1—Description of Leasing Arrangements

The Company's leasing operations consist principally of the leasing of various types of heavy construction and mining equipment, data processing equipment, and transportation equipment. With the exception of the leases of transportation equipment, the bulk of the Company's leases are classified as direct financing leases. The construction equipment and mining equipment leases expire over the next ten years and the data processing equipment leases expire over the next eight years. Transportation equipment (principally trucks) is leased under operating leases that expire during the next three years.
Note 2—Net Investment in Direct Financing and Sales-Type Leases

The following lists the components of the net investment in direct financing and sales-type leases as of December 31:

<table>
<thead>
<tr>
<th>Component</th>
<th>1976</th>
<th>1975</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total minimum lease payments to be received*</td>
<td>$ XXX</td>
<td>$ XXX</td>
</tr>
<tr>
<td>Less: Amounts representing estimated executory costs (such as taxes, maintenance, and insurance), including profit thereon, included in total minimum lease payments</td>
<td>(XXX)</td>
<td>(XXX)</td>
</tr>
<tr>
<td>Minimum lease payments receivable</td>
<td>XXX</td>
<td>XXX</td>
</tr>
<tr>
<td>Less: Allowance for uncollectibles</td>
<td>(XXX)</td>
<td>(XXX)</td>
</tr>
<tr>
<td>Net minimum lease payments receivable</td>
<td>XXX</td>
<td>XXX</td>
</tr>
<tr>
<td>Estimated residual values of leased property (unguaranteed)</td>
<td>XXX</td>
<td>XXX</td>
</tr>
<tr>
<td>Less: Unearned income</td>
<td>(XXX)</td>
<td>(XXX)</td>
</tr>
<tr>
<td>Net investment in direct financing and sales-type leases</td>
<td>$ XXX</td>
<td>$ XXX</td>
</tr>
</tbody>
</table>

* Minimum lease payments do not include contingent rentals which may be received under certain leases of data processing equipment on the basis of hours of use in excess of stipulated minimums. Contingent rentals amounted to $XXX in 1976 and $XXX in 1975. At December 31, 1976, minimum lease payments for each of the five succeeding fiscal years are as follows: $XXX in 1977, $XXX in 1978, $XXX in 1979, $XXX in 1980, and $XXX in 1981.
### Note 3—Property on Operating Leases and Property Held for Lease

The following schedule provides an analysis of the Company’s investment in property on operating leases and property held for lease by major classes as of December 31, 1976:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Construction equipment</td>
<td>$ XXX</td>
</tr>
<tr>
<td>Mining equipment</td>
<td>XXX</td>
</tr>
<tr>
<td>Data processing equipment</td>
<td>XXX</td>
</tr>
<tr>
<td>Transportation equipment</td>
<td>XXX</td>
</tr>
<tr>
<td>Other</td>
<td>XXX</td>
</tr>
<tr>
<td><strong>Less: Accumulated depreciation</strong></td>
<td>(XXX)</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td>$ XXX</td>
</tr>
</tbody>
</table>
Note 4—Rentals under Operating Leases

The following is a schedule by years of minimum future rentals on noncancelable operating leases as of December 31, 1976:

<table>
<thead>
<tr>
<th>Year ending December 31</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>1977</td>
<td>$ XXX</td>
</tr>
<tr>
<td>1978</td>
<td>XXX</td>
</tr>
<tr>
<td>1979</td>
<td>XXX</td>
</tr>
<tr>
<td>1980</td>
<td>XXX</td>
</tr>
<tr>
<td>1981</td>
<td>XXX</td>
</tr>
<tr>
<td>Later years</td>
<td>XXX</td>
</tr>
<tr>
<td>Total minimum future rentals*</td>
<td>$ XXX</td>
</tr>
</tbody>
</table>

* This amount does not include contingent rentals which may be received under certain leases of data processing equipment on the basis of hours of use in excess of stipulated minimums. Contingent rentals amounted to $XXX in 1976 and $XXX in 1975.
Appendix E

ILLUSTRATIONS OF ACCOUNTING AND FINANCIAL STATEMENT PRESENTATION FOR LEVERAGED LEASES

.123 This Appendix illustrates the accounting requirements of this Statement and one way of meeting its disclosure requirements as applied to a leveraged lease. The illustrations do not encompass all circumstances that may arise in connection with leveraged leases; rather, the illustrations are based on a single example of a leveraged lease, the terms and assumptions for which are stated in Schedule 1. The elements of accounting and reporting illustrated for this example of a leveraged lease are as follows:

1. Leveraged lease example—terms and assumptions, Schedule 1
2. Cash flow analysis by years, Schedule 2
3. Allocation of annual cash flow to investment and income, Schedule 3
4. Journal entries for lessor's initial investment and first year of operation, Schedule 4
5. Financial statements including footnotes at end of second year
6. Accounting for a revision in the estimated residual value of the leased asset assumed to occur in the eleventh year of the lease (from $200,000 to $120,000):
   a. Revised allocation of annual cash flow to investment and income, Schedule 5
   b. Balances in investment accounts at beginning of the eleventh year before revised estimate, Schedule 6
   c. Journal entries, Schedule 7
   d. Adjustment of investment accounts, Schedule 8
### Leveraged Lease Example

#### Terms and Assumptions

| Cost of leased asset (equipment) | $1,000,000 |
| Lease term                      | 15 years, dating from January 1, 1975 |
| Lease rental payments           | $90,000 per year (payable last day of each year) |
| Residual value                  | $200,000 estimated to be realized one year after lease termination. In the eleventh year of the lease the estimate is reduced to $120,000. |
| Financing:                      | |
| Equity investment by lessor     | $400,000 |
| Long-term nonrecourse debt      | $600,000, bearing interest at 9% and repayable in annual installments (on last day of each year) of $74,435.30 |
| Depreciation allowable to lessor for income tax purposes | Seven-year ADR life using double-declining-balance method for the first two years (with the half-year convention election applied in the first year) and sum-of-years digits method for remaining life, depreciated to $100,000 salvage value |
| Lessor's income tax rate (federal and state) | 50.4% (assumed to continue in existence throughout the term of the lease) |
| Investment tax credit           | 10% of equipment cost or $100,000 (realized by the lessor on last day of first year of lease) |
| Initial direct costs            | For simplicity, initial direct costs have not been included in the illustration. |

¹ Lease income is recognized as 8.647% of the unrecovered investment at the beginning of each year in which the net investment is positive. The rate is that rate which when applied to the net investment in the years in which the net investment is positive will distribute the net income (net cash flow) to those years. The rate for allocation used in this Schedule is calculated by a trial and error process. The allocation is calculated based upon an initial estimate of the rate as a starting point. If the total thus allocated to income (column 4) differs under the estimated rate from the net cash flow (Schedule 2, column 8) the estimated rate is increased or decreased, as appropriate, to derive a revised allocation. This process is repeated until a rate is selected which develops a total amount allocated to income that is precisely equal to the net cash flow. As a practical matter, a computer program is used to calculate Schedule 3 under successive iterations until the correct rate is determined.

² Each component is allocated among the years of positive net investment in proportion to the allocation of net income in column 4.
SCHEDULE 4

Illustrative Journal Entries for Year Ending December 31, 1975

Lessor’s Initial Investment

Rentals receivable (Schedule 2, total of column 1 less residual value, less totals of columns 3 and 6) 233,470
Investment tax credit receivable (Schedule 2, column 7) 100,000
Estimated residual value (Schedule 1) 200,000
Unearned and deferred income (Schedule 3, totals of columns 5 and 7) 133,470
Cash 400,000

Record lessor’s initial investment

First Year of Operation

Journal Entry 1

Cash 15,565
Rentals receivable (Schedule 2, column 1 less columns 3 and 6) 15,565
Collection of first year’s net rental

Journal Entry 2

Cash* 100,000
Investment tax credit receivable (Schedule 2, column 7) 100,000
Receipt of investment tax credit

* Receipts of the investment tax credit and other tax benefits are shown as cash receipts for simplicity only. Those receipts probably would not be in the form of immediate cash inflow. Instead, they likely would be in the form of reduced payments of taxes on other income of the lessor or on the combined income of the lessor and other entities whose operations are joined with the lessor’s operations in a consolidated tax return.
SCHEDULE 4 continued

Journal Entry 3
Unearned and deferred income
Income from leveraged leases
(Schedule 3, column 5)
Recognition of first year's portion of pretax income allocated in the same proportion as the allocation of total income

\[
\frac{34,588}{116,601} \times 33,470 = 9,929
\]

Journal Entry 4
Unearned and deferred income
Investment tax credit recognized
(Schedule 3, column 7)
Recognition of first year's portion of investment tax credit allocated in the same proportion as the allocation of total income

\[
\frac{34,588}{116,601} \times 100,000 = 29,663
\]

Journal Entry 5
Cash (Schedule 2, column 5)*
Income tax expense (Schedule 3, column 6)
Deferred taxes
To record receipt of first year's tax credit from lease operation, to charge income tax expense for tax effect of pretax accounting income, and to recognize as deferred taxes the tax effect of the difference between pretax accounting income and the tax loss for the year, calculated as follows:

<table>
<thead>

FOOTNOTES

Investment in Leveraged Leases

The Company is the lessor in a leveraged lease agreement entered into in 1975 under which mining equipment having an estimated economic life of 18 years was leased for a term of 15 years. The Company's equity investment represented 40 percent of the purchase price; the remaining 60 percent was furnished by third-party financing in the form of long-term debt that provides for no recourse against the Company and is secured by a first lien on the property. At the end of the lease term, the equipment is turned back to the Company. The residual value at that time is estimated to be 20 percent of cost. For federal income tax purposes, the Company receives the investment tax credit and has the benefit of tax deductions for depreciation on the entire leased asset and for interest on the long-term debt. Since during the early years of the lease those deductions exceed the lease rental income, substantial excess deductions are available to be applied against the Company's other income. In the later years of the lease, rental income will exceed the deductions and taxes will be payable. Deferred taxes are provided to reflect this reversal.

The Company's net investment in leveraged leases is composed of the following elements:

\(^1\) Schedule 5, column 1.
Lessee Guarantee of the Residual Value of Leased Property: An Interpretation of Section 4053

[Source: FASB Interpretation No. 19.]

INTRODUCTION

.01 The FASB has been asked to clarify whether a particular kind of lease provision constitutes a guarantee by the lessee of the residual value of leased property at the expiration of the lease term to be included in minimum lease payments in accordance with paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005(j)(i)(b)], “Accounting for Leases,” and to clarify whether certain provisions in lease agreements and certain other circumstances limit the amount of a lessee guarantee to be included in minimum lease payments to an amount less than a stipulated residual value of the leased property at the end of the lease term. Paragraph 5(j)(i)(b) of the Statement states that minimum lease payments from the standpoint of the lessee shall include a “guarantee by the lessee . . . of the residual value at the expiration of the lease term, whether or not payment of the guarantee constitutes a purchase of the leased property. . . . When the lessee agrees to make up any deficiency below a stated amount in the lessor’s realization of the residual value, the guarantee to be included in the minimum lease payments shall be the stated amount, rather than an estimate of the deficiency to be made up.”

.02 Specifically, the Board has been asked the following three questions:

a. Does a lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage (e.g., excessive mileage on a leased vehicle) constitute a lessee guarantee of the residual value such that the estimated residual value of the leased property at the end of the lease term should be included in minimum lease payments under paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005(j)(i)(b)]?

b. Some lease agreements limit the amount of a residual value deficiency that a lessee can be required to make up to an amount that is (1) less than the stipulated residual value
of the leased property at the end of the lease term but (2) clearly in excess of any reasonable estimate of a deficiency that might be expected to arise in normal circumstances. In those cases, is the amount of the lessee's guarantee to be included in minimum lease payments under paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005 (j)(i)(b)] limited to the specified maximum deficiency that the lessee can be required to make up, or is it the stipulated residual value of the leased property at the end of the lease term?

c. If a lessee who is obligated to make up a deficiency in the lessor's realization of the residual value obtains a guarantee of the residual value from an unrelated third party, may the lessee reduce the amount of his minimum lease payments under paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005(j)(i)(b)] by the amount of the third-party guarantee?

INTERPRETATION

.03 A lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage is similar to contingent rentals in that the amount is not determinable at the inception of the lease.¹ Such a provision does not constitute a lessee guarantee of the residual value for purposes of paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005 (j)(i)(b)].

.04 If a lease limits the amount of the lessee's obligation to make up a residual value deficiency to an amount less than the stipulated residual value of the leased property at the end of the lease term, the amount of the lessee's guarantee to be included in minimum lease payments under paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005(j)(i)(b)] shall be limited to the specified maximum deficiency the lessee can be required to make up. In other words, the "stated amount" referred to in the last sentence of paragraph 5(j)(i)(b) is the specified maximum deficiency that the lessee is obligated to make up. If that maximum deficiency clearly exceeds any reasonable estimate of a deficiency that might be expected to arise in normal circumstances, the lessor's risk associated with

¹ Contingent rentals are not included in minimum lease payments as defined in paragraph 5(j) of FASB Statement No. 13 [section 4053.005(j)]. Contingent rentals are to be recognized as period costs when incurred (or revenue when receivable). (See paragraphs 12, 17(b), and 18(b) of Statement No. 13 [sections 4053.012, 4053.017(b), and 4053.018(b)].)
the portion of the residual in excess of the maximum may appear to be negligible. However, the fact remains that the lessor must look to the resale market or elsewhere rather than to the lessee to recover the unguaranteed portion of the stipulated residual value of the leased property. The lessee has not guaranteed full recovery of the residual value, and the parties should not base their accounting on the assumption that the lessee has guaranteed it. The 90 percent test specified in criterion (d) of paragraph 7 of Statement No. 13 [section 4053.007(d)] is stated as a lower limit rather than as a guideline.

.05 A guarantee of the residual value obtained by the lessee from an unrelated third party for the benefit of the lessor shall not be used to reduce the amount of the lessee's minimum lease payments under paragraph 5(j)(i)(b) of FASB Statement No. 13 [section 4053.005(j)(i)(b)] except to the extent that the lessor explicitly releases the lessee from obligation, including secondary obligation if the guarantor defaults, to make up a residual value deficiency. Amounts paid in consideration for a guarantee by an unrelated third party are executory costs and are not included in the lessee's minimum lease payments.

EFFECTIVE DATE AND TRANSITION

.06 The provisions of this Interpretation shall be effective for leasing transactions and lease agreement revisions (see paragraph 9 of FASB Statement No. 13 [section 4053.009]) entered into on or after January 1, 1978. Earlier application is encouraged. In addition, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of FASB Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of the Statement [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published financial statements based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this interpretation retroactively.
INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to clarify the application of FASB Statement No. 13 [section 4053], "Accounting for Leases," in business combinations. Specifically, this involves the following questions:

a. Does the consummation of a business combination require the combined enterprise to treat leases of the combining companies as new leases to be classified according to the criteria set forth in Statement No. 13 [section 4053], based on conditions as of the date of the combination?

b. If the consummation of a business combination does not require enterprises to treat leases of the combining companies as new leases as of the date of the combination, how should Statement No. 13 [section 4053] be applied to the leases of the combined enterprise?

c. How do the requirements of APB Opinion No. 16 [section 1091], "Business Combinations," for assigning amounts to the assets acquired and liabilities assumed in a business combination that is accounted for by the purchase method affect the application of Statement No. 13 [section 4053] by the combined enterprise to leases of the acquired company?

.02 Paragraph 40 of FASB Statement No. 13 [section 4053.040] requires the new lessee under a sublease or similar transaction to classify the lease in accordance with the criteria in Statement No. 13 [section 4053] and to account for it as a new lease. Subparagraphs (b) and (c) of paragraph 35 of Statement No. 13 [section 4053.035(b) and (c)] describe the transactions similar to subleases that are subject to the requirements of paragraph 40 [section 4053.040] of the Statement as follows:

b. A new lessee is substituted under the original lease agreement. The new lessee becomes the primary obligor under

1 See paragraphs 49 and 51 of FASB Statement No. 13 [sections 4053.049 and 4053.051] regarding retroactive application of Statement No. 13 [section 4053].
the agreement, and the original lessee may or may not be secondarily liable.

c. A new lessee is substituted through a new agreement, with cancellation of the original lease agreement.

The question has been raised as to whether the provisions of paragraphs 35 and 40 [sections 4053.035 and 4053.040] ever require that leases in a business combination be treated as new leases by the combined enterprise.

.03 In connection with a business combination, changes may be made in the provisions of existing leases of a combining enterprise. Paragraph 9 of FASB Statement No. 13 [section 4053.009] discusses changes in the provisions of leases as follows:

If at any time the lessee and lessor agree to change the provisions of the lease, other than by renewing the lease or extending its term, in a manner that would have resulted in a different classification of the lease under the criteria in paragraphs 7 and 8 had the changed terms been in effect at the inception of the lease, the revised agreement shall be considered as a new agreement over its term, and the criteria in paragraphs 7 and 8 shall be applied for purposes of classifying the new lease. Likewise, except when a guarantee or penalty is rendered inoperative as described in paragraphs 12 and 17(e), any action that extends the lease beyond the expiration of the existing lease term (see paragraph 5(f)), such as the exercise of a lease renewal option other than those already included in the lease term, shall be considered as a new agreement, which shall be classified according to the provisions of paragraphs 6-8. Changes in estimates (for example, changes in estimates of the economic life or of the residual value of the leased property) or changes in circumstances (for example, default by the lessee), however, shall not give rise to a new classification of a lease for accounting purposes.

.04 Paragraph 88 of APB Opinion No. 16 [section 1091.88] provides "general guides for assigning amounts to the individual assets acquired and liabilities assumed, except goodwill . . ." in a business combination that is accounted for by the purchase method. The guides in subparagraphs of paragraph 88 [section 1091.88] indicate the method of valuation to be used for various types of assets and liabilities. The concepts underlying FASB Statement No. 13 [section 4053] that govern classification of leases differ in some respects from the concepts of prior APB Opinions on accounting for leases. Thus, the subparagraphs of paragraph 88 of Opinion No. 16 [section 1091.88] that were applied prior to Statement No. 13 [section 4053] may not be the appropriate subparagraphs to be applied under Statement No. 13 [section 4053]. In addition, some provisions of Statement No. 13 [section 4053] (e.g., interest rates used) may suggest that certain of the general guidelines in paragraph 88
An Exposure Draft of a proposed Interpretation on "Accounting for Leases in a Business Combination" was issued on December 19, 1977. The Board received 27 letters of comment in response to the Exposure Draft. Certain of those comments and the Board's consideration of them are discussed in paragraphs .06-.10 below.

One respondent requested that the Interpretation provide for circumstances in which determinations at the inception of the lease are not possible. The Board is aware that in some cases it is difficult to obtain accurate data relating to the remote past of an acquired enterprise but believes that reasonable estimates can be derived based on the information that is available.

Some respondents expressed the belief that the concept of purchase accounting in APB Opinion No. 16 [section 1091] requires the acquiring enterprise to classify the acquired enterprise's leases as new leases at the date of a business combination that is accounted for by the purchase method and stated that the acquiring enterprise should apply the criteria of FASB Statement No. 13 [section 4053] for classifying the acquired leases at the date of the acquisition. The Board does not believe that Opinion No. 16 [section 1091] requires reconsideration of the classification of existing leases that are already classified in conformity with Statement No. 13 [section 4053]; rather, the Board views Opinion No. 16 [section 1091] as requiring valuation of the existing assets and obligations of the acquired company, including assets and obligations pertaining to leases, and allocation of cost to those assets and obligations. Also, the Board views the procedures suggested as contrary to Statement No. 13 [section 4053]. Paragraph .08 below describes the basis for classification of a lease under Statement No. 13 [section 4053].

Paragraph 7 of FASB Statement No. 13 [section 4053.007] states that "the criteria for classifying leases set forth in this paragraph and in paragraph 8 derive from the concept set forth in paragraph 60." Paragraph 60 of Statement No. 13 [section 4053.060] describes the underlying concept as follows:

The provisions of this Statement derive from the view that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for as the acquisition of an asset and the incurrence of an obligation by the lessee and as a sale or financing by the lessor. All other leases should be accounted for as operating leases. . . . [Emphasis added.]
Statement No. 13 [section 4053] requires that the classification of a lease (an agreement between a lessee and a lessor) be determined at the inception of the lease. Once that determination is made, the classification of the lease is not reexamined unless either (a) both parties to the lease agree to a revision that would have resulted in a different classification of the lease had the changed terms been in effect at the inception of the lease or (b) the lease is extended or renewed. Paragraphs 36-40 of Statement No. 13 [section 4053.036-.040] apply similar procedures with respect to classification to the parties affected by a sublease, as follows:

a. The original lessor retains the classification of the original lease unless it is replaced by a new agreement.

b. The original lessee retains the original classification of the original lease unless the original lessee is relieved of the primary obligation. (If the lessee is relieved of the primary obligation, the original lessor will have agreed to a revision.)

c. The new lessee has agreed to the terms of a lease, either with the original lessee (in effect, a sublease) or with the original lessor (a new lease). Accordingly, the new lessee is required to classify the new lease at the date of the new agreement.

Statement No. 13 [section 4053] applies the same rationale to an enterprise that purchases the lessor's interest in an existing lease from the original lessor. The Statement does not permit an enterprise that purchases property from a lessor while the property is leased to a third party lessee to classify the acquired lease as a new lease at the acquisition date. The lessee is not a party to the transaction and the original lessor ceases to be a party to the lease; thus, there has been no new agreement between a lessee and a lessor and the purchase date is not the inception of a new lease requiring classification at that date. The Board views the substance of a business combination that is accounted for under the purchase method to be the purchase of the lessor's or lessee's interest in an existing lease. The original lessor or lessee does not become a party to a new agreement; accordingly, there is no new agreement to be classified, and Statement No. 13 [section 4053] does not permit reclassification of the existing lease unless the provisions of the lease are modified. The Board is aware that the identity of a party to a lease may change in a business combination and that the lease may be modified to reflect that change. If the provisions of the lease are not changed (see paragraph .03 above), the modification does not represent a new agreement.
between the lessee and lessor in substance, and the lease should not be reclassified.

.09 Some respondents suggested that the Board expand the scope of this Interpretation to address asset acquisitions that are not business combinations. As explained in paragraph .08 above, the Board believes that FASB Statement No. 13 [section 4053] provides adequate guidance for those transactions.

.10 Some enterprises have already applied the provisions of FASB Statement No. 13 [section 4053] retroactively and have published financial statements based on the retroactively adjusted accounts. The Exposure Draft proposed that those enterprises would be permitted, but not required, to apply the provisions of this Interpretation retroactively. Some respondents' comments indicated that they interpreted the reference to "published financial statements" in the Exposure Draft to include financial summaries of interim results. The Board had intended the reference to "published financial statements" to exclude those summaries. Upon further consideration, the Board modified the wording of paragraph .18 to "published annual financial statements."

.11 This Interpretation applies to the accounting for leases by combined enterprises at the date of and subsequent to a business combination.

INTERPRETATION

Summary

.12 The classification of a lease in accordance with the criteria of FASB Statement No. 13 [section 4053] shall not be changed as a result of a business combination unless the provisions of the lease are modified. (See paragraph .13.)

Changes in the Provisions of the Lease

.13 If in connection with a business combination, whether accounted for by the purchase method or by the pooling of interests method, the provisions of a lease are modified in a way that would require the revised agreement to be considered a new agreement under paragraph 9 of FASB Statement No. 13 [section 4053.009], the new lease shall be classified by the combined enterprise according to the criteria set forth in Statement No. 13 [section 4053], based on conditions as of the date of the modification of the lease.

Application of Section 4053 in a Pooling of Interests

.14 In a business combination that is accounted for by the pooling of interests method, each lease shall retain its previous
classification under FASB Statement No. 13 [section 4053] unless the provisions of the lease are modified as indicated in paragraph .13 above and shall be accounted for by the combined enterprise in the same manner that it would have been classified and accounted for by the combining enterprise.

Application of Section 4053 in a Purchase Combination

.15 In a business combination that is accounted for by the purchase method, the acquiring enterprise shall retain the previous classification in accordance with FASB Statement No. 13 [section 4053] for the leases of an acquired enterprise unless the provisions of the lease are modified as indicated in paragraph .13 above. The amounts assigned to individual assets acquired and liabilities assumed at the date of the combination shall be determined in accordance with the general guides for that type of asset or liability in paragraph 88 of APB Opinion No. 16 [section 1091.88]. Subsequent to the recording of the amounts called for by Opinion No. 16 [section 1091], the leases shall thereafter be accounted for in accordance with Statement No. 13 [section 4053]. Paragraph .16 below explains the application of this paragraph to a leveraged lease by an enterprise that acquires a lessor.

.16 In a business combination that is accounted for by the purchase method, the acquiring enterprise shall apply the following procedures to the acquired enterprise's investment as a lessor in a leveraged lease. The acquiring enterprise shall retain the classification of a leveraged lease at the date of the combination. The acquiring enterprise shall assign an amount to the acquired net investment in the leveraged lease in accordance with the general guides in paragraph 88 of APB Opinion No. 16 [section 1091.88], based on the remaining future cash flows and giving appropriate recognition to the estimated future tax effects of those cash flows. Once determined, that net investment shall be broken down into its component parts, namely, net rentals receivable, estimated residual value, and unearned income including discount to adjust other components to present value. The acquiring enterprise thereafter shall account for that investment in a leveraged lease in ac-

1If the acquired enterprise has not applied FASB Statement No. 13 [section 4053] retroactively at the date of the business combination, the acquiring enterprise shall classify the leases of the acquired enterprise as they would have been classified if the acquired enterprise had applied Statement No. 13 [section 4053] retroactively at that date.

2FASB Statement No. 13 [section 4053] does not address the subsequent accounting for amounts recorded for favorable or unfavorable operating leases. Accordingly, present practice is not changed with respect to the amortization of those amounts.
Accounting for Leases in a Business Combination

.17 When an enterprise that has acquired another enterprise in a business combination accounted for by the purchase method prior to the effective date of this Interpretation applies the provisions of FASB Statement No. 13 [section 4053] retroactively, leases acquired in the business combination shall be classified as they would have been classified if the acquired enterprise had applied Statement No. 13 [section 4053] retroactively at the date of the business combination. The amounts retroactively recorded for those leases shall be the amounts that would have been allocated under APB Opinion No. 16 [section 1091] by the acquiring enterprise at the purchase date if the leases had been classified in accordance with the provisions of Statement No. 13 [section 4053] at that date. The following examples illustrate the application of this paragraph:

a. In the case of a lease for which the lessee's classification is changed by the retroactive application of Statement No. 13 [section 4053] from an operating lease to a capital lease, the favorable or unfavorable amount recorded under Opinion No. 16 [section 1091] at the date of the combination shall be restated to record an asset and a liability, each to be assigned an amount in accordance with Opinion No. 16 [section 1091]. The net of the restated asset and liability may equal the amount previously recorded for a favorable or unfavorable operating lease. However, if the net of the restated asset and liability differs from the amount that was originally recorded under Opinion No. 16 [section 1091] for that lease, the difference is a retroactive adjustment of the allocation of the cost of the acquired enterprise with an offsetting retroactive adjustment, usually to goodwill.

b. In the case of a lease for which the lessor's classification is changed by the retroactive application of Statement No. 13 [section 4053] from an operating lease to a direct financing lease, the carrying amount of the leased asset and any favorable or unfavorable amount recorded under Opinion No. 16 [section 1091] at the date of the combination shall be restated to record a net investment in the direct financing lease determined in accordance with Opinion No. 16 [section 1091] and consisting of the gross receivable, residual value, and unearned income. If the restated amount allocated to the net investment in the direct financing lease differs from the net amount that was originally recorded for that lease, the difference is a retro-
active adjustment of the allocation of the cost of the acquired enterprise with an offsetting retroactive adjustment, usually to goodwill.

Effective Date and Transition

.18 The provisions of this Interpretation shall be effective for business combinations that are initiated on or after May 1, 1978. Earlier application is encouraged. In addition, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of FASB Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this Interpretation retroactively.

*See paragraph 46(a) of APB Opinion No. 16 [section 1091.46(a)] for the definition of "initiated."

Appendix A

ILLUSTRATION OF THE ACCOUNTING FOR A LEVERAGED LEASE IN A PURCHASE COMBINATION

19 This Appendix illustrates one way that a lessor's investment in a leveraged lease might be valued by the acquiring enterprise in a business combination accounted for by the purchase method and the subsequent accounting for the investment in accordance with FASB Statement No. 13 [section 4053]. The elements of accounting and reporting illustrated for this example are as follows:

1. Leveraged lease example—terms and assumptions, Schedule 1
2. Acquiring enterprise's cash flow analysis by years, Schedule 2
3. Acquiring enterprise's valuation of investment in the leveraged lease, Schedule 3
4. Acquiring enterprise's allocation of annual cash flow to investment and income, Schedule 4
5. Journal entry for recording allocation of purchase price to net investment in the leveraged lease, Schedule 5
6. Journal entries for the year ending December 31, 1984 (year 10 of the lease), Schedule 6

¹ Lease income is recognized as 4.233% of the unrecovered investment at the beginning of each year in which the net investment is positive. The rate is that rate which when applied to the net investment in the years in which the net investment is positive will distribute the net income (net cash flow) to those years. The rate for allocation used in this Schedule is calculated by a trial and error process. The allocation is calculated based upon an initial estimate of the rate as a starting point. If the total thus allocated to income (column 4) differs under the estimated rate from the net cash flow (column 2 less column 3) the estimated rate is increased or decreased, as appropriate, to derive a revised allocation. This process is repeated until a rate is selected which develops a total amount allocated to income that is precisely equal to the net cash flow. As a practical matter, a computer program is used to calculate Schedule 4 under successive iterations until the correct rate is determined.

² Each component is allocated among the years of positive net investment in proportion to the allocation of net income in column 4. Journal Entry 2 in Schedule 6 of this Appendix includes an example of this computation.
Illustrative Journal Entry for Recording Allocation of Purchase Price to Net Investment in the Leveraged Lease

Rentals receivable (Schedule 2, total of column 1 less residual value, less totals of columns 3 and 6) $124,515

Estimated residual value (Schedule 1) 200,000

Purchase price allocation clearing account (Schedule 3, present value) 16,245

Unearned and deferred income (Schedule 3, present value, less total of rentals receivable and estimated residual value) $340,760
Illustrative Journal Entries for Year Ending December 31, 1984

Third Year of Operation after the Business Combination
(Year 10 of the Lease)

Journal Entry 1

Cash $15,565
Rentals receivable (Schedule 2, column 1 less columns 3 and 6) $15,565
Collection of year's net rental

Journal Entry 2

Unearned and Deferred Income $ 5,530
Income from Leveraged Leases (Schedule 4, column 5) $ 5,530
Recognition of pretax income for the year allocated in the same proportion as the allocation of total income

\[
\left( \frac{\$324}{\$19,963} \times \$340,760 = \$5,530 \right)
\]

Journal Entry 3

Deferred taxes (Schedule 2, column 5, less Schedule 4, column 6) $25,008
Income tax expense (Schedule 4, column 6) 5,206
Cash (Schedule 2, column 5) $30,214

To record payment of tax for the year.

AC Section 4053-3

Leases of Certain Property Owned by a Governmental Unit or Authority: An Interpretation of Section 4053

[Source: FASB Interpretation No. 23.]

August 1978

INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to clarify that portion of paragraph 28 of FASB Statement No. 13 [section 4053.028], "Accounting for Leases," stating that leases of certain property owned by a governmental unit or authority shall be classified as operating leases. That portion of paragraph 28 [section 4053.028] is as follows:

Because of special provisions normally present in leases involving terminal space and other airport facilities owned by a governmental unit or authority, the economic life of such facilities for purposes of classifying the lease is essentially indeterminate. Likewise, the concept of fair value is not applicable to such leases. Since such leases also do not provide for a transfer of ownership or a bargain purchase option, they shall be classified as operating leases. Leases of other facilities owned by a governmental unit or authority wherein the rights of the parties are essentially the same as in a lease of airport facilities described above shall also be classified as operating leases. Examples of such leases may be those involving facilities at ports and bus terminals.

.02 That provision of paragraph 28 [section 4053.028] was further explained in paragraph 106 of FASB Statement No. 13 [section 4053.106] as follows:

A number of respondents pointed out that leases of facilities such as airport and bus terminals and port facilities from governmental units or authorities contain features that render the criteria of paragraph 7 inappropriate for classifying such leases. Leases of such facilities do not transfer ownership or contain bargain purchase options. By virtue of its power to abandon a facility during the term of a lease, the governmental body can effectively control the lessee's continued use of the property for its intended purpose, thus making its economic life essentially indeterminate. Finally, since neither the leased property nor equivalent property is available for sale, a meaningful fair value cannot be determined, thereby invalidating the 90 percent recovery criterion. For those reasons, the Board concluded that such leases shall be classified as operating leases by both the lessee and lessor.

.03 The Board has been asked to clarify the conditions that shall cause leases of certain property owned by a governmental unit or authority to be classified as operating leases.
.04 A draft of a proposed Interpretation on “Leases of Certain Property Owned by a Governmental Unit or Authority” was issued on April 7, 1978. The Board received 43 letters of comment in response to the proposed Interpretation. Some respondents disagreed with the proposed Interpretation because they believe that a lessee’s classification of leases of government owned property should be determined by the same criteria as those applied to leases generally. A few respondents expressed neither overall agreement nor disagreement but offered comments or suggestions about specific matters. The remainder of the respondents expressed general agreement with the proposed Interpretation.

.05 The Board also considered the possibility of amending FASB Statement No. 13 to delete that portion of paragraph 28 [section 4053.028] that applies to leases of certain property owned by a governmental unit or authority. As stated in the proposed Interpretation that was released for comment, some Board members believe that a lessee’s classification of leases of government owned property should be determined by the same criteria as those applied to leases generally. However, in the interest of a timely resolution of the matter, the Board concluded that further consideration of amending the applicable portion of paragraph 28 of Statement No. 13 [section 4053.028] should not delay the issuance of this Interpretation.

.06 A number of respondents recommended that the Board clarify subparagraph 8(d) with respect to the lessor’s right to terminate the lease during the lease term. Some of those respondents stated that the existence of the termination right was the significant issue and that such a right can exist even though explicit reference to the right is not contained in the lease agreement. The Board did not intend that leases of government owned property would be classified as operating leases merely because sovereign rights, such as the right of eminent domain, exist. Accordingly, the Board has modified subparagraph 8(d) to clarify its intent.

.07 Some respondents suggested that the Board define the term “equivalent property in the same service area” as that term is used in subparagraph 8(f), and a footnote has been added to that subparagraph to provide additional guidance.

INTERPRETATION

.08 The provisions of paragraph 28 of FASB Statement No. 13 [section 4053.028] stating that certain leases shall be classified as operating leases are intended to apply to leases only if all of the following conditions are met:
Leases of Certain Property Owned by a Governmental Unit or Authority

a. The leased property is owned by a governmental unit or authority.

b. The leased property is part of a larger facility, such as an airport, operated by or on behalf of the lessor.

c. The leased property is a permanent structure or a part of a permanent structure, such as a building, that normally could not be moved to a new location.

d. The lessor, or in some cases a higher governmental authority, has the explicit right under the lease agreement or existing statutes or regulations applicable to the leased property to terminate the lease at any time during the lease term, such as by closing the facility containing the leased property or by taking possession of the facility.

e. The lease neither transfers ownership of the leased property to the lessee nor allows the lessee to purchase or otherwise acquire ownership of the leased property.

f. The leased property or equivalent property in the same service area cannot be purchased nor can such property be leased from a nongovernmental unit or authority.

.09 Leases of property not meeting all of the conditions of paragraph .08 of this Interpretation are subject to the same criteria for classifying leases under FASB Statement No. 13 [section 4053] that are applicable to leases not involving government owned property.

EFFECTIVE DATE AND TRANSITION

.10 The provisions of this Interpretation shall be effective for leasing transactions recorded and lease agreement revisions (see paragraph 9 of FASB Statement No. 13 [section 4053.009]) recorded as of December 1, 1978 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements

---

1 As used in this Interpretation, equivalent property in the same service area is property that would allow continuation of essentially the same service or activity as afforded by the leased property without any appreciable difference in economic results to the lessee.
based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this Interpretation retroactively.
INTRODUCTION AND BACKGROUND INFORMATION

.01 Paragraph 28 of FASB Statement No. 13 [section 4053.028], "Accounting for Leases," states that "when the leased property is part of a larger whole, its cost (or carrying amount) and fair value may not be objectively determinable, as for example, when an office or floor of a building is leased. If the cost and fair value of the leased property are objectively determinable, both the lessee and the lessor shall classify and account for the lease according to the provisions of paragraph 26 [section 4053.026]." Paragraph 28 [section 4053.028] goes on to state that "if the fair value of the leased property is not objectively determinable, the lessee shall classify the lease according to the criterion of paragraph 7(c) [section 4053.007(c)] only. . . ." Paragraph 5(c) of Statement No. 13 [section 4053.005c] defines the fair value of leased property as "the price for which the property could be sold in an arm’s-length transaction between unrelated parties."

.02 The FASB has been asked if a fair value can be objectively determined for a lease involving only part of a building if there are no sales of property similar to the leased property to use as a basis for estimating the leased property’s fair value for purposes of applying FASB Statement No. 13 [section 4053].

.03 A draft of a proposed Interpretation on “Leases Involving Only Part of a Building” was issued on April 20, 1978. The Board received 29 letters of comment on the proposed Interpretation. The Board’s consideration of certain of the respondents’ comments is discussed in paragraphs .04 and .05 below.

.04 A number of respondents questioned whether the proposed Interpretation would provide meaningful guidance. Some respondents noted that, in many cases, information providing a basis for a reasonable estimate of the leased property’s fair value would not be available. Other respondents agreed that information providing a basis for a reasonable estimate of
Revenue and Expense

fair value might be obtained through an appraisal or other similar valuation. The Board does not intend to impose a requirement to obtain an appraisal or similar valuation as a general matter but does believe that kind of information should be obtained whenever possible if (a) classification as a capital lease seems likely and (b) the effects of capital lease classification would be significant to the financial statements of a lessee. Other respondents stated that the applicability of the Interpretation should be limited to lessees of a significant portion of a facility. Although that view was not adopted, the Board recognizes that a lessee's ability to make a reasonable estimate of the leased property's fair value will vary depending on the size of the leased property in relation to the entire facility. For example, obtaining a meaningful appraisal of an office or a floor of a multi-story building may not be possible whereas similar information may be readily obtainable if the leased property is a major part of that facility.

.05 Some respondents stated that replacement cost measures costs of physical attributes but does not necessarily measure fair value. Two of those respondents stated that replacement cost would not reflect the value attributable to factors such as location of the leased property or traffic patterns of a larger complex. One respondent stated that a determination of replacement cost for only part of a building would require arbitrary cost allocations and subjective considerations. Paragraph 5(c)(ii) of FASB Statement No. 13 [section 4053.005(c)(ii)] states in part, "when the lessor is not a manufacturer or dealer, the fair value of the property at the inception of the lease will ordinarily be its cost. . . ." That paragraph further provides that if there is a significant lapse of time between construction or acquisition of the property and inception of the lease, the determination of fair value shall be made in light of the market conditions at inception. The Board recognizes that replacement cost will not reflect the fair value of the leased property in all cases. However, if the leased facility has been recently constructed or acquired, cost estimates may provide a reasonable basis for estimating the property's fair value for purposes of applying the recovery criterion of paragraph 7(d) of Statement No. 13 [section 4053.007(d)].

INTERPRETATION

.06 For purposes of applying paragraph 28 of FASB Statement No. 13 [section 4053.028] to leases involving only part of a building, other evidence may provide a basis for an objective determination of fair value even if there are no sales
of property similar to the leased property. For example, reasonable estimates of the leased property's fair value might be objectively determined by referring to an independent appraisal of the leased property or to estimated replacement cost information.

EFFECTIVE DATE AND TRANSITION
.07 The provisions of this Interpretation shall be effective for leasing transactions recorded and lease agreement revisions (see paragraph 9 of FASB Statement No. 13 [section 4053.009]) recorded as of December 1, 1978 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this Interpretation retroactively.
INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to clarify whether a termination of a capital lease that results from the purchase of a leased asset by the lessee is the type of transaction contemplated by paragraph 14(c) of FASB Statement No. 13 [section 4053.014(c)], “Accounting for Leases.” That paragraph states that “a termination of a capital lease shall be accounted for by removing the asset and obligation, with gain or loss recognized for the difference.”

.02 A draft of a proposed Interpretation on “Accounting for Purchase of a Leased Asset by the Lessee during the Term of the Lease” was issued on April 28, 1978. The Board received 27 letters of comment in response to the proposed Interpretation. Certain of the comments received and the Board’s consideration of them are discussed in paragraphs .03 and .04 below.

.03 A number of respondents stated that the purchase of a leased asset by the lessee during the term of a capital lease gives rise to an early extinguishment of debt for which the accounting is prescribed in APB Opinion No. 26 [section 5362], “Early Extinguishment of Debt.” The Board concluded that it should look to FASB Statement No. 13 [section 4053] to clarify the accounting for the termination of a lease instead of Opinion No. 26 [section 5362]. Statement No. 13 [section 4053] specifies different accounting for the termination of a capital lease for which the leased asset ceases to be carried on the enterprise’s balance sheet and for a renewal or extension for which the leased asset continues to be carried on the enterprise’s balance sheet. The Board views the purchase of the leased asset by the lessee during the term of the lease as a transaction for which similar rights for the same asset continue to be carried on the enterprise’s balance sheet. The Board is aware that some extensions of capital leases and purchases of leased assets could be viewed as similar to early
extinguishments of debt. Other extensions of capital leases and purchases of leased assets could be viewed as nonmonetary transactions with an amount of monetary consideration of the type (exchanges of rights to productive assets not held for sale in the ordinary course of business) for which APB Opinion No. 29 [section 1041], "Accounting for Nonmonetary Transactions," does not permit recognition of gain. The Board considered the possible applicability of both Opinion No. 26 [section 5362] and Opinion No. 29 [section 1041] during its deliberations on the provisions of Statement No. 13 [section 4053] that address accounting for extensions and other terminations of capital leases. The subjectivity of an allocation of the purchase price between retirement of the lease obligation and acquisition of additional property rights was also a consideration in the determination that recognition of gain or loss should not be required if the asset continued to be carried on the enterprise's balance sheet.

.04 Some respondents stated that this Interpretation should require recognition of a loss if a loss is indicated by the terms of the transaction. The Board noted that FASB Statement No. 13 [section 4053] does not include a requirement for loss recognition on an extension of a capital lease. Therefore, an Interpretation of Statement No. 13 [section 4053] could not include such a requirement. However, the Board also noted that Statement No. 13 [section 4053] does not prohibit recognition of a loss if a loss has been incurred.

INTERPRETATION

.05 The termination of a capital lease that results from the purchase of a leased asset by the lessee is not the type of transaction contemplated by paragraph 14(c) of FASB Statement No. 13 [section 4053.014(c)] but rather is an integral part of the purchase of the leased asset. The purchase by the lessee of property under a capital lease shall be accounted for like a renewal or extension of a capital lease that, in turn, is classified as a capital lease,1 that is, any difference between the purchase price and the carrying amount of the lease obligation shall be recorded as an adjustment of the carrying amount of the asset.

EFFECTIVE DATE AND TRANSITION

.06 The provisions of this Interpretation shall be effective for purchases of leased property recorded as of December 1, 1978.

1 Paragraph 14(b)(i) of FASB Statement No. 13 [section 4053.014(b)(i)] refers to paragraph 14(a) [section 4053.014(a)] of the Statement for the accounting for a renewal or an extension of a capital lease that is also classified as a capital lease.
or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of *FASB Statement No. 13* [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this Interpretation retroactively.

AC Section 4053-6

Accounting for a Loss on a Sublease: An Interpretation of Sections 2012 and 4053

[Source: FASB Interpretation No. 27.]

November 1978

INTRODUCTION

.01 The FASB has been asked to clarify whether paragraph 39 of FASB Statement No. 13 [section 4053.039], "Accounting for Leases," prohibits the recognition of a loss by an original lessee 1 who disposes of property that was used in a discontinued operation or mitigates the cost of a lease commitment related to a discontinued operation by subleasing the property. In those circumstances, paragraphs 15-17 of APB Opinion No. 30 [section 2012.15-.17], may require recognition of a loss. Appendix A provides additional background information about this matter.

INTERPRETATION

.02 Paragraph 39 of FASB Statement No. 13 [section 4053.039] does not prohibit the recognition of a loss by an original lessee 2 who disposes of leased property or mitigates the cost of an existing lease commitment by subleasing the property.

.03 If a sublease is entered into as part of a disposal of a segment of a business 3 as defined in paragraph 13 of APB Opinion No. 30 [section 2012.13], the anticipated future cash flows that will result from the original lease and the sublease, as well as the carrying amount of any related recorded assets or obligations, shall be taken into account in determining the overall gain or loss on the disposal.

1 An "original lessee" is used in this Interpretation and in FASB Statement No. 13 [section 4053] to include any lessee who acts as sublessor on a sublease.
2 See Footnote 1.
3 An AICPA Accounting Interpretation of APB Opinion No. 30 [section U 2012.001-.013], "Illustrations of the Application of APB Opinion No. 30," issued in November 1973, states that "the gain or loss on a sale of a portion of a line of business which is not a segment of a business . . . should be calculated using the same measurement principles as if it were a segment of a business (paragraphs 15-17 of the Opinion [section 2012.15-.17])."
EFFECTIVE DATE AND TRANSITION

.04 The provisions of this Interpretation shall be effective for estimates of losses on a disposal of a segment of a business recorded as of a measurement date occurring on or after March 1, 1979 and for subleases recorded as of March 1, 1979 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Interpretation shall be applied retroactively at the same time and in the same manner as the provisions of FASB Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Interpretation may, but are not required to, apply the provisions of this Interpretation retroactively.

*See paragraph 14 of APB Opinion No. 30 [section 2012.14] for the definition of "measurement date."
Appendix A

BACKGROUND INFORMATION

.05 Paragraph 39 of FASB Statement No. 13 [section 4053.039] specifies the accounting by an original lessee for both an original lease and a sublease or similar transaction if the original lessee is not relieved of the primary obligation under the original lease. Under that paragraph, the original lessee accounts for a sublease as a sales-type, direct financing, or operating lease, based partly on the classification of the original lease and partly on the criteria of Statement No. 13 [section 4053] for those classifications. If the sublease is classified as an operating lease, the original lessee continues to account for the original lease as before. If the sublease is classified as a direct financing or sales-type lease, the unamortized balance of the asset under the original lease is treated as the cost of the subleased property, and the original lessee continues to account for the obligation related to the original lease as before. Paragraph 39 [section 4053.039] does not specifically address recognition of a loss on a sublease except when the sublease meets the criteria for classification as a sales-type lease.

.06 Paragraphs 15-17 of APB Opinion No. 30 [section 2012.15-.17] describe how an enterprise determines a gain or loss on disposal of a segment of a business. Paragraph 17 of Opinion No. 30 [section 2012.17] states that “costs and expenses directly associated with the decision to dispose include items such as . . . future rentals on long-term leases to the extent they are not offset by sub-lease rentals.” The provision for a loss on a sublease would be based on the net expected future cash disbursements if both the original lease and the sublease were classified as operating leases.

.07 If an original lease was classified as a capital lease, a comparison of future rentals on the original lease with sublease rentals would not necessarily be indicative of the future loss on the sublease transaction. A loss, if any, would generally have to be measured based on other provisions of APB Opinion No. 30 [section 2012]. Paragraph 15 of Opinion No. 30 [section 2012.15] states that “if it is expected that net losses from operations will be incurred between the measurement date and the expected disposal date, the computation of the gain or loss on disposal should also include an estimate of such amounts.” Paragraph 16 of Opinion No. 30 [section 2012.16] states that “adjustments, costs, and expenses which (a) are clearly a direct result of the decision to dispose of the
Revenue and Expense

segment and (b) are clearly not the adjustments of carrying amounts or costs, or expenses that should have been recognized on a going-concern basis prior to the measurement date should be included in determining the gain or loss on disposal."

.08 A draft of a proposed Interpretation on "Accounting for a Loss on a Sublease" was issued on April 28, 1978. The Board received 20 letters of comment in response to the proposed Interpretation. Certain of the comments received and the Board's consideration of them are discussed in paragraphs .09-.11 below.

.09 The proposed Interpretation was limited to subleases for which APB Opinion No. 30 [section 2012] requires recognition of a loss. A number of respondents suggested that the proposed Interpretation be expanded to encompass all subleases. Paragraph .02 of this Interpretation is intended to clarify the Board's view that paragraph 39 of FASB Statement No. 13 [section 4053.039] does not prohibit recognition of a loss on a sublease whether or not the sublease is part of a disposal of a segment. Paragraph .03 of this Interpretation is intended to indicate that determination of a gain or loss on disposal of a segment will comprehend amounts relating to an original lease and a sublease entered into as part of a decision to dispose of the segment. Any gain or loss on the lease or sublease becomes an indistinguishable part of the gain or loss on disposal. If a sublease is not entered into as part of a decision to dispose of the segment, Statement No. 13 [section 4053] does not specifically require recognition of an indicated loss except for a sales-type loss on a sales-type sublease. The Board has a possible amendment of Statement No. 13 [section 4053] under consideration that would specify the computation of an indicated loss to be recognized on a sublease that is not entered into as part of a disposal of a segment. However, the Board concluded that it should not delay issuance of this Interpretation pending a final decision on whether to proceed with that amendment.

.10 A number of respondents stated that FASB Statement No. 5 [section 4311], "Accounting for Contingencies," requires recognition of a loss on a sublease. The Board views most subleases as outside the scope of Statement No. 5 [section 4311] by reason of the exclusion from the coverage of that Statement of write-downs of operating assets (paragraph 31 of Statement No. 5 [section 4311.31]). In addition, if a sublease covered all of the remaining term of the original lease and no contingent rentals were involved, the only uncertainty would be

AC § 4053-6.08 Copyright © 1978, American Institute of Certified Public Accountants, Inc.
the collectibility of the sublease rentals, and thus Statement No. 5 [section 4311] would not apply to the determination of any loss that would occur if all sublease rentals were collected.

11 A number of respondents suggested that the proposed Interpretation be expanded to address the application of APB Opinion No. 30 [section 2012] to other specific matters. The essence of this Interpretation is that the application of Opinion No. 30 [section 2012] was not affected by the issuance of FASB Statement No. 13 [section 4053]. Accordingly, the Board concluded that it should not expand the scope of this Interpretation to describe the application of Opinion No. 30 [section 2012].

AC Section 4054

Accounting for Leases—Initial Direct Costs

an amendment of section 4053

[Source: FASB Statement No. 17.]

November 1977

INTRODUCTION AND BACKGROUND INFORMATION

.01 FASB Statement No. 13 [section 4053], “Accounting for Leases,” issued by the Board in November 1976, defined initial direct costs in paragraph 5(m) [section 4053.005(m)] as follows:

Those incremental direct costs incurred by the lessor in negotiating and consummating leasing transactions (e.g., commissions and legal fees).

.02 Since issuance of FASB Statement No. 13 [section 4053] the Board has received a number of requests to interpret the definition of initial direct costs, specifically to clarify the meaning of “incremental direct costs.” On April 7, 1977, the Board submitted a proposed Interpretation of the definition to the members of the Financial Accounting Standards Advisory Council for comment. The proposed Interpretation stated that direct referred to those costs that are incurred in connection with specific leasing transactions and incremental limited such costs to those that vary directly with the number or dollar amount of leasing transactions, as distinct from ongoing, recurring expenses that ordinarily do not vary with the number or dollar amount of leasing transactions. Twenty-five letters of comment were received from Council members and from others representing businesses that would be affected by the Interpretation. Many respondents to the proposed Interpretation urged the Board to include in the definition of initial direct costs sales salaries and other costs that do not vary directly with specific leasing transactions but that do vary with the general level of leasing business acquired. The Board concluded that it should amend the definition of initial direct costs to encompass costs that are directly related to consummated leasing transactions and that vary either with specific
leasing transactions or with the general level of leasing business acquired.

.03 An Exposure Draft of a proposed Statement on “Accounting for Leases—Initial Direct Costs” was issued on August 8, 1977. The Board received 42 letters of comment in response to the Exposure Draft. Certain of those comments and the Board’s consideration of them are discussed in paragraphs .04-.06 below.

.04 Some respondents recommended that the Board conform the accounting for initial direct costs of leases to the existing practices for other financing activities of finance companies; other respondents recommended that the Board conform the accounting for initial direct costs of leases to the existing practices for other financing activities of banks. The AICPA Industry Audit Guide, “Audits of Finance Companies,” permits the use of any of three overall methods of recognizing finance income. All of the methods require that direct and indirect acquisition costs applicable to loans be charged to operations when incurred. Two of the methods require that an amount of deferred finance income equal to estimated acquisition costs be transferred to operations in the same period; such a transfer is prohibited under the other permitted method. Banks often charge all loan origination costs to expense without offsetting revenue recognition. Conforming the accounting for initial direct costs of leases to the accounting for initial direct costs of other financing activities of various types of enterprises would require alternative methods of accounting for similar leasing transactions. Still other respondents recommended that the Board permit the option of charging initial direct costs to expense without offsetting revenue recognition. The Board concluded that it should not prescribe alternative methods of accounting for similar leasing transactions.

.05 Some respondents to the Exposure Draft stated that the cost of identifying the portion of salespersons’ salaries that relates to specific completed leasing transactions would be excessive. The Board believes that salespersons can estimate the portion of their time that results in completed leases and the portion spent in negotiations for leases that were not consummated and in other activities and that reasonable allocations of other costs can be made based on similar estimates. In some enterprises, the determinations can be made by periodic statistical samples. The Board believes that enterprises can perform the required allocations without excessive cost.
.06 Some respondents to the Exposure Draft asked if the Board intended that a provision for bad debts be included in initial direct costs. The Board does not intend that initial direct costs, as defined, include a provision for bad debts. Accounting for bad debts that are expected to result from leases and other financing activities is a pervasive issue that the Board did not address in FASB Statement No. 13 [section 4053]. The Board has not studied that question and did not intend that Statement No. 13 [section 4053] would change existing practices in accounting for bad debts.

.07 The Board concluded that on the basis of existing data it could make an informed decision on the matter addressed in this Statement without a public hearing and that the effective date and transition prescribed in paragraph .09 are advisable.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Amendment to Section 4053

.08 Paragraph 5(m) of FASB Statement No. 13 [section 4053.005(m)] is superseded by the following:

*Initial direct costs.* Those costs incurred by the lessor that are directly associated with negotiating and consummating completed leasing transactions. Those costs include, but are not necessarily limited to, commissions, legal fees, costs of credit investigations, and costs of preparing and processing documents for new leases acquired. In addition, that portion of salespersons' compensation, other than commissions, and the compensation of other employees that is applicable to the time spent in the activities described above with respect to completed leasing transactions shall also be included in initial direct costs. That portion of salespersons' compensation and the compensation of other employees that is applicable to the time spent in negotiating leases that are not consummated shall not be included in initial direct costs. No portion of supervisory and administrative expenses or other indirect expenses, such as rent and facilities costs, shall be included in initial direct costs.
Effective Date and Transition

.09 The provisions of this amendment to *FASB Statement No. 13* [section 4053] shall be effective for leasing transactions and lease agreement revisions (see paragraph 9 of Statement No. 13 [section 4053.009]) entered into on or after January 1, 1978. Earlier application is encouraged. In addition, the provisions of this Statement shall be applied retroactively at the same time and in the same manner as the provisions of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published financial statements based on the retroactively adjusted accounts before the effective date of this Statement may, but are not required to, apply the provisions of this Statement retroactively.

The provisions of this Statement need not be applied to immaterial items.
Changes in the Provisions of Lease Agreements Resulting from Refundings of Tax-Exempt Debt

an amendment of section 4053
[Source: FASB Statement No. 22.]

June 1978

INTRODUCTION AND BACKGROUND INFORMATION
.01 The FASB has been asked to reconcile an apparent inconsistency between FASB Statement No. 13 [section 4053], "Accounting for Leases," and APB Opinion No. 26 [section 5362], "Early Extinguishment of Debt," arising from refundings of tax-exempt debt, including advance refundings that are accounted for as early extinguishments of debt. In some situations tax-exempt debt is issued to finance construction of a facility, such as a plant or hospital, that is transferred to a user of the facility by either lease or sale. A lease or, in the case of sale, a mortgage note generally serves as collateral for the guarantee of payments equivalent to those required to service the tax-exempt debt. Payments required by the terms of the lease or mortgage note are essentially the same, as to both amount and timing, as those required by the tax-exempt debt. In practice, a liability equivalent to the amount of the tax-exempt debt often has been included in the accounts of the lessee or the mortgagor. Some issuers of tax-exempt debt recently have entered into refundings and, concurrently, the terms of the related lease or mortgage note have been changed to conform with the terms of the refunding issue. If a refunding of tax-exempt debt results in a change in the provisions of a lease and the revised lease is classified as a capital lease by a lessee or a direct financing lease by a lessor, gain or loss is not recognized.

1An advance refunding involves the issuance of new debt to replace existing debt with the proceeds from the new debt placed in trust or otherwise restricted to retire the existing debt at a determinable future date or dates. Descriptions of advance refundings that are and are not accounted for as early extinguishments of debt are presented in the AICPA Statement of Position on “Accounting for Advance Refundings of Tax-Exempt Debt.”
under Statement No. 13 [section 4053] (see paragraphs 14(a) and 17(f)(i) [sections 4053.014(a) and 4053.017(f)(i)] of the Statement). If a refunding of tax-exempt debt results in a change in the terms of a mortgage note, any gain or loss arising from the transaction because of the change in the carrying amount of the debt would be recognized currently in accordance with the provisions of Opinion No. 26 [section 5362].

Lessee Accounting
.02 Paragraph 14(a) of FASB Statement No. 13 [section 4053.014(a)] sets forth the accounting by a lessee for a change in the provisions, a renewal, or an extension of an existing lease if the revised lease agreement is classified as a capital lease as follows:

If the provisions of the lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (i) does not give rise to a new agreement . . . or (ii) does give rise to a new agreement but such agreement is also classified as a capital lease, the present balances of the asset and the obligation shall be adjusted by an amount equal to the difference between the present value of the future minimum lease payments under the revised or new agreement and the present balance of the obligation. The present value of the future minimum lease payments under the revised or new agreement shall be computed using the rate of interest used to record the lease initially.

.03 In accounting for an early extinguishment of debt, paragraph 20 of APB Opinion No. 26 [section 5362.20] requires that “a difference between the reacquisition price and the net carrying amount of the extinguished debt should be recognized currently in income of the period of extinguishment as losses or gains. . . .” In this regard, paragraph 8 of FASB Statement No. 4 [section 2013.08], “Reporting Gains and Losses from Extinguishment of Debt,” requires that “gains and losses from extinguishment of debt that are included in the determination of net income shall be aggregated and, if material, . . . classified as an extraordinary item, net of related income tax effect.”

.04 If a refunding of tax-exempt debt results in a change in the provisions of a capital lease that passes the perceived economic advantages of the refunding through to the lessee, paragraph 14(a) of FASB Statement No. 13 [section 4053.014(a)] requires the lessee to adjust both the asset and related obligation for any difference caused by a change in the provisions of a lease. If the perceived economic advantages of the same refunding had been passed through by a change in the terms of a mortgage note, the accounting specified by APB Opinion No. 26 [section 5362] would result in the recognition of a gain or loss.
.05 The Board considered the possibility of amending APB Opinion No. 26 [section 5362] to defer recognition of gain or loss. That would not completely eliminate the inconsistency unless the gain or loss were included as an adjustment to the cost of the related property, because FASB Statement No. 13 [section 4053] specifies that any difference resulting from a change in the provisions of a capital lease should be accounted for as an adjustment of the leased asset. In the interest of a timely resolution of the conflict, the Board decided that paragraph 14 of Statement No. 13 [section 4053.014] should be amended so that the accounting will be compatible with that specified by Opinion No. 26 [section 5362].

Lessor Accounting

.06 Paragraph 17(f)(i) of FASB Statement No. 13 [section 4053.017(f)(i)] specifies the accounting by a lessor for a change in the provisions, a renewal, or an extension of an existing lease if the revised lease agreement is classified as a direct financing lease as follows:

If the provisions of a lease are changed in a way that changes the amount of the remaining minimum lease payments and the change either (a) does not give rise to a new agreement or (b) does give rise to a new agreement but such agreement is classified as a direct financing lease, the balance of the minimum lease payments receivable and the estimated residual value, if affected, shall be adjusted to reflect the change and the net adjustment shall be charged or credited to unearned income.

.07 If a refunding of tax-exempt debt results in a change in the provisions of a lease that passes the perceived economic advantages of the refunding through to the lessee and the revised agreement is classified as a direct financing lease, paragraphs 18(c) and 17(f)(i) of FASB Statement No. 13 [sections 4053.018(c) and 4053.017(f)(i)] require the lessor to adjust the balance of the minimum lease payments receivable and unearned income. The lessor, on the other hand, would look to APB Opinion No. 26 [section 5362] for guidance in accounting for a refunding. That Opinion requires recognition of a gain or loss concurrent with early extinguishments of debt. The Board has concluded that the accounting for changes in the provisions of a lease in connection with a refunding of tax-exempt debt should be compatible with the accounting for the refunding of the debt itself. The Board has, therefore, decided to amend paragraph 17(f) of Statement No. 13 [section 4053.017(f)] so that any gain or loss resulting from a change in the provisions of a lease agreement in con-
connection with a refunding of tax-exempt debt is recognized when the tax-exempt debt is considered to have been extinguished.

Other Matters

.08 An Exposure Draft of a proposed Statement on “Accounting for Leases: Changes in the Provisions of Lease Agreements Resulting from Refundings of Tax-Exempt Debt” was issued on December 19, 1977. The Board received 26 letters of comment in response to the Exposure Draft, most of which expressed general agreement.

.09 Several respondents recommended that the final Statement should apply to all types of refundings and not be limited to refundings involving only tax-exempt debt. The Board noted that, typically, lessors in tax-exempt debt refundings are governmental or quasi-governmental agencies that are not affected by state or federal income tax regulations. For the most part, the governmental lessor’s borrowing serves only to obtain necessary financing for the construction of the leased facilities. Refundings that do not involve tax-exempt debt may involve considerations beyond those normally present in the lessor/lessee relationship discussed above. The Board considered these recommendations and concluded that further consideration of the subject of refundings should not delay the issuance of this Statement.

.10 The Board has concluded that on the basis of existing information it can reach an informed decision without a public hearing, and the effective date and transition specified in paragraph .16 are advisable in the circumstances.

.11 The addendum to APB Opinion No. 2 [section 6011] “Accounting for the ‘Investment Credit,’” states that “differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the rate-making process” and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum shall govern the application of this Statement to those operations of a company that are regulated for rate-making purposes on an individual-company-cost-of-service basis.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

.12 If prior to the expiration of the lease term a change in the provisions of a lease results from a refunding by the lessor
of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee and the revised agreement is classified as a capital lease by the lessee or a direct financing lease by the lessor, the change shall be accounted for as follows:

a. Lessee accounting:
   i. If a change in the provisions of a lease results from a refunding by the lessor of tax-exempt debt, including an advance refunding that is accounted for as an early extinguishment of debt, the lessee shall adjust the lease obligation to the present value of the future minimum lease payments under the revised lease using the effective interest rate applicable to the revised agreement and shall recognize any resulting gain or loss currently as a gain or loss on early extinguishment of debt. Any gain or loss so determined shall be classified in accordance with FASB Statement No. 4 [section 2013].
   ii. If the provisions of a lease are changed in connection with an advance refunding by the lessor of tax-exempt debt that is not accounted for as an early extinguishment of debt at the date of the advance refunding and the lessee is obligated to reimburse the lessor for any costs related to the debt to be refunded that have been or will be incurred, such as unamortized discount or issue costs or a call premium, the lessee shall accrue those costs by the "interest" method over the period from the date of the advance refunding to the call date of the debt to be refunded.

b. Lessor accounting:
   i. If a change in the provisions of a lease results from a refunding of tax-exempt debt, including an advance refunding that is accounted for as an early extinguishment of debt, the lessor shall adjust the balance of the minimum lease payments receivable and the estimated residual value, if affected (i.e., the gross investment in the lease) in accordance with the requirements of para-

---

2 See footnote 1.
3 See paragraph 12 of FASB Statement No. 13 [section 4053.012] and footnote 11 thereto.
4 This paragraph prescribes the accounting for a direct financing lease by governmental units that classify and account for leases of that kind.
Revenue and Expense

graphs 18(c) and 17(f)(i) of FASB Statement No. 13 [sections 4053.018(c) and 4053.017(f)(i)]. The adjust­
ment of unearned income shall be the amount required to adjust the net investment in the lease to the sum of
the present values of the two components of the gross investment based on the interest rate applicable to the revised lease agreement. The combined adjust­
ment resulting from applying the two preceding sentences shall be recognized as a gain or loss in the current period.

ii. If a change in the provisions of a lease results from an advance refunding that is not accounted for as an early extinguishment of debt at the date of the advance refunding, the lessor shall systematically recognize, as revenue, any reimbursements to be received from the lessee for costs related to the debt to be refunded, such as unamortized discount or issue costs or a call premium, over the period from the date of the advance refunding to the call date of the debt to be refunded.

.13 The accounting prescribed in subparagraphs .12(a)(i) and .12(b)(i) for a refunding of tax-exempt debt is illustrated in Appendix A.

Amendments to Section 4053

.14 The introduction to paragraph 14 of FASB Statement No. 13 [section 4053.014] is amended to read as follows:

Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a capital lease (see FASB Statement No. 22 [section 4055]), a change in the provisions of a lease, a renewal or extension of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows:

.15 The introduction to paragraph 17(f) of FASB Statement No. 13 [section 4053.017(f)] is amended to read as follows:

Except for a change in the provisions of a lease that results from a refunding by the lessor of tax-exempt debt, including an advance refunding, in which the perceived economic advantages of the refunding are passed through to the lessee by a change in the provisions of the lease agreement and the revised agreement is classified as a direct financing lease (see FASB Statement No. 22 [section 4055]), a change in the provisions of a lease, a renewal or extension of an existing lease, and a termination of a lease prior to the expiration of the lease term shall be accounted for as follows:
Effective Date and Transition
.16 This Statement shall be effective for lease agreement revisions entered into or after July 1, 1978. Earlier application is encouraged. In addition, the provisions of this Statement shall be applied retroactively at the same time and in the same manner as the provisions of FASB Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Statement may, but are not required to, apply the provisions of this Statement retroactively.

The provisions of this Statement need not be applied to immaterial items.

Appendix A

ILLUSTRATION OF LESSOR AND LESSEE ACCOUNTING REQUIRED BY PARAGRAPH .12 OF THIS STATEMENT

.17 The following example illustrates the application of the requirements of subparagraphs .12(a)(i) and .12(b)(i) of this Statement when a refunding of tax-exempt debt results in a change in the provisions of a lease agreement and the revised lease is classified as a direct financing lease by the lessor and as a capital lease by the lessee.

Computation Information

The following table summarizes the total debt service requirements of the serial obligation to be refunded and of the refunding obligation. It is presumed that the perceived economic advantages of the refunding results from the lower interest rate applicable to the refunding obligation. The resulting reduction in total debt service requirements will be passed through to the lessee by changing the terms of the related lease to conform with the debt service requirements of the refunding obligation. All costs that have been or that will be incurred by the lessor in connection with the refunding transaction will be passed through to the lessee.

Fifteen Year Serial Debt Service Requirements ($000 omitted):

<table>
<thead>
<tr>
<th>Obligation to Be Refunded</th>
<th>Refunding Obligation*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Face Amount</td>
<td>Interest 7%</td>
</tr>
<tr>
<td>$50,000</td>
<td>$32,300</td>
</tr>
</tbody>
</table>

* The face amount of the refunding obligation ($52,000,000) is equal to the face amount of the obligation to be refunded ($50,000,000) plus the redemption premium applicable to the obligation to be refunded ($1,500,000) and the costs of issuance ($500,000).
LESSOR ACCOUNTING

Computation of Required Adjustments to Reflect Changes in the Terms of a Lease Resulting from a Refunding of Tax-Exempt Debt

Adjustment to Balance of Minimum Lease Payments Receivable:

Present balance of minimum lease payments receivable (equal to debt service requirements of obligation to be refunded) $82,300,000

Minimum lease payments receivable under revised agreement (equal to debt service requirements of refunding obligation) 75,150,000

Adjustment to reflect reduction in minimum lease payments receivable $ 7,150,000

Adjustment to Unearned Income:

Change in the sum of the present value of the two components of the gross investment using the interest rate applicable to each agreement $ 2,000,000

Change in the balance of minimum lease payments receivable 7,150,000

Adjustment to reflect reduction in balance of unearned income $ 9,150,000

Summary of Adjustments ($000 omitted):

To adjust unearned income by the amount required to adjust the net investment in the lease to the sum of the present values of the two components of the gross investment based on the interest rate applicable to the revised lease agreement in accordance with FASB Statement No. 22.
LESSEE ACCOUNTING

Computation of Required Adjustment to Lease Obligation to Reflect Changes in the Terms of the Lease Resulting from a Refunding of Tax-Exempt Debt

Adjustment to Balance of Lease Obligation:

Present balance of lease obligation under original agreement $50,000,000

Present value of future minimum lease payments under revised agreement 51,500,000

Adjustment to lease obligation $1,500,000

Journal Entry to Record Adjustment to Lease Obligation Resulting from a Refunding of Tax-Exempt Debt

Loss resulting from revision to lease agreement 1,500,000

Obligation under capital lease 1,500,000

To record the loss resulting from changes in the lease terms resulting from a refunding of tax-exempt debt. For purposes of calculating the present value of the future minimum lease payments, deferred issue costs were considered as additional interest in determining the effective interest rate applicable to the revised agreement. (The loss shall be classified in accordance with FASB Statement No. 4.)
AC Section 4056

Inception of the Lease

an amendment of section 4053
[Source: FASB Statement No. 23.]

August 1978

INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to reconsider the application of FASB Statement No. 13 [section 4053], “Accounting for Leases,” for a leasing transaction in which the lessor and lessee agree on lease terms prior to the construction of the asset to be leased. Paragraph .02 describes circumstances in which a literal application of Statement No. 13 [section 4053] can result in a lease classification that does not reflect the economic considerations that entered into the agreement.

.02 A lease that is, in effect, a financing transaction might be classified as an operating lease by both parties rather than as a capital lease to the lessee and a direct financing lease to the lessor. That classification would result from application of the 90 percent recovery criterion in FASB Statement No. 13 [section 4053] at the date of completion of construction instead of the earlier date of the agreement or commitment. If the fair value of the leased asset increases during the construction period, it is possible that the present value of the minimum lease payments at the beginning of the lease term could be more than 90 percent of the estimated fair value of the leased asset at the earlier agreement date but less than 90 percent of the fair value of the leased asset at the later date that construction is completed. On the other hand, if the fair value of the leased asset decreases during the construction period, a lease that would otherwise have been classified as a direct financing lease by the lessor might meet the criteria for classification as a sales-type lease, requiring recognition of a loss even though the terms of the lease were designed to provide full recovery of cost and a reasonable rate of return on net investment to the lessor.

.03 In view of the matters discussed above, the Board concluded that it should amend the definition of “inception of the lease” in FASB Statement No. 13 [section 4053] to make it the date of the lease agreement or any earlier commitment in all cases. Previously, if a lease were for property to be
constructed or to be acquired by the lessor, the "inception of the lease" would have been the date that construction was completed or the property was acquired by the lessor. The purpose of the change is to make the classification of a lease, which is determined at its inception date, better reflect the economic considerations that entered into the agreement. This Statement also amends two paragraphs of Statement No. 13 [section 4053] to provide that, if a lease has a cost-based or similar construction period escalator clause, "fair value at the inception of the lease," for purposes of the lessee's recording of the lease, is escalated to reflect any increases under that clause.

.04 An Exposure Draft of a proposed Statement on "Accounting for Leases—Inception of the Lease" was issued on December 19, 1977. The Board received 30 letters of comment in response to the Exposure Draft. Certain of the comments received and the Board's consideration of them are discussed in Appendix A, "Summary of Consideration of Comments on Exposure Draft."

.05 The Board concluded that on the basis of existing information it can make an informed decision on the matters addressed by this Statement without a public hearing and that the effective date and transition specified in paragraph .11 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Amendments to Section 4053

.06 Paragraph 5(b) of FASB Statement No. 13 [section 4053.005(b)] is superseded by the following:

Inception of the lease. The date of the lease agreement or commitment, if earlier. For purposes of this definition, a commitment shall be in writing, signed by the parties in interest to the transaction, and shall specifically set forth the principal provisions of the transaction. If any of the principal provisions are yet to be negotiated, such a preliminary agreement or commitment does not qualify for purposes of this definition.

.07 The following footnote is added to the end of the first sentence of paragraph 8(b) of FASB Statement No. 13 [section 4053.008(b)]:

If the property covered by the lease is yet to be constructed or has not been acquired by the lessor at the inception of the lease, the classification criterion of para-
Inception of the Lease

.08 The following footnote is added to the end of the second sentence of paragraph 10 of FASB Statement No. 13 [section 4053.010] and to the end of the second sentence of paragraph 26(a)(i) of Statement No. 13 [section 4053.026(a)(i)]:

If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of “fair value of the leased property at the inception of the lease” for purposes of this paragraph.

.09 Paragraphs 17(a) and 18(a) of FASB Statement No. 13 [sections 4053.017(a) and 4053.018(a)] are amended by adding the following final sentence and related footnote to each paragraph:

The estimated residual value used to compute the unguaranteed residual value accruing to the benefit of the lessor shall not exceed the amount estimated at the inception of the lease except as provided in footnote.*

---

* If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of “the estimated residual value of the leased property at the inception of the lease” for purposes of this paragraph.

.10 Paragraph 43(c) of FASB Statement No. 13 [section 4053.043(c)] is amended by adding the following final sentence and related footnote:
The estimated residual value shall not exceed the amount estimated at the inception of the lease except as provided in footnote.†

† If the lease agreement or commitment, if earlier, includes a provision to escalate minimum lease payments for increases in construction or acquisition cost of the leased property or for increases in some other measure of cost or value, such as general price levels, during the construction or pre-acquisition period, the effect of any increases that have occurred shall be considered in the determination of "the estimated residual value of the leased property at the inception of the lease" for purposes of this paragraph.

Effective Date and Transition

.11 The provisions of this amendment to FASB Statement No. 13 [section 4053] shall be effective for leasing transactions recorded and lease agreement revisions (see paragraph 9 of Statement No. 13 [section 4053.009]) recorded as of December 1, 1978 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Statement shall be applied retroactively at the same time and in the same manner as the provisions of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Statement may, but are not required to, apply the provisions of this Statement retroactively.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

SUMMARY OF CONSIDERATION OF COMMENTS ON EXPOSURE DRAFT

.12 The December 19, 1977 Exposure Draft proposed a complex amendment of the definition of \textit{inception of the lease} in paragraph 5(b) of \textit{FASB Statement No. 13} [section 4053.005 (b)]. The amended definition would have modified various determinations used for both classification of and accounting for a lease. The Exposure Draft also would have, in most cases, limited the amount recorded by the lessor for the residual value of the leased property to an amount not greater than the lessor's estimate as of inception of the lease.

.13 Many respondents indicated that the proposed amendment was too complicated and requested clarification or simplification. Some respondents suggested that the Board separate lease classification from lease recording. Based on those comments, the Board made this final Statement a series of individual amendments that, in total, have approximately the same result as the Exposure Draft. The individual amendments are:

a. The definition of \textit{inception of the lease} in paragraph 5(b) of \textit{FASB Statement No. 13} [section 4053.005(b)] is amended to make it the date of the lease agreement or any earlier commitment. This modification should result in a lessee's classification of a lease that reflects the economic considerations that entered into the agreement.

b. A footnote was added to paragraph 8(b) of Statement No. 13 [section 4053.008(b)] to permit a lease of property that is to be constructed or acquired by the lessor to be classified as a sales-type lease or direct financing lease (providing it otherwise meets the criteria for those classifications) if there are no important uncertainties about unreimbursable costs yet to be incurred by the lessor at the date that the property is completed or acquired by the lessor, although there may have been such uncertainties at the inception of the lease. This modification and the modification described in paragraph .13(a) above, in combination, should result in a lessee's classification of a lease that reflects the economic considerations that entered into the agreement.
c. Footnotes were added to paragraphs 10 and 26(a)(i) of Statement No. 13 [sections 4053.010 and 4053.026 (a)(i)] to require a lessee to escalate the "fair value at the inception of the lease," used as a limitation for amounts to be recorded and as a basis for allocation between land and buildings in a real estate lease, for the effects of an escalator provision. The footnotes apply only to leases that include cost-based or similar construction period or pre-acquisition period escalator provisions.

d. Paragraphs .09 and .10 of this Statement modify paragraphs 17(a), 18(a), and 43 of Statement No. 13 [sections 4053.017(a), 4053.018(a) and 4053.043] to limit the amount recorded by the lessor for the residual value of the leased property to an amount not greater than the estimate as of the inception of the lease. Footnotes were added to provide a limited exception to this requirement in the event that a lease includes a cost-based or similar construction period or pre-acquisition period escalator provision.

e. If a lease calls for adjustment of a lease provision because of specified changes occurring during a construction or pre-acquisition period, a new determination related to that occurrence may be appropriate if Statement No. 13 [section 4053] requires a determination at the inception of the lease for recording purposes. The Exposure Draft specified formula adjustments that would have applied to any lease provisions that call for adjustments. For simplicity, this Statement addresses only the usual cost-based or similar construction or pre-acquisition period escalator provisions (see paragraph .13(c) above). The parties to the lease should make the appropriate adjustments to record a lease if other types of construction period or pre-acquisition period contingency provisions are present. However, no adjustments should be made to reflect the effect of contingency provisions that continue during the lease term.

.14 Some respondents questioned the application of the amended definition of inception of the lease to multiple "takedowns" of equipment under a master lease agreement. If a master lease agreement specifies that the lessee must take a minimum number of units or dollar value of equipment and if all other principal provisions are stated, the inception of the lease is the date of the master lease agreement with respect to the specified
minimum. The inception of the lease for equipment "takedowns" in excess of the specified minimum is the date that the lessee orders the equipment because the lessee does not agree to lease the equipment until that date. To the extent that lease payments for required "takedowns" are based on value at the date of the "takedown," the lease, in effect, has a pre-acquisition period escalator provision based on value. Paragraphs .08-.10 of this Statement address that situation. If a master lease agreement does not require the lessee to "takedown" any minimum quantity or dollar value of equipment, the agreement is merely an offer by the lessor to rent equipment at an agreed price and the inception of the lease is the date that the lessee orders the equipment.

.15 Some respondents stated that retroactive application of the proposed Statement would require extensive recomputations to classify and account for existing leases and questioned whether the cost would be justified. Many respondents, on the other hand, stated that retroactive application of the amended definition in the proposed Statement was necessary to reflect the economic considerations that entered into existing leases. The Board considered the problems of data accumulation and reconsidered whether to require retroactive application or to permit prospective application of this Statement. Paragraphs 115-119 of FASB Statement No. 13 [section 4053.115-.119] discuss the considerations that resulted in the requirement for retroactive application of that Statement. The same considerations influenced the Board in its decision to adopt the transition requirements in this Statement. This Statement permits, but does not require, retroactive application for enterprises that have already applied Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts. All other enterprises are required to apply the provisions of this Statement retroactively at the same time as they apply the provisions of Statement No. 13 [section 4053] retroactively. Companies with a large number of leases that are affected may be able to use aggregate computations or statistical sampling techniques to compute the required adjustments.

The next page is 8459-9.
INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked by a committee of the American Institute of Certified Public Accountants to resolve a problem in the application of FASB Statement No. 13 [section 4053], "Accounting for Leases," to leases involving real estate. The problem arises because the classification criteria of paragraph 8 of Statement No. 13 [section 4053.008] are different from and not as specific as those that relate to the recognition of profits on sales of real estate under the AICPA Industry Accounting Guide, "Accounting for Profit Recognition on Sales of Real Estate" (the AICPA Accounting Guide). The AICPA Accounting Guide addresses the timing of profit recognition on real estate sales and concludes that the buyer's investment in the property acquired and the seller's continuing involvement in the property sold are matters of significance in determining the recognition of profits from real estate sales.

.02 Paragraph 6(b)(i) of FASB Statement No. 13 [section 4053.006(b)(i)] describes sales-type leases as:

Leases that give rise to manufacturer's or dealer's profit (or loss) to the lessor (i.e., the fair value of the leased property at the inception of the lease is greater or less than its cost or carrying amount, if different) and that meet one or more of the criteria in paragraph 7 and both of the criteria in paragraph 8. Normally, sales-type leases will arise when manufacturers or dealers use leasing as a means of marketing their products. Leases involving lessors that are primarily engaged in financing operations normally will not be sales-type leases if they qualify under paragraphs 7 and 8, but will most often be direct financing leases, described in paragraph 6(b)(ii) below. However, a lessor need not be a dealer to realize dealer's profit (or loss) on a transaction, e.g., if a lessor, not a dealer, leases an asset that at the inception of the lease has a fair value that is greater or less than its cost or carrying amount, if different, such a transaction is a sales-type lease, assuming the criteria referred to are met.
The criteria for lessors to classify leases are set forth in paragraphs 7 and 8 of Statement No. 13 [section 4053.007-008]. A lease that meets any one of the criteria of paragraph 7 [section 4053.007] and both of the criteria of paragraph 8 [section 4053.008] is classified as a sales-type lease if at inception the fair value of the leased property is greater or less than its cost or carrying amount, if different.

Those making the request described in paragraph .01 indicated that sales transactions of real estate that would not meet the requirements of the AICPA Accounting Guide for full and immediate profit recognition might qualify for profit recognition if they were consummated, instead, as sales-type leases under FASB Statement No. 13 [section 4053]. They believe that the collectibility criterion of paragraph 8(a) of Statement No. 13 [section 4053.008(a)] for sales-type leases of real estate should be equivalent to the tests relating to the adequacy of the buyer's initial and continuing investment in the property acquired as described in paragraphs 15-37 of the AICPA Accounting Guide. Further, they believe that the cost uncertainty criterion of paragraph 8(b) of Statement No. 13 [section 4053.008(b)] would not be met if the lessor continues to be involved with the leased property in any of the ways described in paragraphs 38-60 of the AICPA Accounting Guide because of uncertainties about the amount of unreimbursable costs yet to be incurred by the lessor.

An Exposure Draft of a proposed Statement on "Profit Recognition on Sales-Type Leases of Real Estate" was issued for public comment on December 22, 1978. The Board received 33 letters of comment in response to the Exposure Draft, a majority of which expressed general agreement.

Several respondents stated that the accounting requirements of the AICPA Accounting Guide should govern profit recognition on sales-type leases of real estate and not the classification of a lease. The Board considered the possibility of amending FASB Statement No. 13 [section 4053] to adopt the accounting requirements prescribed in the AICPA Accounting Guide. However, the Board concluded that that approach would involve significant implementation problems and require significant modifications to Statement No. 13 [section 4053]. Accordingly, in the interest of resolving this problem, the Board decided to amend paragraph 8 of Statement No. 13 [section 4053.008] to adopt the requirements of the AICPA Accounting Guide for full and immediate profit recognition as a condition for classifying a lease of real estate.
as a sales-type lease if a "sales-type" profit would result from the transaction (i.e., the fair value of the leased property at inception is greater than its cost or carrying amount, if different). In concluding that those requirements should be adopted as a condition for classifying a lease of real estate as a sales-type lease, the Board determined that those requirements should be met as of the beginning of the lease term rather than as of the inception date. Those requirements concern the adequacy of the buyer's initial and continuing investment in the property acquired and the conditions relating to the seller's continued involvement with the property sold.

.06 The Board has concluded that it can reach an informed decision on the basis of existing data without a public hearing and that the effective date and transition specified in paragraph .08 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING
Amendment to Section 4053

.07 Paragraph 8 of FASB Statement No. 13 [section 4053.008] is amended by adding the following at the end of that paragraph:

However, a lease involving real estate that would otherwise be classified as of the inception date as a sales-type lease giving rise to a manufacturer's or dealer's profit as described in paragraph 6(b)(i) shall be classified as an operating lease unless at the beginning of the lease term it also meets the requirements that a sale of the same property would have to meet for full and immediate profit recognition under the AICPA Industry Accounting Guide, "Accounting for Profit Recognition on Sales of Real Estate." Those requirements relate to the adequacy of the buyer's initial and continuing investment in the property acquired and the conditions relating to the seller's continued involvement with the property sold.

Effective Date and Transition

.08 The provisions of this amendment to FASB Statement No. 13 [section 4053] shall be effective for leasing transactions recorded and lease agreement revisions (see paragraph 9 of Statement No. 13 [section 4053.009]) recorded as of August 1, 1979 or thereafter. Earlier application is encouraged. In addition, except as provided in the next sentence, the provisions of this Statement shall be applied retroactively at the same time and in the same manner as the provisions
of Statement No. 13 [section 4053] are applied retroactively (see paragraphs 49 and 51 of Statement No. 13 [sections 4053.049 and 4053.051]). Enterprises that have already applied the provisions of Statement No. 13 [section 4053] retroactively and have published annual financial statements based on the retroactively adjusted accounts before the effective date of this Statement may, but are not required to, apply the provisions of this Statement retroactively.

The provisions of this Statement need not be applied to immaterial items.
Compensation Involved in Stock Option and Stock Purchase Plans

[Source: ARB No. 43, Chap. 13B, as amended.]

Issue date, unless otherwise indicated: June, 1953

.01 The practice of granting to officers and other employees options to purchase or rights to subscribe for shares of a corporation's capital stock has been followed by a considerable number of corporations over a period of many years. To the extent that such options and rights involve a measurable amount of compensation, this cost of services received should be accounted for as such. The amount of compensation involved may be substantial and omission of such costs from the corporation's accounting may result in overstatement of net income to a significant degree. Accordingly, consideration is given herein to the accounting treatment of compensation represented by stock options or purchase rights granted to officers and other employees.

.02 For convenience, this section will discuss primarily the problems of compensation raised by stock option plans. However, the committee feels that substantially the same problems may be encountered in connection with stock purchase plans made available to employees, and the discussion below is applicable to such plans also.

---

1 Bulletin 37, "Accounting for Compensation in the Form of Stock Options," was issued in November, 1948. Issuance of a revised bulletin in 1953 and its expansion to include stock purchase plans were prompted by the very considerable increase in the use of certain types of option and purchase plans following the enactment in 1950 of Section 130A of the Internal Revenue Code. This section granted specialized tax treatment to employee stock options if certain requirements were met as to the terms of the option, as to the circumstances under which the option was granted and could be exercised and as to the holding and disposal of the stock acquired thereunder. In general, the effect of Section 130A was to eliminate or minimize the amount of income taxable to the employee as compensation and to deny to the issuing corporation any tax deduction in respect of such restricted options. In 1951, Federal Salary Stabilization Board issued rules and regulations relating to stock options and purchase rights granted to employees whereby options generally comparable in nature to the restricted stock options specified in Section 130A might be considered for its purposes not to involve compensation, or to involve compensation only in limited amounts. [Ed. note: changed to past tense.]
RIGHTS INVOLVING COMPENSATION

.03 Stock options involving an element of compensation usually arise out of an offer or agreement by an employer corporation to issue shares of its capital stock to one or more officers or other employees (hereinafter referred to as grantees) at a stated price. The grantees are accorded the right to require issuance of the shares either at a specified time or during some determinable period. In some cases the grantee’s options are exercisable only if at the time of exercise certain conditions exist, such as that the grantee is then or until a specified date has been an employee. In other cases, the grantees may have undertaken certain obligations, such as to remain in the employment of the corporation for at least a specified period, or to take the shares only for investment purposes and not for resale.

RIGHTS NOT INVOLVING COMPENSATION

.04 Stock option plans in many cases may be intended not primarily as a special form of compensation but rather as an important means of raising capital, or as an inducement to obtain greater or more widespread ownership of the corporation’s stock among its officers and other employees. In general, the terms under which such options are granted, including any conditions as to exercise of the options or disposal of the stock acquired, are the most significant evidence ordinarily available as to the nature and purpose of a particular stock option or stock option plan. In practice, it is often apparent that a particular option or plan involves elements of two or more of the above purposes. Where the inducements are not larger per share than would reasonably be required in an offer of shares to all shareholders for the purpose of raising an equivalent amount of capital, no compensation need be presumed to be involved.

.05 Stock purchase plans also are frequently an integral part of a corporation’s program to secure equity capital or to obtain widespread ownership among employees, or both. In such cases, no element of compensation need be considered to be present if the purchase price is not

Footnote: Four essential characteristics of a noncompensatory plan are described in section 4062.07.
TIME OF MEASUREMENT OF COMPENSATION

.06 In the case of stock options involving compensation, the principal problem is the measurement of the compensation. This problem involves selection of the date as of which measurement of any element of compensation is to be made and the manner of measurement. The date as of which measurement is made is of critical importance since the fair value of the shares under option may vary materially in the often extended period during which the option is outstanding. There may be at least six dates to be considered for this purpose: (a) the date of the adoption of an option plan, (b) the date on which an option is granted to a specific individual, (c) the date on which the grantee has performed any conditions precedent to exercise of the option, (d) the date on which the grantee may first exercise the option, (e) the date on which the option is exercised by the grantee, and (f) the date on which the grantee disposes of the stock acquired.

.07 Of the six dates mentioned two are not relevant to the question considered in this section—cost to the corporation which is granting the option. The date of adoption of an option plan clearly has no relevance, inasmuch as the plan per se constitutes no more than a proposed course of action which is ineffective until options are granted thereunder. The date on which a grantee disposes of the shares acquired under an option is equally immaterial since this date will depend on the desires of the individual as a shareholder and bears no necessary relation to the services performed.3

.08 The date on which the option is exercised has been advocated as the date on which a cost may be said to have been incurred. Use of this date is supported by the argument that only then will it be known whether or not the option will be exercised. However, beginning with the time at which the grantee may first exercise the op-

3 This was the date on which income or gain taxable to the grantee might arise under Section 139A. Use of this date for tax purposes was doubtless based on considerations as to the ability of the optionee to pay taxes prior to sale of the shares. [Ed. note: changed to past tense.]
tion he is in effect speculating for his own account. His
delay has no discernible relation to his status as an em­
ployee but reflects only his judgment as an investor.

.09 The date on which the grantee may first exercise
the option will generally coincide with, but in some cases
may follow, the date on which the grantee will have per­
formed any conditions precedent to exercise of the option.
Accordingly this date presents no special problems differ­
ing from those to be discussed in the next paragraph.

.10 There remain to be considered the date on which
an option is granted to a specific individual and the date
on which the grantee has fulfilled any conditions prece­
dent to exercise of the option. When compensation is paid
in a form other than cash the amount of compensation is
ordinarily determined by the fair value of the property
which was agreed to be given in exchange for the serv­
ices to be rendered. The time at which such fair value
is to be determined may be subject to some difference of
opinion but it appears that the date on which an option
is granted to a specific individual would be the appropri­
ate point at which to evaluate the cost to the employer,
since it was the value at that date which the employer may
be presumed to have had in mind. In most of the cases
under discussion, moreover, the only important contingency
involved is the continuance of the grantee in the employ­
ment of the corporation, a matter very largely within the
control of the grantee and usually the main objective of
the grantor. Under such circumstances it may be assumed
that if the stock option were granted as a part of an em­
ployment contract, both parties had in mind a valuation of
the option at the date of the contract; and accordingly,
value at that date should be used as the amount to be ac­
counted for as compensation. If the option were granted
as a form of supplementary compensation otherwise than
as an integral part of an employment contract, the grantor
is nevertheless governed in determining the option price
and the number of shares by conditions then existing. It
follows that it is the value of the option at that time, rather
than the grantee’s ultimate gain or loss on the transac­
tion, which for accounting purposes constitutes whatever
compensation the grantor intends to pay. The committee
therefore concludes that in most cases, including situations where the right to exercise is conditional upon continued employment, valuation should be made of the option as of the date of grant.

.11 The date of grant also represents the date on which the corporation foregoes the principal alternative use of the shares which it places subject to option, i.e., the sale of such shares at the then prevailing market price. Viewed in this light, the cost of utilizing the shares for purposes of the option plan can best be measured in relation to what could then have been obtained through sale of such shares in the open market. However, the fact that the grantor might, as events turned out, have obtained at some later date either more or less for the shares in question than at the date of the grant does not bear upon the measurement of the compensation which can be said to have been in contemplation of the parties at the date the option was granted.4

**MANNER OF MEASUREMENT**

.12 Freely exercisable option rights, even at prices above the current market price of the shares, have been traded in the public markets for many years, but there is no such objective means for measuring the value of an option which is not transferable and is subject to such other restrictions as are usually present in options of the nature here under discussion. Although there is, from the standpoint of the grantee, a value inherent in a restricted future right to purchase shares at a price at or even above the fair value of shares at the grant date, the committee believes it is impracticable to measure any such value. As to the grantee any positive element may, for practical purposes, be deemed to be largely or wholly offset by the negative effect of the restrictions ordinarily present in options of the type under discussion. From the viewpoint of the grantor corporation no measurable cost can be said to have been incurred because it could not at the grant date have realized more than the *fair value* of the optioned shares, the concept of fair value as here used encompassing the possibility and prospect of future developments. On the other hand, it follows in the opinion of the committee that

---

* Also see section 4062.10b for the definition of the *measurement date*.
the value to the grantee and the related cost to the corporation of a restricted right to purchase shares at a price below the fair value of the shares at the grant date may for the purposes here under discussion be taken as the excess of the then fair value of the shares over the option price.5

.13 While market quotations of shares are an important and often a principal factor in determining the fair value of shares, market quotations at a given date are not necessarily conclusive evidence.6 Where significant market quotations cannot be obtained, other recognized methods of valuation have to be used. Furthermore, in determining the fair value7 of shares for the purpose of measuring the cost incurred by a corporation in the issuance of an option, it is appropriate to take into consideration such modifying factors as the range of quotations over a reasonable period and the fact that the corporation by selling shares pursuant to an option may avoid some or all of the expenses otherwise incurred in a sale of shares. The absence of a ready market, as in the case of shares of closely-held corporations, should also be taken into account and may require the use of other means of arriving at fair value than by reference to an occasional market quotation or sale of the security.8

OTHER CONSIDERATIONS

.14 If the period for which payment for services is being made by the issuance of the stock option is not specifically indicated in the offer or agreement, the value of the option should be apportioned over the period of service for which the payment of the compensation seems appropriate in the existing circumstances. Accrual of the compensation over the period selected should be made by means of charges against the income account.9 Upon exerc-

---

5 Section 4062.10 states that “Compensation for services that a corporation receives as consideration for stock issued through employee stock option, purchase, and award plans should be measured by the quoted market price of the stock at the measurement date less the amount, if any, that the employee is required to pay.” [As amended by APB Opinion No. 25, effective after December 31, 1972.]

6 Whether treasury or unissued shares are to be used to fulfill the obligation is not material to a determination of value. (However, see section 4062.11a.)

7 See section 4062.10 in which quoted market price is substituted for fair value.

8 See section 4062.10a.

9 See sections 4062.12-15.
cise of an option the sum of the cash received and the amount of the charge to income should be accounted for as the consideration received on issuance of the stock.

.15 In connection with financial statements, disclosure should be made as to the status of the option or plan at the end of the period of report, including the number of shares under option, the option price, and the number of shares as to which options were exercisable. As to options exercised during the period, disclosure should be made of the number of shares involved and the option price thereof.

AC Section 4062

Accounting for Stock Issued to Employees*

[Source: APB Opinion No. 25.]

Effective for all stock option, purchase, award, and bonus rights granted after December 31, 1972, unless otherwise indicated 1

INTRODUCTION

Scope of Section

.01 Many corporations have adopted various plans, contracts, and agreements to compensate officers and other employees by issuing to them stock of the employer corporation. Under traditional stock option and stock purchase plans an employer corporation grants options to purchase a fixed number of shares of stock of the corporation at a stated price during a specified period or grants rights to purchase shares of stock of the corporation at a stated price, often at a discount from the market price of the stock at the date the rights are granted. Stock options and purchase rights are normally granted for future services of employees. Section 4061, Compensation Involved in Stock Option and Stock Purchase Plans (1953), contains the principles of accounting for those plans.

.02 Among traditional plans not described in section 4061 are plans in which an employer corporation awards to employees shares of stock of the corporation for current or future services. Some corporations have replaced or supplemented traditional plans with more complex plans, contracts, and agreements for issuing stock. An arrangement may be based on variable factors that depend on future events; for example, a corporation may award a variable number of shares of stock or may grant a stock option with a variable option price. Other arrangements combine the characteristics of two or more types of plans, and some give an employee an election.

* See also FASB Interpretation No. 31, Treatment of Stock Compensation Plans in EPS Computations (section 2011-1).

1 See paragraph .20.

AICPA Professional Standards
.03 Accounting for employee services received as consideration for stock issued is included in Accounting Research Study No. 15, *Stockholders' Equity.*

.04 This section deals with some aspects of accounting for stock issued to employees through both noncompensatory and compensatory plans (a plan is any arrangement to issue stock to officers and employees, as a group or individually). Section 4061 remains in effect for traditional stock option and stock purchase plans except that the measure of compensation is redefined in this section. This section recognizes certain practices that evolved after section 4061 was adopted and applies the principles of that section to other plans in which the number of shares of stock that may be acquired by or awarded to an employee and the option or purchase price, if any, are known or determinable at the date of grant or award. It also specifies the accounting for (a) plans in which either the number of shares of stock or the option or purchase price depends on future events and (b) income tax benefits related to stock issued to employees through stock option, purchase, and award plans. Section 4062A illustrates measuring and accounting for compensation under typical plans.

Differing Views

.05 Some accountants believe that compensation cost for all compensatory plans should be recorded at the date of grant or not later than the date of exercise. They believe that past experience and outside evidence of values can overcome difficulties in measuring compensation. Other accountants believe that compensation need not be recorded if an employee pays an amount that is at least equal to the market price of the stock at the date of grant and that problems in accounting for compensation plans pertain to plans in which the number of shares of stock or the option or purchase price cannot be determined until after the date of grant or award. Still other accountants, although they agree in principle with the first group, believe that progress will result from specifying the accounting for plans with variable factors but leaving section 4061 in effect with modifications while the entire topic of accounting for compensation involving stock is studied.

*Accounting research studies are not pronouncements of the Board or of the Institute but are published for the purpose of stimulating discussion on important accounting matters.*
.06 Some accountants believe that a tax benefit attributable to compensation that is deductible in computing taxable income but is not recorded as an expense of any period results from a permanent difference. The benefit should therefore be recorded under section 4091.32-.33, Accounting for Income Taxes, as a reduction of income tax expense for the period that the benefit is received. Other accountants believe that the tax benefit results from issuing stock and should be accounted for as an adjustment of capital in addition to par or stated value of capital stock in accordance with section 4091.51.

OPINION

Noncompensatory Plans

.07 Sections 4061.04-.05 describe stock option and stock purchase plans that may not be intended primarily to compensate employees. An employer corporation recognizes no compensation for services in computing consideration received for stock that is issued through noncompensatory plans. The Board concludes that at least four characteristics are essential in a noncompensatory plan: (a) substantially all full-time employees meeting limited employment qualifications may participate (employees owning a specified percent of the outstanding stock and executives may be excluded), (b) stock is offered to eligible employees equally or based on a uniform percentage of salary or wages (the plan may limit the number of shares of stock that an employee may purchase through the plan), (c) the time permitted for exercise of an option or purchase right is limited to a reasonable period, and (d) the discount from the market price of the stock is no greater than would be reasonable in an offer of stock to stockholders or others. An example of a noncompensatory plan is the "statutory" employee stock purchase plan that qualifies under Section 423 of the Internal Revenue Code.

Compensatory Plans

.08 Plans that do not possess the four characteristics of noncompensatory plans are classified as compensatory plans. Since the major principles of section 4061 are not
changed, classification as a compensatory plan does not necessarily require that compensation cost be recognized.\(^3\)

.09 *Services as Consideration for Stock Issued.* The consideration that a corporation receives for stock issued through a stock option, purchase, or award plan consists of cash or other assets, if any, plus services received from the employee.

.10 *Measuring Compensation for Services.* Compensation for services that a corporation receives as consideration for stock issued through employee stock option, purchase, and award plans should be measured by the quoted market price of the stock at the measurement date less the amount, if any, that the employee is required to pay. That is the principle in section 4061 with two modifications: (a) the meaning of fair value of stock for compensatory plans is narrowed and (b) the measurement date for plans with a variable number of shares of stock or a variable option or purchase price is different.

a. *Quoted market price* is substituted for *fair value.* The Board acknowledges the conclusion in section 4061 that “market quotations at a given date are not necessarily conclusive evidence” of fair value of shares of stock but concludes that, for purposes of this section, the unadjusted quoted market price of a share of stock of the same class that trades freely in an established market should be used in measuring compensation. An employee’s right to acquire or receive shares of stock is presumed to have a value and that value stems basically from the value of the stock to be received under the right. However, the value of the right is also affected by various other factors, some of which tend to diminish its value and some of which tend to enhance it. Those opposing factors include a known future purchase price (or no payment), restrictions on the employee’s right to receive stock, absence of commissions on acquisition, different risks as compared

---

\(^3\) All compensation arrangements involving stock, regardless of the name given, should be accounted for according to their substance. For example, an arrangement in which the consideration for stock issued to an employee is a nonrecourse note secured by the stock issued may be in substance the same as the grant of a stock option and should be accounted for accordingly. The note should be classified as a reduction of stockholders' equity rather than as an asset.
with those of a stockholder, tax consequences to the employee, and restrictions on the employee's ability to transfer stock issued under the right. The effects of the opposing factors are difficult to measure, and a practical solution is to rely on quoted market price to measure compensation cost related to issuing both restricted (or letter) and unrestricted stock through stock option, purchase, or award plans. If a quoted market price is unavailable, the best estimate of the market value of the stock should be used to measure compensation.

b. *The measurement date* for determining compensation cost in stock option, purchase, and award plans is the first date on which are known both (1) the number of shares that an individual employee is entitled to receive and (2) the option or purchase price, if any. That date for many or most plans is the date an option or purchase right is granted or stock is awarded to an individual employee and is therefore unchanged from section 4061. However, the measurement date may be later than the date of grant or award in plans with variable terms that depend on events after date of grant or award.

Thus a corporation recognizes compensation cost for stock issued through compensatory plans unless the employee pays an amount that is at least equal to the quoted market price of the stock at the measurement date.

.11 *Applying the measurement principle*—The following supplements paragraph .10 for special situations in some plans.

a. Measuring compensation by the cost to an employer corporation of reacquired (treasury) stock that is distributed through a stock option, purchase, or award plan is not acceptable practice. The only exception is that compensation cost under a plan with all the provisions described in paragraph .11(c) may be measured by the cost of stock that the corporation (1) reacquires during the fiscal period for which the stock is to be awarded and (2) awards shortly thereafter to employees for services during that period.
b. The measurement date is not changed from the grant or award date to a later date solely by provisions that termination of employment reduces the number of shares of stock that may be issued to an employee.

c. The measurement date of an award of stock for current service may be the end of the fiscal period, which is normally the effective date of the award, instead of the date that the award to an employee is determined if (1) the award is provided for by the terms of an established formal plan, (2) the plan designates the factors that determine the total dollar amount of awards to employees for the period (for example, a percent of income), although the total amount or the individual awards may not be known at the end of the period, and (3) the award pertains to current service of the employee for the period.

d. Renewing a stock option or purchase right or extending its period establishes a new measurement date as if the right were newly granted.

e. Transferring stock or assets to a trustee, agent, or other third party for distribution of stock to employees under the terms of an option, purchase, or award plan does not change the measurement date from a later date to the date of transfer unless the terms of the transfer provide that the stock (1) will not revert to the corporation, (2) will not be granted or awarded later to the same employee on terms different from or for services other than those specified in the original grant or award, and (3) will not be granted or awarded later to another employee.

f. The measurement date for a grant or award of convertible stock or (stock that is otherwise exchangeable for other securities of the corporation) is the date on which the ratio of conversion (or exchange) is known unless other terms are variable at that date (paragraph .10b). The higher of the quoted market price at the measurement date of (1) the convertible stock granted or awarded or (2) the securities into which the original grant or award 
Accounting for Stock Issued to Employees 8487

is convertible should be used to measure compensa-
g. Cash paid to an employee to settle an earlier award
of stock or to settle a grant of option to the em-
ployee should measure compensation cost. If the
cash payment differs from the earlier measure of
the award of stock or grant of option, compensation
cost should be adjusted (paragraph .15). The
amount that a corporation pays to an employee to
purchase stock previously issued to the employee
through a compensation plan is "cash paid to an
employee to settle an earlier award of stock or to
settle a grant of option" if stock is reacquired
shortly after issuance. Cash proceeds that a cor-
poration receives from sale of awarded stock or
stock issued on exercise of an option and remits to
the taxing authorities to cover required withholding
of income taxes on an award is not "cash paid to an
employee to settle an earlier award of stock or to
settle a grant of option" in measuring compensation
cost.

h. Some plans are a combination of two or more types
of plans. An employer corporation may need to
measure compensation for the separate parts. Com-
pensation cost for a combination plan permitting an
employee to elect one part should be measured ac-
cording to the terms that an employee is most likely
to elect based on the facts available each period.

.12 Accruing Compensation Cost. Compensation cost
in stock option, purchase, and award plans should be recog-
nized as an expense of one or more periods in which an
employee performs services and also as part or all of the
consideration received for stock issued to the employee
through a plan. The grant or award may specify the period
or periods during which the employee performs services, or
the period or periods may be inferred from the terms or
from the past pattern of grants or awards (section 4061.14;
section 4064.01).

.13 An employee may perform services in several
periods before an employer corporation issues stock to him
for those services. The employer corporation should accrue
compensation expense in each period in which the services
Revenue and Expense

are performed. If the measurement date is later than the
date of grant or award, an employer corporation should
record the compensation expense each period from date of
grant or award to date of measurement based on the quoted
market price of the stock at the end of each period.

.14 If stock is issued in a plan before some or all of the
services are performed,4 part of the consideration recorded
for the stock issued is unearned compensation and should
be shown as a separate reduction of stockholders' equity.
The unearned compensation should be accounted for as ex­
 pense of the period or periods in which the employee per­
forms service.

.15 Accruing compensation expense may require esti­
mates, and adjustment of those estimates in later periods
may be necessary (section 1051.31-.33, Accounting Changes).
For example, if a stock option is not exercised (or awarded
stock is returned to the corporation) because an employee
fails to fulfill an obligation, the estimate of compensation
expense recorded in previous periods should be adjusted by
decreasing compensation expense in the period of forfeiture.

.16 Accounting for Income Tax Benefits. An employer
corporation may obtain an income tax benefit related to
stock issued to an employee through a stock option, pur­
chase, or award plan. A corporation is usually entitled to
a deduction for income tax purposes of the amount that an
employee reports as ordinary income, and the deduction is
allowable to the corporation in the year in which the
amount is includable in the gross income of the employee.
Thus, a deduction for income tax purposes may differ from
the related compensation expense that the corporation rec­
ognizes,5 and the deduction may be allowable in a period
that differs from the one in which the corporation recog­
nizes compensation expense in measuring net income.

.17 An employer corporation should reduce income
tax expense for a period by no more of a tax reduction un­
der a stock option, purchase, or award plan than the propor­
tion of the tax reduction that is related to the compensation
expense for the period. Compensation expenses that are

4 State law governs the issuance of a corporation's stock including the
acceptability of issuing stock for future services.
5 A corporation may be entitled to a deduction for income tax purposes
even though it recognizes no compensation expense in measuring net
income.

AC § 4062.14 © 1974, American Institute of Certified Public Accountants, Inc.
Accounting for Stock Issued to Employees

deductible in a tax return in a period different from the one in which they are reported as expenses in measuring net income are timing differences (section 4091.33-.36), and deferred taxes should be recorded. The remainder of the tax reduction, if any, is related to an amount that is deductible for income tax purposes but does not affect net income. The remainder of the tax reduction should not be included in income but should be added to capital in addition to par or stated value of capital stock in the period of the tax reduction. Conversely, a tax reduction may be less than if recorded compensation expenses were deductible for income tax purposes. If so, the corporation may deduct the difference from additional capital in the period of the tax reduction to the extent that tax reductions under the same or similar compensatory stock option, purchase, or award plans have been included in additional capital.

.18 A corporation may, either by cash payment or otherwise—for example, by allowing a reduction in the purchase price of stock—reimburse an employee for his action related to a stock option, purchase, or award plan that results in a reduction of income taxes of the corporation. The corporation should include the reimbursement in income as an expense.

.19 Disclosure. Section 4061.15 specifies the disclosures related to stock option and stock purchase plans that should be made in financial statements.*

EFFECTIVE DATE

.20 This section applies to all stock option, purchase, award, and bonus rights granted by an employer corporation to an individual employee after December 31, 1972 under both existing and new arrangements and to reductions of income taxes resulting from deductions as of a date after December 31, 1972 that are related to stock option, purchase, award, and bonus rights granted before as well as after the effective date of this section.

* Other disclosure requirements are in Regulation S-X for financial statements filed with the Securities and Exchange Commission and in listing agreements of the stock exchanges for financial statements included in annual reports to stockholders.
AC Section 4062A

Accounting for Stock Issued to Employees—Appendix A

MEASURING AND ACCOUNTING FOR COMPENSATION UNDER TYPICAL PLANS (FOR ILLUSTRATION ONLY)

.01 Corporations issue stock to officers and other employees through plans with a variety of names and a multiplicity of terms. Plans in which employees pay cash, either directly or through payroll withholding, as all or a significant part of the consideration for stock they receive, are commonly designated by names such as stock option, stock purchase, or stock thrift or savings plans. Plans in which employees receive stock for current or future services without paying cash (or with a nominal payment) are commonly designated by names such as stock bonus or stock award plans. Stock bonus and award plans are invariably compensatory. Stock thrift and savings plans are compensatory to the extent of contributions of an employer corporation. Stock option and purchase plans may be either compensatory or noncompensatory. The combination of terms in some plans tend to make various types of plans shade into one another, and an assigned name may not describe the nature of a plan.

.02 This section is organized according to the most vital distinction in section 4062—compensatory plans are divided between plans in which the cost of compensation is measured at the date of grant or award and those in which the cost of compensation depends on events after the date of grant or award. Combination plans are described briefly in a final section.

Compensation Cost Measured at Date of Grant or Award

.03 Accounting. Total compensation cost is measured by the difference between the quoted market price of the stock at the date of grant or award and the price, if any, to be paid by an employee and is recognized as expense over the period the employee performs related services. The sum of compensation and cash paid by the employee is the consideration received for the stock issued. Compensation cost
related to an award of stock may be adjusted for a later cash settlement (section 4062.11(g)).

.04 Typical Plans with Fixed and Determinable Terms. The characteristic that identifies plans in this group is that the terms fix and provide means for determining at the date of grant or award both the number of shares of stock that may be acquired by or awarded to an employee and the cash, if any, to be paid by the employee. Plans usually presume or provide that the employee perform current or future services. The right to transfer stock received is sometimes restricted for a specified period.

.05 Stock option and stock purchase plans—Typical terms provide for an employer corporation to grant to an employee the right to purchase a fixed number of shares of stock of the employer corporation at a stated price during a specified period.

.06 Stock bonus or award plans—Typical terms provide for an employer corporation to award to an employee a fixed number of shares of stock of the employer corporation without a cash payment (or with a nominal cash payment) by the employee. Often the award is specified as a fixed dollar amount but is distributable in stock with the number of shares determined by the quoted market price of the stock at the date of award, the effective date of award (section 4062.11(c)), or the date treasury stock is acquired (section 4062.11(a)).

Compensation Cost Measured at Other Than Date of Grant or Award

.07 Accounting. Compensation cost is accounted for the same as for plans in the first group with one exception. The quoted market price used in the measurement is not the price at date of grant or award but the price at the date on which both the number of shares of stock that may be acquired by or awarded to an individual employee and the option or purchase price are known. Total compensation cost is measured by the difference between that quoted market price of the stock and the amount, if any, to be paid by an employee and is recognized as expense over the period the employee performs related services. The sum of compensation and cash paid by the employee is the consideration received for the stock issued. Compensation cost re-
lated to an award of stock may be adjusted for a later cash settlement (section 4062.11(g)).

.08 Estimates of compensation cost are recorded before the measurement date based on the quoted market price of the stock at intervening dates. Recorded compensation expense between the date of grant or award and the measurement date may either increase or decrease because changes in quoted market price of the stock require recomputations of the estimated compensation cost.

.09 Typical Plans with Variable Terms. The characteristic that identifies plans in this group is that the terms prevent determining at the date of grant or award either the number of shares of stock that may be acquired by or awarded to an employee or the price to be paid by the employee, or both. The indeterminate factors usually depend on events that are not known or determinable at the date of grant or award. Plans usually presume or provide that the employee perform current or future services. The right to transfer stock received is sometimes restricted for a specified period.

.10 Stock option and stock purchase plans—Some terms provide for an employer corporation to grant to an employee the right to purchase shares of stock of the employer corporation during a specified period. The number of shares of stock, the option or purchase price, or both may vary depending on various factors during a specified period, such as market performance of the stock, equivalents of dividends distributed, or level of earnings of the employer corporation.

.11 Stock bonus or award plans—Some terms provide for an employer corporation to award to an employee the right to receive shares of stock of the employer corporation but the number of shares is not determinable at the date of award. Often the award is specified as a fixed dollar amount but is distributable in stock with the number of shares of stock determined by the market price of the stock at the date distributed, or the award may be of an undesignated number of shares of stock and that number is to be determined by variable factors during a specified period.

.12 The terms of some plans, often called phantom stock or shadow stock plans, base the obligations for com-
pensation on increases in market price of or dividends distributed on a specified or variable number of shares of stock of the employer corporation but provide for settlement of the obligation to the employee in cash, in stock of the employer corporation, or a combination of cash and stock.

Combination and Elective Plans

.13 Accounting. In general, compensation is measured for the separate parts of combination or elective plans. Compensation expense is the sum of the parts that apply. An employer corporation may need to measure compensation at various dates as the terms of separate parts become known. For example, if an employee is entitled to dividend equivalents, compensation cost is the sum of the costs measured at the dates the dividends are credited to the employee in accordance with the terms of the plan. If an employee may choose between alternatives, compensation expense is accrued for the alternative that the employee is most likely to elect based on the facts available at the date of accrual.

.14 Typical Combination and Elective Plans. Some plans provide for an employer corporation to grant or award to an employee rights with more than one set of terms. Often an employee may elect the right to be exercised. The combination of rights may be granted or awarded simultaneously or an employee who holds a right may subsequently be granted or awarded a second but different right. The rights may run concurrently or for different periods. An illustration is: an employee holding an option to purchase a fixed number of shares of stock at a fixed price during a specified period is granted an alternative option to purchase the same number of shares at a different price or during a different specified period. Instead of a second option, the award may be the right to elect to receive cash or shares of stock without paying cash. Often the election to acquire or receive stock under either right decreases the other right. Plans combining rights are often called tandem stock or alternate stock plans; the second right may be of the type that is sometimes called a phantom stock plan.

AC Section 4062-1

Accounting for Stock Appreciation Rights and Other Variable Stock Option or Award Plans: An Interpretation of Sections 2011 and 4062 *

[Source: FASB Interpretation No. 28.]

December 1978

INTRODUCTION
.01 The FASB has been asked to clarify whether the provisions of APB Opinion No. 25 [section 4062], "Accounting for Stock Issued to Employees," apply to stock appreciation rights and, if so, how the Opinion should be applied. Similar questions have been raised about awards under other stock compensation plans with variable terms, that is, plans for which the number of shares of stock the employee may receive, the price per share the employee must pay, or both the number of shares and the price are unknown at the date of grant or award. Appendix A provides additional background information about these matters. Appendix B illustrates applications of this Interpretation.

INTERPRETATION
.02 APB Opinion No. 25 [section 4062] applies to plans for which the employer's stock is issued as compensation or the amount of cash paid as compensation is determined by reference to the market price of the stock or to changes in its market price. Plans involving stock appreciation rights and other variable plan awards are included in those plans dealt with by Opinion No. 25 [section 4062]. When stock appreci-
ation rights or other variable plan awards are granted, an enter­
prise shall measure compensation as the amount by which the
quoted market value of the shares of the enterprise's stock
covered by the grant exceeds the option price or value specified,
by reference to a market price or otherwise, subject to any
appreciation limitations under the plan. Changes, either in­
creases or decreases, in the quoted market value of those shares
between the date of grant and the measurement date result
in a change in the measure of compensation for the right or
award.

.03 Compensation determined in accordance with paragraph .02
shall be accrued as a charge to expense over the period or peri­
dods the employee performs the related services (hereinafter
referred to as the "service period"). If the stock appreciation
rights or other variable plan awards are granted for past serv­
dices, compensation shall be accrued as a charge to expense of
the period in which the rights or awards are granted. If the
service period is not defined in the plan or some other agree­
ment, such as an employment agreement, as a shorter or
previous period, the service period shall be presumed to be the
vesting period.

.04 Compensation accrued during the service period in accord­
ance with paragraph .03 shall be adjusted in subsequent periods
up to the measurement date for changes, either increases or
decreases, in the quoted market value of the shares of the
enterprise's stock covered by the grant but shall not be ad­
justed below zero. The offsetting adjustment shall be made
to compensation expense of the period in which changes in
the market value occur. Except as provided in paragraph .05,
the accrued compensation for a right that is forfeited or can­
celled shall be adjusted by decreasing compensation expense
in the period of forfeiture, in accordance with paragraph .15
of APB Opinion No. 25 [section 4062.15].

Paragraph 10 of Opinion No. 25 [section 4062.10] defines the measurement
date as "the first date on which are known both (1) the number of shares that
an individual employee is entitled to receive and (2) the option or purchase
price, if any." Generally, the number of shares of stock that may be ac­
quired or awarded under stock appreciation rights and many other variable
plan awards are not known until the date that they are exercised.

For purposes of this Interpretation, stock appreciation rights and other
variable plan awards become vested when the employee's right to receive
or retain shares or cash under the rights or awards is not contingent upon
the performance of additional services. Frequently, the vesting period is
the period from the date of grant to the date the rights or awards become
exercisable.

See footnote 2.
.05 For purposes of applying paragraph 11(h)\(^5\) of *APB Opinion No. 25* [section 4062.11(h)], compensation expense for a combination plan\(^6\) involving stock appreciation rights or other variable plan awards (including those that are granted after the date of grant of related stock options) shall be measured according to the terms the employee is most likely to elect based on the facts available each period. An enterprise shall presume that the employee will elect to exercise the stock appreciation rights or other variable plan awards, but the presumption may be overcome if past experience or the terms of a combination plan that limit the market appreciation available to the employee in the stock appreciation rights or other variable plan awards provide evidence that the employee will elect to exercise the related stock option. If an enterprise has been accruing compensation for a stock appreciation right or other variable plan award and a change in circumstances provides evidence that the employee will likely elect to exercise the related stock option, accrued compensation recorded for the right or award shall not be adjusted.\(^7\) If the employee elects to exercise the stock option, the accrued compensation recorded for the right or award shall be recognized as a consideration for the stock issued. If all parts of the grant or award (e.g., both the option and the right or award) are forfeited or cancelled, accrued compensation shall be adjusted by decreasing compensation expense in that period.

.06 Stock appreciation rights and other variable plan awards are common stock equivalents to the extent payable in stock for purposes of applying the provisions of *APB Opinion No. 15* [section 2011], “Earnings per Share.” Stock appreciation rights and other variable plan awards payable only in cash are not common stock equivalents for the computation of earnings per share under that Opinion. [As amended, effective December 15, 1979, by FASB Interpretation No. 31.] (See section 2011-1.)

\(^5\) See paragraph .13 in Appendix A of this Interpretation.
\(^6\) See paragraph .10 in Appendix A of this Interpretation.
\(^7\) A change in the circumstances may be indicated by market appreciation in excess of any appreciation limitations under the plan or the cancellation or forfeiture of the stock appreciation right or other variable plan award without a concurrent cancellation or forfeiture of the related stock option. A subsequent decrease in market value that reduces the appreciation to a level below the limitations under the plan would require adjustment of accrued compensation in accordance with paragraph .04 of this Interpretation if evidence then indicates that the employee will elect to exercise the stock appreciation right or other variable plan award.
EFFECTIVE DATE AND TRANSITION

.07 The provisions of this Interpretation shall be applied prosppecively for stock appreciation rights and other variable plan awards granted in fiscal years beginning after December 15, 1978. Early application is encouraged for stock appreciation rights and other variable plan awards granted in fiscal years beginning before December 16, 1978 for which financial statements have not been previously issued. In addition, this Interpretation may be, but is not required to be, adopted for stock appreciation rights and other variable plan awards granted in fiscal years beginning before December 16, 1978 for which financial statements have been previously issued; if so adopted, an accrual of compensation expense or an adjustment of accrued compensation resulting from the application of this Interpretation for stock appreciation rights and other variable plan awards granted in fiscal years beginning before December 16, 1978 shall be accounted for as a change in estimate in the period of change (see paragraphs 31-33 of APB Opinion No. 20 [section 1051.31-.33]). This Interpretation shall not be applied retroactively for previously issued annual financial statements.

.08 If early application is adopted in financial reports for interim periods of a fiscal year beginning before December 16, 1978, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Interpretation. Any subsequent presentation of that information shall be on the restated basis.
Appendix A

BACKGROUND INFORMATION

.09 Stock appreciation rights are awards entitling employees to receive cash, stock, or a combination of cash and stock in an amount equivalent to any excess of the market value of a stated number of shares of the employer company’s stock over a stated price. The form of payment may be specified when the rights are granted or may be determined when they are exercised; in some plans the employee may choose the form of payment.

.10 Stock appreciation rights are usually granted in combination with compensatory stock options but also may be granted separately. Combination plans usually provide that the rights are exercisable for the same period as the companion stock options and that the exercise of either cancels the other. In some combination plans, the enterprise may grant stock appreciation rights either when the options are granted or at a later date. In some cases the holder of stock options may apply to receive share appreciation in cash or stock with the approval of the enterprise, in lieu of exercising the options.

.11 Paragraph 10 of APB Opinion No. 25 [section 4062.10] specifies that “compensation for services that a corporation receives as consideration for stock issued through employee stock option, purchase, and award plans should be measured by the quoted market price of the stock at the measurement date less the amount, if any, that the employee is required to pay.” Paragraphs 12-15 of Opinion No. 25 [section 4062.12-.15] refer to accrual of compensation in periods for which service is rendered before issuance of stock. Paragraph 13 [section 4062.13] states that “the employer corporation should accrue compensation expense in each period in which the services are performed” and “if the measurement date is later than the date of grant or award, an employer corporation should record the compensation expense each period from date of grant or award to date of measurement based on the quoted market price of the stock at the end of each period.” Paragraph 15 of Opinion No. 25 [section 4062.15] states that the effect of the change in estimated compensation expense should be accounted for in the period of change in accordance with paragraphs 31-33 of APB Opinion No. 20 [section 1051.31-.33], “Accounting Changes.”

.12 Paragraph 11(c) of APB Opinion No. 25 [section 4062.11(c)] states that “the measurement date of an award of stock for current service may be the end of the fiscal period,
which is normally the effective date of the award, instead of
the date that the award to an employee is determined if (1)
the award is provided for by the terms of an established formal
plan, (2) the plan designates the factors that determine the
total dollar amount of awards to employees for the period (for
example, a percent of income), although the total amount or
the individual awards may not be known at the end of the
period, and (3) the award pertains to current service of the
employee for the period.

.13 Paragraph 11(h) of APB Opinion No. 25 [section
4062.11(h)] states that “compensation cost for a combination
plan permitting an employee to elect one part should be
measured according to the terms that an employee is most
likely to elect based on the facts available each period.” Al­
though Opinion No. 25 [section 4062] principally addresses
the measurement of compensation when stock is issued to an
employee, the Opinion also addresses situations in which cash
or stock is paid to an employee for appreciation in the market
price of an enterprise’s stock. Paragraph 32 of the Opinion
[section 4062A.12] states that “the terms of some plans, often
called phantom stock or shadow stock plans, base the obligations
for compensation on increases in market price of or divi­
dends distributed on a specified or variable number of shares
of stock of the employer corporation but provide for settlement
of the obligation to the employee in cash, in stock of the em­
ployer corporation, or a combination of cash and stock.”

.14 A draft of a proposed Interpretation, “Accounting for
Stock Appreciation Rights and Other Compensation Plans
with Variable Terms Related to the Price of a Company's
Stock,” was released for comment August 17, 1978. The Board
received 62 letters of comment in response to the proposed Inter­
pretation. Certain of the comments received and the Board’s
consideration of them are discussed in paragraphs .15-.18
below.

.15 The proposed Interpretation required that compensation
expense for stock appreciation rights and other variable plan
awards be accrued to the extent that the quoted market value
of the shares of the enterprise’s stock covered by the grant
exceeds the value specified. A majority of the respondents
disagreed with that provision as a required allocation method
and recommended that other methods be permitted for allo­
crating compensation cost as an expense in the periods in
which the related services are performed. In adopting that
recommendation, the Board concluded that the recommendation
is consistent with the recognition principles underlying *APB Opinion No. 25* [section 4062].

.16 The proposed Interpretation specified that compensation expense for stock appreciation rights and other variable plan awards should be measured by the extent that the quoted market value of the shares of the enterprise's stock covered by the grant exceeds the value specified, by reference to a market price or otherwise. Several respondents recommended that the compensation expense be measured by using the average market price of the stock, the value of the right or award at the date of grant, or some other value. The Board considered those recommendations and concluded that the method of measuring compensation for stock appreciation rights and other variable plan awards should not be changed without a comprehensive reexamination of the measurement principles underlying *APB Opinion No. 25* [section 4062]. The Board plans such a reexamination in the future but has concluded that issuance of this Interpretation should not be delayed in the meantime.

.17 Some respondents requested guidance on whether stock appreciation rights and other variable plan awards are common stock equivalents for purposes of computing earnings per share. Guidance in this regard is provided in paragraph .06 of this Interpretation.

.18 The transition called for by the proposed Interpretation required that an accrual of compensation expense or an adjustment of accrued compensation resulting from initial application of the Interpretation should be accounted for as a change in estimate in the period of change. The proposed effective date was for annual periods *ending* after December 15, 1978. Several respondents recommended either prospective or retroactive application because, in their view, the application of the Interpretation would result in a change in accounting method for some enterprises. The Board concluded that the effective date and transition should be changed to prospective application for stock appreciation rights and other variable plan awards granted in fiscal years *beginning* after December 15, 1978. The Interpretation also provides an election that it may be applied to grants made in fiscal years beginning before December 16, 1978 as a change in estimate in the period of the change.
Appendix B

ILLUSTRATION OF THE ACCOUNTING FOR STOCK APPRECIATION RIGHTS AND OTHER VARIABLE STOCK OPTION OR AWARD PLANS

.19 This Appendix illustrates applications of this Interpretation in accounting for stock appreciation rights and other variable stock option or award plans when the service period is presumed to be the vesting period. The examples do not comprehend all possible combinations of circumstances nor do the examples illustrate the computation of deferred income taxes.

.20 Provisions of the agreements:

Stock appreciation rights are granted in tandem with stock options for market value appreciation in excess of the option price. Exercise of the rights cancels the option for an equal number of shares and vice versa. Share appreciation is payable in stock, cash, or a combination of stock and cash at the enterprise's election.

Notes
(1) Aggregate compensation for unexercised shares to be allocated to periods service performed.
(2) The percentage accrued is based upon the four-year vesting period.
(3) A similar computation would be made for interim reporting periods.
EXAMPLE 2

.23 If the stock appreciation rights vested 25 percent per year commencing in 1979, the computation of compensation expense in the preceding example would change as illustrated in the following examples.

.24 Because 25 percent of the rights vest each year commencing in 1979, the service period over which compensation is accrued as a charge to expense is determined separately for each 25 percent portion. For example, the services for the 25 percent portion of the rights vesting in 1980 are performed in both 1979 and 1980 and the related compensation is accrued proportionately as a charge to expense in each year. Similarly, compensation for rights vesting in 1981 is proportionately accrued as a charge to expense in 1979, 1980, and 1981. In this way, compensation related to the portion of the rights vesting in 1979 is recognized in 1979, compensation related to the portion of the rights vesting in 1980 is recognized in 1979 and 1980, and so forth. The following schedule indicates the service period for each 25 percent portion of the rights and the computation of the aggregate percentage of compensation accrued by the end of each year of service (the vesting period). A similar computation would be made for interim reporting periods.

**Transaction Codes**
- A—Adjustment for changes in the market price of the stock.
- E—Exercise of a stock appreciation right.

**Notes**
1. Aggregate compensation for unexercised shares to be allocated to periods service performed.
2. See the schedule in paragraph .24 of this Interpretation.
3. A similar computation would be made for interim reporting periods.
.25 Additional Assumptions:

On December 31, 1981, the employee exercises the right to receive share appreciation on 300 shares.

On March 15, 1982, the employee exercises the right to receive share appreciation on 100 shares; quoted market price $15 per share.

On June 15, 1983, the employee exercises the right to receive share appreciation on 100 shares; quoted market price $16 per share.

On December 31, 1983, the employee exercises the right to receive share appreciation on 300 shares.

On December 31, 1984, the employee exercises the right to receive share appreciation on 200 shares.
EXAMPLE 3

.26 If the plan limits the amount of share appreciation that the employee can receive to $5, the computation of compensation expense in Example 2 would change as illustrated in the following example.

.27 When the quoted market price exceeds the appreciation limitation, the employee is more likely to exercise the related stock option rather than the stock appreciation right. Therefore, accrued compensation is not adjusted for changes in the quoted market price of the stock. The assumptions stated in paragraph .25 of this Interpretation are changed to the extent that on June 15, 1983 and December 31, 1984 the employee exercises the related stock option instead of the stock appreciation right. Accordingly, accrued compensation for the equivalent number of rights is recognized as part or all of the consideration for the stock issued in accordance with paragraph .05 of this Interpretation.

#### Transaction Codes
- **A** - Adjustment for changes in the market price of the stock.
- **NA** - No adjustment required because the market price exceeds the appreciation limitation.
- **E** - Exercise of a stock appreciation right.
- **O** - Exercise of the related stock option.

#### Notes
1. Aggregate compensation for unexercised shares to be allocated to periods service performed.
2. See the schedule in paragraph .24 of this Interpretation.
3. A similar computation would be made for interim reporting periods.
INTRODUCTION

.01 Pension plans have developed in an environment characterized by a complex array of social concepts and pressures, legal considerations, actuarial techniques, income tax laws and regulations, business philosophies, and accounting concepts and practices. Each plan reflects the interaction of the environment with the interests of the persons concerned with its design, interpretation and operation. From these factors have resulted widely divergent practices in accounting for the cost of pension plans.

.02 An increased significance of pension cost in relation to the financial position and results of operations of many businesses has been brought about by the substantial growth of private pension plans, both in numbers of employees covered and in amounts of retirement benefits. The assets accumulated and the future benefits to employees under these plans have reached such magnitude that changes in actuarial assumptions concerning pension fund earnings, employee mortality and turnover, retirement age, etc., and the treatment of differences between such assumptions and actual experience, can have important effects on the pension cost recognized for accounting purposes from year to year.

.03 In Accounting Research Bulletin No. 47, Accounting for Costs of Pension Plans, the committee on accounting procedure stated its preferences that “costs based on current and future services should be systematically accrued during the expected period of active service of the covered employees” and that “costs based on past services should be charged off over some reasonable period, provided the
Revenue and Expense

allocation is made on a systematic and rational basis and does not cause distortion of the operating results in any one year." In recognition of the divergent views then existing, however, the committee also said "as a minimum, the accounts and financial statements should reflect accruals which equal the present worth, actuarially calculated, of pension commitments to employees to the extent that pension rights have vested in the employees, reduced, in the case of the balance sheet, by any accumulated trustee funds or annuity contracts purchased." The committee did not explain what was meant by the term "vested" and did not make any recommendations concerning appropriate actuarial cost methods or recognition of actuarial gains and losses.

.04 Despite the issuance of Accounting Research Bulletin No. 47, accounting for the cost of pension plans has varied widely among companies and has sometimes resulted in wide year-to-year fluctuations in the provisions for pension cost of a single company. Generally, companies have provided pension cost equivalent to the amounts paid to a pension fund or used to purchase annuities. In many cases such payments have included amortization of past service cost (and prior service cost arising on amendment of a plan) over periods ranging from about ten to forty years; in other cases the payments have not included amortization but have included an amount equivalent to interest (see definition of interest in section 4063B.27) on unfunded prior service cost. In some cases payments from year to year have varied with fluctuations in company earnings or with the availability of funds. In other cases payments have been affected by the Federal income tax rates in effect at a particular time. The recognition of actuarial gains and losses in the year of their determination, or intermittently, has also caused year-to-year variations in such payments.

.05 Because of the increasing importance of pensions and the variations in accounting for them, the Accounting Principles Board authorized Accounting Research Study No. 8, Accounting for the Cost of Pension Plans (referred to hereinafter as the "Research Study"). The Research Study was published in May 1965 by the American Institute
of Certified Public Accountants and has been widely distributed. The Board has carefully examined the recommendations of the Research Study and considered many comments and articles about it. The Board's conclusions agree in most respects with, but differ in some from, those in the Research Study.

.06 The Board has concluded that this section is needed to clarify the accounting principles and to narrow the practices applicable to accounting for the cost of pension plans.

.07 The computation of pension cost for accounting purposes requires the use of actuarial techniques and judgment. Generally pension cost should be determined from a study by an actuary, giving effect to the conclusions set forth in this section. It should be noted that the actuarial cost methods and their application for accounting purposes may differ from those used for funding purposes. A discussion of actuarial valuations, assumptions and cost methods is included in section 4063A. The terminology used in this section to describe pension cost and actuarial cost methods is consistent with that generally used by actuaries and others concerned with pension plans. A Glossary of such terminology is included in section 4063B.

PENSION PLANS COVERED BY THIS SECTION

.08 For the purposes of this section, a pension plan is an arrangement whereby a company undertakes to provide its retired employees with benefits that can be determined or estimated in advance from the provisions of a document or documents or from the company's practices. Ordinarily, such benefits are monthly pension payments but, in many instances, they include death and disability payments. However, death and disability payments under a separate arrangement are not considered in this section. The section applies both to written plans and to plans whose existence may be implied from a well-defined, although perhaps unwritten, company policy. A company's practice of paying retirement benefits to selected employees in amounts determined on a case-by-case basis at or after retirement does not constitute a pension plan under this section. The section applies to pension cost incurred outside the United States under plans that are reasonably
similar to those contemplated by this section, when included in financial statements intended to conform with generally accepted accounting principles in the United States. The section applies to unfunded plans as well as to insured plans and trust fund plans. It applies to defined-contribution plans as well as to defined-benefit plans. It applies also to deferred compensation contracts with individual employees if such contracts, taken together, are equivalent to a pension plan. It does not apply to deferred profit-sharing plans except to the extent that such a plan is, or is part of, an arrangement that is in substance a pension plan.

**BASIC ACCOUNTING METHOD**

**Discussion**

.09 This section is concerned with the determination of the amount of pension cost for accounting purposes. In considering the discussions and conclusions in this section, it is important to keep in mind that the annual pension cost to be charged to expense ("the provision for pension cost") is not necessarily the same as the amount to be funded for the year. The determination of the amount to be funded is a financial matter not within the purview of this section.

.10 The pension obligations assumed by some companies are different from those assumed by other companies. In some plans the company assumes direct responsibility for the payment of benefits described in the plan. In these cases, if the pension fund is inadequate to pay the benefits to which employees are entitled, the company is liable for the deficiency. In contrast, the terms of most funded plans limit the company's legal obligation for the payment of benefits to the amounts in the pension fund. In these cases, if the pension fund is inadequate to pay the benefits to which employees are otherwise entitled, such benefits are reduced in a manner stated in the plan and the company has no further legal obligation.

.11 There is broad agreement that pension cost, including related administrative expense, should be accounted for on the accrual basis. There is not general agreement, however, about the nature of pension cost. Some view pensions solely as a form of supplemental benefit to employees in service at a particular time. Others see a broader purpose in pensions; they consider pensions to be in large part
(a) a means of promoting efficiency by providing for the systematic retirement of older employees or (b) the fulfillment of a social obligation expected of business enterprises, the cost of which, as a practical matter, constitutes a business expense that must be incurred. Those who hold this second viewpoint associate pension cost, to a large extent, with the plan itself rather than with specific employees. In addition, the long-range nature of pensions causes significant uncertainties about the total amount of pension benefits ultimately to be paid and the amount of cost to be recognized. These differences in viewpoint concerning the nature of pension cost, the uncertainties regarding the amount of the estimates, and the use of many actuarial approaches, compound the difficulty in reaching agreement on the total amount of pension cost over a long period of years and on the time to recognize any particular portion applicable to an employee or group of employees. It is only natural, therefore, that different views exist concerning the preferable way to recognize pension cost. The major views are described in the following four paragraphs.

.12 One view is that periodic pension cost should be provided on an actuarial basis that takes into account all estimated prospective benefit payments under a plan with respect to the existing employee group, whether such payments relate to employee service rendered before or after the plan’s adoption or amendment, and that no portion of the provision for such payments should be indefinitely deferred or treated as though, in fact, it did not exist. Those holding this view believe that the recurring omission of a portion of the provision, because of the time lag between making the provision and the subsequent benefit payments under a plan, is a failure to give accrual accounting recognition to the cost applicable to the benefits accrued over the service lives of all employees. Among those holding this view there is general agreement that cost relating to service following the adoption or amendment of a plan should be recognized ratably over the remaining service lives of employees. There is some difference of opinion, however, concerning the period of time to use in allocating that portion of the cost which the computations under some actuarial methods assign to employee service rendered before a plan’s adoption or amendment. As to this cost, (a) those
viewing pensions as relating solely to the existing employee group believe that it should be accounted for over the remaining service lives of those in the employ of the company at the time of the plan's adoption or amendment, whereas (b) some of those holding the broader view of pensions, referred to in paragraph .11, believe that this cost is associated to a large extent with the plan itself and hence that the period of providing for it need not be limited to the remaining service lives of a particular group of employees but may be extended somewhat beyond that period. However, this difference of opinion relates only to the period of time over which such cost should be provided.

.13 An opposing view stresses that pension cost is related to the pension benefits to be paid to the continuing employee group as a whole. Those holding this view emphasize that, in the application of accrual accounting, charges against income must be based on actual transactions and events—past, present or reasonably anticipated. They stress the long-range nature of pensions, referred to in paragraph .11, and emphasize the uncertainties concerning the total cost of future benefits. They point out that, in the great majority of cases, provision for normal cost plus an amount equivalent to interest on unfunded prior service cost will be adequate to meet, on a continuing basis, all benefit payments under a plan. Those holding this view believe that following the view expressed in paragraph .12 can result, over a period of years, in charging income with, and recording a balance-sheet accrual for, amounts that will not be paid as benefits. They see no reason therefore to urge employers to provide more than normal cost plus an amount equivalent to interest on unfunded prior service cost in these circumstances, because additional amounts never expected to be paid by a going concern are not corporate costs, and thus are not appropriate charges against income. They acknowledge, however, that corporations can and do make payments to pension funds for past and prior service cost, with the result that reductions will be effected in future charges for the equivalent of interest on unfunded amounts, but they consider this to be solely a matter of financial management rather than a practice dictated by accounting considerations.
.14 In many pension plans, cost recorded on the basis described in paragraph .13 will accumulate an amount (whether funded or not) at least equal to the actuarially computed value of vested benefits (see definition of vested benefits in section 4063B.43). However, this result might not be achieved in some cases (for example, if the average age of the employee group is high in relation to that of expected future employee groups, or if benefits vest at a relatively early age). Some hold the view that when periodic provisions are based on normal cost plus an amount equivalent to interest such periodic provisions should be increased if they will not, within a reasonable period of time, accumulate an amount (whether funded or not) at least equal to the actuarially computed value of vested benefits. Others would require the increases in provisions only if the company has a legal obligation for the payment of such benefits.

.15 Another view is that, if the company has no responsibility for paying benefits beyond the amounts in the pension fund, pension cost is discretionary and should be provided for a particular accounting period only when the company has made or has indicated its intent to make a contribution to the pension fund for the period. Others believe that pension cost is discretionary even if the company has a direct responsibility for the payment of benefits described in the plan.

Opinion

.16 The Board recognizes that a company may limit its legal obligation by specifying that pensions shall be payable only to the extent of the assets in the pension fund. Experience shows, however, that with rare exceptions pension plans continue indefinitely and that termination and other limitations of the liability of the company are not invoked while the company continues in business. Consequently, the Board believes that, in the absence of convincing evidence that the company will reduce or discontinue the benefits called for in a pension plan, the cost of the plan should be accounted for on the assumption that the company will continue to provide such benefits. This assumption implies a long-term undertaking, the cost of which should be recognized annually whether or not funded.
Therefore, accounting for pension cost should not be discretionary.

.17 All members of the Board believe that the entire cost of benefit payments ultimately to be made should be charged against income subsequent to the adoption or amendment of a plan and that no portion of such cost should be charged directly against retained earnings. Differences of opinion exist concerning the measure of the cost of such ultimate payments. The Board believes that the approach stated in paragraph .12 is preferable for measuring the cost of benefit payments ultimately to be made. However, some members of the Board believe that the approach stated in paragraph .13, in some cases with the modifications described in paragraph .14, is more appropriate for such measurement. The Board has concluded, in the light of such differences in views and of the fact that accounting for pension cost is in a transitional stage, that the range of practices would be significantly narrowed if pension cost were accounted for at the present time within limits based on paragraphs .12, .13 and .14. Accordingly, the Board believes that the annual provision for pension cost should be based on an accounting method that uses an acceptable actuarial cost method (as defined in paragraphs .23 and .24) and results in a provision between the minimum and maximum stated below. The accounting method and the actuarial cost method should be consistently applied from year to year.

a. Minimum. The annual provision for pension cost should not be less than the total of (1) normal cost, (2) an amount equivalent to interest on any unfunded prior service cost and (3) if indicated in the following sentence, a provision for vested benefits. A provision for vested benefits should be made if there is an excess of the actuarially computed value of vested benefits (see definition of vested benefits in section 4063 B.43) over the total of (1) the pension fund and (2) any balance-sheet pension accruals, less (3) any balance-sheet pension prepayments or deferred charges, at the end of the year, and such excess is not at least 5 per cent less than the comparable excess.

1 The actuarially computed value of vested benefits would ordinarily be based on the actuarial valuation used for the year even though such valuation would usually be as of a date other than the balance sheet date.
Accounting for the Cost of Pension Plans

8529

at the beginning of the year. The provision for vested
benefits should be the lesser of (A) the amount, if any,
by which 5 per cent of such excess at the beginning of
the year is more than the amount of the reduction, if any, in
such excess during the year or (B) the amount necessary
to make the aggregate annual provision for pension cost
equal to the total of (1) normal cost, (2) an amount equiva-
 lent to amortization, on a 40-year basis, of the past service
cost (unless fully amortized), (3) amounts equivalent to
amortization, on a 40-year basis, of the amounts of any
increases or decreases in prior service cost arising on amends-
ments of the plan (unless fully amortized) and (4) interest
equivalents under paragraph .42 or .43 on the difference be-
tween provisions and amounts funded.2

b. Maximum. The annual provision for pension
cost should not be greater than the total of (1) normal cost,
(2) 10 per cent of the past service cost (until fully amor-
tized), (3) 10 per cent of the amounts of any increases or
decreases in prior service cost arising on amendments of
the plan (until fully amortized) and (4) interest equivalents
under paragraph .42 or .43 on the difference between provi-
sions and amounts funded. The 10 per cent limitation is
considered necessary to prevent unreasonably large charges
against income during a short period of years.

.18 The difference between the amount which has been
charged against income and the amount which has been
paid should be shown in the balance sheet as accrued or pre-
paid pension cost. If the company has a legal obligation for
pension cost in excess of amounts paid or accrued, the ex-
cess should be shown in the balance sheet as both a liability
and a deferred charge. Except to the extent indicated in
the preceding sentences of this paragraph, unfunded prior
service cost is not a liability which should be shown in the
balance sheet.

ACTUARIAL COST METHODS

Discussion

.19 A number of actuarial cost methods have been de-
developed to determine pension cost. These methods are de-
signed primarily as funding techniques, but many of them

2 For purposes of this sentence, amortization should be computed as a
level annual amount, including the equivalent of interest.
are also useful in determining pension cost for accounting purposes. Pension cost can vary significantly, depending on the actuarial cost method selected; furthermore, there are many variations in the application of the methods, in the necessary actuarial assumptions concerning employee turnover, mortality, compensation levels, pension fund earnings, etc., and in the treatment of actuarial gains and losses.

.20 The principal actuarial cost methods currently in use are described in section 4063A. These methods include an accrued benefit cost method and several projected benefit cost methods.

a. Under the accrued benefit cost method (unit credit method), the amount assigned to the current year usually represents the present value of the increase in present employees' retirement benefits resulting from that year's service. For an individual employee, this method results in an increasing cost from year to year because both the present value of the annual increment in benefits and the probability of reaching retirement increase as the period to retirement shortens; also, in some plans, the retirement benefits are related to salary levels, which usually increase during the years. However, the aggregate cost for a total work force of constant size tends to increase only if the average age or average compensation of the entire work force increases.

b. Under the projected benefit cost methods (entry age normal, individual level premium, aggregate and attained age normal methods), the amount assigned to the current year usually represents the level amount (or an amount based on a computed level percentage of compensation) that will provide for the estimated projected retirement benefits over the service lives of either the individual employees or the employee group, depending on the method selected. Cost computed under the projected benefit cost methods tends to be stable or to decline year by year, depending on the method selected. Cost computed under the entry age normal method is usually more stable than cost computed under any other method.

.21 Some actuarial cost methods (individual level premium and aggregate methods) assign to subsequent
years the cost arising at the adoption or amendment of a plan. Other methods (unit credit, entry age normal and attained age normal methods) assign a portion of the cost to years prior to the adoption or amendment of a plan, and assign the remainder to subsequent years. The portion of cost assigned to each subsequent year is called normal cost. At the adoption of a plan, the portion of cost assigned to prior years is called past service cost. At any later valuation date, the portion of cost assigned to prior years (which includes any remaining past service cost) is called prior service cost. The amount assigned as past or prior service cost and the amount assigned as normal cost vary depending on the actuarial cost method. The actuarial assignment of cost between past or prior service cost and normal cost is not indicative of the periods in which such cost should be recognized for accounting purposes.

.22 In some cases, past service cost (and prior service cost arising on amendment of a plan) is funded in total; in others it is funded in part; in still others it is not funded at all. In practice, the funding of such cost is influenced by the Federal income tax laws and related regulations, which generally limit the annual deduction for such cost to 10 per cent of the initial amount. There is no tax requirement that such cost be funded, but there are requirements that effectively prohibit the unfunded cost from exceeding the total of past service cost and prior service cost arising on amendment of the plan. The practical effect of the tax requirements is that on a cumulative basis normal cost plus an amount equivalent to the interest on any unfunded prior service cost must be funded. Funding of additional amounts is therefore discretionary for income tax purposes. However, neither funding nor the income tax laws and related regulations are controlling for accounting purposes.

Opinion

.23 To be acceptable for determining cost for accounting purposes, an actuarial cost method should be rational and systematic and should be consistently applied so that it results in a reasonable measure of pension cost from year to year. Therefore, in applying an actuarial cost method that separately assigns a portion of cost as past or prior
service cost, any amortization of such portion should be based on a rational and systematic plan and generally should result in reasonably stable annual amounts. The equivalent of interest on the unfunded portion may be stated separately or it may be included in the amortization; however, the total amount charged against income in any one year should not exceed the maximum amount described in paragraph .17.

.24 Each of the actuarial cost methods described in section 4063A, except terminal funding, is considered acceptable when the actuarial assumptions are reasonable and when the method is applied in conformity with the other conclusions of this Opinion. The terminal funding method is not acceptable because it does not recognize pension cost prior to retirement of employees. For the same reason, the pay-as-you-go method (which is not an actuarial cost method) is not acceptable. The acceptability of methods not discussed herein should be determined from the guidelines in this and the preceding paragraph.

ACTUARIAL GAINS AND LOSSES

Discussion

.25 Actuarial assumptions necessarily are based on estimates of future events. Actual events seldom coincide with events estimated; also, as conditions change, the assumptions concerning the future may become invalid. Adjustments may be needed annually therefore to reflect actual experience, and from time to time to revise the actuarial assumptions to be used in the future. These adjustments constitute actuarial gains and losses. They may be regularly recurring (for example, minor deviations between experience and actuarial assumptions) or they may be unusual or recurring at irregular intervals (for example, substantial investment gains or losses, changes in the actuarial assumptions, plant closings, etc.).

.26 In dealing with actuarial gains and losses, the primary question concerns the timing of their recognition in providing for pension cost. In practice, three methods are in use; immediate-recognition, spreading and averaging. Under the immediate-recognition method (not ordinarily used at present for net losses), net gains are applied to reduce pension cost in the year of occurrence or the
following year. Under the spreading method, net gains or losses are applied to current and future cost, either through the normal cost or through the past service cost (or prior service cost on amendment). Under the averaging method, an average of annual net gains and losses, developed from those that occurred in the past with consideration of those expected to occur in the future, is applied to the normal cost.

.27 The use of the immediate-recognition method sometimes results in substantial reductions in, or the complete elimination of, pension cost for one or more years. For Federal income tax purposes, when the unit credit actuarial cost method is used, and in certain other instances, actuarial gains reduce the maximum pension-cost deduction for the year of occurrence or the following year.

.28 Unrealized appreciation and depreciation in the value of investments in a pension fund are forms of actuarial gains and losses. Despite short-term market fluctuations, the overall rise in the value of equity investments in recent years has resulted in the investments of pension funds generally showing net appreciation. Although appreciation is not generally recognized at present in providing for pension cost, it is sometimes recognized through the interest assumption or by introducing an assumed annual rate of appreciation as a separate actuarial assumption. In other cases, appreciation is combined with other actuarial gains and losses and applied on the immediate-recognition, spreading or averaging method.

.29 The amount of any unrealized appreciation to be recognized should also be considered. Some actuarial valuations recognize the full market value. Others recognize only a portion (such as 75 per cent) of the market value or use a moving average (such as a five-year average) to minimize the effects of short-term market fluctuations. Another method used to minimize such fluctuations is to recognize appreciation annually based on an expected long-range growth rate (such as 3 per cent) applied to the cost (adjusted for appreciation previously so recognized) of common stocks; when this method is used, the total of cost and recognized appreciation usually is not permitted to exceed a specified percentage (such as 75 per cent) of the market value. Unrealized depreciation is recognized in

AICPA Professional Standards
full or on a basis similar to that used for unrealized appreciation.

Opinion

.30 The Board believes that actuarial gains and losses, including realized investment gains and losses, should be given effect in the provision for pension cost in a consistent manner that reflects the long-range nature of pension cost. Accordingly, except as otherwise indicated in paragraphs .31 and .33, actuarial gains and losses should be spread over the current year and future years or recognized on the basis of an average as described in paragraph .26. If this is not accomplished through the routine application of the method (for example, the unit credit method—see paragraph .27), the spreading or averaging should be accomplished by separate adjustments of the normal cost resulting from the routine application of the method. Where spreading is accomplished by separate adjustments, the Board considers a period of from 10 to 20 years to be reasonable. Alternatively, an effect similar to spreading or averaging may be obtained by applying net actuarial gains as a reduction of prior service cost in a manner that reduces the annual amount equivalent to interest on, or the annual amount of amortization of, such prior service cost, and does not reduce the period of amortization.

.31 Actuarial gains and losses should be recognized immediately if they arise from a single occurrence not directly related to the operation of the pension plan and not in the ordinary course of the employer's business. An example of such occurrences is a plant closing, in which case the actuarial gain or loss should be treated as an adjustment of the net gain or loss from that occurrence and not as an adjustment of pension cost for the year. Another example of such occurrences is a merger or acquisition accounted for as a purchase, in which case the actuarial gain or loss should be treated as an adjustment of the purchase price. However, if the transaction is accounted for as a pooling of interests, the actuarial gain or loss should generally be treated as described in paragraph .30.

.32 The Board believes unrealized appreciation and depreciation should be recognized in the determination of the provision for pension cost on a rational and systematic

* See section 1091.88h.
basis that avoids giving undue weight to short-term market fluctuations (as by using a method similar to those referred to in paragraph .29). Such recognition should be given either in the actuarial assumptions or as described in paragraph .30 for other actuarial gains and losses. Ordinarily appreciation and depreciation need not be recognized for debt securities expected to be held to maturity and redeemed at face value.

.33 Under variable annuity and similar plans the retirement benefits vary with changes in the value of a specified portfolio of equity investments. In these cases, investment gains or losses, whether realized or unrealized, should be recognized in computing pension cost only to the extent that they will not be applied in determining retirement benefits.

EMPLOYEES INCLUDED IN COST CALCULATIONS

Discussion

.34 Under some plans employees become eligible for coverage when they are employed; other plans have requirements of age or length of service or both. Some plans state only the conditions an employee must meet to receive benefits but do not otherwise deal with coverage. Ordinarily actuarial valuations exclude employees likely to leave the company within a short time after employment. This simplifies the actuarial calculations. Accordingly, actuarial calculations ordinarily exclude employees on the basis of eligibility requirements and, in some cases, exclude covered employees during the early years of service.

.35 If provisions are not made for employees from the date of employment, pension cost may be understated. On the other hand, the effect of including all employees would be partially offset by an increase in the turnover assumption; therefore, the inclusion of employees during early years of service may expand the volume of the calculations without significantly changing the provisions for pension cost.

Opinion

.36 The Board believes that all employees who may reasonably be expected to receive benefits under a pension plan should be included in the cost calculations, giving ap-
propriate recognition to anticipated turnover. As a practical matter, however, when the effect of exclusion is not material it is appropriate to omit certain employees from the calculations.

**COMPANIES WITH MORE THAN ONE PLAN**

**Opinion**

.37 A company that has more than one pension plan need not use the same actuarial cost method for each one; however, the accounting for each plan should conform to this Opinion. If a company has two or more plans covering substantial portions of the same employee classes and if the assets in any of the plans ultimately can be used in paying present or future benefits of another plan or plans, such plans may be treated as one plan for purposes of determining pension cost.

**DEFINED-CONTRIBUTION PLANS**

**Opinion**

.38 Some defined-contribution plans state that contributions will be made in accordance with a specified formula and that benefit payments will be based on the amounts accumulated from such contributions. For such a plan the contribution applicable to a particular year should be the pension cost for that year.

.39 Some defined-contribution plans have defined benefits. In these circumstances, the plan requires careful analysis. When the substance of the plan is to provide the defined benefits, the annual pension cost should be determined in accordance with the conclusions of this Opinion applicable to defined-benefit plans.

**INSURED PLANS**

**Opinion**

.40 Insured plans are forms of funding arrangements and their use should not affect the accounting principles applicable to the determination of pension cost. Cost under individual policy plans is ordinarily determined by the individual level premium method, and cost under group deferred annuity contracts is ordinarily determined by the unit credit method. Cost under deposit administration contracts, which operate similarly to trust-fund plans, may be
determined on any of several methods. Some elements of pension cost, such as the application of actuarial gains (dividends, termination credits, etc.), may at times cause differences between the amounts being paid to the insurance company and the cost being recognized for accounting purposes. The Board believes that pension cost under insured plans should be determined in conformity with the conclusions of this section.

.41 Individual annuity or life insurance policies and group deferred annuity contracts are often used for plans covering small employee groups. Employers using one of these forms of funding exclusively do not ordinarily have ready access to actuarial advice in determining pension cost. Three factors to be considered in deciding whether the amount of net premiums paid is the appropriate charge to expense are dividends, termination credits and pension cost for employees not yet covered under the plan. Usually, the procedures adopted by insurance companies in arriving at the amount of dividends meet the requirements of paragraph .30; consequently, in the absence of wide year-to-year fluctuations such dividends should be recognized in the year credited. Termination credits should be spread or averaged in accordance with paragraph .30. Unless the period from date of employment to date of coverage under the plan is so long as to have a material effect on pension cost, no provision need be made for employees expected to become covered under the plan. If such a provision is made, it need not necessarily be based on the application of an actuarial cost method.

**EFFECT OF FUNDING**

**Opinion**

.42 This section is written primarily in terms of pension plans that are funded. The accounting described applies also to plans that are unfunded. In unfunded plans, pension cost should be determined under an acceptable actuarial cost method in the same manner as for funded plans; however, because there is no fund to earn the assumed rate of interest, the pension-cost provision for the current year should be increased by an amount equivalent to the interest that would have been earned in the current year if the prior-year provisions had been funded.
.43 For funded plans, the amount of the pension cost determined under this section may vary from the amount funded. When this occurs, the pension-cost provision for the year should be increased by an amount equivalent to interest on the prior-year provisions not funded or be decreased by an amount equivalent to interest on prior-year funding in excess of provisions.

.44 A pension plan may become overfunded (that is, have fund assets in excess of all prior service cost assigned under the actuarial method in use for accounting purposes) as a result of contributions or as a result of actuarial gains. In determining provisions for pension cost, the effects of such overfunding are appropriately recognized in the current and future years through the operation of paragraph .30 or .43. As to a plan that is overfunded on the effective date of this section see paragraph .48.

INCOME TAXES

Opinion

.45 When pension cost is recognized for tax purposes in a period other than the one in which recognized for financial reporting, appropriate consideration should be given to allocation of income taxes among accounting periods. (See section 4091.)

DISCLOSURE

Opinion

[.46] [Superseded, effective December 15, 1979, by FASB Statement No. 36.] (See section 4065.)

CHANGES IN ACCOUNTING METHOD

Opinion

.47 On occasion a company may change its method of accounting for pension cost from one acceptable method under this section to another. Such a change might be a change in the actuarial cost method, in the amortization of past and prior service cost, in the treatment of actuarial gains and losses, or in other factors. When such a change is made subsequent to the effective date of this section, a question arises about the accounting for the difference between the cost actually provided under the old method and the cost that would have been provided under the new
method. The Board believes that pension cost provided under an acceptable method of accounting in prior periods should not be changed subsequently. Therefore, the effect on prior-year cost of a change in accounting method should be applied prospectively to the cost of the current year and future years, in a manner consistent with the conclusions of this section, and not retroactively as an adjustment of retained earnings or otherwise. The change and its effect should be disclosed as indicated in FASB Statement No. 36 [section 4065]. [As amended, effective December 15, 1979 by FASB Statement No. 36.] (See section 4065.)

TRANSITION TO RECOMMENDED PRACTICES

Opinion

.48 For purposes of this section, any unamortized prior service cost (computed under the actuarial cost method to be used for accounting purposes in the future) on the effective date of this section may be treated as though it arose from an amendment of the plan on that date rather than on the actual dates of adoption or amendment of the plan. If the pension plan is overfunded (see paragraph .44) on the effective date of this section, the amount by which it is overfunded (computed under the actuarial cost method to be used for accounting purposes in the future) should be treated as an actuarial gain realized on that date and should be accounted for as described in paragraph .30.

.49 The effect of any changes in accounting methods made as a result of the issuance of this section should be applied prospectively to the cost of the current year and future years in a manner consistent with the conclusions of this section, and not retroactively by an adjustment of retained earnings or otherwise. The change and its effect should be disclosed as indicated in FASB Statement No. 36 [section 4065]. [As amended, effective December 15, 1979 by FASB Statement No. 36.] (See section 4065.)
ACCOUNTING FOR THE COST OF PENSION PLANS—
APPENDIX A

ACTUARIAL VALUATIONS, ASSUMPTIONS AND COST METHODS

ACTUARIAL VALUATIONS

.01 An actuarial valuation of a pension plan is the process used by actuaries for determining the amounts an employer is to contribute (pay, fund) under a pension plan (except where an insured arrangement calls for payment of specified premiums). A valuation is made as of a specific date, which need not coincide with the end of the period for which a payment based on the valuation will be made. Indeed, it is uncommon for such a coincidence of dates to exist. Among other factors, a time lag is necessary in order to compile the data and to permit the actuary to make the necessary calculations. Although annual valuations are, perhaps, the rule, some employers have valuations made at less frequent intervals, in some cases as infrequently as every five years. The calculations are made for a closed group—ordinarily, employees presently covered by the plan, former employees having vested rights and retired employees currently receiving benefits.

.02 An initial step in making a valuation is to determine the present value on the valuation date of benefits to be paid over varying periods of time in the future to employees after retirement (plus any other benefits under the plan). An actuarial cost method (see description in a later section of this Appendix) is then applied to this present value to determine the contributions to be made by the employer.

.03 The resulting determinations are estimates, since in making a valuation a number of significant uncertainties concerning future events must be resolved by making several actuarial assumptions.

Note: For further discussion see Appendix C of Accounting Research Study No. 8, Accounting for the Cost of Pension Plans by Ernest L. Hicks, CPA, published by the American Institute of Certified Public Accountants in 1965.
ACTUARIAL ASSUMPTIONS

.04 The uncertainties in estimating the cost of a pension plan relate to (1) interest (return on funds invested), (2) expenses of administration and (3) the amounts and timing of benefits to be paid with respect to presently retired employees, former employees whose benefits have vested and present employees.

Interest (Return on Funds Invested)

.05 The rate of interest used in an actuarial valuation is an expression of the average rate of earnings that can be expected on the funds invested or to be invested to provide for the future benefits. Since in most instances the investments include equity securities as well as debt securities, the earnings include dividends as well as interest; gains and losses on investments are also a factor. For simplicity, however, the rate is ordinarily called the interest rate.

Expenses of Administration

.06 In many instances the expenses of administering a pension plan—for example, fees of attorneys, actuaries and trustees, and the cost of keeping pension records—are borne directly by the employer. In other cases, such expenses, or some of them, are paid by a trust or insurance company from funds contributed by the employer. In the latter cases, expenses to be incurred in the future must be estimated in computing the employer’s pension cost.

Benefits

.07 Several assumptions must be made as to the amounts and timing of the future benefits whose present value is used in expressing the cost of a pension plan. The principal assumptions are as follows:

a. Future compensation levels. Benefits under some pension plans depend in part on future compensation levels. Under plans of this type, an estimate is ordinarily made of normal increases expected from the progression of employees through the various earnings-rate categories, based on the employer’s experience. General earnings-level increases, such as those which may result from inflation, are usually excluded from this actuarial assumption.
b. Cost-of-living. To protect the purchasing power of retirement benefits, some plans provide that the benefits otherwise determined will be adjusted from time to time to reflect variations in a specific index, such as the Consumer Price Index of the United States Bureau of Labor Statistics. In estimating the cost of such a plan, expected future changes in the cost-of-living index may be included in the actuarial assumptions.

c. Mortality. The length of time an employee covered by a pension plan will live is an important factor in estimating the cost of the benefit payments he will receive. If an employee dies before he becomes eligible for pension benefits, he receives no payments, although in some plans his beneficiaries receive lump-sum or periodic benefits. The total amount of pension benefits for employees who reach retirement is determined in large part by how long they live thereafter. Estimates regarding mortality are based on mortality tables.

d. Retirement age. Most plans provide a normal retirement age, but many plans permit employees to work thereafter under certain conditions. Some plans provide for retirement in advance of the normal age in case of disability, and most plans permit early retirement at the employee's option under certain conditions. When there are such provisions, an estimate is made of their effect on the amount and timing of the benefits which will ultimately be paid.

e. Turnover. In many plans, some employees who leave employment with the employer before completing vesting requirements forfeit their rights to receive benefits. In estimating the amount of future benefits, an allowance for the effect of turnover may be made.

f. Vesting. Many plans provide that after a stated number of years of service an employee becomes entitled to receive benefits (commencing at his normal retirement age and usually varying in amount with his number of years of service) even though he leaves the company for a reason other than retirement. This is taken into consideration in estimating the effect of turnover.

g. Social security benefits. For plans providing for a reduction of pensions by all or part of social security
benefits, it is necessary in estimating future pension benefits to estimate the effect of future social security benefits. Ordinarily, this estimate is based on the assumption that such benefits will remain at the level in effect at the time the valuation is being made.

**Actuarial Gains and Losses**

.08 The likelihood that actual events will coincide with each of the assumptions used is so remote as to constitute an impossibility. As a result, the actuarial assumptions used may be changed from time to time as experience and judgment dictate. In addition, whether or not the assumptions as to events in the future are changed, it is often necessary to recognize in the calculations the effect of differences between actual prior experience and the assumptions used in the past.

**ACTUARIAL COST METHODS**

.09 Actuarial cost methods have been developed by actuaries as funding techniques to be used in actuarial valuations. As indicated in paragraph .19 of section 4063, many of the actuarial cost methods are also useful for accounting purposes. The following discussion of the principal methods describes them as funding techniques (to simplify the discussion, references to prior service cost arising on amendment of a plan have been omitted; such cost would ordinarily be treated in a manner consistent with that described for past service cost). Their application for accounting purposes is described in section 4063.

**Accrued Benefit Cost Method—Unit Credit Method**

.10 Under the unit credit method, future service benefits (pension benefits based on service after the inception of a plan) are funded as they accrue—that is, as each employee works out the service period involved. Thus, the normal cost under this method for a particular year is the present value of the units of future benefit credited to employees for service in that year (hence unit credit). For example, if a plan provides benefits of $5 per month for each year of credited service, the normal cost for a particular employee for a particular year is the present value (adjusted for mortality and usually for turnover) of an
annuity of $5 per month beginning at the employee’s anticipated retirement date and continuing throughout his life.

.11 The past service cost under the unit credit method is the present value at the plan’s inception date of the units of future benefit credited to employees for service prior to the inception date.

.12 The annual contribution under the unit credit method ordinarily comprises (1) the normal cost and (2) an amount for past service cost. The latter may comprise only an amount equivalent to interest on the unfunded balance or may also include an amount intended to reduce the unfunded balance.

.13 As to an individual employee, the annual normal cost for an equal unit of benefit each year increases because the period to the employee’s retirement continually shortens and the probability of reaching retirement increases; also, in some plans, the retirement benefits are related to salary levels, which usually increase during the years. As to the employees collectively, however, the step-up effect is masked, since older employees generating the highest annual cost are continually replaced by new employees generating the lowest. For a mature employee group, the normal cost would tend to be the same each year.

.14 The unit credit method is almost always used when the funding instrument is a group annuity contract and may also be used in trustee plans and deposit administration contracts where the benefit is a stated amount per year of service. This method is not frequently used where the benefit is a fixed amount (for example, $100 per month) or where the current year’s benefit is based on earnings of a future period.

Projected Benefit Cost Methods

.15 As explained above, the accrued benefit cost method (unit credit method) recognizes the cost of benefits only when they have accrued (in the limited sense that the employee service on which benefits are based has been rendered). By contrast, the projected benefit cost methods look forward. That is, they assign the entire cost of an employee’s projected benefits to past, present and future periods. This is done in a manner not directly related to the
periods during which the service on which the benefits are based has been or will be rendered. The principal projected benefit cost methods are discussed below.

.16 Entry age normal method. Under the entry age normal method, the normal costs are computed on the assumption (1) that every employee entered the plan (thus, entry age) at the time of employment or at the earliest time he would have been eligible if the plan had been in existence and (2) that contributions have been made on this basis from the entry age to the date of the actuarial valuation. The contributions are the level annual amounts which, if accumulated at the rate of interest used in the actuarial valuation, would result in a fund equal to the present value of the pensions at retirement for the employees who survive to that time.

.17 Normal cost under this method is the level amount to be contributed for each year. When a plan is established after the company has been in existence for some time, past service cost under this method at the plan’s inception date is theoretically the amount of the fund that would have been accumulated had annual contributions equal to the normal cost been made in prior years.

.18 In theory, the entry age normal method is applied on an individual basis. It may be applied, however, on an aggregate basis, in which case separate amounts are not determined for individual employees. Further variations in practice often encountered are (1) the use of an average entry age, (2) the use, particularly when benefits are based on employees’ earnings, of a level percentage of payroll in determining annual payments and (3) the computation of past service cost as the difference between the present value of employees’ projected benefits and the present value of the employer’s projected normal cost contributions. In some plans, the normal cost contribution rate may be based on a stated amount per employee. In other plans the normal cost contribution itself may be stated as a flat amount.

.19 In valuations for years other than the initial year the past service cost may be frozen (that is, the unfunded amount of such cost is changed only to recognize payments and the effect of interest). Accordingly, actuarial gains and losses are spread into the future, entering into the normal
cost for future years. If past service cost is not frozen, the unfunded amount includes the effects of actuarial gains and losses realized prior to the date of the valuation being made.

.20 The annual contribution under the entry age normal method ordinarily comprises (1) the normal cost and (2) an amount for past service cost. The latter may comprise only an amount equivalent to interest on the unfunded balance or may also include an amount intended to reduce the unfunded balance.

.21 The entry age normal method is often used with trustee plans and deposit administration contracts.

.22 Individual level premium method. The individual level premium method assigns the cost of each employee's pension in level annual amounts, or as a level percentage of the employee's compensation, over the period from the inception date of a plan (or the date of his entry into the plan, if later) to his retirement date. Thus, past service cost is not determined separately but is included in normal cost.

.23 The most common use of the individual level premium method is with funding by individual insurance or annuity policies. It may be used, however, with trustee plans and deposit administration contracts.

.24 In plans using individual annuity policies, the employer is protected against actuarial losses, since premiums paid are not ordinarily subject to retroactive increases. The insurance company may, however, pass part of any actuarial gains along to the employer by means of dividends. Employee turnover may be another source of actuarial gains under such insured plans, since all or part of the cash surrender values of policies previously purchased for employees leaving the employer for reasons other than retirement may revert to the company (or to the trust). Dividends and cash surrender values are ordinarily used to reduce the premiums payable for the next period.

.25 The individual level premium method generates annual costs which are initially very high and which ultimately drop to the level of the normal cost determined under the entry age normal method. The high initial costs
arise because the past service cost (although not separately identified) for employees near retirement when the plan is adopted is in effect amortized over a very short period.

.26 Aggregate method. The aggregate method applies on a collective basis the principle followed for individuals in the individual level premium method. That is, the entire unfunded cost of future pension benefits (including benefits to be paid to employees who have retired as of the date of the valuation) is spread over the average future service lives of employees who are active as of the date of the valuation. In most cases this is done by the use of a percentage of payroll.

.27 The aggregate method does not deal separately with past service cost (but includes such cost in normal cost). Actuarial gains and losses enter into the determination of the contribution rate and, consequently, are spread over future periods.

.28 Annual contributions under the aggregate method decrease, but the rate of decrease is less extreme than under the individual level premium method. The aggregate cost method amortizes past service cost (not separately identified) over the average future service lives of employees, thus avoiding the very short individual amortization periods of the individual level premium method.

.29 The aggregate method may be modified by introducing past service cost. If the past service cost is determined by the entry age normal method, the modified aggregate method is the same as the entry age normal method applied on the aggregate basis. If the past service cost is determined by the unit credit method, the modified aggregate method is called the attained age normal method (discussed below).

.30 The aggregate method is used principally with trusteeed plans and deposit administration contracts.

.31 Attained age normal method. The attained age normal method is a variant of the aggregate method or individual level premium method in which past service cost, determined under the unit credit method, is recognized separately. The cost of each employee's benefits assigned to years after the inception of the plan is spread
over the employee's future service life. Normal cost contributions under the attained age normal method, usually determined as a percentage of payroll, tend to decline but less markedly than under the aggregate method or the individual level premium method.

.32 As with the unit credit and entry age normal methods, the annual contribution for past service cost may comprise only an amount equivalent to interest on the unfunded balance or may also include an amount intended to reduce the unfunded balance.

.33 The attained age normal method is used with trusteeed plans and deposit administration contracts.

Terminal Funding

.34 Under terminal funding, funding for future benefit payments is made only at the end of an employee's period of active service. At that time the employer either purchases a single-premium annuity which will provide the retirement benefit or makes an actuarially equivalent contribution to a trust. (Note—This method is not acceptable for determining the provision for pension cost under section 4063.)

[This page is blank]
Glossary

.01 Accrue (Accrual). When accrue (accrual) is used in accounting discussions in section 4063, it has the customary accounting meaning. When used in relation to actuarial terms or procedures, however, the intended meaning differs somewhat. When actuaries say that pension benefits, actuarial costs or actuarial liabilities have accrued, they ordinarily mean that the amounts are associated, either specifically or by a process of allocation, with years of employee service before the date of a particular valuation of a pension plan. Actuaries do not ordinarily intend their use of the word accrue to have the more conclusive accounting significance.

.02 Accrued Benefit Cost Method. An actuarial cost method. See section 4063A.

.03 Actuarial Assumptions. Factors which actuaries use in tentatively resolving uncertainties concerning future events affecting pension cost; for example, mortality rate, employee turnover, compensation levels, investment earnings, etc. See section 4063A.

.04 Actuarial Cost Method. A particular technique used by actuaries for establishing the amount and incidence of the annual actuarial cost of pension plan benefits, or benefits and expenses, and the related actuarial liability. Sometimes called funding method. See section 4063A.

.05 Actuarial Gains (Losses). The effects on actuarially calculated pension cost of (a) deviations between actual prior experience and the actuarial assumptions used or (b) changes in actuarial assumptions as to future events.

.06 Actuarial Liability. The excess of the present value, as of the date of a pension plan valuation, of pro-
spective pension benefits and administrative expenses over the sum of (1) the amount in the pension fund and (2) the present value of future contributions for normal cost determined by any of several actuarial cost methods. (Sometimes referred to as unfunded actuarial liability.)

.07 Actuarial Valuation. The process by which an actuary estimates the present value of benefits to be paid under a pension plan and calculates the amounts of employer contributions or accounting charges for pension cost. See section 4063A.

.08 Actuarially Computed Value. See present value.

.09 Actuarially Computed Value of Vested Benefits. See vested benefits.

.10 Actuary. There are no statutory qualifications required for actuaries. Membership in the American Academy of Actuaries, a comprehensive organization of the profession in the United States, is generally considered to be acceptable evidence of professional qualification.

.11 Aggregate Method. An actuarial cost method. See section 4063A.

.12 Assumptions. See actuarial assumptions.

.13 Attained Age Normal Method. An actuarial cost method. See section 4063A.

.14 Benefits (Pension Benefits) (Retirement Benefits). The pensions and any other payments to which employees or their beneficiaries may be entitled under a pension plan.

.15 Contribute (Contribution). When used in connection with a pension plan, contribute ordinarily is synonymous with pay.

.16 Deferred Compensation Plan. An arrangement whereby specified portions of the employee’s compensation are payable in the form of retirement benefits.

.17 Deferred Profit-Sharing Plan. An arrangement whereby an employer provides for future retirement benefits for employees from specified portions of the earnings of the business; the benefits for each employee are usually the amounts which can be provided by accumulated amounts specifically allocated to him.
.18 Defined-Benefit Plan. A pension plan stating the benefits to be received by employees after retirement, or the method of determining such benefits. The employer’s contributions under such a plan are determined actuarially on the basis of the benefits expected to become payable.

.19 Defined- Contribution Plan. A pension plan which (a) states the benefits to be received by employees after retirement or the method of determining such benefits (as in the case of a defined-benefit plan) and (b) accompanies a separate agreement that provides a formula for calculating the employer’s contributions (for example, a fixed amount for each ton produced or for each hour worked, or a fixed percentage of compensation). Initially, the benefits stated in the plan are those which the contributions expected to be made by the employer can provide. If later the contributions are found to be inadequate or excessive for the purpose of funding the stated benefits on the basis originally contemplated, either the contributions or the benefits, or both, may be subsequently adjusted. In one type of defined-contribution plan (money-purchase plan) the employer’s contributions are determined for, and allocated with respect to, specific individuals, usually as a percentage of compensation; the benefits for each employee are the amounts which can be provided by the sums contributed for him.

.20 Deposit Administration Contract. A funding instrument provided by an insurance company under which amounts contributed by an employer are not identified with specific employees until they retire. When an employee retires, the insurance company issues an annuity which will provide the benefits stipulated in the pension plan and transfers the single premium for the annuity from the employer’s accumulated contributions.

.21 Entry Age Normal Method. An actuarial cost method. See section 4063A.

.22 Fund. Used as a verb, fund means to pay over to a funding agency. Used as a noun, fund refers to assets accumulated in the hands of a funding agency for the purpose of meeting retirement benefits when they become due.
.23 Funded. The portion of pension cost that has been paid to a funding agency is said to have been *funded*.

.24 Funding Agency. An organization or individual, such as a specific corporate or individual trustee or an insurance company, which provides facilities for the accumulation of assets to be used for the payment of benefits under a pension plan; an organization, such as a specific life insurance company, which provides facilities for the purchase of such benefits.

.25 Funding Method. See actuarial cost method.

.26 Individual Level Premium Method. An actuarial cost method. See section 4063A.

.27 Interest. The return earned or to be earned on funds invested or to be invested to provide for future pension benefits. In calling the return *interest*, it is recognized that in addition to interest on debt securities the earnings of a pension fund may include dividends on equity securities, rentals on real estate, and realized and unrealized gains or (as offsets) losses on fund investments. See section 4063A.

.28 Mortality Rate. Death rate—the proportion of the number of deaths in a specified group to the number living at the beginning of the period in which the deaths occur. Actuaries use mortality tables, which show death rates for each age, in estimating the amount of future retirement benefits which will become payable. See section 4063A.

.29 Normal Cost. The annual cost assigned, under the actuarial cost method in use, to years subsequent to the inception of a pension plan or to a particular valuation date. See past service cost, prior service cost.

.30 Past Service Cost. Pension cost assigned, under the actuarial cost method in use, to years prior to the inception of a pension plan. See normal cost, prior service cost.

.31 Pay-As-You-Go. A method of recognizing pension cost only when benefits are paid to retired employees. (Note—This is not an acceptable method for accounting purposes under section 4063.)
.32 **Pension Fund.** See *fund*.

.33 **Present Value (Actuarially Computed Value).** The current worth of an amount or series of amounts payable or receivable in the future. *Present value* is determined by discounting the future amount or amounts at a predetermined rate of interest. In pension plan valuations, actuaries often combine arithmetic factors representing probability (e.g., mortality, withdrawal, future compensation levels) with arithmetic factors representing discount (interest). Consequently, to actuaries, determining the present value of future pension benefits may mean applying factors of both types.

.34 **Prior Service Cost.** Pension cost assigned, under the actuarial cost method in use, to years prior to the date of a particular actuarial valuation. *Prior service cost* includes any remaining past service cost. See *normal cost*, *past service cost*.

.35 **Projected Benefit Cost Method.** A type of *actuarial cost method*. See section 4063A.

.36 **Provision (Provide).** An accounting term meaning a charge against income for an estimated expense, such as pension cost.

.37 **Service.** Employment taken into consideration under a pension plan. Years of employment before the inception of a plan constitute an employee's past service; years thereafter are classified in relation to the particular actuarial valuation being made or discussed. Years of employment (including past service) prior to the date of a particular valuation constitute prior service; years of employment following the date of the valuation constitute future service.

.38 **Terminal Funding.** An *actuarial cost method*. See section 4063A. (Note—This is not an acceptable *actuarial cost method* for accounting purposes under section 4063.)

.39 **Trust Fund Plan.** A pension plan for which the funding instrument is a trust agreement.

.40 **Turnover.** Termination of employment for a reason other than death or retirement. See *withdrawal*, section 4063A.
.41 Unit Credit Method. An actuarial cost method. See section 4063A.

.42 Valuation. See actuarial valuation, section 4063A.

.43 Vested Benefits. Benefits that are not contingent on the employee's continuing in the service of the employer. In some plans the payment of the benefits will begin only when the employee reaches the normal retirement date; in other plans the payment of the benefits will begin when the employee retires (which may be before or after the normal retirement date). The actuarially computed value of vested benefits, as used in section 4063, represents the present value, at the date of determination, of the sum of (a) the benefits expected to become payable to former employees who have retired, or who have terminated service with vested rights, at the date of determination; and (b) the benefits, based on service rendered prior to the date of determination, expected to become payable at future dates to present employees, taking into account the probable time that employees will retire, at the vesting percentages applicable at the date of determination. The determination of vested benefits is not affected by other conditions, such as inadequacy of the pension fund, which may prevent the employee from receiving the vested benefits.

.44 Withdrawal. The removal of an employee from coverage under a pension plan for a reason other than death or retirement. See turnover.
Accounting for the Cost of Pension Plans Subject to the Employee Retirement Income Security Act of 1974: An Interpretation of Section 4063

[Source: FASB Interpretation No. 3.]

December 1974

INTRODUCTION

.01 The Employee Retirement Income Security Act of 1974 (commonly referred to as the Pension Reform Act) became law on September 2, 1974. It is principally concerned with the funding of pension plans, the conditions for employee participation and for vesting of benefits, and the safeguarding of employees' pension rights. Pension plans adopted after January 1, 1974 are subject to the participation, vesting, and funding requirements of the Act for plan years beginning after September 2, 1974. Pension plans in existence on January 1, 1974 are not subject to those requirements until plan years beginning after December 31, 1975, unless earlier compliance is elected.

.02 The Financial Accounting Standards Board has analyzed the Act to determine whether there is a need to reconsider APB Opinion No. 8 [section 4063] “Accounting for the Cost of Pension Plans.” As a result of that analysis, the Board has placed the overall subject of pension accounting, including accounting and reporting by pension trusts, on its technical agenda. Pending completion of that project, the Board is issuing this Interpretation to clarify the accounting for the cost of pension plans covered by the Act.

INTERPRETATION

.03 A fundamental concept of APB Opinion No. 8 [section 4063] is that the annual pension cost to be charged to expense for financial accounting purposes is not necessarily determined by the funding of a pension plan. Therefore, no change in the minimum and maximum limits for the annual provision for pension cost set forth in paragraph 17 of APB Opinion No. 8 [section 4063.17] is required as a result of the Act. Compliance with the Act's participation, vesting, or funding requirements may result, however, in a change in the amount of pension cost to be charged to expense periodically for financial accounting.
purposes even though no change in accounting methods is made, Paragraph 17 of APB Opinion No. 8 [section 4063.17] requires that "the entire cost of benefit payments ultimately to be made should be charged against income subsequent to the adoption or amendment of a plan." Consistent with that requirement and within the minimum and maximum limits of paragraph 17 of APB Opinion No. 8 [section 4063.17], any change in pension cost resulting from compliance with the Act shall enter into the determination of periodic provisions for pension expense subsequent to the date a plan becomes subject to the Act's participation, vesting, and funding requirements. That date will be determined either by the effective dates prescribed by the Act or by an election of earlier compliance with the requirements of the Act.

.04 If, prior to the date a plan becomes subject to the Act's participation, vesting, and funding requirements, it appears likely that compliance will have a significant effect in the future on the amount of an enterprise's (a) periodic provision for pension expense, (b) periodic funding of pension costs, or (c) unfunded vested benefits, this fact and an estimate of the effect shall be disclosed in the notes to the financial statements.1

.05 Based on an analysis of information presently available, the Board does not believe that the Act creates a legal obligation for unfunded pension costs that warrants accounting recognition as a liability pursuant to paragraph 18 of APB Opinion No. 8 [section 4063.18] except in the following two respects. First, an enterprise with a plan subject to the Act must fund a minimum amount annually unless a waiver is obtained from the Secretary of the Treasury. If a waiver is not obtained, the amount currently required to be funded shall be recognized as a liability by a charge to pension expense for the period, by a deferred charge, or by a combination of both, whatever is appropriate under APB Opinion No. 8 [section 4063]. Second, in the event of the termination of a pension plan, the Act imposes a liability on an enterprise. When there is convincing evidence that a pension plan will be terminated, evidenced perhaps by a formal commitment by management to terminate the plan, and the liability on termination will exceed fund assets and related prior accruals, the excess liability shall be accrued. If the amount of the excess liability cannot be reasonably determined, disclosure of the circumstances shall be made in the notes to the financial statements, including an estimate of the possible range of the liability.

1 The Board recognizes that actuarial computations or other information may not be available in time to permit disclosure of an estimate of the effect in notes to financial statements for fiscal periods ending in 1974 or early in 1975. If an estimate cannot be furnished, an explanation shall be provided.
EFFECTIVE DATE
.06 This Interpretation shall be effective on December 31, 1974.

AC Section 4064

Deferred Compensation Contracts

[Source: APB Opinion No. 12, Pars. 6-8.]

Effective for fiscal periods beginning after December 31, 1967, unless otherwise indicated.

01 Section 4063, Accounting for the Cost of Pension Plans, applies to deferred compensation contracts with individual employees if such contracts, taken together, are equivalent to a pension plan. The Board believes that other deferred compensation contracts should be accounted for individually on an accrual basis. Such contracts customarily include certain requirements such as continued employment for a specified period and availability for consulting services and agreements not to compete after retirement, which, if not complied with, remove the employer's obligations for future payments. The estimated amounts to be paid under each contract should be accrued in a systematic and rational manner over the period of active employment from the time the contract is entered into, unless it is evident that future services expected to be received by the employer are commensurate with the payments or a portion of the payments to be made. If elements of both current and future services are present, only the portion applicable to the current services should be accrued.

02 Some deferred compensation contracts provide for periodic payments to employees or their surviving spouses for life with provisions for a minimum lump-sum settlement in the event of the early death of one or all of the beneficiaries. The estimated amount of future payments to be made under such contracts should be accrued over the period of active employment from the time the contract is entered into. Such estimates should be based on the life expectancy of each individual concerned (based on the most

1 The amounts to be accrued periodically should result in an accrued amount at the end of the term of active employment which is not less than the then present value of the estimated payments to be made.
recent mortality tables available) or on the estimated cost of an annuity contract rather than on the minimum payable in the event of early death.

.03 At the effective date of this section, amounts\textsuperscript{2} pertaining to deferred compensation contracts with employees actively employed, which amounts have not been accrued in a manner consistent with the provisions of the section, should be accrued over the employee's remaining term of active employment. For purposes of transition, these amounts may be accrued over a period of up to ten years if the remaining term of active employment is less than ten years.

Disclosure of Pension Information
an amendment of section 4063

[Source: FASB Statement No. 36.]

May 1980

INTRODUCTION AND BACKGROUND INFORMATION

.01 In March 1980, the FASB issued Statement No. 35 [section 6110], Accounting and Reporting by Defined Benefit Pension Plans, which focuses on accounting and reporting by pension plans. A Discussion Memorandum for a project on accounting by employers for pensions is presently being prepared. It will address the issues relating to employer's accounting for pension and other retirement benefits.

.02 As an interim measure, pending completion of the latter project, the Board has decided that the lack of comparable disclosures in employers' financial statements about the financial status of their pension plans requires an amendment of existing disclosure standards. Many publicly held companies presently disclose in their financial statements the amount of unfunded past service costs, which the Securities and Exchange Commission requires to be disclosed in Form 10-K. The amount of past service costs can vary considerably or be nonexistent depending on the actuarial cost method selected, without any differences in other facts or circumstances. For that reason, the Board believes that disclosure of unfunded past service cost is not as useful as other information for evaluating the impact of pension plans on employers. Also, APB Opinion No. 8 [section 4063], Accounting for the Cost of Pension Plans, does not specify the basis that should be used for valuing pension plan assets in determining the amount of unfunded vested benefits that Opinion requires to be disclosed. Various valuation methods exist in practice. The Board believes that pension disclosures in financial statements would be more useful if employers with defined benefit pension plans disclosed the actuarial present value of accumulated plan benefits and net assets available for those benefits, as determined in accordance with Statement 35 [section 6110].
.03 As a part of its ongoing effort to develop a conceptual framework for financial accounting and reporting, the Board has on its agenda a project that addresses the definitions of liabilities as well as assets and equity interests. At present, the accounting nature of employees' accumulated plan benefits has not been determined. That issue will be addressed, from the employer's perspective, in the project on accounting by employers for pensions. In the meantime, the Board has concluded that summary information of the financial status of the employer's pension plans should be provided to an employer's existing and potential creditors and investors. The Board has also concluded that the information developed for disclosure by the pension plan was a logical basis for the employer's disclosures because of its relevance and because little or no additional cost would be involved.

.04 This Statement does not alter the definitions of a defined benefit pension plan and a defined contribution plan contained in Appendix B of Opinion 8 [section 4063B]. Also, this Statement does not change the requirements of paragraph 39 of Opinion 8 [section 4063.39]; that paragraph requires some defined contribution plans to comply with the requirements applicable to defined benefit plans when careful analysis indicates that the substance of the plan is to provide defined benefits.

.05 An Exposure Draft of a proposed Statement, Disclosure of Pension and Other Post-Retirement Benefit Information, was issued on July 12, 1979. The Board received 228 letters of comment in response to the Exposure Draft. Certain of the comments received and the Board's consideration of them are discussed in Appendix B, "Summary of Consideration of Comments on Exposure Draft."

.06 The Board has concluded that it can reach an informed decision on the basis of existing data without a public hearing and that the effective date and transition specified in paragraph .11 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

.07 The Board believes that pension plans are of sufficient importance to an understanding of financial position and results of operations that the disclosures set forth in this paragraph and paragraph .08 shall be made in financial statements or the notes thereto:
Disclosure of Pension Information

a. A statement that pension plans exist, identifying or describing the employee groups covered,

b. A statement of the company's accounting and funding policies,

c. The provision for pension cost for the period,

d. Nature and effect of significant matters affecting comparability for all periods presented, such as changes in accounting methods (actuarial cost method, amortization of past and prior services cost, treatment of actuarial gains and losses, etc.), changes in circumstances (actuarial assumptions, etc.), or adoption or amendment of a plan.

.08 For its defined benefit pension plans, an employer shall disclose for each complete set of financial statements the following data determined in accordance with Statement 35 [section 6110] as of the most recent benefit information date\(^1\) for which the data are available:

a. The actuarial present value of vested accumulated plan benefits,

b. The actuarial present value of nonvested accumulated plan benefits,

c. The plans' net assets available for benefits,\(^2\)

d. The assumed rates of return used in determining the actuarial present values of vested and nonvested accumulated plan benefits,

e. The date as of which the benefit information was determined.

The data may be reported in total for all plans, separately for each plan, or in such subaggregations as are considered most useful.\(^3\) For plans for which the above data are not

---

\(^1\) The benefit information date is the date as of which the actuarial present value of accumulated plan benefits is determined. In comparative financial statements, data disclosed for earlier periods shall be the data available when the earlier financial statements were originally issued.

\(^2\) For purposes of this Statement, an employer's accrued pension liability, as of the benefit information date, shall be added to the plan's net assets to the extent that it exceeds contributions receivable from the employer included in the plan's net assets available for benefits.

\(^3\) There may be circumstances in which significant unfunded amounts of an individual plan are offset by the aggregation of assets in excess of accumulated benefits in other plans. Separate disclosure of such unfunded amounts may be desirable if a significant number of participants in such an unfunded plan are employed by a subsidiary or division that is unprofitable or experiencing a continuous decline in business.
available, the employer shall continue to comply with the disclosure requirements originally contained in Opinion 8 [section 4063], namely, the excess, if any, of the actuarially computed value of vested benefits over the total of the pension fund and any balance sheet pension accruals, less any pension prepayments or deferred charges. The reasons why the information required by (a) through (e) above is not provided for those plans shall be disclosed.

.09 In some cases, the relative position and undertakings of an employer associated with a multiemployer plan that, pursuant to paragraph 39 of Opinion 8 [section 4063.39], is considered to be a defined benefit plan may not be determinable. If that situation exists and the circumstances are disclosed, the requirements of paragraph .08 are waived with regard to that plan.

Amendment to Section 4063

.10 This Statement supersedes paragraph 46 of Opinion 8. The example following item 5 of paragraph 46 of Opinion 8 is replaced by the example that appears in Appendix A. The requirements of paragraph 46 of Opinion 8 have been carried forward without change except as to item 4 of that paragraph, which is changed by paragraphs .08 and .09 of this Statement.

Effective Date and Transition

.11 This Statement shall be effective for annual financial statements for fiscal years beginning after December 15, 1979 and for a complete set of financial statements for interim periods within those fiscal years issued after June 30, 1980. Earlier application is encouraged. The disclosures required by this Statement need not be included in financial statements for periods beginning before the effective date of this Statement that are being presented for comparative purposes with financial statements for periods after the effective date, but if included, that information shall be presented in conformity with the provisions of this Statement.

The provisions of this Statement need not be applied to immaterial items.

* Plans for which the information may not be available are expected to be only those plans that do not report such information with certain governmental agencies pursuant to the Employee Retirement Income Security Act of 1974 (ERISA).
EXAMPLE OF PENSION PLAN DISCLOSURE

.12 The company and its subsidiaries have several pension plans covering substantially all of their employees, including certain employees in foreign countries. The total pension expense for 19X1 and 19X2 was $XXX and $XXX respectively, which includes, as to certain defined benefit plans, amortization of past service cost over XX years. The company makes annual contributions to the plans equal to the amounts accrued for pension expense. A change during 19X2 in the actuarial cost method used in computing pension cost had the effect of reducing net income for the year by approximately $XXX. A comparison of accumulated plan benefits and plan net assets for the company’s domestic defined benefit plans is presented below:

<table>
<thead>
<tr>
<th></th>
<th>January 1, 19X1</th>
<th>January 1, 19X2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Actuarial present value of accumulated plan benefits:</td>
<td>$XXX $XXX</td>
<td>$XXX $XXX</td>
</tr>
<tr>
<td>Vested</td>
<td>$XXX $XXX</td>
<td>$XXX $XXX</td>
</tr>
<tr>
<td>Nonvested</td>
<td>$XXX $XXX</td>
<td>$XXX $XXX</td>
</tr>
</tbody>
</table>

Net assets available for benefits $XXX $XXX

The weighted average assumed rate of return used in determining the actuarial present value of accumulated plan benefits was X percent for both 19X1 and 19X2. The company's foreign pension plans are not required to report to certain governmental agencies pursuant to ERISA and do not otherwise determine the actuarial value of accumulated benefits or net assets available for benefits as calculated and disclosed above. For those plans, the actuarially computed value of vested benefits as of December 31, 19X1 and December 31, 19X2 exceeded the total of those plans' pension funds and balance sheet accruals less pension prepayments and deferred charges by approximately $XXX and $XXX respectively.
SUMMARY OF CONSIDERATION OF COMMENTS ON EXPOSURE DRAFT

.13 Some respondents questioned whether an amendment to Opinion 8 [section 4063] should be issued at this time because the project on accounting by employers for pensions is on the agenda and will include a comprehensive examination of employer accounting for pension and other retirement benefits. Other respondents supported issuance of the Statement because present requirements do not provide comparable and meaningful pension disclosures. The Board agrees with the latter arguments and believes the improved comparability among employers' financial statements about the financial status of their pension plans warrants proceeding with the issuance of this Statement.

.14 The Exposure Draft would have required a description of all significant actuarial assumptions used to determine the actuarial present value of accumulated plan benefits. Some respondents stated that the highly technical and complex nature of actuarial assumptions would require extensive disclosures to provide adequate information for the user. Others stated that meaningful disclosure of actuarial assumptions would be further complicated for companies with multiple pension plans. Some respondents proposed the disclosure of actuarial assumptions be limited to the assumed rate(s) of investment return as that was considered the most significant assumption. Although the Board recognizes there may be additional significant assumptions, it agreed with the latter respondents and limited disclosure of actuarial assumptions to the assumed rate(s) of return.

.15 The Exposure Draft would have required disclosing a description of other retirement benefits, a description of accounting policies followed with respect to those benefits, and the cost of those benefits included in determining net income for the period. Some respondents objected to such disclosures because they felt that the costs of other retirement benefits were not material when compared to similar costs for active employees. Some respondents stated that because specific accounting standards for such benefits have not been established, disclosure requirements should be postponed pending development of such standards. Other respondents
indicated that the only significant disclosure regarding other retirement benefits would be the difference between the amount charged to expense and the amount that would be required using a generally accepted method of accounting for other retirement benefits. Because there is no authoritative generally accepted method of accounting for other retirement benefits, disclosure of that information would be premature at this time. The Board agreed with the comments of those respondents and, because accounting for other retirement benefits is included within the scope of the project on accounting by employers for pensions, the Board deleted that proposed disclosure requirement.

.16 Some respondents indicated that the Exposure Draft's statement that the proposed disclosures would cause little or no additional cost to the employer was not valid in certain cases. For example, because certain plans (e.g., foreign plans) are not required to report information to certain governmental agencies pursuant to ERISA, employers sponsoring those plans would have to determine the information in paragraph .08 solely for purposes of complying with this Statement. Similarly, plans having fewer than 100 participants that report under ERISA are not required to report accumulated benefit information to those agencies unless that information is calculated. The Board was persuaded by the arguments of those respondents and concluded that the appropriate criterion for requiring the new disclosures required by this Statement should be the availability of the information. If that information is not available, then employers are required to continue to comply with the disclosure requirements originally contained in paragraph 46(4) of Opinion 8. The Board believes this approach provides improved disclosure in those circumstances where the information is available and will involve little additional cost. It will also not diminish the present disclosure by those employers with plans for which the information is not available.

.17 The Exposure Draft required that employers with more than one defined benefit pension plan group those plans as to (a) those with accumulated plan benefits exceeding assets and (b) those having assets exceeding accumulated plan benefits. A number of respondents objected to that requirement because they felt that separate disclosure of "overfunded" and "underfunded" pension plans would be confusing and direct the reader's attention away from the relevance of the combined amounts to the employer's future pension commitments.
Other respondents stated that users do not gain significantly meaningful information from such a division. The Board considered the comments of those respondents and agreed to permit, instead of require, such presentation.
In December, 1947, the committee issued Accounting Research Bulletin No. 33, dealing with the subject of depreciation and high costs. In October, 1948, it published a letter to the membership reaffirming the opinion expressed in the bulletin.

The subject is one of continuing importance. The committee once more expresses its approval of the basic conclusions asserted in both publications, but in view of the many requests received for further consideration of various aspects of the problem has placed the subject on its agenda for further study.

Accounting Research Bulletin No. 33 read as follows:

"The American Institute of Accountants committee on accounting procedure has given extensive consideration to the problem of making adequate provision for the replacement of plant facilities in view of recent sharp increases in the price level. The problem requires consideration of charges against current income for depreciation of facilities acquired at lower price levels.

The committee recognizes that business management has the responsibility of providing for replacement of plant and machinery. It also recognizes that, in reporting profits today, the cost of material and labor is reflected in terms of 'inflated' dollars while the cost of productive facilities in which capital was invested at a lower price level is reflected in terms of dollars whose purchasing power was much greater. There is no doubt that in considering depreciation in connection with product costs, prices, and business policies, management must take into consideration the probability that plant and machinery will have to be

1 See FASB Statement No. 33 [section 1072], Financial Reporting and Changing Prices.
Revenue and Expense

replaced at costs much greater than those of the facilities now in use.

.06 "When there are gross discrepancies between the cost and current values of productive facilities, the committee believes that it is entirely proper for management to make annual appropriations of net income or surplus in contemplation of replacement of such facilities at higher price levels.

.07 "It has been suggested in some quarters that the problem be met by increasing depreciation charges against current income. The committee does not believe that this is a satisfactory solution at this time. It believes that accounting and financial reporting for general use will best serve their purposes by adhering to the generally accepted concept of depreciation on cost, at least until the dollar is stabilized at some level. An attempt to recognize current prices in providing depreciation, to be consistent, would require the serious step of formally recording appraised current values for all properties, and continuous and consistent depreciation charges based on the new values. Without such formal steps, there would be no objective standard by which to judge the propriety of the amounts of depreciation charges against current income, and the significance of recorded amounts of profit might be seriously impaired.

.08 "It would not increase the usefulness of reported corporate income figures if some companies charged depreciation on appraised values while others adhered to cost. The committee believes, therefore, that consideration of radical changes in accepted accounting procedure should not be undertaken, at least until a stable price level would make it practicable for business as a whole to make the change at the same time.

.09 "The committee disapproves immediate write-downs of plant cost by charges against current income in amounts believed to represent excessive or abnormal costs occasioned by current price levels. However, the committee calls attention to the fact that plants expected to have less than normal useful life can properly be depreciated on a systematic basis related to economic usefulness."

.10 The letter of October 14, 1948, was addressed to the members of the Institute and read as follows:
Depreciation and High Costs

.11 "The committee on accounting procedure has reached the conclusion that no basic change in the accounting treatment of depreciation of plant and equipment is practicable or desirable under present conditions to meet the problem created by the decline in the purchasing power of the dollar.

.12 "The committee has given intensive study to this problem and has examined and discussed various suggestions which have been made to meet it. It has solicited and considered hundreds of opinions on this subject expressed by businessmen, bankers, economists, labor leaders, and others. While there are differences of opinion, the prevailing sentiment in these groups is against any basic change in present accounting procedures. The committee believes that such a change would confuse readers of financial statements and nullify many of the gains that have been made toward clearer presentation of corporate finances.

.13 "Should inflation proceed so far that original dollar costs lose their practical significance, it might become necessary to restate all assets in terms of the depreciated currency, as has been done in some countries. But it does not seem to the committee that such action should be recommended now if financial statements are to have maximum usefulness to the greatest number of users.

.14 "The committee, therefore, reaffirms the opinion it expressed in Accounting Research Bulletin No. 33, December, 1947.

.15 "Any basic change in the accounting treatment of depreciation should await further study of the nature and concept of business income.

.16 "The immediate problem can and should be met by financial management. The committee recognizes that the common forms of financial statements may permit misunderstanding as to the amount which a corporation has available for distribution in the form of dividends, higher wages, or lower prices for the company’s products. When prices have risen appreciably since original investments in plant and facilities were made, a substantial proportion of net income as currently reported must be reinvested in the business in order to maintain assets at the same level of productivity at the end of a year as at the beginning.
.17 "Stockholders, employees, and the general public should be informed that a business must be able to retain out of profits amounts sufficient to replace productive facilities at current prices if it is to stay in business. The committee therefore gives its full support to the use of supplementary financial schedules, explanations or footnotes by which management may explain the need for retention of earnings."
Depreciation on Appreciation

[Source: APB Opinion No. 6, Par. 17.]

Effective for fiscal periods beginning after December 31, 1965, unless otherwise indicated.

.01 The Board is of the opinion that property, plant and equipment should not be written up by an entity to reflect appraisal, market or current values which are above cost to the entity. This statement is not intended to change accounting practices followed in connection with quasi-reorganizations or reorganizations. This statement may not apply to foreign operations under unusual conditions such as serious inflation or currency devaluation. However, when the accounts of a company with foreign operations are translated into United States currency for consolidation, such write-ups normally are eliminated. Whenever appreciation has been recorded on the books, income should be charged with depreciation computed on the written up amounts.

Emergency Facilities—Depreciation and Amortization

[Source: ARB No. 43, Chap. 9C, as amended.]

CERTIFICATES OF NECESSITY

.01 Section 124A of the Internal Revenue Code, which was added by the Revenue Act of 1950, provides for the issuance of certificates of necessity under which all or part of the cost of so-called emergency facilities may be amortized over a period of 60 months for income tax purposes. In many cases, the amounts involved are material, and companies are faced with the problem of deciding whether to adopt the 60-month period over which the portions of the cost of the facilities covered by certificates of necessity may be amortized for income tax purposes as the period over which they are to be depreciated in the accounts.

.02 Thinking on this question apparently has become confused because many so-called percentage certificates have been issued covering less than the entire cost of the facility. This fact, together with the fact that the probable economic usefulness of the facility after the close of the five-year amortization period is considered by the certifying authority in determining the percentage covered by these certificates, has led many to believe that the percentage used represents the government’s conclusion as to the proportion of the cost of the facility that is not expected to have usefulness at the end of five years.

.03 In some cases, it is apparent that the probable lack of economic usefulness of the facility after the close of the amortization period must constitute the principal if not the sole basis for determining the percentage to be

1 The material included in this section is from ARB 43, Chapter 9, Section C. Paragraphs 11-13 of that Bulletin were superseded by APB Opinion No. 11, effective for fiscal periods beginning after December 31, 1967.
included in the certificate. However, it must be recognized that the certifying authority has acted under orders to give consideration also to a variety of other factors to the end that the amount certified may be the minimum amount necessary to secure expansion of industrial capacity in the interest of national defense during the emergency period. Among the factors required to be considered in the issuance of these certificates, in addition to loss of useful value, are (a) character of business, (b) extent of risk assumed (including the amount and source of capital employed, and the potentiality of recovering capital or retiring debt through tax savings or pricing), (c) assistance to small business and promotion of competition, (d) compliance with government policies (e.g., dispersal for security), and (e) other types of incentives provided by government, such as direct government loans, guaranties, and contractual arrangements.

**DEPRECIATION CONSIDERATIONS**

.04 The argument has been advanced from time to time that, since the portion of the cost of properties covered by certificates of necessity is amortized over a five-year period for income tax purposes, it is necessary to follow the same procedure in the accounts. Sound financial accounting procedures do not necessarily coincide with the rules as to what shall be included in "gross income," or allowed as a deduction therefrom, in arriving at taxable net income. It is well recognized that such rules should not be followed for financial accounting purposes if they do not conform to generally accepted accounting principles. However, where the results obtained from following income tax procedures do not materially differ from those obtained where generally accepted accounting principles are followed, there are practical advantages in keeping the accounts in agreement with the income tax returns.

.05 The cost of a productive facility is one of the costs of the services it renders during its useful economic life. Generally accepted accounting principles require that this cost be spread over the expected useful life of the facility in such a way as to allocate it as equitably as possible to the periods during which services are obtained from the use of the facility. This procedure is known as depreciation accounting, a system of accounting which aims to distribute
the cost or other basic value of tangible capital assets, less salvage (if any), over the estimated useful life of the unit (which may be a group of assets) in a systematic and rational manner. It is a process of allocation, not of valuation.

.06 The committee is of the opinion that from an accounting standpoint there is nothing inherent in the nature of emergency facilities which requires the depreciation or amortization of their cost for financial accounting purposes over either a shorter or a longer period than would be proper if no certificate of necessity had been issued. Estimates of the probable useful life of a facility by those best informed in the matter may indicate either a shorter or a longer life than the statutory 60-month period over which the certified portion of its cost is deductible for income tax purposes.

.07 In determining the proper amount of annual depreciation with respect to emergency facilities for financial accounting purposes, it must be recognized that a great many of these facilities are being acquired primarily for what they can produce during the emergency period. To whatever extent it is reasonable to expect the useful economic life of a facility to end with the close of the amortization period, the cost of the facility is a proper cost of operation during that period.

.08 In determining the prospective usefulness of such facilities it will be necessary to consider their adaptability to post-emergency use, the effect of their use upon economic utilization of other facilities, the possibility of excessive costs due to expedited construction or emergency conditions, and the fact that no deductions for depreciation of the certified portion will be allowable for income tax purposes in the post-amortization years if the company elects to claim the amortization deduction. The purposes for which emergency facilities are acquired in a great many cases are such as to leave major uncertainties as to the extent of their use during the amortization period and as to their subsequent usefulness—uncertainties which are not normally encountered in the acquisition and use of operating facilities.

.09 Consideration of these factors, the committee believes, will in many cases result in the determination of de-
preciation charges during the amortization period in excess of the depreciation that would be appropriate if these factors were not involved. Frequently they will be so compelling as to indicate the need for recording depreciation of the cost of emergency facilities in the accounts in conformity with the amortization deductions allowable for income tax purposes. However, the committee believes that when the amount allowed as amortization for income tax purposes is materially different from the amount of the estimated depreciation, the latter should be used for financial accounting purposes.\(^2\)

.10 In some cases, certificates of necessity cover facilities which the owner expects to use after the emergency period in lieu of older facilities. As a result the older facilities may become unproductive and obsolete before they are fully depreciated on the basis of their previously expected life. In such situations, the committee believes depreciation charges to income should be determined in relation to the total properties, to the end that sound depreciation accounting may be applied to the property accounts as a whole.

\(^2\) See section 4091.
Declining-Balance Depreciation

[Source: ARB No. 44 (Revised), as amended.]

Issue date, unless otherwise indicated: July, 1958

.01 The declining-balance method of estimating periodic depreciation has a long history of use in England and in other countries including, to a limited extent, the United States. Interest in this method has been increased by its specific recognition for income tax purposes in the Internal Revenue Code of 1954.

.02 The declining-balance method is one of those which meets the requirements of being "systematic and rational." In those cases where the expected productivity or revenue-earning power of the asset is relatively greater during the earlier years of its life, or where maintenance charges tend to increase during the later years, the declining-balance method may well provide the most satisfactory allocation of cost. The conclusions of this section also apply to other methods, including the "sum-of-the-years-digits" method, which produce substantially similar results.

.03 When a change to the declining-balance method is made for general accounting purposes, and depreciation is a significant factor in the determination of net income, the change in method, including the effect thereof, should be disclosed in accordance with section 1051, Accounting Changes. [As amended, effective for fiscal periods beginning after July 31, 1971 by APB Opinion No. 20.]

.04 There may be situations in which the declining-balance method is adopted for income tax purposes but other appropriate methods are used for financial accounting purposes. In such cases, accounting recognition should be given to deferred income taxes (see definition in section 1051).

1 The material included in this section is partially from ARB 44 (Revised). Paragraphs 7 and 10 of that Bulletin were superseded by APB Opinion No. 11, effective for fiscal periods beginning after December 31, 1967.

2 Accounting Terminology Bulletin No. 1, paragraph 56.
Revenue and Expense

4091.34), if the amounts thereof are material, except in the cases mentioned in paragraph .07, where there are special circumstances which may make such procedure inappropriate. The foregoing provision as to accounting recognition of deferred income taxes applies to a single asset, or to a group of assets which are expected to be retired from service at about the same time; in this case an excess of depreciation taken for income tax purposes during the earlier years would be followed by the opposite condition in later years, and there would be a tax deferment for a definite period. It applies also to a group of assets consisting of numerous units which may be of differing lengths of life and which are expected to be continually replaced; in this case an excess of depreciation taken for income tax purposes during the earlier years would be followed in later years by substantial equality between the annual depreciation for income tax purposes and that for accounting purposes, and a tax deferment would be built up during the earlier years which would tend to remain relatively constant thereafter. It applies further to a gradually expanding plant; in this case an excess of depreciation taken for income tax purposes may exist each year during the period of expansion in which event there would be a tax deferment which might increase as long as the period of expansion continued. [As amended, effective for fiscal periods beginning after December 31, 1967, by APB Opinion No. 11.]

.05 Where it may reasonably be presumed that the accumulative difference between taxable income and financial income will continue for a long or indefinite period, it is not appropriate to recognize the related tax effect as additional amortization or depreciation applicable to such assets in recognition of the loss of future deductibility for income tax purposes. [As amended, effective for fiscal periods beginning after December 31, 1967, by APB Opinion No. 11.]

DISCUSSION

.06 Following the passage of the Internal Revenue Act of 1954 in August of that year, permitting the use of declining-balance and similar accelerated depreciation methods for federal income tax purposes, the committee anticipated that many companies would be considering whether such methods should be adopted for general ac-
counting purposes. In October of that year, Accounting Research Bulletin No. 44 was issued in which the committee stated that such accelerated methods met the requirement of being “systematic and rational.” The committee also stated that when such methods were adopted for general accounting purposes, appropriate disclosure of the change should be made whenever depreciation was a significant factor in the determination of net income. (Refer to section 1051, Accounting Changes.)

.07 Many regulatory authorities permit recognition of deferred income taxes for accounting and/or rate-making purposes, whereas some do not. The committee believes that they should permit the recognition of deferred income taxes for both purposes. However, where charges for deferred income taxes are not allowed for rate-making purposes, accounting recognition need not be given to the deferral of taxes if it may reasonably be expected that increased future income taxes, resulting from the earlier deduction of declining-balance depreciation for income tax purposes only, will be allowed in future rate determinations.

.08 When a company subject to rate-making processes adopts the declining-balance method of depreciation for income tax purposes but adopts other appropriate methods for financial accounting purposes in the circumstances described in paragraph .07, and does not give accounting recognition to deferred income taxes, disclosure should be made of this fact. [As amended, effective for fiscal periods beginning after December 31, 1965, by APB Opinion No. 6.]
The purpose of this section is to draw attention to the problems involved in accounting for real and personal property taxes and to present some of the considerations which enter into a determination of their accounting treatment.

LEGAL LIABILITY FOR PROPERTY TAXES AND TREATMENT FOR INCOME TAX PURPOSES

.02 Unlike excise, income, and social security taxes, which are directly related to particular business events, real and personal property taxes are based upon the assessed valuation of property (tangible and intangible) as of a given date, as determined by the laws of a state or other taxing authority. For this reason the legal liability for such taxes is generally considered as accruing at the moment of occurrence of some specific event, rather than over a period of time. Whether such legal accrual should determine the accounting treatment is a question to be discussed later. Tax laws, opinions of attorneys, income tax regulations, and court decisions have mentioned various dates on which certain property taxes are said to accrue legally. Among them are the following:

(a) Assessment date,
(b) Beginning of taxing authority’s fiscal year,
(c) End of taxing authority’s fiscal year,
(d) Date on which tax becomes a lien on the property,
(e) Date tax is levied,
(f) Date or dates tax is payable,
(g) Date tax becomes delinquent,
(h) Tax period appearing on tax bill.

.03 Most of the foregoing dates are mentioned in tax laws. In a given case several of these dates may coincide.
.04 The date to be applied in a particular case necessarily requires reference to the law and court decisions of the state concerned. Where the matter has been litigated, it has often been held that property taxes become a liability at the point of time when they become a lien. The general rule, however, is that such taxes accrue as of the date on which they are assessed. The position of the Bureau of Internal Revenue is that generally property taxes accrue on the assessment date, even if the amount of the tax is not determined until later.

.05 A practical aspect of the legal liability for property taxes must be considered when title to property is transferred during the taxable year. As stated above, the assessment date generally determines accrual. But as between vendor and vendee, the Supreme Court 1 has laid down the rule that the lien date, or the date of personal obligation, controls and that where a transfer occurs after either of those dates, the purchaser is not entitled to deduct the taxes for income-tax purposes.

.06 Adjustments on account of property taxes paid or accrued are frequently incorporated in agreements covering the sale of real estate, which determine the question for the individual case as between the buyer and seller, though they are not necessarily controlling for income tax purposes.

.07 Although pro-rata accrual of property taxes has been permitted by some courts, the generally accepted rule seems to be that such taxes accrue in a lump sum on one date and not ratably over the year.

ACCOUNTING FOR PROPERTY TAXES

Accrual Accounting

.08 Accounting questions arise as to (1) when the liability for real and personal property taxes should be recorded on the books of a taxpayer keeping his accounts on the accrual basis and (2) the amounts to be charged against the income of respective periods. Here again, the decision is influenced by the particular circumstances of each tax. Such terms as assessment date and levy date vary in meaning in the different jurisdictions; and while there is sufficient agreement about assessment date to furn-

1 Magruder v. Supplee, 316 U. S. 394 (1942). [Ed. Note: Subsequent changes in tax law are not indicated in this Reporter.]

AC § 4081.04 Copyright © 1975, American Institute of Certified Public Accountants, Inc.
is a basis for the general legal rule already mentioned, it does not necessarily follow that the legal rule should
determine the accounting treatment.

.09 Determination of the liability for the tax often
proceeds by degrees, the several steps being taken at ap­
preciable intervals of time. For example, while it is known
that the owner of real property is liable, with respect
to each tax period, for a tax on property owned on the as­
essment date, the amount of the tax may not be fixed until
much later. There is sometimes reluctance toward record­
ing liabilities of indeterminate amount, especially such
items as property taxes, and a preference for recording
them when the amount can be computed with certainty.
While this consideration is one which occasionally leads
to the mention of taxes in footnotes as contingent lia­

ts, the inability to determine the exact amount of
taxes is in itself no justification for failure to recognize
an existing tax liability.

.10 In practice, real and personal property taxes have
been charged against the income of various periods, as
indicated below:

(a) Year in which paid (cash basis),
(b) Year ending on assessment (or lien) date,
(c) Year beginning on assessment (or lien) date,
(d) Calendar or fiscal year of taxpayer prior to
assessment (or lien) date,
(e) Calendar or fiscal year of taxpayer including
assessment (or lien) date,
(f) Calendar or fiscal year of taxpayer prior to
payment date,
(g) Fiscal year of governing body levying the tax,
(h) Year appearing on tax bill.

.11 Some of these periods may coincide, as when the
fiscal year of the taxing body and that of the taxpayer
are the same. The charge to income is sometimes made in
full at one time, sometimes ratably on a monthly basis,
sometimes on the basis of prior estimates, adjusted during
or after the period.

.12 The various periods mentioned represent varying
degrees of conservatism in accrual accounting. Some jus-
Consistency of application from year to year is the important consideration and selection of any of the periods mentioned is a matter for individual judgment.

**Basis Considered Most Acceptable**

.14 Generally, the most acceptable basis of providing for property taxes is monthly accrual on the taxpayer's books during the fiscal period of the taxing authority for which the taxes are levied. The books will then show, at any closing date, the appropriate accrual or prepayment.

.15 It may be argued that the entire amount of tax should logically be accrued by the lien date. Advocates of this procedure vary from those who would accrue the tax by charges to income during the year ending on the lien date, to those who urge setting up the full tax liability on the lien date and charging the amount thereof to income during the subsequent year. However, the basis described in the preceding paragraph is held by the majority of accountants to be practical and satisfactory so long as it is consistently followed.

**TREATMENT IN FINANCIAL STATEMENTS**

**Balance Sheet**

.16 An accrued liability for real and personal property taxes, whether estimated or definitely known, should be included among the current liabilities. Where estimates are subject to a substantial measure of uncertainty the liability should be described as estimated.

**Income Statement**

.17 While it is sometimes proper to capitalize in property accounts the amount of real estate taxes applicable to property which is being developed for use or sale, these taxes are generally regarded as an expense of doing business. They may be (a) charged to operating expenses; (b) shown as a separate deduction from income; or (c) distributed among the several accounts to which they are deemed to apply, such as factory overhead, rent income, and selling or general expenses.
.18 In condensed income statements appearing in published reports, the amounts of real and personal property taxes, however charged in the accounts, are rarely shown separately. They are frequently combined with other taxes but not with taxes on income.

.19 Since the liability for property taxes must frequently be estimated at the balance-sheet date, it is often necessary to adjust the provision for taxes of a prior year when their amount has been ascertained. These adjustments should be made through the income statement, either in combination with the current year's provision or as a separate item. [As amended, effective for fiscal periods beginning after December 31, 1966, by APB Opinion No. 9.] [As amended, effective for financial statements for fiscal years beginning after October 15, 1977, by FASB Statement No. 16.]
Accounting for Income Taxes

[Source: APB Opinion No. 11, as amended.]

Effective for fiscal periods beginning after December 31, 1967, unless otherwise indicated

INTRODUCTION

.01 This section sets forth the Board’s conclusions on some aspects of accounting for income taxes. These conclusions include significant modifications of views previously expressed by the Committee on Accounting Procedure and by the Board.

.02 Discounting. The Board’s Opinion on “Tax Allocation Accounts—Discounting,” as expressed in section 4092, continues in effect pending further study of the broader aspects of discounting as it is related to financial accounting in general.

.03 Investment Credits. The Board is continuing its study on accounting for “Investment Credits” and intends to issue a new Opinion on the subject as soon as possible. In the meantime section 4094, Accounting for the Investment Credit, remains in effect.

.04 Certain aspects of tax allocation, including illustrations of procedures and an extended discussion of alternative approaches to allocation, are presented in Accounting Research Study No. 9, Interperiod Allocation of Corporate Income Taxes, by Homer A. Black, published by the American Institute of Certified Public Accountants in 1966. The Board has considered the Study and the comments received on it. The conclusions in this section vary in some important respects from those reached in the Study.

APPLICABILITY

.05 This section applies to financial statements which purport to present financial position and results of operations in conformity with generally accepted accounting

---

1 Accounting Research Studies are not statements of this Board, or of the Institute, but are published for the purpose of stimulating discussion on important accounting issues.
principles. It does not apply (a) to regulated industries in those circumstances where the standards described in section 6011 (which remains in effect) are met and (b) to special areas requiring further study as specifically indicated in paragraphs .37-.40 of this section. The Board has deferred consideration of the special problems of allocation among components of a business enterprise pending further study and the issuance of Opinions on the applicability of generally accepted accounting principles to these statements. (As amended, effective after December 31, 1973, by APB Opinion No. 28.) (See section 2071.)

.06 The Board emphasizes that this section, as in the case of all other sections, is not intended to apply to immaterial items.

SUMMARY OF PROBLEMS

.07 The principal problems in accounting for income taxes arise from the fact that some transactions affect the determination of net income for financial accounting purposes in one reporting period and the computation of taxable income and income taxes payable in a different reporting period. The amount of income taxes determined to be payable for a period does not, therefore, necessarily represent the appropriate income tax expense applicable to transactions recognized for financial accounting purposes in that period. A major problem is, therefore, the measurement of the tax effects of such transactions and the extent to which the tax effects should be included in income tax expense in the same periods in which the transactions affect pretax accounting income.

.08 The United States Internal Revenue Code permits a “net operating loss” of one period to be deducted in determining taxable income of other periods. This leads to the question of whether the tax effects of an operating loss should be recognized for financial accounting purposes in the period of loss or in the periods of reduction of taxable income.

.09 Certain items includable in taxable income receive special treatment for financial accounting purposes, even though the items are reported in the same period in which

---

² The term transactions refers to all transactions and other events requiring accounting recognition. As used in this section, it relates either to individual events or to groups of similar events.
they are reported for tax purposes. A question exists, therefore, as to whether the tax effects attributable to extraordinary items, adjustments of prior periods (or of the opening balance of retained earnings), and direct entries to other stockholders’ equity accounts should be associated with the particular items for financial reporting purposes.³

.10 Guidelines are needed for balance sheet and income statement presentation of the tax effects of timing differences, operating losses and similar items.

**SUMMARY OF CONCLUSIONS**

.11 The Board’s conclusions on some of the problems in accounting for income taxes are summarized as follows:

a. Interperiod tax allocation is an integral part of the determination of income tax expense, and income tax expense should include the tax effects of revenue and expense transactions included in the determination of pretax accounting income.

b. Interperiod tax allocation procedures should follow the deferred method,⁴ both in the manner in which tax effects are initially recognized and in the manner in which deferred taxes are amortized in future periods.

c. The tax effects of operating loss carrybacks should be allocated to the loss periods. The tax effects of operating loss carryforwards⁵ usually should not be recognized until the periods of realization.

d. Tax allocation within a period should be applied to obtain fair presentation of the various components of results of operations.

e. Financial statement presentations of income tax expense and related deferred taxes should disclose (1) the composition of income tax expense as between amounts currently payable and amounts representing tax effects allocable to the period and (2) the classification of deferred taxes into a net current amount and a net noncurrent amount.

⁴ See paragraph .18.
⁵ The term “loss carryforwards” is used in this section to mean “loss carryovers” as referred to in the United States Internal Revenue Code.
DEFINITIONS AND CONCEPTS

.12 Terminology relating to the accounting for income taxes is varied; some terms have been used with different meanings. Definitions of certain terms used in this section are therefore necessary.

a. **Income taxes.** Taxes based on income determined under provisions of the United States Internal Revenue Code and foreign, state and other taxes (including franchise taxes) based on income.

b. **Income tax expense.** The amount of income taxes (whether or not currently payable or refundable) allocable to a period in the determination of net income.

c. **Pretax accounting income.** Income or loss for a period, exclusive of related income tax expense.

d. **Taxable income.** The excess of revenues over deductions or the excess of deductions over revenues to be reported for income tax purposes for a period.6

e. **Timing differences.** Differences between the periods in which transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income. Timing differences originate in one period and reverse or "turn around" in one or more subsequent periods. Some timing differences reduce income taxes that would otherwise be payable currently; others increase income taxes that would otherwise be payable currently.

f. **Permanent differences.** Differences between taxable income and pretax accounting income arising from transactions that, under applicable tax laws and regulations, will not be offset by corresponding differences or "turn around" in other periods.7

g. **Tax effects.** Differentials in income taxes of a period attributable to (1) revenue or expense transactions which enter into the determination of pretax accounting income in one period and into the deter-

---

6 For the purposes of this definition "deductions" do not include reductions in taxable income arising from net operating loss carrybacks or carryforwards.

7 See paragraph .32.
mination of taxable income in another period, (2) deductions or credits that may be carried backward or forward for income tax purposes and (3) adjustments of prior periods (or of the opening balance of retained earnings) and direct entries to other stockholders' equity accounts which enter into the determination of taxable income in a period but which do not enter into the determination of pretax accounting income of that period. A permanent difference does not result in a "tax effect" as that term is used in this Opinion.

h. **Deferred taxes.** Tax effects which are deferred for allocation to income tax expense of future periods.

i. **Interperiod tax allocation.** The process of apportioning income taxes among periods.

j. **Tax allocation within a period.** The process of apportioning income tax expense applicable to a given period between income before extraordinary items and extraordinary items, and of associating the income tax effects of adjustments of prior periods (or of the opening balance of retained earnings) and direct entries to other stockholders' equity accounts with these items.

.13 Certain general concepts and assumptions are recognized by the Board to be relevant in considering the problems of accounting for income taxes.

a. The operations of an entity subject to income taxes are expected to continue on a going concern basis, in the absence of evidence to the contrary, and income taxes are expected to continue to be assessed in the future.

b. Income taxes are an expense of business enterprises earning income subject to tax.

c. Accounting for income tax expense requires measurement and identification with the appropriate time period and therefore involves accrual, deferral and estimation concepts in the same manner as these concepts are applied in the measurement and time period identification of other expenses.

d. Matching is one of the basic processes of income determination; essentially it is a process of deter-
mining relationships between costs (including reductions of costs) and (1) specific revenues or (2) specific accounting periods. Expenses of the current period consist of those costs which are identified with the revenues of the current period and those costs which are identified with the current period on some basis other than revenue. Costs identifiable with future revenues or otherwise identifiable with future periods should be deferred to those future periods. When a cost cannot be related to future revenues or to future periods on some basis other than revenues, or it cannot reasonably be expected to be recovered from future revenues, it becomes, by necessity, an expense of the current period (or of a prior period).

TIMING DIFFERENCES

Discussion

Nature of Timing Differences

.14 Four types of transactions are identifiable which give rise to timing differences; that is, differences between the periods in which the transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income. Each timing difference originates in one period and reverses in one or more subsequent periods.

a. Revenues or gains are included in taxable income later than they are included in pretax accounting income. For example, gross profits on installment sales are recognized for accounting purposes in the period of sale but are reported for tax purposes in the period the installments are collected.

b. Expenses or losses are deducted in determining taxable income later than they are deducted in determining pretax accounting income. For example, estimated costs of guarantees and of product warranty contracts are recognized for accounting purposes in the current period but are reported for tax purposes in the period paid or in which the liability becomes fixed.

*Accounting Research Study No. 9, Interperiod Allocation of Corporate Income Taxes, pages 2-3 and 8-10.

AC § 4091.14 © 1974, American Institute of Certified Public Accountants, Inc.
c. Revenues or gains are included in taxable income earlier than they are included in pretax accounting income. For example, rents collected in advance are reported for tax purposes in the period in which they are received but are deferred for accounting purposes until later periods when they are earned.

d. Expenses or losses are deducted in determining taxable income earlier than they are deducted in determining pretax accounting income. For example, depreciation is reported on an accelerated basis for tax purposes but is reported on a straight-line basis for accounting purposes.

Additional examples of each type of timing difference are presented in Appendix A to this section (section 4091A).

.15 The timing differences of revenue and expense transactions entering into the determination of pretax accounting income create problems in the measurement of income tax expense for a period, since the income taxes payable for a period are not always determined by the same revenue and expense transactions used to determine pretax accounting income for the period. The amount of income taxes determined to be payable for a period does not, therefore, necessarily represent the appropriate income tax expense applicable to transactions recognized for financial accounting purposes in that period.

.16 Interperiod tax allocation procedures have been developed to account for the tax effects of transactions which involve timing differences. Interperiod allocation of income taxes results in the recognition of tax effects in the same periods in which the related transactions are recognized in the determination of pretax accounting income.

**Differing Viewpoints**

.17 Interpretations of the nature of timing differences are diverse, with the result that three basic methods of interperiod allocation of income taxes have developed and been adopted in practice. The three concepts and their applications are described and evaluated in Chapters 2, 3 and 4 of *Accounting Research Study No. 9*. A brief description of each method follows.

.18 Interperiod tax allocation under the *deferred method* is a procedure whereby the tax effects of current
Revenue and Expense

timing differences are deferred currently and allocated to income tax expense of future periods when the timing differences reverse. The deferred method emphasizes the tax effects of timing differences on income of the period in which the differences originate. The deferred taxes are determined on the basis of the tax rates in effect at the time the timing differences originate and are not adjusted for subsequent changes in tax rates or to reflect the imposition of new taxes. The tax effects of transactions which reduce taxes currently payable are treated as deferred credits; the tax effects of transactions which increase taxes currently payable are treated as deferred charges. Amortization of these deferred taxes to income tax expense in future periods is based upon the nature of the transactions producing the tax effects and upon the manner in which these transactions enter into the determination of pretax accounting income in relation to taxable income.

.19 Interperiod tax allocation under the liability method is a procedure whereby the income taxes expected to be paid on pretax accounting income are accrued currently. The taxes on components of pretax accounting income may be computed at different rates, depending upon the period in which the components were, or are expected to be, included in taxable income. The differences between income tax expense and income taxes payable in the periods in which the timing differences originate are either liabilities for taxes payable in the future or assets for prepaid taxes. The estimated amounts of future tax liabilities and prepaid taxes are computed at the tax rates expected to be in effect in the periods in which the timing differences reverse. Under the liability method the initial computations are considered to be tentative and are subject to future adjustment if tax rates change or new taxes are imposed.

.20 Interperiod tax allocation under the net of tax method is a procedure whereby the tax effects (determined by either the deferred or liability methods) of timing differences are recognized in the valuation of assets and liabilities and the related revenues and expenses. The tax effects are applied to reduce specific assets or liabilities on the basis that tax deductibility or taxability are factors in their valuation.
.21 In addition to the different methods of applying interperiod tax allocation, differing views exist as to the extent to which interperiod tax allocation should be applied in practice.

.22 Some transactions result in differences between pretax accounting income and taxable income which are permanent * because under applicable tax laws and regulations the current differences will not be offset by corresponding differences in later periods. Other transactions, however, result in differences between pretax accounting income and taxable income which reverse or turn around in later periods; these differences are classified broadly as timing differences. The tax effects of certain timing differences often are offset in the reversal or turnaround period by the tax effects of similar differences originating in that period. Some view these differences as essentially the same as permanent differences because, in effect, the periods of reversal are indefinitely postponed. Others believe that differences which originate in a period and differences which reverse in the same period are distinguishable phases of separate timing differences and should be considered separately.

.23 In determining the accounting recognition of the tax effects of timing differences, the first question is whether there should be any tax allocation. One view holds that interperiod tax allocation is never appropriate. Under this concept, income tax expense of a period equals income taxes payable for that period. This concept is based on the presumption that income tax expense of a period should be measured by the amount determined to be payable for that period by applying the laws and regulations of the governmental unit, and that the amount requires no adjustment or allocation. This concept has not been used widely in practice and is not supported presently to any significant extent.

.24 The predominant view holds that interperiod tax allocation is appropriate. However, two alternative concepts exist as to the extent to which it should be applied: partial allocation and comprehensive allocation.

* See paragraph .32.
Partial Allocation

.25 Under partial allocation the general presumption is that income tax expense of a period for financial accounting purposes should be the tax payable for the period. Holders of this view believe that when recurring differences between taxable income and pretax accounting income give rise to an indefinite postponement of an amount of tax payments or to continuing tax reductions, tax allocation is not required for these differences. They believe that amounts not reasonably expected to be payable to, or recoverable from, a government as taxes should not affect net income. They point out in particular that the application of tax allocation procedures to tax payments or recoveries which are postponed indefinitely involves contingencies which are at best remote and thus, in their opinion, may result in an overstatement or understatement of expenses with consequent effects on net income. An example of a recurring difference not requiring tax allocation under this view is the difference that arises when a company having a relatively stable or growing investment in depreciable assets uses straight-line depreciation in determining pretax accounting income but an accelerated method in determining taxable income. If tax allocation is applied by a company with large capital investments coupled with growth in depreciable assets (accentuated in periods of inflation) the resulting understatement of net income from using tax allocation is magnified.

.26 Holders of the view expressed in paragraph .25 believe that the only exceptions to the general presumption stated therein should be those instances in which specific nonrecurring differences between taxable income and pretax accounting income would lead to a material misstatement of income tax expense and net income. If such nonrecurring differences occur, income tax expense of a period for financial accounting purposes should be increased (or decreased) by income tax on differences between taxable income and pretax accounting income provided the amount of the increase (or decrease) can be reasonably expected to be paid as income tax (or recovered as a reduction of income taxes) within a relatively short period not exceeding, say, five years. An example would be an isolated install-
Income Taxes

...ment sale of a productive facility in which the gross profit is reported for financial accounting purposes at the date of sale and for tax purposes when later collected. Thus, tax allocation is applicable only when the amounts are reasonably certain to affect the flow of resources used to pay taxes in the near future.

.27 Holders of this view state that comprehensive tax allocation, as opposed to partial allocation, relies on the so-called "revolving" account approach which seems to suggest that there is a similarity between deferred tax accruals and other balance sheet items, like accounts payable, where the individual items within an account turnover regularly although the account balance remains constant or grows. For these other items, the turnover reflects actual, specific transactions—goods are received, liabilities are recorded and payments are subsequently made. For deferred tax accruals on the other hand, no such transactions occur—the amounts are not owed to anyone; there is no specific date on which they become payable, if ever; and the amounts are at best vague estimates depending on future tax rates and many other uncertain factors. Those who favor partial allocation suggest that accounting deals with actual events, and that those who would depart from the fact of the tax payment should show that the modification will increase the usefulness of the reports to management, investors or other users. To do this requires a demonstration that the current lower (or higher) tax payments will result in higher (or lower) cash outflows for taxes within a span of time that is of significant interest to readers of the financial statements.

Comprehensive Allocation

.28 Under comprehensive allocation, income tax expense for a period includes the tax effects of transactions entering into the determination of pretax accounting income for the period even though some transactions may affect the determination of taxes payable in a different period. This view recognizes that the amount of income taxes payable for a given period does not necessarily measure the appropriate income tax expense related to transactions for that period. Under this view, income tax expense encompasses any accrual, deferral or estimation...
necessary to adjust the amount of income taxes payable for the period to measure the tax effects of those transactions included in pretax accounting income for that period. Those supporting comprehensive allocation believe that the tax effects of initial timing differences should be recognized and that the tax effects should be matched with or allocated to those periods in which the initial differences reverse. The fact that when the initial differences reverse other initial differences may offset any effect on the amount of taxable income does not, in their opinion, nullify the fact of the reversal. The offsetting relationships do not mean that the tax effects of the differences cannot be recognized and measured. Those supporting comprehensive allocation state that the makeup of the balances of certain deferred tax amounts "revolve" as the related differences reverse and are replaced by similar differences. These initial differences do reverse, and the tax effects thereof can be identified as readily as can those of other timing differences. While new differences may have an offsetting effect, this does not alter the fact of the reversal; without the reversal there would be different tax consequences. Accounting principles cannot be predicated on reliance that offsets will continue. Those supporting comprehensive allocation conclude that the fact that the tax effects of two transactions happen to go in opposite directions does not invalidate the necessity of recognizing separately the tax effects of the transactions as they occur.

.29 Under comprehensive allocation, material tax effects are given recognition in the determination of income tax expense, and the tax effects are related to the periods in which the transactions enter into the determination of pretax accounting income. The tax effects so determined are allocated to the future periods in which the differences between pretax accounting income and taxable income reverse. Those supporting this view believe that comprehensive allocation is necessary in order to associate the tax effects with the related transactions. Only by the timely recognition of such tax effects is it possible to associate the tax effects of transactions with those transactions as they enter into the determination of net income. The need exists to recognize the tax effects of initial differences because only by doing so will the income tax expense in

AC § 4091.29 © 1974, American Institute of Certified Public Accountants, Inc.
the periods of initial differences include the tax effects of transactions of those periods.

.30 Those who support comprehensive allocation believe that the partial allocation concept in stressing cash outlays represents a departure from the accrual basis of accounting. Comprehensive allocation, in their view, results in a more thorough and consistent association in the matching of revenues and expenses, one of the basic processes of income determination.

.31 These differences in viewpoint become most significant with respect to the tax effects of transactions of a recurring nature—for example, depreciation of machinery and equipment using the straight-line method for financial accounting purposes and an accelerated method for income tax purposes. Under partial allocation the tax effects of these timing differences would not be recognized under many circumstances; under comprehensive allocation the tax effects would be recognized beginning in the periods of the initial timing differences. Under partial allocation, the tax effects of these timing differences would not be recognized so long as it is assumed that similar timing differences would arise in the future creating tax effects at least equal to the reversing tax effects of the previous timing differences. Thus, under partial allocation, so long as the amount of deferred taxes is estimated to remain fixed or to increase, no need exists to recognize the tax effects of the initial differences because they probably will not "reverse" in the foreseeable future. Under comprehensive allocation tax effects are recognized as they occur.

Permanent Differences

.32 Some differences between taxable income and pretax accounting income are generally referred to as permanent differences. Permanent differences arise from statutory provisions under which specified revenues are exempt from taxation and specified expenses are not allowable as deductions in determining taxable income. (Examples are interest received on municipal obligations and premiums paid on officers' life insurance.) Other permanent differences arise from items entering into the determination of taxable income which are not components of pretax accounting income.
in any period. (Examples are the special deduction for certain dividends received and the excess of statutory depletion over cost depletion.)

Opinion

.33 The Board has considered the various concepts of accounting for income taxes and has concluded that comprehensive interperiod tax allocation is an integral part of the determination of income tax expense. Therefore, income tax expense should include the tax effects of revenue and expense transactions included in the determination of pretax accounting income. The tax effects of those transactions which enter into the determination of pretax accounting income either earlier or later than they become determinants of taxable income should be recognized in the periods in which the differences between pretax accounting income and taxable income arise and in the periods in which the differences reverse. Since permanent differences do not affect other periods, interperiod tax allocation is not appropriate to account for such differences.

.34 The Board has concluded that the deferred method of tax allocation should be followed since it provides the most useful and practical approach to interperiod tax allocation and the presentation of income taxes in financial statements.

.35 The tax effect of a timing difference should be measured by the differential between income taxes computed with and without inclusion of the transaction creating the difference between taxable income and pretax accounting income. The resulting income tax expense for the period includes the tax effects of transactions entering into the determination of results of operations for the period. The resulting deferred tax amounts reflect the tax effects which will reverse in future periods. The measurement of income tax expense becomes thereby a consistent and integral part of the process of matching revenues and expenses in the determination of results of operations.

.36 In computing the tax effects referred to in paragraph .35 timing differences may be considered individually or similar timing differences may be grouped. The net
change in deferred taxes for a period for a group of similar timing differences may be determined on the basis of either (a) a combination of amounts representing the tax effects arising from timing differences originating in the period at the current tax rates and reversals of tax effects arising from timing differences originating in prior periods at the applicable tax rates reflected in the accounts as of the beginning of the period; or (b) if the applicable deferred taxes have been provided in accordance with this section on the cumulative timing differences as of the beginning of the period, the amount representing the tax effects at the current tax rates of the net change during the period in the cumulative timing differences. If timing differences are considered individually, or if similar timing differences are grouped, no recognition should be given to the reversal of tax effects arising from timing differences originating prior to the effective date of this section unless the applicable deferred taxes have been provided for in accordance with this section, either during the periods in which the timing differences originated or, retroactively, as of the effective date of this section. The method or methods adopted should be consistently applied.

OPERATING LOSSES

Discussion

.41 An operating loss arises when, in the determination of taxable income, deductions exceed revenues. Under
applicable tax laws and regulations, operating losses of a period may be carried backward or forward for a definite period of time to be applied as a reduction in computing taxable income, if any, in those periods. When an operating loss is so applied, pretax accounting income and taxable income (after deducting the operating loss carryback or carryforward) will differ for the period to which the loss is applied.

.42 If operating losses are carried backward to earlier periods under provisions of the tax law, the tax effects of the loss carrybacks are included in the results of operations of the loss period, since realization is assured. If operating losses are carried forward under provisions of the tax law, the tax effects usually are not recognized in the accounts until the periods of realization, since realization of the benefits of the loss carryforwards generally is not assured in the loss periods. The only exception to that practice occurs in unusual circumstances when realization is assured beyond any reasonable doubt in the loss periods. Under an alternative view, however, the tax effects of loss carryforwards would be recognized in the loss periods unless specific reasons exist to question their realization.

Opinion

.43 The tax effects of any realizable loss carrybacks should be recognized in the determination of net income (loss) of the loss periods. The tax loss gives rise to a refund (or claim for refund) of past taxes, which is both measurable and currently realizable; therefore the tax effect of
the loss is properly recognizable in the determination of net income (loss) for the loss period. Appropriate adjustments of existing net deferred tax credits may also be necessary in the loss period.

.44 The tax effects of loss carryforwards also relate to the determination of net income (loss) of the loss periods. However, a significant question generally exists as to realization of the tax effects of the carryforwards, since realization is dependent upon future taxable income. Accordingly, the Board has concluded that the tax benefits of loss carryforwards should not be recognized until they are actually realized, except in unusual circumstances when realization is assured beyond any reasonable doubt at the time the loss carryforwards arise. When the tax benefits of loss carryforwards are not recognized until realized in full or in part in subsequent periods, the tax benefits should be reported in the results of operations of those periods as extraordinary items.11

.45 In those rare cases in which realization of the tax benefits of loss carryforwards is assured beyond any reasonable doubt, the potential benefits should be associated with the periods of loss and should be recognized in the determination of results of operations for those periods. Realization is considered to be assured beyond any reasonable doubt when conditions such as those set forth in paragraph .46 are present. (Also see paragraph .47.) The amount of the asset (and the tax effect on results of operations) recognized in the loss period should be computed at the rates expected 12 to be in effect at the time of realization. If the applicable tax rates change from those used to measure the tax effect at the time of recognition, the effect of the rate change should be accounted for in the period of the change as an adjustment of the asset account and of income tax expense.

11 See section 2012.07, Reporting the Results of Operations.
12 The rates referred to here are those rates which, at the time the loss carry forward benefit is recognized for financial accounting purposes, have been enacted to apply to appropriate future periods.
.46 Realization of the tax benefit of a loss carryforward would appear to be assured beyond any reasonable doubt when both of the following conditions exist: (a) the loss results from an identifiable, isolated and nonrecurring cause and the company either has been continuously profitable over a long period or has suffered occasional losses which were more than offset by taxable income in subsequent years, and (b) future taxable income is virtually certain to be large enough to offset the loss carryforward and will occur soon enough to provide realization during the carryforward period.

.47 Net deferred tax credits arising from timing differences may exist at the time loss carryforwards arise. In the usual case when the tax effect of a loss carryforward is not recognized in the loss period, adjustments of the existing net deferred tax credits may be necessary in that period or in subsequent periods. In this situation net deferred tax credits should be eliminated to the extent of the lower of (a) the tax effect of the loss carryforward, or (b) the amortization of the net deferred tax credits that would otherwise have occurred during the carryforward period. If the loss carryforward is realized in whole or in part in periods subsequent to the loss period, the amounts eliminated from the deferred tax credit accounts should be reinstated (at the then current tax rates) on a cumulative basis as, and to the extent that, the tax benefit of the loss carryforward is realized. In the unusual situation in which the tax effect of a loss carryforward is recognized as an asset in the loss year, the deferred tax credit accounts would be amortized in future periods as indicated in paragraph .18.

.48 The tax effects of loss carryforwards of purchased subsidiaries (if not recognized by the subsidiary prior to purchase) should be recognized as assets at the date of purchase only if realization is assured beyond any reasonable doubt. Otherwise they should be recognized only when the tax benefits are actually realized and should be re-

* See paragraph .45.
corded as retroactive adjustments\textsuperscript{14} of the purchase transactions and treated in accordance with the procedures described in section 1091.88. Retroactive adjustments of results of operations for the periods subsequent to purchase may also be necessary if the balance sheet items affected have been subject to amortization in those periods.

\textbf{.49} Tax effects of loss carryforwards arising prior to a quasi-reorganization (including for this purpose the application of a deficit in retained earnings to contributed capital) should, if not previously recognized, be recorded as assets at the date of the quasi-reorganization only if realization is assured beyond any reasonable doubt. If not previously recognized and the benefits are actually realized at a later date, the tax effects should be added to contributed capital because the benefits are attributable to the loss periods prior to the quasi-reorganization.

\textbf{TAX ALLOCATION WITHIN A PERIOD}

\textbf{Discussion}

\textbf{.50} The need for tax allocation within a period arises because items included in the determination of taxable income may be presented for accounting purposes as (a) extraordinary items, (b) adjustments of prior periods (or of the opening balance of retained earnings) or (c) as direct entries to other stockholders' equity accounts.

\textbf{Opinion}

\textbf{.51} The Board has concluded that tax allocation within a period should be applied to obtain an appropriate relationship between income tax expense and (a) income before extraordinary items, (b) extraordinary items, (c) adjustments of prior periods (or of the opening balance of retained earnings) and (d) direct entries to other stockholders' equity accounts. The income tax expense attributable to income before extraordinary items is computed by determining the income tax expense related to revenue and expense transactions entering into the determination of such income, without giving effect to the tax consequences of the items excluded from the determination of income before extraordinary items. The income tax ex-

\textsuperscript{14} See section 2010, \textit{Reporting the Results of Operations}.
Revenue and Expense

tens attributable to other items is determined by the tax consequences of transactions involving these items. If an operating loss exists before extraordinary items, the tax consequences of such loss should be associated with the loss.

OTHER UNUSED DEDUCTIONS AND CREDITS

Opinion

.52 The conclusions of this section, including particularly the matters discussed in paragraphs .41-.49 on tax reductions resulting from operating losses, also apply to other unused deductions and credits for tax purposes that may be carried backward or forward in determining taxable income (for example, capital losses, contribution carryovers, and foreign tax credits).

FINANCIAL REPORTING

Discussion

Balance Sheet

.53 Interperiod tax allocation procedures result in the recognition of several deferred tax accounts. Classification of deferred taxes in the balance sheet has varied in practice, with the accounts reported, alternatively, as follows:

a. Separate current and noncurrent amounts. In this form of presentation all balance sheet accounts resulting from income tax allocation are classified into four separate categories—current assets, noncurrent assets, current liabilities and noncurrent liabilities.

b. Net current and net noncurrent amounts. In this form of presentation all balance sheet accounts resulting from income tax allocation are classified into two categories—net current amount and net noncurrent amount.

c. Single amount. In this form of presentation all balance sheet accounts resulting from income tax allocation are combined in a single amount.

d. Net of tax presentation. Under this approach each balance sheet tax allocation account (or portions thereof) is reported as an offset to, or a valuation of, the asset or liability that gave rise to the tax effect. Net of tax presentation is an extension of a valuation concept and treats the tax effects as valu-
ation adjustments of the related assets and liabilities.

Income Statement

.54 Interperiod tax allocation procedures result in income tax expense generally different from the amount of income tax payable for a period. Three alternative approaches have developed for reporting income tax expense:

a. Combined amount. In this presentation income tax expense for the period is reported as a single amount, after adjustment of the amount of income taxes payable for the period for the tax effects of those transactions which had different effects on pretax accounting income and on taxable income. This form of presentation emphasizes that income tax expense for the period is related to those transactions entering into the determination of pretax accounting income.

b. Combined amount plus disclosure (or two or more separate amounts). In this presentation the amount of income taxes reported on the tax return is considered significant additional information for users of financial statements. The amount of taxes payable (or the effect of tax allocation for the period) is, therefore, disclosed parenthetically or in a note to the financial statements. Alternatively, income tax expense may be disclosed in the income statement by presenting separate amounts—the taxes payable and the effects of tax allocation.

c. “Net of tax” presentation. Under the “net of tax” concept the tax effects recognized under interperiod tax allocation are considered to be valuation adjustments to the assets or liabilities giving rise to the adjustments. For example, depreciation deducted for tax purposes in excess of that recognized for financial accounting purposes is held to reduce the future utility of the related asset because of a loss of a portion of future tax deductibility. Thus, depreciation expense, rather than income tax expense, is adjusted for the tax effect of the difference between the depreciation amount used in the determination of taxable income and
that used in the determination of pretax accounting income.

**Opinion**

**Balance Sheet**

.55 Balance sheet accounts related to tax allocation are of two types:

a. Deferred charges and deferred credits relating to timing differences; and

b. Refunds of past taxes or offsets to future taxes arising from the recognition of tax effects of carrybacks and carryforwards of operating losses and similar items.

.56 Deferred charges and deferred credits relating to timing differences represent the cumulative recognition given to their tax effects and as such do not represent receivables or payables in the usual sense. They should be classified in two categories—one for the net current amount and the other for the net noncurrent amount. This presentation is consistent with the customary distinction between current and noncurrent categories and also recognizes the close relationship among the various deferred tax accounts, all of which bear on the determination of income tax expense. The current portions of such deferred charges and credits should be those amounts which relate to assets and liabilities classified as current. Thus, if installment receivables are a current asset, the deferred credits representing the tax effects of uncollected installment sales should be a current item; if an estimated provision for warranties is a current liability, the deferred charge representing the tax effect of such provision should be a current item.

.57 Refunds of past taxes or offsets to future taxes arising from recognition of the tax effects of operating loss carrybacks or carryforwards should be classified either as current or noncurrent. The current portion should be determined by the extent to which realization is expected to occur during the current operating cycle as defined in section 2031.

.58 Deferred taxes represent tax effects recognized in the determination of income tax expense in current and
prior periods, and they should, therefore, be excluded from retained earnings or from any other account in the stockholders’ equity section of the balance sheet.

**Income Statement**

.59 In reporting the results of operations the components of income tax expense for the period should be disclosed, for example:

a. Taxes estimated to be payable
b. Tax effects of timing differences
c. Tax effects of operating losses.

These amounts should be allocated to (a) income before extraordinary items and (b) extraordinary items and may be presented as separate items in the income statement or, alternatively, as combined amounts with disclosure of the components parenthetically or in a note to the financial statements.

.60 When the tax benefit of an operating loss carry-forward is realized in full or in part in a subsequent period, and has not been previously recognized in the loss period, the tax benefit should be reported as an extraordinary item in the results of operations of the period in which realized.

.61 Tax effects attributable to adjustments of prior periods (or of the opening balance of retained earnings) and direct entries to other stockholders’ equity accounts should be presented as adjustments of such items with disclosure of the amounts of the tax effects.

**General**

.62 Certain other disclosures should be made in addition to those set forth in paragraphs .55-.61:

a. Amounts of any operating loss carryforwards not recognized in the loss period, together with expiration dates (indicating separately amounts which, upon recognition, would be credited to deferred tax accounts);

b. Significant amounts of any other unused deductions or credits, together with expiration dates; and

c. Reasons for significant variations in the customary relationships between income tax expense and pre-

---

*See section 2012.07, Reporting the Results of Operations.*
tax accounting income, if they are not otherwise apparent from the financial statements or from the nature of the entity's business.

The Board recommends that the nature of significant differences between pretax accounting income and taxable income be disclosed.

.63 The "net of tax" form of presentation of the tax effects of timing differences should not be used for financial reporting. The tax effects of transactions entering into the determination of pretax accounting income for one period but affecting the determination of taxable income in a different period should be reported in the income statement as elements of income tax expense and in the balance sheet as deferred taxes and not as elements of valuation of assets or liabilities.

EFFECTIVE DATE

.64 This section shall be effective for all fiscal periods that begin after December 31, 1967. However, the Board encourages earlier application of the provisions of this section.

.65 Accordingly, the tax allocation procedures set forth in this section should be applied to timing differences occurring after the effective date. (See paragraph .36 for treatment of timing differences originating prior to the effective date.) Balance sheet accounts which arose from interperiod tax allocation and accounts stated on a net of tax basis prior to the effective date of this section should be presented in the manner set forth in this section.

.66 The Board recognizes that companies may apply this section retroactively to periods prior to the effective date to obtain comparability in financial presentations for the current and future periods. If the procedures are applied retroactively, they should be applied to all material items of those periods insofar as the recognition of prior period tax effects of timing differences, operating losses and other deductions or credits is concerned. Any adjustments made to give retroactive effect to the conclusions stated in this section should be considered adjustments of prior periods and treated accordingly."16

See section 2010, Reporting the Results of Operations.

The next page is 8831.
EXAMPLES OF TIMING DIFFERENCES

.01 The following examples of timing differences are taken from Accounting Research Study No. 9, *Interperiod Allocation of Corporate Income Taxes*, by Homer A. Black, pages 8-10. They are furnished for illustrative purposes only without implying approval by the Board of the accounting practices described.

.02 (A) Revenues or gains are taxed after accrued for accounting purposes:

Profits on installment sales are recorded in accounts at date of sale and reported in tax returns when later collected.

Revenues on long-term contracts are recorded in accounts on percentage-of-completion basis and reported in tax returns on a completed-contract basis.

Revenue from leasing activities is recorded in a lessor's accounts based on the financing method of accounting and exceeds rent less depreciation reported in tax returns in the early years of a lease.

Earnings of foreign subsidiary companies are recognized in accounts currently and included in tax returns when later remitted.

.03 (B) Expenses or losses are deducted for tax purposes after accrued for accounting purposes:

Estimated costs of guarantees and product warranty contracts are recorded in accounts at date of sale and deducted in tax returns when later paid.

Expenses for deferred compensation, profit-sharing, bonuses, and vacation
and severance pay are recorded in accounts when accrued for the applicable period and deducted in tax returns when later paid.

Expenses for pension costs are recorded in accounts when accrued for the applicable period and deducted in tax returns for later periods when contributed to the pension plan.

Current expenses for self-insurance are recorded in accounts based on consistent computations for the plan and deducted in tax returns when losses are later incurred.

Estimated losses on inventories and purchase commitments are recorded in accounts when reasonably anticipated and deducted in tax returns when later realized.

Estimated losses on disposal of facilities and discontinuing or relocating operations are recorded in accounts when anticipated and determinable and deducted in tax returns when losses or costs are later incurred.

Estimated expenses of settling pending lawsuits and claims are recorded in accounts when reasonably ascertainable and deducted in tax returns when later paid.

Provisions for major repairs and maintenance are accrued in accounts on a systematic basis and deducted in tax returns when later paid.

Depreciation recorded in accounts exceeds that deducted in tax returns in early years because of:

- accelerated method of computation for accounting purposes
- shorter lives for accounting purposes
Organization costs are written off in accounts as incurred and amortized in tax returns.

.04 (C) **Revenues or gains are taxed before accrued for accounting purposes:**

Rent and royalties are taxed when collected and deferred in accounts to later periods when earned.

Fees, dues, and service contracts are taxed when collected and deferred in accounts to later periods when earned.

Profits on intercompany transactions are taxed when reported in separate returns, and those on assets remaining within the group are eliminated in consolidated financial statements.

Gains on sales of property leased back are taxed at date of sale and deferred in accounts and amortized during the term of lease.

Proceeds of sales of oil payments or ore payments are taxed at date of sale and deferred in accounts and recorded as revenue when produced.

.05 (D) **Expenses or losses are deducted for tax purposes before accrued for accounting purposes:**

Depreciation deducted in tax returns exceeds that recorded in accounts in early years because of:

- accelerated method of computation for tax purposes
- shorter guideline lives for tax purposes
- amortization of emergency facilities under certificates of necessity

Unamortized discount, issue cost and redemption premium on bonds refunded are deducted in tax returns and deferred and amortized in accounts.
Revenue and Expense

Research and developments costs are deducted in tax returns when incurred and deferred and amortized in accounts.

Interest and taxes during construction are deducted in tax returns when incurred and included in the cost of assets in accounts.

Preoperating expenses are deducted in tax returns when incurred and deferred and amortized in accounts.

Applicability of Indefinite Reversal Criteria to Timing Differences: An Interpretation of Sections 4091 and 4095

[Source: FASB Interpretation No. 22.]

April 1978

INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to clarify whether the indefinite reversal criteria described in APB Opinion No. 23 [section 4095], "Accounting for Income Taxes—Special Areas," are applicable beyond the four special areas addressed by that Opinion, for example, in connection with the costs of railroad gradings and tunnel bores that are reported differently for financial statement purposes and income tax purposes.

.02 Paragraph 13 of APB Opinion No. 11 [section 4091.12], "Accounting for Income Taxes," defines differences between taxable income and pretax accounting income as either timing differences or permanent differences and provides criteria for distinguishing between the differences. Timing differences are "differences between the periods in which transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income. Timing differences originate in one period and reverse or 'turn around' in one or more subsequent periods." Permanent differences are "differences between taxable income and pretax accounting income arising from transactions that, under applicable tax laws and regulations, will not be offset by corresponding differences or 'turn around' in other periods." Opinion No. 11 [section 4091] recognizes five special areas with unique aspects in which reversal of the tax consequences of some timing differences may be indefinite and defers any conclusion as to whether interperiod tax allocation should be required in those areas. The five special areas are:

a. Undistributed earnings of subsidiaries.

b. Intangible development costs in the oil and gas industry.

c. "General reserves" of stock savings and loan associations.

d. Amounts designated as "policyholders' surplus" by stock life insurance companies.

e. Deposits in statutory reserve funds by United States steamship companies.
Except for those special areas, Opinion No. 11 [section 4091] requires interperiod income tax allocation under the comprehensive allocation view adopted in the Opinion for timing differences.

.03 APB Opinion No. 23 [section 4095] addresses three of the special areas identified in APB Opinion No. 11 [section 4091]: undistributed earnings of subsidiaries,¹ "general reserves" of stock savings and loan associations, and amounts designated as "policyholders' surplus" by stock life insurance companies and also addresses undistributed earnings of corporate joint ventures. Opinion No. 23 [section 4095] concludes that because of special provisions of the United States Internal Revenue Code that are unique to the four special areas addressed, an enterprise might postpone indefinitely the payment of income taxes on certain differences between pretax accounting income and taxable income that would otherwise require tax allocation for financial reporting purposes. The Opinion further indicates that an enterprise must take specific action for income tax purposes before taxes on those timing differences become payable and the taxes may never become payable unless the enterprise takes those actions. However, if circumstances indicate that the enterprise is likely to pay taxes on those differences, either currently or in later years because of known or expected actions, income taxes should be accrued as tax expense of the current period. Further, the Opinion indicates that there is a presumption that interperiod income tax allocation applies to timing differences in the four special areas addressed even though the presumption may be overcome in each case.

.04 Paragraphs 5 and 6 of APB Opinion No. 23 [section 4095.05-06] discuss permanent and timing differences. Paragraph 6 [section 4095.06] states:

A timing difference arises when the initial difference between taxable income and pretax accounting income originates in one period and predictably reverses or turns around in one or more subsequent periods. The reversal of a timing difference at some future date is definite and the period of reversal is generally predictable within reasonable limits. Sometimes, however, reversal of a difference cannot be predicted because the events that create the tax consequences are controlled by the taxpayer and frequently require that the taxpayer take specific action before the initial difference reverses.

¹Footnote 2 of Opinion No. 23 [section 4095.09] states that the conclusions on undistributed earnings of a subsidiary also apply to the portion of the earnings of a Domestic International Sales Corporation (DISC) that is eligible for tax deferral.
Some have suggested that the discussion of timing differences in Opinion No. 23 [section 4095] amends the definition of timing differences in APB Opinion No. 11 [section 4091] (see paragraph .02 above).

.05 APB Opinion No. 24 [section 4096], "Accounting for Income Taxes—Investments in Common Stock Accounted for by the Equity Method (Other than Subsidiaries and Corporate Joint Ventures)," which was issued concurrently with APB Opinion No. 23 [section 4095], requires tax allocation for an investor's equity in the undistributed earnings of an investee other than a subsidiary or corporate joint venture, both of which are addressed by Opinion No. 23 [section 4095].

.06 FASB Statement No. 19 [section 6021], "Financial Accounting and Reporting by Oil and Gas Producing Companies," which supersedes FASB Statement No. 9, "Accounting for Income Taxes—Oil and Gas Producing Companies," addresses income tax allocation for intangible development costs in the oil and gas industry. Statement No. 19 [section 6021] requires comprehensive interperiod income tax allocation by oil and gas producing companies and prohibits "interaction" of book/tax timing differences (see paragraphs 60-62 and 260-264 of that Statement [sections 6021.060-.062 and 6021.260-.264]).

.07 This Interpretation does not modify APB Opinion No. 17 [section 5141], "Intangible Assets," or the AICPA Industry Audit Guide, "Audits of Stock Life Insurance Companies." This Interpretation does not apply to deposits in capital construction funds or statutory reserve funds by United States steamship companies, for which APB Opinions No. 11 [section 4091] and 23 [section 4095] did not reach a conclusion as to whether interperiod tax allocation should be required.

.08 The Addendum to APB Opinion No. 2 [section 6011], "Accounting for the 'Investment Credit,'" states that "differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the rate-making process" and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum shall govern the application of this Interpretation to those operations of a company that are regulated for rate-making purposes on an individual-company-cost-of-service basis.

.09 Although APB Opinion No. 23 [section 4095] discusses criteria for identifying a special category of timing differences
involving indefinite reversal, it carefully limited the application of those criteria to specified transactions and only under certain circumstances. The Board believes that Opinion No. 23 [section 4095] was not intended to establish general criteria applicable beyond the specified areas. The Board recognizes that the income tax benefits resulting from amortization and depreciation of railroad gradings and tunnel bores, and possibly other transactions, have characteristics that might be considered similar in some respects to the four special areas addressed in Opinion No. 23 [section 4095]. However, the Board is engaged in other studies which may lead to a comprehensive reexamination of tax allocation concepts and believes that it should not reopen the matter of tax allocation at this time or extend the range of exceptions to APB Opinion No. 11 [section 4091]. Accordingly, the Board reaffirms the applicability of Opinion No. 11 [section 4091], which requires comprehensive interperiod tax allocation for timing differences unless specifically exempted by other APB Opinions or FASB Statements.

INTERPRETATION

.10 APB Opinion No. 23 [section 4095] acknowledges that reversal of some timing differences cannot be predicted because of special provisions in the tax law that allow a taxpayer to control the events that control the tax consequences in certain areas. Opinion No. 23 [section 4095] does not require interperiod tax allocation for timing differences in the four special areas addressed in that Opinion except in specified circumstances, and the indefinite reversal criteria of that Opinion apply only to the four special areas addressed. APB Opinion No. 11 [section 4091] as amended to date requires interperiod tax allocation under the comprehensive allocation view adopted in that Opinion except for the four special areas addressed in Opinion No. 23 [section 4095] and for the areas described in paragraph .07 of this Interpretation.

.11 The income tax benefits resulting from amortization and depreciation of railroad gradings and tunnel bores for income tax reporting purposes are timing differences for which comprehensive interperiod income tax allocation is required. The provisions of APB Opinion No. 23 [section 4095] do not apply to those timing differences.

EFFECTIVE DATE AND TRANSITION

.12 The provisions of this Interpretation shall be applied prospectively for timing differences occurring in fiscal years beginning after June 15, 1978. Timing differences that result
from depreciation or amortization reported in fiscal years beginning after June 15, 1978, shall be subject to the provisions of this Interpretation. Earlier application is encouraged in financial statements for fiscal years beginning before June 16, 1978, that have not been previously issued.

.13 If early application is adopted in financial reports for interim periods of a fiscal year beginning before June 16, 1978, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Interpretation and any subsequent presentation of that information shall be on the restated basis.
**AC Section 4092**

**Tax Allocation Accounts—Discounting**

[Source: APB Opinion No. 10, Par. 6.]

Effective for fiscal periods beginning after December 31, 1966, unless otherwise indicated.

.01 Accounting Research Study No. 9, *Interperiod Allocation of Corporate Income Taxes,*¹ deals with the allocation of income taxes among accounting periods when revenues and expenses are reported for financial accounting purposes in different periods than they are for income tax purposes. The Board is presently giving attention to this general subject with a view to issuing an Opinion on it.² One of the questions now being considered is whether certain long-term tax allocation accounts should be determined on a discounted basis as recommended in the Study. Pending further consideration of this subject and the broader aspects of discounting as it is related to financial accounting in general and until the Board reaches a conclusion on this subject, it is the Board’s opinion that, except for applications existing on the exposure date of this section (September 26, 1966) with respect to transactions consummated prior to that date, deferred taxes should not be accounted for on a discounted basis.

---

¹ Accounting Research Studies are not statements of this Board or of the American Institute of Certified Public Accountants, but are published for the purpose of stimulating discussion on important accounting issues.

² APB Opinion No. 11 was issued effective for fiscal periods beginning after December 31, 1967. See section 4091.
New Depreciation Guidelines and Rules

[Source: APB Opinion No. 1, as amended.]

Issue date, unless otherwise indicated: November, 1962

.01 Accounting problems may arise in connection with the Depreciation Guidelines and Rules issued by the United States Treasury Department Internal Revenue Service as Revenue Procedure 62-21, effective July 12, 1962. [As amended, effective for fiscal periods beginning after December 31, 1967, by APB Opinion No. 11.]

.02 The service lives suggested in the Guidelines for broad classes of depreciable assets are, in general, appreciably shorter than the individual lives given in Bulletin "F," which was previously used as a guide in the determination of deductible depreciation for income tax purposes. The Guidelines purport to bring the lives used for income tax purposes into line with the actual experience of taxpayers, and thereby reduce the areas of controversy as to the amount of deductible depreciation, but not to provide another type of accelerated depreciation.

.03 For the first three years, either the new Guideline lives, or lives longer than the Guideline lives, may be used for income tax purposes without challenge. Lives shorter than those found in the Guidelines may be used if they have previously been established or are justifiable as reflecting the taxpayer's existing or intended retirement and replacement practices. If the "reserve ratio" tests provided in the Procedure subsequently indicate that the lives used for income tax purposes are not in accordance with actual retirement and replacement practices, the lives may be lengthened in accordance with the "life adjustment" tables provided in the Procedure. If the adjustment is not sufficient to bring tax and actual lives into line, the adjusted lives will then be replaced by lives determined in accordance with all of the facts and circumstances.
.04 A taxpayer should carefully review the estimates of useful life of depreciable property adopted for financial accounting purposes, with the objective of conforming them with Guideline lives to the extent that the latter fall within a reasonable range of estimated useful lives applicable in his business.

.05 With exceptions such as those discussed in paragraphs .06 and .07, net income for the period should not be increased as the result of the adoption of Guideline lives for income tax purposes only. Accordingly, where Guideline lives shorter than the lives used for financial accounting purposes are adopted for income tax purposes, provision for deferred income taxes should be made in the manner provided by section 4091. [As amended effective for fiscal periods beginning after December 31, 1967, by APB Opinion No. 11.]

.06 It may happen that a company has used shorter lives for accounting purposes than for tax purposes in the past, and now finds that these lives are longer than the new Guideline lives. If the lives previously used for accounting purposes are still considered reasonable, they presumably will be continued, but Guideline lives might be adopted for tax purposes. Tax-effect accounting should be introduced in this type of case in conformity with section 4091. [As amended, effective for fiscal periods beginning after December 31, 1967, by APB Opinion No. 11.]

.07 It may develop that some regulatory authorities having jurisdiction over regulated businesses will prescribe the manner in which the tax effect of the adoption of Guideline lives for income tax purposes only is to be dealt with for rate-making purposes. Where this is done, the principles set forth in section 4074.07-.08 are applicable.
Accounting for the Investment Credit

[Source: APB Opinion Nos. 2 and 4, as amended.]

This is a combination of APB Opinion No. 2, issued December, 1962, and APB Opinion No. 4 (Amending No. 2), issued March, 1964, unless otherwise indicated

.01 The Internal Revenue Code of 1954, as amended, provides for an “investment credit” which, in general, is equal to a specified percentage of the cost of certain depreciable assets acquired and placed in service after 1961. It is subject to certain statutory limitations and the amount available in any one year is used to reduce the amount of income tax payable for that year. An investment credit once allowed is subject to recapture under certain circumstances set forth in the statute.

.02 Some decision as to the nature of the investment credit, i.e., as to the substance of its essential characteristics, if not indispensable, is of great significance in a determination of its accounting treatment.

.03 Three concepts as to the substance of the investment credit have been considered by the Board: (a) subsidy by way of a contribution to capital; (b) reduction in taxes otherwise applicable to the income of the year in which the credit arises; and (c) reduction in a cost otherwise chargeable in a greater amount to future accounting periods.

.04 There is no significant disagreement with the view that the investment credit is a factor which influences the determination of net income. The basic accounting issue before us therefore is not whether the investment credit increases net income but, rather, the accounting period(s) during which it should be reflected in the operating statement. Resolution of the accounting issue, in large part, rests upon the accounting principles relative to the realizat-
tion of income. This is true for both regulated and nonregulated companies.

.05 Subsidy by way of a contribution to capital. This concept, in our opinion, is the least rational because it runs counter to the conclusion that the investment credit increases the net income of some accounting period(s).

.06 Tax reduction. The argument for this concept essentially is that since the investment credit is made available by the Internal Revenue Code of 1954, as amended, it is in substance a selective reduction in taxes related to the taxable income of the year in which the credit arises.

.07 The General Rule of Section 38(a) of the Internal Revenue Code of 1954, as amended, provides that:

There shall be allowed, as a credit against the tax imposed by this chapter, the amount determined under sub-part B of this part.

The tax code has traditionally distinguished between exclusions from taxable income (which affect the computation of taxes payable on taxable income of the period) and credits to be applied to reduce taxes otherwise applicable to such taxable income (which do not enter into such computation). In our view the relevant materials support the interpretation that the investment credit is an administrative procedure to permit the taxpayer to withhold the cash equivalent of the credit from taxes otherwise payable and that it is not an element entering into the computation of taxes related to income of the period.

.08 Cost reduction. We believe that the interpretation of the investment credit as a reduction in or offset against a cost otherwise chargeable in a greater amount to future accounting periods is supported by the weight of the pertinent factors and is based upon existing accounting principles.

.09 In reaching this conclusion we have evaluated the pertinent portions of the legislative history of the investment credit, which we regard as significant but not decisive. We also evaluated the pertinent provisions of the tax code which contain recapture and other provisions the effect of which is to make realization of the credit dependent to some degree on future events.

.10 In concluding that the cost reduction concept is based upon existing accounting principles we attach sub-
Accounting for the Investment Credit

stational weight to two points in particular. First, in our opinion, earnings arise from the use of facilities, not from their acquisition. Second, the ultimate realization of the credit is contingent to some degree on future developments. Where the incidence of realization of income is uncertain, as in the present circumstances, we believe the record does not support the treatment of the investment credit as income at the earliest possible point of time. In our opinion the alternative choice of spreading the income in some rational manner over a series of future accounting periods is more logical and supportable.

.11 In December 1962 the Board stated (in APB Opinion No. 2):

"... the allowable investment credit should be reflected in net income over the productive life of acquired property and not in the year in which it is placed in service."

.12 In January 1963 the Securities and Exchange Commission issued Accounting Series Release No. 96 in which it reported that in recognition of the substantial diversity of opinion among responsible persons in the matter of accounting for the investment credit the Commission would accept statements in which the credit was accounted for either as this Board concluded in Opinion No. 2 or as a reduction in taxes otherwise applicable to the year in which the credit arises. The Commission has recently reconsidered and reaffirmed that position.

.13 The Board's review of experience since the issuance of Opinion No. 2 shows that the investment credit has been treated by a significant number of companies as an increase in net income of the year in which the credit arose.

.14 The Revenue Act of 1964 eliminates the requirement imposed by the Revenue Act of 1962 that the investment credit be treated for income tax purposes as a reduction in the basis of the property to which the credit relates.

CONCLUSIONS

.15 It is the conclusion of this Board that the Revenue Act of 1964 does not change the essential nature of the investment credit and, hence, of itself affords no basis
for revising our Opinion as to the method of accounting for the investment credit.

.16 However, the authority of Opinions of this Board rests upon their general acceptability. The Board, in the light of events and developments occurring since the issuance of Opinion No. 2, has determined that its conclusions as there expressed have not attained the degree of acceptability which it believes is necessary to make the Opinion effective.

.17 In the circumstances the Board believes that, while the method of accounting for the investment credit recommended in paragraph .11 should be considered to be preferable, the alternative method of treating the credit as a reduction of Federal income taxes of the year in which the credit arises is also acceptable.

.18 The Board emphasizes that whichever method of accounting for the investment credit is adopted, it is essential that full disclosure be made of the method followed and amounts involved, when material.

.19 A number of alternative choices for recording the credit on the balance sheet has been considered. While we believe the reflection of the allowable credit as a reduction in the net amount at which the acquired property is stated (either directly or by inclusion in an offsetting account) may be preferable in many cases, we recognize as equally appropriate the treatment of the credit as deferred income, provided it is amortized over the productive life of the acquired property.

.20 We believe it preferable that the statement of income in the year in which the allowable investment credit arises should be affected only by the results which flow from the accounting for the credit set forth in paragraph .11. Nevertheless, reflection of income tax provisions, in the income statement, in the amount payable (that is, after deduction of the allowable investment credit) is appropriate provided that a corresponding charge is made to an appropriate cost or expense (for example, to the provision for depreciation) and the treatment is adequately disclosed in the financial statements of the first year of its adoption.

.21 An investment credit should be reflected in the financial statements only to the extent that it has been
used as an offset against income tax liability. Under the statute, unused investment credits may be carried backward or forward to other years. The amount of a carryback of unused investment credit may be set up as an asset (a claim for refund of income taxes) and be added to the allowable investment credit in accounting for the effect of the credit in the year in which the property is placed in service. A carryforward of unused investment credit should ordinarily be reflected only in the year in which the amount becomes "allowable," in which case the unused amount would not appear as an asset. Either of two treatments is acceptable in the preparation of income statements for the year in which these carrybacks or carryforwards are recognized: (a) the amount of taxes estimated to be actually payable for such year may be shown in the income statement, with the amount of the tax reduction attributable to the amounts carried backward or forward indicated either in a footnote or parenthetically in the body of the income statement; or (b) the income statement may indicate the tax expense for the period without inclusion of such reduction, which reduction should be shown as a separate item in the statement of income. Material amounts of unused investment credits should be disclosed. [As amended, effective for fiscal periods beginning after December 31, 1966, by APB Opinion No. 9.] (See section 2010.)
INTRODUCTION AND BACKGROUND INFORMATION

.01 The FASB has been asked to clarify the circumstances, if any, under which an enterprise may recognize the benefit of an investment tax credit prior to its realization as an offset against federal income tax liability.

.02 Paragraph 16 of APB Opinion No. 2 [section 4094.21], "Accounting for the 'Investment Credit'," states:

An investment credit should be reflected in the financial statements only to the extent that it has been used as an offset against income tax liability. . . . A carryforward of unused investment credit should ordinarily be reflected only in the year in which the amount becomes "allowable," in which case the unused amount would not appear as an asset. Material amounts of unused investment credits should be disclosed.

Paragraph 10 of APB Opinion No. 4 (Amending No. 2) [section 4094.17], "Accounting for the 'Investment Credit'," amended paragraph 13 of APB Opinion No. 2 [section 4094.11] and states that "treating the credit as a reduction of federal income taxes of the year in which the credit arises is also acceptable" [emphasis added].

.03 With respect to accounting for investment tax credits, paragraph 4 of APB Opinion No. 11 [section 4091.03], "Accounting for Income Taxes," states:

Investment Credits. The [Accounting Principles] Board is continuing its study on accounting for "Investment Credits" and intends to issue a new Opinion on the subject as soon as possible. In the meantime APB Opinion No. 2, Accounting for the "Investment Credit," and APB Opinion No. 4 (Amending No. 2) [combined in section 4094], Accounting for the "Investment Credit," remain in effect.

.04 For tax years beginning before January 1, 1976, federal income tax law required that an investment tax credit arising in a particular tax year was to be offset against federal income tax liability before any investment tax credit carry-

1 As to accounting for the investment tax credit, paragraph 13 of Opinion No. 2 [section 4094.11] states that "the allowable investment credit should be reflected in net income over the productive life of acquired property and not in the year in which it is placed in service."
overs to that year. Because the carryforward period was limited to seven years, an investment tax credit could expire unused. The Tax Reform Act of 1976 establishes a first-in, first-out treatment of investment tax credits for tax years beginning after December 31, 1975. Investment tax credit carryovers are to be used to reduce federal income taxes otherwise payable before investment tax credits arising from additions to assets in the current tax year. If unused investment tax credits from more than one tax year are carried over to a subsequent year, the credit from the earliest year is used first. As a result of that change in the federal income tax law and other features of the Tax Reform Act of 1976, some enterprises have concluded that an investment tax credit may be recognized in advance of realization because they believe its future realization is assured. Although the Tax Reform Act of 1976 has changed the order in which unused investment tax credits are used, an investment tax credit carryover can still expire unused.

.05 A draft of a proposed Interpretation, "Accounting for an Unused Investment Tax Credit," was issued on December 16, 1977. The Board received 32 letters of comment in response to the proposed Interpretation. A few respondents disagreed with the proposed Interpretation and others expressed neither overall agreement nor disagreement but offered comments or suggestions about specific matters. The remainder expressed general agreement.

.06 Some respondents urged the Board to conform the accounting for unused investment tax credit to that specified by APB Opinion No. 11 [section 4091] for net operating losses. Others recommended that investment tax credit should be recognized as an asset if future realization is assured beyond any reasonable doubt. The Board considered those recommendations and concluded that adoption of either might require an amendment. The Board believes that other aspects of accounting for the investment credit would require further consideration if an amendment were contemplated. The Board believes issuance of this Interpretation should not be delayed pending that further consideration.

.07 Other respondents recommended that the investment tax credit should be recognized only when realized as an offset against federal income tax liability. Under comprehensive interperiod tax allocation by the deferred method required by APB Opinion No. 11 [section 4091] and as interpreted by AICPA Accounting Interpretation No. 18 of Opinion No. 11 [section U4091.106-114], the investment tax credit is recognized
Accounting for an Unused Investment Tax Credit

before it is realized as an offset against federal income tax liability under the "with and without" method described in paragraph 36 [section 4091.35] of that Opinion. The Board has concluded that this practice should not be changed without a reconsideration of accounting for income taxes.

.08 A number of respondents recommended that the Board clarify the computational guidelines in the proposed Interpretation for recognizing the investment tax credit, including the limitations on recognition of unused investment tax credit. Several respondents also suggested that examples of the application of the requirements of the proposed Interpretation should be provided. The computational guidelines have been clarified and Appendix A, Examples of Computations of Investment Tax Credit Recognized, has been added to the Interpretation setting forth some examples. The examples do not attempt to illustrate all of the various possible combinations of circumstances that may affect the amount of investment tax credit recognized.

.09 The Addendum to APB Opinion No. 2 [section 6011] states that "differences may arise in the application of generally accepted accounting principles as between regulated and non-regulated businesses, because of the effect in regulated businesses of the rate-making process," and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum [section 6011] shall govern the application of this Interpretation to those operations of a company that are regulated for rate-making purposes on an individual-company-cost-of-service basis.

INTERPRETATION

Interperiod Tax Allocation

.10 The tax benefit of investment tax credits becoming available in the current period (excluding investment tax credits carried back to previous years 2) or carried forward from a prior period shall be recognized in measuring income tax expense for the current period 3 by the deferred method to the extent that the benefit would have been realized if taxes pay-

---

1 The tax benefit of investment tax credits carried back to previous tax years and realized as a refund of federal income taxes previously paid is added to the amount of investment tax credits recognized in measuring income tax expense for the current period in accordance with paragraph .10 above.

2 Some enterprises recognize the tax benefit of investment tax credits only to the extent realized as an offset to federal income tax liability and defer and amortize such credits over the productive life of acquired property. This Interpretation does not modify that practice.
able had been based on pretax accounting income adjusted for permanent differences. In addition, any remaining unused investment tax credit shall be offset against existing net deferred tax credits to the extent that those net deferred tax credits would reverse during the investment tax credit carryforward period, disregarding any timing differences that may originate in that carryforward period. The statutory limitation on offsets of the investment tax credit against federal income taxes payable shall be applied to each determination of amounts of investment tax credit to be recognized in accordance with the provisions of this Interpretation.

.11 The guidelines set forth in paragraphs 45-47 of APB Opinion No. 11 [section 4091.44-.46] that permit the recognition of the tax benefit of an operating loss carryforward when future realization is assured beyond any reasonable doubt do not apply to recognition of an unused investment tax credit.

.12 When the tax benefit of an unused investment tax credit that was recognized through offset of net deferred tax credits (see paragraph .10 above) is subsequently realized as a reduction of federal income taxes payable, an equivalent amount of deferred tax credits shall be reinstated. The reinstated deferred tax credits shall be amortized in the periods in which the related timing differences reverse.

Unused Investment Tax Credit Acquired in a Business Combination Accounted for by the Purchase Method

.13 Paragraphs 66-96 of APB Opinion No. 16 [section 1091.66-.96], "Business Combinations," specify the accounting for a business combination by the purchase method. Paragraph 87 [section 1091.87] of that Opinion requires that all identifiable assets acquired and liabilities assumed, whether

---

*As used in this Interpretation, the term "net deferred tax credits" represents the net of aggregate deferred tax credits and aggregate deferred tax debits.

*Currently, the federal statutory limitation is generally 100 percent of the first $25,000 and 50 percent of the remaining federal income taxes payable for most enterprises.

*Paragraph 45 of APB Opinion No. 11 [section 4091.44] states that "the tax benefits of loss carryforwards should not be recognized until they are actually realized, except in unusual circumstances when realization is assured beyond any reasonable doubt at the time the loss carryforwards arise." Paragraph 47 [section 4091.46] of that Opinion states:

Realization of the tax benefit of the loss carryforward would appear to be assured beyond any reasonable doubt when both of the following conditions exist: (a) the loss results from an identifiable, isolated and nonrecurring cause and the company either has been continuously profitable over a long period or has suffered occasional losses which were more than offset by taxable income in subsequent years, and (b) future taxable income is virtually certain to be large enough to offset the loss carryforward and will occur soon enough to provide realization during the carryforward period.
or not shown in the financial statements of the acquired enterprise, shall be assigned a portion of the cost of the acquired enterprise and that the excess of the cost of the acquired enterprise over the sum of the amounts assigned to the identifiable assets acquired less liabilities assumed shall be recorded as goodwill. Paragraphs 87, 91 and 92 [sections 1091.87, 1091.91 and -1091.92] of the Opinion also specify the accounting for the cost of an acquired enterprise if the market or appraisal values of identifiable assets acquired less liabilities assumed exceeds the cost of the acquired enterprise.

.14 APB Opinion No. 2 [section 4094] does not permit an unused investment tax credit to be recognized as an asset.

.15 An acquiring enterprise shall reduce the goodwill recognized in a business combination by the amount of tax benefits realized from an unused investment tax credit of an acquired enterprise in the period in which that credit offsets federal income tax liability. Goodwill shall not be reduced (or "negative goodwill") shall not be increased) retroactively to the date of the business combination and the results of operations of previous periods shall not be retroactively restated for revised amortization of goodwill. Rather, the adjusted goodwill (or "negative goodwill") shall be amortized over the remainder of the amortization period. Paragraph .16 of this Interpretation specifies the accounting for the realized tax benefits from an acquired enterprise's unused investment tax credit that exceed the remaining unamortized goodwill recognized in the business combination.

.16 If there is no remaining unamortized goodwill from the business combination, the realized tax benefits from an acquired enterprise's unused investment tax credit shall be applied to reduce any remaining unamortized balances of amounts assigned to noncurrent assets acquired in the combination as specified in paragraphs 87, 91 and 92 of APB Opinion No. 16 [sections 1091.87, 1091.91 and 1091.92]. Those amounts shall not be reduced retroactively to the date of the business combination and the results of operations for previous periods shall not be retroactively restated for revised depreciation, depletion, or amortization expense. If the unused investment tax credit realized reduces the unamortized balance of noncurrent assets acquired in the combination to zero, any further tax benefits realized from unused investment tax credit acquired in the combination shall be recorded as a deferred credit and shall be amortized systematically to income over the estimated period to be benefited, not to exceed forty years.

1 See paragraph 87 of APB Opinion No. 16 [section 1091.87].
EFFECTIVE DATE AND TRANSITION

.17 The provisions set forth in paragraphs .10-.12 of this Interpretation shall be applied prospectively in fiscal years beginning after December 15, 1978. Investment tax credits related to acquisitions in fiscal years beginning after December 15, 1978 shall be accounted for in accordance with this Interpretation. Unused investment tax credits related to acquisitions in fiscal years beginning before December 16, 1978 shall be accounted for in accordance with the enterprise's present method of accounting for unused investment tax credits. Earlier application is encouraged in financial statements for fiscal years beginning before December 16, 1978 that have not been previously issued.

.18 The provisions set forth in paragraphs .13-.16 of this Interpretation shall be applied prospectively in annual financial statements for fiscal years beginning after December 15, 1978 and for financial reports for interim periods within those fiscal years, regardless of the date of the business combination. Earlier application is encouraged in financial statements for fiscal years beginning before December 16, 1978 that have not been previously issued.

.19 If early application is adopted in financial reports for interim periods of a fiscal year beginning before December 16, 1978, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Interpretation and any subsequent presentation of that information shall be on the restated basis. This Interpretation shall not be applied retroactively for previously issued annual financial statements.
Appendix A

EXAMPLES OF COMPUTATIONS OF INVESTMENT TAX CREDIT RECOGNIZED

.20 This Appendix illustrates the application of the provisions of paragraphs .10-.12 of this Interpretation in computing the amount of investment tax credit recognized. The examples do not comprehend all possible combinations of circumstances.

General Assumptions

.21 The general assumptions on which the following examples are based are:

1. The statutory tax rate is 48 percent.
2. Investment tax credit that may be offset against federal income taxes payable is limited to 50 percent of taxes payable.
3. There are no permanent differences.
4. There are no investment tax credit carrybacks.
5. The "net change" method of computing deferred taxes is used (paragraph 37, APB Opinion No. 11 [section 4091.36]).
EXAMPLE 1

.22 This example illustrates the computation of investment tax credit to be recognized had taxes payable been based on pretax accounting income. In addition, investment tax credit is also recognized as an offset against existing net deferred tax credits that would reverse in the investment tax credit carryforward period.

Additional assumptions:

- Pretax accounting income: $1,000,000
- Net timing differences: $(300,000)
- Taxable income: $700,000
- Available investment tax credit (for both financial reporting and tax purposes): $925,000
- Existing net deferred tax credits: $2,000,000
- Existing net deferred tax credits to be amortized in the investment tax credit carryforward period: $1,200,000

The maximum amount of investment tax credit recognizable is computed as follows:

- Investment tax credit recognized based upon tax on pretax accounting income: $240,000
- Investment tax credit recognized as an offset against existing net deferred tax credits to be amortized in the investment tax credit carryforward period: 600,000

Maximum investment tax credit recognizable (limited to $925,000 available): $840,000
### Computation of the provision for income taxes:

Changes in net deferred tax credits:

Balance, beginning of period .................. $2,000,000

Deferred tax on net timing differences
   ($480,000 - 336,000) .................... 144,000

Investment tax credit offset against deferred tax credits
   ($240,000 - 168,000 + 600,000) ............ (672,000)

Balance, end of period ...................... $1,472,000

EXAMPLE 2

.23 This example illustrates the reinstatement of deferred tax credits that have been offset by investment tax credit to the extent that the tax benefit of the investment tax credit is subsequently realized (a continuation of Example 1).

Additional assumptions:

Pretax accounting income ..................... $2,000,000
Net timing differences ....................... (125,000)

Taxable income .............................. $1,875,000

Available investment tax credit (all amounts carried forward from prior year):

   Financial reporting ($925,000 - 840,000) . . $ 85,000
   Tax return ($925,000 - 168,000) ............. $ 757,000

Existing net deferred tax credits .............. $1,472,000
Accounting for an Unused Investment Tax Credit

Investment tax credit recognizable:

Investment tax credit recognized based upon tax on pretax accounting income
($2,000,000 x 48% x 50% limitation = $480,000; limited to available investment tax credit) $ 85,000

Computation of the provision for income taxes:

Tax on pretax accounting income
($2,000,000 x 48%) $960,000

Less investment tax credit
(limited to available investment tax credit) (85,000) $ 875,000

Tax on taxable income
($1,875,000 x 48%) $900,000

Less investment tax credit
($900,000 x 50% limitation) (450,000) (450,000)

Deferred tax expense (differential equivalent to tax effects of timing differences and reinstatement of deferred tax credits for investment tax credit realized that was recognized in a previous period) 425,000*

Taxes currently payable - above 450,000

Provision for income taxes $ 875,000

*See next page.

Application of Percentage Limitations in Recognizing Investment Tax Credit: An Interpretation of Sections 4091 and 4094

[Source: FASB Interpretation No. 32.]

March 1980

INTRODUCTION

.01 The FASB has been asked to clarify the application of paragraph 10 of FASB Interpretation No. 25 [section 4094-1.10], Accounting for an Unused Investment Tax Credit, with respect to the statutory limitation to be used in recognizing unused investment tax credit. Appendix A contains background information about that request.

INTERPRETATION

.02 The percentage limitation on the amount of federal income tax payable that can be offset by investment tax credit in the "with-and-without" computation¹ shall be the statutory percentage limitations in effect for the year for which the computation is being made.

.03 The limitations to be used in recognizing investment tax credit in addition to that recognized in the "with-and-without" computation shall be the statutory percentage limitations applicable to the years in which previously recorded deferred tax credits are expected to reverse. Only net deferred tax credits that have not been previously offset and that will reverse during the investment tax credit carryforward period, disregarding any timing differences that may originate in that carryforward period, shall be offset by investment tax credit.

.04 Net deferred tax credits offset in prior years shall not be adjusted to reflect changes in the statutory percentage limitations.

¹ See paragraph .09.
EFFECTIVE DATE AND TRANSITION

.05 The provisions of this Interpretation shall be applied prospectively for recognition of investment tax credit\(^2\) in fiscal years beginning after December 15, 1979. Earlier application is encouraged in financial statements for fiscal years beginning before December 16, 1979 that have not been previously issued.

.06 If early application is adopted in financial statements for a fiscal year beginning before December 16, 1979, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Interpretation. Any subsequent presentation of that information shall be on a restated basis: This Interpretation shall not be applied retroactively for previously issued annual financial statements.

\(^2\) Paragraph 17 of Interpretation 25 [section 4094-1.17] specifies that unused investment tax credit related to property acquired in fiscal years beginning before December 16, 1978 shall be accounted for in accordance with the enterprise's method of accounting for unused investment tax credit in those years.
Appendix A

BACKGROUND INFORMATION

.07 Paragraph 10 of Interpretation 25 [section 4094-1.10] states:

The tax benefit of investment tax credits becoming available in the current period (excluding investment tax credits carried back to previous years ...) or carried forward from a prior period shall be recognized in measuring income tax expense for the current period ... by the deferred method to the extent that the benefit would have been realized if taxes payable had been based on pretax accounting income adjusted for permanent differences. In addition, any remaining unused investment tax credit shall be offset against existing net deferred tax credits ... to the extent that those net deferred tax credits would reverse during the investment tax credit carryforward period, disregarding any timing differences that may originate in that carryforward period. The statutory limitation on offsets of the investment tax credit against federal income taxes payable ... shall be applied to each determination of amounts of investment tax credit to be recognized in accordance with the provisions of this Interpretation. [Emphasis added.]

.08 The Revenue Act of 1978 changed the statutory percentage limitations that determine the extent to which federal income tax otherwise payable may be offset by investment
tax credit.\(^3\) The FASB has been asked whether an enterprise should use the limitation currently in effect or the limitation that is scheduled to be in effect in the year that the timing difference is expected to reverse in determining the amount of investment tax credit to be recognized in applying Interpretation 25 [section 4094-1].

.09 Paragraph 36 of APB Opinion No. 11 [section 4091.35], *Accounting for Income Taxes*, and paragraph 10 of Interpretation 25 [section 4094-1.10] require that the tax effect of timing differences be computed by the "with-and-without" method. Under that method, the tax effect of a timing difference is the difference between income taxes on income "with" the timing difference included and "without" it and results in deferred income tax debits or credits. The deferred taxes are based on tax rates in effect when the timing differences originate.

.10 A proposed Interpretation, *Application of Percentage Limitations in Recognizing Investment Tax Credits under FASB Interpretation No. 25*, was issued November 14, 1979. The Board received 28 letters of comment on the proposed Interpretation.

.11 Under Interpretation 25 [section 4094-1], the amount of investment tax credit recognized in the computation of income tax expense for the current period includes investment tax credit recognized (a) in the "with-and-without" computation and (b) as an offset against existing net deferred tax credits. Some respondents questioned the rationale for limiting investment

\(^3\) Prior to the Revenue Act of 1978, the statutory limitation was 100 percent of the first $25,000 of federal income taxes payable plus a percentage of the remaining federal income taxes payable. That Act changed the percentage limitation applicable to the remaining federal income taxes payable as follows:

<table>

tax credit recognized in the “with-and-without” computation to the limitation in effect for the year for which the computation is being made but using future limitations in offsetting investment tax credit against existing net deferred tax credits. Other respondents suggested that the additional investment tax credit to be recognized as an offset of existing net deferred tax credits should not be limited to deferred tax credits that have not been previously offset.

.12 The first sentence of paragraph 10 of Interpretation 25 [section 4094-1.10] provides for the recognition of investment tax credit in the “with-and-without” computation under comprehensive interperiod income tax allocation by the deferred method. The deferred method of interperiod tax allocation uses the tax rates currently in effect, does not consider future tax rates, and does not adjust for subsequent changes in rates (paragraph 19 of Opinion 11 [section 4091.18]). Therefore, the amount of investment tax credit recognized in the “with-and-without” computation is determined by applying the limitation in effect for the year for which the computation is being made (paragraph 36 of Opinion 11 [section 4091.35]). Deferred tax credits offset in the “with-and-without” computation are considered fully offset.

.13 In determining the amount of investment tax credit to be recognized as an offset against existing net deferred tax credits, prospective percentage limitations are applied to existing net deferred tax credits from prior years that have not been previously offset. Prospective limitations are applied only to existing net deferred tax credits not previously offset because application of prospective limitations to existing net deferred tax credits that have been previously offset would result in subsequently adjusting the limitation applied in the “with-and-without” computation. This concept under Interpretation 25 [section 4094-1] is similar to recognizing currently the tax benefit of an operating loss carryforward as an offset against existing net deferred tax credits (paragraph 48 of Opinion 11 [section 4091.47]).

.14 A footnote in the proposed Interpretation stated that the most current statutory percentage limitations in effect should be used if the limitations change after the end of the reporting period but before the financial statements are issued. Several respondents disagreed with that approach as not being consistent with Opinion 11 [section 4091]. That footnote was deleted and the statutory percentage limitations to be used in
applying paragraph .03 are those that have been enacted by the end of the reporting period as being applicable to the years in which the deferred tax credits are expected to reverse.
Appendix B

EXAMPLE OF COMPUTATIONS FOR RECOGNIZING INVESTMENT TAX CREDIT

.15 This example illustrates one method of computing the amount of investment tax credit to be recognized in financial statement provisions for income tax expense in the "with-and-without" computation and as an offset against existing net deferred tax credits under this Interpretation. Note that paragraph .04 specifies that net deferred tax credits previously offset shall not be adjusted to reflect changes in the statutory limitations. The example does not comprehend all possible combinations of circumstances.

General Assumptions

.16 The general assumptions on which the following example is based are:

a. There are no permanent differences.
b. There are no investment tax credit carrybacks.
c. The "net change" method of computing deferred taxes is used (paragraph 37 of Opinion 11 [section 4091.36]).
d. As of January 1, 1979, the deferred tax account consists of the following:

| Deferred tax credits resulting from timing differences aggregating $260,000 | $119,600 |
| Less investment tax credit recognized but not realized | 35,000 |
| Net deferred tax credits | $ 84,600 |

e. The federal income tax rate before recognition of any tax credits is 46 percent.
f. The statutory percentage limitations in effect are those specified in footnote 3 to paragraph .08 of this Interpretation.
g. Reinstatement of deferred tax credits only arises when investment tax credit realized on the tax return exceeds the amount recognized for financial reporting purposes in the current period.
Timing Differences

.17 Timing differences are summarized as follows:

- $230,000
Application of Percentage Limitations in Recognizing Investment Tax Credit

"With-and-without" Computation

.19 Investment tax credit recognized under the "with-and-without" method is computed as follows:

Investment tax credit based on the federal income tax on pretax accounting income:

First $25,000 X 100%  
Remainder of federal income tax:
   ($690,000 − $25,000) X 60%  
   ($460,000 − $25,000) X 70%  
   ($736,000 − $25,000) X 80%  
Total

Amount recognized (lesser of amount computed above or amount available)

Investment tax credit realized on taxable income (cannot exceed amount available for tax purposes):

Offset of Unrecognized Investment Tax Credit Against Existing Net Deferred Tax Credits

.20 Remaining unused investment tax credit, after the "with-and-without" computation, is recognized as an offset against existing net deferred tax credits that would reverse in the investment tax credit carryforward period. Investment tax credit offset against existing net deferred tax credits is summarized as follows:

AICPA Professional Standards
Unrecognized investment tax credit after "with-and-without" computation (available for offset against existing net deferred tax credits):

<table>
<thead>
<tr>
<th></th>
<th>1979</th>
<th>1980</th>
<th>1981</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unrecognized investment tax credit carried forward from prior years</td>
<td>$ -</td>
<td>$ -</td>
<td>$ -</td>
</tr>
<tr>
<td>Originating in current year</td>
<td>325,000</td>
<td>370,000</td>
<td>675,000</td>
</tr>
<tr>
<td>Recognized in &quot;with-and-without&quot; computation</td>
<td>325,000</td>
<td>329,500</td>
<td>593,800</td>
</tr>
</tbody>
</table>

Unrecognized investment tax credit available for offset against existing net deferred tax credits:

<table>
<thead>
<tr>
<th></th>
<th>1979</th>
<th>1980</th>
<th>1981</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) $ -</td>
<td>$ 40,500</td>
<td>$ 81,200</td>
<td></td>
</tr>
</tbody>
</table>

Existing net deferred tax credits at the beginning of the year, available for offset at the end of the year:

- Paragraph .21: $205,400
- Paragraph .22: $61,831

Multiplied by limitation rate in years of expected reversal:

- 80% & 90%
- 90%

Offset limitation based on existing net deferred tax credits available for offset:

<table>
<thead>
<tr>
<th></th>
<th>1980</th>
<th>1981</th>
</tr>
</thead>
<tbody>
<tr>
<td>(2) N/A</td>
<td>$183,088</td>
<td>$55,648</td>
</tr>
</tbody>
</table>

Investment tax credit recognized by offset [lesser of (1) or (2)]:

<table>
<thead>
<tr>
<th></th>
<th>1980</th>
<th>1981</th>
</tr>
</thead>
<tbody>
<tr>
<td>(3) N/A</td>
<td>$40,500</td>
<td>$55,648</td>
</tr>
</tbody>
</table>

Investment tax credit carried forward [(1)-(3)]:

<table>
<thead>
<tr>
<th></th>
<th>1980</th>
<th>1981</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ -</td>
<td>$ -</td>
<td>$ 25,552</td>
</tr>
</tbody>
</table>

4The first $25,000 of federal income tax payable may be completely offset by investment tax credit, but the complications involved and additional record keeping that would be necessary would generally cause the cost to exceed the benefit from the greater precision.

5In 1980, the existing net deferred tax credits at the beginning of the year available for offset at the end of the year relate to the 1979 originating timing difference in the amount of $612,000. The offset limitation based on existing net deferred tax credits available for offset is determined as follows:

<table>
<thead>
<tr>
<th>Reversal of Timing Difference (paragraph 17(a))</th>
<th>Deferred Tax Credit Considered to Have Been Offset (paragraph 21)</th>
<th>Limitation Rate in Year of Expected Reversal (E X D)</th>
<th>Offset Limitation (E X D)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year</td>
<td>Amount</td>
<td>Difference (B–C)</td>
<td>Offset Limitation (E X D)</td>
</tr>
<tr>
<td>1981</td>
<td>$204,000</td>
<td>$76,120</td>
<td>$14,176</td>
</tr>
<tr>
<td>1982</td>
<td>204,000</td>
<td>93,840</td>
<td>80%</td>
</tr>
<tr>
<td>1983</td>
<td>204,000</td>
<td>93,840</td>
<td>90%</td>
</tr>
</tbody>
</table>

$612,000 $281,520 $76,120 $183,088

Because the investment tax credit recognized by offset is limited to $40,500, the deferred tax credits considered offset by the $40,500 is determined as follows:

<table>
<thead>
<tr>
<th>Investment Tax Credit Recognized</th>
<th>Deferred Tax Credits Offset</th>
</tr>
</thead>
<tbody>
<tr>
<td>$14,176 ÷ 80%</td>
<td>$17,720</td>
</tr>
<tr>
<td>26,324 ÷ 90%</td>
<td>29,249</td>
</tr>
<tr>
<td>$40,500</td>
<td>$46,969</td>
</tr>
</tbody>
</table>
## Application of Percentage Limitations in Recognizing Investment Tax Credit

### Offset Computation

.21 The computation of deferred tax credits available for offset in 1980 is as follows:

<table>
<thead>
<tr>
<th>Timing differences (paragraph 17(c))</th>
<th>1976</th>
<th>1977</th>
<th>1978</th>
<th>1979</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>$840,000</td>
<td>$96,000</td>
<td>$72,000</td>
<td>$60,000</td>
</tr>
<tr>
<td>Deferred tax credits at average rate (1)</td>
<td>$386,400</td>
<td>$44,160</td>
<td>$33,120</td>
<td>$27,600</td>
</tr>
<tr>
<td>Deferred tax credits considered to have been previously offset: (2)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Investment Tax Credit Recognized</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pre-1979 $35,000 ÷ 50%</td>
<td>$70,000</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1979 66,600 ÷ 60%</td>
<td>111,200</td>
<td></td>
<td></td>
<td>7,280</td>
</tr>
<tr>
<td>Total deferred tax credits offset (2)</td>
<td>181,200</td>
<td>44,160</td>
<td>33,120</td>
<td>27,600</td>
</tr>
<tr>
<td>Difference [(1) - (2)] (3)</td>
<td>205,400</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Deferred tax credits that will reverse beyond the carryforward period for 1980 investment tax credits (4)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Existing net deferred tax credits available for offset under paragraph 03 [(3) - (4)]</td>
<td>$205,400</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Paragraph .03 specifies that only net deferred tax credits that have not been previously offset and that will reverse during the investment tax credit carryforward period shall be offset by investment tax credit. The above computation disregards any timing differences that may originate in that carryforward period. Hence, identification of specific timing differences is necessary.

6Represents the amount of timing differences originating prior to the beginning of the period that are still in existence at the end of the period. Originating timing differences (current period) are offset in the "with-and-without" computation and are not eligible for additional offset.

7The average rate that is applied to the timing differences is calculated as the balance in the deferred tax account plus the total recognized but unrealized investment tax credit divided by the cumulative net timing differences (at the beginning of the period). The 1980 computation consists of:

\[
\frac{$294,000 \text{ (paragraph 22(b))} + $101,600 \text{ (paragraph 22(a))}}{860,000 \text{ (paragraph 17(b))}} = 45\%
\]

8The average rate that is applied to the timing differences is calculated as the balance in the deferred tax account plus the total recognized but unrealized investment tax credit divided by the cumulative net timing differences (at the beginning of the period). The 1980 computation consists of:

\[
\frac{$360,000 \text{ (paragraph 17(b))}}{860,000 \text{ (paragraph 17(b))}} = 42\%
\]

9In 1980, the only deferred tax credits that have not been fully offset relate to timing differences originating in 1979; all reverse within the carryforward period for 1980 investment tax credits.
The computation of deferred tax credits available for offset in 1981 is as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Deferred tax credits at average rate&lt;sup&gt;11&lt;/sup&gt;</td>

INTRODUCTION

.01 In December 1967 the Accounting Principles Board issued APB Opinion No. 11 [section 4091], Accounting for Income Taxes, but deferred modifying the practices of accounting for income taxes in five special areas identified in paragraphs 38 through 41 of that Opinion as requiring further study:

- a. Undistributed earnings of subsidiaries
- b. Intangible development costs in the oil and gas industry *
- c. "General reserves" of stock savings and loan associations
- d. Amounts designated as "policyholders' surplus" by stock life insurance companies
- e. Deposits in statutory reserve funds by United States steamship companies.

.02 The Board has examined the characteristics of the tax consequences of transactions in the three special areas designated (a), (c), and (d) above and sets forth in this section its conclusions on appropriate accounting treatments. The Board defers conclusions on deposits in capital construction funds or statutory reserve funds by United States steamship companies until regulations covering the provisions of the Merchant Marine Act of 1970 are available; experience under the 1970 Act, which substantially modified the Merchant Marine Act of 1936, is now limited. The Board also expresses in this section its conclusions on accounting for taxes on income from investments

* See FASB Statement No. 19 [section 6021], Financial Accounting and Reporting by Oil and Gas Producing Companies.
in corporate joint ventures accounted for by the equity method in accordance with APB Opinion No. 18 [section 5131], *The Equity Method of Accounting for Investments in Common Stock*. APB Opinion No. 24 [section 4096] covers accounting for taxes on income from investments in common stock accounted for by the equity method (other than subsidiaries and corporate joint ventures). [Amended, effective for financial statements issued on or after December 1, 1975, by FASB Statement No. 9.]

.03 This section supersedes paragraph 16 of ARB No. 51, *Consolidated Financial Statements*, paragraphs 38, 39, and 41 of APB Opinion No. 11 and paragraph 19(j) of APB Opinion No. 18. Except as stated in the preceding sentence this section does not modify APB Opinion No. 11 [section 4091].

.04 This section applies to financial statements which purport to present financial position, results of operations, and changes in financial position in conformity with generally accepted accounting principles. It does not apply to regulated industries in those circumstances meeting the standards described in the Addendum [section 6011] to APB Opinion No. 2, *Accounting for the "Investment Credit"*.

Discussion

.05 In APB Opinion No. 11 [section 4091] the Board defined differences between taxable income and pretax accounting income as either timing differences or permanent differences and provided criteria for distinguishing between the differences. Timing differences are "Differences between the periods in which transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income. Timing differences originate in one period and reverse or 'turn around' in one or more subsequent periods." Permanent differences are "Differences between taxable income and pretax accounting income arising from transactions that, under applicable tax laws and regulations, will not be offset by corresponding differences or 'turn around' in other periods." The Board also recognized that the tax consequences of a number of other transactions are somewhat similar to those of timing differences; however, the initial differences be-
between taxable income and pretax accounting income related to the transactions may not reverse until indefinite future periods or may never reverse.

.06 A timing difference arises when the initial difference between taxable income and pretax accounting income originates in one period and predictably reverses or turns around in one or more subsequent periods. The reversal of a timing difference at some future date is definite and the period of reversal is generally predictable within reasonable limits. Sometimes, however, reversal of a difference cannot be predicted because the events that create the tax consequences are controlled by the taxpayer and frequently require that the taxpayer take specific action before the initial difference reverses.

**UNDISTRIBUTED EARNINGS OF SUBSIDIARIES**

**Discussion**

.07 Paragraph 16 of ARB No. 51, *Consolidated Financial Statements*, which is superseded by this section, provided guides for interperiod allocation of income taxes that will be incurred at the date that previously undistributed earnings of subsidiaries are remitted to the parent company.¹ The concept of accruing income taxes for earnings included in consolidated income in accordance with ARB No. 51 [section 2051], has been applied inconsistently. Some believe that the only appropriate method is to accrue related deferred taxes substantially in accordance with paragraphs 36 and 37 of APB Opinion No. 11 [sections

¹ Paragraph 16 of ARB No. 51 stated: “When separate income tax returns are filed, income taxes usually are incurred when earnings of subsidiaries are transferred to the parent. Where it is reasonable to assume that a part or all of the undistributed earnings of a subsidiary will be transferred to the parent in a taxable distribution, provision for related income taxes should be made on an estimated basis at the time the earnings are included in consolidated income, unless these taxes are immaterial in amount when effect is given, for example, to dividend-received deductions or foreign-tax credits. There is no need to provide for income tax to the parent company in cases where the income has been, or there is evidence that it will be, permanently invested by the subsidiaries, or where the only likely distribution would be in the form of a tax-free liquidation.”
4091.35—.36], while others believe that under the criteria set forth in ARB No. 51 [section 2051], a parent company need accrue related deferred taxes only if the transfer of earnings to the parent company in a taxable distribution is imminent or relatively certain. Disclosure of the accounting for income taxes on undistributed earnings of subsidiaries has often been inadequate. Some believe that the contingent liability for taxes that would be payable if the undistributed earnings of subsidiaries were remitted should be disclosed. In their view changing circumstances, often beyond the control of the parent company, may accelerate distribution of earnings of a subsidiary so that the parent company will incur a tax for which no provision has been made. They believe an inability to determine the exact amount of the tax that might be payable is in itself no justification for not accruing the best current estimate of the contingent liability. Others believe that instead the amount of undistributed earnings of subsidiaries for which a parent company has not accrued income taxes should be disclosed in notes to financial statements. In their view disclosure of a hypothetical tax which would be payable, assuming those earnings were distributed currently, implies a contradiction of the decision that it is not necessary to provide for income taxes on the earnings in the financial statements. They do not believe that such a hypothetical tax is normally a realistic quantification of the contingent taxes that would be incurred even if some portion of the undistributed earnings were remitted.

.08 A domestic or foreign subsidiary remits earnings to a parent company after the parties consider numerous factors, including the following:

a. Financial requirements of the parent company  
b. Financial requirements of the subsidiary  
c. Operational and fiscal objectives of the parent company, both long-term and short-term  
d. Remittance restrictions imposed by governments  
e. Remittance restrictions imposed by lease or financing agreements of the subsidiary  
f. Tax consequences of the remittance.

Remittance of earnings of a subsidiary may sometimes be indefinite because of the specific long-term investment plans
and objectives of the parent company. Even in the absence of long-term investment plans, the flexibility inherent in the United States Internal Revenue Code may permit a parent company to postpone income taxes on the earnings of a subsidiary for an extended period or may permit the ultimate distribution to be taxed at special rates applicable to the nature of the distribution. Other circumstances may indicate that the earnings will probably be remitted in the foreseeable future. However, the parent company may control the events that create the tax consequences in either circumstance.

Opinion

.09 The Board concludes that including undistributed earnings of a subsidiary in the pretax accounting income
of a parent company, either through consolidation or accounting for the investment by the equity method, may result in a timing difference, in a difference that may not reverse until indefinite future periods, or in a combination of both types of differences, depending on the intent and actions of the parent company.

.10 Timing difference. The Board believes it should be presumed that all undistributed earnings of a subsidiary will be transferred to the parent company. Accordingly, the undistributed earnings of a subsidiary included in consolidated income (or in income of the parent company) should be accounted for as a timing difference, except to the extent that some or all of the undistributed earnings meet the criteria in paragraph .12. Income taxes attributable to a timing difference in reporting undistributed earnings of a subsidiary should be accounted for in accordance with the provisions of APB Opinion No. 11 [section 4091] for interperiod allocation of taxes. Problems in measuring and recognizing the tax effect of a timing difference do not justify ignoring income taxes related to the timing difference. Income taxes of the parent company applicable to a timing difference in undistributed earnings of a subsidiary are necessarily based on estimates and assumptions. For example, the tax effect may be determined by assuming that unremitted earnings were distributed in the current period and that the parent company received the benefit of all available tax-planning alternatives and available tax credits and deductions. The income tax expense of the parent company should also include taxes that would have been withheld if the undistributed earnings had been remitted as dividends.

.11 The tax effect of a difference between taxable income and pretax accounting income attributable to losses of a subsidiary should be accounted for in accordance with the Board’s conclusions on operating losses in paragraphs 44 through 50 of APB Opinion No. 11 [sections 4091.43-.49].

.12 Indefinite reversal criteria. The presumption that all undistributed earnings will be transferred to the parent

---

4 Paragraph 14 of APB Opinion No. 18 [section 5131.14].
4 As the unused tax credits that are recognized by the parent in determining deferred income taxes on undistributed earnings of a subsidiary are subsequently realized, the initial reduction in deferred taxes should be reinstated at the then current rates in accordance with the provisions of APB Opinion No. 11 [section 4091].
company may be overcome, and no income taxes should be accrued by the parent company, if sufficient evidence shows that the subsidiary has invested or will invest the undistributed earnings indefinitely or that the earnings will be remitted in a tax-free liquidation. A parent company should have evidence of specific plans for reinvestment of undistributed earnings of a subsidiary which demonstrate that remittance of the earnings will be postponed indefinitely. Experience of the companies and definite future programs of operations and remittances are examples of the types of evidence required to substantiate the parent company's representation of indefinite postponement of remittances from a subsidiary. If circumstances change and it becomes apparent that some or all of the undistributed earnings of a subsidiary will be remitted in the foreseeable future but income taxes have not been recognized by the parent company, it should accrue as an expense of the current period income taxes attributable to that remittance; income tax expense for such undistributed earnings should not be accounted for as an extraordinary item. If it becomes apparent that some or all of the undistributed earnings of a subsidiary on which income taxes have been accrued will not be remitted in the foreseeable future, the parent company should adjust income tax expense of the current period; such adjustment of income tax expense should not be accounted for as an extraordinary item.

Change in investment. An investment in common stock of a subsidiary may change so that it is no longer a subsidiary because the parent company sells a portion of the investment, the subsidiary sells additional stock, or other transactions affect the investment. If the remaining investment in common stock should be accounted for by the equity method, the investor should recognize income taxes on its share of current earnings of the investee company in accordance with the provisions of APB Opinion No. 24 [section 4096]. If a parent company did not recognize income taxes on its equity in undistributed earnings of a subsidiary for the reasons cited in paragraph .12 (and the company in which the investment is held ceases to be a subsidiary), it should accrue as a current period expense income taxes on undistributed earnings in the period that it
becomes apparent* that any of those undistributed earnings (prior to the change in status) will be remitted; the accrual of those income taxes should not be accounted for as an extraordinary item. If a parent company recognized income taxes on its equity in undistributed earnings of a subsidiary, the amount of deferred income taxes of the parent attributable to undistributed earnings of the subsidiary should be considered in accounting for a disposition through sale or other transaction which reduces the investment.

.14 Disclosure. Information concerning undistributed earnings of a subsidiary for which income taxes have not been accrued that should be disclosed in notes to financial statements includes:

a. A declaration of an intention to reinvest undistributed earnings of a subsidiary to support the conclusion that remittance of those earnings has been indefinitely postponed, or a declaration that the undistributed earnings will be remitted in the form of a tax-free liquidation, and

b. The cumulative amount of undistributed earnings on which the parent company has not recognized income taxes.6

INVESTMENTS IN CORPORATE JOINT VENTURES

Discussion

.15 Corporate joint ventures, as defined in section 5131 are of two kinds: (1) those essentially permanent in duration and (2) those that have a life limited by the nature of the venture or other business activity. In section 5131 the Board concluded that the equity method of accounting best enables an investor in a corporate joint venture to recognize the underlying nature of the investment regardless of duration.

.16 Unless characteristics indicate a limited life, a corporate joint venture has many of the characteristics of a subsidiary. The investors usually participate in the management of the joint venture, consider the factors set forth

* The change in the status of an investment would not by itself mean that remittance of these undistributed earnings should be considered apparent.

6 Other disclosure requirements in sections 4091.55-.63 may also apply. Disclosure of other matters such as available tax credits and deductions may be desirable.
Revenue and Expense

in paragraph .08 above, and agree (frequently before forming the venture) as to plans for long-term investment, for utilizing the flexibility inherent in the United States Internal Revenue Code, and for planned remittances.

Opinion

.17 The Board concludes that the principles applicable to undistributed earnings of subsidiaries (paragraphs .09, .10, .11, .12 and .13) also apply to tax effects of differences between taxable income and pretax accounting income attributable to earnings of corporate joint ventures that are essentially permanent in duration and are accounted for by the equity method.7

.18 Disclosure. The disclosure requirements set forth in paragraph .14 also apply to earnings of corporate joint ventures.

“BAD DEBT RESERVES” OF SAVINGS AND LOAN ASSOCIATIONS

Discussion

.19 Regulatory authorities require both stock and mutual savings and loan associations to appropriate a portion of earnings to general reserves8 and to retain the reserves as a protection for depositors. Provisions of the United States Internal Revenue Code permit a savings and loan association to deduct an annual addition to a reserve for bad debts8 in determining taxable income, subject to certain limitations. This annual addition permitted by the Code generally differs significantly from the bad debt experience upon which determination of pretax accounting income is based. Thus, taxable income and pretax accounting income of an association usually differ.

.20 Although a general reserve determined according to requirements of the regulatory authorities is not directly related to a reserve for bad debts computed according to provisions of the United States Internal Revenue Code, the purposes and restrictions of each reserve are similar.

7 Certain corporate joint ventures have a life limited by the nature of the venture, project, or other business activity. Therefore, a reasonable assumption is that a part or all of the undistributed earnings of the venture will be transferred to the investor in a taxable distribution. Deferred taxes should be recorded, in accordance with the concepts of section 4091 at the time the earnings (or losses) are included in the investor’s income.

8 The terms general reserves and reserve for bad debts are used in the context of the special meaning these terms have in regulatory pronouncements and in the United States Internal Revenue Code.
Amounts of bad debt deductions for income tax purposes are includable in taxable income of later years only if the bad debt reserves are used subsequently for purposes other than to absorb bad debt losses.

.21 The term *pretax accounting income*, as used in this section, represents income or loss for a period, exclusive of related income tax expense, determined in conformity with generally accepted accounting principles. The term *taxable income*, as used in this section, represents pretax accounting income (a) adjusted for reversal of provisions for estimated losses on loans and property acquired in settlement of loans, and gains or losses on the sales of such property, and adjusted for permanent differences, and (b) after giving effect to the bad debt deduction allowable by the United States Internal Revenue Code assuming the applicable tax return were to be prepared based on such adjusted pretax accounting income.

.22 Some believe that a difference between taxable income and pretax accounting income attributable to a bad debt reserve that is accounted for as part of the general reserve and undivided profits of a savings and loan association has attributes of a permanent or indefinite deferral of tax payments. In their view, a savings and loan association should not accrue income taxes on such differences. Others believe that this difference has the principal attributes of a timing difference as described in paragraphs 36 and 37 of APB Opinion No. 11 [section 4091.35—.36]. In effect, they believe that this difference is a Government-sponsored deferral of tax, that the Government has an equity in the savings and loan association to the extent of the deferred tax, and that it is inappropriate to include earnings in stockholders’ equity without accruing income taxes which the association would incur if the earnings were distributed to stockholders or otherwise became subject to tax. In their view the savings and loan association should recognize deferred taxes on the difference.

**Opinion**

.23 The Board concludes that a difference between taxable income and pretax accounting income attributable to a bad debt reserve that is accounted for as part of the general reserves and undivided profits of a savings and
loan association\(^9\) may not reverse until indefinite future periods or may never reverse. The association controls the events that create the tax consequence, and the association is required to take specific action before the initial difference reverses. Therefore, a savings and loan association should not provide income taxes on this difference. However, if circumstances indicate that the association is likely to pay income taxes, either currently or in later years, because of known or expected reductions in the bad debt reserve, income taxes attributable to that reduction should be accrued as tax expense of the current period; the accrual of those income taxes should not be accounted for as an extraordinary item.

.24 Disclosure. Information that should be disclosed in notes to financial statements of a savings and loan association concerning bad debt reserves that are accounted for as part of the general reserves and undivided profits includes:

a. The purposes for which the reserves are provided under the applicable rules and regulations and the fact that income taxes may be payable if the reserves are used for other purposes, and

b. The accumulated amount of the reserves for which income taxes have not been accrued.\(^10\)

.25 The disclosure requirements set forth in paragraph .24 also apply to a parent company of a savings and loan association accounting for that investment either through consolidation or by the equity method.

"POLICYHOLDERS' SURPLUS" OF STOCK LIFE INSURANCE COMPANIES

Discussion

.26 The provisions of the United States Internal Revenue Code provide for the exclusion from taxable income of a stock life insurance company of amounts determined under a formula and the allocation of those amounts to

---

\(^9\) Paragraph 38 of APB Opinion No. 11 indicated that the "general reserves" of stock savings and loan associations was a special area requiring further study. In practice the statement also has been applied to mutual savings and loan associations and mutual savings banks. The Board affirms that its conclusions in this section apply to stock and mutual savings and loan associations and mutual savings banks.

\(^10\) Other disclosure requirements in paragraphs 56—64 of APB Opinion No. 11 [section 4091.55—.63] may also apply.
policyholders' surplus until the total policyholders' surplus equals a specified maximum. The amounts excluded from taxable income and designated as policyholders' surplus are includable in taxable income of later years if the company elects to (a) distribute policyholders' surplus to stockholders as dividends, (b) transfer amounts from policyholders' surplus to shareholders' surplus designated for tax purposes as available for any business purpose, or (c) take, or if it fails to take, certain other specified actions (none of which usually occur).

.27 Some believe that a difference between taxable income and pretax accounting income attributable to amounts designated as policyholders' surplus of a stock life insurance company has attributes of a permanent or indefinite deferral of tax payments. In their view, a stock life insurance company should not accrue income taxes on the difference between taxable income and pretax accounting income related to amounts designated as policyholders' surplus unless circumstances indicate that the insurance company is likely to pay income taxes, either currently or in future years, because of known or expected reductions in policyholders' surplus. Others believe that the difference has the principal attributes of a timing difference as described in paragraphs 36 and 37 of APB Opinion No. 11 [section 4091.35—.36]. In effect, they believe that the difference is a Government-sponsored deferral of tax, that the Government has an equity in the stock life insurance company to the extent of the deferred tax, and that it is inappropriate to include earnings in stockholders' equity without accruing income taxes which would be incurred by the stock life insurance company if those earnings were distributed to stockholders or otherwise became subject to tax. In their view the stock life insurance company should accrue deferred taxes on the difference.

Opinion

.28 The Board concludes that a difference between taxable income and pretax accounting income attributable to amounts designated as policyholders' surplus of a stock life insurance company may not reverse until indefinite future periods or may never reverse. The insurance company controls the events that create the tax consequences and the company is generally required to take specific ac-
tion before the initial difference reverses. Therefore, a stock life insurance company should not accrue income taxes on the difference between taxable income and pretax accounting income attributable to amounts designated as policyholders’ surplus. However, if circumstances indicate that the insurance company is likely to pay income taxes, either currently or in later years, because of known or expected reductions in policyholders’ surplus, income taxes attributable to that reduction should be accrued as a tax expense of the current period; the accrual of those income taxes should not be accounted for as an extraordinary item.

.29 Disclosure. Information concerning amounts designated as policyholders’ surplus of a stock life insurance company that should be disclosed in notes to financial statements includes:

a. The treatment of policyholders’ surplus under the United States Internal Revenue Code and the fact that income taxes may be payable if the company takes certain specified actions, which should be appropriately described, and

b. The accumulated amount of the policyholders’ surplus for which income taxes have not been accrued.11

.30 The disclosure requirements set forth in paragraph .29 also apply to a parent company of a stock life insurance company accounting for that investment either through consolidation or by the equity method.

EFFECTIVE DATE

.31 This section shall be effective for all fiscal periods beginning after December 31, 1971. However, the Board encourages earlier application of the provisions of this section.

.32 The conclusions of the Board on accounting for income taxes on undistributed earnings of subsidiaries and corporate joint ventures represent a clarification of current practice. Accordingly, this section should be applied retroactively to undistributed earnings of subsidiaries included in consolidated financial statements and to undistributed earnings applicable to unconsolidated subsidiaries and investments in corporate joint ventures accounted for by the

---

11 Other disclosure requirements in paragraphs 56—64 of APB Opinion No. 11 [section 4091.55—.63] may also apply.
equity method in accordance with APB Opinion No. 18 [section 5131]. An adjustment resulting from a change in accounting method to comply with this section should be treated as an adjustment of prior periods, and financial statements presented for the periods affected should be restated.

.33 The conclusions of the Board on "bad debt reserves" of savings and loan associations and amounts designated as "policyholders' surplus" by stock life insurance companies agree generally with current practice. If application of this section should result in a change in accounting principle, the adjustment should be treated as an adjustment of prior periods, and financial statements presented for the periods affected should be restated.

REPORTING TAX BENEFITS REALIZED ON
DISPOSITION OF INVESTMENTS IN CERTAIN
SUBSIDIARIES AND OTHER INVESTEES:
AN INTERPRETATION OF SECTIONS 4095
AND 4096

[SOURCE: FASB INTERPRETATION NO. 29.]

FEBRUARY 1979

INTRODUCTION
.01 The FASB has been asked to clarify the reporting of income tax benefits realized by an investor from the disposition of an investment in certain subsidiaries and other investees.\(^1\) Losses of a subsidiary or other investee that have been included in the investor's financial statements may have created a difference\(^2\) between the accounting basis and the tax basis of the investment in the subsidiary or other investee because the investor could not deduct those losses for income tax purposes. No recognition is given to the tax effect relating to the difference between the accounting basis and the tax basis in the years prior to disposition of the investment if realization of the tax benefit is not assured beyond any reasonable doubt. Upon disposition of the investment, a question arises as to whether tax benefits realized on disposition of the investment relating to a difference between the accounting basis and the tax basis of the investment in the subsidiary or other investee should be reported in the investor's financial statements as an extraordinary credit or as a reduction of income taxes on continuing operations. Appendix A provides additional background information about this matter.

\(^1\) The term "subsidiary or other investee," as used in this Interpretation, refers to a subsidiary that files separate income tax returns (whether consolidated or accounted for by the equity method for financial reporting) or to a corporate joint venture or other nonsubsidiary investee accounted for by the equity method.

\(^2\) A "difference between the accounting basis and the tax basis of the investment in the subsidiary or other investee," as used in this Interpretation, refers to a difference attributable to prior year losses of a subsidiary or other investee that have been included in the investor's financial statements and could not be deducted by the investor for income tax purposes.
INTERPRETATION

.02 The accounting for the effect of a difference between taxable income and pretax accounting income as stated in paragraphs 11 and 17 of APB Opinion No. 23 [section 4095.11 and section 4095.17], "Accounting for Income Taxes—Special Areas," and paragraph 9 of APB Opinion No. 24 [section 4096.09], "Accounting for Income Taxes—Investments in Common Stock Accounted for by the Equity Method (Other than Subsidiaries and Corporate Joint Ventures)," applies to an investor's accounting for the operating losses and the related tax benefits of operating loss carrybacks or carryforwards that may be realized by a subsidiary, a corporate joint venture, or other investee under applicable tax laws and regulations and does not apply to tax benefits that may be realized by the investor from disposition of the related investment. An investor shall classify tax benefits realized on disposition of an investment relating to a difference between the accounting basis and the tax basis of the investment in the subsidiary or other investee in the same manner as the classification accorded the gain or loss on disposition of the investment.

.03 If reporting tax benefits in accordance with paragraph .02 of this Interpretation creates a significant variation in the customary relationship between income tax expense and pretax accounting income, that fact shall be disclosed in accordance with paragraph 63(c) of APB Opinion No. 11 [section 4091.62(c)], "Accounting for Income Taxes."

EFFECTIVE DATE AND TRANSITION

.04 The provisions of this Interpretation shall be effective for dispositions of investments in certain subsidiaries and other investees occurring after March 31, 1979. Earlier application is encouraged. Reclassification in previously issued financial statements is permitted but not required.

3 The term "tax benefits realized" as used in this Interpretation refers to either realization by inclusion in an income tax return or the determination that realization is assured beyond any reasonable doubt.
4 See footnote 2.
Appendix A

BACKGROUND INFORMATION

.05 Paragraph 11 of APB Opinion No. 23 [section 4095.11] states:

The tax effect of a difference between taxable income and pretax accounting income attributable to losses of a subsidiary should be accounted for in accordance with the Board's conclusions on operating losses in paragraphs 44 through 50 of APB Opinion No. 11 [section 4091.43-.49].

Paragraph 17 of Opinion No. 23 [section 4095.17] applies the same provision to an investment in a corporate joint venture that is accounted for by the equity method. Paragraph 9 of APB Opinion No. 24 [section 4096.09] has an identical provision for losses of an investee other than a subsidiary or corporate venture.

.06 Paragraphs 44 through 50 of APB Opinion No. 11 [section 4091.43-.49] address the accounting for operating loss carrybacks and carryforwards. Paragraph 45 [section 4091.44] states: "When the tax benefits of loss carryforwards are not recognized until realized in full or in part in subsequent periods, the tax benefits should be reported in the results of operations of those periods as extraordinary items."

.07 APB Opinion No. 30 [section 2012], "Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions," requires income taxes applicable to a disposal of a segment of a business and to an extraordinary item to be associated with the gain or loss on disposal of the segment or the extraordinary item reported in an income statement.

.08 The following three approaches have been suggested to the Board for classification of tax benefits realized on disposition of an investment relating to a difference between the accounting basis and the tax basis of the investment in the subsidiary or other investee:

a. Report the tax benefits as a reduction of income taxes from continuing operations for the current period, because the benefits are attributable to a decision made and an action taken (i.e., disposition of an investment) in the current period.
b. Classify the tax benefits in the investor's financial statements the same as the classification accorded the gain or loss on disposition of the related investment (for example, as a reduction of income taxes on continuing operations, as extraordinary, or as disposal of a segment of a business).

c. Report the tax benefits as an extraordinary credit in accordance with paragraph 45 of *APB Opinion No. 11* [section 4091.44] because the difference in bases "is attributable to losses of an investee," as referred to in paragraphs 11 and 17 of *APB Opinion No. 23* [sections 4095.11 and 4095.17] and paragraph 9 of *APB Opinion No. 24* [section 4096.09].

.09 A draft of a proposed Interpretation on "Reporting Tax Benefits Realized on Disposition of Investments in Certain Subsidiaries and Other Investees" was issued on September 22, 1978. The Board received 22 letters of comment in response to the proposed Interpretation. Virtually all respondents expressed agreement with the proposed Interpretation. However, a few respondents questioned whether the proposed Interpretation amounted to an amendment of *APB Opinion Nos. 23* [section 4095] and 24 [section 4096], and the Board concluded that it does not. The Board believes that *Opinion Nos. 23* [section 4095] and 24 [section 4096] address the reporting of operating losses and related tax benefits of operating loss carrybacks or carryforwards available to a subsidiary or other investee but does not address the reporting of tax benefits realized by an investor from disposition of the related investment. The Board believes that the differences between tax benefits arising from the utilization by an investee of its tax loss carryforwards and the tax consequences to an investor upon disposition of its investment justify differences in reporting.
INTRODUCTION

.01 In March 1971 the Accounting Principles Board issued APB Opinion No. 18 [section 5131], The Equity Method of Accounting for Investments in Common Stock, and stated that the guides in paragraph 16 of ARB No. 51, Consolidated Financial Statements, should apply in accounting for income taxes on income recognized by an investor in common stock of an investee company until the APB issued an Opinion on the special areas referred to in paragraphs 38 through 41 of APB Opinion No. 11, Accounting for Income Taxes. (See APB Opinion No. 23 [section 4095], Accounting for Income Taxes—Special Areas.)

.02 The Board has examined the characteristics of the tax consequences of transactions in this area and sets forth in this section its conclusion on appropriate accounting for taxes on income from investments in common stock accounted for by the equity method (other than subsidiaries and corporate joint ventures) in accordance with APB Opinion No. 18 [section 5131].

.03 This section applies to financial statements which purport to present financial position, results of operations, and changes in financial position in conformity with generally accepted accounting principles. It does not apply to regulated industries in those circumstances meeting the standards described in the Addendum [section 6011], to APB Opinion No. 2, Accounting for the "Investment Credit".
DISCUSSION

.04 The Board concluded in APB Opinion No. 18 [section 5131] that an investor should follow the equity method of accounting for an investment in common stock if the investment in voting stock gives it the ability to exercise significant influence over operating and financial policies of an investee even though the investor holds 50% or less of the voting stock.

.05 Under the equity method of accounting for investments, an investor recognizes its share of the earnings or losses of an investee in the periods for which they are reported by the investee in its financial statements rather than in the period in which an investee declares a dividend or the period in which an investor liquidates its investment. A reasonable assumption is that a part or all of the earnings of an investee ultimately transferred to the investor or realized through the sale or liquidation of the investment will be taxable to the investor. Some believe that the assumed eventual tax consequences have the essential characteristics of a timing difference, and accordingly they would require interperiod tax allocation under the provisions of APB Opinion No. 11 [section 4091].

.06 Others believe that the principles applicable to undistributed earnings of subsidiaries (paragraphs 9, 10, 11, 12 and 13) of APB Opinion No. 23 [section 4095.09—.13], are equally applicable to undistributed earnings of investees (other than subsidiaries and corporate joint ventures) accounted for by the equity method and that income taxes should be provided only on the portion of undistributed earnings of an investee that represents a timing difference and not on the portion that available evidence indicates will be invested permanently or for an indefinite period. They emphasize that application of APB Opinion No. 18 [section 5131] is based on the presumption that the investor has the ability to exercise significant influence over the operating and financial policies of the investee, and accordingly they believe that the investor must necessarily be presumed to have the ability to exercise significant influence on the extent to which and manner in which the earnings of an investee will be remitted or invested. Under such circumstances, they believe that the investor is in a
position to determine and substantiate the effect of probable future remittances which may require an accrual of income tax.

**OPINION**

.07 The Board concludes that the tax effects of differences between taxable income and pretax accounting income attributable to an investor's share of earnings of investee companies (other than subsidiaries and corporate joint ventures) accounted for by the equity method in accordance with APB Opinion No. 18 [section 5131] are related either to probable future distributions of dividends or to anticipated realization on disposal of the investment and therefore have the essential characteristics of timing differences. The Board believes that the ability of an investor to exercise significant influence over an investee differs significantly from the ability of a parent company to control investment policies of a subsidiary and that only control can justify the conclusion that undistributed earnings may be invested for indefinite periods.

.08 The Board believes that the determination of whether an investor’s equity in undistributed earnings of an investee will be realized in the form of dividends, will be realized by ultimate disposition of the investment, or a combination of both must be based on all facts and circumstances. If evidence indicates that an investor's equity in undistributed earnings of an investee will be realized in the form of dividends, an investor should recognize income taxes attributable to the timing difference as if the equity in earnings of the investee that the investor included in income were remitted as a dividend during the period, recognizing available dividend-received deductions and foreign tax credits. Income taxes of the investor company should also include taxes that would have been withheld if the undistributed earnings had been remitted as dividends. If evidence indicates that an investor’s equity in undistributed earnings of an investee will be realized by ultimate disposition of the investment, an investor should accrue income taxes attributable to the timing difference at capital gains or other appropriate rates, recognizing all available deductions and credits.

.09 The tax effect of a difference between taxable income and pretax accounting income attributable to losses of
an investee should be accounted for in accordance with the Board’s conclusions on operating losses in paragraphs 44 through 50 of APB Opinion No. 11 [section 4091.43-.49].

.10 Change in Investment. An investment in common stock of an investee (other than a subsidiary or corporate joint venture) may change so that the investee becomes a subsidiary because the investor acquires additional common stock, the investee acquires or retires common stock or other transactions affect the investment. Or, an investment in common stock of an investee may fall below the level of ownership necessary for the investor to have the ability to exercise significant influence over operating and financial policies of the investee because the investor sells a portion of the investment, the investee sells additional stock or other transactions affect the investment. If an investment in an investee increases so that it becomes a subsidiary, the deferred income taxes previously accrued by the investor in accordance with paragraphs .07 through .09 should be included in the income of the parent company only as dividends from the subsidiary are received in amounts which exceed the parent company’s share of the earnings of the subsidiary subsequent to the date it became a subsidiary. Similarly, if an investment in the investee falls below the level of ownership necessary to enable the investor to follow the equity method of accounting, the deferred income taxes previously accrued by the investor should be included in the income of the former investor only as dividends from the former investee are received in amounts which exceed the former investor’s allocable share of earnings of the former investee subsequent to the date it ceased to qualify as an investee. The amount of deferred income taxes of the investor attributable to its share of the equity in earnings of the investee company should be considered in accounting for a disposition through sale or other transaction that reduces the investment.

EFFECTIVE DATE

.11 This section shall be effective for all fiscal periods beginning after December 31, 1971. However, the Board encourages earlier application of the provisions of this section.
.12 The conclusions of the Board on accounting for income taxes on investments in common stock (other than subsidiaries and corporate joint ventures) represent a clarification of current practice. Accordingly, this section should be applied retroactively to undistributed earnings applicable to investments (other than subsidiaries and corporate joint ventures) accounted for by the equity method in accordance with APB Opinion No. 18 [section 5131]. Adjustments resulting from a change in accounting method to comply with this section should be treated as adjustments of prior periods, and financial statements presented for the periods affected should be restated.
Introduction and Background Information

01 The FASB has been asked to clarify the accounting for income taxes relating to recent changes in the United Kingdom tax law with respect to "stock relief" for enterprises reporting in conformity with United States generally accepted accounting principles. The U.K. "stock relief" legislation permits enterprises to deduct, for the purpose of determining taxable income, increases in the carrying amount of inventories. The FASB has been informed that tax benefits from "stock relief" have been deferred as if this deduction were a timing difference, which reverses if inventories decrease in future years. The reversal increases taxable income, thereby resulting in the recapture of previously granted tax benefits. This recapture is known in the United Kingdom as the "clawback provision." In July 1979, the United Kingdom adopted legislation to limit the timing and the amount of tax that could be recaptured. Under the new legislation, the potential for recapture of tax benefits in 1973-1974 and 1974-1975 fiscal years has been eliminated, effective from the beginning of an enterprise's 1979-1980 fiscal year. The legislation also provides that the potential for recapture of the "stock relief" tax benefit received in a year will terminate if it has not been recaptured during a six-year period. Thus,

1 In the United Kingdom, inventory is known as "stock."
2 Timing differences are defined in paragraph 13(e) of APB Opinion No. 11 [section 4091.12(e)], Accounting for Income Taxes.
3 Fiscal is used in this Statement to indicate an enterprise's financial year ended after March 31 of one year and before April 1 of the following year, as that term is used in the United Kingdom.
4 The legislation stipulates that any recapture will be on a LIFO basis; for example, a decrease in inventory in 1978-1979 would first be offset against any "stock relief" claimed in 1977-1978.

.02 The Board believes that the change in the U. K. tax law changes the character of the “stock relief” deduction for purposes of accounting for income taxes as of the date the legislation was enacted. Because the potential for recapture exists for six years, the Board concluded that the tax benefit resulting from “stock relief” should be deferred unless it is probable that the benefit will not be recaptured. The Board also concluded that the deferred benefit should be adjusted if circumstances change, indicating that the probability of recapture has changed; any accrual or reversal should be included in the determination of income tax expense of the period in which circumstances change. The Board believes that the change in the U.K. tax law with regard to “stock relief” creates a unique situation in accounting for income taxes and that the accounting specified by this Statement should not extend to other situations.

.03 An Exposure Draft of a proposed Statement on “Accounting for Income Taxes Related to U.K. Tax Legislation Concerning Stock Relief” was issued for public comment on July 30, 1979. The Board received 49 letters of comment in response to the Exposure Draft. Certain of the comments received and the Board’s consideration of them are discussed in Appendix A, “Summary of Consideration of Comments on Exposure Draft.”

.04 The Board has concluded that it can reach an informed decision on the basis of existing data without a public hearing and that the effective date and transition specified in paragraphs .08 and .09 are advisable in the circumstances.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

.05 Because of the potential recapture of “stock relief,” the tax benefit related thereto shall be deferred unless it is probable that the tax benefit will not be recaptured prior to the end of the relevant six-year recapture period. If the tax benefit related to “stock relief” has been deferred and circumstances subsequently change indicating that it is probable that the tax benefit will not be recaptured prior
Accounting for Tax Benefits Related to U. K.
Tax Legislation Concerning Stock Relief

to the end of the relevant six-year recapture period, the tax benefit previously deferred shall be recognized by a reduction of income tax expense in the period in which circumstances change. If the tax benefit related to "stock relief" has not been deferred and circumstances subsequently change, the tax benefit attributable to that "stock relief" shall be deferred to the extent appropriate by a charge to income tax expense of the period in which circumstances change.

.06 For interim reporting purposes, except as provided in paragraph .09, any change in circumstances requiring an adjustment of the tax benefit related to "stock relief" shall be included as an adjustment of the estimated annual effective tax rate in the interim reporting period in which circumstances change.

.07 If accounting for "stock relief" in accordance with this Statement creates a significant variation in the customary relationship between income tax expense and pretax accounting income, that fact shall be disclosed.

Effective Date and Transition

.08 The provisions of this Statement shall be applied in the first annual or interim financial statements issued after September 30, 1979 for periods ending on or after July 26, 1979. Application in such statements issued by September 30, 1979 is encouraged but not required.

.09 In the initial application of this Statement in an interim reporting period ending after July 26, 1979, any recognition of previously deferred tax benefits related to "stock relief" shall be reported as an item of income tax expense of that interim period only rather than as an adjustment of the estimated annual effective tax rate and shall not be reported as an extraordinary item.

The provisions of this Statement need not be applied to immaterial items.

*An increase in net income of a U. K. subsidiary from recognition of the tax benefit related to "stock relief" may require income tax allocation under APB Opinion No. 23 [section 4095], Accounting for Income Taxes—Special Areas, when that increase is recognized by the U. S. parent company.

AICPA Professional Standards

AC § 4097.09
SUMMARY OF CONSIDERATION OF COMMENTS ON EXPOSURE DRAFT

10 Some respondents indicated that they believed the "stock relief" deduction is a timing difference that will reverse on recapture or become a permanent difference when the potential for recapture is eliminated, i.e., after the six-year time period. They therefore recommended that tax benefits deferred from 1975-1976 to date should not be recognized until the relevant six-year period has passed, when in their view the timing difference would become a permanent difference. Further, some respondents commented on the wording used in the Exposure Draft to describe the previous treatment of "stock relief": "the FASB has been informed that deferred taxes have been provided as if this deduction were a timing difference." (Emphasis added.) The Board believes that "stock relief" does not have the characteristics of a timing difference for the following reasons. Inventory and merchandise purchases are accounted for the same way each year for both income tax and financial reporting; an additional deduction for any increase in inventory is allowed for income tax purposes in the year the increase occurs. Because any increase in inventory is accounted for the same way each year for both income tax and financial reporting, the increase does not have the characteristics of a timing difference.6 Likewise, the additional deduction does not have the characteristics of a permanent difference because the tax benefit is subject to recapture during the six-year period.7 In some respects, "stock relief" is like the investment tax credit in that a tax benefit is realized because of an increase in particular assets and is recaptured if those assets or their equivalent are not held for the required period. APB Opinion No. 11 [section 4091], Accounting for Income Taxes, defines differences as either timing differences or permanent differences and does not contemplate a timing difference that later changes into a permanent difference. The Board has therefore concluded that accounting for "stock relief" as a timing difference that becomes a permanent difference is inappropriate under the existing principles of income tax allocation.

6See par. 13(e) of Opinion 11 [section 4091.12(e)].
7See par. 13(f) of Opinion 11 [section 4091.12(f)].
Some respondents questioned the use of the probability approach and suggested that recapture was not simply probable or improbable. Other comments on this approach suggested that it was too subjective and would be difficult to implement in practice. The Board has modified the approach proposed in the Exposure Draft so that the tax benefit related to "stock relief" is deferred unless it is probable that the tax benefit will not be recaptured.

Some respondents recommended that for interim reporting purposes the reversal of previously deferred tax benefits should be treated as a discrete item and not as an adjustment of the estimated annual effective tax rate as proposed in the Exposure Draft because treatment as a discrete item would minimize any distortion of earnings and would not include a nonoperating item in the results of operations. The Board accepted this recommendation for initial application of this Statement because of the unusual nature of this unique situation. However, for ongoing accounting, paragraph .06 is consistent with FASB Interpretation No. 18 [section 2071-1], Accounting for Income Taxes in Interim Periods, which requires the tax effect of changes in estimates to be reflected in the computation of the estimated annual effective tax rate. The Board does not believe this existing principle should be modified for such future changes.
AC Section 4111

**Interest on Receivables and Payables**

[Source: APB Opinion No. 21; as amended.]

Effective for transactions entered into on or after October 1, 1971 unless otherwise indicated.

**INTRODUCTION**

.01 Problem. Business transactions often involve the exchange of cash or property, goods, or service for a note or similar instrument. The use of an interest rate that varies from prevailing interest rates warrants evaluation of whether the face amount and the stated interest rate of a note or obligation provide reliable evidence for properly recording the exchange and subsequent related interest. This section sets forth the Board’s views regarding the appropriate accounting when the face amount of a note does not reasonably represent the present value of the consideration given or received in the exchange. This circumstance may arise if the note is noninterest bearing or has a stated interest rate which is different from the rate of interest appropriate for the debt at the date of the transaction. Unless the note is recorded at its present value in this circumstance the sales price and profit to a seller in the year of the transaction and the purchase price and cost to the buyer are misstated, and interest income and interest expense in subsequent periods are also misstated. The primary objective of this section is to refine the manner of applying existing accounting principles in this circumstance. Thus, it is not intended to create a new accounting principle.

.02 Applicability. The principles discussed in this section are applicable to receivables and payables which represent contractual rights to receive money or contractual obligations to pay money on fixed or determinable dates, whether or not there is any stated provision for interest, except as stated in paragraphs .03 and .04. Such receivables and payables are collectively referred to in this section as

1 See Paragraph .16.

2 *Present value* is the sum of the future payments discounted to the present date at an appropriate rate of interest. Section 4111A contains a description of the valuation process.
"notes." Examples are secured and unsecured notes, debentures, bonds, mortgage notes, equipment obligations, and some accounts receivable and payable.

.03 Except that paragraph .15 covering statement presentation of discount and premium is applicable in all circumstances, this section is not intended to apply to:

(a) receivables and payables arising from transactions with customers or suppliers in the normal course of business which are due in customary trade terms not exceeding approximately one year;

(b) amounts which do not require repayment in the future, but rather will be applied to the purchase price of the property, goods, or service involved (e.g., deposits or progress payments on construction contracts, advance payments for acquisition of resources and raw materials, advances to encourage exploration in the extractive industries);

(c) amounts intended to provide security for one party to an agreement (e.g., security deposits, retainages on contracts);

(d) the customary cash lending activities and demand or savings deposit activities of financial institutions whose primary business is lending money;

(e) transactions where interest rates are affected by the tax attributes or legal restrictions prescribed by a governmental agency (e.g., industrial revenue bonds, tax exempt obligations, government guaranteed obligations, income tax settlements); and

(f) transactions between parent and subsidiary companies and between subsidiaries of a common parent.3

.04 This section is also not intended to apply to, and the Board is not presently taking a position4 as to, the application of the present value measurement (valuation) technique to estimates of contractual or other obligations assumed in connection with sales of property, goods, or

---

3 The Board has deferred consideration of the treatment of transactions between such companies pending consideration of the subject of reporting on components of a business enterprise and completion of the Accounting Research Study on intercorporate investments.

4 In section 4092, the Board concluded that deferred income taxes should not be accounted for on a discounted (present value) basis. That conclusion is not modified by this section.
service, for example, a warranty for product performance. This section does not alter the accounting for convertible debt securities described in section 5516, *Accounting forConvertible Debt and Debt Issued with Stock Purchase Warrants*.

**DISCUSSION**

.05 *Note received or issued for cash.* The total amount of interest during the entire period of a cash loan is generally measured by the difference between the actual amount of cash received by the borrower and the total amount agreed to be repaid to the lender. Frequently, the stated or coupon interest rate differs from the prevailing rate applicable to similar notes, and the proceeds of the note differ from its face amount. As section 4111A demonstrates, such differences are related to differences between the present value upon issuance and the face amount of the note. The difference between the face amount and the proceeds upon issuance is shown as either discount or premium, which is amortized over the life of the note.\(^5\)

.06 *Unstated rights or privileges.* A note issued solely for cash equal to its face amount is presumed to earn the stated rate of interest. However, in some cases the parties may also exchange unstated (or stated) rights or privileges, which are given accounting recognition by establishing a note discount or premium account. In such instances, the effective interest rate differs from the stated rate. For example, a corporation may lend a supplier cash which is to be repaid five years hence with no stated interest. Such a noninterest bearing loan may be partial consideration under a purchase contract for supplier products at lower than the prevailing market prices. In this circumstance, the difference between the present value of the receivable and the cash loaned to the supplier is appropriately regarded as an addition to the cost of products purchased during the con-

---

\(^5\) For example, if a bond is issued at a discount or premium, such discount or premium is recognized in accounting for the original issue. The coupon or stated interest rate is not regarded as the effective yield or market rate. Moreover, if a long-term noninterest bearing note or bond is issued, its net proceeds are less than face amount and an effective interest rate is based on its market value upon issuance. As section 4111A illustrates, the coupon or stated rate of interest and the face amount of a note or bond may not be the appropriate bases for valuation. The presumption that market values provide the evidence for valuation must be overcome before using coupon or stated rates and face or maturity amounts as the bases for accounting.
tract term. The note discount is amortized as interest income over the five-year life of the note.

.07 Note received or issued in a noncash transaction. A note exchanged for property, goods, or service represents two elements, which may or may not be stipulated in the note: (1) the principal amount, equivalent to the bargained exchange price of the property, goods, or service as established between the supplier and the purchaser and (2) an interest factor to compensate the supplier over the life of the note for the use of funds he would have received in a cash transaction at the time of the exchange. Notes so exchanged are accordingly valued and accounted for at the present value of the consideration exchanged between the contracting parties at the date of the transaction in a manner similar to that followed for a cash transaction. The difference between the face amount and the present value upon issuance is shown as either discount or premium, which is amortized over the life of the note.

.08 Determining present value. If determinable, the established exchange price (which, presumably, is the same as the price for a cash sale) of property, goods, or service acquired or sold in consideration for a note may be used to establish the present value of the note. When notes are traded in an open market, the market rate of interest and market value of the notes provide the evidence of the present value. The above methods are preferable means of establishing the present value of the note.

.09 If an established exchange price is not determinable and if the note has no ready market, the problem of determining present value is more difficult. To estimate the present value of a note under such circumstances, an applicable interest rate is approximated which may differ from the stated or coupon rate. This process of approximation is frequently called imputation, and the resulting rate is often called an imputed interest rate. Nonrecognition of an apparently small difference between the stated rate of interest and the applicable current rate may have a material effect on the financial statements if the face amount of the note is large and its term is relatively long.

**OPINION**

.10 Note exchanged for cash. When a note is re-
interest on receivables and payables

received or issued solely for cash and no other right or privilege is exchanged, it is presumed to have a present value at issuance measured by the cash proceeds exchanged. If cash and some other rights or privileges are exchanged for a note, the value of the rights or privileges should be given accounting recognition as described in paragraph .06.

.11 Note exchanged for property, goods, or service. When a note is exchanged for property, goods, or service in a bargained transaction entered into at arm's length, there should be a general presumption that the rate of interest stipulated by the parties to the transaction represents fair and adequate compensation to the supplier for the use of the related funds. That presumption, however, must not permit the form of the transaction to prevail over its economic substance and thus would not apply if (1) interest is not stated, or (2) the stated interest rate is unreasonable (paragraphs .12 and .13) or (3) the stated face amount of the note is materially different from the current cash sales price for the same or similar items or from the market value of the note at the date of the transaction. In these circumstances, the note, the sales price, and the cost of the property, goods, or service exchanged for the note should be recorded at the fair value of the property, goods, or service or at an amount that reasonably approximates the market value of the note, whichever is the more clearly determinable. That amount may or may not be the same as its face amount, and any resulting discount or premium should be accounted for as an element of interest over the life of the note (paragraph .14). In the absence of established exchange prices for the related property, goods, or service or evidence of the market value of the note (paragraph .08), the present value of a note that stipulates either no interest or a rate of interest that is clearly unreasonable should be determined by discounting all future payments on the notes using an imputed rate of interest as described in paragraphs .12 and .13. This determination should be made at the time the note is issued, assumed, or acquired; any subsequent changes in prevailing interest rates should be ignored.

.12 Determining an appropriate interest rate. The variety of transactions encountered precludes any specific interest rate from being applicable in all circumstances. However, some general guides may be stated. The choice of a rate may be affected by the credit standing of the is-
issuer, restrictive covenants, the collateral, payment and other terms pertaining to the debt, and, if appropriate, the tax consequences to the buyer and seller. The prevailing rates for similar instruments of issuers with similar credit ratings will normally help determine the appropriate interest rate for determining the present value of a specific note at its date of issuance. In any event, the rate used for valuation purposes will normally be at least equal to the rate at which the debtor can obtain financing of a similar nature from other sources at the date of the transaction. The objective is to approximate the rate which would have resulted if an independent borrower and an independent lender had negotiated a similar transaction under comparable terms and conditions with the option to pay the cash price upon purchase or to give a note for the amount of the purchase which bears the prevailing rate of interest to maturity.

13 The selection of a rate may be affected by many considerations. For instance, where applicable, the choice of a rate may be influenced by (a) an approximation of the prevailing market rates for the source of credit that would provide a market for sale or assignment of the note; (b) the prime or higher rate for notes which are discounted with banks, giving due weight to the credit standing of the maker; (c) published market rates for similar quality bonds; (d) current rates for debentures with substantially identical terms and risks that are traded in open markets; and (e) the current rate charged by investors for first or second mortgage loans on similar property.7

14 Amortization of discount and premium. With respect to a note which by the provisions of this section requires the imputation of interest, the difference between the present value and the face amount should be treated as discount or premium8 and amortized as interest expense * or

---

7 A theory has been advanced which states that no imputation of interest is necessary if the stated interest rate on a note receivable exceeds the interest cost on the borrowed funds used to finance such notes. The Board considers this theory unacceptable for reasons discussed in this section.

8 Differences between the recognition for financial accounting purposes and income tax purposes of discount or premium resulting from determination of the present value of a note should be treated as timing differences in accordance with section 4091, Income Taxes.

* The amount chargeable to interest expense is eligible for inclusion in the amount of interest cost capitalizable in accordance with FASB Statement No. 34, Capitalization of Interest Cost. [As modified, effective for fiscal years beginning after December 15, 1979, by FASB Statement No. 34.] (See section 5155.)
income over the life of the note in such a way as to result in a constant rate of interest when applied to the amount outstanding at the beginning of any given period. This is the "interest" method described in and supported by section 5361. However, other methods of amortization may be used if the results obtained are not materially different from those which would result from the "interest" method.

.15 Statement presentation of discount and premium. The discount or premium resulting from the determination of present value in cash or non-cash transactions is not an asset or liability separable from the note which gives rise to it. Therefore, the discount or premium should be reported in the balance sheet as a direct deduction from or addition to the face amount of the note. It should not be classified as a deferred charge or deferred credit. The description of the note should include the effective interest rate; the face amount should also be disclosed in the financial statements or in the notes to the statements. Amortization of discount or premium should be reported as interest in the statement of income.* Issue costs should be reported in the balance sheet as deferred charges.

**EFFECTIVE DATE**

.16 This section shall be effective for transactions entered into on or after October 1, 1971. The Board believes that the conclusions as to balance sheet presentation and disclosure in paragraph .15 should apply to transactions made prior as well as subsequent to the issuance of this section. However, this section is not intended to require the discounting of notes existing on September 30, 1971 which were not previously discounted. Notes that were previously recorded in fiscal years ending before October 1, 1971 should not be adjusted. However, notes that have previously been recorded in the fiscal year in which October 1, 1971 occurs may be adjusted to comply with the provisions of this section.

*Refer to section 4111A for illustrations of balance sheet presentation.
*The amount chargeable to interest expense is eligible for inclusion in the amount of interest cost capitalizable in accordance with FASB Statement No. 34, *Capitalization of Interest Cost.* [As modified, effective for fiscal years beginning after December 15, 1979, by FASB Statement No. 34.] (See section 5155.)
Interest on Receivables
and Payables—Appendix

.01 Present value concepts. Upon issuance of a note or bond, the issuer customarily records as a liability the face or principal amount of the obligation. Ordinarily, the recorded liability also represents the amount which is to be repaid upon maturity of the obligation. The value recorded in the liability account, however, may be different from the proceeds received or the present value of the obligation at issuance if the market rate of interest differs from the coupon rate of interest. For example, consider the issuance of a $1,000, 20-year bond which bears interest at 10% annually. If we assume that 10% is an appropriate market rate of interest for such a bond the proceeds at issuance will be $1,000. The bond payable would be recorded at $1,000 which represents the amount repayable at maturity and also the present value at issuance which is equal to the proceeds. However, under similar circumstances, if the prevailing market rate were more (less) than 10%, a 20-year 10% bond with a face amount of $1,000 would usually have a value at issuance and provide cash proceeds of less (more) than $1,000. The significant point is that, upon issuance, a bond is valued at (1) the present value of the future coupon interest payments plus (2) the present value of the future principal payments (face amount). These two sets of future cash payments are discounted at the prevailing market rate of interest (for an equivalent security) at the date of issuance of the debt. As the 8% and 12% columns show, premium or discount arises when the prevailing market rate of interest differs from the coupon rate:
### Assume prevailing market rate of

Accounting for Research and Development Costs

[Source: FASB Statement No. 2.]

INTRODUCTION

October 1974

.01 This Statement establishes standards of financial accounting and reporting for research and development costs with the objectives of reducing the number of alternative accounting and reporting practices presently followed and providing useful financial information about research and development costs. This Statement specifies:

a) Those activities that shall be identified as research and development for financial accounting and reporting purposes.

b) The elements of costs that shall be identified with research and development activities.

c) The accounting for research and development costs.

d) The financial statement disclosures related to research and development costs.

.02 Accounting for the costs of research and development activities conducted for others under a contractual arrangement is a part of accounting for contracts in general and is beyond the scope of this Statement. Indirect costs that are specifically reimbursable under the terms of a contract are also excluded from this Statement.

.03 This Statement does not apply to activities that are unique to enterprises in the extractive industries, such as prospecting, acquisition of mineral rights, exploration, drilling, mining, and related mineral development. It does apply, however, to research and development activities of enterprises in the extractive industries that are comparable in nature to research and development activities of other
enterprises, such as development or improvement of processes and techniques including those employed in exploration, drilling, and extraction.

.04 APB Opinion No. 17 [section 5141], "Intangible Assets," is hereby amended to exclude from its scope those research and development costs encompassed by this Statement.

.05 Paragraph 13 of APB Opinion No. 22 [section 2045.13], "Disclosure of Accounting Policies," is amended to delete "research and development costs (including basis for amortization)" as an example of disclosure "commonly required" with respect to accounting policies.

.06 Standards of financial accounting and reporting for research and development costs are set forth in paragraphs .07—.16. The basis for the Board's conclusions, as well as alternatives considered by the Board and reasons for their rejection, are discussed in Appendix B to this Statement. Background information is presented in Appendix A.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Activities Constituting Research and Development

.07 Paragraphs .08—.10 set forth broad guidelines as to the activities that shall be classified as research and development.

.08 For purposes of this Statement, research and development is defined as follows:

a) Research is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service (hereinafter "product") or a new process or technique (hereinafter "process") or in bringing about a significant improvement to an existing product or process.

b) Development is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use. It includes the conceptual formulation, design, and testing of product alternatives, construction of prototypes, and operation of pilot plants. It does not include routine or periodic alterations to existing products, production lines.
manufacturing processes, and other on-going operations even though those alterations may represent improvements and it does not include market research or market testing activities.

.09 The following are examples of activities that typically would be included in research and development in accordance with paragraph .08 (unless conducted for others under a contractual arrangement—see paragraph .02):

a) Laboratory research aimed at discovery of new knowledge.

b) Searching for applications of new research findings or other knowledge.

c) Conceptual formulation and design of possible product or process alternatives.

d) Testing in search for or evaluation of product or process alternatives.

e) Modification of the formulation or design of a product or process.

f) Design, construction, and testing of pre-production prototypes and models.

g) Design of tools, jigs, molds, and dies involving new technology.

h) Design, construction, and operation of a pilot plant that is not of a scale economically feasible to the enterprise for commercial production.

i) Engineering activity required to advance the design of a product to the point that it meets specific functional and economic requirements and is ready for manufacture.

.10 The following are examples of activities that typically would be excluded from research and development in accordance with paragraph .08:

a) Engineering follow-through in an early phase of commercial production.
b) Quality control during commercial production including routine testing of products.

c) Trouble-shooting in connection with break-downs during commercial production.

d) Routine, on-going efforts to refine, enrich, or otherwise improve upon the qualities of an existing product.

e) Adaptation of an existing capability to a particular requirement or customer’s need as part of a continuing commercial activity.

f) Seasonal or other periodic design changes to existing products.

g) Routine design of tools, jigs, molds, and dies.

h) Activity, including design and construction engineering, related to the construction, relocation, rearrangement, or start-up of facilities or equipment other than (1) pilot plants (see paragraph .09(h)) and (2) facilities or equipment whose sole use is for a particular research and development project (see paragraph .11(a)).

i) Legal work in connection with patent applications or litigation, and the sale or licensing of patents.

Elements of Costs to Be Identified with Research and Development Activities

.11 Elements of costs shall be identified with research and development activities as follows:

a) Materials, equipment, and facilities. The costs of materials (whether from the enterprise’s normal inventory or acquired specially for research and development activities) and equipment or facilities that are acquired or constructed for research and development activities and that have alternative future uses (in research and development projects or otherwise) shall be capitalized as tangible assets when acquired or constructed. The cost of such materials consumed in research and development activities and the depreciation of such equipment or facilities used in those activities are research and development costs. However, the costs of materials,
equipment, or facilities that are acquired or constructed for a particular research and development project and that have no alternative future uses (in other research and development projects or otherwise) and therefore no separate economic values are research and development costs at the time the costs are incurred.

b) **Personnel.** Salaries, wages, and other related costs of personnel engaged in research and development activities shall be included in research and development costs.

c) **Intangibles purchased from others.** The costs of intangibles that are purchased from others for use in research and development activities and that have alternative future uses (in research and development projects or otherwise) shall be capitalized and amortized as intangible assets in accordance with *APB Opinion No. 17* [section 5141]. The amortization of those intangible assets used in research and development activities is a research and development cost. However, the costs of intangibles that are purchased from others for a particular research and development project and that have no alternative future uses (in other research and development projects or otherwise) and therefore no separate economic values are research and development costs at the time the costs are incurred.

d) **Contract services.** The costs of services performed by others in connection with the research and development activities of an enterprise, including research and development conducted by others in behalf of the enterprise, shall be included in research and development costs.

e) **Indirect costs.** Research and development costs shall include a reasonable allocation of indirect costs. However, general and administrative costs that are not clearly related to research and development activities shall not be included as research and development costs.

**Accounting for Research and Development Costs**

.12 All research and development costs encompassed by this Statement shall be charged to expense when incurred.
Disclosure

.13 Disclosure shall be made in the financial statements of the total research and development costs charged to expense in each period for which an income statement is presented.

.14 A government-regulated enterprise that defers research and development costs for financial accounting purposes in accordance with the Addendum [section 6011] to APB Opinion No. 2, “Accounting for the ‘Investment Credit,’” shall disclose the following additional information about its research and development costs:

a) Accounting policy, including basis for amortization.

b) Total research and development costs incurred in each period for which an income statement is presented and the amount of those costs that has been capitalized or deferred in each period.

Effective Date and Transition

.15 This Statement shall be effective for fiscal years beginning on or after January 1, 1975, although earlier application is encouraged. The requirement of paragraph .12 that research and development costs be charged to expense when incurred shall be applied retroactively by prior period adjustment (described in paragraphs 18 and 26 of APB Opinion No. 9 [sections 2010.17 and 2010.25], “Reporting the Results of Operations”). When financial statements for periods before the effective date or financial summaries or other data derived therefrom are presented, they shall be restated to reflect the prior period adjustment. The prior period adjustment shall recognize any related income tax effect. The nature of a restatement and its effect on income before extraordinary items, net income, and related per share amounts for each period presented shall be disclosed in the period of change.

.16 The disclosures specified in paragraphs .13—.14 are encouraged but not required for fiscal periods prior to the effective date of this Statement. If disclosures for those earlier periods are made, amounts shall be based to the extent practicable on the guidelines in paragraphs .08—.11 of this Statement for identifying research and development activities and costs.
The provisions of this Statement need not be applied to immaterial items.
Appendix A

BACKGROUND INFORMATION

.17 Expenditures for research and development constitute a significant element of the United States economy and are vital for its growth. Based on statistics for research and development as defined by the National Science Foundation (see paragraph .25), total expenditures were over $30 billion in 1973, approximately two-thirds of which was spent for research and development conducted by business enterprises and the balance for research and development conducted by the government, universities and colleges, and other organizations.

.18 In recognition of the significance of research and development and the alternative accounting and reporting practices presently followed for research and development costs, in April 1973 the FASB placed on its technical agenda a project on "Accounting for Research and Development and Similar Costs." The scope of the project encompassed accounting and reporting by companies in the development stage.

.19 A task force of 16 persons from industry, government, public accounting, the financial community, and academe was appointed in July 1973 to provide counsel to the Board in preparing a Discussion Memorandum analyzing issues related to the project.

.20 In February 1973 the AICPA published Accounting Research Study No. 14, "Accounting for Research and Development Expenditures." In view of the availability of that study and other published research studies and articles, which are cited in Appendix B and in the Discussion Memorandum, the FASB did not undertake a major research effort for the project. The FASB staff interviewed a limited number of selected financial analysts and commercial bankers and reviewed a substantial number of published financial statements.

.21 The Board issued the Discussion Memorandum on December 28, 1973, and held a public hearing on the subject on March 15, 1974. The Board received 74 position papers, letters of comment, and outlines of oral presentations in
connection with the public hearing and heard 14 oral presentations at the hearing.

.22 In its deliberations following the hearing, the Board concluded that the initial Statement of Financial Accounting Standards resulting from the project should address solely accounting for research and development costs. An Exposure Draft of a proposed Statement on "Accounting for Research and Development Costs" was issued on June 5, 1974. The Board received 168 letters of comment on the Exposure Draft.
Appendix B
BASIS FOR CONCLUSIONS

.23 This Appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including the various alternatives considered and reasons for accepting some and rejecting others.

ACTIVITIES CONSTITUTING RESEARCH AND DEVELOPMENT

.24 The guidelines in paragraphs .08—.10 for activities that should be identified as research and development are designed to accommodate a wide variety of research and development activities. Adherence to those guidelines should result in a reasonable degree of comparability. Differences among enterprises and among industries are so great that a detailed prescription of the activities and related costs includable in research and development, either for all companies or on an industry-by-industry basis, is not a realistic undertaking for the FASB.

.25 The Board began its consideration of a definition of research and development with the following definition by the National Science Foundation (NSF):¹

*Research and development* — Basic and applied research in the sciences and engineering and the design and development of prototypes and processes. This definition excludes quality control, routine product testing, market research, sales promotion, sales service, research in the social sciences or psychology, and other nontechnological activities or technical services.

.26 The NSF further classifies research and development activities by type, as follows:²

*Basic research* — Original investigations for the advancement of scientific knowledge not having specific commercial objectives, although such investigations may be in fields of present or potential interest to the reporting company.

²Ibid.
Accounting for Research and Development Costs

Applied research — Investigations directed to the discovery of new scientific knowledge having specific commercial objectives with respect to products or processes. This definition differs from that of basic research chiefly in terms of the objectives of the reporting company.

Development — Technical activities of a nonroutine nature concerned with translating research findings or other scientific knowledge into products or processes. Development does not include routine technical services to customers or other activities excluded from . . . research and development.

.27 The NSF definition has the advantage of being relatively widely used and understood. However, it is oriented primarily to research in the physical and biological sciences and excludes research in the social sciences.

.28 Respondents to the Discussion Memorandum recommended modifications of the NSF definition as well as various other definitions which were generally similar to or broader than the NSF definition. The Board agreed that a broad definition including research and development activities in the social sciences such as those conducted by service-type business enterprises is appropriate for financial accounting and reporting purposes. Accordingly, the definition in paragraph .08 has been adopted.

.29 The Exposure Draft had included research and development activities conducted for others under a contractual arrangement within the definition of research and development and had proposed that all research and development costs not directly reimbursable by others be charged to expense when incurred. Some respondents to the Exposure Draft contended that costs incurred in research and development activities conducted for others under a contractual arrangement should continue to be accounted for in accordance with financial accounting standards for contracts in general rather than as research and development costs. The Board agrees with this view and the change is reflected in paragraph .02.

.30 The examples in paragraphs .09—.10 incorporate certain changes, many of which were recommended by respondents to the Exposure Draft. The Board believes that those paragraphs as changed more clearly reflect its intent regarding the inclusion or exclusion of particular types of activities within the definition of research and development.
.31 Several respondents to the Exposure Draft raised questions about the inclusion or exclusion of the development of various types of computer software within the definition of research and development. Computer software is developed for many and diverse uses. Accordingly, in each case the nature of the activity for which the software is being developed should be considered in relation to the guidelines in paragraphs .08—.10 to determine whether software costs should be included or excluded. For example, efforts to develop a new or higher level of computer software capability intended for sale (but not under a contractual arrangement) would be a research and development activity encompassed by this Statement.

ELEMENTS OF COSTS TO BE IDENTIFIED WITH RESEARCH AND DEVELOPMENT ACTIVITIES

.32 To achieve a reasonable degree of comparability among enterprises, the Board concluded that broad guidelines are appropriate to identify the elements of costs that should be included as research and development. Those guidelines are in paragraph .11.

.33 Consideration was given to the alternative that the costs of materials, equipment, or facilities that are acquired or constructed for a particular research and development project and that have no alternative future uses (in other research and development projects or otherwise) be apportioned over the life of the project rather than treated as research and development costs when incurred. The Board reasoned, however, that if materials, equipment, or facilities are of such a specialized nature that they have no alternative future uses, even in another research and development project, those materials, equipment, or facilities have no separate economic values to distinguish them from other types of costs such as salaries and wages incurred in a particular project. Accordingly, all costs of those materials, equipment, and facilities should be treated as research and development costs when incurred.

.34 Paragraph .11(c) reflects certain changes from the Exposure Draft to treat the costs of intangibles purchased from others in a manner similar to that in paragraph .11(a) for the costs of materials, equipment, or facilities. Paragraph .11(c) is not intended to alter the conclusions in paragraphs.
Accounting for Research and Development Costs

87-88 of *APB Opinion No. 16* [section 1091.87-.88], “Business Combinations,” regarding allocation of cost to assets acquired in a business combination accounted for by the purchase method.

.35 The conclusion that general and administrative costs not be allocated to research and development activities (unless clearly related) conforms to present accounting practice, which generally treats such costs as expenses when incurred.

.36 One question in the Discussion Memorandum was whether interest or other cost of capital should be allocated to research and development activities. At present, interest or other cost of capital generally is not allocated to the cost of assets or specific activities for financial accounting purposes. The Board believes that allocation of interest or other cost of capital to research and development activities is part of a broader question beyond the scope of this Statement.

**ACCOUNTING FOR RESEARCH AND DEVELOPMENT COSTS**

.37 The Board considered four alternative methods of accounting at the time research and development costs are incurred:

a) Charge all costs to expense when incurred.

b) Capitalize all costs when incurred.

c) Capitalize costs when incurred if specified conditions are fulfilled and charge all other costs to expense.

d) Accumulate all costs in a special category until the existence of future benefits can be determined.

.38 In concluding that all research and development costs be charged to expense when incurred (see paragraph .12), Board members considered the factors discussed in paragraphs .39—.59. Individual Board members gave greater weight to some factors than to others.

**Uncertainty of Future Benefits**

.39 There is normally a high degree of uncertainty about the future benefits of individual research and development projects, although the element of uncertainty may diminish.
as a project progresses. Estimates of the rate of success of research and development projects vary markedly—depending in part on how narrowly one defines a "project" and how one defines "success"—but all such estimates indicate a high failure rate. For example, one study of a number of industries found that an average of less than 2 percent of new product ideas and less than 15 percent of product development projects were commercially successful.³

Even after a project has passed beyond the research and development stage, and a new or improved product or process is being marketed or used, the failure rate is high. Estimates of new product failures range from 30 percent to 90 percent, depending on the definition of failure used.⁴ One study concludes that "for about every three products emerging from research and development departments as technical successes, there is an average of only one commercial success."⁵ That study goes on to say that "of all the dollars of new product expense, almost three-fourths go to unsuccessful products; about two-thirds of these ... dollars are in the 'development stage.' "⁶

Lack of Causal Relationship Between Expenditures and Benefits

A direct relationship between research and development costs and specific future revenue generally has not been demonstrated, even with the benefit of hindsight. For example, three empirical research studies, which focus on companies in industries intensively involved in research and development activities, generally failed to find a significant correlation between research and development expenditures and increased future benefits as measured by subsequent sales,⁷ earnings,⁸ or share of industry sales.⁹

⁶ Ibid., p. 11.
Accounting for Research and Development Costs

Accounting Recognition of Economic Resources

.42 In paragraph 57 of APB Statement No. 4 [section 1023.18], "Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises," economic resources are defined as the scarce means for carrying on economic activities. The economic resources of a particular enterprise are generally regarded as those scarce resources for which there is an expectation of future benefits to the enterprise either through use or sale.

.43 Not all of the economic resources of an enterprise are recognized as assets for financial accounting purposes. However, criteria for identifying those economic resources that should be recognized as the assets of an enterprise for accounting purposes have not been specified in the official accounting literature. One criterion that has been suggested in published research studies and articles and in position papers, letters of comment, and oral presentations the Board received in connection with the public hearing is that of measurability.

.44 The criterion of measurability would require that a resource not be recognized as an asset for accounting purposes unless at the time it is acquired or developed its future economic benefits can be identified and objectively measured.

.45 Paragraphs .39—.40 indicate that at the time most research and development costs are incurred the future benefits are at best uncertain. In other words, there is no indication that an economic resource has been created. Moreover, even if at some point in the progress of an individual research and development project the expectation of future benefits becomes sufficiently high to indicate that an economic resource has been created, the question remains whether that resource should be recognized as an asset for financial accounting purposes. Although future benefits from a particular research and development project may be foreseen, they generally cannot be measured with a reasonable degree of certainty. According to the research data cited in paragraph .41, there is normally little, if any, direct relationship between the amount of current research and development expenditures and the amount of resultant future benefits to the enterprise. Research and development costs therefore fail to satisfy the suggested measurability test for accounting recognition as an asset.
The criterion of exchangeability, which was discussed in the Exposure Draft, was not considered a significant factor by the Board in reaching its final conclusion on accounting for research and development costs. The Board believes that exchangeability needs further study and at this time the Board neither accepts nor rejects exchangeability as a criterion for accounting recognition of an economic resource.

Expense Recognition and Matching

APB Statement No. 4 [section 1021—1029] explicitly avoids using the term "matching" because it has a variety of meanings in the accounting literature. In its broadest sense, matching refers to the entire process of income determination —described in paragraph 147 of APB Statement No. 4 [section 1026.11] as "identifying, measuring, and relating revenues and expenses of an enterprise for an accounting period." Matching may also be used in a more limited sense to refer only to the process of expense recognition or in an even more limited sense to refer to the recognition of expenses by associating costs with revenue on a cause and effect basis. In the following discussion, matching is used in its most limited sense to refer to the process of recognizing costs as expenses on a cause and effect basis.

Three pervasive principles for recognizing costs as expenses are set forth in paragraphs 156—160 of APB Statement No. 4 [section 1026.20—.24], as follows:

- **Associating Cause and Effect.** Some costs are recognized as expenses on the basis of a presumed direct association with specific revenue... recognizing them as expenses accompanies recognition of the revenue.

- **Systematic and Rational Allocation.** If an asset provides benefits for several periods its cost is allocated to the periods in a systematic and rational manner in the absence of a more direct basis for associating cause and effect.

- **Immediate Recognition.** Some costs are associated with the current accounting period as expenses because (1) costs incurred during the period provide no discernible future benefits, (2) costs recorded as assets in prior periods no longer provide discernible benefits, or (3) allocating costs either on the basis of association with revenue or among several accounting periods is considered to serve no useful purpose... The principle of immediate recognition also requires that items carried as assets in prior periods that are discovered to have no discernible future benefit be charged to expense, for example, a patent that is determined to be worthless.
.49 As noted in paragraph .41, evidence of a direct causal relationship between current research and development expenditures and subsequent future benefits generally has not been found. Also, there is often a high degree of uncertainty about whether research and development expenditures will provide any future benefits. Thus, even an indirect cause and effect relationship can seldom be demonstrated. Because there is generally no direct or even indirect basis for relating costs to revenues, the Board believes that the principles of “associating cause and effect” and “systematic and rational allocation” cannot be applied to recognize research and development costs as expenses. That is, the notion of “matching”—when used to refer to the process of recognizing costs as expenses on any sort of cause and effect basis—cannot be applied to research and development costs. Indeed, the general lack of discernible future benefits at the time the costs are incurred indicates that the “immediate recognition” principle of expense recognition should apply.

Usefulness of Resulting Information

.50 APB Statement No. 4 [sections 1021—1029] indicates that certain costs are immediately recognized as expenses because allocating them to several accounting periods “is considered to serve no useful purpose.” There is general agreement that two of the basic elements in the decision models of many financial statement users are (a) expected return—the predicted amount and timing of the return on an investment—and (b) risk—the variability of that expected return. The data cited in paragraphs .39—.41, the views of security analysts and other professional investors submitted to the Board in connection with the public hearing, and FASB interviews with selected analysts and bankers suggest that the relationship between current research and development costs and the amount of resultant future benefits to an enterprise is so uncertain that capitalization of any research and development costs is not useful in assessing the earnings potential of the enterprise. Therefore, it is unlikely that one’s ability to predict the return on an investment and the variability of that return would be enhanced by capitalization.

Capitalization of All Costs When Incurred

.51 Enterprises undertake research and development activities with the hope of future benefits. If there were no such hope, the activities would not be conducted. Some
persons take the position that the accounting treatment for research and development costs should be determined by considering in the aggregate all of the research and development activities of an enterprise. In their view, if there is a high probability of future benefits from an enterprise's total research and development program, the entire cost of those activities should be capitalized without regard to the certainty of future benefits from individual projects.

.52 The Board believes, however, that it is not appropriate to consider accounting for research and development activities on an aggregate or total-enterprise basis for several reasons. For accounting purposes the expectation of future benefits generally is not evaluated in relation to broad categories of expenditures on an enterprise-wide basis but rather in relation to individual or related transactions or projects. Also, an enterprise's total research and development program may consist of a number of projects at varying stages of completion and with varying degrees of uncertainty as to their ultimate success. If research and development costs were capitalized on an enterprise-wide basis, a meaningful method of amortization could not be developed because the period of benefit could not be determined. Moreover, over 90 percent of the respondents to a survey reported in AICPA Accounting Research Study No. 14 indicated that their company's philosophy is that research and development expenditures are intended to be recovered by current revenues rather than by revenue from new products.10

Selective Capitalization

.53 Selective capitalization — capitalizing research and development costs when incurred if specified conditions are fulfilled and charging to expense all other research and development costs — requires establishment of conditions that must be fulfilled before research and development costs are capitalized. The Board considered a number of factors on which prerequisite conditions might be based, including the following:

a) Definition of product or process. The new or improved product or process must be defined.

b) **Technological feasibility.** The new or improved product or process must be determined to be technologically feasible.

c) **Marketability/Usefulness.** The marketability of the product or process or, if it is to be used internally rather than sold, its usefulness to the enterprise must be substantially assured.

d) **Economic feasibility.** Probability of future economic benefits sufficient to recover all capitalized costs must be high. Encompassed by the notion of economic feasibility is measurability of future benefits. Also implicit is the ability to associate particular future benefits with particular costs.

e) **Management action.** Management must have definitely decided to produce and market or use the new product or process or to incorporate the significant improvement into an existing product or process.

f) **Distortion of net income comparisons.** Capitalization or immediate charging to expense of research and development costs must be determined on the basis of whether interperiod comparisons of net income would be materially distorted.

.54 None of those factors, however, lends itself to establishing a condition that could be objectively and comparably applied by all enterprises. Considerable judgment is required to identify the point in the progress of a research and development project at which a new or improved product or process is “defined” or is determined to be “technologically feasible,” “marketable,” or “useful.” Nor can the “probability of future benefits” be readily assessed. A “management decision” to proceed with production does not necessarily assure future benefits. The Board does not believe that “distortion of net income comparisons,” which a few respondents to the Discussion Memorandum suggested, is an operable criterion by which to decide whether research and development costs should be capitalized because the point at which net income comparisons might be “distorted” cannot be defined. Moreover, in assessing risk, financial statement users have indicated that they seek information about the variability of earnings.
.55 The Board has concluded that no set of conditions that might be established for capitalization of costs could achieve the comparability among enterprises that proponents of "selective capitalization" cite as a primary objective of that approach.

.56 If selective capitalization were applied only to costs incurred after fulfillment of the specified conditions, only a portion of the total costs of a particular research and development project would be capitalized and amortized. Thus, the capitalized amount would not indicate the total costs incurred to produce future benefits; nor would the amount of periodic amortization of capitalized costs represent a "matching" of costs and benefits.

.57 Selective capitalization might involve retroactive capitalization of previously incurred costs in addition to capitalization of costs incurred after fulfillment of the specified conditions. However, many research and development costs incurred before fulfillment of the conditions are not likely to be directly identifiable with the particular new or improved product or process for which costs would be capitalized. Moreover, retroactive capitalization of costs previously charged to expense is contrary to present accounting practice for other transactions whose initial accounting is not altered as a result of hindsight. The preparation of periodic financial statements requires many estimates and judgments for which restatements are not made in retrospect.

Accumulation of Costs in a Special Category

.58 The Board considered the proposal that all research and development costs be accumulated in a special category distinct from assets and expenses until a determination can be made about whether future benefits exist. That special category might be reported either below the asset section of the balance sheet (with segregation of a corresponding amount of stockholders' equity) or as a negative (contra) element of stockholders' equity. Ultimately, the accumulated costs would be transferred to assets (if future benefits become reasonably established) or written off (if it were reasonably established that no significant future benefits would ensue).

.59 A feature cited by proponents of this approach is that it draws attention to the uncertainty surrounding most research
and development costs and it enables postponement of the
capitalize vs. expense decision. This alternative was rejected,
however, for the following reasons. First, financial analysts
and others have indicated that costs accumulated in that
special category would not be useful in assessing the earning
power of an enterprise because of the uncertainties involved,
and the research data cited earlier tend to support that view.
Second, use of a special category would alter the nature of
the basic financial statements and would complicate the
computation of ratios and other financial data.

**DISCLOSURE**

.60 Regardless of their position on the accounting treatment
for research and development costs, respondents to the
Discussion Memorandum generally pointed out that current
disclosure practices for research and development costs vary
and that requirements for informative disclosure need to be
established. The disclosures specified in paragraphs .13—.14
reflect the Board's general agreement with that view.

.61 The Exposure Draft had proposed that disclosure also be
required of (a) the accounting policy for research and
development costs, (b) the amount of directly reimbursable
research and development costs incurred, (c) the costs of
research and development conducted in behalf of the
enterprise by others, and (d) the amounts and classifications
in the income statement of research and development costs
charged to expense during the period. The Board has
accepted the recommendation of some respondents to the
Exposure Draft that disclosure of accounting policy not be
required\(^{11}\) because this Statement permits only one method
of accounting for research and development costs. Some
letters of comment on the Exposure Draft indicated that data
related to items (b), (c), and (d) above are frequently
difficult to obtain and that those disclosures generally would
not be meaningful. The Board agrees with this view; this
Statement does not require those disclosures.

.62 The Board recognizes that disclosure of additional
information about an enterprise's research and development
activities might be useful to some financial statement users.
However, many respondents to the Discussion Memorandum

\(^{11}\)That disclosure is required by this Statement for certain
government-regulated enterprises (see paragraph .14).
contended that certain kinds of information should not be required to be included in financial statements because the information is not sufficiently objective, is confidential in nature, or is beyond the scope of financial accounting information. For that reason, the Board concluded that disclosure of (a) the nature, status, and costs of individual research and development projects, (b) the nature and status of patents, (c) projections about new or improved products or processes, and (d) an enterprise's philosophy regarding research and development, all of which were included in the Discussion Memorandum as disclosure possibilities, should not be required. In addition, most respondents said that forecasts of research and development expenditures should not be considered in this project, and the Board agrees with that view. Disclosure of research and development costs by line of business was considered by the FASB in its project, "Financial Reporting for Segments of a Business Enterprise," but FASB Statement No. 14 [section 2081] does not require that disclosure. [As modified, effective for financial statements for fiscal years beginning after December 15, 1976, and for interim periods within those fiscal years, by FASB Statement No. 14.] (See section 2081.)

EFFECTIVE DATE AND TRANSITION

.63 The Board considered three alternative approaches to reporting a change in the method of accounting for research and development costs: (1) prior period adjustment, (2) the "cumulative effect" method described in APB Opinion No. 20 [section 1051], "Accounting Changes," and (3) continued amortization of previously capitalized costs. The Board concluded that the prior period adjustment method will provide the most useful information about research and development costs for comparing financial data for periods after the effective date of this Statement with data presented for earlier periods.

.64 Upon consideration of all circumstances, the Board judged that the effective date specified in paragraph .15, which had been proposed in the Exposure Draft, is advisable.
Applicability of Section 4211 to Business Combinations Accounted for by the Purchase Method: An Interpretation of Section 4211
[Source: FASB Interpretation No. 4.]

INTRODUCTION
.01 The FASB has been asked to explain the applicability of FASB Statement No. 2 [section 4211], "Accounting for Research and Development Costs," to the cost of tangible and intangible assets to be used in research and development activities of an enterprise when those assets are acquired in a business combination accounted for by the purchase method.

.02 Broad guidelines about the activities to be classified as research and development and the elements of costs to be identified with those activities are set forth in paragraphs 8-11 of Statement No. 2 [section 4211.08-.11]. Paragraph 12 of that Statement [section 4211.12] provides that research and development costs shall be charged to expense when incurred. However, some costs associated with research and development activities shall be capitalized if the item has alternative future uses in research and development or otherwise (see paragraphs 11(a) and 11(c) of Statement No. 2). [Sections 4211.11(a) and 4211.11(c).] The cost of materials consumed, the depreciation of equipment and facilities used, and the amortization of intangibles used in research and development activities are research and development costs.

.03 Statement No. 2 amends APB Opinion No. 17 [section 5141], "Intangible Assets," to exclude from the scope of that Opinion those research and development costs encompassed by the Statement but does not amend APB Opinion No. 16 [section 1091], "Business Combinations." Paragraph 34 of the Statement [section 4211.34] indicates that paragraph 11(c) [section 4211.11(c)] is not intended to alter the conclusions in paragraphs 87-88 of APB Opinion No. 16 [section 1091.87-.88] regarding allocation of cost to assets acquired in a business combination accounted for by the purchase method.

INTERPRETATION
.04 The intent of paragraph 34 of Statement No. 2 [section 4211.34] is that the allocation of cost to the identifiable assets of an acquired enterprise shall be made in accordance with the provisions

AICPA Professional Standards
Revenue and Expense

of *APB Opinion No. 16* [section 1091]. Therefore, costs shall be assigned to all identifiable tangible and intangible assets, including any resulting from research and development activities of the acquired enterprise or to be used in research and development activities of the combined enterprise. Identifiable assets resulting from research and development activities of the acquired enterprise might include, for example, patents received or applied for, blueprints, formulas, and specifications or designs for new products or processes. Identifiable assets to be used in research and development activities of the combined enterprise might include, for example, materials and supplies, equipment and facilities, and perhaps even a specific research project in process. In either case, the costs to be assigned under *APB Opinion No. 16* [section 1091] are determined from the amount paid by the acquiring enterprise and not from the original cost to the acquired enterprise.

.05 The subsequent accounting by the combined enterprise for the costs allocated to assets to be used in research and development activities shall be determined by reference to *Statement No. 2* [section 4211]. Paragraph 12 of *Statement No. 2* [section 4211.12] requires that costs identified with research and development activities shall be charged to expense when incurred unless the test of alternative future use in paragraph 11(a) or 11(c) [sections 4211.11(a) or 4211.11(c)] is met. That requirement also applies in a business combination accounted for by the purchase method. Accordingly, costs assigned to assets to be used in a particular research and development project and that have no alternative future use shall be charged to expense at the date of consummation of the combination. Therefore, the accounting for the cost of an item to be used in research and development activities is the same under paragraphs 11 and 12 of *Statement No. 2* [sections 4211.11 and 4211.12], whether the item is purchased singly, or as part of a group of assets, or as part of an entire enterprise in a business combination accounted for by the purchase method.

**EFFECTIVE DATE AND TRANSITION**

.06 Because there have been varying interpretations of *Statement No. 2* [section 4211] with respect to the accounting for the cost of tangible and intangible assets covered by this Interpretation, the Board has concluded that it shall be effective as follows:

---

1 In this regard, paragraph 69 of *APB Opinion No. 16* [section 1091.69] states in part that: "The nature of an asset and not the manner of its acquisition determines an acquirer's subsequent accounting for the cost of that asset."
(a) Application of this Interpretation to business combinations accounted for by the purchase method that are initiated after March 31, 1975 is required.

(b) Application of this Interpretation to business combinations accounted for by the purchase method that are initiated prior to April 1, 1975 and consummated after March 31, 1975 is encouraged but is not required. It may be applied selectively to those combinations.

(c) Application of this Interpretation to business combinations accounted for by the purchase method that were initiated and consummated prior to April 1, 1975 is encouraged but is not required. If an enterprise chooses to apply this Interpretation to those combinations, it shall be applied retroactively as described in paragraphs 15 and 16 of Statement No. 2 [sections 4211.15 and 4211.16] to all business combinations accounted for by the purchase method that were consummated prior to April 1, 1975.

07 This Interpretation shall not be applied prior to the initial application of Statement No. 2 [section 4211].

Applicability of Section 4211 to Computer Software: An Interpretation of Section 4211

[Source: FASB Interpretation No. 6.]

February 1975

INTRODUCTION

.01 The FASB has been asked to explain the applicability of FASB Statement No. 2 [section 4211], “Accounting for Research and Development Costs,” to costs incurred to obtain or develop computer software.

.02 Broad guidelines about the activities to be classified as research and development and the elements of costs to be identified with those activities are set forth in paragraphs 8-11 of Statement No. 2 [section 4211.08-.11]. Paragraph 12 of that Statement [section 4211.12] provides that research and development costs shall be charged to expense when incurred. However, some costs associated with research and development activities shall be capitalized if the item has alternative future uses in research and development or otherwise (see paragraphs 11(a) and 11(c) of Statement No. 2). [Sections 4211.11(a) and 4211.11(c).] The costs of materials consumed, the depreciation of equipment and facilities used, and the amortization of intangibles used in research and development activities are research and development costs.

.03 Paragraph 31 of Statement No. 2 [section 4211.31] states the following about the activities for which computer software is developed:

Computer software is developed for many and diverse uses. Accordingly, in each case the nature of the activity for which the software is being developed should be considered in relation to the guidelines in paragraphs 8-10 to determine whether software costs should be included or excluded (in research and development). For example, efforts to develop a new or higher level of computer software capability intended for sale (but not under a contractual arrangement) would be a research and development activity encompassed by this Statement.

INTERPRETATION

.04 Paragraph 8 of Statement No. 2 [section 4211.08] defines research and development to include those activities aimed at developing or significantly improving a product or service (hereinafter “product”) or a process or technique (hereinafter “process”) whether the product or process is intended for sale or use. A process may be a system whose output is to be sold, leased, or otherwise marketed to others. A process also may be used internally as a part of a manufacturing activity or a service...
activity where the service itself is marketed. A process may be intended to achieve cost reductions as opposed to revenue generation. Paragraph 8(b) of Statement No. 2 [section 4211.08(b)], however, specifically excludes from research and development activities "market research or market testing activities." Those activities were excluded because they relate to the selling function of an enterprise. Thus, while in the broadest sense of the word, a process may be used in all of an enterprise’s activities, the Board’s intent in Statement No. 2 [section 4211] was that the acquisition, development, or improvement of a process by an enterprise for use in its selling or administrative activities be excluded from the definition of research and development activities. To the extent, therefore, that the acquisition, development, or improvement of a process by an enterprise for use in its selling or administrative activities includes costs for computer software, those costs are not research and development costs. Examples of the excluded costs of software are those incurred for development by an airline of a computerized reservation system or for development of a general management information system.

Purchase or Lease of Software

.05 Costs incurred to purchase or lease computer software developed by others are not research and development costs under Statement No. 2 [section 4211] unless the software is for use in research and development activities. When software for use in research and development activities is purchased or leased, its cost shall be accounted for as specified by paragraphs 11(c) and 12 of Statement No. 2 [sections 4211.11(c) and 4211.12]. That is, the cost shall be charged to expense as incurred unless the software has alternative future uses (in research and development or otherwise).

Internal Development of Software

.06 An enterprise may undertake development of computer software internally for its own use or as a product or process to be sold, leased, or otherwise marketed to others for their use. If development is undertaken for the enterprise’s own use, the software may be intended, for example, to be used in the research and development activities of the enterprise or as a part of a newly developed or significantly improved product or process.

.07 Development of software as a product or process to be sold, leased, or otherwise marketed. Accounting for the cost of developing software for others under a contractual arrangement is

---

1 General and administrative costs are discussed in paragraphs 11(e) and 35 of Statement No. 2 [sections 4211.11(e) and 4211.35].
Applicability of Section 4211 to Computer Software

beyond the scope of Statement No. 2 [section 4211], because paragraph 2 of the Statement [section 4211.02] indicates that this is part of accounting for contracts in general. On the other hand, if the development of software is undertaken to create a new or significantly improved product or process without any contractual arrangement, costs incurred for conceptual formulation or the translation of knowledge into a design would be research and development costs (see paragraph 8 of Statement No. 2 [section 4211.08]). Other costs, including those incurred for programming and testing software, are research and development costs when incurred in the search for or the evaluation of product or process alternatives or in the design of a pre-production model. On the other hand, costs for programming and testing are not research and development costs when incurred, for example, in routine or other on-going efforts to improve an existing product or adapt a product to a particular requirement or customer's need. Because the term product also encompasses services that are sold, leased, or otherwise marketed to others, this paragraph applies, for example, to costs incurred in developing software to be used by a data processing service bureau or a computer time-sharing company.

.08 Development of software to be used in research and development activities. Developing or significantly improving a product or process that is intended to be sold, leased, or otherwise marketed to others is a research and development activity (see paragraph 8 of Statement No. 2 [section 4211.08]). Similarly, developing or significantly improving a process whose output is a product that is intended to be sold, leased, or otherwise marketed to others is a research and development activity. Costs incurred by an enterprise in developing computer software internally for use in its research and development activities are research and development costs and, therefore, shall be charged to expense when incurred. This includes costs incurred during all phases of software development because all of those costs are incurred in a research and development activity.

.09 Development of software to be used as a part of a product or process. An enterprise may undertake internal development of software as a part of a newly developed or significantly improved product or process that will be sold, leased, or otherwise marketed to others, or as a part of a process whose output is a product that will be sold, leased, or otherwise marketed to others. For example, a manufacturer of computerized typesetting machinery may undertake to develop and use software as a part of that machinery, or a medical laboratory may undertake to develop software

---

2 The alternative future use test does not apply to the internal development of computer software; paragraph 11(c) of Statement No. 2 [section 4211.11(c)] applies only to intangibles purchased from others.
for use in a newly developed analytical process. In those cases, costs incurred for conceptual formulation or the translation of knowledge into a design would be research and development costs (see paragraph 8 of Statement No. 2 [section 4211.08]). Other costs, including those incurred for programming and testing software, are research and development costs when incurred in the search for or the evaluation of product or process alternatives or in the design of a pre-production model. On the other hand, costs for programming and testing are not research and development costs when incurred, for example, in routine or other on-going efforts to improve an existing product or process or adapt a product or process to a particular requirement or customer's need.

EFFECTIVE DATE AND TRANSITION

.10 Because there have been varying interpretations of Statement No. 2 [section 4211] with respect to costs of computer software, this Interpretation shall be effective for fiscal years beginning on or after April 1, 1975. Earlier application is encouraged, except that this Interpretation shall not be applied prior to initial application of Statement No. 2 [section 4211]. Retroactive application of this Interpretation, as described in paragraphs 15 and 16 of Statement No. 2 [sections 4211.15 and 4211.16], to costs incurred in prior fiscal years is also encouraged but is not required.
AC Section 4311

Accounting for Contingencies

[Source: FASB Statement No. 5, as amended.]

INTRODUCTION

.01 For the purpose of this Statement, a contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a “gain contingency”) or loss¹ (hereinafter a “loss contingency”) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability.

.02 Not all uncertainties inherent in the accounting process give rise to contingencies as that term is used in this Statement. Estimates are required in financial statements for many on-going and recurring activities of an enterprise. The mere fact that an estimate is involved does not of itself constitute the type of uncertainty referred to in the definition in paragraph .01. For example, the fact that estimates are used to allocate the known cost of a depreciable asset over the period of use by an enterprise does not make depreciation a contingency; the eventual expiration of the utility of the asset is not uncertain. Thus, depreciation of assets is not a contingency as defined in paragraph .01, nor are such matters as recurring repairs, maintenance, and overhauls, which interrelate with depreciation. Also, amounts owed for services received, such as advertising and utilities, are not contingencies even though the accrued amounts may have been estimated; there is nothing uncertain about the fact that those obligations have been incurred.

.03 When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms probable, reasonably possible, and remote to identify three areas within that range, as follows:

¹ The term loss is used for convenience to include many charges against income that are commonly referred to as expenses and others that are commonly referred to as losses.
a) **Probable.** The future event or events are likely to occur.

b) **Reasonably possible.** The chance of the future event or events occurring is more than remote but less than likely.

c) **Remote.** The chance of the future event or events occurring is slight.

.04 Examples of loss contingencies include:

a) Collectibility of receivables.

b) Obligations related to product warranties and product defects.

c) Risk of loss or damage of enterprise property by fire, explosion, or other hazards.

d) Threat of expropriation of assets.

e) Pending or threatened litigation.

f) Actual or possible claims and assessments.

g) Risk of loss from catastrophes assumed by property and casualty insurance companies including reinsurance companies.

h) Guarantees of indebtedness of others.

i) Obligations of commercial banks under "standby letters of credit."^2

j) Agreements to repurchase receivables (or to repurchase the related property) that have been sold.

---

^2 As defined by the Federal Reserve Board, "standby letters of credit" include "every letter of credit (or similar arrangement however named or designated) which represents an obligation to the beneficiary on the part of the issuer (1) to repay money borrowed by or advanced to or for the account of the account party or (2) to make payment on account of any evidence of indebtedness undertaken by the account party or (3) to make payment on account of any default by the account party in the performance of an obligation." A note to that definition states that "as defined, 'standby letter of credit' would not include (1) commercial letters of credit and similar instruments where the issuing bank expects the beneficiary to draw upon the issuer and which do not 'guaranty' payment of a money obligation or (2) a guaranty or similar obligation issued by a foreign branch in accordance with and subject to the limitations of Regulation M [of the Federal Reserve Board]." Regulations of the Comptroller of the Currency and the Federal Deposit Insurance Corporation contain similar definitions.
Some enterprises now accrue estimated losses from some types of contingencies by a charge to income prior to the occurrence of the event or events that are expected to resolve the uncertainties while, under similar circumstances, other enterprises account for those losses only when the confirming event or events have occurred.

This Statement establishes standards of financial accounting and reporting for loss contingencies (see paragraphs .08—.16) and carries forward without reconsideration the conclusions of Accounting Research Bulletin (ARB) No. 50, "Contingencies," with respect to gain contingencies (see paragraph .17) and other disclosures (see paragraphs .18—.19). The basis for the Board's conclusions, as well as alternatives considered and reasons for their rejection, are discussed in Appendix C. Examples of application of this Statement are presented in Appendix A, and background information is presented in Appendix B.

This Statement supersedes both ARB No. 50 and Chapter 6 "Contingency Reserves," of ARB No. 43. The conditions for accrual of loss contingencies in paragraph .08 of this Statement do not amend any other present requirement in an Accounting Research Bulletin or Opinion of the Accounting Principles Board to accrue a particular type of loss or expense. Thus, for example, accounting for pension cost, deferred compensation contracts, and stock issued to employees are excluded from the scope of this Statement. Those matters are covered, respectively, in APB Opinion No. 8 [section 4063], "Accounting for the Cost of Pension Plans," APB Opinion No. 12, "Omnibus Opinion—1967," paragraphs 6—8 [section 4064], and APB Opinion No. 25 [section 4062], "Accounting for Stock Issued to Employees." Accounting for other employment-related costs, such as group insurance, vacation pay, workmen's compensation, and disability benefits, is also excluded from the scope of this Statement. Accounting practices for those types of costs and pension accounting practices tend to involve similar considerations.
Revenue and Expense

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Accrual of Loss Contingencies

.08 An estimated loss from a loss contingency (as defined in paragraph .01) shall be accrued by a charge to income if both of the following conditions are met:

a) Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.\(^4\) It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.

b) The amount of loss can be reasonably estimated.

Disclosure of Loss Contingencies

.09 Disclosure of the nature of an accrual\(^5\) made pursuant to the provisions of paragraph .08, and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading.

.10 If no accrual is made for a loss contingency because one or both of the conditions in paragraph .08 are not met, or if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph .08, disclosure of the contingency shall be made when there is at least a reasonable possibility that a loss or an additional loss may have been incurred.\(^6\) The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or

\(^4\) Date of the financial statements means the end of the most recent accounting period for which financial statements are being presented.

\(^5\) Terminology used shall be descriptive of the nature of the accrual (see paragraphs 57-64 of Accounting Terminology Bulletin No. 1, "Review and Resume").

\(^6\) For example, disclosure shall be made of any loss contingency that meets the condition in paragraph .08(a) but that is not accrued because the amount of loss cannot be reasonably estimated (paragraph .08(b)). Disclosure is also required of some loss contingencies that do not meet the condition in paragraph .08(a)—namely, those contingencies for which there is a reasonable possibility that a loss may have been incurred even though information may not indicate that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements.
range of loss or state that such an estimate cannot be made. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

.11 After the date of an enterprise's financial statements but before those financial statements are issued, information may become available indicating that an asset was impaired or a liability was incurred after the date of the financial statements or that there is at least a reasonable possibility that an asset was impaired or a liability was incurred after that date. The information may relate to a loss contingency that existed at the date of the financial statements, e.g., an asset that was not insured at the date of the financial statements. On the other hand, the information may relate to a loss contingency that did not exist at the date of the financial statements, e.g., threat of expropriation of assets after the date of the financial statements or the filing for bankruptcy by an enterprise whose debt was guaranteed after the date of the financial statements. In none of the cases cited in this paragraph was an asset impaired or a liability incurred at the date of the financial statements, and the condition for accrual in paragraph .08(a) is, therefore, not met. Disclosure of those kinds of losses or loss contingencies may be necessary, however, to keep the financial statements from being misleading. If disclosure is deemed necessary, the financial statements shall indicate the nature of the loss or loss contingency and give an estimate of the amount or range of loss or possible loss or state that such an estimate cannot be made. Occasionally, in the case of a loss arising after the date of the financial statements where the amount of asset impairment or liability incurrence can be reasonably estimated, disclosure may best be made by supplementing the historical financial statements with pro forma financial data giving effect to the loss as if it had occurred at the date of the financial statements. It may be desirable to present pro forma statements, usually a balance sheet only, in columnar form on the face of the historical financial statements.

.12 Certain loss contingencies are presently being disclosed in financial statements even though the possibility of loss may be remote. The common characteristic of those contingencies is a guarantee, normally with a right to proceed against an
outside party in the event that the guarantor is called upon to satisfy the guarantee. Examples include (a) guarantees of indebtedness of others, (b) obligations of commercial banks under "standby letters of credit," and (c) guarantees to repurchase receivables (or, in some cases, to repurchase the related property) that have been sold or otherwise assigned. The Board concludes that disclosure of those loss contingencies, and others that in substance have the same characteristic, shall be continued. The disclosure shall include the nature and amount of the guarantee. Consideration should be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

.13 This Statement applies to regulated enterprises in accordance with provisions of the Addendum to APB Opinion No. 2 [section 6011], "Accounting for the 'Investment Credit.'" If, in conformity with the Addendum, a regulated enterprise accrues for financial accounting and reporting purposes an estimated loss without regard to the conditions in paragraph .08, the following information shall be disclosed in its financial statements:

a) The accounting policy including the nature of the accrual and the basis for estimation.

b) The amount of any related "liability" or "asset valuation" account included in each balance sheet presented.

General or Unspecified Business Risks

.14 Some enterprises have in the past accrued so-called "reserves for general contingencies." General or unspecified business risks do not meet the conditions for accrual in paragraph .08, and no accrual for loss shall be made. No disclosure about them is required by this Statement.

Appropriation of Retained Earnings

.15 Some enterprises have classified a portion of retained earnings as "appropriated" for loss contingencies. In some cases, the appropriation has been shown outside the stockholders' equity section of the balance sheet. Appropriation of retained earnings is not prohibited by this Statement provided that it is shown within the stockholders' equity section of the balance sheet and is clearly identified as
an appropriation of retained earnings. Costs or losses shall not be charged to an appropriation of retained earnings, and no part of the appropriation shall be transferred to income.

Examples of Application of this Statement

.16 Examples of application of the conditions for accrual of loss contingencies in paragraph .08 and the disclosure requirements in paragraphs .09—.11 are presented in Appendix A.

Gain Contingencies

.17 The Board has not reconsidered ARB No. 50 with respect to gain contingencies. Accordingly, the following provisions of paragraphs 3 and 5 of that Bulletin shall continue in effect:

a) Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization.

b) Adequate disclosure shall be made of contingencies that might result in gains, but care shall be exercised to avoid misleading implications as to the likelihood of realization.

Other Disclosures

.18 Paragraph 6 of ARB No. 50 required disclosure of a number of situations including "unused letters of credit, long-term leases, assets pledged as security for loans, pension plans, the existence of cumulative preferred stock dividends in arrears, and commitments such as those for plant acquisition or an obligation to reduce debts, maintain working capital, or restrict dividends." Subsequent Opinions issued by the Accounting Principles Board established more explicit disclosure requirements for a number of those items, i.e., leases (see APB Opinion Nos. 5 and 31*), pension plans (see APB Opinion No. 8 [section 4063]), and preferred stock dividend arrearages (see APB Opinion No. 10, paragraph 11(b) [section 5515.02b]).

.19 Situations of the type described in the preceding paragraph shall continue to be disclosed in financial statements, and this Statement does not alter the present disclosure requirements with respect to those items.

* Ed. Note: APB Opinion Nos. 5 and 31 have been superseded by FASB Statement No. 13, Accounting for Leases. See section 4053.
Effective Date and Transition

.20 This Statement shall be effective for fiscal years beginning on or after July 1, 1975, although earlier application is encouraged. Thereafter, if financial statements for periods before the effective date, and financial summaries or other data derived therefrom, are presented, they shall be restated, if practicable, to conform to the provisions of paragraph .08 or .14 of this Statement.* In the year that this Statement is first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per share amounts for each period restated. If restatement of financial statements or summaries for all prior periods presented is not practicable, information presented shall be restated for as many consecutive periods immediately preceding the effective date of this Statement as is practicable, and the cumulative effect of applying paragraph .08 or .14 on the retained earnings at the beginning of the earliest period restated (or at the beginning of the period in which this Statement is first applied if it is not practicable to restate any prior periods) shall be included in determining net income of that period (see paragraph 20 of APB Opinion No. 20 [section 1051.20]).** The effect on income before extraordinary items, net income, and related per share amounts of applying this Statement in a period in which the cumulative effect is included in determining net income shall be disclosed for that period, and the reason for not restating all of the prior periods presented shall be explained. Reclassification of an appropriation of retained earnings to comply with paragraph .15 of this Statement shall be made in any financial statements for periods before the effective date of this Statement, or financial summaries or other data derived therefrom, that are presented after the effective date of this Statement. [As amended December 1975 by FASB Statement No. 11.] (See section 4312.)

The provisions of this Statement need not be applied to immaterial items.

* This does not alter the accounting for changes in estimates — see paragraph 31 of APB Opinion No. 20 [section 1051.31].

** Pro forma disclosures required by paragraphs 19(d) and 21 of APB Opinion No. 20 [sections 1051.19(d) and 1051.21] are not applicable.
Appendix A

EXAMPLES OF APPLICATION OF THIS STATEMENT

.21 This Appendix contains examples of application of the conditions for accrual of loss contingencies in paragraph .08 and of the disclosure requirements in paragraphs .09—.11. Some examples have been included in response to questions raised in letters of comment on the Exposure Draft. It should be recognized that no set of examples can encompass all possible contingencies or circumstances. Accordingly, accrual and disclosure of loss contingencies should be based on an evaluation of the facts in each particular case.

Collectibility of Receivables

.22 The assets of an enterprise may include receivables that arose from credit sales, loans, or other transactions. The conditions under which receivables exist usually involve some degree of uncertainty about their collectibility, in which case a contingency exists as defined in paragraph .01. Losses from uncollectible receivables shall be accrued when both conditions in paragraph .08 are met. Those conditions may be considered in relation to individual receivables or in relation to groups of similar types of receivables. If the conditions are met, accrual shall be made even though the particular receivables that are uncollectible may not be identifiable.

.23 If, based on available information, it is probable that the enterprise will be unable to collect all amounts due and, therefore, that at the date of its financial statements the net realizable value of the receivables through collection in the ordinary course of business is less than the total amount receivable, the condition in paragraph .08(a) is met because it is probable that an asset has been impaired. Whether the amount of loss can be reasonably estimated (the condition in paragraph .08(b)) will normally depend on, among other things, the experience of the enterprise, information about the ability of individual debtors to pay, and appraisal of the receivables in light of the current economic environment. In the case of an enterprise that has no experience of its own, reference to the experience of other enterprises in the same business may be appropriate. Inability to make a reasonable estimate of the amount of loss from uncollectible receivables (i.e., failure to satisfy the condition in paragraph .08(b))
precludes accrual and may, if there is significant uncertainty as to collection, suggest that the installment method, the cost recovery method, or some other method of revenue recognition be used (see paragraph 12 of APB Opinion No. 10 [section 4020.01], “Omnibus Opinion—1966”); in addition, the disclosures called for by paragraph .10 of this Statement should be made.

Obligations Related to Product Warranties and Product Defects

.24 A warranty is an obligation incurred in connection with the sale of goods or services that may require further performance by the seller after the sale has taken place. Because of the uncertainty surrounding claims that may be made under warranties, warranty obligations fall within the definition of a contingency in paragraph .01. Losses from warranty obligations shall be accrued when the conditions in paragraph .08 are met. Those conditions may be considered in relation to individual sales made with warranties or in relation to groups of similar types of sales made with warranties. If the conditions are met, accrual shall be made even though the particular parties that will make claims under warranties may not be identifiable.

.25 If, based on available information, it is probable that customers will make claims under warranties relating to goods or services that have been sold, the condition in paragraph .08(a) is met at the date of an enterprise’s financial statements because it is probable that a liability has been incurred. Satisfaction of the condition in paragraph .08(b) will normally depend on the experience of an enterprise or other information. In the case of an enterprise that has no experience of its own, reference to the experience of other enterprises in the same business may be appropriate. Inability to make a reasonable estimate of the amount of a warranty obligation at the time of sale because of significant uncertainty about possible claims (i.e., failure to satisfy the condition in paragraph .08(b)) precludes accrual and, if the range of possible loss is wide, may raise a question about whether a sale should be recorded prior to expiration of the warranty period or until sufficient experience has been gained to permit a reasonable estimate of the obligation; in addition, the disclosures called for by paragraph .10 of this Statement should be made.
.26 Obligations other than warranties may arise with respect to products or services that have been sold, for example, claims resulting from injury or damage caused by product defects. If it is probable that claims will arise with respect to products or services that have been sold, accrual for losses may be appropriate. The condition in paragraph .08(a) would be met, for instance, with respect to a drug product or toys that have been sold if a health or safety hazard related to those products is discovered and as a result it is considered probable that liabilities have been incurred. The condition in paragraph .08(b) would be met if experience or other information enables the enterprise to make a reasonable estimate of the loss with respect to the drug product or the toys.

Risk of Loss or Damage of Enterprise Property

.27 At the date of an enterprise's financial statements, it may not be insured against risk of future loss or damage to its property by fire, explosion, or other hazards. The absence of insurance against losses from risks of those types constitutes an existing condition involving uncertainty about the amount and timing of any losses that may occur, in which case a contingency exists as defined in paragraph .01. Uninsured risks may arise in a number of ways, including (a) noninsurance of certain risks or co-insurance or deductible clauses in an insurance contract or (b) insurance through a subsidiary or investee7 to the extent not reinsured with an independent insurer. Some risks, for all practical purposes, may be noninsurable, and the self-assumption of those risks is mandatory.

.28 The absence of insurance does not mean that an asset has been impaired or a liability has been incurred at the date of an enterprise's financial statements. Fires, explosions, and other similar events that may cause loss or damage of an enterprise's property are random in their occurrence.8 With respect to events of that type, the condition for accrual in

---

7 The effects of transactions between a parent or other investor and a subsidiary or investee insurance company shall be eliminated from an enterprise's financial statements (see paragraph 6 of ARB No. 51 [section 2051.07], "Consolidated Financial Statements," and paragraph 19(a) of APB Opinion No. 18 [section 5131.19(a)], "The Equity Method of Accounting for Investments in Common Stock").

8 The Board recognizes that, in practice, experience regarding loss or damage to depreciable assets is in some cases one of the factors considered in estimating the depreciable lives of a group of depreciable assets, along with such other factors as wear and tear, obsolescence, and maintenance and replacement policies. This Statement is not intended to alter present depreciation practices (see paragraph .02).
paragraph .08(a) is not satisfied prior to the occurrence of the event because until that time there is no diminution in the value of the property. There is no relationship of those events to the activities of the enterprise prior to their occurrence, and no asset is impaired prior to their occurrence. Further, unlike an insurance company, which has a contractual obligation under policies in force to reimburse insureds for losses, an enterprise can have no such obligation to itself and, hence, no liability.

Risk of Loss from Future Injury to Others, Damage to the Property of Others, and Business Interruption

.29 An enterprise may choose not to purchase insurance against risk of loss that may result from injury to others, damage to the property of others, or interruption of its business operations. Exposure to risks of those types constitutes an existing condition involving uncertainty about the amount and timing of any losses that may occur, in which case a contingency exists as defined in paragraph .01.

.30 Mere exposure to risks of those types, however, does not mean that an asset has been impaired or a liability has been incurred. The condition for accrual in paragraph .08(a) is not met with respect to loss that may result from injury to others, damage to the property of others, or business interruption that may occur after the date of an enterprise's financial statements. Losses of those types do not relate to the current or a prior period but rather to the future period in which they occur. Thus, for example, an enterprise with a fleet of vehicles should not accrue for injury to others or damage to the property of others that may be caused by those vehicles in the future even if the amount of those losses may be reasonably estimable. On the other hand, the conditions in paragraph .08 would be met with respect to uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements, even though the enterprise may not become aware of those matters until after that date, if the experience of the enterprise or other information enables it to make a reasonable estimate of the loss that was incurred prior to the date of its financial statements.

9 As to injury or damage resulting from products that have been sold, see paragraph .26.
Write-Down of Operating Assets

.31 In some cases, the carrying amount of an operating asset not intended for disposal may exceed the amount expected to be recoverable through future use of that asset even though there has been no physical loss or damage of the asset or threat of such loss or damage. For example, changed economic conditions may have made recovery of the carrying amount of a productive facility doubtful. The question of whether, in those cases, it is appropriate to write down the carrying amount of the asset to an amount expected to be recoverable through future operations is not covered by this Statement.

Threat of Expropriation

.32 The threat of expropriation of assets is a contingency within the definition of paragraph .01 because of the uncertainty about its outcome and effect. If information indicates that expropriation is imminent and compensation will be less than the carrying amount of the assets, the condition for accrual in paragraph .08(a) is met. Imminence may be indicated, for example, by public or private declarations of intent by a government to expropriate assets of the enterprise or actual expropriation of assets of other enterprises. Paragraph .08(b) requires that accrual be made only if the amount of loss can be reasonably estimated. If the conditions for accrual are not met, the disclosures specified in paragraph .10 would be made when there is at least a reasonable possibility that an asset has been impaired.

Litigation, Claims, and Assessments

.33 The following factors, among others, must be considered in determining whether accrual and/or disclosure is required with respect to pending or threatened litigation and actual or possible claims and assessments:

a) The period in which the underlying cause (i.e., the cause for action) of the pending or threatened litigation or of the actual or possible claim or assessment occurred.

b) The degree of probability of an unfavorable outcome.

c) The ability to make a reasonable estimate of the amount of loss.
.34 As a condition for accrual of a loss contingency, paragraph .08(a) requires that information available prior to the issuance of financial statements indicate that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. Accordingly, accrual would clearly be inappropriate for litigation, claims, or assessments whose underlying cause is an event or condition occurring after the date of financial statements but before those financial statements are issued, for example, a suit for damages alleged to have been suffered as a result of an accident that occurred after the date of the financial statements. Disclosure may be required, however, by paragraph .11.

.35 On the other hand, accrual may be appropriate for litigation, claims, or assessments whose underlying cause is an event occurring on or before the date of an enterprise's financial statements even if the enterprise does not become aware of the existence or possibility of the lawsuit, claim, or assessment until after the date of the financial statements. If those financial statements have not been issued, accrual of a loss related to the litigation, claim, or assessment would be required if the probability of loss is such that the condition in paragraph .08(a) is met and the amount of loss can be reasonably estimated.

.36 If the underlying cause of the litigation, claim, or assessment is an event occurring before the date of an enterprise's financial statements, the probability of an outcome unfavorable to the enterprise must be assessed to determine whether the condition in paragraph .08(a) is met. Among the factors that should be considered are the nature of the litigation, claim, or assessment, the progress of the case (including progress after the date of the financial statements but before those statements are issued), the opinions or views of legal counsel and other advisers, the experience of the enterprise in similar cases, the experience of other enterprises, and any decision of the enterprise's management as to how the enterprise intends to respond to the lawsuit, claim, or assessment (for example, a decision to contest the case vigorously or a decision to seek an out-of-court settlement). The fact that legal counsel is unable to express an opinion that the outcome will be favorable to the enterprise should not necessarily be interpreted to mean that the condition for accrual of a loss in paragraph .08(a) is met.
.37 The filing of a suit or formal assertion of a claim or assessment does not automatically indicate that accrual of a loss may be appropriate. The degree of probability of an unfavorable outcome must be assessed. The condition for accrual in paragraph .08(a) would be met if an unfavorable outcome is determined to be probable. If an unfavorable outcome is determined to be reasonably possible but not probable, or if the amount of loss cannot be reasonably estimated, accrual would be inappropriate, but disclosure would be required by paragraph .10 of this Statement.

.38 With respect to unasserted claims and assessments, an enterprise must determine the degree of probability that a suit may be filed or a claim or assessment may be asserted and the possibility of an unfavorable outcome. For example, a catastrophe, accident, or other similar physical occurrence predictably engenders claims for redress, and in such circumstances their assertion may be probable; similarly, an investigation of an enterprise by a governmental agency, if enforcement proceedings have been or are likely to be instituted, is often followed by private claims for redress, and the probability of their assertion and the possibility of loss should be considered in each case. By way of further example, an enterprise may believe there is a possibility that it has infringed on another enterprise's patent rights, but the enterprise owning the patent rights has not indicated an intention to take any action and has not even indicated an awareness of the possible infringement. In that case, a judgment must first be made as to whether the assertion of a claim is probable. If the judgment is that assertion is not probable, no accrual or disclosure would be required. On the other hand, if the judgment is that assertion is probable, then a second judgment must be made as to the degree of probability of an unfavorable outcome. If an unfavorable outcome is probable and the amount of loss can be reasonably estimated, accrual of a loss is required by paragraph .08. If an unfavorable outcome is probable but the amount of loss cannot be reasonably estimated, accrual would not be appropriate, but disclosure would be required by paragraph .10. If an unfavorable outcome is reasonably possible but not probable, disclosure would be required by paragraph .10.

.39 As a condition for accrual of a loss contingency, paragraph .08(b) requires that the amount of loss can be reasonably estimated. In some cases, it may be determined that a loss was incurred because an unfavorable outcome of
the litigation, claim, or assessment is probable (thus satisfying the condition in paragraph .08(a)), but the range of possible loss is wide. For example, an enterprise may be litigating an income tax matter. In preparation for the trial, it may determine that, based on recent decisions involving one aspect of the litigation, it is probable that it will have to pay additional taxes of $2 million. Another aspect of the litigation may, however, be open to considerable interpretation, and depending on the interpretation by the court the enterprise may have to pay taxes of $8 million over and above the $2 million. In that case, paragraph .08 requires accrual of the $2 million if that is considered a reasonable estimate of the loss. Paragraph .10 requires disclosure of the additional exposure to loss if there is a reasonable possibility that additional taxes will be paid. Depending on the circumstances, paragraph .09 may require disclosure of the $2 million that was accrued.

Catastrophe Losses of Property and Casualty Insurance Companies

.40 At the time that a property and casualty insurance company or reinsurance company issues an insurance policy covering risk of loss from catastrophes, a contingency arises. The contingency is the risk of loss assumed by the insurance company, that is, the risk of loss from catastrophes that may occur during the term of the policy. The insurance company has not assumed risk of loss for catastrophes that may occur beyond the term of the policy. Clearly, therefore, no asset has been impaired or liability incurred with respect to catastrophes that may occur beyond the terms of policies in force.

.41 The conditions in paragraph .08 should be considered with respect to the risk of loss assumed by an insurance company for catastrophes that may occur during the terms of policies in force to determine whether accrual of a loss is appropriate. To satisfy the condition in paragraph .08(a) that it be probable that a liability has been incurred to existing policyholders, the occurrence of catastrophes (i.e., the confirming future events) would have to be reasonably predictable within the terms of policies in force. Further, to satisfy the condition in paragraph .08(b), the amounts of losses therefrom would have to be reasonably estimable. Actuarial techniques are employed by insurance companies to predict the rate of occurrence of and amounts of losses from catastrophes over long periods of time for insurance rate-setting purposes.
Predictions over relatively short periods of time, such as an individual accounting period or the terms of a large number of existing insurance policies in force, are subject to substantial deviations. Consequently, assumption of risk of loss from catastrophes by property and casualty insurance companies and reinsurance companies fails to satisfy the conditions for accrual in paragraphs .08(a) and .08(b). Moreover, deferral of unearned premiums within the terms of policies in force represents the "unknown liability" for loss (including catastrophe losses) on unexpired policies, making an accrual inappropriate—see paragraphs .94—.96 in Appendix C. Recognition of premium income as earned revenue within the terms of policies in force is discussed in the AICPA Industry Audit Guide, "Audits of Fire and Casualty Insurance Companies."

.42 Although some property and casualty insurance companies have accrued an estimated amount for catastrophe losses, other insurance companies have accomplished the same objective by deferring a portion of the premium income. Deferral of any portion of premium income beyond the terms of policies in force is, in substance, similar to premature accrual of catastrophe losses and, therefore, also does not meet the conditions of paragraph .08.

.43 The conditions for accrual in paragraph .08 do not prohibit a property and casualty insurance company from accruing probable catastrophe losses that have been incurred on or before the date of its financial statements but that have not been reported by its policyholders as of that date. If the amount of loss can be reasonably estimated, paragraph .08 requires accrual of those incurred-but-not-reported losses.

Payments to Insurance Companies
That May Not Involve Transfer of Risk

.44 To the extent that an insurance contract or reinsurance contract does not, despite its form, provide for indemnification of the insured or the ceding company by the insurer or reinsurer against loss or liability, the premium paid less the amount of the premium to be retained by the insurer or reinsurer shall be accounted for as a deposit by the insured or the ceding company. Those contracts may be structured in various ways, but if, regardless of form, their substance is that all or part of the premium paid by the insured or the ceding company is a deposit, it shall be accounted for as such.
Operations in certain industries may be subject to such high risks that insurance is unavailable or is available only at what is considered to be a prohibitively high cost. Some enterprises in those industries have "pooled" their risks by forming a mutual insurance company in which they retain an equity interest and to which they pay insurance premiums. For example, some electric utility companies have formed such a mutual insurance company to insure risks related to nuclear power plants, and some oil companies have formed a company to insure against risks associated with petroleum exploration and production. Whether the premium paid represents a payment for the transfer of risk or whether it represents merely a deposit will depend on the circumstances surrounding each enterprise's interest in and insurance arrangement with the mutual insurance company. An analysis of the contract is required to determine whether risk has been transferred and to what extent.

Appendix B

BACKGROUND INFORMATION

In April 1973, the FASB placed on its technical agenda a project then entitled "Accounting for Future Losses." The project addressed accrual and disclosure of loss contingencies. The Board believes that "Accounting for Contingencies" is a more descriptive title for this Statement than "Accounting for Future Losses."

A task force of 16 persons from industry, public accounting, the financial community, and academe was appointed in the summer of 1973 to provide counsel to the Board in preparing a Discussion Memorandum analyzing issues related to the project.

The Discussion Memorandum gave examples of various types of contingencies and considered several of those at length to assist in the development of standards of financial accounting and reporting. These included (a) uninsured risks ("self-insurance"), (b) risk of losses from catastrophes assumed by property and casualty insurance companies, and (c) risk of losses from expropriations by foreign governments.

Research undertaken in connection with this project included (a) a search of relevant literature, (b) an examination of published financial statements in annual reports to shareholders and in filings with the SEC on Form 10-K, (c) a questionnaire survey conducted by the Financial
Executives Institute to which 64 companies responded, and (d) a study of catastrophe reserve accounting methods employed by property and casualty insurance companies. Summaries of research findings are included in appendices to the Discussion Memorandum.

.50 On January 3, 1973 (prior to the date the Board placed this subject on its agenda), the Securities and Exchange Commission issued its Accounting Series Release No. 134, which pointed out that a number of property and casualty insurance companies had adopted the accounting policy of making a provision from each period's income to cover a portion of major losses expected to occur in future periods. The SEC Release indicated that the Committee on Insurance Accounting and Auditing of the AICPA was working actively on the subject in cooperation with industry groups. The Release set forth certain disclosure requirements pending resolution of the question of accrual.

.51 The AICPA committee's report (dated July 17, 1973) was in the form of a memorandum setting forth the views of those committee members favoring and those opposing accrual of losses from future catastrophes. In the course of its study, the AICPA committee had gathered considerable data on the subject, in part from a survey of member companies of the American Insurance Association, and this information was made available to the Board.

.52 On August 2, 1973, the SEC announced in Accounting Series Release No. 145 that property and casualty insurance companies should not change their method of accounting for catastrophe losses "until a single method has been adopted by the Financial Accounting Standards Board."

.53 The Board issued the Discussion Memorandum on March 13, 1974, and held a public hearing on the subject on May 13, 1974. The Board received 87 position papers, letters of comment, and outlines of oral presentations in response to the Discussion Memorandum. Eighteen presentations were made at the public hearing.

.54 An Exposure Draft of a proposed Statement on "Accounting for Contingencies" was issued on October 21, 1974. The Board received 212 letters of comment on the Exposure Draft.
Appendix C

Basis for Conclusions

.55 This Appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including various alternatives considered and reasons for accepting some and rejecting others.

Scope of this Statement

.56 Some respondents to the Exposure Draft proposed that the Statement not deal with accrual and disclosure of loss contingencies in general but, rather, only with the following three specific matters: "self-insurance," risks of losses from catastrophes assumed by property and casualty insurance companies including reinsurance companies, and threat of expropriation. As the basis for that position, they noted that the Discussion Memorandum considered those three matters at length. Other respondents suggested that catastrophe losses be dealt with in a separate Statement.

.57 The Board has concluded, however, that the broad issue of accrual and disclosure of loss contingencies should be dealt with in a single Statement, just as the Discussion Memorandum encompassed "the broad issue of accounting for future losses." As the Discussion Memorandum stated, "future losses of all types presently known to affect enterprises and new types of future losses that may arise are conceptually included in the scope of this project." The three matters dealt with at length in the Discussion Memorandum were used "as examples to assist in the evaluation and development of criteria for accounting for future losses," and other examples were discussed. The Board has concluded that

---

10 The Board believes that contingencies is a more descriptive term than future losses, and the Discussion Memorandum indicated that the project would necessarily involve reconsideration of both ARB No. 50 and Chapter 6 of ARB No. 43.
loss contingencies such as those given as examples in paragraph .04 of this Statement have common characteristics and that questions about accounting for and reporting of those contingencies should be resolved comprehensively. It is for that reason, also, that the Board believes it inappropriate to deal with catastrophe losses in a separate Statement.

.58 A question has been raised whether uncollectibility of receivables and product warranties constitute contingencies within the scope of this Statement. The Board recognizes that uncertainties associated with uncollectibility of some receivables and some product warranties are likely to be, in part, inherent in making accounting estimates (described in paragraph .02) as well as, in part, the type of uncertainties that give rise to a contingency (described in paragraph .01). The Board believes that no useful purpose would be served by attempting to distinguish between those two types of uncertainties for purposes of establishing conditions for accrual of uncollectible receivables and product warranties. Consequently, those matters are deemed to be contingencies within the definition of paragraph .01 and should be accounted for pursuant to the provisions of this Statement.

ACCRUAL OF LOSS CONTINGENCIES

.59 Paragraph .08 requires that a loss contingency be accrued if the two specified conditions are met. The purpose of those conditions is to require accrual of losses when they are reasonably estimable and relate to the current or a prior period. The requirement that the loss be reasonably estimable is intended to prevent accrual in the financial statements of amounts so uncertain as to impair the integrity of those statements. The Board has concluded that disclosure is preferable to accrual when a reasonable estimate of loss cannot be made. Further, even losses that are reasonably estimable should not be accrued if it is not probable that an asset has been impaired or a liability has been incurred at the date of an enterprise's financial statements because those losses relate to a future period rather than the current or a prior period. Attribution of a loss to events or activities of
the current or prior periods is an element of asset impairment or liability incurrence.

.60 In establishing the conditions in paragraph .08, Board members considered the factors discussed in paragraphs .61—.101. Individual Board members gave greater weight to some factors than to others.

**Accounting Accruals Do Not Provide Protection Against Losses**

.61 Accrual of a loss related to a contingency does not create or set aside funds to lessen the possible financial impact of a loss, although some respondents to the Discussion Memorandum and the Exposure Draft argued to the contrary. The Board believes that confusion exists between accounting accruals (sometimes referred to as “accounting reserves”) and the reserving or setting aside of specific assets to be used for a particular purpose or contingency. Accounting accruals are simply a method of allocating costs among accounting periods and have no effect on an enterprise’s cash flow. An enterprise may choose to maintain or have access to sufficient liquid assets to replace or repair lost or damaged property or to pay claims in case a loss occurs. Alternatively, it may transfer the risk to others by purchasing insurance. Those are financial decisions, and if enterprise management decides to do neither, the presence or absence of an accrued credit balance on the balance sheet will have no effect on the consequences of that decision. The accounting standards set forth in this Statement do not affect the fundamental business economics of that decision.

.62 In that regard, some respondents to the Discussion Memorandum and the Exposure Draft contended that an accounting standard that does not permit periodic accrual of so-called “self-insurance reserves” and, in the case of insurance companies, so-called “catastrophe reserves” will force enterprises to purchase insurance or reinsurance because the “protection” afforded by the accrual would no longer exist. Those accruals, however, in no way protect the assets available to replace or repair uninsured property that
may be lost or damaged, or to satisfy claims that are not covered by insurance, or, in the case of insurance companies, to satisfy the claims of insured parties. Accrual, in and of itself, provides no financial protection that is not available in the absence of accrual.

63 The sole result of accrual, for financial accounting and reporting purposes, is allocation of costs among accounting periods. Some respondents to the Discussion Memorandum and the Exposure Draft took the position that estimated losses from loss contingencies should be accrued even before available information indicates that it is probable that an asset has been impaired or a liability has been incurred to avoid reporting net income that fluctuates widely from period to period. In their view, financial statement users may be misled by those fluctuations. They believe that estimated losses should be accrued without regard to whether the loss relates to the current period if, based on experience, it is reasonable to expect losses sometime in the future.

64 Financial statement users have indicated, however, that information about earnings variability is important to them. Two elements often cited as basic to the decision models of many financial statement users are (a) expected return — the predicted amount and timing of the return on an investment — and (b) risk — the variability of that expected return. If the nature of an enterprise’s operations is such that irregularities in the incurrence of losses cause variations in periodic net income, that fact should not be obscured by accruing for anticipated losses that do not relate to the current period.

65 The Board recognizes that some investors may have a preference for investments in enterprises having a stable pattern of earnings, because that indicates lesser uncertainty or risk than fluctuating earnings. That preference, in turn, is perceived by many as having a favorable effect on the market prices of those enterprises’ securities. If accruals for such matters as future uninsured losses and catastrophes were prohibited, some respondents contended, enterprises would be forced to purchase insurance or reinsurance to achieve the more stable pattern of reported earnings that tends to
accompany the use of an "accounting reserve." Insurance or reinsurance reduces or eliminates risks and the inherent earnings fluctuations that accompany risks. Unlike insurance and reinsurance, however, the use of "accounting reserves" does not reduce or eliminate risk. The Board rejects the contention, therefore, that the use of "accounting reserves" is an alternative to insurance and reinsurance in protecting against risk. Earnings fluctuations are inherent in risk retention, and they should be reported as they occur. The Board cannot sanction the use of an accounting procedure to create the illusion of protection from risk when, in fact, protection does not exist.

.66 The Board has also considered the argument that periodic accrual of losses without regard to whether an asset has been impaired or liability incurred is justified on grounds of comparability of financial statements among enterprises. Some respondents contended, for example, that accrual is necessary to make the financial statements of enterprises that do not purchase insurance comparable to those of enterprises that do purchase insurance (and report the premiums as expenses) and to make the financial statements of property and casualty insurance companies comparable regardless of the extent to which reinsurance has been purchased. In the Board's view, however, to report activity when there has been none would obscure a fundamental difference in circumstance between enterprises that transfer risks to others and those that do not.

Financial Accounting and Reporting Reflects Primarily the Effects of Past Transactions and Existing Conditions

.67 Financial accounting and reporting reflects primarily the effects of past transactions and existing conditions, not future transactions or conditions. For example, paragraph 35 of APB Statement No. 4 [section 1022.27], "Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises," states:

Financial accounting and financial statements are primarily historical in that information about events that have taken place provides the basic data of financial accounting and financial statements.
The first condition in paragraph .08—that a loss contingency not be accrued until it is probable that an asset has been impaired or a liability has been incurred—is consistent with this concept of financial accounting and financial statements. That condition is not so past-oriented that accrual of a loss must await the occurrence of the confirming future event, for example, final adjudication or settlement of a lawsuit. The condition requires only that it be probable that the confirming future event will occur. The condition is intended to prohibit the recognition of a liability when it is not probable that one has been incurred and to prohibit the accrual of an asset impairment when it is not probable that an asset of an enterprise has been impaired.

The Concept of a Liability

In many cases, the accrual of a loss contingency results in the recording of a liability, for example, accruals for a probable tax assessment, a warranty obligation, or a probable loss resulting from the guarantee of indebtedness of others. In the course of its deliberations, therefore, the Board found it relevant to consider the concept of a liability as expressed in accounting literature.

The economic obligations of an enterprise are defined in paragraph 58 of APB Statement No. 4 [section 1023.19] as "its present responsibilities to transfer economic resources or provide services to other entities in the future." Two aspects of that definition are especially relevant to accounting for contingencies: first, that liabilities are present responsibilities and, second, that they are obligations to other entities. Those notions are supported by other definitions of liabilities in published accounting literature, for example:

Liabilities are claims of creditors against the enterprise, arising out of past activities, that are to be satisfied by the disbursement or utilization of corporate resources.11

A liability is the result of a transaction of the past, not of the future.12

.71 The condition in paragraph .08(a)—that a loss contingency shall be accrued if it is probable that a liability has been incurred—is intended to proscribe recognition of losses that relate to future periods but to require accrual of losses that relate to the current or a prior period (assuming the amount of loss can be reasonably estimated—see paragraph .08(b)).

.72 Liability definitions also generally require that the amount of an economic obligation be known or susceptible of reasonable estimation before it is recorded as a liability. For example:

[Liabilities] are measured by cash received, by the established price of noncash assets or services received, or by estimates of a definitive character when the amount owing cannot be measured more precisely.13

The amount of the liability must be the subject of calculation or of close estimation.14

.73 The condition in paragraph .08(b)—that an estimated loss from a loss contingency not be accrued until the amount of loss can be reasonably estimated—is consistent with this feature of the liability concept.

Accounting for Impairment of Value of Assets

.74 The accrual of some loss contingencies may result in recording the impairment of the value of an asset rather than in recording a liability, for example, accruals for expropriation of assets or uncollectible receivables.

13 American Accounting Association, Accounting and Reporting Standards for Corporate Financial Statements, p. 16.
14 Maurice Moonitz, "The Changing Concept of Liabilities," p. 44.
Accounting presently recognizes impairments of the value of assets such as the following:

a) Paragraph 9 of Chapter 3A, “Current Assets and Current Liabilities,” of \textit{ARB No. 43} [section 2031.09] provides that “in the case of marketable securities where market value is less than cost by a substantial amount and it is evident that the decline in market value is not due to a mere temporary condition, the amount to be included as a current asset should not exceed the market value.”

b) Statement 5 of Chapter 4, “Inventory Pricing,” of \textit{ARB No. 43} [section 5121.07—08] states that “a departure from the cost basis of pricing the inventory is required when the utility of the goods is no longer as great as its cost. . . . A loss of utility is to be reflected as a charge against the revenues of the period in which it occurs.”

c) Paragraph 19(h) of \textit{APB Opinion No. 18} [section 5131.19 (h)], “The Equity Method of Accounting for Investments in Common Stock,” states that “a loss in value of an investment which is other than a temporary decline should be recognized the same as a loss in value of other long-term assets.”

d) Paragraph 15 of \textit{APB Opinion No. 30} [section 2012.15], “Reporting the Results of Operations,” states that “if a loss is expected from the proposed sale or abandonment of a segment, the estimated loss should be provided for at the measurement date. . . .” Paragraph 14 [section 2012.14] states that the measurement date is the date on which management “commits itself to a formal plan to dispose of a segment of the business, whether by sale or abandonment.”

e) Paragraph 183 of \textit{APB Statement No. 4} [section 1027.09] states that “when enterprise assets are damaged by others, asset amounts are written down to recoverable costs and a loss is recorded.”

.75 A recurring principle underlying all of these references to asset impairments in the accounting literature is that a loss should not be accrued until it is probable that an asset has
been impaired and the amount of the loss can be reasonably estimated. As indicated by those references, impairment is recognized, for instance, when a non-temporary decline in the market price of marketable securities below cost has taken place, when the utility of inventory is no longer as great as its cost, when a commitment, in terms of a formal plan, has been made to abandon a segment of a business or to sell a segment at less than its carrying amount, when enterprise assets are damaged, and so forth. The condition in paragraph .08(a) is intended to proscribe accrual of losses that relate to future periods, and the condition in paragraph .08(b) further requires that the amount of loss be reasonably estimable before it is accrued.

The Matching Concept

.76 A number of respondents to the Discussion Memorandum and the Exposure Draft noted that losses from certain types of contingencies are likely to occur irregularly over an extended period of time encompassing a number of accounting periods. In their view, the matching process in accounting requires that estimated losses from those types of contingencies be accrued in each accounting period even if not directly related to events or activities of the period.

.77 APB Statement No. 4 [sections 1021—1029] explicitly avoids using the term “matching” because it has a variety of meanings in the accounting literature. In its broadest sense, matching refers to the entire process of income determination—described in paragraph 147 of APB Statement No. 4 [section 1026.11] as “identifying, measuring, and relating revenue and expenses of an enterprise for an accounting period.” Matching may also be used in a more limited sense to refer only to the process of expense recognition or in an even more limited sense to refer to the recognition of expenses by associating costs with revenue on a cause and effect basis.

.78 Three pervasive principles for recognizing costs as expenses are set forth in paragraphs 156-160 of APB Statement No. 4 [section 1026.20—.24] as follows:
Accounting for Contingencies

**Associating Cause and Effect.** Some costs are recognized as expenses on the basis of a presumed direct association with specific revenue... recognizing them as expenses accompanies recognition of the revenue.

**Systematic and Rational Allocation.** If an asset provides benefits for several periods its cost is allocated to the periods in a systematic and rational manner in the absence of a more direct basis for associating cause and effect.

**Immediate Recognition.** Some costs are associated with the current accounting period as expenses because (1) costs incurred during the period provide no discernible future benefits, (2) costs recorded as assets in prior periods no longer provide discernible benefits or (3) allocating costs either on the basis of association with revenue or among several accounting periods is considered to serve no useful purpose.

.79 Some who believe that matching requires accrual of losses that are likely to occur irregularly over an extended period of time encompassing a number of accounting periods cite the systematic and rational allocation principle of expense recognition as justification for their position. That principle, however, involves the systematic and rational allocation of the cost of an asset (an asset that has been acquired) throughout the estimated periods that the asset provides benefits or the systematic and rational accrual of the amount of some obligations (obligations that have been incurred) throughout the estimated periods that the obligations are incurred. The customary depreciation of plant and equipment is an example of the former; when reasonably estimable, the accrual of vacation pay is an example of the latter. The systematic and rational allocation principle has no application to assets that are expected to be acquired in the future or to obligations that are expected to be incurred in the future.

.80 Matching, in the sense of recognizing expenses by associating costs with specific revenue on a cause and effect basis, is a consideration in relation to accrual for such matters as uncollectible receivables and warranty obligations. For example, most enterprises that make credit sales or warrant
their products or services regularly incur losses from uncollectible receivables and warranty obligations. Frequently, those losses can be associated with revenue on a cause and effect basis. If the amount of those losses can be reasonably estimated, paragraph .08 of this Statement requires accrual if it is probable that an asset has been impaired (estimated uncollectible receivables) or that a liability has been incurred (estimated warranty claims).

Spreading the Burden of Irregularly Occurring Costs to Successive Generations of Customers and Shareholders

.81 Some respondents to the Discussion Memorandum and the Exposure Draft contended that all costs of doing business should be accrued in each accounting period so that successive generations of customers and shareholders would bear their share of all costs including those that occur irregularly. It would seem, however, that those irregularly occurring costs are usually borne by customers through pricing policy and that pricing is not necessarily dependent upon financial accounting and reporting practices. With regard to accrual on grounds that it enables successive generations of shareholders to bear their share of irregularly occurring costs, see paragraphs .63—.65.

Conservatism

.82 On the grounds of conservatism, some respondents supported accrual of estimated losses from loss contingencies before available information indicates that it is probable that an asset has been impaired or a liability has been incurred. Conservatism is indicated as one of the "characteristics and limitations" of financial accounting in paragraph 35 of APB Statement No. 4 [section 1022.27] as follows:

Conservatism. The uncertainties that surround the preparation of financial statements are reflected in a general tendency toward early recognition of unfavorable events and minimization of the amount of net assets and net income.
Conservatism is further discussed in paragraph 171 of APB Statement No. 4 [section 1026.35]:

Conservatism. Frequently, assets and liabilities are measured in a context of significant uncertainties. Historically, managers, investors, and accountants have generally preferred that possible errors in measurement be in the direction of understatement rather than overstatement of net income and net assets. This has led to the convention of conservatism. . . .

The conditions for accrual in paragraph .08 are not inconsistent with the accounting concept of conservatism. Those conditions are not intended to be so rigid that they require virtual certainty before a loss is accrued. They require only that it be probable that an asset has been impaired or a liability has been incurred and that the amount of loss be reasonably estimable. In the absence of that probability or estimability, however, the Board has concluded that disclosure is preferable to accruing in the financial statements amounts so uncertain as to impair the integrity of the financial statements.

Risk of Future Loss or Damage of Enterprise Property, Injury to Others, Damage to the Property of Others, and Business Interruption

Some persons contend that the decision not to purchase insurance against losses that can be reasonably expected some time in the future (such as risk of loss or damage of enterprise property, injury to others, damage to the property of others, and business interruption) justifies periodic accrual for those losses without regard to whether it is probable that an asset has been impaired or a liability incurred at the date of the financial statements. As a basis for their position, they frequently cite the following factors: matching of revenue and expense, spreading the burden of irregularly occurring costs to successive generations of customers, and conservatism. They also believe that accrual of estimated losses from those types of risks improves the comparability of the financial statements of enterprises that do not insure with those of enterprises that purchase insurance. Some
contend that a prohibition against periodic accrual for uninsured losses will force enterprises to purchase insurance coverage that would not otherwise be purchased.

.86 In the Board's judgment, however, the mere existence of risk, at the date of an enterprise's financial statements, does not mean that a loss should be accrued. Anticipation of asset impairments or liabilities or losses from business interruption that do not relate to the current or a prior period is not justified by the matching concept.

.87 The Board's views regarding the contention that periodic accrual for uninsured losses is a way of providing protection against loss and improving comparability among enterprises that do and do not purchase insurance, and the contention that prohibition of accrual will force enterprises to purchase insurance, are discussed in paragraphs .61—.66. The Board's position regarding periodic accrual for uninsured risks and other loss contingencies on the grounds of spreading the burden of irregularly occurring costs to successive generations of customers or on the grounds of conservatism is discussed in paragraphs .81—.84.

.88 Some respondents to the Exposure Draft said that prohibition against periodic accrual for uninsured losses would be detrimental to government contractors because requirements of Federal government agencies in auditing costs subject to procurement regulations currently allow reimbursement for periodic accruals for uninsured losses only if they are included in the contractor's financial statements. Contract reimbursement and financial accounting and reporting may well have different objectives. Accordingly, the provisions of this Statement may not be appropriate for contract reimbursement purposes.

Catastrophe Losses of Property and Casualty Insurance Companies

.89 At the time that a property and casualty insurance company or reinsurance company issues an insurance policy covering risk of loss from catastrophes, a contingency arises.
The contingency is the risk of loss *assumed* by the insurance company, that is, the risk of loss from catastrophes that may occur *during the term of the policy*.

.90 Some respondents to the Discussion Memorandum and the Exposure Draft proposed that insurance companies accrue estimated losses from catastrophes including both those that may occur during the terms of insurance policies in force and those that may occur beyond the terms of policies in force. Other respondents proposed that some portion of the premium revenue of a property and casualty insurance company be deferred beyond the terms of insurance policies in force to provide what, in substance, is an estimated liability for future catastrophe losses. Some respondents proposed that accrual of estimated losses or deferral of premiums be permitted but not required. On the other hand, some respondents to the Discussion Memorandum and the Exposure Draft were opposed to any accrual for future catastrophe losses by means of an estimated liability or deferral of premium revenue. Because those estimated liabilities and revenue deferrals have come to be referred to as "catastrophe reserves," that term will be used in paragraphs .91—.101 for convenience.

.91 In response to the Exposure Draft, it was recommended that the FASB appoint a special committee to study further the matter of catastrophe reserve accounting and to make recommendations thereon. The Board has concluded, however, that its own research and that of others (mentioned in Appendix B to this Statement and summarized in the Discussion Memorandum), the written responses received to the Discussion Memorandum, the presentations made at the public hearing, and the letters of comment on the Exposure Draft provide the Board with sufficient information with which to reach a conclusion.

.92 Proponents of catastrophe reserve accounting generally cite the following reasons for their position:

a) *Catastrophes certain to occur.* Over the long term, catastrophes are certain to occur; therefore, they are not contingencies.
b) **Predictability of catastrophe losses.** On the basis of experience and by application of appropriate statistical techniques, catastrophe losses can be predicted over the long term with reasonable accuracy.

c) **Matching.** Some portion of property and casualty insurance premiums is intended to cover losses that usually occur infrequently and at intervals longer than both the terms of the policies in force and the financial accounting and reporting period. Catastrophe losses should, therefore, be accrued when the revenue is recognized (or premiums should be deferred beyond the terms of policies in force to periods in which the catastrophes occur) to match catastrophe losses with the related revenue.

d) **Stabilization of reported income.** Catastrophe reserve accounting stabilizes reported income and avoids erratic variations caused by irregularly occurring catastrophes.

e) **Comparability.** Reinsurance premiums paid by a prime insurer are said to be similar to accrual of catastrophe losses prior to their occurrence because the reinsurance premiums paid reduce income before a catastrophe loss occurs. Accrual of catastrophe losses as an expense prior to occurrence of a catastrophe makes the financial statements of property and casualty insurance companies comparable regardless of the extent to which reinsurance has been purchased.

f) **Non-accrual would force purchase of reinsurance.** Non-accrual of catastrophe losses will force property and casualty insurance companies to purchase reinsurance.

g) **Generations of policyholders.** Periodic accrual of estimated catastrophe losses charges each generation of policyholders with its share of the loss through the premium structure.

.93 The Board does not find those arguments persuasive. The fact that over the long term catastrophes are certain to occur does not justify accrual before the catastrophes occur. As
stated in paragraph .59, the purpose of the conditions for accrual in paragraph .08 is to require accrual of losses if they are reasonably estimable and relate to the current or a prior period. An enterprise may know with certainty, for example, next year's administrative salaries, but that does not justify accrual in the current accounting period because those salaries do not relate to that period. As indicated in paragraphs .67—.68, financial accounting and reporting reflects primarily the effects of past transactions and existing conditions, not future transactions or conditions; accrual for losses from catastrophes that are expected to occur beyond the terms of insurance policies in force would amount to accrual of a liability before one has been incurred. Existing policyholders are insured only during the period covered by their insurance contracts; an insurance company is not presently obligated to policyholders for catastrophes that may occur after expiration of their policies. Accrual for those catastrophe losses would record a liability that is inconsistent with the concept of a liability discussed in paragraphs .69—.73.

.94 The Board recognizes that the costs of catastrophes to insurance companies are large and are incurred irregularly and that insurance companies recoup those costs in the long run through periodic adjustments in the premiums charged to policyholders. It is the view of the Board, however, that the long-run nature of pricing of premiums should not be a determinant of the time when a liability is recorded.

.95 The AICPA Industry Audit Guide, "Audits of Fire and Casualty Insurance Companies," describes accounting for premiums as follows (pp. 24-25):

As soon as a policy is issued promising to indemnify for loss, the insurance company incurs a potential liability. The company may be called upon to pay the full amount of the policy, a portion of the policy, or nothing. It would be impossible to try to measure the liability under a single policy. However, since insurance is based on the law of averages, one may estimate from experience the loss on a large number of policies.
As state supervision of insurance developed, the insurance departments set about providing a legal basis for determining the potential liability under outstanding policies in order to establish an ample reserve for the protection of policyholders and provide a uniform method of calculation. It was recognized that, since the premium is expected to pay losses and expenses, and provide a margin of profit over the term of the policy, the portion measured by the unexpired term should be adequate to pay policy liabilities (principally losses and loss expenses) and return premiums during the unexpired term on a uniform basis for all companies. Therefore the unearned premium was adopted as the basis for computing the unknown liability on unexpired policies.

.96 Because unearned premiums represents the "unknown liability," the Board is of the view that it is inappropriate to accrue an additional amount as an estimate for that same unknown liability. Further, in the Board's view, deferral of premiums beyond the terms of policies in force is inconsistent with the concept of revenue recognition set forth in the Audit Guide and is without any conceptual basis. Moreover, the Board believes that its conclusion regarding the time at which accruals shall be made for catastrophic losses is consistent with the Audit Guide. It should be noted that this Statement does not prohibit (and, in fact, requires) accrual of a net loss (that is, a loss in excess of deferred premiums) that probably will be incurred on insurance policies that are in force, provided that the loss can be reasonably estimated, just as accrual of net losses on long-term construction-type contracts is required (see ARB No. 45 [section 4031], "Long-Term Construction-Type Contracts").

.97 With respect to catastrophes that may occur within the terms of policies in force, to satisfy the conditions for accrual in paragraph .08, the occurrence of catastrophes would have to be probable during the terms of those policies, and the amounts of losses therefrom would have to be reasonably estimable. The letters of comment and position papers received in response to the Discussion Memorandum and the Exposure Draft and presentations at the public hearing lead
the Board to conclude that neither the timing of catastrophes nor the amounts of losses therefrom are reasonably predictable within the terms of policies in force.

.98 The Board is of the view that accrual of losses from catastrophes is not justified by the accounting concept of matching. Systematic and rational allocation does not apply to costs that have not been incurred. The Board recognizes that large and irregularly occurring costs must of necessity be considered in systematically and rationally determining premiums to be charged to customers but does not believe that pricing considerations should dictate the accrual of losses for financial accounting purposes. The Board also does not believe that matching in the sense of recognizing expenses by associating losses with specific revenue on a cause and effect basis is, in and of itself, a basis for accrual of catastrophe losses prior to the event causing the loss. The Board believes that, for the reasons stated in paragraphs .94—.96, there can be no presumed direct association with specific revenue prior to the event causing the catastrophe loss.

.99 The Board's views regarding justification of periodic accrual of catastrophe reserves on grounds of (a) stabilizing reported income, (b) improving comparability among financial statements of insurance companies, and (c) preventing the "forced" purchase of reinsurance are discussed in paragraphs .61—.66.

.100 The argument that accrual of catastrophe reserves enables each generation of policyholders to bear its share of the losses through the premiums that it is charged is also questionable because amounts established for premiums are not necessarily dependent on financial accounting and reporting practices.

.101 The Board considered the proposal that catastrophe reserve accounting be permitted but not made mandatory. Whether it is probable that an asset has been impaired or a liability incurred is determined by the circumstances, not by choice. Accordingly, the conditions for accrual in paragraph
Revenue and Expense

.08 apply to all loss contingencies, including risk of loss from catastrophes assumed by property and casualty insurance companies and reinsurancce companies. In the Board's view, the use of different methods to report catastrophe losses in similar circumstances cannot be justified.

APPLICABILITY TO LIFE INSURANCE COMPANIES

.102 Some respondents to the Exposure Draft inquired as to whether the conditions for accrual in paragraph .08 are intended to change accounting practices of life insurance companies. This Statement does not amend the AICPA Industry Audit Guide, "Audits of Stock Life Insurance Companies."

DISCLOSURE OF NONINSURANCE

.103 A number of respondents to the Exposure Draft inquired as to whether it is the Board's intent to require disclosure of noninsurance or underinsurance. Some recommended that the Board require disclosures with respect to uninsured risks that enterprises ordinarily insure against. Others said that they were unable to define risks that would ordinarily be insured against because the insurance practices of enterprises are so varied. Because of the problems involved in developing operational criteria for disclosure of noninsured or underinsured risks, this Statement does not require disclosure of uninsured risks. However, the Board does not discourage those disclosures in appropriate circumstances.

EFFECTIVE DATE AND TRANSITION

.104 The Board considered three alternative approaches to a change in the method of accounting for contingencies: (1) prior period adjustment, (2) the "cumulative effect" method described in APB Opinion No. 20 [section 1051], "Accounting Changes," and (3) retention of amounts accrued for contingencies that do not meet the conditions for accrual in paragraph .08 until
those amounts are exhausted by actual losses charged thereto. The Exposure Draft had proposed the change be effected by the prior period adjustment method. A large number of respondents to the Exposure Draft, however, opposed the prior period adjustment method for a number of reasons, including significant difficulties involved in determining the degree of probability and estimability that had existed in prior periods as would have been required if the conditions in paragraph .08 were applied retroactively. On further consideration of all the circumstances, the Board has concluded that use of the "cumulative effect" method described in APB Opinion No. 20 [section 1051] represents a satisfactory solution and has concluded that the effective date in paragraph .20 is advisable.
Reasonable Estimation of the Amount of a Loss: An Interpretation of Section 4311

[Source: FASB Interpretation No. 14.]

September 1976

INTRODUCTION

.01 The two conditions for accrual of an estimated loss from a loss contingency set forth in paragraph 8 of FASB Statement No. 5 [section 4311.08], “Accounting for Contingencies,” are that “(a) information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. . . .” and “(b) the amount of loss can be reasonably estimated.” In some situations in which condition (a) in paragraph 8 [section 4311.08] is met, a range of loss can be reasonably estimated but no single amount within the range appears at the time to be a better estimate than any other amount within the range. The Board has been asked to clarify whether, in those situations, condition (b) in paragraph 8 [section 4311.08] also is met and, if so, to explain what amount of loss should be accrued.

INTERPRETATION

.02 As indicated in paragraph 59 of FASB Statement No. 5 [section 4311.59], the purpose of the two conditions in paragraph 8 [section 4311.08] of the Statement is “to require accrual of losses when they are reasonably estimable and relate to the current or a prior period.” Condition (b) in paragraph 8 [section 4311.08], that “the amount of loss can be reasonably estimated,” does not delay accrual of a loss until only a single amount can be reasonably estimated. To the contrary, when condition (a) in paragraph 8 [section 4311.08] is met, i.e., “it is probable that an asset had been impaired or a liability had been incurred,” and information available indicates that the estimated amount of loss is within a range of amounts, it follows that some amount of loss has occurred and can be reasonably estimated.

.03 When condition (a) in paragraph 8 [section 4311.08] is met with respect to a particular loss contingency and the reasonable estimate of the loss is a range, condition (b) in paragraph 8 [section 4311.08] is met and an amount shall be accrued for the loss. When some amount within the range appears at the time to be a
better estimate than any other amount within the range, that amount shall be accrued. When no amount within the range is a better estimate than any other amount, however, the minimum amount in the range shall be accrued.\footnote{Even though the minimum amount in the range is not necessarily the amount of loss that will be ultimately determined, it is not likely that the ultimate loss will be less than the minimum amount.} In addition, paragraph 9 [section 4311.09] of the Statement may require disclosure of the nature and, in some circumstances, the amount accrued, and paragraph 10 [section 4311.10] requires disclosure of the nature of the contingency and the additional exposure to loss if there is at least a reasonable possibility of loss in excess of the amount accrued.

.04 As an example, assume that an enterprise is involved in litigation at the close of its fiscal year ending December 31, 1976 and information available indicates that an unfavorable outcome is probable. Subsequently, after a trial on the issues, a verdict unfavorable to the enterprise is handed down, but the amount of damages remains unresolved at the time the financial statements are issued. Although the enterprise is unable to estimate the exact amount of loss, its reasonable estimate at the time is that the judgment will be for not less than $3 million or more than $9 million. No amount in that range appears at the time to be a better estimate than any other amount. \textit{FASB Statement No. 5} [section 4311] requires accrual of the $3 million at December 31, 1976, disclosure of the nature of the contingency and the exposure to an additional amount of loss of up to $6 million, and possibly disclosure of the amount of the accrual.

.05 The same answer would result under the example in paragraph .04 above if it is probable that a verdict will be unfavorable even though the trial has not been completed before the financial statements are issued. In that situation, condition (a) in paragraph 8 [section 4311.08] would be met because information available to the enterprise indicates that an unfavorable verdict is probable. An assessment that the range of loss is between $3 million and $9 million would meet condition (b) in paragraph 8 [section 4311.08]. If no single amount in that range is a better estimate than any other amount, \textit{FASB Statement No. 5} [section 4311] requires accrual of $3 million at December 31, 1976, disclosure of the nature of the contingency and the exposure to an additional amount of loss of up to $6 million, and possibly disclosure of the amount of the accrual. Note, however, that if the enterprise had assessed the verdict differently (e.g., that an unfavorable verdict was \textit{not} probable but was only reasonably possible), condition (a) in paragraph 8 [section 4311.08] would not have been met and no amount of loss would be accrued but
the nature of the contingency and any amount of loss that is reasonably possible would be disclosed.

.06 Assume that in the examples given in paragraphs .04 and .05 above condition (a) in paragraph 8 [section 4311.08] has been met and a reasonable estimate of loss is a range between $3 million and $9 million but a loss of $4 million is a better estimate than any other amount in that range. In that situation, FASB Statement No. 5 [section 4311] requires accrual of $4 million, disclosure of the nature of the contingency and the exposure to an additional amount of loss of up to $5 million, and possibly disclosure of the amount of the accrual.

.07 As a further example, assume that at December 31, 1976 an enterprise has an investment of $1,000,000 in the securities of another enterprise that has declared bankruptcy, and there is no quoted market price for the securities. Condition (a) in paragraph 8 [section 4311.08] has been met because information available indicates that the value of the investment has been impaired, and a reasonable estimate of loss is a range between $300,000 and $600,000. No amount of loss in that range appears at the time to be a better estimate of loss than any other amount. FASB Statement No. 5 [section 4311] requires accrual of the $300,000 loss at December 31, 1976, disclosure of the nature of the contingency and the exposure to an additional amount of loss of up to $300,000, and possibly disclosure of the amount of the accrual.

EFFECTIVE DATE AND TRANSITION

.08 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods beginning after October 15, 1976. Earlier application is encouraged in financial statements for annual and interim periods beginning before October 15, 1976 that have not been previously issued. An accrual for a loss contingency or an adjustment of an established accrual for a loss contingency resulting from application of this Interpretation shall be accounted for as a change in estimate in accordance with the requirements of paragraph 31 of APB Opinion No. 20 [section 1051.31], “Accounting Changes.” This Interpretation shall not be applied retroactively for previously issued annual and interim financial statements.
AC Section 4312

Accounting for Contingencies—Transition Method

an amendment of Section 4311
[Source: FASB Statement No. 11.]

December 1975

INTRODUCTION AND BACKGROUND INFORMATION

.01 FASB Statement No. 5 [section 4311], “Accounting for Contingencies,” was issued by the Board in March 1975. With respect to that Statement’s effective date and transition, paragraph 20 of that Statement [section 4311.20] read as follows:

This Statement shall be effective for fiscal years beginning on or after July 1, 1975, although earlier application is encouraged. A change in accounting principle resulting from compliance with paragraph .08 or .14 of this Statement shall be reported in accordance with APB Opinion No. 20 [section 1051], “Accounting Changes.” Accordingly, except in the special circumstances referred to in paragraphs 29-30 of APB Opinion No. 20 [section 1051.29-.30], the cumulative effect of the change on retained earnings at the beginning of the year in which the change is made shall be included in net income of the year of the change, and the disclosures specified in APB Opinion No. 20 [section 1051] shall be made. Reclassification of an appropriation of retained earnings to comply with paragraph .15 of this Statement shall be made in any financial statements for periods before the effective date of this Statement, or financial summaries or other data derived therefrom, that are presented after the effective date of this Statement.

.02 In Appendix C, “Basis for Conclusions,” of that Statement, paragraph 104 [section 4311.104] reads as follows:

The Board considered three alternative approaches to a change in the method of accounting for contingencies: (1) prior period adjustment, (2) the “cumulative effect” method described in APB Opinion No. 20 [section 1051], “Accounting Changes,” and (3) retention of amounts accrued for contingencies that do not meet the conditions for accrual in paragraph .08 until those amounts are exhausted by actual losses charged thereto. The Exposure Draft had proposed the change be effected by the prior period adjustment method. A large number of respondents to the Exposure Draft, however, opposed the prior period adjustment method for a number of reasons, including significant difficulties involved in determining the degree of probability and estimability that had existed in prior periods as would have been required if the conditions in paragraph .08 were applied retroactively. On further consideration of all the circumstances, the Board has concluded that use of the “cumulative effect” method
described in *APB Opinion No. 20* [section 1051] represents a satisfactory solution and has concluded that the effective date in paragraph .20 is advisable.

.03 The Exposure Draft of *FASB Statement No. 5* [section 4311] proposed a transition requiring retroactive restatement by prior period adjustment. In Appendix B, "Basis for Conclusions," of the Exposure Draft, the Board stated a preference for the prior period adjustment method because, in its judgment at the time, it would provide the most useful information for comparing financial data for periods after the adoption of the Statement with prior periods.

.04 The Board recently issued *FASB Statement No. 8* [section 1083], "Accounting for the Translation of Foreign Currency Transactions and Foreign Currency Financial Statements." With respect to that Statement's effective date and transition, paragraphs 35 and 36 of that Statement [section 1083.035 and 1083.036] read as follows:

This Statement shall be effective for fiscal years beginning on or after January 1, 1976, although earlier application is encouraged. Thereafter, if financial statements for periods before the effective date, and financial summaries or other data derived therefrom, are presented, they shall be restated, if practicable, to conform to the provisions of paragraphs .007-.031 of this Statement. In the year that this Statement is first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per share amounts for each period restated.[*]

If restatement of financial statements or summaries for all prior periods presented is not practicable, information presented shall be restated for as many consecutive periods immediately preceding the effective date of this Statement as is practicable, and the cumulative effect of applying paragraphs .007-.031 on the retained earnings at the beginning of the earliest period restated (or at the beginning of the period in which the Statement is first applied if it is not practicable to restate any prior periods) shall be included in determining net income of that period (see paragraph 20 of *APB Opinion No. 20* [section 1051.20], "Accounting Changes").

The effect on income before extraordinary items, net income, and related per share amounts of applying this Statement in a period in which the cumulative effect is included in determining net income shall be disclosed for that period, and the reason for not restating all of the prior periods presented shall be explained.

.05 Although the Exposure Draft of *FASB Statement No. 8* [section 1083] indicated that transition under that Statement

[*] Amended, effective January 1, 1978, by FASB Statement No. 20. (See section 1084.)

<sup>14</sup> For enterprises having fiscal years of 52 or 53 weeks instead of the calendar year, this Statement shall be effective for fiscal years beginning in late December 1975.

<sup>15</sup> Pro forma disclosures required by paragraphs 19(d) and 21 of *APB Opinion No. 20* [sections 1051.19(d) and 1051.21] are not applicable.
would be required in accordance with paragraphs 19-21, 25, and 39 of APB Opinion No. 20 [sections 1051.19-.21, 1051.25, and 1051.39] (viz., to include in the determination of net income in the year of change the effect of the accounting change), in the final Statement, the Board concluded that prior period restatement is the preferable method to provide useful information about foreign currency transactions and foreign operations for comparing financial data for a number of periods. In Appendix D, “Basis for Conclusions,” of that Statement, paragraphs 240 and 241 [sections 1083.240 and 1083.241] read as follows:

The Board concluded that because of the various methods of translation or of recognition of exchange gains and losses now followed in practice and because of the complex nature of the translation process, a prospective method of transition is not feasible. The Board considered whether the transition should be by prior period restatement or by cumulative effect adjustment (the method specified in the Exposure Draft). The Board concluded that prior period restatement is the preferable method to provide useful information about foreign currency transactions and foreign operations for purposes of comparing financial data for periods after the effective date of this Statement with data presented for earlier periods.

The Board recognizes, however, that the procedures called for by this Statement may sometimes differ significantly from procedures followed in previous periods. In addition, restatement requires the availability of records or information that an enterprise may no longer have or that its past procedures did not require. Therefore, if the effect of the restatement on all individual periods presented cannot be computed or reasonably estimated, the cumulative effect adjustment method shall be used in accordance with paragraph .036.

Reconsideration of the Transition Method of Section 4311

.06 In considering and resolving the issue of transition in FASB Statement No. 8 [section 1083], the Board was mindful that there were similarities in characteristics of certain accounts affected by FASB Statement No. 8 [section 1083] and FASB Statement No. 5 [section 4311]. As indicated in paragraph 104 of FASB Statement No. 5 [section 4311.104], one of the factors that led the Board to conclude that use of the cumulative effect method would be preferable to restatement of financial statements for prior periods was its concern about the cases in which there might be significant difficulties in determining the degree of probability and estimability that existed in the prior periods. After reconsideration of the differences in the transition methods required by FASB Statement Nos. 5 and 8 [sections 4311 and 1083] and the factors that led the Board to reach different conclusions on transition in those two Statements, the Board has concluded that the cumulative effect method should not be
required as it now is by *FASB Statement No. 5* [section 4311] in those cases in which the difficulties of determining probability and estimability retroactively are not present. On reconsideration of all the circumstances, the Board has concluded that, in order to provide the most useful information, it is preferable for an enterprise adopting *FASB Statement No. 5* [section 4311] to restate its financial statements for as many immediately preceding periods as is practicable in accordance with the revised transition method set forth in paragraph .10 of this Statement.

.07 Some enterprises elected to apply *FASB Statement No. 5* [section 4311] prior to its effective date (as encouraged in paragraph 20 of the Statement [section 4311.20]) and issued annual or interim financial statements or financial summaries or other data derived therefrom using the cumulative effect method of transition. The Board considered whether those enterprises should now be required to conform to the method of transition to *FASB Statement No. 5* [section 4311] specified by this Statement. Although the Board strongly encourages those enterprises to restate their financial statements in a manner similar to that required of enterprises that did not elect early application, it has concluded that it should not require them to do so.

.08 An Exposure Draft of a proposed Statement on "Accounting for Contingencies—Transition Method" was issued on October 31, 1975. Forty-five letters were received in response to that Exposure Draft.

.09 The Board concluded that on the basis of existing data it could make an informed decision on the matter addressed in this Statement without a public hearing and that the effective date in paragraph .11 is advisable.

**STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING**

**Amendment to Section 4311**

.10 Paragraph 20 of *FASB Statement No. 5* [section 4311.20] is amended to read as follows:

*FASB Statement No. 5* [section 4311] shall be effective for fiscal years beginning on or after July 1, 1975, although earlier application is encouraged. Thereafter, if financial statements for periods before the effective date, and financial summaries or other data derived therefrom, are presented, they shall be restated, if practicable, to conform to the provisions of paragraphs 8 or 14 of *FASB Statement No. 5* [section 4311.08 or 4311.14].* In the year that the Statement is

---

*This does not alter the accounting for changes in estimates—see paragraph 31 of *APB Opinion No. 20* [section 1051.31].*
first applied, the financial statements shall disclose the nature of any restatement and its effect on income before extraordinary items, net income, and related per share amounts for each period restated. If restatement of financial statements or summaries for all prior periods presented is not practicable, information presented shall be restated for as many consecutive periods immediately preceding the effective date of *FASB Statement No. 5* [section 4311] as is practicable, and the cumulative effect of applying paragraph 8 or 14 [sections 4311.08 or 4311.14] on the retained earnings at the beginning of the earliest period restated (or at the beginning of the period in which the Statement is first applied if it is not practicable to restate any prior periods) shall be included in determining net income of that period (see paragraph 20 of *APB Opinion No. 20* [section 1051.20]).**

The effect on income before extraordinary items, net income, and related per share amounts of applying *FASB Statement No. 5* [section 4311] in a period in which the cumulative effect is included in determining net income shall be disclosed for that period, and the reason for not restating all of the prior periods presented shall be explained. Reclassification of an appropriation of retained earnings to comply with paragraph 15 of *FASB Statement No. 5* [section 4311.15] shall be made in any financial statements for periods before the effective date of the Statement, or financial summaries or other data derived therefrom, that are presented after the effective date of the Statement.

**Effective Date and Transition**

.11 This amendment to *FASB Statement No. 5* [section 4311] shall be effective retroactively to the effective date of *FASB Statement No. 5* [section 4311] except that enterprises that have issued financial statements for annual or interim periods, or financial summaries or other data derived therefrom, prior to January 1, 1976 based on the original transition requirement in paragraph 20 of *FASB Statement No. 5* [section 4311.20] are strongly encouraged but not required to comply with this Statement when those financial statements or financial summaries or other data derived therefrom are subsequently presented for the first time on or after January 1, 1976.

---

**The provisions of this Statement need not be applied to immaterial items.**

---

**Pro forma disclosures required by paragraphs 19(d) and 21 of *APB Opinion No. 20* [sections 1051.19(d) and 1051.21] are not applicable.**

AC Section 5111

Receivables from Officers, Employees or Affiliated Companies

[Source: ARB No. 43, Chap. 1A, Par. 5.]

Issue date, unless otherwise indicated:

1934

.01 Notes or accounts receivable due from officers, employees, or affiliated companies must be shown separately and not included under a general heading such as notes receivable or accounts receivable.

The next page is 9341.
Whenever the operation of a business includes the ownership of a stock of goods, it is necessary for adequate financial accounting purposes that inventories be properly compiled periodically and recorded in the accounts. Such inventories are required both for the statement of financial position and for the periodic measurement of income.

This section sets forth the general principles applicable to the pricing of inventories of mercantile and manufacturing enterprises. Its conclusions are not directed to or necessarily applicable to noncommercial businesses or to regulated utilities.

**STATEMENT 1**

The term *inventory* is used herein to designate the aggregate of those items of tangible personal property which (1) are held for sale in the ordinary course of business, (2) are in process of production for such sale, or (3) are to be currently consumed in the production of goods or services to be available for sale.

**Discussion**

The term *inventory* embraces goods awaiting sale (the merchandise of a trading concern and the finished goods of a manufacturer), goods in the course of production (work in process), and goods to be consumed directly or indirectly in production (raw materials and supplies). This definition of inventories excludes long-term assets subject to depreciation accounting, or goods which, when put into use, will be so classified. The fact that a depreciable asset is retired from regular use and held for sale does not indicate that the item should be classified as part of the inventory. Raw materials and supplies purchased for

---

1 Prudent reliance upon perpetual inventory records is not precluded.
production may be used or consumed for the construction of long-term assets or other purposes not related to production, but the fact that inventory items representing a small portion of the total may not be absorbed ultimately in the production process does not require separate classification. By trade practice, operating materials and supplies of certain types of companies such as oil producers are usually treated as inventory.

STATEMENT 2

A major objective of accounting for inventories is the proper determination of income through the process of matching appropriate costs against revenues.

Discussion

.04 An inventory has financial significance because revenues may be obtained from its sale, or from the sale of the goods or services in whose production it is used. Normally such revenues arise in a continuous repetitive process or cycle of operations by which goods are acquired and sold, and further goods are acquired for additional sales. In accounting for the goods in the inventory at any point of time, the major objective is the matching of appropriate costs against revenues in order that there may be a proper determination of the realized income. Thus, the inventory at any given date is the balance of costs applicable to goods on hand remaining after the matching of absorbed costs with concurrent revenues. This balance is appropriately carried to future periods provided it does not exceed an amount properly chargeable against the revenues expected to be obtained from ultimate disposition of the goods carried forward. In practice, this balance is determined by the process of pricing the articles comprised in the inventory.

STATEMENT 3

The primary basis of accounting for inventories is cost, which has been defined generally as the price paid or consideration given to acquire an asset. As applied to inventories, cost means in principle the sum of the applicable expenditures
and charges directly or indirectly incurred in bringing an article to its existing condition and location.

**Discussion**

.05 In keeping with the principle that accounting is primarily based on cost, there is a presumption that inventories should be stated at cost. The definition of cost as applied to inventories is understood to mean acquisition and production cost, and its determination involves many problems. Although principles for the determination of inventory costs may be easily stated, their application, particularly to such inventory items as work in process and finished goods, is difficult because of the variety of problems encountered in the allocation of costs and charges. For example, under some circumstances, items such as idle facility expense, excessive spoilage, double freight, and re-handling costs may be so abnormal as to require treatment as current period charges rather than as a portion of the inventory cost. Also, general and administrative expenses should be included as period charges, except for the portion of such expenses that may be clearly related to production and thus constitute a part of inventory costs (product charges). Selling expenses constitute no part of inventory costs. It should also be recognized that the exclusion of all overheads from inventory costs does not constitute an accepted accounting procedure. The exercise of judgment in an individual situation involves a consideration of the adequacy of the procedures of the cost accounting system in use, the soundness of the principles thereof, and their consistent application.

**STATEMENT 4**

Cost for inventory purposes may be determined under any one of several assumptions as to the flow of cost factors (such as first-in first-out, average, and last-in first-out); the major objective in selecting a method should be to choose the one which, under the circumstances, most clearly reflects periodic income.

---

*In the case of goods which have been written down below cost at the close of a fiscal period, such reduced amount is to be considered the cost for subsequent accounting purposes.*

AICPA Professional Standards  AC § 5121.05
Discussion

.06 The cost to be matched against revenue from a sale may not be the identified cost of the specific item which is sold, especially in cases in which similar goods are purchased at different times and at different prices. While in some lines of business specific lots are clearly identified from the time of purchase through the time of sale and are costed on this basis, ordinarily the identity of goods is lost between the time of acquisition and the time of sale. In any event, if the materials purchased in various lots are identical and interchangeable, the use of identified cost of the various lots may not produce the most useful financial statements. This fact has resulted in the development of general acceptance of several assumptions with respect to the flow of cost factors (such as first-in first-out, average, and last-in first-out) to provide practical bases for the measurement of periodic income. In some situations a reversed mark-up procedure of inventory pricing, such as the retail inventory method, may be both practical and appropriate. The business operations in some cases may be such as to make it desirable to apply one of the acceptable methods of determining cost to one portion of the inventory or components thereof and another of the acceptable methods to other portions of the inventory.

.07 Although selection of the method should be made on the basis of the individual circumstances, it is obvious that financial statements will be more useful if uniform methods of inventory pricing are adopted by all companies within a given industry.

STATEMENT 5

A departure from the cost basis of pricing the inventory is required when the utility of the goods is no longer as great as its cost. Where there is evidence that the utility of goods, in their disposal in the ordinary course of business, will be less than

---

3 Standard costs are acceptable if adjusted at reasonable intervals to reflect current conditions so that at the balance-sheet date standard costs reasonably approximate costs computed under one of the recognized bases. In such cases descriptive language should be used which will express this relationship, as, for instance, “approximate costs determined on the first-in first-out basis,” or, if it is desired to mention standard costs, “at standard costs, approximating average costs.”
Inventory Pricing

cost, whether due to physical deterioration, obsolescence, changes in price levels, or other causes, the difference should be recognized as a loss of the current period. This is generally accomplished by stating such goods at a lower level commonly designated as market.

Discussion

.08 Although the cost basis ordinarily achieves the objective of a proper matching of costs and revenues, under certain circumstances cost may not be the amount properly chargeable against the revenues of future periods. A departure from cost is required in these circumstances because cost is satisfactory only if the utility of the goods has not diminished since their acquisition; a loss of utility is to be reflected as a charge against the revenues of the period in which it occurs. Thus, in accounting for inventories, a loss should be recognized whenever the utility of goods is impaired by damage, deterioration, obsolescence, changes in price levels, or other causes. The measurement of such losses is accomplished by applying the rule of pricing inventories at cost or market, whichever is lower. This provides a practical means of measuring utility and thereby determining the amount of the loss to be recognized and accounted for in the current period.

STATEMENT 6

As used in the phrase lower of cost or market the term market means current replacement cost (by purchase or by reproduction, as the case may be) except that:

(1) Market should not exceed the net realizable value (i.e., estimated selling price in the ordinary course of business less reasonably predictable costs of completion and disposal); and

(2) Market should not be less than net realizable value reduced by an allowance for an approximately normal profit margin.

The terms cost or market, whichever is lower and lower of cost or market are used synonymously in general practice and in this section. The committee does not express any preference for either of the two alternatives.
Discussion

.09 The rule of cost or market, whichever is lower is intended to provide a means of measuring the residual usefulness of an inventory expenditure. The term market is therefore to be interpreted as indicating utility on the inventory date and may be thought of in terms of the equivalent expenditure which would have to be made in the ordinary course at that date to procure corresponding utility. As a general guide, utility is indicated primarily by the current cost of replacement of the goods as they would be obtained by purchase or reproduction. In applying the rule, however, judgment must always be exercised and no loss should be recognized unless the evidence indicates clearly that a loss has been sustained. There are therefore exceptions to such a standard. Replacement or reproduction prices would not be appropriate as a measure of utility when the estimated sales value, reduced by the costs of completion and disposal, is lower, in which case the realizable value so determined more appropriately measures utility. Furthermore, where the evidence indicates that cost will be recovered with an approximately normal profit upon sale in the ordinary course of business, no loss should be recognized even though replacement or reproduction costs are lower. This might be true, for example, in the case of production under firm sales contracts at fixed prices, or when a reasonable volume of future orders is assured at stable selling prices.

.10 Because of the many variations of circumstances encountered in inventory pricing, Statement 6 is intended as a guide rather than a literal rule. It should be applied realistically in the light of the objectives expressed in this section and with due regard to the form, content, and composition of the inventory. The committee considers, for example, that the retail inventory method, if adequate markdowns are currently taken, accomplishes the objectives described herein. It also recognizes that, if a business is expected to lose money for a sustained period, the inventory should not be written down to offset a loss inherent in the subsequent operations.
Depending on the character and composition of the inventory, the rule of cost or market, whichever is lower may properly be applied either directly to each item or to the total of the inventory (or, in some cases, to the total of the components of each major category). The method should be that which most clearly reflects periodic income.

Discussion

.11 The purpose of reducing inventory to market is to reflect fairly the income of the period. The most common practice is to apply the lower of cost or market rule separately to each item of the inventory. However, if there is only one end-product category the cost utility of the total stock—the inventory in its entirety—may have the greatest significance for accounting purposes. Accordingly, the reduction of individual items to market may not always lead to the most useful result if the utility of the total inventory to the business is not below its cost. This might be the case if selling prices are not affected by temporary or small fluctuations in current costs of purchase or manufacture. Similarly, where more than one major product or operational category exists, the application of the cost or market, whichever is lower rule to the total of the items included in such major categories may result in the most useful determination of income.

.12 When no loss of income is expected to take place as a result of a reduction of cost prices of certain goods because others forming components of the same general categories of finished products have a market equally in excess of cost, such components need not be adjusted to market to the extent that they are in balanced quantities. Thus, in such cases, the rule of cost or market, whichever is lower may be applied directly to the totals of the entire inventory, rather than to the individual inventory items, if they enter into the same category of finished product and if they are in balanced quantities, provided the procedure is applied consistently from year to year.

.13 To the extent, however, that the stocks of particular materials or components are excessive in relation to others, the more widely recognized procedure of applying
the lower of cost or market to the individual items constituting the excess should be followed. This would also apply in cases in which the items enter into the production of unrelated products or products having a material variation in the rate of turnover. Unless an effective method of classifying categories is practicable, the rule should be applied to each item in the inventory.

.14 When substantial and unusual losses result from the application of this rule it will frequently be desirable to disclose the amount of the loss in the income statement as a charge separately identified from the consumed inventory costs described as cost of goods sold.

STATEMENT 8

The basis of stating inventories must be consistently applied and should be disclosed in the financial statements; whenever a significant change is made therein, there should be disclosure of the nature of the change and, if material, the effect on income in accordance with section 1051, Accounting Changes. [As amended, effective for fiscal periods beginning after July 31, 1971 by APB Opinion No. 20.]

Discussion

.15 While the basis of stating inventories does not affect the over-all gain or loss on the ultimate disposition of inventory items, any inconsistency in the selection or employment of a basis may improperly affect the periodic amounts of income or loss. Because of the common use and importance of periodic statements, a procedure adopted for the treatment of inventory items should be consistently applied in order that the results reported may be fairly allocated as between years. A change of such basis may have an important effect upon the interpretation of the financial statements both before and after that change, and hence, in the event of a change, a full disclosure of its nature and of its effect, if material, upon income should be made. (See also section 2031.09.)

STATEMENT 9

Only in exceptional cases may inventories properly be stated above cost. For example, pre-
cious metals having a fixed monetary value with no substantial cost of marketing may be stated at such monetary value; any other exceptions must be justifiable by inability to determine appropriate approximate costs, immediate marketability at quoted market price, and the characteristic of unit interchangeability. Where goods are stated above cost this fact should be fully disclosed.

Discussion

.16 It is generally recognized that income accrues only at the time of sale, and that gains may not be anticipated by reflecting assets at their current sales prices. For certain articles, however, exceptions are permissible. Inventories of gold and silver, when there is an effective government-controlled market at a fixed monetary value, are ordinarily reflected at selling prices. A similar treatment is not uncommon for inventories representing agricultural, mineral, and other products, units of which are interchangeable and have an immediate marketability at quoted prices and for which appropriate costs may be difficult to obtain. Where such inventories are stated at sales prices, they should of course be reduced by expenditures to be incurred in disposal, and the use of such basis should be fully disclosed in the financial statements.

STATEMENT 10

Accrued net losses on firm purchase commitments for goods for inventory, measured in the same way as are inventory losses, should, if material, be recognized in the accounts and the amounts thereof separately disclosed in the income statement.

Discussion

.17 The recognition in a current period of losses arising from the decline in the utility of cost expenditures is equally applicable to similar losses which are expected to arise from firm, uncancellable, and unhedged commitments for the future purchase of inventory items. The net loss on such commitments should be measured in the same way as are inventory losses and, if material, should be recognized.
in the accounts and separately disclosed in the income statement. The utility of such commitments is not impaired, and hence there is no loss, when the amounts to be realized from the disposition of the future inventory items are adequately protected by firm sales contracts or when there are other circumstances which reasonably assure continuing sales without price decline.
AC Section 5131

The Equity Method of Accounting for Investments in Common Stock

[Source: APB Opinion No. 18, as amended.]

Effective for fiscal periods beginning after December 31, 1971, unless otherwise indicated.

INTRODUCTION

.01 The Accounting Principles Board expresses in this section its views on the equity method of accounting for investments in common stock. This section clarifies the applicability of the equity method of accounting (paragraph .06b) to investments in common stock of subsidiaries and extends the applicability of the equity method of accounting to investments in common stock of corporate joint ventures and certain other investments in common stock. The section also applies to investments reported in parent-company financial statements when such statements are prepared for issuance to stockholders as the financial statements of the primary reporting entity.2

.02 This section does not apply to investments in common stock held by (a) investment companies registered under the Investment Company Act of 1940 or investment companies which would be included under the Act (including small business investment companies) except that the number of stockholders is limited and the securities are not offered publicly, or (b) nonbusiness entities, such as estates, trusts and individuals. The section also does not apply to investments in common stock other than those described in the section.

.03 Several terms are used in this section as indicated:

a. “Investor” refers to a business entity that holds an investment in voting stock of another company.

1 See paragraph .21.
2 An accounting research study on the broader subject of accounting for intercorporate investments is now in process and will encompass the matters on parent-company financial statements and on consolidated financial statements covered in section 2051 and in section 1081.
b. "Investee" refers to a corporation that issued voting stock held by an investor.

c. "Subsidiary" refers to a corporation which is controlled, directly or indirectly, by another corporation. The usual condition for control is ownership of a majority (over 50%) of the outstanding voting stock. The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other stockholders or by court decree.

d. "Corporate joint venture" refers to a corporation owned and operated by a small group of businesses (the "joint venturers") as a separate and specific business or project for the mutual benefit of the members of the group. A government may also be a member of the group. The purpose of a corporate joint venture frequently is to share risks and rewards in developing a new market, product or technology; to combine complementary technological knowledge; or to pool resources in developing production or other facilities. A corporate joint venture also usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An entity which is a subsidiary of one of the "joint venturers" is not a corporate joint venture. The ownership of a corporate joint venture seldom changes, and its stock is usually not traded publicly. A minority public ownership, however, does not preclude a corporation from being a corporate joint venture.

e. "Dividends" refers to dividends paid or payable in cash, other assets, or another class of stock and does not include stock dividends or stock splits.

f. "Earnings or losses of an investee" and "financial position of an investee" refer to net income (or net loss) and financial position of an investee determined in accordance with accounting principles generally accepted in the United States.
DISCUSSION

.04 Section 2051.02 states that: "There is a presumption that consolidated statements are more meaningful than separate statements and that they are usually necessary for a fair presentation when one of the companies in the group directly or indirectly has a controlling financial interest in the other companies." Consolidated financial statements combine the assets, liabilities, revenues and expenses of subsidiaries with the corresponding items of the parent company. Intercompany items are eliminated to avoid double counting and prematurely recognizing income. Consolidated financial statements report the financial position and results of operations of the parent company and its subsidiaries as an economic entity. In practice, consolidation has been limited to subsidiary companies, although under certain circumstances valid reasons may exist for omitting a subsidiary from consolidation.3

.05 Investments are sometimes held in stock of companies other than subsidiaries, namely corporate joint ventures and other noncontrolled corporations. These investments are usually accounted for by one of two methods—the cost method or the equity method. While practice varies to some extent, the cost method is generally followed for most investments in noncontrolled corporations, in some corporate joint ventures, and to a lesser extent in unconsolidated subsidiaries, particularly foreign. The equity method is generally followed for investments in unconsolidated domestic subsidiaries, some corporate joint ventures and some noncontrolled corporations. An adaptation of the cost method, the lower of cost or market, has also been followed for investments in certain marketable securities if a decline in market value is evidently not a mere temporary condition.4

.06 A summary of the two principal methods of accounting for the investments in common stock discussed in this section follows:

a. The cost method. An investor records an investment in the stock of an investee at cost, and recognizes as income dividends received that are distributed from net accumulated earnings of the investee since the date of acquisition by the investor. The net accumu-

3 See section 2051.03-.04 and section 1081.08.
4 Modified by section 5132, Accounting for Certain Marketable Securities.
lated earnings of an investee subsequent to the date of investment are recognized by the investor only to the extent distributed by the investee as dividends. Dividends received in excess of earnings subsequent to the date of investment are considered a return of investment and are recorded as reductions of cost of the investment. A series of operating losses of an investee or other factors may indicate that a decrease in value of the investment has occurred which is other than temporary and should accordingly be recognized.*

b. The equity method. An investor initially records an investment in the stock of an investee at cost, and adjusts the carrying amount of the investment to recognize the investor's share of the earnings or losses of the investee after the date of acquisition. The amount of the adjustment is included in the determination of net income by the investor, and such amount reflects adjustments similar to those made in preparing consolidated statements including adjustments to eliminate intercompany gains and losses, and to amortize, if appropriate, any difference between investor cost and underlying equity in net assets of the investee at the date of investment. The investment of an investor is also adjusted to reflect the investor's share of changes in the investee's capital. Dividends received from an investee reduce the carrying amount of the investment. A series of operating losses of an investee or other factors may indicate that a decrease in value of the investment has occurred which is other than temporary and which should be recognized even though the decrease in value is in excess of what would otherwise be recognized by application of the equity method.

.07 Under the cost method of accounting for investments in common stock, dividends are the basis for recognition by an investor of earnings from an investment. Financial statements of an investor prepared under the cost method may not reflect substantial changes in the affairs of an investee. Dividends included in income of an investor for a period may be unrelated to the earnings (or losses) of

* Modified by section 5132, Accounting for Certain Marketable Securities.
an investee for that period. For example, an investee may pay no dividends for several periods and then pay dividends substantially in excess of the earnings of a period. Losses of an investee of one period may be offset against earnings of another period because the investor reports neither in results of operations at the time they are reported by the investee. Some dividends received from an investee do not cover the carrying costs of an investment whereas the investor's share of the investee's earnings more than covers those costs. Those characteristics of the cost method may prevent an investor from reflecting adequately the earnings related to an investment in common stock—either cumulatively or in the appropriate periods.

.08 Corporations have increasingly established or participated in corporate joint venture arrangements or taken substantial positions (but less than majority ownership) in other corporations. The significant increase in the number of intercorporate investments of less than majority ownership of voting stock has broadened interest in reflecting earnings from investments on a more timely basis than by receipt of dividends. Some hold that such investments should be accounted for at market value and that this basis of accounting is most appropriate, whether market value is lower than or higher than cost. Others hold that the equity method is the most appropriate basis of accounting for some or all investments of that type.

.09 Under the market value method, an investor recognizes both dividends received and changes in market prices of the stock of the investee company as earnings or losses from an investment. Dividends received are accounted for as part of income from the investment. In addition, an investor adjusts the carrying amount of its investment based on the market value of the investee’s stock. Change in market value since the preceding reporting date is included in results of operations of the investor. Reporting of investments in common stock at market value (or at approximate fair value if market value is not available) is considered to meet most closely the objective of reporting the economic consequences of holding the investment. However, the market value method is now used only in special circumstances. While the Board believes the market value method provides the best presentation of investments
in some situations, it concludes that further study is necessary before the market value method is extended beyond current practice.

.10 Under the equity method, an investor recognizes its share of the earnings or losses of an investee in the periods for which they are reported by the investee in its financial statements rather than in the period in which an investee declares a dividend. An investor adjusts the carrying amount of an investment for its share of the earnings or losses of the investee subsequent to the date of investment and reports the recognized earnings or losses in income. Dividends received from an investee reduce the carrying amount of the investment. Thus, the equity method is an appropriate means of recognizing increases or decreases measured by generally accepted accounting principles in the economic resources underlying the investments. Furthermore, the equity method of accounting more closely meets the objectives of accrual accounting than does the cost method since the investor recognizes its share of the earnings and losses of the investee in the periods in which they are reflected in the accounts of the investee.

.11 Under the equity method, an investment in common stock is generally shown in the balance sheet of an investor as a single amount. Likewise, an investor's share of earnings or losses from its investment is ordinarily shown in its income statement as a single amount.

.12 The equity method tends to be most appropriate if an investment enables the investor to influence the operating or financial decisions of the investee. The investor then has a degree of responsibility for the return on its investment, and it is appropriate to include in the results of operations of the investor its share of the earnings or losses of the investee. Influence tends to be more effective as the investor's percent of ownership in the voting stock of the investee increases. Investments of relatively small percentages of voting stock of an investee tend to be passive in nature and enable the investor to have little or no influence on the operations of the investee.

.13 Some hold the view that neither the market value method nor the equity method is appropriate accounting for investments in common stock where the investor holds less
The Equity Method for Investments in Common Stock

than majority ownership of the voting stock. They would account for such investments at cost. Under that view the investor is not entitled to recognize earnings on its investment until a right to claim the earnings arises, and that claim arises only to the extent dividends are declared. The investor is considered to have no earnings on its investment unless it is in a position to control the distribution of earnings. Likewise, an investment or an investor’s operations are not affected by losses of an investee unless those losses indicate a loss in value of the investment that should be recognized.

OPINION

.14 The Board reaffirms the conclusion that investors should account for investments in common stock of unconsolidated domestic subsidiaries by the equity method in consolidated financial statements, and the Board now extends this conclusion to investments in common stock of all unconsolidated subsidiaries (foreign as well as domestic) in consolidated financial statements. The equity method is not, however, a valid substitute for consolidation and should not be used to justify exclusion of a subsidiary when consolidation is otherwise appropriate. The Board also concludes that parent companies should account for investments in the common stock of subsidiaries by the equity method in parent-company financial statements prepared for issuance to stockholders as the financial statements of the primary reporting entity.4

[.15] [Superseded, effective January 1, 1977, by FASB Statement No. 13] (see section 4053).

.16 The Board concludes that the equity method best enables investors in corporate joint ventures to reflect the underlying nature of their investment in those ventures.

4 Section 2051.03-04 and section 1081.08 described, among other things, the conditions under which a subsidiary should or might not be consolidated. The limitations on consolidation described in section 2051.03 and section 1081.08, should also be applied as limitations to the use of the equity method. The Board has deferred further consideration of the treatment of foreign subsidiaries in consolidated statements and the treatment of all subsidiaries in parent-company statements that are not prepared for issuance to stockholders as the financial statements of the primary reporting entity until the accounting research study on intercorporate investments is published. In the meantime, the provisions of section 1081 continue in effect. The conclusions in paragraph .14 of this section apply to investments in foreign subsidiaries unless those companies are operating under conditions of exchange restrictions, controls or other uncertainties of a type that would affect decisions as to consolidation or application of the equity method; if those conditions exist, the cost method should be followed.
Therefore, investors should account for investments in common stock of corporate joint ventures by the equity method, both in consolidated financial statements and in parent-company financial statements prepared for issuance to stockholders as the financial statements of the primary reporting entity.

The Board concludes that the equity method of accounting for an investment in common stock should also be followed by an investor whose investment in voting stock gives it the ability to exercise significant influence over operating and financial policies of an investee even though the investor holds 50% or less of the voting stock. Ability to exercise that influence may be indicated in several ways, such as representation on the board of directors, participation in policy making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency. Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings, but substantial or majority ownership of the voting stock of an investee by another investor does not necessarily preclude the ability to exercise significant influence by the investor. The Board recognizes that determining the ability of an investor to exercise such influence is not always clear and applying judgment is necessary to assess the status of each investment. In order to achieve a reasonable degree of uniformity in application, the Board concludes that an investment (direct or indirect) of 20% or more of the voting stock of an investee should lead to a presumption that in the absence of evidence to the contrary an investor has the ability to

Footnote 5 to paragraph .15 superseded by FASB Statement No. 13. The equity method should not be applied to the investments described in this paragraph insofar as the limitations on the use of the equity method outlined in footnote 4 would be applicable to investments other than those in subsidiaries.
exercise significant influence over an investee. Conversely, an investment of less than 20% of the voting stock of an investee should lead to a presumption that an investor does not have the ability to exercise significant influence unless such ability can be demonstrated. When the equity method is appropriate, it should be applied in consolidated financial statements and in parent-company financial statements prepared for issuance to stockholders as the financial statements of the primary reporting entity.\footnote{The equity method should not be applied to the investments described in this paragraph insofar as the limitations on the use of the equity method outlined in footnote 4 would be applicable to investments other than those in subsidiaries.}

.18 An investor's voting stock interest in an investee should be based on those currently outstanding securities whose holders have present voting privileges. Potential voting privileges which may become available to holders of securities of an investee should be disregarded. An investor's \textit{share of the earnings or losses} of an investee should be based on the shares of common stock held by an investor without recognition of securities of the investee which are designated as "common stock equivalents" under section 2011.\footnote{Section 2011.39 states: "The designation of securities as common stock equivalents in this section is solely for the purpose of determining primary earnings per share. No changes from present practices are recommended in the accounting for such securities, in their presentation within the financial statements or in the manner of determining net assets per common share. Information is available in the financial statements and elsewhere for readers to make judgments as to the present and potential status of the various securities outstanding." Sections 2011A.20-24 discuss the treatment of common stock equivalents of subsidiaries in computing earnings per share of a parent company. The provisions of those paragraphs also apply to investments in common stock of corporate joint ventures and investee companies accounted for under the equity method. Additional exceptions may be found in FASB Statement No. 12, par. 9 [AC section 5132.09] and FASB Statement No. 34, par. 15 [AC section 5155.15].}

.19 Applying the equity method. The difference between consolidation and the equity method lies in the details reported in the financial statements. Thus, an investor's net income for the period and its stockholders' equity at the end of the period are the same whether an investment in a subsidiary is accounted for under the equity method or the subsidiary is consolidated (except as indicated in paragraph .19 i*). The procedures set forth below should be followed by an investor in applying the equity method of accounting to investments in common stock of unconsoli-
dated subsidiaries, corporate joint ventures, and other investees which qualify for the equity method:

a. Intercompany profits and losses should be eliminated until realized by the investor or investee as if a subsidiary, corporate joint venture or investee company were consolidated.

b. A difference between the cost of an investment and the amount of underlying equity in net assets of an investee should be accounted for as if the investee were a consolidated subsidiary.

c. The investment(s) in common stock should be shown in the balance sheet of an investor as a single amount, and the investor’s share of earnings or losses of an investee(s) should ordinarily be shown in the income statement as a single amount except for the extraordinary items as specified in (d) below.

d. The investor’s share of extraordinary items and its share of prior-period adjustments reported in the financial statements of the investee in accordance with sections 2010 and 2012 should be classified in a similar manner unless they are immaterial in the income statement of the investor. [As amended, effective for events and transactions occurring after September 30, 1973 by APB Opinion No. 30.]

e. A transaction of an investee of a capital nature that affects the investor’s share of stockholders’ equity of the investee should be accounted for as if the investee were a consolidated subsidiary.

f. Sales of stock of an investee by an investor should be accounted for as gains or losses equal to the difference at the time of sale between selling price and carrying amount of the stock sold.

g. If financial statements of an investee are not sufficiently timely for an investor to apply the equity method currently, the investor ordinarily should record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting should be consistent from period to period.

*For investments made prior to November 1, 1970, the effective date of section 5141, investors are not required to amortize any goodwill in the absence of evidence that the goodwill has a limited term of existence; prospective amortization of such goodwill is encouraged.
h. A loss in value of an investment which is other than a temporary decline should be recognized the same as a loss in value of other long-term assets. Evidence of a loss in value might include, but would not necessarily be limited to, absence of an ability to recover the carrying amount of the investment or inability of the investee to sustain an earnings capacity which would justify the carrying amount of the investment. A current fair value of an investment that is less than its carrying amount may indicate a loss in value of the investment. However, a decline in the quoted market price below the carrying amount or the existence of operating losses is not necessarily indicative of a loss in value that is other than temporary. All are factors to be evaluated.

i. An investor’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by the equity method plus advances made by the investor. The investor ordinarily should discontinue applying the equity method when the investment (and net advances) is reduced to zero and should not provide for additional losses unless the investor has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee. If the investee subsequently reports net income, the investor should resume applying the equity method only after its share of that net income equals the share of net losses not recognized during the period the equity method was suspended.

[j.] [Superseded, effective for fiscal periods beginning after December 31, 1971 by APB Opinion No. 23.]

k. When an investee has outstanding cumulative preferred stock, an investor should compute its share of earnings (losses) after deducting the investee’s preferred dividends, whether or not such dividends are declared.

---

9 An investor should, however, provide for additional losses when the imminent return to profitable operations by an investee appears to be assured. For example, a material, nonrecurring loss of an isolated nature may reduce an investment below zero even though the underlying profitable operating pattern of an investee is unimpaired.

10 See section 4095.
I. An investment in voting stock of an investee company may fall below the level of ownership described in paragraph .17 from sale of a portion of an investment by the investor, sale of additional stock by an investee, or other transactions and the investor may thereby lose the ability to influence policy, as described in that paragraph. An investor should discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for the equity method. The earnings or losses that relate to the stock retained by the investor and that were previously accrued should remain as a part of the carrying amount of the investment. The investment account should not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed his share of earnings for such periods should be applied in reduction of the carrying amount of the investment (see paragraph .06a).

m. An investment in common stock of an investee that was previously accounted for on other than the equity method may become qualified for use of the equity method by an increase in the level of ownership described in paragraph .17 (i.e., acquisition of additional voting stock by the investor, acquisition or retirement of voting stock by the investee, or other transactions). When an investment qualifies
for use of the equity method, the investor should adopt the equity method of accounting. The investment, results of operations (current and prior periods presented), and retained earnings of the investor should be adjusted retroactively in a manner consistent with the accounting for a step-by-step acquisition of a subsidiary.

n. The carrying amount of an investment in common stock of an investee that qualifies for the equity method of accounting as described in subparagraph (m) may differ from the underlying equity in net assets of the investee. The difference should affect the determination of the amount of the investor's share of earnings or losses of an investee as if the investee were a consolidated subsidiary. However, if the investor is unable to relate the difference to specific accounts of the investee, the difference should be considered to be goodwill and amortized over a period not to exceed forty years, in accordance with section 5141.13

120 Disclosures. The significance of an investment to the investor's financial position and results of operations should be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. If the investor has more than one investment in common stock, disclosures wholly or partly on a combined basis may be appropriate. The following disclosures are generally applicable to the equity method of accounting for investments in common stock:

a. Financial statements of an investor should disclose parenthetically, in notes to financial statements, or in separate statements or schedules (1) the name of each investee and percentage of ownership of common stock, (2) the accounting policies of the investor with respect to investments in common stock,13 and

13 For investments made prior to November 1, 1970, the effective date of section 5141, investors are not required to amortize any goodwill in the absence of evidence that the goodwill has a limited term of existence; prospective amortization of such goodwill is encouraged.

12 Disclosure should include the names of any significant investee corporations in which the investor holds 20% or more of the voting stock, but the common stock is not accounted for on the equity method, together with the reasons why the equity method is not considered appropriate, and the names of any significant investee corporations in which the investor holds less than 20% of the voting stock and the common stock is accounted for on the equity method, together with the reasons why the equity method is considered appropriate.
(3) the difference, if any, between the amount at
which an investment is carried and the amount of
underlying equity in net assets and the accounting
treatment of the difference.

b. For those investments in common stock for which a
quoted market price is available, the aggregate
value of each identified investment based on the
quoted market price usually should be disclosed.
This disclosure is not required for investments in
common stock of subsidiaries.

c. When investments in unconsolidated subsidiaries
are, in the aggregate, material in relation to financial
position or results of operations, summarized in­
formation as to assets, liabilities, and results of op­
erations should be presented in the notes or separate
statements should be presented for such subsidiaries,
either individually or in groups, as appropriate.

d. When investments in common stock of corporate
joint ventures or other investments of 50% or less
accounted for under the equity method are, in the
aggregate, material in relation to the financial posi­
tion or results of operations of an investor, it may
be necessary for summarized information as to as­
sets, liabilities, and results of operations of the
investees to be presented in the notes or in separate
statements, either individually or in groups, as
appropriate.

e. Conversion of outstanding convertible securities,
exercise of outstanding options and warrants and
other contingent issuances of an investee may have
a significant effect on an investor’s share of reported
earnings or losses. Accordingly, material effects of
possible conversions, exercises or contingent issu­
ces should be disclosed in notes to the financial
statements of an investor.14

EFFECTIVE DATE

§ 5131.21 This section shall be effective for all fiscal periods
beginning after December 31, 1971, and should be applied
retroactively to all investments in common stock held

14 See footnote 8.
during any portion of the period for which results of operations are presented regardless of the date the investments were acquired. However, the Board encourages earlier application of the provisions of this section. Adjustments resulting from a change in accounting method to comply with this section should be treated as adjustments of prior periods, and financial statements presented for the periods affected should be restated appropriately.
INTRODUCTION AND BACKGROUND INFORMATION

.01 There has long been diversity in accounting for marketable securities. Paragraph 9, Chapter 3A, "Current Assets and Current Liabilities," of Accounting Research Bulletin (ARB) No. 43 [section 2031.09] (originally adopted as ARB No. 30 in 1947) narrowed practice somewhat by stating:

... practice varies with respect to the carrying basis for current assets such as marketable securities and inventories. In the case of marketable securities where market value is less than cost by a substantial amount and it is evident that the decline in market value is not due to a mere temporary condition, the amount to be included as a current asset should not exceed the market value.

Chapter 3A of ARB No. 43 [section 2031] did not, however, deal with the question of whether a write-up of a previous write-down might be permissible to reflect a recovery in the market. Accounting Principles Board (APB) Opinion No. 18 [section 5131], "The Equity Method of Accounting for Investments in Common Stock," dealt with accounting for investments by the equity method when the investor has "significant influence" over the investee, thus establishing accounting principles for those investments. In addition, a number of Industry Audit Guides, issued by the AICPA for certain industries, describe specialized accounting practices applied in those industries. At present, some enterprises are carrying marketable securities at cost, some at market (or variations of market), some at the lower of cost or market, and some are applying more than one of those methods to different classes of securities. During
1973 and 1974, there were substantial declines in market values of many securities. As a result, in many enterprises where securities are carried at cost, the carrying amount is in excess of current market value. In other enterprises where carrying amounts were written down to reflect the market decline, the partial recovery in the market in 1975 has given rise to a situation in which securities are being carried at amounts which are below both original cost and current market value.

.02 Concern over the lack of definitive guidance in the authoritative literature with respect to certain accounting problems accentuated by these conditions led to requests for the FASB to consider those problems on an urgent basis. The issues raised were submitted to the members of the Board’s Screening Committee on Emerging Problems, and their recommendations were weighed by the Board in arriving at its decision to proceed with a project of limited scope, based on the three questions stated in paragraph .03.

.03 The Board has concluded that the following questions concerning financial accounting and reporting for marketable securities require resolution as soon as possible:

a) Under what circumstances should marketable equity securities that are carried on a cost basis be written down below cost?

b) Should marketable equity securities that have been written down be written back up based on market recoveries or other criteria?

c) If a parent company and one or more subsidiaries or investees follow different methods of accounting for marketable securities, should any adjustments be made to conform the subsidiaries’ or investees’ methods of accounting to that of the parent company in consolidated or parent company financial statements?  

.04 An Exposure Draft of a proposed Statement on “Accounting for Certain Marketable Securities” was issued November 6, 1975, and a public hearing based on the Exposure Draft was held on December 8, 1975. The Board received 272 position papers and letters of comment in response to the Exposure Draft. Twenty presentations were made at the public hearing.

The term parent company financial statements as used in this Statement is limited to those parent company financial statements prepared for issuance as the financial statements of the primary reporting entity.
.05 This Statement does not apply to not-for-profit organizations\(^2\) or mutual life insurance companies; it does, however, apply to mutual savings banks (see paragraphs .39 and .40) as well as to other for-profit mutual enterprises. This Statement also does not apply to employee benefit plans because that subject is a separate item on the FASB's current agenda.

.06 Investments accounted for by the equity method, as described in *APB Opinion No. 18* [section 5131], are beyond the scope of this Statement except for the provisions of paragraph .18.

**STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING**

**Enterprises in Industries Not Having Specialized Accounting Practices with Respect to Marketable Securities**

.07 For purposes of applying paragraphs .08-.13 of this Statement, certain terms are defined as follows:

a) *Equity security* encompasses any instrument representing ownership shares (e.g., common, preferred, and other capital stock), or the right to acquire (e.g., warrants, rights, and call options) or dispose of (e.g., put options) ownership shares in an enterprise at fixed or determinable prices. The term does not encompass preferred stock that by its terms either must be redeemed by the issuing enterprise or is redeemable at the option of the investor, nor does it include treasury stock or convertible bonds.

b) * Marketable*, as applied to an equity security, means an equity security as to which sales prices or bid and ask prices are currently available on a national securities exchange (i.e., those registered with the Securities and Exchange Commission) or in the over-the-counter market. In the over-the-counter market, an equity security shall be considered marketable when a quotation is publicly reported by the National Association of Securities Dealers Automatic Quotations System or by the National Quotations Bureau Inc. (provided, in the latter case, that quotations are available from at least three dealers). **Equity securities traded in foreign markets**

\(^{2}\) For this purpose, not-for-profit organizations are those described in the third sentence of paragraph 5 of the Introduction to *ARB No. 43* [section 510.05].
shall be considered marketable when such markets are of a breadth and scope comparable to those referred to above. Restricted stock\textsuperscript{3} does not meet this definition.

c) *Market price* refers to the price (see paragraph .07(b)) of a single share or unit of a marketable equity security.

d) *Market value* refers to the aggregate of the market price times the number of shares or units of each marketable equity security in the portfolio. When an entity has taken positions involving short sales, sales of calls, and purchases of puts for marketable equity securities and the same securities are included in the portfolio, those contracts shall be taken into consideration in the determination of market value of the marketable equity securities.

e) *Cost* refers to the original cost of a marketable equity security unless a new cost basis has been assigned based on recognition of an impairment of value that was deemed other than temporary or as the result of a transfer between current and noncurrent classifications as described in paragraph .10. In such cases, the new cost basis shall be the cost for the purposes of this Statement.

f) The *valuation allowance* for a marketable equity securities portfolio represents the net unrealized loss (the amount by which aggregate cost exceeds market value) in that portfolio.

g) The *carrying amount* of a marketable equity securities portfolio is the amount at which that portfolio of marketable equity securities is reflected in the financial statements of an enterprise.

h) A *realized gain or loss* represents the difference between the net proceeds from the sale of a marketable equity security and its cost.

i) *Net unrealized gain or loss* on a marketable equity securities

---

\textsuperscript{3} Restricted stock for purposes of this Statement shall mean securities for which sale is restricted by a governmental or contractual requirement except where such requirement terminates within one year or where the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the stock which can reasonably be expected to qualify for sale within one year, such as may be the case under Rule 144 or similar rules of the Securities and Exchange Commission, is not considered restricted.
Accounting for Certain Marketable Securities

portfolio represents the difference between the market value of its securities and their aggregate cost at any given date.

.08 The carrying amount of a marketable equity securities portfolio shall be the lower of its aggregate cost or market value, determined at the balance sheet date. The amount by which aggregate cost of the portfolio exceeds market value shall be accounted for as the valuation allowance.

.09 Marketable equity securities owned by an entity shall, in the case of a classified balance sheet, be grouped into separate portfolios according to the current or noncurrent classification of the securities for the purpose of comparing aggregate cost and market value to determine carrying amount. In the case of an unclassified balance sheet, marketable equity securities shall for the purposes of this Statement be considered as noncurrent assets. The current portfolios of entities that are consolidated in financial statements and that do not follow specialized industry accounting practices with respect to marketable securities shall be treated as a single consolidated portfolio for the comparison of aggregate cost and market value; similarly, the noncurrent portfolios of entities that are consolidated in financial statements and that do not follow specialized industry accounting practices with respect to marketable securities shall be treated as a single consolidated portfolio for the comparison of aggregate cost and market value. The portfolios of marketable equity securities owned by an entity (subsidiary or investee) that is accounted for by the equity method shall not be combined with the portfolios of marketable equity securities owned by any other entity included in the financial statements. However, such an entity is, itself, subject to the requirements of this Statement.

.10 If there is a change in the classification of a marketable equity security between current and noncurrent, the security shall

---

4 For this purpose, marketable equity securities owned by an investee accounted for by the equity method shall not be considered owned by the entity (investor).

5 This constitutes an exception to paragraph 19 of APB Opinion No. 18 [section 5131.19] in those cases in which a subsidiary accounted for under the equity method has a net unrealized gain or loss on a portfolio of marketable equity securities that would serve to offset, in whole or in part, the net unrealized gain or loss on a comparable portfolio of marketable equity securities of the parent or consolidated entity. If the subsidiary were consolidated and its portfolios were combined with comparable portfolios of other entities in the consolidation in accordance with this paragraph, a different effect on consolidated net income would be produced, as compared with the equity method.
be transferred between the corresponding portfolios at the lower of its cost or market value at date of transfer. If market value is less than cost, the market value shall become the new cost basis, and the difference shall be accounted for as if it were a realized loss and included in the determination of net income.

.11 Realized gains and losses shall be included in the determination of net income of the period in which they occur. Changes in the valuation allowance for a marketable equity securities portfolio included in current assets shall be included in the determination of net income of the period in which they occur. Accumulated changes in the valuation allowance for a marketable equity securities portfolio included in noncurrent assets or in an unclassified balance sheet shall be included in the equity section of the balance sheet and shown separately.

.12 The following information with respect to marketable equity securities owned shall be disclosed either in the body of the financial statements or in the accompanying notes:

a) As of the date of each balance sheet presented, aggregate cost and market value (each segregated between current and noncurrent portfolios when a classified balance sheet is presented) with identification as to which is the carrying amount.

b) As of the date of the latest balance sheet presented, the following, segregated between current and noncurrent portfolios when a classified balance sheet is presented:
   i) Gross unrealized gains representing the excess of market value over cost for all marketable equity securities in the portfolio having such an excess.
   ii) Gross unrealized losses representing the excess of cost over market value for all marketable equity securities in the portfolio having such an excess.

c) For each period for which an income statement is presented:
   i) Net realized gain or loss included in the determination of net income.
   ii) The basis on which cost was determined in computing realized gain or loss (i.e., average cost or other method used).
iii) The change in the valuation allowance(s) that has been included in the equity section of the balance sheet during the period and, when a classified balance sheet is presented, the amount of such change included in the determination of net income.

.13 An enterprise's financial statements shall not be adjusted for realized gains or losses or for changes in market prices with respect to marketable equity securities when such gains or losses or changes occur after the date of the financial statements but prior to their issuance, except for situations covered by paragraph .21. However, significant net realized and net unrealized gains and losses arising after the date of the financial statements, but prior to their issuance, applicable to marketable equity securities owned at the date of the most recent balance sheet shall be disclosed.

Enterprises in Industries Having Specialized Accounting Practices with Respect to Marketable Securities

.14 Certain industries apply specialized industry accounting practices with respect to marketable securities. Such industries include investment companies, brokers and dealers in securities, stock life insurance companies, and fire and casualty insurance companies. Except for the requirements in paragraphs .15, .21, and .22, this Statement does not alter any industry's specialized accounting practices. Paragraphs .15, .17, and .19 deal with marketable equity securities as that term is defined in paragraph .07. Paragraphs .16, .18, and .20-.22 deal with marketable securities as that term is used in the particular industries concerned, including, but not limited to, marketable equity securities.

.15 Entities that carry marketable equity securities at cost shall hereafter carry them at the lower of their aggregate cost or market value.6 In making this determination, the provisions of paragraphs .07-.09 shall be applied with the exception of the third sentence of paragraph .09. The portfolios of entities that are consolidated in financial statements and that follow the same specialized industry accounting practices with respect to marketable equity securities

---

6 This does not preclude entities in industries in which either the cost basis or the market basis is an accepted specialized practice from electing the market basis where such election is permissible in that industry. In such an election, the provisions of paragraphs 15-17 of APB Opinion No. 20 [section 1051.15-.17], "Accounting Changes," shall not apply.
shall be treated as a single portfolio for the comparison of aggregate cost and market value. This Statement does not alter any entity's specialized industry practice for reporting gains and losses, whether realized or unrealized, for marketable equity securities.

.16 Entities that do not include unrealized gains and losses on marketable securities in the determination of net income but that do include them in the equity section of the balance sheet shall disclose the following information, either in the body of the financial statements or in the accompanying notes:

a) Gross unrealized gains and gross unrealized losses as of the date of the latest balance sheet presented.

b) Change in net unrealized gain or loss (the amount by which equity has been increased or decreased as a result of unrealized gains and losses) for each period for which an income statement is presented.

.17 An enterprise's financial statements shall not be adjusted for realized gains or losses or for changes in market prices with respect to marketable equity securities when such gains or losses or changes occur after the date of the financial statements, but prior to their issuance, except for situations covered by paragraph .21. However, significant net realized and net unrealized gains and losses arising after the date of the financial statements, but prior to their issuance, applicable to marketable equity securities in the portfolio at the date of the most recent balance sheet shall be disclosed.

Enterprises That Include Entities Whose Accepted Accounting Practices Differ with Respect to Marketable Securities

.18 If an investee accounted for by the equity method or a subsidiary follows accepted accounting practices that are different from those of the parent or investor with respect to marketable securities, those practices shall be retained in the consolidated or parent company financial statements in which those entities are included. As an exception to this requirement, if it is the practice of the parent or investor to include realized gains and losses arising after the date of the financial statements, but prior to their issuance, applicable to marketable equity securities in the portfolio at the date of the most recent balance sheet shall be disclosed.

\[7\text{For the purposes of paragraph .16, unrealized gains and losses shall have the same meaning as is presently accepted in the particular industry's specialized accounting practice.}\]
losses in the determination of net income, or would so include them if present, the accounting treatment of a subsidiary or an investee that does not follow such practice shall be conformed to that of the parent or investor in that particular respect in consolidated or parent company financial statements.

.19 If the parent company in a consolidation follows specialized industry accounting practices with respect to marketable securities but two or more consolidated subsidiaries do not (and hence are subject to the provisions of paragraphs .08-.13 of this Statement), the current and noncurrent portfolios of marketable equity securities of such subsidiaries shall be consolidated as separate current and noncurrent portfolios in the manner provided in paragraph .09, exclusive of the portfolios of the parent company, for the purpose of determining carrying amounts in accordance with paragraph .09. The information required by paragraph .12 shall be disclosed in the consolidated financial statements with respect to such subsidiaries.

.20 If the consolidated financial statements reflect more than one accepted practice of accounting for marketable securities, the disclosures required by this Statement and those encompassed by specialized industry practice, as applicable, shall be disclosed either in the body of the financial statements or in the accompanying notes for the marketable securities accounted for under each such practice.

Decline in Market Value Is Assessed to Be Other Than Temporary

.21 For those marketable securities for which the effect of a change in carrying amount is included in stockholders' equity rather than in net income (including marketable securities in unclassified balance sheets), a determination must be made as to whether a decline in market value below cost as of the balance sheet date of an individual security is other than temporary. If the decline is judged to be other than temporary, the cost basis of the individual security shall be written down to a new cost basis and the amount of the write-down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in market value.

---

8 For a recent discussion of this subject, see the Auditing Interpretation published by the staff of the Auditing Standards Division, AICPA, "Evidential Matter for the Carrying Amount of Marketable Securities," in The Journal of Accountancy, April 1975. (See AU section 9332.01-.14.)

AICPA Professional Standards

AC § 5132.21
Income Taxes

.22 Unrealized gains and losses on marketable securities, whether recognized in net income or included in the equity section of the balance sheet, shall be considered as timing differences, and the provisions of APB Opinion No. 11 [section 4091], "Accounting for Income Taxes," shall be applied in determining whether such net unrealized gain or loss shall be reduced by the applicable income tax effect. A tax effect shall be recognized on an unrealized capital loss only when there exists assurance beyond a reasonable doubt that the benefit will be realized by an offset of the loss against capital gains.

Effective Date and Transition

.23 The provisions of this Statement, other than those of paragraph .18, shall be effective for financial statements for annual and interim periods ending on or after December 31, 1975. If initial application of this Statement necessitates establishment of a valuation allowance for a marketable equity securities portfolio included in current assets, the amount thereof shall be included in the determination of net income for the period in which this Statement is initially applied. If initial application of this Statement necessitates establishment of a valuation allowance for a marketable equity securities portfolio included in noncurrent assets or in an unclassified balance sheet, the amount thereof shall be reflected separately in stockholders' equity as of the end of the period in which this Statement is initially applied. For initial application of this Statement, the provisions of paragraph .10 shall not apply to transfers between current and noncurrent classifications made as of or before December 31, 1975. Financial statements for annual and interim periods ending before December 31, 1975 shall not be restated except as stated below. The provisions of paragraph .18 of this Statement shall be effective for financial statements for annual and interim periods ending on or after December 31, 1975. Those provisions shall be applied retroactively by prior period adjustment (described in paragraphs 18 and 26 of APB Opinion No. 9 [sections 2010.17 and 2010.25], "Reporting the Results of Operations"). When prior period

---

9 For enterprises having fiscal years of 52 or 53 weeks instead of the calendar year, this Statement shall be effective for financial statements for periods ending in late December 1975.

10 See footnote 9.

11 See footnote 9.

12 See footnote 9.
financial statements or financial summaries or other data derived therefrom are presented, they shall be restated to conform to those provisions.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

BASIS FOR CONCLUSIONS

.24 This Appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including alternatives considered and the reasons for accepting some and rejecting others.

Scope

.25 The three questions which the Board addressed as constituting financial reporting problems requiring early resolution are those listed in paragraph .03. Questions (a) and (b) relate to the determination of carrying amount for marketable equity securities, whereas question (c) relates to the issue of conformity in consolidated or parent company financial statements of different methods of accounting with respect to all marketable securities, whether or not they are equity securities.

.26 Because of the urgency of resolving these questions within a limited time frame, the Board concluded that the scope of the project should be limited essentially to the questions as presented. Although a number of respondents objected to the short exposure period and the proximity of the proposed effective date, the Board determined that the problems should be resolved for application in 1975. As stated in paragraph .02, the requests that the Board deal with the problems had indicated that such a timely answer was needed. On the basis of available information, including that obtained at the public hearing and in position papers and letters of comment, the Board concluded that it could make an informed decision on the questions as presented and that the effective date and method of transition specified herein are advisable.

.27 The Board is mindful of the fact that enterprises in certain industries apply specialized accounting practices presently accepted in those industries. The Board concluded that consideration of questions (a) and (b) with respect to those particular industries should be limited to the enterprises within those industries that carry marketable equity securities on the basis of cost. The alternative bases for carrying marketable equity securities...
(e.g., market value, appraised value, fair value) which are permitted in certain specialized industry accounting practices with respect to marketable securities have not been considered by the Board and are not altered by this Statement. The Board further concluded that it would not, as a part of this project, examine or change specialized industry practice for reporting gains and losses, whether realized or unrealized, for marketable securities. To do so would expand the scope of the project in that consideration of the fundamental issues that led to the adoption of those specialized practices would be required. This, the Board decided, could not be done in the limited time available for the completion of this project.

.28 For the reasons discussed in paragraph .27, the "Standards of Financial Accounting and Reporting" of this Statement contain separate provisions for two categories of enterprises: those in industries not having specialized accounting practices with respect to marketable securities, and those in industries having such specialized accounting practices.

Enterprises in Industries Not Having Specialized Accounting Practices with Respect to Marketable Securities

.29 In considering questions (a) and (b) of paragraph .03 the Board noted that the questions pertain to marketable equity securities carried on a cost basis. The Board's conclusion that the lower of cost or market should apply in the determination of carrying amount for such securities was based on the following factors:

a) The Board excluded from its consideration market value alone as the determinant of carrying value. Consideration of that alternative would raise pervasive issues concerning the valuation of other types of assets, including the concept of historic cost versus current or realizable value. The Board concluded that it could not examine these conceptual issues in a project of such limited scope.

b) The Board noted that continuance of original cost as the carrying amount of a portfolio of marketable equity securities when its market value is lower has the effect of deferring
recognition of the decline in the realizable value of such securities based on the expectation of a future recovery in market value which may or may not occur. Because of the uncertainty of such future recovery, the Board concluded that original cost is not a proper determinant of carrying amount for marketable equity securities when market value is below cost. A number of respondents advanced the argument that, in the case of securities held as long-term investments, a decline in market value viewed as temporary should not be reflected in net income. While not necessarily accepting this argument, the Board took into account the fact that this argument has considerable support in current practice, and that the Auditing Interpretation referred to in footnote 8 is consistent with it. The Board concluded that the conceptual question of whether such differences should or should not be included in income could not be dealt with in this project, and hence no such requirement should be made at this time. However, the Board concluded that a decline in market value below cost should in all cases be reflected in the balance sheet and when such securities are classified as current assets, the decline in market value below cost should enter into the determination of net income. In the case of current assets, it is the Board's view that the realization of the loss in value of the securities should be regarded as imminent and therefore should be recognized in the determination of net income.

c) In adopting the lower of cost or market as the determinant for carrying amount, the Board required that when write-downs have been made because the market value of the portfolio has dropped below cost, if market value subsequently rises, the write-down be reversed to the extent that the resulting carrying amount does not exceed cost. The Board does not regard the reversal of the write-down as representing recognition of an unrealized gain. Rather, the Board views the write-down as establishing a valuation allowance representing the estimated reduction in the realizable value of the portfolio, and it views a subsequent market increase as having reduced or eliminated the requirement for such an allowance. In the Board's view, the reversal of the write-down represents a change in an accounting estimate of an unrealized loss (see paragraph 2 of FASB Statement No. 5 [section 4311.02], "Accounting for Contingencies" and paragraph 10 of APB Opinion No. 20 [section 1051.10]).
The Exposure Draft required that all changes in the carrying amounts of the marketable equity securities portfolio be reflected in income currently and made no distinction in that regard between the current or noncurrent classifications of such securities. Some respondents favored the separation of the single portfolio called for by the Exposure Draft into current and noncurrent portfolios with the change in carrying amount for the noncurrent portfolio to be reflected in equity rather than in income. They argued that fluctuations in the market value of long-term investments should not be reflected in income and to do so would cause distortions which would not be understood by investors. While not necessarily agreeing with these arguments, for the reasons discussed in paragraph .29(b), the Board decided not to require in this Statement that declines in the market value below cost of noncurrent marketable equity securities be reflected in net income. In reaching this decision, the Board recognized that the present concepts of income require authoritative clarification with respect to the recognition of unrealized gains and losses on long-term assets. Such clarification, the Board noted, is beyond the scope of this Statement. For these reasons, the Board concluded that marketable equity securities classified as noncurrent assets should constitute a separate portfolio from those securities classified as current assets for the determination of carrying amount, and that changes in the carrying amount of the noncurrent portfolio should be reflected in the equity section of the balance sheet rather than included in income, provided that the decline in market value is assessed as temporary.

An issue inherent in the determination of carrying amount for marketable equity securities was whether the lower of cost or market method adopted by the Board should be applied on the basis of individual security holdings or on a portfolio basis. In deciding to require application on a portfolio basis (with the exceptions noted in paragraph .09), the Board considered the following factors: Many enterprises regard their portfolios of marketable equity securities (excluding long-term investments accounted for under the equity method) as collective assets. A requirement that the application of lower of cost or market be made on an individual security basis would, in the Board's view, be unduly conservative and at variance with the manner in which enterprises generally view their investment in marketable equity securities. The Board recognized that the application of the criterion on a portfolio basis may be regarded as having the effect of offsetting the unrealized losses on one security with unrealized gains on
another. However, the Board agrees with those respondents who regard the current and noncurrent portfolios of marketable equity securities each as collective assets, hence the determination of the carrying amount on a collective (portfolio) basis is in the Board's view appropriate despite the offsets referred to. The disclosures required by paragraph .12(b) are intended to inform as to the extent to which such offsets exist in the portfolio.

.32 Paragraph .30 discussed the reasons for the Board's decision to change from a single portfolio basis as provided by the Exposure Draft to separate portfolios for current and noncurrent assets. The Exposure Draft noted that such a separation of portfolios would provide opportunities for transfers between portfolios simply by changing classifications and that such transfers could result in significant changes in net income. The Board had this feature in mind in requiring that transfers between the current and noncurrent portfolios be accounted for in the manner prescribed by paragraph .10. This has the effect of accounting for an unrealized loss at the date of transfer in the same manner as if it had been realized, thus reducing the incentive to cause significant changes in income by transferring securities between portfolios. The Board recognized, however, that the above requirement would not be effective in the case of a transfer from noncurrent to current classifications of a security having an excess of market value over cost which would serve to offset a reverse situation in the current portfolio, thus affecting the determination of net income. However, as mentioned in paragraph .31, the disclosures required by paragraph .12(b) should assist users of financial statements in assessing the effects of such transfers.

.33 The definition of "equity security" in the Exposure Draft included convertible bonds. Many respondents believed that such inclusion was in conflict with APB Opinion No. 14 [section 5516], "Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants." It was pointed out further that the market sometimes values a convertible bond primarily on its equity characteristics and at other times primarily on its debt characteristics. The Board concluded that it was impractical to apply criteria under which a convertible bond might in some time intervals come under the definition and at other times be excluded. Accordingly, the Board decided that convertible bonds, and, for consistency, convertible preferred stock with redemption requirements, would be excluded from the definition of equity securities.
A number of respondents asked for clarification of what was encompassed by the term "restricted stock" with respect to the statement in the Exposure Draft that restricted stock did not meet the definition of "marketable." Footnote 3 of this Statement is intended to provide the requested clarification. The Board's decision to consider restricted stock as meeting the definition of marketable where the restriction terminates or can be terminated by the holder within one year is based on the view that current market value is relevant in applying the lower of cost or market determination to such securities, whereas in the case of longer term restrictions, the application of current market value is of lesser relevance.

Paragraph .09 provides, as did the Exposure Draft, that "The portfolios of marketable equity securities owned by an entity (subsidiary or investee) that is accounted for by the equity method shall not be combined with the portfolios of marketable equity securities owned by any other entity included in the financial statements." Some respondents were of the opinion that the portfolio(s) of unconsolidated subsidiaries accounted for by the equity method should be so combined, especially in the case of 100 percent owned subsidiaries, and that failure to do so would be contrary to paragraph 19 of APB Opinion No. 18 [section 5131.19]. Some of the respondents expressing this view acknowledged that there were both conceptual and mechanical problems involved in implementing this recommendation, but none offered specific suggestions for resolving them. The Board noted in the Exposure Draft and in footnote 5 of this Statement that the procedure called for constitutes an exception to paragraph 19 of APB Opinion No. 18 [section 5131.19]. The Board rejected the recommendation that the portfolios of equity method subsidiaries be combined with others, because to do so could produce illogical results either with respect to the carrying amount of marketable securities as reflected in the consolidated balance sheet, or the carrying amount of the equity method subsidiary as reflected in the same balance sheet.

Enterprises in Industries Having Specialized Accounting Practices with Respect to Marketable Securities

Paragraph .14 states that, with the exception of paragraphs .15, .21, and .22, this Statement does not alter any industry's specialized accounting practices with respect to marketable securities.
.37 Paragraph .15 requires that entities that carry marketable equity securities at cost shall hereafter carry them at the lower of their aggregate cost or market value with the following exception: entities in industries whose specialized accounting practices permit market value as an acceptable alternate carrying basis may elect that basis. The cost basis is no longer acceptable for determining carrying amount for marketable equity securities and is replaced by the lower of aggregate cost or market value.

.38 The Board's decision to replace the cost basis with the lower of cost or market basis in industries having specialized accounting practices took into account the following factors:

a) Having concluded that the cost basis should be replaced in all enterprises in industries with nonspecialized accounting practices, the Board could find no justification for maintaining cost as a basis for marketable equity securities in the other industries.

b) As stated in paragraph .27, this Statement does not alter specialized industry practice for reporting gains and losses on marketable securities because to do so would involve a reconsideration of fundamental issues in those industries. However, a change in the carrying basis for marketable equity securities does not, in the Board's view, necessitate such a reconsideration.

c) Elimination of cost as a carrying basis for marketable equity securities in the industries having specialized accounting practices serves to reduce some of the disparity in practice among those industries as well as with industries not having specialized accounting practices.

Applicability

.39 Numerous responses from the mutual savings bank industry urged that mutual savings banks be excluded from the scope of this Statement. The principal arguments advanced were: mutual savings banks are regulated and, in some states, are required to
carry marketable securities at cost; the exclusion of not-for-profit organizations should apply to mutual savings banks; the element of mutuality (absence of shareholders) applies equally to these organizations as it does to mutual life insurance companies. The Board did not find these arguments persuasive. When mutual savings banks, which are in an industry not having specialized accounting practices, present financial statements purporting to be in conformity with generally accepted accounting principles, the fact that they are regulated or that they do not have shareholders does not, in the Board’s view, justify different accounting for marketable equity securities from that required to be followed by other entities not having specialized accounting practices. Accordingly, the provisions of this Statement apply to mutual savings banks, as well as to other for-profit mutual enterprises, except mutual life insurance companies.

.40 Mutual life insurance companies were excluded from the scope of this Statement because, unlike stock life insurance companies (see paragraph .14), there is disagreement as to whether generally accepted accounting principles exist for mutual life insurance companies. This coupled with the complexity of some of the issues involved in life insurance accounting caused the Board to conclude that it could not resolve these questions within this project. On the other hand, mutual savings banks, which are not excluded from the scope of this Statement, do present financial statements prepared in conformity with generally accepted accounting principles and there are no complex related accounting issues involved as is the case with mutual life insurance companies.

.41 The Exposure Draft proposed that the Statement be applied retroactively by prior period restatement. That method of transition was proposed on the premise that it would afford maximum comparability among financial statements. The Board has obtained information, subsequent to the issuance of the Exposure Draft, that a number of companies have in past years made substantial reclassifications of marketable equity securities as between current and noncurrent assets. With the Board’s decision to provide for separate portfolios of current and noncurrent marketable equity securities with different accounting for changes in carrying value of the two portfolios, the number of and seemingly divergent
bases for reclassifications that have occurred in recent years would, in the case of retroactive restatement, result in less rather than more comparability. The new requirement that transfers between current and noncurrent portfolios be accounted for in a manner to treat reductions in market value below cost as realized losses at the date of transfer would, if applied retroactively, accentuate this effect. For these reasons, the Board concluded that the interests of users of financial statements would best be served by making the Statement effective December 31, 1975 14 (except for paragraph .18 for which retroactive application is still required).

14 See footnote 9.
Appendix B

ILLUSTRATION OF DISCLOSURES REQUIRED BY PARAGRAPH .12 OF THIS STATEMENT

.42 The following example illustrates the disclosure requirements of paragraph .12 for an enterprise having a classified balance sheet. For purposes of this illustration it is presumed that the only marketable securities that the enterprise owns are marketable equity securities as defined in paragraph .07. The illustration does not encompass all possible circumstances that may arise in connection with the disclosure requirements, nor does it indicate the Board's preference for a particular format.

Computational Information

The details on the following pages pertain to marketable equity securities owned at December 31:

## NOTES TO FINANCIAL STATEMENTS

### Note 1—Marketable Equity Securities

At December 31, 1975, the current and noncurrent portfolios of marketable equity securities are each carried at their lower of cost or market at the balance sheet date. Marketable equity securities included in current and noncurrent assets had a cost of $900,000 and $650,000, respectively, at December 31, 1975.

To reduce the carrying amount of the current marketable equity securities portfolio to market, which was lower than cost at December 31, 1975, a valuation allowance in the amount of $50,000 was established with a corresponding charge to net income at that date. To reduce the carrying amount of the noncurrent marketable equity securities portfolio to market, which was lower than cost at December 31, 1975, a valuation allowance in the amount of $110,000 was established by a charge to stockholders’ equity representing the net unrealized loss.

AC § 5132.42 Copyright © 1976, Financial Accounting Standards Board
At December 31, 1974, the current and noncurrent portfolios of marketable equity securities were not required to be carried at their lower of cost or market at the balance sheet date and were carried at cost. Marketable equity securities included in current and noncurrent assets had a market value of $925,000 and $500,000, respectively, at December 31, 1974.

At December 31, 1975, gross unrealized gains and gross unrealized losses pertaining to the marketable equity securities in the portfolios were as follows:

<table>
<thead>
<tr>
<th></th>
<th>Gains</th>
<th>Losses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current</td>
<td>$75,000</td>
<td>$125,000</td>
</tr>
<tr>
<td>Noncurrent</td>
<td>$90,000</td>
<td>$200,000</td>
</tr>
</tbody>
</table>

A net realized loss of $10,000 on the sale of marketable equity securities was included in the determination of net income for 1975. The cost of the securities sold was based on the average cost of all the shares of each such security held at the time of sale. There were no sales of marketable equity securities during 1974.
AC Section 5132-1

Application of Section 5132 to Personal Financial Statements: An Interpretation of Section 5132

[Source: FASB Interpretation No. 10.]

September 1976

INTRODUCTION
.01 Paragraph 5 of FASB Statement No. 12 [section 5132.05], "Accounting for Certain Marketable Securities," enumerates the entities excluded from the scope of the Statement but does not mention individuals. The AICPA Industry Audit Guide, "Audits of Personal Financial Statements," states that ". . . financial statements for individuals should be prepared on a cost basis, in conformity with generally accepted accounting principles" and that " . . . financial information on an estimated value basis is useful . . . as additional financial information" (pages 2 and 3). Further, the Industry Audit Guide recommends a two-column presentation of personal financial statements: "The first column should present financial data on the cost basis, paralleled by a second column presenting estimated values" (page 3). The FASB has been asked to clarify whether in personal financial statements prepared in conformity with generally accepted accounting principles the presentation of marketable equity securities on an estimated value basis in the second column supplants the requirement of paragraph 8 of FASB Statement No. 12 [section 5132.08] to carry marketable equity securities at the lower of aggregate cost or aggregate market value in the first column.

INTERPRETATION
.02 Personal financial statements prepared in conformity with generally accepted accounting principles are included in the scope of FASB Statement No. 12 [section 5132]. The presentation of marketable equity securities on an estimated value basis as additional financial information in the second column does not supplant the requirement of paragraph 8 of FASB Statement No. 12 [section 5132.08] to carry marketable equity securities at the lower of aggregate cost or aggregate market value in the first column.

EFFECTIVE DATE AND TRANSITION
.03 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods ending after
October 15, 1976. Earlier application is encouraged in financial statements for annual and interim periods ending before October 16, 1976 that have not been previously issued. This Interpretation shall not be applied retroactively for previously issued annual or interim financial statements.
Changes in Market Value after the Balance Sheet Date: An Interpretation of Section 5132

[Source: FASB Interpretation No. 11.]

INTRODUCTION
.01 Paragraphs 13 and 17 of FASB Statement No. 12 [sections 5132.13 and 5132.17], “Accounting for Certain Marketable Securities,” specify in part that “an enterprise’s financial statements shall not be adjusted for realized gains or losses or for changes in market prices with respect to marketable equity securities when such gains or losses or changes occur after the date of the financial statements but prior to their issuance, except for situations covered by paragraph 21 [section 5132.21].” The Board has been requested to clarify the meaning of the qualification, except for situations covered by paragraph 21 [section 5132.21].

.02 Paragraph 21 of FASB Statement No. 12 [section 5132.21] states:

For those marketable securities for which the effect of a change in carrying amount is included in stockholders’ equity rather than in net income (including marketable securities in unclassified balance sheets), a determination must be made as to whether a decline in market value below cost as of the balance sheet date of an individual security is other than temporary. . . . If the decline is judged to be other than temporary, the cost basis of the individual security shall be written down to a new cost basis and the amount of the write-down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in market value.

The Board also has been asked to elaborate on the amount of the write-down that shall be accounted for as a realized loss when the “decline in market value below cost as of the balance sheet date of an individual security is other than temporary.” (Emphasis added.)

INTERPRETATION
.03 In the case of those marketable securities for which the effect of a change in carrying amount is included in stockholders’ equity rather than in net income, the phrase “except for situations covered by paragraph 21 [section 5132.21]” in paragraphs 13 [section 5132.13] and 17 [section 5132.17] refers to the provi-

Paragraph 13 applies to enterprises in industries not having specialized accounting practices with respect to marketable securities, and paragraph 17 applies to enterprises in industries having specialized accounting practices with respect to marketable securities.
sions in paragraph 21 [section 5132.21] requiring a decline in market value below cost as of the balance sheet date of an individual security that is determined to be other than temporary to be accounted for as a realized loss. In judging whether a decline in market value below cost at the balance sheet date is other than temporary, a gain or loss realized on subsequent disposition or changes in market price occurring after the date of the financial statements but prior to their issuance shall be taken into consideration along with other factors.

.04 The amount of decline in market value below cost of an individual marketable equity security that is accounted for as a realized loss as of the balance sheet date because the decline is other than temporary shall not exceed the difference between market value at the balance sheet date and cost of the marketable equity security. Further declines in market value after the balance sheet date might indicate that the decline in market value below cost at the balance sheet date was other than temporary. However, those declines result from information, events, or changes in expectations occurring after the balance sheet date. Accordingly, if a decline in market value below cost as of the balance sheet date of an individual security is judged to be other than temporary, further declines in market value occurring after the date of the balance sheet shall not be included in the amount that is accounted for as a realized loss as of the balance sheet date. Recoveries in market value after the balance sheet date also result from information, events, or changes in expectations occurring after the balance sheet date, but they tend to indicate that a portion or all of the decline at the balance sheet date was in fact temporary. Accordingly, such recoveries shall be considered when estimating the amount of decline as of the balance sheet date that is judged to be other than temporary.

EFFECTIVE DATE AND TRANSITION

.05 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods ending after October 15, 1976. Earlier application is encouraged in financial statements for annual and interim periods ending before October 16, 1976 that have not been previously issued. This Interpretation shall not be applied retroactively for previously issued annual or interim financial statements.

Accounting for Previously Established Allowance Accounts: An Interpretation of Section 5132

[Source: FASB Interpretation No. 12.]

September 1976

INTRODUCTION

.01 Paragraph 8 of FASB Statement No. 12 [section 5132.08], "Accounting for Certain Marketable Securities," specifies that the "carrying amount of a marketable equity securities portfolio shall be the lower of its aggregate cost or market value, determined at the balance sheet date." Paragraph 7(e) of FASB Statement No. 12 [section 5132.07(e)] defines "cost" of a marketable equity security as "original cost . . . unless a new cost basis has been assigned based on recognition of an impairment of value that was deemed other than temporary. . . . In such cases, the new cost basis shall be the cost . . . ."

.02 Prior to the issuance of FASB Statement No. 12 [section 5132], some enterprises that carried marketable equity securities at cost had reduced the carrying amount of individual marketable equity securities to market value through an allowance account with a corresponding amount included in the determination of net income. In some of those cases, a new cost basis was not established for individual securities and the allowance account was expected to increase or decrease depending on fluctuations in the market price of the marketable equity security because the decline in market value below cost was assessed to be temporary. The Board has been asked to clarify whether, in those cases, the original cost of the individual securities or the original cost reduced by an existing allowance account should be used in applying paragraphs 7(e) and 8 of FASB Statement No. 12 [sections 5132.07(e) and 5132.08].

INTERPRETATION

.03 The original cost of individual marketable equity securities shall be used in applying paragraphs 7(e) and 8 of FASB Statement No. 12 [sections 5132.07(e) and 5132.08] by an enterprise that carried marketable equity securities at cost and that (a) had reduced the carrying amount of individual marketable equity securities through an allowance account with a corresponding amount included in the determination of net income prior to the
effective date of the Statement and (b) expected the allowance account to increase or decrease in the future based on fluctuations in the market price of the security because the decline in market value below cost was assessed to be temporary. Any balance remaining in such an existing allowance account shall be eliminated and credited to income in the period in which this Interpretation is initially applied. The valuation allowance would then be determined in accordance with paragraph 8 of FASB Statement No. 12 [section 5132.08].

.04 If, prior to the effective date of FASB Statement No. 12 [section 5132], a new cost basis had been assigned to a marketable equity security based on recognition of an impairment of value that was deemed other than temporary, the new cost basis shall be used in applying the provisions of FASB Statement No. 12 [section 5132].

EFFECTIVE DATE AND TRANSITION

.05 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods ending after October 15, 1976. Earlier application is encouraged in financial statements for annual and interim periods ending before October 16, 1976 that have not been previously issued. This Interpretation shall not be applied retroactively for previously issued annual or interim financial statements.
Consolidation of a Parent and Its Subsidiaries
Having Different Balance Sheet Dates: An Interpretation of Section 5132

[Source: FASB Interpretation No. 13.]

September 1976

INTRODUCTION

.01 Paragraphs 8, 9, and 15 of FASB Statement No. 12 [sections 5132.08, 5132.09, and 5132.15], “Accounting for Certain Marketable Securities,” set forth the requirements of the portfolio basis for comparing cost and market value. The portfolio basis requires that marketable equity securities owned by enterprises that are consolidated and that do not follow specialized accounting practices with respect to marketable equity securities, or that are consolidated and follow the same specialized accounting practices with respect to marketable equity securities, shall be aggregated into separate portfolios according to the current or noncurrent classifications of the securities. The aggregate cost and aggregate market value of the portfolios are compared to determine carrying amount.

.02 Paragraph 13 of FASB Statement No. 12 [section 5132.13], which applies to enterprises in industries not having specialized accounting practices with respect to marketable securities, states:

An enterprise’s financial statements shall not be adjusted for realized gains or losses or for changes in market prices with respect to marketable equity securities when such gains or losses or changes occur after the date of the financial statements but prior to their issuance, except for situations covered by paragraph 21. However, significant net realized and net unrealized gains and losses arising after the date of the financial statements, but prior to their issuance, applicable to marketable equity securities owned at the date of the most recent balance sheet shall be disclosed. (Emphasis added.)

Paragraph 17 of FASB Statement No. 12 [section 5132.17], which applies to enterprises in industries having specialized accounting practices with respect to marketable securities, is in substance identical to paragraph 13 of the Statement.

.03 The financial statements of a subsidiary sometimes are consolidated with the financial statements of its parent even though the financial statements of the subsidiary are as of a date different from the financial statements of the parent. The use of different dates is permitted by paragraph 4 of ARB No.
51 [section 2051.05], "Consolidated Financial Statements," which states:

A difference in fiscal periods of a parent and a subsidiary does not of itself justify the exclusion of the subsidiary from consolidation. It ordinarily is feasible for the subsidiary to prepare, for consolidation purposes, statements for a period which corresponds with or closely approaches the fiscal period of the parent. However, where the difference is not more than about three months, it usually is acceptable to use, for consolidation purposes, the subsidiary's statements for its fiscal period; when this is done, recognition should be given by disclosure or otherwise to the effect of intervening events which materially affect the financial position or results of operations.

.04 The Board has been requested to clarify application of the portfolio basis specified in FASB Statement No. 12 [section 5132] when the financial statements of a subsidiary are as of a date different from that of its parent and are consolidated with the financial statements of its parent. Further, the Board has been asked to explain the meaning of "the date of the financial statements" in paragraphs 13 and 17 of FASB Statement No. 12 [sections 5132.13 and 5132.17] when the financial statements of a subsidiary or investee are as of a date different from that of its parent or investor and are consolidated with or accounted for by the equity method in the financial statements of its parent or investor.

INTERPRETATION

.05 To compute the amount of any valuation allowance(s) required by FASB Statement No. 12 [section 5132] in the consolidated financial statements, aggregate cost and aggregate market value of the portfolio(s) shall be determined for each subsidiary that is consolidated as of the date of each subsidiary's balance sheet, and those aggregates shall be combined with aggregate cost and aggregate market value of the parent's portfolio(s) determined as of the parent's balance sheet date. For example, assume that consolidated financial statements dated December 31, 1976 and issued on March 1, 1977 include the financial statements of the parent as of December 31, 1976 and of the subsidiary as of October 31, 1976. The cost of the marketable equity securities owned by the subsidiary at October 31, 1976 is added to the cost of the marketable equity securities owned by the parent at December 31, 1976. The market values at October 31, 1976 of the securities owned by the subsidiary and the market values at December 31, 1976 of the securities owned by the parent are aggregated in the same manner. The aggregate cost and aggregate market value of the portfolios are compared to determine the carrying amount in the consolidated financial statements.

.06 For purposes of applying paragraphs 13 and 17 of FASB Statement No. 12 [sections 5132.13 and 5132.17], "the date of the
financial statements” shall be for each subsidiary or investee the date of the financial statements that are consolidated with or accounted for by the equity method in the financial statements of its parent or investor. The last sentence in each of those paragraphs requires disclosure of significant net realized gains or losses and of significant net unrealized gains or losses arising after the date of the financial statements. Using the assumptions in the example in paragraph .05 above, aggregate amounts are computed as follows for possible disclosure: the net realized gains or losses arising after October 31, 1976 and prior to March 1, 1977 applicable to the marketable equity securities in the portfolio of the subsidiary at October 31, 1976 are aggregated with the net realized gains or losses arising after December 31, 1976 and prior to March 1, 1977 applicable to the marketable equity securities in the portfolio of the parent at December 31, 1976. Likewise, net unrealized gains or losses arising in the portfolio of the subsidiary after October 31, 1976 and prior to March 1, 1977 applicable to the marketable equity securities in the portfolio of the subsidiary at October 31, 1976 are aggregated with the net unrealized gains or losses arising after December 31, 1976 and prior to March 1, 1977 applicable to the marketable equity securities in the portfolio of the parent at December 31, 1976. If significant, each of the aggregate amounts shall be disclosed.

.07 If the financial statements of a subsidiary are consolidated with the financial statements of its parent and the financial statements of the subsidiary are as of a date different from the financial statements of the parent, paragraph 4 of ARB No. 51 [section 2051.05] requires that “recognition should be given by disclosure or otherwise to the effect of intervening events which materially affect the financial position or results of operations.” In the case of the subsidiary in the example in paragraph .05 above, that requirement pertains to the period from October 31, 1976 to December 31, 1976. Accordingly, in addition to the disclosure required by paragraph .06 above, the net realized gains or losses and the net unrealized gains or losses arising after October 31, 1976 and prior to December 31, 1976 applicable to the marketable equity securities of the subsidiary shall be disclosed if they “materially affect the financial position or results of operations.” Further, as required by paragraphs 13 and 17 of FASB Statement No. 12 [sections 5132.13 and 5132.17], the subsidiary’s financial statements shall not be adjusted for realized gains or losses or for changes in market prices with respect to its marketable equity securities occurring after October 31, 1976.

1 See also FASB Interpretation No. 11 [section 5132-2], “Changes in Market Value after the Balance Sheet Date: an interpretation of FASB Statement No. 12 [section 5132].”
and prior to December 31, 1976, unless the decline in market value below cost of an individual marketable equity security is determined to be other than temporary and, accordingly, shall be accounted for as a realized loss.

EFFECTIVE DATE AND TRANSITION

.08 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods ending after October 15, 1976. Earlier application is encouraged in financial statements for annual and interim periods ending before October 16, 1976 that have not been previously issued. This Interpretation shall not be applied retroactively for previously issued annual or interim financial statements.
Clarification of Definitions and Accounting for Marketable Equity Securities That Become Nonmarketable: An Interpretation of Section 5132

[Source: FASB Interpretation No. 16.]

February 1977

INTRODUCTION

.01 The FASB has been asked to clarify the definitions of the terms “marketable” and “restricted stock” as used in FASB Statement No. 12 [section 5132], “Accounting for Certain Marketable Securities,” and to clarify whether paragraph 10 of FASB Statement No. 12 [section 5132.10] requires a new cost basis to be assigned when a marketable equity security becomes nonmarketable if its market value is less than its cost at that time.

.02 For purposes of applying paragraphs 8-13, 15, 17, and 19 of FASB Statement No. 12 [section 5132.08—13, section 5132.15, section 5132.17, and section 5132.19], the term “marketable” is defined in paragraph 7(b) of the Statement [section 5132.07(b)] as follows:

Marketable, as applied to an equity security, means an equity security as to which sales prices or bid and ask prices are currently available on a national securities exchange (i.e., those registered with the Securities and Exchange Commission) or in the over-the-counter market. In the over-the-counter market, an equity security shall be considered marketable when a quotation is publicly reported by the National Association of Securities Dealers Automatic Quotations System or by the National Quotations Bureau Inc. (provided, in the latter case, that quotations are available from at least three dealers). Equity securities traded in foreign markets shall be considered marketable when such markets are of a breadth and scope comparable to those referred to above. Restricted stock does not meet this definition.

Footnote 3 to that paragraph defines restricted stock as follows:

Restricted stock for purposes of this Statement shall mean securities for which sale is restricted by a governmental or contractual requirement except where such requirement terminates within one year or where the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the stock which can reasonably be expected to qualify for sale within one year, such as may be the case under Rule 144 or similar rules of the Securities and Exchange Commission, is not considered restricted [under FASB Statement No. 12] [section 5132].
.03 Paragraph 10 of FASB Statement No. 12 [section 5132.10] states:

If there is a change in the classification of a marketable equity security between current and noncurrent, the security shall be transferred between the corresponding portfolios at the lower of its cost or market value at date of transfer. If market value is less than cost, the market value shall become the new cost basis, and the difference shall be accounted for as if it were a realized loss and included in the determination of net income.

INTERPRETATION

Definitions

.04 For purposes of applying paragraphs 8-13, 15, 17, and 19 of FASB Statement No. 12 [section 5132.08—.13, section 5132.15, section 5132.17, and section 5132.19], an equity security is not considered marketable if market price quotations specified by the Statement (see paragraph .02 above) are not available or if it is "restricted stock" as defined in the Statement (see paragraph .02 above) even though market price quotations are available for securities of the same class that are not restricted.

.05 The determination of whether an equity security is marketable is made as of the balance sheet date, but a temporary lack of trades or price quotations for an equity security at the balance sheet date does not make it nonmarketable for purposes of applying FASB Statement No. 12 [section 5132] if the required market prices are available on days closely preceding and following the balance sheet date in that situation, the market price of a security traded on a national securities exchange shall be determined from the sales or bid and ask prices on the first day following the balance sheet date that the information is available. If the lack of a publicly reported quotation by the National Association of Securities Dealers Automatic Quotations System or the lack of three quotations by the National Quotations Bureau Inc. is a mere temporary condition as described above for a security traded in the over-the-counter market, its market price shall be determined from:

a. The quotation publicly reported by the National Association of Securities Dealers Automatic Quotations System on the first day following the balance sheet date that a quotation is publicly reported, or

b. The quotation(s) reported by the National Quotations Bureau Inc. as of the balance sheet date if at least one quotation is

1 If the balance sheet date falls on a date that securities are not normally traded (e.g., Saturday or Sunday), the availability of market price quotations shall be determined as of the most recent business day preceding the balance sheet date.
available as of that date or on the first day following the balance sheet date that quotations are reported if no quotations are available on the balance sheet date.

.06 If it can be reasonably expected that a security "for which sale is restricted by a governmental or contractual requirement" can qualify for sale within one year of the balance sheet date and market price quotations for unrestricted securities of the same class are available as of the balance sheet date, the security is considered marketable at the balance sheet date for purposes of applying FASB Statement No. 12 [section 5132] (see paragraph .02 above). In this situation, market price quotations for unrestricted shares of the same class at the balance sheet date provide a surrogate market price for the restricted shares and shall be considered as the market price for the security. If the restricted security cannot qualify for sale within one year or market price quotations are not available for unrestricted shares of the same class, the security is considered nonmarketable for purposes of applying the Statement.

.07 As an example of the application of paragraph .06 above, assume that an enterprise pledges a marketable equity security as collateral for a loan due in three years. Normally, debt agreements permit substitution for the collateral or sale of the collateral if the proceeds are used to repay the loan. However, if the debt agreement prohibits sale of or substitution for the collateral for the term of the loan, the pledged security becomes "restricted stock" and nonmarketable for purposes of applying FASB Statement No. 12 [section 5132] at the time it is pledged and shall be excluded from the enterprise's portfolio of marketable equity securities from that date until one year before expiration of the long-term debt agreement.

.08 As a further example, assume that an enterprise owns common stock that cannot be sold to the public, except pursuant to Rule 144 of the Securities and Exchange Commission (see explanation below), until a registration statement has been filed with the SEC and has become effective. Also assume that the stock is marketable at one balance sheet date pursuant to an effective registration statement. At the next balance sheet date, the registration statement is no longer effective and the enterprise does not have the power to cause another one to be filed within one year. Then, only the portion of the stock that "can reasonably be expected to qualify for sale within one year . . . under Rule 144 . . . is not considered restricted" under FASB
Statement No. 12 [section 5132]. Rule 144 specifies that if certain conditions are met a security may be sold to the public without an effective registration statement on file with the SEC, subject to a limitation on the number of shares that may be sold during a given time period. The number of shares eligible for sale is based on the total number of shares of the security outstanding or the average weekly trading volume of the security for a stated past period. Changes in the number of shares outstanding or in trading volume change the number of shares that qualify for sale under Rule 144. The number of shares considered marketable for purposes of applying the Statement are those that “can reasonably be expected to qualify for sale within one year”; the determination of such number is a matter of judgment based on past trading volumes, the presently outstanding shares and plans for changes therein, and other relevant factors. The number of shares considered nonmarketable are those that cannot qualify for sale within one year under the preceding sentence.

Accounting

.09 Paragraph 10 of FASB Statement No. 12 [section 5132.10] applies to all transfers between current and noncurrent classifications of equity securities that are marketable, as that term is defined in the Statement (see paragraph .02 above). If the change in the classification of an equity security is coincident with a change in its status from marketable to nonmarketable or from nonmarketable to marketable, paragraph 10 of the Statement [section 5132.10] shall apply to the transfer between current and noncurrent classifications. Paragraph 10 of the Statement [section 5132.10] requires that if the market value of the security is less than its cost when it is transferred between current and noncurrent classifications, “the market value shall become the new cost basis, and the difference shall be accounted for as if it were a realized loss and included in the determination of net income.” In that situation, market value shall be the security’s last available market price if the transfer between classifications is coincident with a change in status from marketable to nonmarketable and the first available market price if the transfer between classifications is coincident with a change in status from nonmarketable to marketable.

.10 The accounting for a nonmarketable security is outside of the scope of FASB Statement No. 12 [section 5132]. When a marketable equity security becomes nonmarketable, the cost of that security shall be excluded from the portfolio of marketable equity securities of which it was a part for purposes of applying the Statement. When a nonmarketable equity security becomes marketable, that security shall be included in the portfolio of
marketable equity securities at cost. The term cost is defined in paragraph 7(e) of the Statement [section 5132.07(e)] as "the original cost... unless a new cost basis has been assigned based on recognition of an impairment of value that was deemed other than temporary or as the result of a transfer between current and noncurrent classifications as described in paragraph 10 [of the Statement] [section 5132.10]. In such cases, the new cost basis shall be the cost for the purposes of this Statement."

EFFECTIVE DATE AND TRANSITION

.11 The provisions of this Interpretation shall be effective for financial statements for annual and interim periods ending after March 15, 1977. Earlier application is encouraged in financial statements for annual and interim periods ending before March 16, 1977 that have not been previously issued. This Interpretation shall not be applied retroactively for previously issued annual or interim financial statements.

Accounting for Intangible Assets

[Source: APB Opinion No. 17, as amended.]

Effective to account for intangible assets acquired after October 31, 1970, unless otherwise indicated.

SUMMARY

Problem

.01 An enterprise may acquire intangible assets from others or may develop them itself. Many kinds of intangible assets may be identified and given reasonably descriptive names, for example, patents, franchises, trademarks, and the like. Other types of intangible assets lack specific identifiability. Both identifiable and unidentifiable assets may be developed internally. Identifiable intangible assets may be acquired singly, as a part of a group of assets, or as part of an entire enterprise, but unidentifiable assets cannot be acquired singly. The excess of the cost of an acquired company over the sum of identifiable net assets, usually called goodwill, is the most common unidentifiable intangible asset.

.02 Accounting for an intangible asset involves the same kinds of problems as accounting for other long-lived assets, namely, determining an initial carrying amount, accounting for that amount after acquisition under normal business conditions (amortization), and accounting for that amount if the value declines substantially and permanently. Solving the problems is complicated by the characteristics of an intangible asset: its lack of physical qualities makes evidence of its existence elusive, its value is often difficult to estimate, and its useful life may be indeterminable.

1 See paragraphs .33-.35.
.03 The Director of Accounting Research of the American Institute of Certified Public Accountants has published Accounting Research Study No. 10, *Accounting for Goodwill*, by George R. Catlett and Norman O. Olson. The study emphasizes accounting for goodwill acquired in a business combination but also discusses accounting for goodwill developed internally. The study cites the supporting authoritative pronouncements and their influences on accounting practices and evaluates the effects of practices on financial reporting.

**Scope and Effect of Section**

.04 The Board has considered the conclusions and recommendations of Accounting Research Study No. 10, the discussions of the appropriateness of accepted methods of accounting for intangible assets, and proposals for alternative accounting procedures. The Board expresses in this section its conclusions on accounting for intangible assets. Those research and development costs encompassed by FASB Statement of Financial Accounting Standards No. 2 are excluded from the scope of this section. [As amended, effective for fiscal years beginning on or after January 1, 1975, by FASB Statement No. 2.] (See section 4211.)

.05 This section covers the accounting for both identifiable and unidentifiable intangible assets that a company acquires, including those acquired in business combinations. "Company" in this section refers to both incorporated and unincorporated enterprises. The conclusions of the section apply to intangible assets recorded, if any, on the acquisition of some or all of the stock held by minority stockholders of a subsidiary company. This section also covers accounting for costs of developing goodwill and other unidentifiable intangible assets with indeterminate lives.

.06 The provisions of this section apply to costs of developing identifiable intangible assets that a company defers and records as assets. Some companies defer costs incurred to develop identifiable intangible assets while others record the costs as expenses as incurred. Certain

---

2 Accounting research studies are not pronouncements of the Board or of the Institute but are published for the purpose of stimulating discussion on important accounting matters.
costs, for example, preoperating costs, present problems which need to be studied separately. The question of deferral of those costs is beyond the scope of this section. [As amended, effective for fiscal years beginning on or after January 1, 1975, by FASB Statement No. 2.] (See section 4211.)

.07 This section applies to regulated companies in accordance with the provisions of the Addendum [section 6011] to APB Opinion No. 2, Accounting for the “Investment Credit”, 1962.
The conclusions of this section modify previous views of the Board and its predecessor, the Committee on Accounting Procedure.

Conclusions

The Board concludes that a company should record as assets the costs of intangible assets acquired from others, including goodwill acquired in a business combination. A company should record as expenses the costs to develop intangible assets which are not specifically identifiable. The Board also concludes that the cost of each type of intangible asset should be amortized by systematic charges to income over the period estimated to be benefited. The period of amortization should not, however, exceed forty years.

BACKGROUND

Bases of Classification

Various intangible assets differ in their characteristics, their useful lives, their relations to operations, and their later dispositions. Intangible assets may be classified on several different bases:

- Identifiability—separately identifiable or lacking specific identification.
- Manner of acquisition—acquired singly, in groups, or in business combinations or developed internally.
- Expected period of benefit—limited by law or contract, related to human or economic factors, or indefinite or indeterminate duration.
- Separability from an entire enterprise—rights transferable without title, salable, or inseparable from the enterprise or a substantial part of it.

Present Accounting

Accounting for Costs at Acquisition

Present principles of accounting for intangible assets are generally similar to those for tangible, long-lived assets such as property, plant, and equipment. Intangible assets acquired from other entities are recorded at cost when acquired. Costs incurred to develop specifically identifiable intangible assets are often recorded as assets if the periods of expected future benefit are reasonably determinable. Costs of developing other intangible assets are usually recorded as expenses when incurred.

Accounting for Deferred Costs After Acquisition

Intangible assets have been divided into two classes for purposes of accounting for their costs: (a) those with a
determinable term of existence because it is limited by law, regulation, or agreement, or by the nature of the asset, and (b) those having no limited term of existence and no indication of limited life at the time of acquisition. The cost of a type (a) intangible asset is amortized by systematic charges to income over the term of existence or other period expected to be benefited. The cost of a type (b) intangible asset may be treated in either of two ways: (1) the cost may be retained until a limit on the term of existence or a loss of value is evident, at which time the cost is amortized systematically over the estimated remaining term of existence or, if worthless, written off as an extraordinary item in the income statement, or (2) the cost may be amortized at the discretion of management by charges to income even though no present evidence points to a limited term of existence or a loss of value.

.13 The cost of an intangible asset, including goodwill acquired in a business combination, may not be written off as a lump sum to capital surplus or to retained earnings nor be reduced to a nominal amount at or immediately after acquisition (ARB No. 43, Chapter 5 and APB Opinion No. 9).

Criticism of Present Practice

.14 Present accounting for goodwill and other unidentifiable intangible assets is often criticized because alternative methods of accounting for costs are acceptable. Some companies amortize the cost of acquired intangible assets over a short arbitrary period to reduce the amount of the asset as rapidly as practicable, while others retain the cost as an asset until evidence shows a loss of value and then record a material reduction in a single period. Selecting an arbitrary period of amortization is criticized because it may understatement net income during the amortization period and overstate later net income. Retaining the cost as an asset is criticized because it may overstate net income before the loss of value is recognized and understate net income in the period of write-off.

Appraisal of Alternative Procedures

Cost of Intangible Assets

.15 The cost of intangible assets acquired either singly or in groups, including intangible assets acquired in a busi-
ness combination, from other businesses or individuals is determined by general principles of the historical-cost basis of accounting. The costs of developing goodwill and other intangible assets with indeterminate lives are ordinarily not distinguishable from the current costs of operations and are thus not assignable to specific assets.

Treatment of Costs

.16 Costs of intangible assets which have fixed or reasonably determinable terms of existence are now amortized by systematic charges to income over their terms of existence. Differences of opinion center on the amortization of acquired intangible assets with lives which cannot be estimated reliably either at the date of acquisition or perhaps long after, for example, goodwill and trade names.

.17 The literature on business combinations and goodwill, including Accounting Research Study No. 10, Accounting for Goodwill, contains at least four possible accounting treatments of goodwill and similar intangible assets:

a. Retain the cost as an asset indefinitely unless a reduction in its value becomes evident.

b. Retain the cost as an asset but permit amortization as an operating expense over an arbitrary period.

c. Retain the cost as an asset but require amortization as an operating expense over its estimated limited life or over an arbitrary but specified maximum and minimum period.

d. Deduct the cost from stockholders' equity at the date acquired.

.18 Arguments for nonamortization. The two of the four accounting proposals which do not involve amortization of goodwill as an operating expense are based in part on the contention that goodwill value is not consumed or used to produce earnings in the same manner as various property rights, and therefore net income should not be reduced by amortization of goodwill. Further, net income should not be reduced by both amortization of goodwill and current expenditures that are incurred to enhance or maintain the value of the acquired intangible assets. All
methods of amortizing goodwill are criticized as arbitrary because the life of goodwill is indefinite and an estimated period of existence is not measurable.

.19 The basis for proposing that the cost of goodwill be retained as an asset until a loss in value becomes evident is that the cost incurred for acquired goodwill should be accounted for as an asset at the date acquired and in later periods. The cost should not be reduced as long as the value of the asset is at least equal to that cost.

.20 The basis for proposing that the cost of goodwill be deducted from stockholders’ equity at the date acquired is that the nature of goodwill differs from other assets and warrants special accounting treatment. Since goodwill attaches only to a business as a whole and its value fluctuates widely for innumerable reasons, estimates of either the terms of existence or current value are unreliable for purposes of income determination.

Accounting on the Historical-Cost Basis

.21 All assets which are represented by deferred costs are essentially alike in historical-cost based accounting. They result from expenditures or owners’ contributions and are expected to increase revenue or reduce costs to be incurred in future periods. If future benefit or the period to be benefited is questionable, the expenditure is usually treated as a current expense and not as a deferred cost. Associating deferred costs with the revenue or period to which they are expected to relate is a basic problem in historical-cost based accounting both in measuring periodic income and in accounting for assets. The basic accounting treatment does not depend on whether the asset is a building, a piece of equipment, an element of inventory, a prepaid insurance premium, or whether it is tangible or intangible. The cost of goodwill and similar intangible assets is therefore essentially the same as the cost of land, buildings, or equipment under historical-cost based accounting. Deducting the cost of an asset from stockholders’ equity (either retained earnings or capital in excess of par or stated value) at the date incurred does not match costs with revenue.
Accounting for the cost of a long-lived asset after acquisition normally depends on its estimated life. The cost of assets with perpetual existence, such as land, is carried forward as an asset without amortization, and the cost of assets with finite lives is amortized by systematic charges to income. Goodwill and similar intangible assets do not clearly fit either classification; their lives are neither infinite nor specifically limited, but are indeterminate. Thus, although the principles underlying present practice conform to the principles of accounting for similar types of assets, their applications have led to alternative treatments. Amortizing the cost of goodwill and similar intangible assets on arbitrary bases in the absence of evidence of limited lives or decreased values may recognize expenses and decreases of assets prematurely, but delaying amortization of the cost until a loss is evident may recognize the decreases after the fact.

A Practical Solution

A solution to this dilemma is to set minimum and maximum amortization periods. This accounting follows from the observation that few, if any, intangible assets last forever, although some may seem to last almost indefinitely. Allocating the cost of goodwill or other intangible assets with an indeterminate life over time is necessary because the value almost inevitably becomes zero at some future date. Since the date at which the value becomes zero is indeterminate, the end of the useful life must necessarily be set arbitrarily at some point or within some range of time for accounting purposes.

OPINION

Acquisition of Intangible Assets

The Board concludes that a company should record as assets the costs of intangible assets acquired from other enterprises or individuals. Costs of developing, maintaining, or restoring intangible assets which are not specifically identifiable, have indeterminate lives, or are inherent in a continuing business and related to an enterprise as a whole—such as goodwill—should be deducted from income when incurred.
.25 Cost of intangible assets. Intangible assets acquired singly should be recorded at cost at date of acquisition. Cost is measured by the amount of cash disbursed, the fair value of other assets distributed, the present value of amounts to be paid for liabilities incurred, or the fair value of consideration received for stock issued as described in section 1091.67.

.26 Intangible assets acquired as part of a group of assets or as part of an acquired company should also be recorded at cost at date of acquisition. Cost is measured differently for specifically identifiable intangible assets and those lacking specific identification. The cost of identifiable intangible assets is an assigned part of the total cost of the group of assets or enterprise acquired, normally based on the fair values of the individual assets. The cost of unidentifiable intangible assets is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed. Cost should be assigned to all specifically identifiable intangible assets; cost of identifiable assets should not be included in goodwill. Principles and procedures of determining cost of assets acquired, including intangible assets, are discussed in detail in section 1091.66-.89.

Amortization of Intangible Assets

.27 The Board believes that the value of intangible assets at any one date eventually disappears and that the recorded costs of intangible assets should be amortized by systematic charges to income over the periods estimated to be benefited. Factors which should be considered in estimating the useful lives of intangible assets include:

a. Legal, regulatory, or contractual provisions may limit the maximum useful life.

b. Provisions for renewal or extension may alter a specified limit on useful life.

c. Effects of obsolescence, demand, competition, and other economic factors may reduce a useful life.

d. A useful life may parallel the service life expectancies of individuals or groups of employees.
e. Expected actions of competitors and others may restrict present competitive advantages.

f. An apparently unlimited useful life may in fact be indefinite and benefits cannot be reasonably projected.

g. An intangible asset may be a composite of many individual factors with varying effective lives.

The period of amortization of intangible assets should be determined from the pertinent factors.

.28 The cost of each type of intangible asset should be amortized on the basis of the estimated life of that specific asset and should not be written off in the period of acquisition. Analysis of all factors should result in a reasonable estimate of the useful life of most intangible assets. A reasonable estimate of the useful life may often be based on upper and lower limits even though a fixed existence is not determinable.

.29 The period of amortization should not, however, exceed forty years. Analysis at the time of acquisition may indicate that the indeterminate lives of some intangible assets are likely to exceed forty years and the cost of those assets should be amortized over the maximum period of forty years, not an arbitrary shorter period.

.30 Method of amortization. The Board concludes that the straight-line method of amortization—equal annual amounts—should be applied unless a company demonstrates that another systematic method is more appropriate. The financial statements should disclose the method and period of amortization. Amortization of acquired goodwill and of other acquired intangible assets not deductible in computing income taxes payable does not create a timing difference, and allocation of income taxes is inappropriate.

.31 Subsequent review of amortization. A company should evaluate the periods of amortization continually to determine whether later events and circumstances warrant revised estimates of useful lives. If estimates are changed, the unamortized cost should be allocated to the increased or reduced number of remaining periods in the revised useful life but not to exceed forty years after acquisition. Estimation of value and future benefits of an intangible asset
may indicate that the unamortized cost should be reduced significantly by a deduction in determining net income (section 2012.19-.24). However, a single loss year or even a few loss years together do not necessarily justify an extraordinary charge to income for all or a large part of the unamortized cost of intangible assets. The reason for an extraordinary deduction should be disclosed. [As amended, effective for events and transactions occurring after September 30, 1973 by APB Opinion No. 30.] (See section 2012.)

Disposal of Goodwill

.32 Ordinarily goodwill and similar intangible assets cannot be disposed of apart from the enterprise as a whole. However, a large segment or separable group of assets of an acquired company or the entire acquired company may be sold or otherwise liquidated, and all or a portion of the unamortized cost of the goodwill recognized in the acquisition should be included in the cost of the assets sold.

EFFECTIVE DATE

.33 The provisions of this section shall be effective to account for intangible assets acquired after October 31, 1970. Intangible assets recognized in business combinations initiated before November 1, 1970 and consummated on or after that date under the terms prevailing on October 31, 1970* may be accounted for in accordance with this section or Chapter 5 of ARB No. 43 and section 2010.

.34 The provisions of this section should not be applied retroactively to intangible assets acquired before November 1, 1970, whether in business combinations or otherwise.

.35 The Board encourages the application on a prospective basis to all intangible assets held on October 31, 1970 of the provisions in paragraphs .27 to .31 of this section which require amortization of all intangible assets. Unless the provisions of this section are applied prospectively, the accounting for intangible assets held on October 31, 1970 should be in accordance with Chapter 5 of ARB No. 43 as modified by section 2010.
Capitalization of Interest Cost

[Introduction: FASB Statement No. 34.]

October 1979

INTRODUCTION

.01 This Statement establishes standards of financial accounting and reporting for capitalizing interest cost as a part of the historical cost of acquiring certain assets. For the purposes of this Statement, interest cost includes interest recognized on obligations having explicit interest rates,1 interest imputed on certain types of payables in accordance with APB Opinion No. 21 [section 4111], Interest on Receivables and Payables, and interest related to a capital lease determined in accordance with FASB Statement No. 13 [section 4053], Accounting for Leases.

.02 Paragraphs 15 and 16 of Opinion 21 [section 4111.14-.15] provide that the discount or premium that results from imputing interest for certain types of payables should be amortized as interest expense over the life of the payable and reported as such in the statement of income. Paragraph 12 of Statement 13 [section 4053.012] provides that, during the term of a capital lease, a portion of each minimum lease payment shall be recorded as interest expense. This Statement modifies Opinion 21 [section 4111] and Statement 13 [section 4053] in that the amount chargeable to interest expense under the provisions of those paragraphs is eligible for inclusion in the amount of interest cost capitalizable in accordance with this Statement.

.03 Some enterprises now charge all interest cost to expense when incurred; some enterprises capitalize interest cost in some circumstances; and some enterprises, primarily public utilities, also capitalize a cost for equity funds in some circumstances. This diversity of practice and an observation that an increasing number of nonutility registrants were adopting a policy of capitalizing interest led the Securities and Exchange Commission to

1 Interest cost on these obligations includes amounts resulting from periodic amortization of discount or premium and issue costs on debt.
impose, in November 1974, a moratorium on adoption or extension of such a policy by most nonutility registrants until such time as the FASB established standards in this area.² *

.04 Appendix A provides additional background information. Appendix B sets forth the basis for the Board's conclusions, including alternatives considered and reasons for accepting some and rejecting others.

.05 The Addendum [section 6011] to APB Opinion No. 2, *Accounting for the 'Investment Credit',* states that "differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the rate-making process,"¹ and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum shall govern the application of this Statement to those operations of an enterprise that are regulated for rate-making purposes on an individual-company-cost-of-service basis.

STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

.06 The historical cost of acquiring an asset includes the costs necessarily incurred to bring it to the condition and location necessary for its intended use.³ If an asset requires a period of time in which to carry out the activities⁴ necessary to bring it to that condition and location, the interest cost incurred during that period as a result of expenditures for the asset is a part of the historical cost of acquiring the asset.

.07 The objectives of capitalizing interest are (a) to obtain a measure of acquisition cost that more closely reflects the enterprise's total investment in the asset and (b) to charge a cost that relates to the acquisition of a resource that will benefit future periods against the revenues of the periods benefited.

---

² Securities and Exchange Commission, ASR No. 163, *Capitalization of Interest by Companies Other Than Public Utilities* (Washington: November 14, 1974).

³ The term intended use embraces both readiness for use and readiness for sale, depending on the purpose of acquisition.

⁴ See paragraph .17 for a definition of those activities for purposes of this Statement.
In concept, interest cost is capitalizable for all assets that require a period of time to get them ready for their intended use (an "acquisition period"). However, in many cases, the benefit in terms of information about enterprise resources and earnings may not justify the additional accounting and administrative cost involved in providing the information. The benefit may be less than the cost because the effect of interest capitalization and its subsequent amortization or other disposition, compared with the effect of charging it to expense when incurred, would not be material. In that circumstance, interest capitalization is not required by this Statement.

**Assets Qualifying for Interest Capitalization**

Subject to the provisions of paragraph .08, interest shall be capitalized for the following types of assets ("qualifying assets"): a. Assets that are constructed or otherwise produced for an enterprise's own use (including assets constructed or produced for the enterprise by others for which deposits or progress payments have been made) b. Assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g., ships or real estate developments).

However, interest cost shall not be capitalized for inventories that are routinely manufactured or otherwise produced in large quantities on a repetitive basis because, in the Board's judgment, the informational benefit does not justify the cost of so doing. In addition, interest shall not be capitalized for the following types of assets:

a. Assets that are in use or ready for their intended use in the earning activities of the enterprise b. Assets that are not being used in the earning activities of the enterprise and that are not undergoing the activities necessary to get them ready for use.

Land that is not undergoing activities necessary to get it ready for its intended use is not a qualifying asset. If activities are undertaken for the purpose of developing land for a particular use, the expenditures to acquire the land qualify for interest capitalization while those activities are in progress. The interest cost capitalized on those expenditures is a cost of acquiring the
asset that results from those activities. If the resulting asset is a structure, such as a plant or a shopping center, interest capitalized on the land expenditures is part of the acquisition cost of the structure. If the resulting asset is developed land, such as land that is to be sold as developed lots, interest capitalized on the land expenditures is part of the acquisition cost of the developed land.

The Amount of Interest Cost to Be Capitalized

.12 The amount of interest cost to be capitalized for qualifying assets is intended to be that portion of the interest cost incurred during the assets’ acquisition periods that theoretically could have been avoided (for example, by avoiding additional borrowings or by using the funds expended for the assets to repay existing borrowings) if expenditures for the assets had not been made.

.13 The amount capitalized in an accounting period shall be determined by applying an interest rate(s) (“the capitalization rate”) to the average amount of accumulated expenditures for the asset during the period. The capitalization rates used in an accounting period shall be based on the rates applicable to borrowings outstanding during the period. If an enterprise’s financing plans associate a specific new borrowing with a qualifying asset, the enterprise may use the rate on that borrowing as the capitalization rate to be applied to that portion of the average accumulated expenditures for the asset that does not exceed the amount of that borrowing. If average accumulated expenditures for the asset exceed the amounts of specific new borrowings associated with the asset, the capitalization rate to be applied to such excess shall be a weighted average of the rates applicable to other borrowings of the enterprise.

.14 In identifying the borrowings to be included in the weighted average rate, the objective is a reasonable measure of the cost of financing acquisition of the asset in terms of the interest cost incurred that otherwise could have been avoided. Accordingly, judgment will be required to make a selection of borrowings that best accomplishes that objective in the circumstances. For example, in some circumstances, it will be appropriate to include all borrowings of the parent company and its consolidated subsidiaries; for some multinational enterprises, it may be appropriate for each foreign subsidiary to use an average of the rates applicable to its own borrowings. However, the use of judgment in determin-
ing capitalization rates shall not circumvent the requirement that a capitalization rate be applied to all capitalized expenditures for a qualifying asset to the extent that interest cost has been incurred during an accounting period.

.15 The total amount of interest cost capitalized in an accounting period shall not exceed the total amount of interest cost incurred by the enterprise in that period. In consolidated financial statements, that limitation shall be applied by reference to the total amount of interest cost incurred by the parent company and consolidated subsidiaries on a consolidated basis. In any separately issued financial statements of a parent company or a consolidated subsidiary and in the financial statements (whether separately issued or not) of unconsolidated subsidiaries and other investees accounted for by the equity method, the limitation shall be applied by reference to the total amount of interest cost (including interest on intercompany borrowings) incurred by the separate entity.

.16 For the purposes of this Statement, expenditures to which capitalization rates are to be applied are capitalized expenditures (net of progress payment collections) for the qualifying asset that have required the payment of cash, the transfer of other assets, or the incurring of a liability on which interest is recognized (in contrast to liabilities, such as trade payables, accruals, and retainages on which interest is not recognized). However, reasonable approximations of net capitalized expenditures may be used. For example, capitalized costs for an asset may be used as a reasonable approximation of capitalized expenditures unless the difference is material.

The Capitalization Period

.17 The capitalization period shall begin when three conditions are present:

a. Expenditures (as defined in paragraph .16) for the asset have been made.
b. Activities that are necessary to get the asset ready for its intended use are in progress.
c. Interest cost is being incurred.

Interest capitalization shall continue as long as those three conditions are present. The term activities is to be construed broadly. It encompasses more than physical construction; it includes all
the steps required to prepare the asset for its intended use. For example, it includes administrative and technical activities during the preconstruction stage, such as the development of plans or the process of obtaining permits from governmental authorities; it includes activities undertaken after construction has begun in order to overcome unforeseen obstacles, such as technical problems, labor disputes, or litigation. If the enterprise suspends substantially all activities related to acquisition of the asset, interest capitalization shall cease until activities are resumed. However, brief interruptions in activities, interruptions that are externally imposed, and delays that are inherent in the asset acquisition process shall not require cessation of interest capitalization.

.18 The capitalization period shall end when the asset is substantially complete and ready for its intended use. Some assets are completed in parts, and each part is capable of being used independently while work is continuing on other parts. An example is a condominium. For such assets, interest capitalization shall stop on each part when it is substantially complete and ready for use. Some assets must be completed in their entirety before any part of the asset can be used. An example is a facility designed to manufacture products by sequential processes. For such assets, interest capitalization shall continue until the entire asset is substantially complete and ready for use. Some assets cannot be used effectively until a separate facility has been completed. Examples are the oil wells drilled in Alaska before completion of the pipeline. For such assets, interest capitalization shall continue until the separate facility is substantially complete and ready for use.

.19 Interest capitalization shall not cease when present accounting principles require recognition of a lower value for the asset than acquisition cost; the provision required to reduce acquisition cost to such lower value shall be increased appropriately.

Disposition of the Amount Capitalized

.20 Because interest cost is an integral part of the total cost of acquiring a qualifying asset, its disposition shall be the same as that of other components of asset cost.

Disclosures

.21 The following information with respect to interest cost shall be disclosed in the financial statements or related notes:
a. For an accounting period in which no interest cost is capitalized, the amount of interest cost incurred and charged to expense during the period

b. For an accounting period in which some interest cost is capitalized, the total amount of interest cost incurred during the period and the amount thereof that has been capitalized.

**Effective Date and Transition**

.22 This Statement shall be applied prospectively in fiscal years beginning after December 15, 1979. Earlier application is permitted, but not required, in financial statements for fiscal years beginning before December 16, 1979 that have not been previously issued. With respect to qualifying assets in existence at the beginning of the fiscal year in which this Statement is first applied for which interest cost has not been previously capitalized, interest capitalization shall begin at that time. With respect to qualifying assets for which interest cost has been capitalized according to a method that differs from the provisions of this Statement, no adjustment shall be made to the amounts of interest cost previously capitalized, but interest cost capitalized after this Statement is first applied shall be determined according to the provisions of this Statement. With respect to assets in existence when this Statement is first applied for which interest cost has been capitalized but which do not qualify for interest capitalization according to the provisions of this Statement, no adjustments shall be made, but no additional amounts of interest cost shall be capitalized.

.23 If early application is adopted in financial reports for interim periods of a fiscal year beginning before December 16, 1979, previously issued financial information for any interim periods of that fiscal year that precede the period of adoption shall be restated to give effect to the provisions of this Statement, and any subsequent presentation of that information shall be on the restated basis. This Statement shall not be applied retroactively for previously issued annual financial statements.

| The provisions of this Statement need not be applied to immaterial items. |
Appendix A

BACKGROUND INFORMATION

.24 Accounting for interest cost was the subject of considerable discussion in accounting literature during the first quarter of this century, but, apart from discussion in accounting textbooks and some articles in regulatory periodicals, relatively little was written on the subject during the next 40 years. The sharp rise in interest rates and increased use of borrowed funds in the last 10 years, however, resulted in renewed attention to the subject.

.25 The question of capitalizing interest cost has never been resolved by an authoritative pronouncement of a standard-setting body. In 1971, the Accounting Principles Board (APB) appointed a committee to study the subject. The committee prepared a comprehensive working paper setting forth the principal issues to be considered, but the APB terminated its activities before a pronouncement could be issued. Accounting for interest cost was also among the many topics originally suggested to the FASB by its Advisory Council and others; however, it was not included on the Board's initial technical agenda.

.26 In 1974, the Securities and Exchange Commission became concerned with accounting for interest cost when it noted an increase in the number of nonutility registrants that were adopting a policy of capitalizing interest as part of the cost of certain assets. On June 21, 1974, the SEC issued a release that proposed a moratorium on adoption or extension of a policy of capitalizing interest by registrants other than public utilities that had not, as of June 21, 1974, publicly disclosed such a policy. On November 14, 1974, the moratorium was imposed by ASR No. 163, Capitalization of Interest by Companies Other Than Public Utilities. “Public utilities” was defined to include electric, gas, water, and telephone utilities; registrants covered by AICPA Guides Accounting for Retail Land Sales and Audits of Savings and Loan Associations were also excluded from the moratorium. In explaining its action, the SEC noted that:

---

5 In 1917, the American Institute of Accountants (as it was then known) set up a Special Committee on Interest in Relation to Cost. The Committee concluded that interest on investment should not be included in production cost. At the Institute's 1918 annual meeting, the members in attendance voted their acceptance and approval of the Committee's report.

Although the vote of the Institute's membership is of historical interest, it has not been incorporated into the body of authoritative pronouncements currently in force.
Capitalization of Interest Cost

. . . it does not seem desirable to have an alternative practice grow up through selective adoption by individual companies without careful consideration of such a change by the Financial Accounting Standards Board, including the development of systematic criteria as to when, if ever, capitalization of interest is desirable.

Accordingly, the Commission concludes that companies other than electric, gas, water and telephone utilities and those companies covered by the two exceptions in the authoritative literature described above which had not, as of June 21, 1974, publicly disclosed an accounting policy of capitalizing interest costs shall not follow such a policy in financial statements filed with the Commission covering fiscal periods ending after June 21, 1974. At such time as the Financial Accounting Standards Board develops standards for accounting for interest cost, the Commission expects to reconsider this conclusion. Until such time, companies which have publicly disclosed such a policy may continue to apply it on a consistent basis but not extend it to new types of assets. Return on equity invested shall not be capitalized by companies other than electric, gas, water and telephone utilities.

The Release amended Regulation S-X to require the disclosure of certain information by registrants continuing to capitalize interest.

.27 At its meeting on September 18, 1974, the FASB’s Advisory Council agreed that this matter should be considered by the FASB, and on November 25, 1974, the Board added the project to its technical agenda. In September 1975, a task force of 16 persons from academe, the financial community, industry, and public accounting was appointed to provide counsel to the Board in preparing a Discussion Memorandum.

.28 The project began with a broad scope. It was to deal not only with accounting for interest on debt, but also to explore the proposal to give comprehensive accounting recognition to an imputed interest cost for equity capital. According to proponents of that proposal, accounting should recognize such imputed interest whether it is to be capitalized or not. The total of debt interest and imputed equity interest, they believe, should be allocated to enterprise assets and operations, just as material, labor, and overhead costs are presently allocated. However, as the project proceeded, the Board came to the conclusion that, because it could involve fundamental changes in the measurement of earnings and asset values—a subject that properly be-
longs in the Board's conceptual framework project—the Statement resulting from the interest cost project should not deal with that proposal. Accordingly, the scope of the project was narrowed to focus on accounting alternatives that are found in practice under the present accounting model.

.29 Presently, some companies account for interest on debt as an expense of the period in which it is incurred. Some companies, on the other hand, capitalize interest on debt as part of the cost of certain kinds of assets, such as construction work in progress, land held for future development, and real estate in process of development; and some companies, notably public utility companies, capitalize a cost of equity funds as well as interest on debt as part of the cost of certain assets. Thus, the basic issue to be resolved by this project was stated in the Discussion Memorandum, Accounting for Interest Costs, to be a determination as to which of those accounting alternatives should be applied.

.30 In addition to presenting arguments for and against each of the accounting alternatives, the Discussion Memorandum identified 10 implemental issues relating to interest capitalization and three implemental issues relating to information disclosures and application of this Statement. A chapter was devoted to the proposal for comprehensive accounting recognition of imputed equity interest to assist the reader to relate the basic issue being considered to the broader aspects of the subject but, because of the Board's decision not to deal with the proposal at the present time, the related issues were described as "advisory" issues.

.31 The Board issued the Discussion Memorandum on December 16, 1977 and held a public hearing in New York on April 4 and 5, 1978. The Board received 145 position papers, letters of comment, and outlines of oral presentations in response to the Discussion Memorandum, and 18 presentations were made at the public hearing.

.32 An Exposure Draft of a proposed Statement on Capitalization of Interest Cost was issued on December 15, 1978. The Board received 269 letters of comment in response to the Exposure Draft.
Appendix B

BASIS FOR CONCLUSIONS

.33 This appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including various alternatives considered and reasons for accepting some and rejecting others. Individual assenting Board members gave greater weight to some factors than to others.

Scope

.34 Some respondents to the Discussion Memorandum recommended that regulated enterprises be exempt from the provisions of this Statement because the rate-making process creates a special set of circumstances and because most regulatory agencies prescribe when and how interest shall be capitalized by companies subject to their jurisdiction. The Board concluded that the applicability of this Statement should not differ from that of other FASB Statements. Moreover, the effect of the rate-making process on accounting and reporting by regulated enterprises is the subject of another project on the Board's technical agenda, and the Board concluded that this Statement should not prejudge the outcome of that project.

.35 Some respondents to the Exposure Draft urged that the scope of this Statement be expanded to include other costs, such as insurance and property taxes, that are sometimes capitalized in the same circumstances as interest cost. The Board did not adopt that suggestion because special considerations apply to interest cost and expansion of the scope of this Statement at that stage would have significantly delayed its issuance. The scope of the project was considered at length during the Discussion Memorandum stage, as indicated in Appendix A.

The Accounting Alternatives

.36 As indicated in Appendix A, the Board considered three basic methods of accounting for interest cost:
   a. Account for interest on debt as an expense of the period in which it is incurred.
   b. Capitalize interest on debt as part of the cost of an asset when prescribed conditions are met.
   c. Capitalize interest on debt and imputed interest on stockholders' equity as part of the cost of an asset when prescribed conditions are met.
The Board concluded that the second of those methods should be adopted. The reasons for that conclusion are presented in paragraphs .37-.57.

**Interest as a Cost of Acquiring an Asset**

.37 The Board determined that the primary question to be addressed was whether there are any circumstances in which interest cost should be considered to be part of the historical cost of acquiring an asset. The focus on the historical cost of acquiring an asset followed from the Board's decision, in developing the scope of this project, that the accounting alternatives that would be considered for this Statement should be limited to those found in practice based on the present accounting model, as stated in Appendix A. In the present accounting model, non-monetary assets are generally carried at acquisition cost or some unexpired or unamortized portion of it. The cost "at which assets are carried and expenses are measured in financial accounting today usually means historical or acquisition cost because of the conventions of initially recording assets at acquisition cost and of ignoring increases in assets until they are exchanged (the realization convention)."

.38 Some believe that interest should be capitalized as a cost of holding assets, but, in general, in the present accounting model, costs are not added to assets subsequent to their readiness for use. Consideration of that proposal would require a comprehensive reexamination of a fundamental principle underlying present practice. One of the consequences of restricting the focus to acquisition cost was that capitalization of interest as a holding cost was rejected. Thus, earning assets and nonearning assets not undergoing the activities necessary to get them ready for use do not qualify for interest capitalization under this Statement.

.39 The Board concluded that interest cost is a part of the cost of acquiring an asset if a period of time is required in which to carry out the activities necessary to get it ready for its intended use. In reaching this conclusion, the Board considered that the point in time at which an asset is ready for its intended use is critical in determining its acquisition cost. Assets are expected to provide future economic benefits, and the notion of expected future economic benefits implies fitness for a particular

7 Ibid., par. 164 [section 1026.28].
Capitalization of Interest Cost

purpose. Although assets may be capable of being applied to a variety of possible uses, the use intended by the enterprise in deciding to acquire an asset has an important bearing on the nature and value of the economic benefits that it will yield.

.40 Some assets are ready for their intended use when purchased. Others are constructed or otherwise developed for a particular use by a series of activities whereby diverse resources are combined to form a new asset or a less valuable resource is transformed into a more valuable resource. Activities take time for their accomplishment. During the period of time required, the expenditures for the materials, labor, and other resources used in creating the asset must be financed. Financing has a cost. The cost may take the form of explicit interest on borrowed funds, or it may take the form of a return foregone on an alternative use of funds, but regardless of the form it takes, a financing cost is necessarily incurred. On the premise that the historical cost of acquiring an asset should include all costs necessarily incurred to bring it to the condition and location necessary for its intended use, the Board concluded that, in principle, the cost incurred in financing expenditures for an asset during a required construction or development period is itself a part of the asset's historical acquisition cost.

.41 Some assenting Board members believe that the informational value of historical cost as an indicator of an asset's cash flow potential is also a reason for capitalizing interest cost. At the time of the decision to acquire an asset, they point out, the enterprise believes that the present value of its cash flow service potential is at least as great as the sum of the costs that will have to be incurred to acquire it. Otherwise, the enterprise presumably would not acquire the asset. Accordingly, the enterprise's commitment of cash or other resources to acquire the asset provides the best available objective evidence of an asset's cash flow service potential at the time of acquisition.

.42 Those Board members believe acquisition cost provides the most reliable measure of cash flow potential when assets are self-constructed or produced as well as when they are purchased in arms-length transactions. Measuring the acquisition cost of a self-constructed or produced asset is not as simple as measuring the acquisition cost of a purchased asset, but, those Board members believe, the objective should be the same—to obtain a measure of cash flow service potential that is supported by objective evidence. For such assets, therefore, acquisition cost should include all the cost components envisioned by the enter-
prise as being necessary to acquire the asset. The cost of financing the asset during the period of its construction or production is one of those cost components. Since the cash flow potential of an enterprise's assets is significant information in assessing the future net cash flows of the enterprise and hence the prospective cash receipts of investors and creditors, a measure of acquisition cost that includes interest cost is likely to be more useful to investors and creditors than one that does not.

Some assenting Board members believe that a case could be made for allocating interest cost to all nonmonetary assets, whether being developed for use or in use. It could be argued that, since assets are future economic benefits, the historical cost of an asset at any point in time should be the unexpired portion of all costs incurred in relation to the asset prior to that time. All assets require financing, and therefore the cost of financing (interest) should be included in the historical cost of all nonmonetary assets. Those Board members, however, concluded that allocation of interest cost to assets in use or ready for use is not appropriate at present. The broad issue of dividing the long-term service potential of an asset into the services associated with periods of use would have to be reexamined before such an extension of the historical cost concept could be made. Further, allocation of interest cost to all nonmonetary assets often would have a relatively small effect on periodic earnings because the amount of interest capitalized in a period would tend to be offset by amortization of interest capitalized in prior periods. The incremental informational benefit would not be commensurate with the additional accounting and administrative costs. They concluded that interest cost should be capitalized only when it is part of the original acquisition cost of an asset.

The reasoning in the foregoing paragraphs would lead to the conclusion that interest should be included in the acquisition cost of all assets that are derived from a production, construction, or other time-consuming development process. However, in considering the circumstances in which interest capitalization should be required, the Board weighed the expected benefit in terms of information about enterprise resources and earnings against the expected cost of providing that information. With that consideration in mind when developing the Exposure Draft, the Board had concluded that interest should not be included in the cost of manufactured inventories that turn over relatively quickly and that interest capitalization should be confined to assets whose

required development period is significant. But respondents to the Exposure Draft identified a number of problems with the proposal to delineate qualifying assets by the length of the development period. In particular, it was pointed out that a judgment about the benefit of interest capitalization in a given set of circumstances should focus on the significance of the amount of interest cost associable with an asset, and that the length of the development period is only one of the factors to be considered. Other factors include the amount of expenditures, the timing of expenditures, the capitalization rate, and the criterion by which significance is judged (e.g., periodic earnings). In addition, some respondents said that a review of their operations showed that, in any given year, a very large number of assets would meet the “significant period” test. They said that considerable costs would be involved in continually identifying assets that meet the test and the borrowings to be associated with each asset, and in additional recordkeeping.

.45 Other respondents expressed concern that inventory items that require an extended maturation period (such as aging whiskeys and tobacco) would qualify for interest capitalization according to the Exposure Draft. They said that aging is not part of the production process. Moreover, such inventories are often accounted for on the last-in, first-out basis (LIFO), which would present special difficulties in concept, in implementation, and in application of “LIFO conformity” requirements for income tax purposes. Finally, it was observed that, although an individual batch of whiskey or tobacco may be held in inventory for a significant period, there is a constant flow of product into and out of inventory. Hence, the effect on earnings of capitalizing interest on maturing inventories usually would not be significant in the long run.

.46 In the light of respondents’ comments, the Board decided that cost/benefit considerations indicated that the circumstances in which interest capitalization is required should be more restricted than those set forth in the Exposure Draft and that those circumstances should be delineated by criteria other than the length of the required development period. The significance of the effect of interest capitalization in relation to enterprise resources and earnings is the most important consideration in assessing its benefit. The ease with which qualifying assets and related expenditures can be separately identified and the number of assets subject to interest capitalization are important factors in assessing the cost of implementation. Interest capitalization should be required only when the balance of the informational
benefit and the cost of implementation is favorable. The Board judged that a favorable balance is most likely to be achieved where an asset is constructed or produced as a discrete project for which costs are separately accumulated and where construction of the asset takes considerable time, entails substantial expenditures, and hence is likely to involve a significant amount of interest cost. A favorable balance is unlikely in the case of inventory items that are routinely manufactured or otherwise produced in large quantities on a repetitive basis. Accordingly, this Statement proscribes interest capitalization on those types of inventories and provides for interest capitalization on assets that are constructed or produced as discrete projects. (Some Board members believe that another reason for not capitalizing interest on inventories generally is that, because variations presently exist in the methods of costing inventories, inclusion of interest cost would do little to improve comparability of inventory costs among enterprises.)

.47 The Board recognized that, in many cases, the effect of interest capitalization and its subsequent amortization or other disposition, compared with the effect of charging it to expense when incurred, would not be material. Some assenting Board members noted that the primary factor in making materiality judgments in current practice usually is the relation to the level or trend of earnings. Accordingly, they anticipate that such a factor will be primary in making materiality judgments about the requirement for interest capitalization in accordance with this Statement.

.48 Some respondents to the Discussion Memorandum and the Exposure Draft expressed the view that interest is a unique cost that cannot be allocated to cost objectives in the same way as material, labor, and overhead costs. The Board rejected that view. As explained in paragraph .51, the Board concluded that the cause-and-effect relationship between acquiring an asset and the incurrence of interest cost makes interest cost analogous to a direct cost that is readily and objectively assignable to the acquired asset. The Board believes that failure to capitalize the interest cost associated with the acquisition of qualifying assets improperly reduces reported earnings during the period of acquisition and increases reported earnings in later periods.

The Amount of Interest Cost to Be Capitalized

.49 Some Board members believe that there is a valid conceptual argument for measuring the cost of financing acquisition of
Capitalization of Interest Cost

qualifying assets on the basis of the enterprise's cost of capital, which would include imputed interest on equity capital as well as interest on borrowed capital. Such a measure would recognize that both borrowed capital and equity capital provide funds to the enterprise and that, due to the fungible nature of cash, it is usually impossible to determine objectively the proportion of the funds expended for a particular purpose that was derived from each source. It would also recognize the interrelationship between an enterprise's cost of borrowing and its cost of equity. Some assenting Board members believe that it may be appropriate at some time in the future to consider whether the cost of equity capital should be recognized within a framework for financial reporting that continues to be based primarily on historical cost. Accordingly, they think that the standards prescribed in this Statement should not be incompatible with that possible development. Other assenting Board members do not share that view. Nevertheless, all Board members agreed that recognition of the cost of equity capital does not conform to the present accounting framework. In the present accounting framework, the cost of a resource is generally measured by the historical exchange price paid to acquire it. However, funds are an unusual kind of resource in that, although an enterprise obtains funds from various sources, only borrowed funds give rise to a cost that can be described as a historical exchange price. Although a historical exchange transaction may occur when equity securities are issued, that transaction is not the basis generally advocated for measuring the cost of equity capital. It is generally agreed that use of equity capital entails an economic cost, but in the absence of a historical exchange price, the cost of equity capital is not reliably determinable. The Board concluded, therefore, that the cost of financing expenditures for a qualifying asset should be measured by assigning to the asset an appropriate portion of the interest cost incurred on borrowings during the period of its acquisition. (As a result of that conclusion, the issue presented in the Discussion Memorandum regarding the appropriate method of accounting for the credit corresponding to imputed interest on equity capital did not have to be addressed.)

.50 The Board considered several methods of determining the amount of interest cost to be capitalized. Some suggested that the amount capitalized be limited to the interest incurred on specific borrowings associated with the qualifying asset by the enterprise. However, in the Board's view, association of sources and uses of funds is primarily subjective. If that suggestion had been adopted, the enterprise's identification of the source of the funds used for the asset would determine not only the amount of interest
capitalized but also whether any interest is capitalized. Some suggested that interest cost be allocated to qualifying assets on a basis such as total assets or the total of debt and owner's equity. That method would be based on an assumption that funds used for all assets are obtained from borrowings and other sources proportionately. However, in many cases, it would result in an amount of capitalized interest that was unrealistically low as a measure of the economic cost of financing acquisition of the qualifying asset.

.51 The Board concluded that the amount of interest cost to be capitalized should be the amount that theoretically could have been avoided during the acquisition period if expenditures for the asset had not been made. Clearly, interest cost can be avoided by repaying existing borrowings as well as by not borrowing additional funds. When an enterprise is contemplating investment in an asset, both those alternatives are available. When the decision to invest in the asset is made, those alternatives are rejected and the incurrence of interest cost during the acquisition period is a consequence of that decision. That cause-and-effect relationship between the investment in the asset and the incurrence of interest cost makes interest cost analogous to a direct cost in those circumstances. Also, the amount of interest cost that could have been avoided is one measure of the opportunity cost incurred. Admittedly, investment of funds in the asset also entails rejection of a wide range of other possible uses of funds, and therefore interest cost avoided is only one of several possible measures of opportunity cost. But it is the measure that can be recognized in the present accounting framework. (In adopting the notion of interest on borrowings as an avoidable cost, the Board does not intend that the practicability of repaying individual borrowings has to be considered.)

.52 In the Exposure Draft, the Board proposed a method of associating interest on borrowings with qualifying assets that gave priority to recent borrowings. Respondents criticized that method on a number of grounds, most of which related to its complexity in practice and hence the cost of implementation. The Board concluded that the method should be simplified in order to reduce that cost. Two methods considered were (a) a general measure of the current cost of money, such as the prime rate and (b) the enterprise's incremental borrowing rate. However, the Board rejected those methods on the grounds that the historical exchange price convention requires that the interest rate used for capitalization purposes be based on rates actually being paid by the enterprise. The Board also considered a weighted average of
the rates being paid on all borrowings. But it concluded that, despite the element of subjectivity, if an enterprise borrows additional funds with the intention of using them to finance a qualifying asset, the enterprise should not be prevented from using the rate on that borrowing as a capitalization rate. That rate would provide a readily determined measure of a major part of the interest cost that could have been avoided if funds had not been invested in the asset. This Statement therefore permits use of the rate(s) on specific new borrowing(s) associated with a qualifying asset and provides that an average rate shall be applied to expenditures not covered by specific new borrowings. Judgment is to be used in determining the borrowings on which the average rate is based. Thus, for example, depending on the facts and circumstances, it might be appropriate to include all borrowings of the parent company and consolidated subsidiaries or to include only the borrowings of the corporate entity constructing the qualifying asset. It should be noted, however, that the provisions regarding capitalization rates are intended to allow an enterprise to determine a relevant measure of the cost of financing acquisition of the asset while minimizing the cost of implementing this Statement. Exclusion of borrowings from the computation of the average rate is not to circumvent the requirement to capitalize interest cost to the extent that interest cost has been incurred during a qualifying asset's acquisition period.

53 Some respondents to the Exposure Draft observed that, by attaching an interest cost to all of the expenditures for a qualifying asset, the prescribed method of determining the amount of interest capitalized in effect imputes an interest cost to any equity funds that may have been used. Board members' responses to that observation differ. Some would agree, arguing that the prescribed method uses the cost of borrowings as a surrogate measure of enterprise cost of capital. In their view, the prescribed method is an appropriate compromise between the conceptually desirable and the constraints of the present accounting framework. Other Board members do not share that view. They believe that the essence of this Statement is that interest on borrowings is a cost, which, like any other cost, is capitalizable in certain circumstances. In their view, the notion of interest on borrowings as an avoidable cost incurred as a consequence of the decision to acquire the qualifying asset supports the position that the capitalization method does not impute a cost to equity funds.

54 Some respondents to the Discussion Memorandum and to the Exposure Draft observed that limiting capitalized interest to interest on borrowings would preclude the "all-equity" enterprise
from capitalizing interest, even though it incurs an economic cost of the same order as an enterprise that has borrowed funds. The Board concluded that, despite that consequence, capitalization of interest on borrowings in the circumstances specified in this Statement is preferable to the alternatives of (a) excluding interest from asset acquisition cost in all circumstances or (b) imputing interest on equity capital. In the Board's view, the fact that the present accounting framework does not recognize all economic costs should not control accounting for the costs that are recognized. Moreover, an "all-equity" enterprise is not the same as an enterprise that has borrowed funds. (Similarly, an enterprise that is making substantial expenditures for asset construction differs from one that is not.) Those who assert that comparability among enterprises would be greater if all interest cost were expensed would create an illusion of comparability that may disguise the differences in facts.

.55 Some respondents disagreed with the conclusion in the Exposure Draft that the total amount of interest cost available for capitalization should be the amount recognized in the present accounting framework and hence include interest cost imputed on certain types of payables in accordance with Opinion 21 [section 4111] and interest cost related to a capital lease determined in accordance with Statement 13 [section 4053]. In their view, interest cost determined in accordance with Opinion 21 [section 4111] and Statement 13 [section 4053] clearly relates to transactions other than the acquisition of qualifying assets. However, as previously indicated, the Board's conclusions in this Statement rest on an assumption that association of sources and uses of funds is primarily subjective. The Board believes that, just as association of a particular borrowing with a qualifying asset is an insufficiently objective basis for determining whether any interest cost should be capitalized, the form of financing transactions covered by Opinion 21 [section 4111] and Statement 13 [section 4053] is an inadequate basis for excluding interest cost recognized on those transactions from the pool of interest cost available for capitalization.

.56 The Board concluded that, in determining the expenditures with which interest cost is associated, amounts corresponding to liabilities on which interest cost is not recognized (such as trade payables, accruals, and retainages) should be excluded. The Board does not intend that enterprises try to determine precisely
when those liabilities are liquidated. Capitalized costs may be used as a reasonable approximation of expenditures unless the difference is material.

.57 One of the issues raised in the Discussion Memorandum was whether capitalized interest should be compounded. The Board concluded that compounding is conceptually consistent with its conclusion that interest on expenditures for the asset is a cost of acquiring the asset. Admittedly, some portion of the interest incurred during an accounting period may be unpaid at the end of the period, but that complication usually may be ignored to simplify practical application.

The Capitalization Period

.58 The capitalization period is determined by the definition of the circumstances in which interest is capitalizable. Essentially, the capitalization period covers the duration of the activities required to get the asset ready for its intended use, provided that expenditures for the asset have been made and interest cost is being incurred. Interest capitalization continues as long as those activities and the incurrence of interest cost continue. The capitalization period ends when the asset is substantially complete and ready for its intended use. The words "substantially complete" are used to prohibit continuation of interest capitalization in situations in which completion of the asset is intentionally delayed. For example, it is customary for a condominium developer to defer installation of certain fixtures and fittings until units are sold, so that buyers may choose the types and colors they want. An intentional delay of that kind is related more to marketing of the asset than to the exigencies of the asset acquisition process. Similarly, interest is not to be capitalized during periods when the enterprise intentionally defers or suspends activities related to the asset. Interest cost incurred during such periods is a holding cost, not an acquisition cost. However, delays that are inherent in the asset acquisition process and interruptions in activities that are imposed by external forces are unavoidable in acquiring the asset and as such do not call for a cessation of interest capitalization. Brief interruptions may be disregarded on immateriality grounds.

.59 Some respondents to the Exposure Draft asked for confirmation that interest capitalization is not restricted to times when physical change is taking place. Most cited the example of land development. Many activities, they pointed out, must be undertaken before work on the land itself can begin. In response to
those requests, an explanation that the term *activities* is to be construed broadly in this context has been included in paragraph .17.

.60 Some respondents to the Exposure Draft asked for clarification concerning the end of interest capitalization when an asset is completed in parts and the individual parts are capable of being used while work continues on other parts. Paragraph .18 now explains that interest capitalization stops on each part as it is completed.

.61 Some respondents took issue with the conclusion in Appendix C to the Exposure Draft that interest capitalization on mineral interests should stop when the first well capable of producing oil or gas is completed. They argued that the oil or gas producing system is not ready for its intended use until the means of transporting the oil or gas from the well (e.g., a pipeline) is in place. The Board agreed, and that conclusion has been added to paragraph .18.

.62 Some respondents to the Discussion Memorandum expressed the view that capitalization of interest for an asset intended for sale should end when the accumulated costs of the asset equal its net realizable value. The Board concluded that that view is inconsistent with the conclusion that interest is a cost of acquiring the asset. Capitalization of material, labor, and overhead costs does not end when a net realizable value limit is reached; interest cost should not be treated differently. The present accounting requirements for recognizing a lower asset value than acquisition cost should apply when total asset cost includes capitalized interest and when it does not.

**Disposition of Capitalized Interest**

.63 Some companies that presently capitalize interest amortize it over a shorter period than the life of the related asset. The Board believes that the conclusion that interest is part of the cost of acquiring a qualifying asset requires that capitalized interest should not be accounted for differently from other components of asset cost.

**Disclosures**

.64 Disclosure of the total amount of interest cost incurred in an accounting period is required because lenders, security analysts, and others may wish to know that amount in order to compute
The amount of interest cost incurred and capitalized during a period is required because that amount is not included in the determination of earnings.

The Board concluded that the other possible disclosures listed in the Discussion Memorandum were not required. Descriptions of the method of accounting for interest, the circumstances in which interest is capitalized, and the method of determining the amount of interest capitalized are unnecessary because those matters are dealt with in this Statement. Information about amortization of capitalized interest is unnecessary; such disclosure is not required for other components of asset cost.

Some respondents to the Discussion Memorandum suggested that the net effect on periodic earnings of capitalizing interest as opposed to charging it to expense should be disclosed. The Board decided that such disclosure was unnecessary once accounting alternatives had been eliminated.

Effective Date and Transition

The Board concluded that this Statement should be applied prospectively. Inevitably, prospective application of a Statement entails some impairment of comparability among enterprises' financial statements during the periods immediately following its adoption. Retroactive application in this instance, however, would require greater accounting effort than would be justified by the resulting informational benefits.

Amortization of Debt Discount and Expense or Premium

[Source: APB Opinion No. 12, Pars. 16 and 17.]

Effective for fiscal periods beginning after December 31, 1967, unless otherwise indicated

.01 Questions have been raised as to the appropriateness of the “interest” method of periodic amortization of discount and expense or premium on debt (i.e., the difference between the net proceeds, after expense, received upon issuance of debt and the amount repayable at its maturity) over its term. The objective of the interest method is to arrive at a periodic interest cost (including amortization) which will represent a level effective rate on the sum of the face amount of the debt and (plus or minus) the unamortized premium or discount and expense at the beginning of each period. The difference between the periodic interest cost so calculated and the nominal interest on the outstanding amount of the debt is the amount of periodic amortization.

.02 In the Board’s opinion, the interest method of amortization is theoretically sound and an acceptable method.
Early Extinguishment of Debt

[Source: APB Opinion No. 26, as amended.]

Effective for all extinguishments of debt occurring on or after January 1, 1973, unless otherwise indicated.

INTRODUCTION

.01 Debt is frequently extinguished in various ways before its scheduled maturity. Generally, the amount paid upon reacquisition of debt securities will differ from the net carrying amount of the debt at that time. This section expresses the views of the Accounting Principles Board regarding the appropriate accounting for that difference.

.02 Applicability. This section applies to the early extinguishment of all kinds of debt. (For early extinguishments of debt through troubled debt restructurings, FASB Statement No. 15 [section 5363], Accounting by Debtors and Creditors for Troubled Debt Restructurings, applies.) It supersedes Chapter 15 of ARB No. 43 and paragraph 19 of APB Opinion No. 6. However, this section does not apply to debt that is converted pursuant to the existing conversion privileges of the holder. Moreover, it does not alter the accounting for convertible debt securities described in APB Opinion No. 14 [section 5516]. This section applies to regulated companies in accordance with the provisions of the Addendum [section 6011] to APB Opinion No. 2, Accounting for the "Investment Credit", 1962. [As amended, effective for troubled debt restructurings consummated after Dec. 31, 1977, by FASB Statement No. 15.] (See section 5363.)
.03 Definitions. Several terms are used in this section as follows:

a. Early extinguishment is the reacquisition of any form of debt security or instrument before its scheduled maturity except through conversion by the holder, regardless of whether the debt is viewed as terminated or is held as so-called "treasury bonds." All open-market or mandatory reacquisitions of debt securities to meet sinking fund requirements are early extinguishments.

b. Net carrying amount of debt is the amount due at maturity, adjusted for unamortized premium, discount, and cost of issuance.

c. Reacquisition price of debt is the amount paid on early extinguishment, including a call premium and miscellaneous costs of reacquisition. If early extinguishment is achieved by a direct exchange of new securities, the reacquisition price is the total present value of the new securities.

d. Difference as used in this section is the excess of the reacquisition price over the net carrying amount or the excess of the net carrying amount over the reacquisition price.

DISCUSSION

.04 Current practice. Early extinguishment of debt is usually achieved in one of three ways: use of existing liquid assets, use of proceeds from issuance of equity securities, and use of proceeds from issuing other debt securities. The replacement of debt with other debt is frequently called refunding.

.05 Differences on nonrefunding extinguishments are generally treated currently in income as losses or gains. Three basic methods are generally accepted to account for the differences on refunding transactions:

a. Amortization over the remaining original life of the extinguished issue

b. Amortization over the life of the new issue

c. Recognition currently in income as a loss or gain.

Each method has been supported in court decisions, in rulings of regulatory agencies, and in accounting literature.
.06 Amortization over life of old issue. Some accountants believe that the difference on refunding should be amortized over the remaining original life of the extinguished issue. In effect, the difference is regarded as an adjustment of the cash cost of borrowing that arises from obtaining another arrangement for the unexpired term of the old agreement. Therefore, the cost of money over the remaining period of the original issue is affected by the difference that results upon extinguishment of the original contract. Early extinguishment occurs for various reasons, but usually because it is financially advantageous to the
issuer, for example, if the periodic cash interest outlay can be reduced for future periods. Accordingly, under this view the difference should be spread over the unexpired term of the original issue to obtain the proper periodic cost of borrowed money. If the maturity date of the new issue precedes the maturity date of the original issue, a portion of the difference is amortized over the life of the new debt and the balance of the difference is recognized currently in income as a loss or gain.

.07 Amortization over life of new issue. Some accountants believe that the difference on refunding should be amortized over the life of the new issue if refunding occurs because of lower current interest rates or anticipated higher interest rates in the future. Under this view, the principal motivation for refunding is to establish a more favorable interest rate over the term of the new issue. Therefore, the expected benefits to be obtained over the life of the new issue justify amortization of the difference over the life of the new issue.

.08 Recognition currently in income. Some accountants believe a difference on refunding is similar to the difference on other early extinguishments and should be recognized currently in income in the period of the extinguishment. This view holds that the value of the old debt has changed over time and that paying the call price or current market value is the most favorable way to extinguish the debt. The change in the market value of the debt is caused by a change in the market rate of interest, but the change has not been reflected in the accounts. Therefore, the entire difference is recorded when the specific contract is terminated because it relates to the past periods when the contract was in effect. If the accountant had foreseen future events perfectly at the time of issuance, he would have based the accounting on the assumption that the maturity value of the debt would equal the reacquisition price. Thus, no difference upon early extinguishment would occur because previous periods would have borne the proper interest expense. Furthermore, a call premium necessary to eliminate an old contract and an unamortized discount or premium relate to the old contract and cannot be a source of benefits from a new debt issue. For example, a larger (or smaller) coupon rate could have been set on the old issue to avoid an
unamortized discount (or premium) at issuance. When such debt originally issued at par is refunded, few accountants maintain that some portion of past interest should be capitalized and written off over the remaining life of the old debt or over the life of the new debt.

.09 Another argument in favor of current recognition of the difference as gain or loss is also related to market forces but is expressed differently. If debt is callable, the call privilege is frequently exercised when the market value of the bonds as determined by the current yield rate exceeds the call price. A loss or gain is recognized on extinguishing the debt because an exchange transaction occurs in which the call or current market value of the debt differs from its net carrying amount. For example, the market value of the debt ordinarily rises as the market rate of interest falls. If market values were recorded as the market rate of interest fluctuates, the changes in the market value of the debt would have been recorded periodically as losses or gains. The bond liability would not exceed the call price.

.10 On the other hand, some accountants holding views opposing current recognition of the difference in income believe that recognizing the difference as gains or losses may induce a company to report income by borrowing money at high rates of interest in order to pay off discounted low-rate debt. Conversely, a large potential charge to income may discourage refunding even though it is economically desirable; the replacement of high cost debt with low cost debt may result in having to recognize a large loss. Thus, a company may show higher current income in the year of extinguishment while increasing its economic cost of debt and lower current income while decreasing its economic cost of debt. For these reasons, these accountants favor deferral.

.11 Extinguishment of convertible debt. Accountants have expressed differing views regarding accounting for the extinguishment of convertible debt. In section 5516, which is directed in part to accounting for convertible debt at time of issue, the Board concluded that no portion of the proceeds from the issuance of the types of convertible debt securities defined in section 5516 should be accounted for as attributable to the conversion feature. In reaching that conclusion, the Board placed greater weight on the inseparability of the
Early Extinguishment of Debt

debt and conversion option and less weight on practical difficulties. The Board emphasized that a convertible debt security is a complex hybrid instrument bearing an option the alternative choices of which cannot exist independently of one another. The holder ordinarily does not sell one right and retain the other. Furthermore, the two choices are mutually exclusive; the holder cannot exercise the option to convert unless he foregoes the right to redemption, and vice versa. Therefore, section 5516 implies that (except for conversion) a difference on extinguishing convertible debt needs to be recognized in the same way as a difference on extinguishment of debt without conversion features.

.12 The various views expressed on how to account for the extinguishment of convertible debt to some extent reflect the same attitudes as to the nature of the debt at time of issue as were considered in section 5516. Thus, some accountants believe that a portion of the proceeds at issuance is attributable to the conversion feature. If the convertible debt is later extinguished, the initial value of the conversion feature should then be recorded as an increase in stockholders' equity. The balance of the difference would, under that view of the transaction, be a gain or loss in income of the period of extinguishment.

.13 Some accountants maintain that the intent of issuing convertible debt is to raise equity capital. A convertible debt is therefore in substance an equity security, and all the difference on extinguishing convertible debt should be an increase or decrease of paid-in capital.

.14 Another view is that the market price that gives rise to the difference reflects both the level of interest rates on debt and the prices of the related common stock or both. Those expressing this view believe that if the effects of these factors can be identified at the time of extinguishment, the difference attributable to the interest rate should be accounted for as gain or loss in income, and that the difference attributable to the market price of the issuer's common stock should be accounted for as an increase or decrease in paid-in capital.

.15 Some accountants believe that the accounting for a difference on extinguishment of convertible debt depends on the nature of the security at the time of extinguishment.
Events after time of issue may provide evidence that a convertible debt is either still debt in substance or equity in substance. Under this view the purchase price on extinguishment provides the best evidence as to whether the security is essentially debt or equity.Convertible debt that is selling below the call or redemption price at time of extinguishment is essentially debt; the difference should be a gain in current income. Moreover, if convertible debt has a coupon rate that exceeds the current market rate of interest and clearly causes the issue to trade at a premium as a debt instrument, the difference on extinguishment should be a loss in current income. On the other hand, if convertible debt is selling above the call or redemption price because of the conversion privilege, it is essentially a common stock. In effect, market forces have transformed a debt instrument into an equity security, and the extinguishment provides an explicit transaction to justify recognizing that the convertible debt is in substance a common stock equivalent. Those who hold this view believe that accounting should report the substance of the transaction rather than its form; convertible debt need not be converted into common stock to demonstrate that the extinguishment transaction is equivalent to a purchase of common stock for retirement.

.16 Economic nature of extinguishment. In many respects the essential economics of the decision leading to the early extinguishment of outstanding debt are the same, regardless of whether such debt is extinguished via the use of the existing liquid assets, new equity securities, or new debt. That is, the decision favoring early extinguishment usually implies that the net present value of future cash inflows and outflows is maximized by extinguishing the debt now rather than by letting it run to maturity. The savings may be in lower cash interest costs on a new debt issue, in increased earnings per share of common stock if the assets are not earning the interest rate on the outstanding debt, or in some other form. The essential event is early extinguishment. Under this view, the difference is associated with extinguishing the existing debt and is accounted for the same regardless of how extinguishment is accomplished.
.17 To illustrate that view, assume that three firms each have long-term debt outstanding with ten years remaining to maturity. The first firm may have excess cash and no investment opportunities that earn a rate of return higher than the cash savings that would ensue from immediately extinguishing the debt. The second firm may wish to replace the debt with a similar issue bearing a lower coupon rate. The third firm may have excessive debt and may want to replace the debt with a new issue of common stock. The underlying reason for the early extinguishment in all three cases is to obtain a perceived economic advantage. The relevant comparison in the replacement of debt with other debt is with the costs of other debt. The comparison in other cases is with other means of financing. The means by which the debt is extinguished have no bearing on how to account for the loss or gain.

OPINION

.18 The following conclusions of the Board are based primarily on the reasoning in paragraphs .08, .09, .11, .16, and .17.

.19 Reduction of alternatives. The Board concludes that all extinguishments of debt before scheduled maturities are fundamentally alike. The accounting for such transactions should be the same regardless of the means used to achieve the extinguishment.

.20 Disposition of amounts. A difference between the reacquisition price and the net carrying amount of the extinguished debt should be recognized currently in income of the period of extinguishment as losses or gains and identified as a separate item.² The criteria in section 2013 and in section 2012 as amended by section 2013 should be used to determine whether the losses or gains are ordinary or extraordinary items. Gains and losses should not be amortized to future periods. [As amended, effective for events and transactions occurring after September 30, 1973 by APB Opinion No. 30.] (See section 2012.) [As amended, effective for extinguishments occurring after

² If upon extinguishment of debt, the parties also exchange unstated (or stated) rights or privileges, the portion of the consideration exchanged allocable to such unstated (or stated) rights or privileges should be given appropriate accounting recognition. Moreover, extinguishment transactions between related entities may be in essence capital transactions.

AICPA Professional Standards

AC § 5362.20
March 31, 1975 by FASB Statement No. 4. [See section 2013.]

.21 Convertible debt. The extinguishment of convertible debt before maturity does not change the character of the security as between debt and equity at that time. Therefore, a difference between the cash acquisition price of the debt and its net carrying amount should be recognized currently in income in the period of extinguishment as losses or gains.

EFFECTIVE DATE

.22 This section shall be effective for all extinguishments of debt occurring on or after January 1, 1973. Extinguishment transactions are considered to be terminated events similar to that set forth in section 1051.16 and as such, extinguishments that were previously recorded in fiscal years ending before January 1, 1973 should not be adjusted. However, the accounting for refunding transactions that have been previously reported in the fiscal year in which December 31, 1972 occurs may be retroactively restated to comply with the provisions of this section.

The next page is 9721. ←
INTRODUCTION

.001  This Statement establishes standards of financial accounting and reporting by the debtor and by the creditor for a troubled debt restructuring. The Statement does not cover accounting for allowances for estimated uncollectible amounts and does not prescribe or proscribe particular methods for estimating amounts of uncollectible receivables.

.002  A restructuring of a debt constitutes a troubled debt restructuring for purposes of this Statement if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider. That concession either stems from an agreement between the creditor and the debtor or is imposed by law or a court. For example, a creditor may restructure the terms of a debt to alleviate the burden of the debtor's near-term cash requirements, and many troubled debt restructurings involve modifying terms to reduce or defer cash payments required of the debtor in the near future to help the debtor attempt to improve its financial condition and eventually be able to pay the creditor. Or, for example, the creditor may accept cash, other assets, or an equity interest in the debtor in satisfaction of the debt though the value received is less than the amount of the debt because the creditor concludes that step will maximize recovery of its investment.¹

¹ Although troubled debt that is fully satisfied by foreclosure, repossession, or other transfer of assets or by grant of equity securities by the debtor is, in a technical sense, not restructured, that kind of event is included in the term troubled debt restructuring in this Statement.
.003 Whatever the form of concession granted by the creditor to the debtor in a troubled debt restructuring, the creditor's objective is to make the best of a difficult situation. That is, the creditor expects to obtain more cash or other value from the debtor, or to increase the probability of receipt, by granting the concession than by not granting it.

.004 In this Statement, a *receivable* or *payable* (collectively referred to as *debt*) represents a contractual right to receive money or a contractual obligation to pay money on demand or on fixed or determinable dates that is already included as an asset or liability in the creditor's or debtor's balance sheet at the time of the restructuring. Receivables or payables that may be involved in troubled debt restructurings commonly result from lending or borrowing of cash, investing in debt securities that were previously issued, or selling or purchasing goods or services on credit. Examples are accounts receivable or payable, notes, debentures and bonds (whether those receivables or payables are secured or unsecured and whether they are convertible or nonconvertible), and related accrued interest, if any. Typically, each receivable or payable is negotiated separately, but sometimes two or more receivables or payables are negotiated together. For example, a debtor may negotiate with a group of creditors but sign separate debt instruments with each creditor. For purposes of this Statement, restructuring of each receivable or payable, including those negotiated and restructured jointly, shall be accounted for individually. The substance rather than the form of the receivable or payable shall govern. For example, to a debtor, a bond constitutes one payable even though there are many bondholders.

.005 A troubled debt restructuring may include, but is not necessarily limited to, one or a combination of the following:

a. Transfer from the debtor to the creditor of receivables from third parties, real estate, or other assets to satisfy fully or partially a debt (including a transfer resulting from foreclosure or repossession).

b. Issuance or other granting of an equity interest to the creditor by the debtor to satisfy fully or partially a debt unless the equity interest is granted pursuant to existing terms for converting the debt into an equity interest.

c. Modification of terms of a debt, such as one or a combination of:
   1. Reduction (absolute or contingent) of the stated interest rate for the remaining original life of the debt.
2. Extension of the maturity date or dates at a stated interest rate lower than the current market rate for new debt with similar risk.

3. Reduction (absolute or contingent) of the face amount or maturity amount of the debt as stated in the instrument or other agreement.

4. Reduction (absolute or contingent) of accrued interest.

Troubled debt restructurings may occur before, at, or after the stated maturity of debt, and time may elapse between the agreement, court order, etc. and the transfer of assets or equity interest, the effective date of new terms, or the occurrence of another event that constitutes consummation of the restructuring. The date of consummation is the time of the restructuring in this Statement.

A debt restructuring is not necessarily a troubled debt restructuring for purposes of this Statement even if the debtor is experiencing some financial difficulties. For example, a troubled debt restructuring is not involved if (a) the fair value of cash, other assets, or an equity interest accepted by a creditor from a debtor in full satisfaction of its receivable at least equals the creditor's recorded investment in the receivable; (b) the fair value of cash, other assets, or an equity interest transferred by a debtor to a creditor in full settlement of its payable at least equals the debtor's carrying amount of the payable; (c) the creditor reduces the effective interest rate on the debt primarily to reflect a decrease in market interest rates in general or a decrease in the risk so as to maintain a relationship with a debtor that can readily obtain funds from other sources at the current market interest rate; or (d) the debtor issues in exchange for its debt new marketable debt having an effective interest rate based on its market price that is at or near the current market interest rates of debt with similar maturity dates and stated interest rates issued by nontroubled debtors. In general, a debtor that can obtain funds from sources other than the existing creditor at market interest rates at or near those for nontroubled debt is not involved in a troubled debt restructuring. A debtor in a troubled debt restructuring can obtain funds from sources other than the existing creditor in the troubled debt restructuring, if at all, only at effective interest rates (based on market prices) so high that it cannot afford to pay them. Thus, in an attempt to protect as much of its investment as possible, the

2 Defined in paragraph .013.
3 Defined in footnote 17.
creditor in a troubled debt restructuring grants a concession to the
debtor that it would not otherwise consider.

.008 For purposes of this Statement, troubled debt restructurings
do not include changes in lease agreements (the accounting is
prescribed by FASB Statement No. 13 [section 4053], “Accounting
for Leases”) or employment-related agreements (for example,
pension plans and deferred compensation contracts). Nor do
troubled debt restructurings include debtors’ failures to pay trade
accounts according to their terms or creditors’ delays in taking
legal action to collect overdue amounts of interest and principal,
unless they involve an agreement between debtor and creditor
to restructure.

.009 The Addendum to APB Opinion No. 2 [section 6011],
“Accounting for the ‘Investment Credit’,” states that “dif­fer­ences may arise in the application of generally accepted account­
ing principles as between regulated and nonregulated businesses,
because of the effect in regulated businesses of the rate-making
process” and discusses the application of generally accepted
accounting principles to regulated industries. FASB State­
ments and Interpretations should therefore be applied to regu­
lated companies that are subject to the rate-making process in
accordance with the provisions of the Addendum.

.010 This Statement supersedes FASB Interpretation No. 2, “Im­
puting Interest on Debt Arrangements Made under the Federal
Bankruptcy Act,” and shall be applied to the types of situations
that were covered by that Interpretation. Thus, it shall be applied
to troubled debt restructurings consummated under reorganization,
arrangement, or other provisions of the Federal Bankruptcy Act
or other Federal statutes related thereto. It also amends APB
Opinion No. 26 [section 5362], “Early Extinguishment of
Debt,” to the extent needed to exclude from that Opinion’s scope
early extinguishments of debt through troubled debt restructurings.

.011 Appendix A provides background information. Appendix B
sets forth the basis for the Board’s conclusions, including alterna­
tives considered and reasons for accepting some and rejecting
others.

* This Statement does not apply, however, if under provisions of those
Federal statutes or in a quasi-reorganization or corporate readjustment
(ARB No. 43, Chapter 7, Section A [section 5581], “Quasi-Reorganization
or Corporate Readjustment . . .”) with which a troubled debt restruc­
turing coincides, the debtor restates its liabilities generally.
STANDARDS OF FINANCIAL ACCOUNTING
AND REPORTING

Accounting by Debtors

.012 A debtor shall account for a troubled debt restructuring according to the type of the restructuring as prescribed in the following paragraphs.

Transfer of Assets in Full Settlement

.013 A debtor that transfers its receivables from third parties, real estate, or other assets to a creditor to settle fully a payable shall recognize a gain on restructuring of payables (see paragraph .021). The gain shall be measured by the excess of (i) the carrying amount of the payable settled (the face amount increased or decreased by applicable accrued interest and applicable unamortized premium, discount, finance charges, or issue costs) over (ii) the fair value of the assets transferred to the creditor. The fair value of the assets transferred is the amount that the debtor could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value of assets shall be measured by their market value if an active market for them exists. If no active market exists for the assets transferred but exists for similar assets, the selling prices in that market may be helpful in estimating the fair value of the assets transferred. If no market price is available, a forecast of expected cash flows may aid in estimating the fair value of assets transferred, provided the expected cash flows are discounted at a rate commensurate with the risk involved.\(^5\)

\(^5\) Paragraphs .013, .015 and .019 indicate that the fair value of assets transferred or the fair value of an equity interest granted shall be used in accounting for a settlement of a payable in a troubled debt restructuring. That guidance is not intended to preclude using the fair value of the payable settled if more clearly evident than the fair value of the assets transferred or of the equity interest granted in a full settlement of a payable (paragraphs .013 and .015). (See paragraph 67 of APB Opinion No. 16 [section 1091.67], “Business Combinations.”) However, in a partial settlement of a payable (paragraph .019), the fair value of the assets transferred or of the equity interest granted shall be used in all cases to avoid the need to allocate the fair value of the payable between the part settled and the part still outstanding.

\(^6\) Some factors that may be relevant in estimating the fair value of various kinds of assets are described in paragraphs 88 and 89 of APB Opinion No. 16 [section 1091.88-89], paragraphs 12-14 of APB Opinion No. 21 [section 4111.11-13], “Interest on Receivables and Payables,” and paragraph 25 of APB Opinion No. 29 [section 1041.25], “Accounting for Nonmonetary Transactions.”
A difference between the fair value and the carrying amount of assets transferred to a creditor to settle a payable is a gain or loss on transfer of assets. The debtor shall include that gain or loss in measuring net income for the period of transfer, reported as provided in *APB Opinion No. 30* [section 2012], "Reporting the Results of Operations."

Grant of Equity Interest in Full Settlement

A debtor that issues or otherwise grants an equity interest to a creditor to settle fully a payable shall account for the equity interest at its fair value. The difference between the fair value of the equity interest granted and the carrying amount of the payable settled shall be recognized as a gain on restructuring of payables (see paragraph .021).

Modification of Terms

A debtor in a troubled debt restructuring involving only modification of terms of a payable—that is, not involving a transfer of assets or grant of an equity interest—shall account for the effects of the restructuring prospectively from the time of restructuring, and shall not change the carrying amount of the payable at the time of the restructuring unless the carrying amount exceeds the total future cash payments specified by the new terms. That is, the effects of changes in the amounts or timing (or both) of future cash payments designated as either interest or face amount shall be reflected in future periods. Interest expense shall be computed in a way that a constant effective interest rate is ap-

---

7 The carrying amount of a receivable encompasses not only unamortized premium, discount, acquisition costs, and the like but also an allowance for uncollectible amounts and other "valuation" accounts, if any. A loss on transferring receivables to creditors may therefore have been wholly or partially recognized in measuring net income before the transfer and be wholly or partly a reduction of a valuation account rather than a gain or loss in measuring net income for the period of the transfer.

8 See footnote 5.

9 In this Statement, *total future cash payments* includes related accrued interest, if any, at the time of the restructuring that continues to be payable under the new terms.

10 All or a portion of the carrying amount of the payable at the time of the restructuring may need to be reclassified in the balance sheet because of changes in the terms, for example, a change in the amount of the payable due within one year after the date of the debtor's balance sheet. A troubled debt restructuring of a short-term obligation after the date of a debtor's balance sheet but before that balance sheet is issued may affect the classification of that obligation in accordance with *FASB Statement No. 6* [section 2033], "Classification of Short-Term Obligations Expected to Be Refinanced."
Accounting for Troubled Debt Restructurings

plied to the carrying amount of the payable at the beginning of each period between restructuring and maturity (in substance the "interest" method prescribed by paragraph 15 of APB Opinion No. 21 [section 4111.14]). The new effective interest rate shall be the discount rate that equates the present value of the future cash payments specified by the new terms (excluding amounts contingently payable) with the carrying amount of the payable.

.017 If, however, the total future cash payments specified by the new terms of a payable, including both payments designated as interest and those designated as face amount, are less than the carrying amount of the payable, the debtor shall reduce the carrying amount to an amount equal to the total future cash payments specified by the new terms and shall recognize a gain on restructuring of payables equal to the amount of the reduction (see paragraph .021). Thereafter, all cash payments under the terms of the payable shall be accounted for as reductions of the carrying amount of the payable, and no interest expense shall be recognized on the payable for any period between the restructuring and maturity of the payable.

.018 A debtor shall not recognize a gain on a restructured payable involving indeterminate future cash payments as long as the maximum total future cash payments may exceed the carrying amount of the payable. Amounts designated either as interest or as face amount by the new terms may be payable contingent on a specified event or circumstance (for example, the debtor may be required to pay specified amounts if its financial condition improves to a specified degree within a specified period). To determine whether the debtor shall recognize a gain according to the provisions of paragraphs .016 and .017, those contingent amounts shall be included in the "total future cash payments specified by the new terms" to the extent necessary to prevent recognizing a gain at the time of restructuring that may be offset by future interest expense. Thus, the debtor shall apply paragraph 17 of FASB Statement No. 5 [section 4311.17], "Accounting for Contingencies," in which probability of occurrence of a gain con-

---

11 If the carrying amount of the payable comprises several accounts (for example, face amount, accrued interest, and unamortized premium, discount, finance charges, and issue costs) that are to be continued after the restructuring, some possibly being combined, the reduction in carrying amount may need to be allocated among the remaining accounts in proportion to the previous balances. However, the debtor may choose to carry the amount designated as face amount by the new terms in a separate account and adjust another account accordingly.

12 The only exception is to recognize interest expense according to paragraph .022.
tingency is not a factor, and shall assume that contingent future payments will have to be paid. The same principle applies to amounts of future cash payments that must sometimes be estimated to apply the provisions of paragraphs .016 and .017. For example, if the number of future interest payments is flexible because the face amount and accrued interest is payable on demand or becomes payable on demand, estimates of total future cash payments shall be based on the maximum number of periods possible under the restructured terms.

**Combination of Types**

.019 A troubled debt restructuring may involve partial settlement of a payable by the debtor's transferring assets or granting an equity interest (or both) to the creditor and modification of terms of the remaining payable. A debtor shall account for a troubled debt restructuring involving a partial settlement and a modification of terms as prescribed in paragraphs .016-.018 except that, first, assets transferred or an equity interest granted in that partial settlement shall be measured as prescribed in paragraphs .013 and .015, respectively, and the carrying amount of the payable shall be reduced by the total fair value of those assets or equity interest. A difference between the fair value and the carrying amount of assets transferred to the creditor shall be recognized as a gain or loss on transfer of assets. No gain on restructuring of payables shall be recognized unless the remaining carrying amount of the payable exceeds the total future cash payments (including amounts contingently payable) specified by the terms of the debt remaining unsettled after the restructuring. Future interest expense, if any, shall be determined according to the provisions of paragraphs .016-.018.

**Related Matters**

.020 A troubled debt restructuring that is in substance a repossession or foreclosure by the creditor or other transfer of assets to the creditor shall be accounted for according to the provisions of paragraphs .013, .014, and .019.

---

\(^{13}\) Even if the stated terms of the remaining payable, for example, the stated interest rate and the maturity date or dates, are not changed in connection with the transfer of assets or grant of an equity interest, the restructuring shall be accounted for as prescribed by paragraph .019.

\(^{14}\) If cash is paid in a partial settlement of a payable in a troubled debt restructuring, the carrying amount of the payable shall be reduced by the amount of cash paid.
.021 Gains on restructuring of payables determined by applying the provisions of paragraphs .013-.020 of this Statement shall be aggregated, included in measuring net income for the period of restructuring, and, if material, classified as an extraordinary item, net of related income tax effect, in accordance with paragraph 8 of *FASB Statement No. 4* [section 2013.08], "Reporting Gains and Losses from Extinguishment of Debt."

.022 If a troubled debt restructuring involves amounts contingently payable, those contingent amounts shall be recognized as a payable and as interest expense in future periods in accordance with paragraph 8 of *FASB Statement No. 5* [section 4311.08]. Thus, in general, interest expense for contingent payments shall be recognized in each period in which (a) it is probable that a liability has been incurred and (b) the amount of that liability can be reasonably estimated. Before recognizing a payable and interest expense for amounts contingently payable, however, accrual or payment of those amounts shall be deducted from the carrying amount of the restructured payable to the extent that contingent payments included in "total future cash payments specified by the new terms" prevented recognition of a gain at the time of restructuring (paragraph .018).

.023 If amounts of future cash payments must be estimated to apply the provisions of paragraphs .016-.018 because future interest payments are expected to fluctuate—for example, the restructured terms may specify the stated interest rate to be the prime interest rate increased by a specified amount or proportion—estimates of maximum total future payments shall be based on the interest rate in effect at the time of the restructuring. Fluctuations in the effective interest rate after the restructuring from changes in the prime rate or other causes shall be accounted for as changes in estimates in the periods the changes occur. However, the accounting for those fluctuations shall not result in recognizing a gain on restructuring that may be offset by future cash payments (paragraphs .018 and .022). Rather, the carrying amount of the restructured payable shall remain unchanged, and future cash payments shall reduce the carrying amount until the time that any gain recognized cannot be offset by future cash payments.

.024 Legal fees and other direct costs that a debtor incurs in granting an equity interest to a creditor in a troubled debt restructuring shall reduce the amount otherwise recorded for that equity interest according to paragraphs .015 and .019. All other direct costs that a debtor incurs to effect a troubled debt restructuring shall be deducted in measuring gain on restructuring of payables or shall
Liabilities and Deferred Credits

be included in expense for the period if no gain on restructuring is recognized.

Disclosure by Debtors

.025 A debtor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about troubled debt restructurings that have occurred during a period for which financial statements are presented:

a. For each restructuring:15 a description of the principal changes in terms, the major features of settlement, or both.

b. Aggregate gain on restructuring of payables and the related income tax effect (paragraph .021).

c. Aggregate net gain or loss on transfers of assets recognized during the period (paragraphs .014 and .019).

d. Per share amount of the aggregate gain on restructuring of payables, net of related income tax effect.

.026 A debtor shall disclose in financial statements for periods after a troubled debt restructuring the extent to which amounts contingently payable are included in the carrying amount of restructured payables pursuant to the provisions of paragraph .018. If required by paragraphs 9–13 of FASB Statement No. 5 [section 4311.09-.13], a debtor shall also disclose in those financial statements total amounts that are contingently payable on restructured payables and the conditions under which those amounts would become payable or would be forgiven.

Accounting by Creditors

.027 A creditor shall account for a troubled debt restructuring according to the type of the restructuring as prescribed in the following paragraphs. Paragraphs .028-.042 do not apply to a receivable that the creditor is accounting for at market value in accordance with specialized industry practice (for example, a marketable debt security accounted for at market value by a mutual fund). Estimated cash expected to be received less estimated costs expected to be incurred is not market value in accordance with specialized industry practice as that term is used in this paragraph.

15 Separate restructurings within a fiscal period for the same category of payables (for example, accounts payable or subordinated debentures) may be grouped for disclosure purposes.
Receipt of Assets in Full Satisfaction

.028 A creditor that receives from a debtor in full satisfaction of a receivable either (i) receivables from third parties, real estate, or other assets or (ii) shares of stock or other evidence of an equity interest in the debtor, or both, shall account for those assets (including an equity interest) at their fair value at the time of the restructuring (see paragraph .013 for how to measure fair value). The excess of (i) the recorded investment in the receivable satisfied over (ii) the fair value of assets received is a loss to be recognized according to paragraph .035.

.029 After a troubled debt restructuring, a creditor shall account for assets received in satisfaction of a receivable the same as if the assets had been acquired for cash.

Modification of Terms

.030 A creditor in a troubled debt restructuring involving only modification of terms of a receivable—that is, not involving receipt of assets (including an equity interest in the debtor)—shall account for the effects of the restructuring prospectively and shall not change the recorded investment in the receivable at the time of the restructuring unless that amount exceeds the total future cash receipts specified by the new terms. That is, the

---

16 Paragraphs .028 and .033 indicate that the fair value of assets received shall be used in accounting for satisfaction of a receivable in a troubled debt restructuring. That guidance is not intended to preclude using the fair value of the receivable satisfied if more clearly evident than the fair value of the assets received in full satisfaction of a receivable (paragraph .028). (See paragraph 67 of APB Opinion No. 16 [section 1091.67].) However, in a partial satisfaction of a receivable (paragraph .033), the fair value of the assets received shall be used in all cases to avoid the need to allocate the fair value of the receivable between the part satisfied and the part still outstanding.

17 Recorded investment in the receivable is used in paragraphs .028-.041 instead of carrying amount of the receivable because the latter is net of an allowance for estimated uncollectible amounts or other "valuation" account, if any, while the former is not. The recorded investment in the receivable is the face amount increased or decreased by applicable accrued interest and unamortized premium, discount, finance charges, or acquisition costs and may also reflect a previous direct write-down of the investment.

18 In this Statement, total future cash receipts includes related accrued interest, if any, at the time of the restructuring that continues to be receivable under the new terms. Uncertainty of collection of noncontingent amounts specified by the new terms (see paragraph .032 for inclusion of contingent amounts) is not a factor in applying paragraphs .030-.032 but should, of course, be considered in accounting for allowances for uncollectible amounts.

AICPA Professional Standards
effects of changes in the amounts or timing (or both) of future cash receipts designated either as interest or as face amount shall be reflected in future periods. Interest income shall be computed in a way that a constant effective interest rate is applied to the recorded investment in the receivable at the beginning of each period between restructuring and maturity (in substance the "interest" method prescribed by paragraph 15 of APB Opinion No. 21 [section 4111.14]). The new effective interest rate shall be the discount rate that equates the present value of the future cash receipts specified by the new terms (excluding amounts contingently receivable) with the recorded investment in the receivable.

.031 If, however, the total future cash receipts specified by the new terms of the receivable, including both receipts designated as interest and those designated as face amount, are less than the recorded investment in the receivable before restructuring, the creditor shall reduce the recorded investment in the receivable to an amount equal to the total future cash receipts specified by the new terms. The amount of the reduction is a loss to be recognized according to paragraph .035. Thereafter, all cash receipts by the creditor under the terms of the restructured receivable, whether designated as interest or as face amount, shall be accounted for as recovery of the recorded investment in the receivable, and no interest income shall be recognized on the receivable for any period between the restructuring and maturity of the receivable.

.032 A creditor shall recognize a loss on a restructured receivable involving indeterminate future cash receipts unless the minimum future cash receipts specified by the new terms at least equals the recorded investment in the receivable. Amounts designated either as interest or as face amount that are receivable from the debtor may be contingent on a specified event or circumstance (for example, specified amounts may be receivable from the debtor if the debtor's financial condition improves to a specified degree within a specified period). To determine whether the creditor shall

---

19 All or a portion of the recorded investment in the receivable at the time of restructuring may need to be reclassified in the balance sheet because of changes in the terms.
20 Some creditors—for example, finance companies (AICPA Industry Audit Guide, "Audits of Finance Companies," Chapter 2)—use methods that recognize less revenue in early periods of a receivable than does the "interest" method. The accounting for restructured receivables described in this Statement is not intended to change creditors' methods of recognizing revenue to require a different method for restructured receivables from that for other receivables.
21 The only exception is to recognize interest income according to paragraph .036.
recognize a loss according to the provisions of paragraphs .030 and .031, those contingent amounts shall be included in the “total future cash receipts specified by the new terms” only if at the time of restructuring those amounts meet the conditions that would be applied under the provisions of paragraph 8 of FASB Statement No. 5 [section 4311.08] in accruing a loss. That is, a creditor shall recognize a loss unless contingent future cash receipts needed to make total future cash receipts specified by the new terms at least equal to the recorded investment in the receivable both are probable and can be reasonably estimated. The same principle applies to amounts of future cash receipts that must sometimes be estimated to apply the provisions of paragraphs .030 and .031. For example, if the number of interest receipts is flexible because the face amount and accrued interest is collectible on demand or becomes collectible on demand after a specified period, estimates of total future cash receipts should be based on the minimum number of periods possible under the restructured terms.

Combination of Types

.033 A troubled debt restructuring may involve receipt of assets (including an equity interest in the debtor) in partial satisfaction of a receivable and a modification of terms of the remaining receivable.22 A creditor shall account for a troubled debt restructuring involving a partial satisfaction and modification of terms as prescribed in paragraphs .030-.032 except that, first, the assets received shall be accounted for at their fair values as prescribed in paragraph .028 and the recorded investment in the receivable shall be reduced by the fair value of the assets received.23 No loss on the restructuring shall be recognized unless the remaining recorded investment in the receivable exceeds the total future cash receipts specified by the terms of the receivable remaining unsatisfied after the restructuring. Future interest income, if any, shall be determined according to the provisions of paragraphs .030-.032.

Related Matters

.034 A troubled debt restructuring that is in substance a repossession or foreclosure by the creditor, or in which the creditor

---

22 Even if the stated terms of the remaining receivable, for example, the stated interest rate and the maturity date or dates, are not changed in connection with the receipt of assets (including an equity interest in the debtor), the restructuring shall be accounted for as prescribed by paragraph .033.

23 If cash is received in a partial satisfaction of a receivable, the recorded investment in the receivable shall be reduced by the amount of cash received.
otherwise obtains one or more of the debtor’s assets in place of all or part of the receivable, shall be accounted for according to the provisions of paragraphs .028 and .033 and, if appropriate, .039.

.035 Losses determined by applying the provisions of paragraphs .028-.034 of this Statement shall, to the extent that they are not offset against allowances for uncollectible amounts or other valuation accounts, be included in measuring net income for the period of restructuring and reported according to APB Opinion No. 30 [section 2012]. Although this Statement does not address questions concerning estimating uncollectible amounts or accounting for the related valuation allowance (paragraph .001), it recognizes that creditors use allowances for uncollectible amounts. Thus, a loss from reducing the recorded investment in a receivable may have been recognized before the restructuring by deducting an estimate of uncollectible amounts in measuring net income and increasing an appropriate valuation allowance. If so, a reduction in the recorded investment in the receivable in a troubled debt restructuring is a deduction from the valuation allowance rather than a loss in measuring net income for the period of restructuring. A valuation allowance can also be used to recognize a loss determined by applying paragraphs .028-.034 that has not been previously recognized in measuring net income. For example, a creditor with an allowance for uncollectible amounts pertaining to a group of receivables that includes the restructured receivable may deduct from the allowance the reduction of recorded investment in the restructured receivable and recognize the loss in measuring net income for the period of restructuring by estimating the appropriate allowance for remaining receivables, including the restructured receivable.

.036 If a troubled debt restructuring involves amounts contingently receivable, those contingent amounts shall not be recognized as interest income in future periods before they become receivable—that is, they shall not be recognized as interest income before both the contingency has been removed and the interest has been earned.24 Before recognizing those amounts as interest income, however, they shall be deducted from the recorded investment in the restructured receivable to the extent that contingent receipts included in “total future cash receipts specified by the new terms” avoided recognition of a loss at the time of restructuring (paragraph .032).

24 FASB Statement No. 5, paragraph 17 [section 4311.17], (which continued without reconsideration certain provisions of ARB No. 50, “Contingencies”), states, in part: “Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization.”
.037 If amounts of future cash receipts must be estimated to apply the provisions of paragraphs .030-.032 because future interest receipts are expected to fluctuate—for example, the restructured terms may specify the stated interest rate to be the prime interest rate increased by a specified amount or proportion—estimates of the minimum total future receipts shall be based on the interest rate in effect at the time of restructuring. Fluctuations in the effective interest rate after the restructuring from changes in the prime rate or other causes shall be accounted for as changes in estimates in the periods the changes occur except that a creditor shall recognize a loss and reduce the recorded investment in a restructured receivable if the interest rate decreases to an extent that the minimum total future cash receipts determined using that interest rate fall below the recorded investment in the receivable at that time.

.038 Legal fees and other direct costs incurred by a creditor to effect a troubled debt restructuring shall be included in expense when incurred.

.039 A receivable from the sale of assets previously obtained in a troubled debt restructuring shall be accounted for according to APB Opinion No. 21 [section 4111] regardless of whether the assets were obtained in satisfaction (full or partial) of a receivable to which that Opinion was not intended to apply. A difference, if any, between the amount of the new receivable and the carrying amount of the assets sold is a gain or loss on sale of assets.

Disclosure by Creditors

.040 A creditor shall disclose, either in the body of the financial statements or in the accompanying notes, the following information about troubled debt restructurings as of the date of each balance sheet presented:

a. For outstanding receivables whose terms have been modified in troubled debt restructurings, by major category:25 (i) the aggregate recorded investment; (ii) the gross interest income that would have been recorded in the period then ended if

25 The appropriate major categories depend on various factors, including the industry or industries in which the creditor is involved. For example, for a commercial banking enterprise, at a minimum, the appropriate categories are investments in debt securities and loans. Information need not be disclosed, however, for non-interest-bearing trade receivables; loans to individuals for household, family, and other personal expenditures; and real estate loans secured by one-to-four family residential properties.
those receivables had been current in accordance with their original terms and had been outstanding throughout the period or since origination, if held for part of the period; and (iii) the amount of interest income on those receivables that was included in net income for the period. A receivable whose terms have been modified need not be included in that disclosure if, subsequent to restructuring, its effective interest rate (paragraph .030) has been equal to or greater than the rate that the creditor was willing to accept for a new receivable with comparable risk.

b. The amount of commitments, if any, to lend additional funds to debtors owing receivables whose terms have been modified in troubled debt restructurings.

.041 A financial institution, or other creditor, may appropriately disclose the information prescribed by paragraph .040, by major category, for the aggregate of outstanding reduced-earning and nonearning receivables rather than separately for outstanding receivables whose terms have been modified in troubled debt restructurings.

**Substitution or Addition of Debtors**

.042 A troubled debt restructuring may involve substituting debt of another business enterprise, individual, or government unit for that of the troubled debtor or adding another debtor (for example, as a joint debtor). That kind of restructuring should be accounted for according to its substance. For example, a restructuring in which, after the restructuring, the substitute or additional debtor controls, is controlled by, or is under common control with the original debtor is an example of one that shall be accounted for by the creditor according to the provisions of paragraphs .030-.032. Those paragraphs shall also apply to a restructuring in which the substitute or additional debtor and original debtor are related after the restructuring by an agency, trust, or other

---

26 Government units include, but are not limited to, states, counties, townships, municipalities, school districts, authorities, and commissions. See page 4 of *AICPA Industry Audit Guide, "Audits of State and Local Governmental Units."

27 "Control" in this paragraph has the meaning described in paragraph 3(c) of *APB Opinion No. 18* [section 5131.03(c)], "The Equity Method of Accounting for Investments in Common Stock": "The usual condition for control is ownership of a majority (over 50%) of the outstanding voting stock. The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other stockholders or by court decree."
relationship that in substance earmarks certain of the original debtor's funds or funds flows for the creditor although payments to the creditor may be made by the substitute or additional debtor. In contrast, a restructuring in which the substitute or additional debtor and the original debtor do not have any of the relationships described above after the restructuring shall be accounted for by the creditor according to the provisions of paragraphs .028 and .033.

**Effective Date and Transition**

.043 The preceding paragraphs of this Statement, other than paragraphs .039-.041, shall be effective for troubled debt restructurings consummated after December 31, 1977. Early application is encouraged for those consummated on or before December 31, 1977 but during fiscal years for which annual financial statements have not previously been issued. The paragraphs shall not be applied to those consummated during fiscal years for which annual financial statements have previously been issued.

.044 Paragraph .039 shall be effective for receivables resulting from sales of assets after December 31, 1977 regardless of whether the provisions of this Statement were applied to the related troubled debt restructuring. Earlier application is encouraged for receivables from sales of assets on or before December 31, 1977 but during fiscal years for which annual financial statements have not previously been issued. It shall not be applied to those from sales of assets during fiscal years for which annual financial statements have previously been issued.

.045 The information prescribed by paragraphs .040 and .041 shall be disclosed in financial statements for fiscal years ending after December 15, 1977. Earlier application is encouraged in financial statements for fiscal years ending before December 16, 1977. For the purpose of applying paragraph .040, “receivables whose terms have been modified in troubled debt restructurings” shall encompass not only (a) receivables whose terms have been modified in troubled debt restructurings to which the other provisions of this Statement have been applied in accordance with paragraph .043 but also (b) those whose terms have been modified in earlier restructurings that constitute troubled debt restructurings (para-

---

28 For an enterprise having a fiscal year of 52 or 53 weeks ending in the last seven days in December or the first seven days in January, references to December 31, 1977 in paragraphs .043 and .044 shall mean the date in December 1977 or January 1978 on which the fiscal year ends.
graphs .002-.008) but have been excluded from its other provisions because of the timing of the restructurings.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

BACKGROUND INFORMATION

.046 There has been a substantial increase in recent years in the number of debtors that are unable to meet their obligations on outstanding debt because of financial difficulties. Sometimes the debtor and the creditor have restructured the debt to enable the debtor to avoid bankruptcy proceedings or other consequences of default, and the number of troubled debt restructurings receiving publicity has also increased. Although many of the most publicized troubled debt restructurings have involved debtors that are real estate companies or real estate investment trusts, debtors in other industries have also been involved in troubled debt restructurings.

.047 APB Opinion No. 26 [section 5362], "Early Extinguishment of Debt," established the accounting by a debtor for debt extinguished before its scheduled maturity. A number of commentators have observed, however, that not all troubled debt restructurings are "extinguishments" as that term is used in APB Opinion No. 26 [section 5362]. Also, since many troubled debt restructurings have occurred on or after the scheduled maturity of the debt, questions have arisen about accounting for debt restructurings that are not early extinguishments. It has been suggested that troubled debt restructurings should be considered separately from restructurings, including early extinguishments, that do not involve the economic or legal pressure to restructure on the creditor that characterizes troubled debt restructurings.

.048 Concern over the lack of guidance in the authoritative literature on accounting for troubled debt restructurings, accentuated by their increasing number, led to requests that the Financial Accounting Standards Board consider the matter. The Board submitted the question to the Screening Committee on Emerging Problems and weighed its recommendations in deciding to proceed with a project limited in scope to accounting and reporting by a debtor whose debt is restructured in a troubled loan situation. The Board issued an Exposure Draft of a Proposed Statement, "Restructuring of Debt in a Troubled Loan Situation," dated November 7, 1975, and held a public hearing on December 12, 1975. The Board received 63 written responses to the Exposure Draft and heard five oral presentations at the public hearing. A number of respondents objected to the accounting prescribed by the Exposure Draft, but they held divergent views about the appropriate accounting. Major issues of concern centered on (a) whether...
certain kinds of troubled debt restructurings require reductions of carrying amounts of debt, (b) if they do, whether the effect of the reduction should be included in measuring current net income, be deferred, or be considered a contribution to capital, and (c) whether interest that is contingently payable on restructured debt should be recognized before it becomes payable.

.049 During the same period, uncertainties arose about the abilities of some state and local government units to pay their obligations when due. Some of those obligations have also been restructured, for example, by continuing the existing obligation for a designated period at a reduced interest rate or by substituting obligations with later maturities of the same or a related issuer. Questions about accounting and reporting by creditors for those restructured securities led various individuals and organizations to urge the Board to consider that matter.

.050 The Board considered (a) the lack of authoritative guidance and divergent views about accounting and reporting by debtors for troubled debt restructurings and by creditors for restructured securities of state and local government units and (b) the similarities of the issues for debtors and creditors and concluded that the accounting and reporting issues affecting both debtors and creditors should be considered in a single project. The Board therefore announced on January 7, 1976, that it had added to its agenda a project to determine accounting and reporting by both debtors and creditors. At the same time the Board announced that since the new project concerned accounting by both debtors and creditors, the Board would not issue a Statement covering the limited topic of the November 7, 1975 Exposure Draft.

.051 The Securities and Exchange Commission issued, also on January 7, 1976, Accounting Series Release No. 188, "Interpretive Statement by the Commission on Disclosure by Registrants of Holdings of Securities of New York City and Accounting for Securities Subject to Exchange Offer and Moratorium." The Commission did not require a particular accounting method because of the divergent views on accounting for the securities held and "the fact that the Financial Accounting Standards Board has agreed to undertake a study of the accounting problems . . . with the intention of developing standards which can be applied to year-end statements in 1976."

.052 The Board appointed a task force in January 1976 to provide counsel in preparing a Discussion Memorandum. Its sixteen members included individuals from academe, the financial com-
munity, industry, law, and public accounting. The Board issued a Discussion Memorandum, “Accounting by Debtors and Creditors When Debt Is Restructured,” dated May 11, 1976, comprehending accounting and reporting by debtors and creditors for “any change in the amount or timing of cash payments otherwise required under the terms of the debt at the date of restructuring.” It received 894 written responses to the Discussion Memorandum and heard 37 oral presentations at a public hearing on July 27-30, 1976.

.053 In addition, the FASB staff reviewed the accounting and reporting practices of a number of debtors and creditors involved in troubled debt restructurings and interviewed a limited number of individuals who were directly associated with some of those restructurings.

.054 The Board issued an Exposure Draft of a proposed Statement on “Accounting by Debtors and Creditors for Troubled Debt Restructurings,” dated December 30, 1976. It received 96 letters of comment on the Exposure Draft.

Appendix B

BASIS FOR CONCLUSIONS

.055 This Appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including various alternatives considered and reasons for accepting some and rejecting others.

SCOPE OF THIS STATEMENT

.056 Paragraph .001 states that this Statement establishes standards of financial accounting and reporting by the debtor and by the creditor for a troubled debt restructuring. In contrast, the Discussion Memorandum comprehended all restructurings that changed "the amount or timing of cash payments otherwise required under the terms of the debt at the date of the restructuring." The broader scope of the Discussion Memorandum, which encompassed nontroubled as well as troubled debt restructurings, was due to several factors. The Board considered it necessary to obtain additional information about accounting practices and problems for both troubled and nontroubled debt restructurings. Some respondents to the November 7, 1975 Exposure Draft of a Proposed Statement, "Restructuring of Debt in a Troubled Loan Situation," expressed concern that to apply its guidelines for identifying troubled loan situations would require considerable judgment. Some Task Force members and other commentators advised the Board to comprehend all restructurings accomplished by exchanges of debt for debt or of equity securities for debt that may not be covered by APB Opinion No. 26 [section 5362].

.057 Most respondents to the Discussion Memorandum that commented on the matter, however, recommended that a Statement at this time should be limited to accounting for troubled debt restructurings. Numerous respondents indicated that restructurings of debt in nontroubled situations present no significant or unusual accounting problems that merit consideration or require new accounting and reporting standards. Many respondents contended that the kinds of major changes that might result from new standards on accounting for all restructurings should be deferred pending progress on the FASB's existing projects on accounting for interest costs and the conceptual framework for financial accounting and reporting. Some respondents argued that a useful distinction between troubled and nontroubled restructurings of debt can be made

See paragraph .047 of this Statement.
and that the need to use judgment in some circumstances should not be a deterrent to making that distinction in a Statement. A number of respondents to the Exposure Draft made similar comments.

.058 The Board found persuasive the views described in the preceding paragraph and decided to limit the scope of this Statement to troubled debt restructurings. The Board also decided that conclusions in this Statement should not attempt to anticipate results of considering the issues in its Discussion Memorandum, "Conceptual Framework for Financial Accounting and Reporting: Elements of Financial Statements and Their Measurement," dated December 2, 1976. Rather, the Board believes that, to the extent possible, the accounting for troubled debt restructurings prescribed in this Statement should be consistent and compatible with the existing accounting framework.

.059 Paragraph .001 also states that the Statement does not establish standards of financial accounting and reporting for allowances for uncollectible amounts and does not prescribe or proscribe particular methods for estimating amounts of uncollectible receivables. Several respondents to the Exposure Draft urged the Board to adopt the method of accounting for uncollectible amounts based on the net realizable value of collateral property set forth in Statement of Position 75-2, "Accounting Practices of Real Estate Investment Trusts," issued June 27, 1975 by the Accounting Standards Division of the American Institute of Certified Public Accountants. Others noted potential conflicts between the Exposure Draft and the AICPA publication and requested clarification. Still others urged the Board to reject the method for estimating amounts of uncollectible receivables in Statement of Position 75-2.

.060 Since this Statement neither prescribes nor proscribes particular methods for estimating uncollectible amounts of receivables, it takes no position on whether the net realizable value of collateral is a proper basis for estimating allowances for uncollectible amounts of receivables. However, the accounting prescribed in this Statement for assets received in troubled debt restructurings differs from that in Statement of Position 75-2, for reasons given in paragraphs .065-.105, and the accounting prescribed in this Statement governs.

> References to "Exposure Draft" in this Appendix are to "Accounting by Debtors and Creditors for Troubled Debt Restructurings," dated December 30, 1976, unless the reference specifically identifies the earlier Exposure Draft, "Restructuring of Debt in a Troubled Loan Situation," dated November 7, 1975.
.061 Paragraphs .002-.008 identify debt restructurings that fall within the scope of this Statement. This paragraph and the next are intended to clarify further the meaning of troubled debt restructuring for purposes of this Statement. The description of a troubled debt restructuring is based generally on that in the November 7, 1975 Exposure Draft, which many respondents to that Exposure Draft and the Discussion Memorandum found satisfactory. It focuses on the economic and legal considerations related to the debtor's financial difficulties that in effect compel the creditor to restructure a receivable in ways more favorable to the debtor than the creditor would otherwise consider. The creditor participates in a troubled debt restructuring because it no longer expects its investment in the receivable to earn the rate of return expected at the time of investment and may view loss of all or part of the investment to be likely unless the receivable is restructured. Thus, a troubled debt restructuring involves a receivable whose risk to the creditor has greatly increased since its acquisition, and if the creditor were not faced with the need to restructure to protect itself, it would require a much higher effective interest rate to invest in the same receivable currently. If the receivable has a market price, the effective interest rate based on that market price will have increased because of that increased risk to the creditor—that is, it will have increased more than market interest rates generally (or fallen less than market rates or increased while interest rates generally have fallen).

.062 Although the broad description of a troubled debt restructuring in paragraphs .002-.008 includes settlements of debt by transfers of assets and grants of equity interests in debtors, troubled debt restructuring refers in particular to modifications of terms intended to continue an existing debt by making the terms more favorable to the debtor to protect the creditor's investment. For purposes of this Statement, troubled debt restructurings do not include changes in terms resulting in an effective interest rate based on market price of the debt that is comparable to effective interest rates applicable to debt issued by nontroubled debtors, for example, a situation in which a debtor is able to exchange for its outstanding debt new marketable debt with an effective interest rate at or near the market interest rates for debt issued by nontroubled debtors generally. The fact that the debtor can obtain that interest rate only by including a "sweetener," such as a conversion privilege, does not make that transaction a troubled debt restructuring because (a) the debtor is sufficiently strong financially that the kind of economic compulsion on the creditor described earlier is not present, (b) the "sweetener" represents so drastic a change in the terms of the debt...
that the transaction is in substance the exchange of new debt for outstanding debt rather than merely a modification of terms to continue an existing debt, or (c) some combination of both factors.

.063 Some respondents to the Discussion Memorandum advocated that the scope of this Statement specifically exclude restructurings of receivables related to consumer finance activities or to all or certain residential properties. Their reasons focused primarily on the individual insignificance of those receivables in a creditor’s financial position and on the cost involved to account for reductions in recorded investments in large numbers of receivables that may be restructured. The Board concluded that accounting for restructurings of those receivables in troubled situations should in general be the same as for other troubled debt restructurings. However, grouping like items or using statistical measures may be appropriate for receivables that are not individually material.

.064 Some respondents to the Exposure Draft suggested that the time of a troubled debt restructuring be clarified because several dates or events may be involved. The time may be significant in matters relating to recognizing gains or losses from restructuring or to the effective date of the Statement. Paragraph .006 specifies the time of a restructuring to be the date of consummation, that is, the time that assets are transferred, new terms become effective, and the like. A debtor should not recognize a gain on restructuring before consummation of the restructuring; a creditor should record receipt of an asset or equity interest at that date or should formally write down a restructured receivable, but may already have recognized a loss on restructuring through estimated uncollectible amounts.

DIVERGENT VIEWS OF TROUBLED DEBT RESTRUCTURINGS

.065 Respondents to the Discussion Memorandum expressed divergent views about the substance of various types of troubled debt restructurings and appropriate accounting for them within the existing accounting framework. Those views fall generally into three categories:

a. All troubled debt restructurings constitute events that are part of continuing efforts by creditors to recover amounts invested and obtain a return on investment despite debtors’ financial difficulties; therefore, troubled debt restructurings may require certain disclosures, but usually do not require changes in carrying amounts of payables or recorded investments in receivables or recognition of gains or losses.
b. All debt restructurings, troubled and nontroubled, constitute transactions whose financial effect on assets or liabilities (receivables or payables) should be recognized, including recognition of gains or losses.

c. Accounting for a troubled debt restructuring depends on the characteristics of the restructuring. Some troubled debt restructurings constitute transactions requiring recognition of changes in receivables or payables and related gains or losses; other troubled debt restructurings do not.

Recognition of Changes Not Appropriate

.066 Respondents who contended that troubled debt restructurings constitute events for which recognition of changes in assets or liabilities is usually not appropriate within the existing accounting framework generally focused on accounting by creditors. They reasoned that a troubled debt restructuring commonly involves a concession granted unilaterally by the creditor to increase its prospects of recovering the amount invested. The debtor is usually a passive beneficiary of the effects of the restructuring. Troubled debt restructurings typically result from the debtor's financial difficulties that existed before restructuring, and in the existing accounting framework the creditor should have considered the debtor's financial difficulties in estimating an allowance for uncollectible amounts regardless of whether those difficulties were likely to culminate in a restructuring. According to those respondents, the restructuring event in itself has no accounting significance except to sometimes provide more definitive evidence of the effect of the debtor's financial difficulties on the creditor's ability to recover the recorded investment in the receivable.

.067 According to that view, the creditor should record no change in a receivable restructured in a troubled debt restructuring and no gain or loss whether the restructuring involves (i) transfer of receivables, real estate, or other noncash assets from the debtor to the creditor to satisfy the receivable, (ii) grant to the creditor of an equity interest in the debtor to satisfy the receivable, (iii) modification of the terms of the receivable, or (iv) some combination of transfer of assets or grant of equity interests (or both) and modification of terms. The normal, expected course of events in a creditor's activities is to invest cash, earn interest on the cash invested, and eventually recover the cash. Although a creditor initiates or agrees to a restructuring to protect the amount invested, not to acquire noncash assets, the creditor may accept noncash assets (including an equity interest) as a necessary intermediate step. The creditor previously held a claim on the debtor's assets, either through a
receivable secured by specific collateral or through an unsecured general claim against the debtor's assets. Accepting noncash assets in a restructuring represents the exercise of that claim; the assets stand in the place of the receivable. According to that view, the creditor's recorded investment in the receivable should become the recorded investment in the surrogate assets obtained. Then, since whether the creditor recovers that investment depends on the cash received for the assets that replaced the receivable, recoverability of that recorded investment as a result of obtaining the surrogate assets should be assessed. An expected failure, if any, to recover all of the recorded investment should be recognized as a loss by the creditor to the extent not previously recognized. However, transfer of the assets to the creditor should not precipitate recognition of a loss that was not inherent in the receivable before the restructuring; at most, the transfer provides evidence of the existence and amount of a loss.

Recognition of Changes Appropriate for All Debt Restructurings

Some respondents advocated for virtually all debt restructurings, troubled and nontroubled, the accounting normally required in the existing accounting framework for initial recognition of assets and liabilities. They reasoned that each restructuring is an exchange resulting in a new asset for the creditor or liability for the debtor in place of the old one. According to that view, the presence or absence of financial difficulties does not affect the appropriate accounting for a restructuring; at most, a debtor's financial difficulties may affect the terms of the exchange. Those respondents contended that all assets and liabilities exchanged in debt restructurings should be measured at their fair values at the time of the restructuring by both debtors and creditors. They considered continued use of recorded amounts derived from previous exchange transactions to be inappropriate for restructured receivables and payables because it ignores a current exchange transaction and may ignore gains or losses that have occurred and should be recognized.

Accounting Depends on Circumstances

Some respondents contended that the controlling criterion in determining appropriate accounting for a debt restructuring within the existing accounting framework is whether the restructuring involves transfer of resources, obligations, or both between debtor and creditor. According to that view, a troubled debt restructuring
involving transfer of resources, obligations, or both should be accounted for the same as other transfers of resources and obligations in the existing accounting framework and may involve recognizing a gain or loss. A troubled debt restructuring involving no transfer of resources or obligations requires no accounting for changes in assets or liabilities, except to recognize losses in accordance with FASB Statement No. 5 [section 4311].

Some respondents distinguished debt restructurings involving transfers of resources, obligations, or both from those involving no transfers on the basis of whether the debtor transferred assets or granted an equity interest to the creditor to satisfy the debt or the restructuring involved modification of terms only. Other respondents classified modifications of terms involving reduction of face amount of the debt with transfers of assets or grants of equity interests (discussed further in paragraphs .106-.155).

Board Conclusions about Recognizing Changes in Assets or Liabilities

According to APB Statement No. 4 [sections 1021-1029], almost all of the events that in the existing accounting framework normally change assets and liabilities and also affect net income for the period of change are either "exchanges" or "nonreciprocal transfers," the two classes that comprise "transfers of resources or obligations to or from other entities." The other classes of events—"external events other than transfers of resources or obligations to or from other entities" (price changes, interest rate changes, technological changes, vandalism, etc.) and "internal events" (production and casualties)—result in
revenues or gains only through "exceptions" and result in expenses or losses only because some produce losses by definition or by applying the "modifying convention" of conservatism. (See APB Statement No. 4, paragraphs 62 and 180-187 [sections 1023.23 and 1027.06-.13].)

.073 An exchange is a reciprocal transfer between the enterprise and another entity in which "the enterprise either sacrifices resources or incurs obligations in order to obtain other resources or satisfy other obligations." "Exchanges between the enterprise and other entities (enterprises or individuals) are generally recorded in financial accounting when the transfer of resources or obligations takes place or services are provided." Nonreciprocal transfers are "transfers in one direction of resources or obligations, either from the enterprise to other entities or from other entities to the enterprise." In nonreciprocal transfers between the enterprise and entities other than owners, "one of the two entities is often passive, a mere beneficiary or victim of the other's actions." Nonreciprocal transfers between the enterprise and entities other than owners "are recorded when assets are acquired (except that some noncash assets received as gifts are not recorded), when assets are disposed of or their loss is discovered, or when liabilities come into existence or are discovered." (See APB Statement No. 4, paragraphs 62, 181, and 182 [sections 1023.23 and 1027.07-.08].)

.074 The Board rejected the view that virtually all troubled debt restructurings have the same substance in the existing accounting framework. It therefore rejected both the view that accounting for all troubled debt restructurings should involve recognition of changes in assets or liabilities and perhaps gains and losses and the view that no troubled debt restructurings should require recognition of changes in assets or liabilities or gains or losses.

.075 The Board concluded that a troubled debt restructuring that involves transfer of resources or obligations requires accounting for the resources or obligations transferred whether that restructuring involves an exchange transaction or a nonreciprocal transfer. Both kinds of transfers are accounted for in the existing accounting framework on essentially the same basis (exchange price received or paid or fair value received or given). In this Statement, therefore, the Board found it unnecessary to decide whether the transfer of resources and obligations in various types of troubled debt restructurings is reciprocal (an exchange) or nonreciprocal as those terms are used in paragraph 62 of APB Statement No. 4 [section 1023.23].

.076 The Board also concluded that a troubled debt restructuring that does not involve a transfer of resources or obligations is a
continuation of an existing debt. It is neither an event that results in a new asset or liability for accounting purposes nor an event that requires a new measurement of an existing asset or liability.

077 The Board noted that guidance regarding the types of troubled debt restructurings that involve transfers of resources, obligations, or both is sparse in existing accounting pronouncements, and various views exist. The Board concluded that to the extent a troubled debt restructuring involves (i) transfer of receivables, real estate, or other assets from debtor to creditor to satisfy debt or (ii) grant to the creditor of an equity interest in the debtor to satisfy debt (or a combination of both), a transfer of resources or obligations has occurred that in the existing accounting framework should be accounted for at fair value. The debtor has given up assets or granted an equity interest to settle a payable, and the creditor has received the assets or equity interest in satisfaction of a receivable. In contrast, to the extent a troubled debt restructuring involves only modification of terms of continuing debt, no transfer of resources or obligations has occurred. The substance of troubled debt restructurings involving modifications of continuing debt is discussed in paragraphs .106-.155.

078 Several respondents to the Exposure Draft disagreed with the Board's distinction between troubled debt restructurings involving transfers of assets or grants of equity interests in debtors and those involving only modifications of terms. Some respondents wished to have fewer kinds of troubled debt restructurings accounted for as transactions between debtors and creditors and thus disagreed with the Exposure Draft's conclusions on accounting for transfers of assets; their views are noted in the next section. Others wished to account for more kinds of troubled debt restructurings as transactions between debtors and creditors and thus disagreed with the Exposure Draft's conclusions on accounting for modifications of terms; their views are noted in paragraphs .150-.153.

ACCOUNTING FOR RESTRUCTURINGS INVOLVING TRANSFERS

Accounting by Debtors and Creditors for Transfer of Assets

Concept of Fair Value

079 Some respondents to the Exposure Draft continued to argue that all troubled debt restructurings should be accounted for as modifications of terms of debt and that none should be accounted for as transfers of assets (paragraphs .066 and .067). Others ac-
accepted the need to account for some troubled debt restructurings as asset transfers but held that obtaining assets through foreclosure or repossession under terms included in lending agreements should be distinguished from obtaining assets in exchange for cash or in other “asset swaps.” They contended that (a) only the form of the asset is changed by foreclosure or repossession, (b) the substance of a secured loan is that the lender may choose either to postpone receipt of cash or take the asset to optimize cash receipts and recovery of its investment, and (c) foreclosure or repossession is not the completion of a lending transaction but merely a step in the transaction that begins with lending cash and ends with collecting cash.

.080 The Board rejected those arguments for the reasons given in paragraphs .071-.077, emphasizing that an event in which (a) an asset is transferred between debtor and creditor, (b) the creditor relinquishes all or part of its claim against the debtor, and (c) the debtor is absolved of all or part of its obligation to the creditor is the kind of event that is the basis of accounting under the existing transaction-based accounting framework. To fail to recognize an event that fits the usual description of a transaction and to recognize only the lending and collection of cash as transactions would significantly change the existing accounting framework.

.081 Use of the fair value of an asset transferred to measure the debtor’s gain on restructuring and gain or loss on the asset’s disposal or the creditor’s cost of acquisition is not adopting some kind of “current value accounting.” On the contrary, that use of fair value is common practice within the existing accounting framework. Paragraph .013 of this Statement explains briefly the meaning of fair value and refers to APB Opinions No. 16 [section 1091], No. 21 [section 4111], and No. 29 [section 1041], which use fair value in the same way and provide guidance about determining fair values within the existing accounting framework. The term fair value is used in essentially the same way as market value was used in the Discussion Memorandum to denote a possible attribute to be measured at the time a debt is restructured. Fair value is defined in paragraph 181 of APB Statement No. 4 [section 1027.07] as “the approximation of exchange price in transfers in which money or money claims are not involved.” Although a “money claim” is necessarily involved in transferring assets to settle a payable in a troubled debt restructuring, the troubled circumstances in which the transfer occurs make it obvious that the amount of the “money claim” does not establish an exchange price. Determining fair value of the assets transferred in a troubled debt restructuring is usually necessary to approximate an exchange price for the
same reasons that determining fair value is necessary to account for transfers of assets in nonmonetary transactions (APB Opinion No. 29 [section 1041]).

.082 That point is emphasized in this Appendix because some respondents to the Exposure Draft apparently misunderstood the concept of fair value (paragraph 11 of the Exposure Draft and paragraph .013 of this Statement) and the discounting of expected cash flows specified in those paragraphs. Paragraph .013 permits discounting of expected cash flows from an asset transferred or received in a troubled debt restructuring to be used to estimate fair value only if no market prices are available either for the asset or for similar assets. The sole purpose of discounting cash flows in that paragraph is to estimate a current market price as if the asset were being sold by the debtor to the creditor for cash. That estimated market price provides the equivalent of a sale price on which the debtor can base measurement of a gain on restructuring and a gain or loss on disposal of the asset and the equivalent of a purchase price on which the creditor can measure the acquisition cost of the asset. To approximate a market price, the estimate of fair value should use cash flows and discounting in the same way the marketplace does to set prices—in essence, the marketplace discounts expected future cash flows from a particular asset "at a rate commensurate with the risk involved" in holding the asset. An individual assessment of expected cash flows and risk may differ from what the marketplace's assessment would be, but the procedure is the same.

.083 In contrast to the purpose of paragraph .013, AICPA Statement of Position No. 75-2 31 is concerned with different measures—net realizable value to a creditor of a receivable secured by real property and net realizable value of repossessed or foreclosed property. Its method of accounting for assets obtained by foreclosure or repossession thus differs from the method specified in this Statement. It proposes discounting expected cash flows at a rate based on the creditor's "cost of money" to measure the "holding cost" of the asset until its realizable value is collected in cash. The concept of fair value in paragraph .013 does not involve questions of whether interest is a "holding cost" or "period cost" because it is concerned with estimating market price, not net realizable value, however defined. Accounting for transfers of assets in troubled debt restructurings and for the assets after transfer is, of course, governed by this Statement.

.084 Several respondents to the Exposure Draft suggested that the Statement should explicitly state that troubled debt restructurings

---

31 See paragraphs .059 and .060 of this Statement.
that are in substance transfers of assets should be accounted for according to that substance. The Board agreed that a restructuring may be in substance a foreclosure, repossession, or other transfer of assets even though formal foreclosure or repossession proceedings are not involved. Thus, the Statement requires accounting for a transfer of assets if, for example, the creditor obtains control or ownership (or substantially all of the benefits and risks incident to ownership) of one or more assets of the debtor and the debtor is wholly or partially relieved of the obligations under the debt, or if both the debt and one or more assets of the debtor are transferred to another debtor that is controlled by the creditor.

**Debtor's Recognition of Gain or Loss**

.085 Responses to the November 7, 1975 Exposure Draft, the May 11, 1976 Discussion Memorandum, and the Exposure Draft included two general procedures for a debtor to account for a gain or loss from a troubled debt restructuring involving a transfer of assets to settle a payable:

a. The debtor recognizes a difference, if any, between the carrying amount of assets transferred and the carrying amount of the payable settled as a gain on restructuring of a payable.

b. The debtor (1) recognizes a difference, if any, between the fair value and carrying amount of assets transferred as a gain or loss on transfer of assets and (2) recognizes a difference, if any, between the fair value of assets transferred and the carrying amount of the payable settled, as a gain on restructuring of a payable.

.086 Some respondents contended that debtors should not recognize the difference between the carrying amount and fair value of assets transferred to settle a payable as a gain or loss on assets. Instead, the net difference, if any, between the carrying amount of assets transferred and the carrying amount of a payable settled should be recognized as a gain or loss on restructuring of a payable. They argued that to measure the fair value of assets transferred would be costly and subjective in certain circumstances and that distinctions in the debtor's income statement between a gain or loss on disposition of assets and a gain on settlement of payables in the same troubled debt restructuring would probably not be helpful and might be arbitrary.

.087 Other respondents who addressed the question emphasized the desirability of being able to assess separately the debtor's
performance with respect to the transferred assets. They suggested that measuring the fair values of the transferred assets is essential to that assessment and conveys significant information that is obscured if fair values are not measured. For example, the fair values of some assets transferred (such as real estate) may often exceed their carrying amounts, while the fair values of other assets transferred (such as receivables) may sometimes be less than their face amounts. In the existing accounting framework, the first kind of difference is not recognized before disposal of the asset, but the second kind of difference is likely to have been recognized before restructuring by some debtors but not recognized by others for various reasons. Failure to include a gain or loss for the difference between the fair values and carrying amounts of assets transferred in troubled debt restructurings is likely to obscure differences and similarities between restructurings, according to that view, and respondents who advocated separate recognition of a debtor's gains or losses on assets transferred and gains on restructuring argued that separate recognition is required to provide consistent information about a single debtor for different periods and comparable information about different debtors for the same periods. The need for separate recognition is accentuated if gains and losses on transfer of assets are classed differently from gains on restructuring in the debtor's income statement (that is, if the latter are classified as extraordinary items).

The Board concluded that the fair value of the assets transferred in a troubled debt restructuring constitutes the best measure of the debtor's sacrifice to settle the payable and therefore that the fair value of assets transferred should be used to measure the gain on restructuring of the payable. In the existing accounting framework, gains, and losses on certain kinds of noncurrent assets, are usually recognized on assets only when the assets are sold or otherwise disposed of. For many assets, that gain or loss on sale or disposal is the only indication of whether the enterprise did well or poorly by having the asset. That indication is lost if the gain or loss on disposition is buried in a gain on restructuring of troubled debt, and the effect of the restructuring itself is also obscured. Further, unless fair value of the asset transferred is used to account for the transaction, the proportion of a payable settled by the transfer can usually be determined only by arbitrary and complicated allocations if the transfer settles only part of the payable and the terms are modified on the remainder (paragraph .019).

Since a gain or loss recognized by a debtor on the assets transferred to settle a payable in a troubled debt restructuring
is closely related to a gain recognized by a debtor on restructuring of a payable, the Board concluded that the aggregate amount of each should be disclosed for restructurings that have occurred during a period for which financial statements are presented (paragraph .025).

Creditor’s Subsequent Accounting

.090 The Board considered two proposals for a creditor’s accounting for assets received in full satisfaction of a receivable in a troubled debt restructuring: (a) the creditor accounts for the assets received at their fair value and recognizes as a loss a difference, if any, between the total fair value of assets received and the recorded investment in the receivable satisfied or (b) the creditor accounts for the assets received at the recorded investment in the receivable satisfied and recognizes no loss. Those alternatives are described in paragraphs .065-.070, and the Board’s reasons for adopting the first proposal are given in paragraphs .071-.078.

.091 Several respondents to the Exposure Draft requested guidance on a creditor’s accounting after a troubled debt restructuring for assets received in the restructuring. Some asked the Board to require or permit creditors to accrue interest on all assets acquired through repossession or foreclosure. In response, paragraph .029 states that “after a troubled debt restructuring, a creditor shall account for assets received in satisfaction of a receivable the same as if the assets had been acquired for cash.” The fair value at the time of transfer of an asset transferred to a creditor in a troubled debt restructuring is a measure of its cost to the creditor and generally remains its carrying amount (except for depreciation or amortization) until sale or other disposition if the asset is inventory, land, building, equipment, or other nonmonetary asset. That is, under the present accounting framework, interest is accrued only on some receivables and other monetary assets. Except for the effects of a few specialized rules that permit interest cost to be added to the cost of some assets under construction, etc., interest is not accrued on nonmonetary assets. That framework governs accounting for assets acquired in a troubled debt restructuring. The method of accounting for assets received through foreclosure, repossession, or other asset transfer to satisfy a receivable proposed by Statement of Position 75–2 is not compatible with the accounting specified in this Statement.
Debtor’s Accounting for Grant of Equity Interest

.092 The Board considered three proposals for a debtor’s accounting for an equity interest granted to a creditor to settle a payable in a troubled debt restructuring:

a. The debtor directly increases its owners’ equity by the fair value of the equity interest granted” and recognizes the difference between that fair value and the carrying amount of the payable settled as a gain included in measuring net income.

b. Same as (a) except that the resulting gain is included directly in the owners’ equity of the debtor.

c. The debtor directly increases its owners’ equity by the carrying amount of the payable settled, recognizing no gain.

.093 Respondents favoring use of fair value to record a grant of an equity interest contended that the increase in the owners’ equity of the debtor as a result of a troubled debt restructuring should be measured by the consideration received for the equity interest granted, not by the carrying amount of the payable settled because that carrying amount has no current economic significance. They also contended that a separate measure of a gain on restructuring of payables provides useful information.

.094 Among those who advocated use of fair value to record an equity interest granted to settle debt in a troubled debt restructuring and recognition of a resulting gain on restructuring, some advocated including that gain in measuring net income and others advocated including it directly in the debtor’s equity accounts. Those favoring inclusion in net income argued that all gains from troubled debt restructurings are components of net income whether they arise from transfer of assets or grant of equity interests. Those favoring direct inclusion in owners’ equity argued that, to the extent an equity interest is involved, the restructuring is a capital transaction and gains resulting from capital transactions should be recognized as direct increases in paid-in or contributed owners’ equity rather than as components of net income.

.095 Those who advocated that the debtor’s increase in equity for an equity interest granted should be the carrying amount of

“Fair value” in this context normally means the fair value of the liability satisfied or the fair value of the equity interest granted, whichever is the more clearly evident (APB Opinion No. 16, paragraph 67 [section 1091.67], and APB Statement No. 4, paragraph 182 [section 1027.08]).
the debt settled also argued that granting an equity interest is essentially a capital transaction to which the notion of a gain does not apply. That solution was proposed in the November 7, 1975 Exposure Draft. Advocates of that view noted that paragraph 187 of APB Statement No. 4 [section 1027.13] states that, among other sources, increases in owners' equity arise from investments in an enterprise by its owners. According to that view, a creditor that accepts an equity interest in the debtor in satisfaction of a receivable becomes an owner; the debtor's measure of the owners’ investment is the carrying amount of the payable settled.

.096 After considering the comments received in response to the November 7, 1975 Exposure Draft, the May 11, 1976 Discussion Memorandum, and the Exposure Draft, the Board concluded that a debtor should record an equity interest in the debtor granted to a creditor to settle a payable in a troubled debt restructuring at its fair value, and the difference between that fair value and the carrying amount of the payable settled should be recognized as a gain in measuring net income. The Board recognizes that, for some debtors involved in troubled debt restructurings, estimating either the fair value of the equity interest granted or the fair value of the payable settled may be difficult. That estimate is necessary, however, to measure separately the consideration received for the equity interest and the gain on restructuring. To include the gain on restructuring in contributed equity would violate a clear principle for accounting for issues of stock—capital stock issued is recorded at the fair value of the consideration received (APB Statement No. 4, paragraph 182 [section 1027.08]). The consideration received for the stock issued in that kind of troubled debt restructuring is cancellation of the payable (or part of it), but the fair value of the consideration received is not measured by the carrying amount of the payable. Whether the consideration received is measured by the fair value of the stock issued or the fair value of the payable cancelled, the consideration is less than the carrying amount of the payable. To record the stock issued at the carrying amount of the payable thus results in recording the stock at an amount in excess of the consideration received; to include the gain in restructuring in contributed equity instead of net income gives the same result.

.097 To recognize a gain on restructuring acknowledges that the creditor accepted something less than the carrying amount of the payable to settle it. Since that is the essential result whether the restructuring is in the form of a transfer of assets from debtor to creditor or the form of a grant to the creditor of an equity inter-
Liabilities and Deferred Credits

est in the debtor, the Board believes that essentially the same accounting applies in the existing accounting framework to both kinds of restructurings. Although the creditor becomes an owner of the debtor to the extent that the creditor accepts an equity interest in the debtor, that is a consequence of the kind of consideration used to settle a payable in a restructuring. The restructuring itself is an agreement between a debtor and a creditor, and the gain to the debtor results because the creditor accepted less consideration than the carrying amount of the debt.

**Classification of Debtor's Gain on Restructuring**

.098 Alternatives considered by the Board for classifying gain on a troubled debt restructuring in the debtor's financial statements were that the gain is: (a) always included in measuring net income in accordance with *APB Opinion No. 30* [section 2012], (b) always included in measuring net income as an extraordinary item, and (c) always included as a direct addition to paid-in capital. Most respondents addressing the question recommended classifying a gain on restructuring debt as an extraordinary item, primarily because they perceived it to be similar to gains or losses on extinguishment of debt that, according to *FASB Statement No. 4* [section 2013], shall be aggregated and, if material, classified as an extraordinary item, net of related income tax effect. Some respondents recommended classifying the gain as a direct increase in paid-in capital, contending that since the gain results from a unilateral action by the creditor, the debtor has in effect received a contribution to equity from the creditor.

.099 The Board concluded that a gain on restructuring (net of related income tax effect), if material, should always be classified as an extraordinary item in measuring the debtor's net income. The Board recognized that to apply the criteria in *APB Opinion No. 30* [section 2012] to a particular debtor's gain on restructuring would not necessarily result in its classification as an extraordinary item. The Board concluded, however, that a gain on restructuring of a payable in a troubled debt restructuring is indistinguishable from a gain or loss on other extinguishments of debt, and the same classification in financial statements is appropriate. Since *FASB Statement No. 4* [section 2013] classifies a gain or loss on extinguishment of debt as an extraordinary item, the classification is appropriate for a gain on restructuring of a payable.

.100 Some respondents suggested that "legal fees and other direct costs that a debtor incurs in granting an equity interest
to a creditor in a troubled debt restructuring" (paragraph .024) always be included as extraordinary items whether or not the debtor recognizes a gain on restructuring. Issuing equity interests is not an extraordinary event for a business enterprise, however, and related costs are not extraordinary items under any existing authoritative literature. Deducting those costs from the proceeds of issue has been customary practice, and this Statement does not change that custom. But only costs of issuing the equity interest may be accounted for that way. All other direct costs of a troubled debt restructuring are expenses of the period of restructuring but shall be deducted from a gain, if any, on restructuring.

**Creditor's Accounting for Loss on Restructuring**

.101 Some respondents to the Discussion Memorandum, especially financial institutions, indicated that they hold and manage broad groups of earning assets (primarily loans and investments) as portfolios rather than as individual assets. According to them, their primary consideration in making a new loan or investment is to recover the amount invested, and the rate of return on the amount invested is a secondary consideration. Although one objective is to obtain an appropriate rate of return for the particular credit risk, changes in market conditions and general economic conditions as well as changes affecting the individual asset or debtor may cause the actual return from a loan or investment to vary from that originally anticipated. Therefore, the objective is to maintain a portfolio with an average yield that provides an adequate margin over the cost of funds and that has risk, maturity, marketability, and liquidity characteristics that are appropriate for the particular institution. To achieve that objective, the contractual rate of return required on individual loans and investments must include a factor to offset the probability that some of them will become nonearning assets, some will ultimately recover amounts invested only with difficulty, and some will involve loss of at least a portion of the amounts invested.

.102 The financial difficulties of a debtor that lead to a troubled debt restructuring usually require the creditor to consider those difficulties carefully in determining whether to recognize a loss on the existing receivable. Typically, before restructuring occurs, the creditor has determined the need for a related allowance for uncollectible amounts in light of those difficulties. An allowance for uncollectible amounts may have been based on individual receivables, on groups of similar receivables without necessarily attempting to identify particular receivables that may prove un-
collectible, or both. The creditor typically has numerous lending transactions and expects loan losses to recur as a consequence of customary and continuing business activities. Almost all respondents who commented on the classification of a creditor's loss on restructuring recommended that the loss be accounted for in a manner consistent with the enterprise's method of accounting for other losses related to its receivables. Usually that involves recognizing specific losses as they are identified and periodically adjusting the allowance for uncollectible amounts based on an assessment of its adequacy for losses not yet specifically identified. Respondents recommended that the net effect of recognizing specific losses and adjusting the valuation allowance be included in measuring net income in accordance with the provisions of APB Opinion No. 30 [section 2012].

The Board considered the varied frequency and significance for creditors of troubled debt restructurings in the light of the discussion in APB Opinion No. 30 [section 2012], and agreed that (a) a creditor should account for a loss from a troubled debt restructuring in the same manner as a creditor's other losses on receivables (that is, as deductions in measuring net income or as reductions of an allowance for uncollectible amounts), and (b) APB Opinion No. 30 [section 2012] should apply to losses on restructuring that are included in measuring net income.

Creditor's Sale of Assets Received in Restructuring

A creditor whose customary business activities include lending may sell an asset that was previously acquired in a troubled debt restructuring. The consideration received in that sale may be represented, in whole or in part, by a receivable. The Board considered whether a receivable received in that way is exempt from the provisions of APB Opinion No. 21 because paragraph 3(d) of that Opinion [section 4111.03(d)] states that, except for one paragraph, the Opinion does not apply to several kinds of receivables or payables or activities, including "the customary cash lending activities and demand or savings deposit activities of financial institutions whose primary business is lending money." Some respondents to the Exposure Draft held that acquiring and disposing of those assets is part of "the customary cash lending activities" of certain financial institutions.

The "lending activities" referred to in paragraph 3(d) of APB Opinion No. 21 [section 4111.03(d)] are modified by the words "customary" and "cash," and the Board concluded that the sale of an asset, such as real estate, by a financial institution is distinguishable from its customary cash lending activities. The view that the customary cash lending activities of a finan-
cial institution include repossession or foreclosure and resale of assets is part of the argument that repossessions and foreclosures are not transactions to be accounted for but merely changes in the form of the asset (paragraphs .066, .067, and .079-.084). The Board rejected that contention and also rejected this part of it. APB Opinion No. 21 [section 4111] focuses primarily on the possible misstatement of the exchange price (sale price or purchase price) in an exchange of a noncash asset for a receivable or payable, with consequent misstatement in the period of the transaction of gain or loss on sale or acquisition cost and misstatement in later periods of interest income or interest expense. The resale of repossessed or foreclosed assets is that kind of transaction and involves the same questions. Accordingly, the Board concluded that a receivable resulting from sale of an asset received in a troubled debt restructuring is covered by that Opinion, including paragraph 12, which prescribes the measurement of a note (receivable) exchanged "for property, goods, or service in a bargained transaction entered into at arm's length."

ACCOUNTING FOR RESTRUCTURINGS INVOLVING MODIFICATION OF TERMS

Background Information

.106 A creditor holds a receivable with the expectation that the future cash receipts, both those designated as interest and those designated as face amount, specified by the terms of the agreement will provide a return of the creditor's investment in that receivable and a return on the investment (interest income). That essential nature of a creditor's investment in a receivable is the same whether the creditor invested cash (for example, a cash loan to a debtor or a cash purchase of debt securities) or exchanged assets or services (for example, a sale of the creditor's services, product, or other assets) for the receivable.

.107 Similarly, a debtor expects the future cash payments specified by the terms of a payable to include a cost (interest expense) for the privilege of deferring repayment of funds borrowed or deferring payment for goods or services acquired. The essential nature of a debtor's payable is the same whether the debtor received cash in exchange for the payable (for example, a cash loan

33 The terms of some short-term receivables and payables (for example, trade accounts receivable or payable) may not be expected to result in interest income or interest expense to the creditor or debtor except as it may be implicit in the transaction (for example, implicit in the price of a product sold or purchased on account).
or the issue of debt securities for cash) or received other assets or services (for example, a purchase of services, materials, or other assets from the creditor).

.108 The difference between the amount a creditor invests in a receivable and the amount it receives from the debtor's payments of interest and face amount is the return on the investment (interest income) for the entire period the receivable is held. Similarly, the difference between the amount a debtor receives and the amount it pays for interest and face amount is the cost of deferring payment (interest expense) for the entire period the payable is outstanding. The question that must be answered to account for a debt (a receivable or payable) and related interest is how that total interest income or expense is to be allocated to the accounting periods comprising the entire period that the receivable is held or the payable is outstanding.

.109 That allocation of interest income or expense to periods is normally accomplished in present accounting practice by the interest method, which measures the interest income or expense of each period by applying the effective interest rate implicit in the debt to the amount of the debt at the beginning of the period, assuming that all cash receipts or payments will occur as specified in the agreement. The effective interest rate implicit in the debt may be the same as or different from the interest rate stated in the agreement (the stated interest rate). The effective and stated rates are the same if the amount invested or borrowed equals the face amount; the rates differ if the amount invested or borrowed is greater or less than the face amount.

.110 Thus, the recorded investment in a receivable or the carrying amount of a payable, both at the time of the originating transaction and at the beginning of each period comprising the entire period a receivable is held or a payable is outstanding, is the sum of the present values of (a) the amounts of periodic future cash receipts or payments that are designated as interest and (b) the face amount of cash due at maturity, both discounted at the effective interest rate implicit in the debt. If the effective interest rate differs from the stated interest rate, the recorded investment in the receivable or carrying amount of the payable in financial statements is the face amount plus unamortized premium or less unamortized discount, and that amount is used to measure the interest income or expense, as described in the preceding paragraph.

.111 Numerous references to and descriptions of the concepts and procedures referred to in paragraphs .108-.110 are found in the pronouncements of the Accounting Principles Board and
the Financial Accounting Standards Board, for example, on accounting for leases (FASB Statement No. 13 [section 4053]); accounting for the cost of pension plans (APB Opinion No. 8 [section 4063]); accounting for interest on receivables and payables (APB Opinions No. 12 [section 5361] and No. 21 [section 4111]); accounting for early extinguishment of debt (APB Opinion No. 26 [section 5362]); recording receivables and payables of a company acquired in a business combination (APB Opinion No. 16, paragraphs 87-89 [section 1091.87-89]); and translating receivables and payables denominated in a foreign currency (FASB Statement No. 8, paragraph 39 [section 1083.039]).

112 Pronouncements of the Accounting Principles Board also include several specific statements of broad principle. They include: "The general principles to apply the historical-cost basis of accounting to an acquisition of an asset depend on the nature of the transaction: . . . b. An asset acquired by incurring liabilities is recorded at cost—that is, at the present value of the amounts to be paid" (APB Opinion No. 16, paragraph 67 [section 1091.67]); "Conceptually, a liability is measured at the amount of cash to be paid discounted to the time the liability is incurred" (APB Statement No. 4, paragraph 181 [M-1C] [section 1027.07]); and "... upon issuance, a bond is valued at (1) the present value of the future coupon interest payments plus (2) the present value of the future principal payments (face amount)... discounted at the prevailing market rate of interest... at the date of issuance of the debt" and "... the difference between the present value and the face amount should be treated as discount or premium and amortized as interest expense or income over the life of the note in such a way as to result in a constant rate of interest when applied to the amount outstanding at the beginning of any given period. This is the 'interest' method described in and supported by paragraphs 16 and 17 of APB Opinion No. 12 [section 5361.01-.02]'" (APB Opinion No. 21, paragraphs 18 [Appendix] and 15 [sections 4111A.01 and 4111.14]).

Kinds of Modications and Accounting issues

113 Agreements between a creditor and a debtor that modify the terms of an existing debt may affect (i) only the timing of future cash receipts or payments specified by the agreement—the timing of periodic interest, the maturity date, or both, (ii) only the amounts of cash to be received or paid—the amounts of interest, face amount, or both, or (iii) both timing and amounts of cash to be received or paid.

114 Two major issues arise in accounting for an existing debt whose terms are modified in a troubled debt restructuring. One issue involves whether to: (a) continue the same recorded invest-
ment for the receivable or carrying amount for the payable and recognize the effects of the new terms prospectively as reduced interest income or expense or (b) recognize a loss or gain by changing the recorded amount. The interest method (paragraph .109) is used in both (a) and (b) to allocate interest income or expense to periods between restructuring and maturity, but in general, the implicit annual interest rate will be higher, and the resulting interest income or expense will be larger in each of the remaining periods, if a loss (creditor) or gain (debtor) is recognized at the time of a troubled debt restructuring, as in (b), than if the effects of the new terms are recognized prospectively, as in (a).

.115 The other issue involves two related questions: Should the same accounting (either (a) or (b) in paragraph .114) apply both to modifications of timing and to modifications of amounts to be received or paid under the agreement? And should the same accounting apply both to modifications of interest and to modifications of face amount? The following paragraphs explain and illustrate those issues and summarize the arguments advanced for various proposed solutions.

.116 Modifications of terms that affect only the timing of amounts to be received or paid do not change the total amount to be received or paid. However, changes in timing of the amounts to be received or paid on a debt change its present value determined by discounting at the prerestructuring effective interest rate or a current market interest rate or change the effective interest rate needed to discount the amounts to the prerestructuring present value (recorded investment in receivable or carrying amount of payable) or market value. Modifications that affect only the amount of interest or face amount (or both unless they are exactly offsetting) to be received or paid change total amounts as well as present values, effective interest rates, or both. Modifications of both timing and amount to be received or paid combine those effects. A hypothetical case illustrates those kinds of modifications and their effects.

.117 A creditor holds a receivable calling for receipt of $100 at the end of each year for five more years and receipt of the $1,000 face amount at the end of those five years. The stated interest rate is 10 percent, compounded annually. The recorded investment in the receivable is $1,000, and the effective annual interest rate implicit in the investment is also 10 percent. If all amounts are received as agreed, the creditor will receive total interest income of $500—the difference between the total amount to be received ($1,500) and the recorded investment in the receivable ($1,000)—
and the effective interest rate on the $1,000 investment will be 10 percent. However, the terms of the receivable are to be modified in a troubled debt restructuring. The four modifications that follow are examples of the three kinds of modifications described in paragraphs .113 and .116 (change in amount of interest and change in face amount are both illustrated; change in timing of face amount raises no issues different from change in timing of interest and is not illustrated):

1. **Timing of interest only**—Terms modified to defer collection of interest until the receivable matures (a single collection of $500 at the end of five years is substituted for five annual collections of $100).

2. **Amount of interest only**—Terms modified to leave unchanged the timing of interest and the timing and amount of the face amount but reduce the annual interest from $100 to $60.

3. **Amount of face amount only**—Terms modified to leave unchanged the amounts and timing of interest but reduce the face amount to $800 due at the end of five years.

4. **Both timing of interest and amount of face amount**—Terms modified to defer collection of interest until the receivable matures and reduce the face amount to $800 (modifications 1 and 3 combined).

.118 The following chart lists several factual observations that can be made about the effects on the creditor's receivable of each of those restructurings. In general, the same observations apply to the debtor's payable.
Liabilities and Deferred Credits

Observation:

a. Amount by which total cash receipts specified by the terms exceed recorded investment in the receivable:

b. Effective interest rate on the recorded investment ($1,000) 10.0%

c. Present value of the total cash receipts discounted at the prerestructuring effective interest rate (10%) $1,000
d. Present value of the total cash receipts discounted at the current market interest rate (assumed to be 12%) $928
e. Face amount specified by the terms $1,000
### Alternatives Considered

.119 Proposals for accounting for troubled debt restructurings tend to focus on the various observations (paragraph .118) about the effects of modifying the terms of a debt.

a. Some respondents focused on the effect of a troubled debt restructuring on the effective interest rate (observation (b)). They would not reduce the recorded investment in a receivable or carrying amount of a payable and recognize a loss (creditor) or gain (debtor) as long as the new terms did not result in a negative effective interest rate on the recorded investment or carrying amount—that is, as long as the total future cash receipts or
payments specified by the new terms (including both amounts designated as interest and the amount designated as face amount) at least equaled the recorded investment or carrying amount (observation (a)). Thus, they would recognize no loss or gain for any of the four modifications in the illustration in paragraphs .117 and .118.

b. Some respondents focused on the effect of a troubled debt restructuring on the face amount of the debt (observation (e)). They would not reduce the recorded investment in a receivable or carrying amount of a payable as long as the restructuring modified only the timing or amount of designated interest or the timing of the designated face amount, but would recognize a loss (creditor) or gain (debtor) if restructuring reduced the face amount of the debt. Thus, they would recognize a loss or gain for modifications 3 and 4 in the illustration.

c. Some respondents focused on the effect of a troubled debt restructuring on the present value of the debt discounted at the effective interest rate before restructuring (observation (c)). They would reduce the recorded investment in a receivable or carrying amount of a payable to the present value of the total future cash receipts or payments under the new terms discounted at the pre restructuring effective interest rate and recognize a loss (creditor) or gain (debtor) equal to the reduction. Thus, they would recognize a loss or gain for each of the modifications in the illustration.

d. Some respondents focused on the fair or market value of the debt after a troubled debt restructuring. They would account for each restructuring as an exchange of debt, recording a new receivable or payable at its fair or market value and recognizing a loss (creditor) or gain (debtor) for the difference between that fair or market value and the recorded investment or carrying amount of the receivable or payable replaced. Thus, they would recognize a loss or gain for each of the modifications in the illustration.

The following paragraphs summarize those four views and their variations.

**Change in Effective Rate View**

.120 Some respondents emphasized that, in the absence of a transfer of resources or obligations, the existing accounting framework does not require losses to be recognized or permit gains to be
recognized because of events that affect only future profitability of an investment but do not affect the recoverability of the investment itself. They contended that applying that principle to troubled debt restructurings means that no loss or gain should be recognized on a debt because of modification of terms of debt unless part of the recorded investment in a receivable is not recoverable or part of the carrying amount of a payable will not be paid under the new terms. In their view, a creditor should recognize a loss to the extent that the total future cash receipts specified by the new terms is less than the recorded investment in the receivable, and a debtor should recognize a gain to the extent that the total future cash payments specified by the new terms is less than the carrying amount of the payable.

.121 According to that view, if the recorded investment in a receivable is recoverable or the carrying amount of a payable is to be paid under the new terms, interest income or expense is allocated to the periods between restructuring and maturity of the debt by using the reduced effective interest rate that is implicit in the difference between the recorded investment or carrying amount before (and after) restructuring and the future cash receipts or payments specified by the new terms. If a loss or gain is recognized at the time of restructuring, the recorded investment or carrying amount equals the total future cash receipts or payments, and no interest income or expense is allocated to the remaining periods between restructuring and maturity.

.122 Some of those respondents contended that the amount invested by a creditor in a receivable has some of the characteristics of, and is analogous to, an investment in plant, property, intangibles, and similar assets sometimes called “capital assets.” According to that analogy, modifying the terms of receivables in troubled debt restructurings is similar to modifying selling prices of products produced by those capital assets; the modifications affect the profitability of those assets but are not recorded in the existing accounting framework unless they result in an inability to recover the investment in the assets. That capital asset analogy leads its proponents to accounting for troubled debt restructurings that is essentially the same as that described in paragraphs .120 and .121.

.123 Certain respondents who supported the views described in paragraphs .120-.122 argued that the resulting accounting not only is required by the existing accounting framework but also accur-

* The likelihood of collection of the amounts specified by the new terms of a receivable should, of course, be assessed in determining allowances for estimated uncollectible amounts.
ately describes a troubled debt restructuring involving only modification of terms. They held that, unless the effective interest rate on a debt becomes negative in a troubled debt restructuring, the essential effect of modifying terms is to reduce the effective interest rate on the debt—that is, to decrease the effective rate of return to the creditor and to decrease the effective cost to the debtor of deferring payment. For example, some responding financial analysts argued that to disclose the creditor’s new effective interest rate on restructured receivables would be more useful for their purposes than for the creditor to report a loss on restructuring and then show those receivables to be earning the prerestructuring interest rate, the current market interest rate, or some other rate higher than the effective rate on the recorded investment in a receivable before restructuring.

.124 According to respondents who emphasized the effect of a troubled debt restructuring on the effective interest rate, there is no economic basis for distinguishing modifications of future cash receipts or payments designated as interest from modifications of future cash receipts or payments designated as face amount. They argued that a creditor in a troubled debt restructuring attempts first to assure recovery of its investment (which is represented in its financial statements by the recorded investment in the receivable) and then to obtain the highest interest income commensurate with the situation. Whether the amounts to be received under the new terms are designated as receipts of interest or receipt of face amount is a minor consideration; the significant question is whether the new terms allow the creditor to recover its investment.

.125 According to that view, since numerous combinations of receipts or payments designated as interest and face amount can be structured to produce a particular present value or effective interest rate, to base accounting on that distinction is likely to result in questionable, if not indefensible, financial reporting. The creditor in a troubled debt restructuring may have considerable flexibility in designating a proportion of the future receipts or payments under the new terms as interest and designating another proportion as face amount. If those designations were to dictate the accounting, a creditor desiring to recognize a loss on restructuring and to recognize higher interest income for later periods could restructure terms in one way, while a creditor desiring to avoid recognizing a loss on restructuring and to recognize lower interest income for later periods could restructure the terms in another way, even though the underlying cash receipts specified by the new terms were the same, both in timing and amount, for both creditors. A creditor desiring to recognize a gain on restructuring could conceivably in-
crease the amount designated as face amount to an amount higher than the present recorded investment and reduce the amounts designated as receipt of interest; a debtor might agree to that arrangement if it were financially troubled at the time of restructuring but expected to be able to pay the higher face amount later.

Change in Face Amount View

Some respondents distinguished modifications of face amounts from modifications affecting only amounts or timing of receipts or payments designated as interest or timing of the maturity date. They would neither reduce recorded investment in a receivable or carrying amount of a payable nor recognize loss or gain in a troubled debt restructuring if a modification of terms of a debt changed only the amounts or timing of receipts or payments designated as interest or changed the timing of receipts or payments designated as face amount. They held, however, that if a troubled debt restructuring reduces the face amount of a debt, the creditor should recognize a loss, and the debtor should recognize a gain.35

To record a modification of terms involving reduction of face amount of a debt, proponents of that view would reduce the recorded investment in the receivable or carrying amount of the payable by the same proportion as the reduction of the face amount and recognize a loss (creditor) or gain (debtor) for that amount. If the restructuring changed the effective interest rate on the remaining recorded investment or carrying amount, they would allocate interest income or expense to the remaining periods between restructuring and maturity using that new effective interest rate. That rate would be implicit in the difference between the new recorded investment in the receivable or carrying amount of the payable and the future cash receipts or payments specified by the new terms. That rate would be higher for a debt whose face amount had been reduced, and would therefore result in more interest income or expense for those periods, than the rate described in paragraph .121.

Respondents who distinguished between modifications of terms that change the face amount of a debt and other kinds of modifications generally agreed with the view expressed in paragraphs .120 and .122 that the existing accounting framework does not recognize losses or gains from events that change the profitability of existing assets but requires a loss to be recognized if the event causes part or all of an investment in an asset to become un-

35 Some proponents of this view opposed recognizing gains from troubled debt restructurings not involving transfers of assets or grants of equity interests.
recoverable. Those respondents gave several reasons for concluding that reduction of face amount of a debt in a troubled debt restructuring requires proportionate reduction of the recorded investment in the receivable or carrying amount of the payable and recognition of a resulting loss or gain.

.129 Some respondents who favored accounting based on a distinction between modifications of face amount and other modifications argued that to the extent that the face amount of a debt is reduced, the debtor-creditor relationship has been terminated, and the accounting should recognize that termination. In other words, the face amount adjusted by a premium or discount, if any, measured in the market at the time a receivable or payable was created is recognized in the existing accounting framework as an asset for the creditor or liability for the debtor; reducing that face amount therefore reduces an asset or liability proportionately, and the reduction must be recognized. In their view, to the extent the face amount is reduced, a transfer of resources or obligations occurs.

.130 Some respondents described the analogy between a creditor's investment in a receivable and an investment in "capital assets" that is noted in paragraph .122 and contended that reductions of face amounts of receivables in troubled debt restructurings are analogous to events that reduce the amount, rather than the future profitability, of capital assets. Both they and the respondents whose view is described in the preceding paragraph held that the act of reducing the face amount showed that the creditor and debtor agreed that the receivable and payable had been decreased.

.131 Some respondents contended in effect that accounting for receivables and payables in the existing accounting framework is based on the face amount of a receivable or payable, or perhaps on the face amount plus a premium or minus a discount at the date of acquisition or issue, and a change in the face amount is a change in an asset (receivable) or liability (payable). They implicitly assumed or concluded that the present value concepts described in the pronouncements noted in paragraphs .111 and .112 did not apply to receivables or payables involved in troubled debt restructurings. Thus, they contended that the distinction between the face amount due at maturity and the amounts designated as interest to be received or paid periodically until maturity is vital in determining proper accounting for a troubled debt restructuring. According to that view, the face amount due at maturity (sometimes referred to as the "principal") is the basis of the recorded investment in a receivable or carrying amount of a payable; that investment or carrying amount does not include the present
value of future receipts or payments designated as interest. That is, a creditor or debtor records the face amount (perhaps increased by premium or decreased by discount) when a receivable is obtained or a payable is incurred, and no value is ascribed in the accounts to rights to receive or obligations to pay amounts designated as interest; rather, cash receipts or payments designated as interest are recognized in the accounts only as they become receivable or payable in future periods. Some respondents holding that view added that to record a loss (creditor) or gain (debtor) because future cash receipts or payments designated as interest are modified in a troubled debt restructuring would represent abandonment of the existing historical cost framework and constitute piecemeal implementation of current value accounting.

.132 Several respondents who supported the views described in paragraphs .126-.131 held that the accounting required by those views is presently used, at least by some financial institutions. Some banker respondents indicated that troubled debt restructurings involving reductions in face amount or “principal” are exceedingly rare, but that most bankers would probably recognize a loss of “principal” in recording one in which their institution was the creditor.

.133 Differences between the view that focuses on the effect of a troubled debt restructuring on face amount (paragraphs .126-.132) and the view that focuses on its effect on the effective interest rate (paragraphs .120-.125) pertain wholly to troubled debt restructurings that reduce the amount designated as face amount. Both views lead to the same accounting for troubled debt restructurings involving other kinds of modification of terms.

Present Value at Prerestructuring Rate View

.134 Some respondents contended that accounting for troubled debt restructurings should recognize the revised pattern of cash receipts or payments under the new terms of the restructured debt. That is, they would continue to use the effective interest rate established when the receivable was acquired or payable was incurred and would reduce the recorded investment or carrying amount to the present value of the future cash receipts or payments specified by the new terms.

.135 Those respondents in effect supported the accounting proposed in the FASB Exposure Draft, “Restructuring of Debt in a Troubled Loan Situation” (November 7, 1975): a debtor should account for a troubled debt restructuring that involves modification of terms of debt by adjusting the carrying amount of the payable
Liabilities and Deferred Credits

to the present value of the cash payments (both those designated as interest and those designated as face amount) required of the debtor after restructurering, discounted at the prereestructuring effective interest rate, and recognizing a gain on restructuring of the payable equal to the difference, if any, between that present value and the carrying amount of the payable before restructurering (paragraph 6 of that Exposure Draft). Since a troubled debt restructurering almost invariably involves stretching out or deferring the debtor's payments, and may involve reducing amounts due as well, the present value of a restructured payable is almost invariably less than its carrying amount (both are determined by discounting at the same interest rate); a debtor would thus normally recognize a gain on the restructuring. The November 7, 1975 Exposure Draft dealt only with accounting by debtors, but if the counterpart accounting were adopted by creditors, the creditor would normally recognize a loss equal to the difference between its recorded investment in the receivable before restructurering and the present value at the prereestructuring effective interest rate. Interest expense or income in future periods would continue to be based on the prereestructuring interest rate.

.136 Some respondents who held the view described in paragraphs .134 and .135 agreed with the view in paragraphs .124 and .125 that no economic basis exists for distinguishing between modifications of face amounts and other kinds of modifications. The major difference between the two views is that the accounting for one view (paragraphs .134 and .135) retains the same effective interest rate as before restructurering and changes the present value of the future cash receipts or payments specified by the new terms, while the other view (paragraphs .124 and .125) retains the same present value as before restructurering (the recorded investment in a receivable or carrying amount of a payable) and changes the effective interest rate for the periods remaining between restructurering and maturity.

Fair Value View

.137 Some respondents contended that modifying terms in a troubled debt restructurering results in an exchange of new debt for the previous debt. The new debt should be recorded at its fair value—usually the present value of the future cash receipts or payments specified by the new terms (whether designated as interest or face amount) discounted at the current market rate of interest for receivables or payables with similar terms and risk.

---

*Unless the restructuring causes the effective interest rate to fall below zero.*
characteristics. Those respondents contended that every debt re­
structuring is an exchange transaction (paragraph .068), and they
would recognize a loss (creditor) and gain (debtor) to the extent
of the difference between the recorded investment in the receiv­
able or carrying amount of the payable before restructuring and the
fair value of the receivable or payable after restructuring. Interest
income and expense in future periods would be based on the market
rate of interest at the time of restructuring.

.138 Respondents who supported the view just described agreed
that designations of amounts as face amount or interest should
not determine whether a loss or gain should be recognized (para­
graphs .124 and .125) because only the amounts and timing of cash
receipts or payments, and not their names, affect the present value
of a receivable or payable. They disagreed with other respondents
by contending that the current market interest rate—which gives
the fair value of a receivable or payable—should be used because
an exchange transaction had occurred.

.139 Some of the responding financial analysts indicated a pref­
erence for accounting that does not use a current interest rate to
determine whether a creditor should recognize a loss in a troubled
debt restructuring involving modification of terms. According to
them, to use a current interest rate to discount future cash
receipts only for receivables that have been restructured would
not result in meaningful information about the earning potential
of a creditor's entire loan or investment portfolio and might be
confusing because receivables that were not restructured would
continue to reflect the various historical interest rates at the time
of each investment.

Conclusions on Modification of Terms

.140 After considering the information received in connection
with (i) the Exposure Draft, "Restructuring of Debt in a Troubled
Loan Situation" (November 7, 1975), and the public hearing based
on it (paragraph .048), (ii) the Discussion Memorandum, "Ac­
counting By Debtors and Creditors When Debt Is Restructured"
(May 11, 1976), and the public hearing based on it (paragraph
.052), and (iii) the Exposure Draft, the Board concluded that the
substance of all modifications of a debt in a troubled debt restruc­
turing is essentially the same whether they are modifications of

\[37\text{ Some respondents contended that the fair value of the receivable or pay­}
able after restructuring should be measured by discounting the future cash
flows specified by the new terms at the cost of capital to the creditor or
debtor, as appropriate.\]
Liabilities and Deferred Credits

timing, modifications of amounts designated as interest, or modifications of amounts designated as face amounts. All of those kinds of modifications affect future cash receipts or payments and therefore affect (a) the creditor's total return on the receivable, its effective interest rate, or both and (b) the debtor's total cost on the payable, its effective interest rate, or both. The Board believes that accounting for restructured debt should be based on the substance of the modifications—the effect on cash flows—not on the labels chosen to describe those cash flows.

.141 The Board thus rejected views that modifications involving changes in face amounts should be distinguished from and accounted for differently from modifications involving amounts of future cash receipts or payments designated as interest and modifications involving timing of future cash receipts or payments. The major reason for that rejection is given in the preceding paragraph: the substance of a troubled debt restructuring lies in its effect on the timing and amounts of cash receipts or payments due in the future. Whether an amount due at a particular time is described as face amount or interest is of no consequence to either the present value of the receivable or payable or its effective interest rate.

.142 The Board considered the views described in paragraphs .129-.132 and rejected them to the extent they conflict with the Board's conclusions. In the Board's view, a debtor-creditor relationship is described by the entire agreement between the debtor and creditor and not merely by the face amount of the debt. Changes in that relationship therefore encompass changes in timing and changes in amounts designated as interest as well as changes in an amount designated as face amount. The same reasoning applies to the analogy between debt and investment in "capital assets." A reduction in a troubled debt restructuring of an amount designated as face amount is not, in the Board's view, analogous to the loss or destruction of a portion of a capital asset. Indeed, the economic impact of reducing an amount designated as face amount is essentially the same as that of reducing by the same amount an amount designated as interest that is due at the same time. Thus, although an analogy between investment in a receivable and investment in a capital asset may have merit, an analogy between an amount designated as the face amount of a receivable and the physical entirety of a capital asset does not.

.143 The Board also rejected the view that accounting is based on the face amount or "principal" in the existing accounting framework. That view is not consistent with the weight of the pro-
Accounting for Troubled Debt Restructurings

nouncements noted in paragraphs .111 and .112 to the effect that the recorded investment in a receivable or carrying amount of a payable is the present value of the future cash receipts or payments specified by the terms of the debt discounted at the effective interest rate that is implicit in the debt at its inception. That accounting explicitly excludes from the recorded investment in a receivable or carrying amount of a payable the interest income or expense to be recognized in future periods. The interest method recognizes that interest income or expense as a constant percent (the effective interest rate) of the recorded investment or carrying amount at the beginning of each future period as the interest income or expense becomes receivable or payable. The method is not a "current value method" as that term is generally used in the accounting literature, unless the effective interest rate used to determine present value and interest income or expense each period is the current market interest rate for the period.

.144 The Board noted the argument that current practice in some financial institutions is to record losses based on reductions in troubled debt restructurings of amounts designated as face amount. The Board also noted that several respondents indicated that modifications of terms of that kind almost never occur. Presumably, a creditor would generally prefer to alleviate the debtor's cash difficulties by deferring payment of the amount designated as face amount rather than by reducing it because deferring payment preserves a creditor's maximum claim in the event of the debtor's bankruptcy. The Board decided that accounting for reductions in troubled debt restructurings of amounts designated as face amounts, although occurring only rarely, should be made consistent with accounting for other modifications of future cash receipts or payments in troubled debt restructurings and with the accounting pronouncements referred to in paragraphs .111 and .112.

.145 The Board also considered the views described in paragraphs .134-.139 and rejected them to the extent they conflict with the Board's conclusions. The Board concluded that since a troubled debt restructuring involving modification of terms of debt does not involve transfers of resources or obligations (paragraph .077), restructured debt should continue to be accounted for in the existing accounting framework, on the basis of the recorded investment in the receivable or carrying amount of the payable before the restructuring. The effective interest rate on that debt should be determined by the relation of the recorded investment in the receivable or carrying amount of the payable and the future cash receipts or payments specified by the new terms of the debt.
.146 To introduce the current market interest rate to provide a new measure of the recorded investment in a restructured receivable or carrying amount of a restructured payable is inappropriate in the existing accounting framework in the absence of a transfer of resources or obligations, that is, if only the terms of a debt are modified in a troubled debt restructuring. Moreover, since the new terms are not negotiated on the basis of the current market rates of interest, there is little or no reason to believe that a current market rate of interest applied to the restructured debt reflects the effective return to the creditor or the effective cost to the debtor. On the contrary, the circumstances of a troubled debt restructuring give every reason to believe that, except by coincidence, it does not. Similarly, there is little or no reason to believe that a restructured debt continues to earn or cost the same effective interest rate as before the restructuring. The restructuring reflected the creditor's recognition that its investment in the receivable no longer could earn that rate and that a lower effective rate was inevitable. In other words, the effect of the restructuring was to decrease the effective interest rate on a continuing debt, and the accounting should show that result.

.147 The Board found persuasive the arguments that a creditor in a troubled debt restructuring is interested in protecting its unrecovered investment (represented in the accounts by the recorded investment in the receivable) and, if possible, obtaining a return. To the creditor, therefore, the effect of a restructuring that provides for recovery of the investment is to reduce the rate of return (the effective interest rate) between the restructuring and maturity. Similarly, the effect of that kind of restructuring to the debtor is to reduce the cost of credit (the effective interest rate) between the restructuring and maturity.

.148 Thus, the Board concluded that no loss (creditor) or gain (debtor) should be recognized in a troubled debt restructuring if the total future cash receipts or payments (whether designated as interest or face amount) specified by the new terms at least equals the recorded investment or carrying amount of the debt before the restructuring. The creditor should reduce the recorded investment in the receivable and recognize a loss and the debtor should reduce the carrying amount of the payable and recognize a gain to the extent that the recorded investment or carrying amount exceeds the total cash receipts or payments specified by the new terms. Some respondents to the Exposure Draft apparently misunderstood the reason for using total future cash receipts or payments to compare with the recorded investment in a receivable or the carrying amount of a payable to determine whether to recognize
a loss or gain on restructuring. Some wondered if the failure to
discount the future cash flows implied changes in pronouncements
that require discounting or de-emphasis or abandonment by the
Board of discounting methods. On the contrary, the Statement is
based solidly on the need to consider the effect of interest. Indeed,
the Board's conclusion is that a troubled debt restructuring affects
primarily the effective interest rate and results in no loss or gain
as long as the effective rate does not fall below zero. It requires
recognition of a loss to prevent the effective rate from falling
below zero. The effective interest rate inherent in the unrecovered
receivable or unpaid payable and the cash flows specified by the
modified terms is then used to recognize interest income or inter­
est expense between restructuring and maturity.

.149 The Board also concluded that the fair values of assets trans­
ferred or equity interest granted in partial settlement of debt in a
troubled debt restructuring should be accounted for the same as a
partial cash payment. The recorded investment in the receivable or
carrying amount of the payable should be reduced by the amount
of cash or fair value transferred, and the remaining receivable or
payable should be accounted for the same as a modification of
terms. That accounting avoids basing losses or gains on restruc­
turing on arbitrary allocations otherwise required to determine the
amount of a receivable satisfied or payable settled by transfer of
assets or grant of an equity interest.

.150 Several respondents to the Exposure Draft disagreed with
its proposed conclusions on accounting for modifications of terms
in troubled debt restructurings. One group, which favored account­
ing for all troubled debt restructurings at fair value as exchanges
of debt, criticized the Exposure Draft for failing to recognize
losses and gains from decreases in present values of receivables
and payables, for being inconsistent with APB Opinions No. 21
[section 4111] and No. 26 [section 5362], and for elevating
form over substance. Another group, which agreed with
the Exposure Draft except for restructurings in which face
amounts of receivables are reduced, criticized it for failing
to recognize losses and gains from decreases in face amounts,
for changing existing practice, and for elevating form over
substance. Both views are discussed individually in earlier
paragraphs (.126-.139) and are there shown to be virtually oppo­
site views to each other, but they have some similarities when
compared to the accounting in the Exposure Draft and this
Statement.

.151 For example, both criticisms of the Exposure Draft noted
in the preceding paragraph result from rejection of fundamental
conclusions in the Exposure Draft. Thus, respondents who favor accounting for all troubled debt restructurings as exchanges of debt disagreed with the conclusions that "a troubled debt restructuring that does not involve a transfer of resources or obligations is a continuation of an existing debt" and "to the extent that a troubled debt restructuring involves only a modification of terms of continuing debt, no transfer of resources or obligations has occurred (paragraphs .076 and .077). Respondents with that view presumably saw troubled debt restructurings as of the same essence as exchanges covered by APB Opinions No. 21 [section 4111] and No. 26 [section 5362] and found the Exposure Draft inconsistent with those Opinions. If, however, the conclusions quoted earlier in this paragraph are accepted, modifications of terms of continuing debt are different in substance from exchanges of resources or obligations, and the Exposure Draft is consistent with the Opinions.

.152 Similarly, some respondents who favor recognizing losses and gains from reducing face amounts in troubled debt restructurings disagreed with the conclusion that "the substance of all modifications of a debt in a troubled debt restructuring is essentially the same whether they are modifications of timing, modifications of amounts designated as interest, or modifications of amounts designated as face amounts" (paragraph .140). That is, they think that financial institutions' customary distinctions between principal and interest have more substance than the effects of modifications on future cash flows, although they admit that changes in practice would be minimal because few troubled debt restructurings involve changes in face amounts (paragraph .144).

.153 The fact that elevating form over substance is a criticism common to the arguments of respondents who fundamentally disagreed with the Exposure Draft emphasizes that various views on proper accounting depend on varying perceptions of the substance of modification of terms in a troubled debt restructuring. The preceding paragraphs note three different views of that substance: the view on which the Exposure Draft and this Statement are based and two other views that differ significantly not only from the view adopted but from each other. The Board carefully analyzed all three views before issuing the Exposure Draft and decided on one of them for the reasons stated in paragraphs .106-.152.

.154 Some respondents who agreed generally with the accounting for modifications of terms specified in the Exposure Draft and some who preferred to recognize debtors' gains and creditors' losses from decreases in face amounts expressed concern that a debtor's prepayment may result in recognizing a creditor's loss in the
wrong period (they are silent about a debtor's gain). That is, if a debtor may prepay a reduced face amount without penalty, total future cash receipts may actually be less than the recorded investment in the receivable even though the total future amounts specified by the restructured terms are at least equal to the recorded investment, and no loss is recognized by the creditor at the time of restructuring under paragraph .016. The loss would be recorded in the period of prepayment rather than the period of restructuring. They propose that a creditor be required to recognize a loss on restructuring in the period of restructuring to the extent that a reduction of face amount is not protected by a prepayment penalty.

.155 This Statement does not include that kind of test based on prepayment penalties. The proposed test rests on the assumption that a loss resulting from prepayment necessarily is a loss on restructuring, and that presumption is questionable. At the time of restructuring, the most probable estimate of future cash receipts is usually that the debtor will not prepay, even if there is no prepayment penalty, because (a) prepayment of a debt with a relatively low effective interest rate is to the creditor's advantage, not the debtor's, (b) initiative for prepayment lies wholly with the debtor, and (c) the debtor is clearly unable to prepay at the time of a troubled debt restructuring and may never be able to prepay. If that most probable estimate later proves incorrect, and the debtor does prepay, a change of estimate should be recorded in the period of prepayment.

CREDITOR'S ACCOUNTING FOR SUBSTITUTION OR ADDITION OF DEBTORS

.156 A change between the Exposure Draft and this Statement is that the Exposure Draft dealt with substitutions of debtors only if the debtors were government units. Several respondents to the Exposure Draft suggested that the principles developed there applied to substitutions or additions of nongovernment debtors as well.

.157 The general principle developed in earlier paragraphs is that the accounting for a troubled debt restructuring depends on its substance. The issues raised if a creditor in a troubled debt restructuring accepts, or is required to accept, a new receivable from a different debtor to replace an existing receivable from a debtor experiencing financial difficulties pertains to the circumstances, if any, in which the substitution or addition is in substance similar to a transfer of assets to satisfy a receivable and the circumstances, if any, in which that kind of restructuring is in substance similar to a modification of terms only.
One view expressed by respondents was that the substitution of a receivable from a different debtor for an existing receivable or the addition of another debtor is always a transaction requiring accounting by the creditor for a new asset at its fair value, recognizing gain or loss to the extent that the fair value of the new asset differs from the recorded investment in the receivable it replaces. To some proponents, that view holds regardless of the relationship between the original debtor and the new debtor.

Another view expressed was that the kind of substitution involved in each restructuring must be considered, and the accounting depends on the relationship between the original and new debtors and between the original and new terms.

The Board rejected the view that the substitution or addition of a new debtor is always a transaction requiring recognition of a new asset by the creditor. In some troubled debt restructurings, the substitution or addition may be primarily a matter of form while the underlying debtor-creditor relationship, though modified, essentially continues. For example, to enhance the likelihood that the modified terms of a troubled debt restructuring will be fulfilled, a new legal entity may be created to serve as a custodian or trustee to collect designated revenues and disburse the cash received in accordance with the new debt agreement. The role of that new unit may be similar to that of a sinking fund trustee in an untroubled debt situation. The source of the funds required to fulfill the agreement may be the same, but some or all of those funds may be earmarked to meet specific obligations under the agreement. Similarly, if the new debtor controls, is controlled by, or is under common control with the original debtor, the substance of the relationship is not changed. Each troubled debt restructuring involving a substitution or addition of a debtor should be carefully examined to determine whether the substitution or addition is primarily a matter of form to facilitate compliance with modified terms or primarily a matter of substance.

The Board considers the exchanges of bonds of the Municipal Assistance Corporation (Corporation) for notes of the City of New York (City) described in recent exchange offers to be examples of troubled debt restructurings whose substance to creditors for accounting purposes is a modification of the terms of an existing receivable rather than an acquisition of a new asset (receivable). According to those exchange offers:

The Corporation . . . was created in June 1975 . . . for the purposes of assisting the City in providing essential services to its inhabitants without interruption and in creating investor confidence in the soundness of the obligations of the City. To carry out such purposes, the Corporation is empowered, among other things, to issue and sell bonds and notes and to pay or lend funds received from such sale to the City and to exchange the Corporation's obligations for obligations of the City.39

The Board's understanding is that: (a) the Corporation receives its funds to meet debt service requirements and operating expenses from tax allocations from New York State's collections of Sales Taxes imposed by the State within the City, Stock Transfer Taxes, and Per Capita Aid (revenue sources previously available to the City); (b) Tax and Per Capita Aid amounts not allocated to the Corporation for its requirements are available to the City under the terms of the applicable statutes; and (c) the primary purpose in creating the Corporation was to enhance the likelihood that the City's debt will be paid, not to introduce new economic resources and activities.

RELATED MATTERS

.162 Several respondents commenting on accounting for contingent future cash payments or receipts indicated a need for some clarification of the accounting described in the Exposure Draft. Accounting for contingent payments or receipts is complicated because it involves four separate situations—(1) accounting by the debtor at the time of restructuring, (2) accounting by the debtor after the time of restructuring, (3) accounting by the creditor at the time of restructuring, and (4) accounting by the creditor after the time of restructuring. It is further complicated because the view of both debtor and creditor shifts between "gain" contingencies and "loss" contingencies as the accounting shifts from the time of restructuring to after the time of restructuring. The accounting in the Exposure Draft and this Statement is governed by the following general principles:

a. Paragraph 17 (gain contingencies) of FASB Statement No. 5 [section 4311.17] governs a debtor's accounting for contingent cash payments at the time of restructuring (paragraph .018) and a creditor's accounting for contingent cash receipts after the time of restructuring (paragraph .036). Since gain contingencies are not recognized until a gain is realized, (1) a debtor should not recognize a gain at the

time of restructuring that may be offset by future contingent payments, which is equivalent to assuming that contingent future payments will be paid, and (2) a creditor should not recognize contingent cash receipts as interest income until they become unconditionally receivable, that is, until both the contingency has been removed and the interest has been earned.

b. Paragraph 8 (loss contingencies) of FASB Statement No. 5 [section 4311.08] governs a debtor's accounting for contingent cash payments after the time of restructuring (paragraph .022) and a creditor's accounting for contingent cash receipts at the time of restructuring (paragraph .032). Since two conditions must be met to recognize an estimated loss, (1) a debtor should recognize an interest expense and payable for contingent payments when it is probable that a liability has been incurred and the amount can be reasonably estimated, and (2) a creditor should recognize a loss unless offsetting contingent cash receipts are probable and the amount can be reasonably estimated. Contingent cash receipts are unlikely to be probable at the time of restructuring.

.163 The principles described in the preceding paragraph also apply to other situations in which future cash payments or receipts must be estimated to apply the provisions of the Statement, for example, future interest payments or receipts that are expected to fluctuate because they are based on the prime interest rate or indeterminate total interest payments or receipts because the debt is payable or collectible on demand or becomes payable or collectible on demand after a specified period (paragraphs .018 and .032).

DISCLOSURE

Disclosure by Debtors

.164 Most respondents to the Discussion Memorandum commenting on disclosure by debtors for restructurings advocated essentially the disclosure prescribed for gains or losses from extinguishment of debt in FASB Statement No. 4 [section 2013]. Paragraph .099 gives the Board's reasons for adopting for gains on troubled debt restructurings the guidelines for income statement classification prescribed in that Statement for gains from extinguishment of debt. Since troubled debt restructurings for which gains are recognized and extinguishments of debts thus use the same guidelines for income statement
classification and are similar for disclosure purposes, the Board concluded that the kind of information prescribed in paragraph 9 of FASB Statement No. 4 [section 2013.09] is generally appropriate for disclosing troubled debt restructurings involving recognition of gains. Since some of those restructurings involve transfers of assets to creditors to settle payables, the Board believes that it is appropriate also to disclose the aggregate net gain or loss recognized on transfers of assets. However, since several respondents to the Exposure Draft indicated that problems would arise in attempting to determine when a debtor's current difficulties began and perhaps in obtaining amounts of earlier losses, this Statement omits a requirement in the Exposure Draft to disclose also "the aggregate loss, if any, recognized on those assets in earlier periods in connection with the debtor's current financial difficulties."

.165 Restructurings not involving recognition of gain or loss at the time of restructuring usually modify the timing, amounts, or both, of interest or face amount the debtor is to pay under the debt's terms (paragraphs .016-.018). In the Board's view, the principal changes in terms should be disclosed to permit an understanding of the financial effects of those modifications.

.166 Paragraph .026, specifying disclosure of the extent to which inclusion of contingent future cash receipts prevented recognizing a gain on restructuring was added in response to suggestions by respondents to the Exposure Draft. The Board agreed that information would be useful in assessing the relation between future cash payments and future interest expenses of the debtor.

Disclosure by Creditors

.167 Most banking and other financial institutions responding to the Discussion Memorandum that commented on disclosure by creditors argued against separate disclosures about restructured receivables. They emphasized that to be the most meaningful to financial statement users information about receivables should disclose the interest rate characteristics of each broad group of earning assets (primarily loan or investment portfolios), by major category. They argued that information limited to receivables that have been restructured would not only be less meaningful than information about entire portfolios of receivables but also could be confusing because the same information is also needed about other receivables, particularly those that are earning no return but have not been restructured (nonearning receivables). Several of those institutions referred to the requirements of the Securities and Exchange Commission and of the banking regulatory agencies,
which recently became effective, both concerning disclosure about
categories of loan and investment portfolios—including their
maturities, interest rates, and nonearning loans and investments
—and the allowance for uncollectible amounts. They indicated
that those requirements provide adequate information about the
financial effects of restructurings, troubled or nontroubled. Fi­
nancial analysts responding also recommended disclosure focusing
on the characteristics of each broad group of earning assets. They
expressed a desire for information about past and expected yields
of entire portfolios, by major category, to enable them to make
informed judgments about recent and prospective earnings per­
formance.

.168 Some respondents to the Discussion Memorandum that are
not financial institutions recommended that the Board require in­
formation to be disclosed about each significant troubled debt
restructuring in the period that it occurs, primarily the terms of
the restructuring, gain or loss recognized, if any, and the related
income tax effect. Most of those respondents focused on individual
receivables rather than on groups of receivables and proposed
that debtors and creditors disclose similar information.

.169 The Board concluded that the information prescribed by
paragraph .040 should be disclosed, by major category, for out­
standing receivables whose terms have been modified in troubled
debt restructurings. The information may be disclosed either sepa­
ately for those receivables or as part of the disclosure about
reduced-earning and nonearning receivables. The Board believes
that the appropriate format for that disclosure depends primarily
on the characteristics and number of receivables, including the
proportion of those receivables that have reduced earning poten­
tial. It believes the argument has merit that the most meaning­
ful disclosure about earnings potential for a financial institution
typically should focus on entire portfolios of receivables, by major
category, rather than only on receivables that have been restruc­
tured in troubled situations, but the Board acknowledges that de­
termining appropriate disclosure for receivables in general is be­
yond the scope of this Statement. Accordingly, paragraphs .040
and .041 specify types of information that shall be disclosed and
permit that information to be provided by major category for the
aggregate of outstanding reduced-earning and nonearning receiv­
able, by major category for outstanding receivables whose terms
have been modified in troubled debt restructurings, or for each
significant outstanding receivable that has been so restructured,
depending on the circumstances.
This Statement contains three changes from the Exposure Draft concerning disclosure by creditors, all made in response to comments or suggestions from respondents to the Exposure Draft and all in paragraph .040, which was paragraph 34 of the Exposure Draft: (1) disclosure of information more in conformity with SEC Guides 61 and 3 replaces disclosure of the weighted average effective interest rate and the range of maturities, (2) disclosure of the allowance for uncollectible amounts or other valuation allowance applicable to restructured receivables is deleted, and (3) disclosure of a commitment to lend additional funds to debtors owing restructured receivables is added.

Disclosure of commitments to lend additional funds was chosen instead of a penalty suggested by some respondents to the Exposure Draft. They expressed concern that a creditor might avoid recognizing a loss under paragraphs .030-.032 by restructuring a troubled receivable in a way that the specified future cash receipts exceed the recorded investment in the receivable and then agree to lend funds to the debtor to meet those terms. They proposed that irrevocable commitments to lend to the debtor be included in the creditor’s recorded investment to determine whether the creditor should recognize a loss at the time of restructuring. Since that test is equivalent to saying that a creditor must recognize a loss unless the restructured terms provide not only for recovery of the outstanding receivable but also for recovery of future loans to the same debtor (because future cash receipts from future loans are ignored), the test is excessively punitive. The Board decided that disclosure of those commitments is adequate. That disclosure may already be required by paragraphs 18 and 19 of FASB Statement No. 5 [section 4311.18-.19], but paragraph .040(b) makes the disclosure explicit.

Some respondents who advocated that the scope of this Statement exclude restructurings of receivables related to consumer financing activities or to all or certain residential properties (paragraph .063) also argued that, if those restructurings were embraced by this Statement, applicable requirements for disclosure would likely be burdensome and not very meaningful to financial statement users. They point out that the accounting, including information normally disclosed in financial statements or in other reports, for those types of receivables has been tailored to fit special characteristics of the receivables, such as large numbers of relatively small balances, interest rates fixed by state law rather than in a fluctuating

market, and numerous accounts on which collections are past due. The Board noted the special characteristics of those types of receivables and, since the scope of this Statement does not encompass appropriate disclosure for receivables generally, concluded that paragraphs .040 and .041 should not necessarily apply to those types of receivables that have been restructured.

ACCOUNTING SYMMETRY BETWEEN DEBTORS AND CREDITORS

.173 The Discussion Memorandum contained several questions on whether particular accounting by debtors and creditors should be symmetrical. Most respondents considered a criterion of symmetry between debtors and creditors an insignificant factor in accounting for troubled debt restructurings. Many noted that existing accounting principles for accounting by creditors for receivables after their initial recording and for recognizing losses already differ from those for accounting by debtors for payables and for recognizing gains. Some respondents also noted that differences usually exist between the debtor and creditor in a particular restructuring (for example, differences in the industry or industries in which they are involved, in their financial viability, and in the significance and frequency of that kind of event for them). The accounting for troubled debt restructurings prescribed in this Statement is symmetrical between debtors and creditors in most matters. However, the Board considered the types of differences described above, among other factors, in concluding that different accounting is appropriate for debtors and creditors in matters such as classifying gains or losses recognized at the time of troubled debt restructurings, accounting for contingent interest, and disclosing information about troubled debt restructurings.

EFFECTIVE DATE AND TRANSITION

.174 The Board concluded that prospective application of this Statement is appropriate and that the effective dates in paragraphs .043-.045 are advisable. In the Board's view, comparability of financial statements would not be greatly enhanced by restating past, nonrecurring troubled debt restructurings. Further, difficulties in retroactive application of the provisions of this Statement include identifying restructurings for which fair values would need to be determined and determining those fair values. A number of enterprises that in recent years have had several restructurings of those types would be unlikely to have information available to restate retroactively.

Capital Surplus

[Source: ARB 43, Chap. 1A, Par. 2.]

Issue date, unless otherwise indicated: 1934

.01 Capital surplus, however created, should not be used to relieve the income account of the current or future years of charges which would otherwise fall to be made thereagainst. This rule might be subject to the exception that where, upon reorganization, a reorganized company would be relieved of charges which would require to be made against income if the existing corporation were continued, it might be regarded as permissible to accomplish the same result without reorganization provided the facts were as fully revealed to and the action as formally approved by the shareholders as in reorganization.

1 The above rule was adopted by the membership of the Institute in 1934. It had been recommended in 1932 to the New York Stock Exchange by the Institute's committee on cooperation with stock exchanges.

2 See also section 5581, Quasi-Reorganization or Corporate Readjustment.
Donated Stock

[Source: ARB 43, Chap. 1A, Par. 6.]

Issue date, unless otherwise indicated: 1934

.01 If capital stock is issued nominally for the acquisition of property and it appears that at about the same time, and pursuant to a previous agreement or understanding, some portion of the stock so issued is donated to the corporation, it is not permissible to treat the par value of the stock nominally issued for the property as the cost of that property. If stock so donated is subsequently sold, it is not permissible to treat the proceeds as a credit to surplus of the corporation.

1 The above rule was adopted by the membership of the Institute in 1934.
AC Section 5515

**Liquidation Preference of Preferred Stock**

*Source: APB Opinion No. 10, Par. 10-11, as amended.*

Effective for fiscal periods beginning after December 31, 1966, unless otherwise indicated

.01 Companies at times issue preferred (or other senior) stock which has a preference in involuntary liquidation considerably in excess of the par or stated value of the shares. The relationship between this preference in liquidation and the par or stated value of the shares may be of major significance to the users of the financial statements of those companies and the Board believes it highly desirable that it be prominently disclosed. Accordingly, the Board recommends that, in these cases, the liquidation preference of the stock be disclosed in the equity section of the balance sheet in the aggregate, either parenthetically or "in short," rather than on a per share basis or by disclosure in notes.

.02 In addition, the financial statements should disclose, either on the face of the balance sheet or in notes pertaining thereto:

a. the aggregate or per share amounts at which preferred shares may be called or are subject to redemption through sinking fund operations or otherwise;

b. as called for by section 2011A.05, the aggregate and per share amounts of arrearages in cumulative preferred dividends. [As amended, effective for fiscal periods beginning after Dec. 31, 1968 by APB Opinion No. 15.] (See section 2011.)

Convertible Debt and Debt Issued with Stock Purchase Warrants

[Source: APB Opinion No. 14.]

Effective for fiscal periods beginning after December 31, 1966, unless otherwise indicated.

CONVERTIBLE DEBT

Discussion

.01 Convertible debt securities discussed herein are those debt securities which are convertible into common stock of the issuer or an affiliated company at a specified price at the option of the holder and which are sold at a price or have a value at issuance not significantly in excess of the face amount. The terms of such securities generally include (1) an interest rate which is lower than the issuer could establish for nonconvertible debt, (2) an initial conversion price which is greater than the market value of the common stock at time of issuance, and (3) a conversion price which does not decrease except pursuant to antidilution provisions. In most cases such securities also are callable at the option of the issuer and are subordinated to nonconvertible debt.

.02 Convertible debt may offer advantages to both the issuer and the purchaser. From the point of view of the issuer, convertible debt has a lower interest rate than does nonconvertible debt. Furthermore, the issuer of convertible debt securities, in planning its long-range financing, may view convertible debt as essentially a means of raising equity capital. Thus, if the market value of the underlying common stock increases sufficiently in the future, the issuer can force conversion of the convertible debt into common stock by calling the issue for redemption. Under these market conditions, the issuer can effectively terminate the conversion option and eliminate the debt. If the market

---

1 This section supersedes paragraphs 8 and 9 of APB Opinion No. 10 and paragraphs 11-15 of APB Opinion No. 12.
2 See paragraphs .17 and .18.
value of the stock does not increase sufficiently to result in conversion of the debt, the issuer will have received the benefit of the cash proceeds to the scheduled maturity dates at a relatively low cash interest cost.

.03 On the other hand, the purchaser obtains an option to receive either the face or redemption amount of the security or the number of common shares into which the security is convertible. If the market value of the underlying common stock increases above the conversion price, the purchaser (either through conversion or through holding the convertible debt containing the conversion option) benefits through appreciation. He may at that time require the issuance of the common stock at a price lower than the current market price. However, should the value of the underlying common stock not increase in the future, the purchaser has the protection of a debt security. Thus, in the absence of default by the issuer, he would receive the principal and interest if the conversion option is not exercised.

.04 Differences of opinion exist as to whether convertible debt securities should be treated by the issuer solely as debt or whether the conversion option should receive separate accounting recognition at time of issuance. The views in favor of each of these two concepts are contained in the following paragraphs.

.05 The most important reason given for accounting for convertible debt solely as debt is the inseparability of the debt and the conversion option. A convertible debt security is a complex hybrid instrument bearing an option, the alternative choices of which cannot exist independently of one another. The holder ordinarily does not sell one right and retain the other. Furthermore the two choices are mutually exclusive; they cannot both be consummated. Thus, the security will either be converted into common stock or be redeemed for cash. The holder cannot exercise the option to convert unless he foregoes the right to redemption, and vice versa.

.06 Another reason advanced in favor of accounting for convertible debt solely as debt is that the valuation of the conversion option or the debt security without the conversion option presents various practical problems. In the absence of separate transferability, values are not estab-
lished in the marketplace, and accordingly, the value assigned to each feature is necessarily subjective. A determination of the value of the conversion feature poses problems because of the uncertain duration of the right to obtain the stock and the uncertainty as to the future value of the stock obtainable upon conversion. Furthermore, issuers often claim that a subjective valuation of a debt security without the conversion option but with identical other terms (which are usually less restrictive on the issuer and less protective of the holder than those of nonconvertible debt) is difficult because such a security could not be sold at a price which the issuer would regard as producing an acceptable cost of financing. Thus, when the attractiveness to investors of a convertible debt security rests largely on the anticipated increased value of the issuer’s stock, the conversion feature may be of primary importance, with the debt feature regarded more as a hedge than as the principal investment objective. Many proponents of the single-element view believe that the practical problems of determining separate values for the debt and the conversion option should not be controlling for purposes of determining appropriate accounting but such problems should be given consideration, particularly if valid arguments exist for each of the two accounting concepts identified in paragraph .04.

.07 The contrary view is that convertible debt possesses characteristics of both debt and equity and that separate accounting recognition should be given to the debt characteristics and to the conversion option at time of issuance. This view is based on the premise that there is an economic value inherent in the conversion feature or call on the stock and that the nature and value of this feature should be recognized for accounting purposes by the issuer. The conversion feature is not significantly different in nature from the call represented by an option or warrant, and sale of the call is a type of capital transaction. The fact that the conversion feature coexists with certain debt characteristics in a hybrid security and cannot be sold or transferred separately from these senior elements or from the debt instrument itself does not constitute a logical or compelling reason why the values of the two elements should not receive separate accounting recognition. Similar separate accounting recognition for disparate features of single
instruments is reflected in, for example, the capitalization of long-term leases—involving the separation of the principal and interest elements—and in the allocation of the purchase cost in a bulk acquisition between goodwill and other assets.

.08 Holders of this view also believe that the fact that the eventual outcome of the option available to the purchaser of the convertible debt security cannot be determined at time of issuance is not relevant to the question of reflecting in the accounting records the distinguishable elements of the security at time of issuance. The conversion option has a value at time of issuance, and a portion of the proceeds should therefore be allocated to this element of the transaction. The remainder of the proceeds is attributable to the debt characteristics, and should be so recognized for accounting purposes.

.09 Holders of this view also believe that the difficulties of implementation—which are claimed by some to justify or to support not recognizing the conversion option for accounting purposes—are not insurmountable and should not govern the conclusion. When convertible debt securities are issued, professional advisors are usually available to furnish estimates of values of the conversion option and of the debt characteristics, which values are sufficiently precise for the purpose of allocating the proceeds. If a nonconvertible debt security could not be sold at an acceptable price, the value of the conversion option is of such material significance that its accounting recognition, even on the basis of an estimate, is essential.

Opinion

.10 The Board is of the opinion that no portion of the proceeds from the issuance of the types of convertible debt securities described in paragraph .01 should be accounted for as attributable to the conversion feature. In reaching this conclusion, the Board places greater weight on the in-separability of the debt and the conversion option (as described in paragraph .05) and less weight on practical difficulties.

DEBT WITH STOCK PURCHASE WARRANTS

Discussion

.11 Unlike convertible debt, debt with detachable warrants to purchase stock is usually issued with the expecta-
tion that the debt will be repaid when it matures. The provisions of the debt agreement are usually more restrictive on the issuer and more protective of the investor than those for convertible debt. The terms of the warrants are influenced by the desire for a successful debt financing. Detachable warrants often trade separately from the debt instrument. Thus, the two elements of the security exist independently and may be treated as separate securities.

.12 From the point of view of the issuer, the sale of a debt security with warrants results in a lower cash interest cost than would otherwise be possible or permits financing not otherwise practicable. The issuer usually cannot force the holders of the warrants to exercise them and purchase the stock. The issuer may, however, be required to issue shares of stock at some future date at a price lower than the market price existing at that time, as is true in the case of the conversion option of convertible debt. Under different conditions the warrants may expire without exercise. The outcome of the warrant feature thus cannot be determined at time of issuance. In either case the debt must generally be paid at maturity or earlier redemption date whether or not the warrants are exercised.

.13 There is general agreement among accountants that the proceeds from the sale of debt with stock purchase warrants should be allocated to the two elements for accounting purposes. This agreement results from the separability of the debt and the warrants. The availability of objective values in many instances is also a factor. There is agreement that the allocation should be based on the relative fair values of the debt security without the warrants and of the warrants themselves at time of issuance. The portion of the proceeds so allocated to the warrants should be accounted for as paid-in capital. The remainder of the proceeds should be allocated to the debt security portion of the transaction. This usually results in issuing the debt security at a discount (or, occasionally, a reduced premium).

**Opinion**

.14 The Board is of the opinion that the portion of the proceeds of debt securities issued with detachable stock purchase warrants which is allocable to the warrants should
be accounted for as paid-in capital. The allocation should be based on the relative fair values of the two securities at time of issuance. Any resulting discount or premium on the debt securities should be accounted for as such. The same accounting treatment applies to issues of debt securities (issued with detachable warrants) which may be surrendered in settlement of the exercise price of the warrant. However, when stock purchase warrants are not detachable from the debt and the debt security must be surrendered in order to exercise the warrant, the two securities taken together are substantially equivalent to convertible debt and the accounting specified in paragraph .10 should apply.

.15 When detachable warrants are issued in conjunction with debt as consideration in purchase transactions, the amounts attributable to each class of security issued should be determined separately, based on values at the time of issuance. The debt discount or premium is obtained by comparing the value attributed to the debt securities with the face amount thereof.

OTHER TYPES OF DEBT SECURITIES

Opinion

.16 The Board recognizes that it is not practicable in this section to discuss all possible types of debt with conversion features, debt issued with stock purchase warrants, or debt securities with a combination of such features. Securities not explicitly discussed in this section should be dealt with in accordance with the substance of the transaction. For example, when convertible debt is issued at a substantial premium, there is a presumption that such premium represents paid-in capital.

EFFECTIVE DATE OF THIS SECTION

.17 This section is effective for fiscal periods beginning after December 31, 1966. However, if a portion of the proceeds of a convertible debt issue covered by paragraph .10

---

*The time of issuance generally is the date when agreement as to terms has been reached and announced, even though the agreement is subject to certain further actions, such as directors' or stockholders' approval.

*See sections 5361 and 5362.

*This was the effective date of paragraphs 8 and 9 of APB Opinion No. 10 which were temporarily suspended by paragraphs 11-15 of APB Opinion No. 12. The latter Opinion stated that the Board might decide to have the Opinion resolving this question apply retroactively to fiscal periods beginning after December 31, 1966.
was allocated to the conversion feature for periods beginning before January 1, 1969 that accounting may be continued with respect to such issues.

.18 Material adjustments resulting from adoption of this section which affect periods beginning prior to January 1, 1969 should be treated as prior period adjustments.

Accounting for Treasury Stock

[Source: ARB 43, Chap. 1A, Par. 4.]

Issue date, unless otherwise indicated:
1934

.01 While it is perhaps in some circumstances permissible to show stock of a corporation held in its own treasury as an asset, if adequately disclosed, the dividends on stock so held should not be treated as a credit to the income account of the company.

The next page is 10,061.
AC Section 5542

Profits or Losses on Treasury Stock

[Source: ARB 43, Chap. 1B, as amended.]

Issue date, unless otherwise indicated:
June, 1953

.01 Following an inquiry made by the New York Stock Exchange, a predecessor committee on accounting procedure in 1938 issued the following report:

"PROFITS OR LOSSES ON TREASURY STOCK"

.02 "The executive committee of the American Institute of Accountants has directed that the following report of the committee on accounting procedure, which it received at a meeting on April 8, 1938, be published, without approval or disapproval of the committee, for the information of members of the Institute:

To the Executive Committee,
American Institute of Accountants:

.03 "This committee has had under consideration the question regarding treatment of purchase and sale by a corporation of its own stock, which was raised during 1937 by the New York Stock Exchange with the Institute’s special committee on cooperation with stock exchanges.

.04 "As a result of discussions which then took place, the special committee on cooperation with stock exchanges made a report which was approved by the committee on accounting procedure and the executive committee, and a copy of which was furnished to the committee on stock list of the New York Stock Exchange. The question raised was stated in the following form:

.05 "Should the difference between the purchase and resale prices of a corporation’s own common stock be reflected in earned surplus (either directly or through inclusion in the income account) or should such difference be reflected in capital surplus?"

.06 "The opinion of the special committee on cooperation with stock exchanges reads in part as follows:
.07 'Apparently there is general agreement that the
difference between the purchase price and the stated value
of a corporation's common stock purchased and retired
should be reflected in capital surplus. Your committee be­
lieves that while the net asset value of the shares of com­
mon stock outstanding in the hands of the public may be
increased or decreased by such purchase and retirement,
such transactions relate to the capital of the corporation
and do not give rise to corporate profits or losses. Your
committee can see no essential difference between (a) the
purchase and retirement of a corporation's own common
stock and the subsequent issue of common shares, and (b)
the purchase and resale of its own common stock.'

.08 "This committee is in agreement with the views
thus expressed; it is aware that such transactions have
been held to give rise to taxable income, but it does not
feel that such decisions constitute any bar to the appli­
cation of correct accounting procedure as above outlined.

.09 "The special committee on cooperation with stock
exchanges continued and concluded its report with the fol­
lowing statement:

.10 "Accordingly, although your committee recog­
nizes that there may be cases where the transactions in­
volved are so inconsequential as to be immaterial, it does
not believe that, as a broad general principle, such trans­
actions should be reflected in earned surplus (either di­
rectly or through inclusion in the income account).'</n
.11 "This committee agrees with the special commit­
tee on cooperation with stock exchanges, but thinks it de­
sirable to point out that the qualification should not be
applied to any transaction which, although in itself in­
considerable in amount, is a part of a series of transac­
tions which in the aggregate are of substantial importance.

.12 "This committee recommends that the views ex­
pressed be circulated for the information of members of
the Institute.'

.13 The Board considers that the following account­
ing practices, in addition to the accounting practices indi­
cated in paragraphs .03-.12 are acceptable, and that they
appear to be more in accord with current developments
in practice:
Profits or Losses on Treasury Stock

a. When a corporation's stock is retired, or purchased for constructive retirement (with or without an intention to retire the stock formally in accordance with applicable laws):

i. an excess of purchase price over par or stated value may be allocated between capital surplus and retained earnings. The portion of the excess allocated to capital surplus should be limited to the sum of (a) all capital surplus arising from previous retirements and net "gains" on sales of treasury stock of the same issue and (b) the prorata portion of capital surplus paid in, voluntary transfers of retained earnings, capitalization of stock dividends, etc., on the same issue. For this purpose, any remaining capital surplus applicable to issues fully retired (formal or constructive) is deemed to be applicable pro-rata to shares of common stock. Alternatively, the excess may be charged entirely to retained earnings in recognition of the fact that a corporation can always capitalize or allocate retained earnings for such purposes.

ii. an excess of par or stated value over purchase price should be credited to capital surplus.

b. When a corporation's stock is acquired for purposes other than retirement (formal or constructive), or when ultimate disposition has not yet been decided, the cost of acquired stock may be shown separately as a deduction from the total of capital stock, capital surplus, and retained earnings, or may be accorded the accounting treatment appropriate for retired stock, or in some circumstances may be shown as an asset in accordance with section 5541. "Gains" on sales of treasury stock not previously accounted for as constructively retired should be credited to capital surplus; "losses" may be charged to capital surplus to the extent that previous net "gains" from sales or retirements of the same class of stock are included therein, otherwise to retained earnings.

[As amended, effective for fiscal periods beginning after December 31, 1965, by APB Opinion]
Laws of some states govern the circumstances under which a corporation may acquire its own stock and prescribe the accounting treatment therefor. Where such requirements are at variance with paragraph .13 the accounting should conform to the applicable law. When state laws relating to acquisition of stock restrict the availability of retained earnings for payment of dividends or have other effects of a significant nature, these facts should be disclosed. [As amended, effective for fiscal periods beginning after December 31, 1965, by APB Opinion No. 6.]
Stock Dividends and Stock Split-Ups

[Source: ARB 43, Chap. 7B, as amended.]

Issue date, unless otherwise indicated:
June, 1953

.01 The term stock dividend as used in this section refers to an issuance by a corporation of its own common shares to its common shareholders without consideration and under conditions indicating that such action is prompted mainly by a desire to give the recipient shareholders some ostensibly separate evidence of a part of their respective interests in accumulated corporate earnings without distribution of cash or other property which the board of directors deems necessary or desirable to retain in the business.

.02 The term stock split-up as used in this section refers to an issuance by a corporation of its own common shares to its common shareholders without consideration and under conditions indicating that such action is prompted mainly by a desire to increase the number of outstanding shares for the purpose of effecting a reduction in their unit market price and, thereby, of obtaining wider distribution and improved marketability of the shares.

.03 This section is not concerned with the accounting for a distribution or issuance to shareholders of (a) shares of another corporation theretofore held as an investment, or (b) shares of a different class, or (c) rights to subscribe for additional shares or (d) shares of the same class in cases where each shareholder is given an election to receive cash or shares.

.04 The discussion of accounting for stock dividends and split-ups that follows is divided into two parts. The first deals with the problems of the recipient. The second deals with the problems of the issuer.
AS TO THE RECIPIENT

.05 One of the basic problems of accounting is that of income determination. Complete discussion of this problem is obviously beyond the scope of this section. Basically, income is a realized gain and in accounting is recognized, recorded, and stated in accordance with certain principles as to time and amount.

.06 In applying the principles of income determination to the accounts of a shareholder of a corporation, it is generally agreed that the problem of determining his income is distinct from the problem of income determination by the corporation itself. The income of the corporation is determined as that of a separate entity without regard to the equity of the respective shareholders in such income. Under conventional accounting concepts, the shareholder has no income solely as a result of the fact that the corporation has income; the increase in his equity through undistributed earnings is no more than potential income to him. It is true that income earned by the corporation may result in an enhancement in the market value of the shares, but until there is a distribution, division, or severance of corporate assets, the shareholder has no income. If there is an increase in the market value of his holdings, such unrealized appreciation is not income. In the case of a stock dividend or split-up, there is no distribution, division, or severance of corporate assets. Moreover, there is nothing resulting therefrom that the shareholder can realize without parting with some of his proportionate interest in the corporation.

(Note: The Board is of the opinion that paragraph .06 should not be construed as prohibiting the equity method of accounting for substantial intercorporate investments. [As amended, effective for fiscal periods beginning after December 31, 1965, by APB Opinion No. 6.] This method, which is described in section 5131, The Equity Method of Accounting for Investments in Common Stock, is required in certain circumstances.)

.07 The foregoing are important points to be considered in any discussion of the accounting procedures to be followed by the recipient of a stock dividend or split-
Stock Dividends and Stock Split-Ups

up since many arguments put forward by those who favor recognizing stock dividends as income are in substance arguments for the recognition of corporate income as income to the shareholder as it accrues to the corporation, and prior to its distribution to the shareholder; the acceptance of such arguments would require the abandonment of the separate entity concept of corporation accounting.

.08 The question as to whether or not stock dividends are income has been extensively debated; the arguments pro and con are well known. The situation cannot be better summarized, however, than in the words approved by Mr. Justice Pitney in *Eisner v. Macomber*, 252 U. S. 189, wherein it was held that stock dividends are not income under the Sixteenth Amendment, as follows:

“A stock dividend really takes nothing from the property of the corporation and adds nothing to the interests of the stockholders. Its property is not diminished and their interests are not increased . . . the proportional interest of each shareholder remains the same. The only change is in the evidence which represents that interest, the new shares and the original shares together representing the same proportional interests that the original shares represented before the issue of the new ones.”

.09 Since a shareholder’s interest in the corporation remains unchanged by a stock dividend or split-up except as to the number of share units constituting such interest, the cost of the shares previously held should be allocated equitably to the total shares held after receipt of the stock dividends or split-up. When any shares are later disposed of, a gain or loss should be determined on the basis of the adjusted cost per share.

AS TO THE ISSUER

**Stock Dividends**

.10 As has been previously stated, a stock dividend does not, in fact, give rise to any change whatsoever in either the corporation’s assets or its respective shareholders’ proportionate interests therein. However, it can-

---

not fail to be recognized that, merely as a consequence of the expressed purpose of the transaction and its characterization as a dividend in related notices to shareholders and the public at large, many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received. Furthermore, it is to be presumed that such views of recipients are materially strengthened in those instances, which are by far the most numerous, where the issuances are so small in comparison with the shares previously outstanding that they do not have any apparent effect upon the share market price and, consequently, the market value of the shares previously held remains substantially unchanged. The committee therefore believes that where these circumstances exist the corporation should in the public interest account for the transaction by transferring from earned surplus to the category of permanent capitalization (represented by the capital stock and capital surplus accounts) an amount equal to the fair value of the additional shares issued. Unless this is done, the amount of earnings which the shareholder may believe to have been distributed to him will be left, except to the extent otherwise dictated by legal requirements, in earned surplus subject to possible further similar stock issuances or cash distributions.

.11 Where the number of additional shares issued as a stock dividend is so great that it has, or may reasonably be expected to have, the effect of materially reducing the share market value, the committee believes that the implications and possible constructions discussed in the preceding paragraph are not likely to exist and that the transaction clearly partakes of the nature of a stock split-up as defined in paragraph .02. Consequently, the committee considers that under such circumstances there is no need to capitalize earned surplus, other than to the extent occasioned by legal requirements. It recommends, however, that in such instances every effort be made to avoid the use of the word dividend in related corporate resolutions, notices, and announcements and that, in those cases where because of legal requirements this cannot be done, the transaction be described, for example, as a split-up effected in the form of a dividend.
.12 In cases of closely-held companies, it is to be presumed that the intimate knowledge of the corporations' affairs possessed by their shareholders would preclude any such implications and possible constructions as are referred to in paragraph .10. In such cases, the committee believes that considerations of public policy do not arise and that there is no need to capitalize earned surplus other than to meet legal requirements.

.13 Obviously, the point at which the relative size of the additional shares issued becomes large enough to materially influence the unit market price of the stock will vary with individual companies and under differing market conditions and, hence, no single percentage can be laid down as a standard for determining when capitalization of earned surplus in excess of legal requirements is called for and when it is not. However, on the basis of a review of market action in the case of shares of a number of companies having relatively recent stock distributions, it would appear that there would be few instances involving the issuance of additional shares of less than, say, 20% or 25% of the number previously outstanding where the effect would not be such as to call for the procedure referred to in paragraph .10.

.14 The corporate accounting recommended in paragraph .10 will in many cases, probably the majority, result in the capitalization of earned surplus in an amount in excess of that called for by the laws of the state of incorporation; such laws generally require the capitalization only of the par value of the shares issued, or, in the case of shares without par value, an amount usually within the discretion of the board of directors. However, these legal requirements are, in effect, minimum requirements and do not prevent the capitalization of a larger amount per share.

Stock Split-Ups

.15 Earlier in this section a stock split-up was defined as being confined to transactions involving the issuance of shares, without consideration moving to the corporation, for the purpose of effecting a reduction in the unit market price of shares of the class issued and, thus, of obtaining wider distribution and improved marketability of the
shares. Where this is clearly the intent, no transfer from earned surplus to capital surplus or capital stock account is called for, other than to the extent occasioned by legal requirements. It is believed, however, that few cases will arise where the aforementioned purpose can be accomplished through an issuance of shares which is less than, say, 20% or 25% of the previously outstanding shares.

.16 The committee believes that the corporation's representations to its shareholders as to the nature of the issuance is one of the principal considerations in determining whether it should be recorded as a stock dividend or a split-up. Nevertheless, it believes that the issuance of new shares in ratios of less than, say, 20% or 25% of the previously outstanding shares, or the frequent recurrence of issuances of shares, would destroy the presumption that transactions represented to be split-ups should be recorded as split-ups.
AC Section 5581

Quasi-Reorganization or Corporate Readjustment

(Amplification of Institute Rule No. 2 of 1934)

[Source: ARB 43, Chap. 7A.]

Issue date, unless otherwise indicated: June, 1953

.01 A rule was adopted by the Institute in 1934 which read as follows:

"Capital surplus, however created, should not be used to relieve the income account of the current or future years of charges which would otherwise fall to be made thereagainst. This rule might be subject to the exception that where, upon reorganization, a reorganized company would be relieved of charges which would require to be made against income if the existing corporation were continued, it might be regarded as permissible to accomplish the same result without reorganization provided the facts were as fully revealed to and the action as formally approved by the shareholders as in reorganization."

.02 Readjustments of the kind mentioned in the exception to the rule fall in the category of what are called quasi-reorganizations. This section does not deal with the general question of quasi-reorganizations, but only with cases in which the exception permitted under the rule of 1934 is availed of by a corporation. Hereinafter such cases are referred to as readjustments. The problems which arise fall into two groups: (a) what may be permitted in a readjustment and (b) what may be permitted thereafter.

PROCEDURE IN READJUSTMENT

.03 If a corporation elects to restate its assets, capital stock, and surplus through a readjustment and thus avail itself of permission to relieve its future income account or earned surplus account of charges which would otherwise be made thereagainst, it should make a clear report to its shareholders of the restatements proposed to be made, and obtain their formal consent. It should present a fair bal-

---

*See section 5511.*
ance sheet as at the date of the readjustment, in which the adjustment of carrying amounts is reasonably complete, in order that there may be no continuation of the circumstances which justify charges to capital surplus.

.04 A write-down of assets below amounts which are likely to be realized thereafter, though it may result in conservatism in the balance sheet at the readjustment date, may also result in overstatement of earnings or of earned surplus when the assets are subsequently realized. Therefore, in general, assets should be carried forward as of the date of readjustment at fair and not unduly conservative amounts, determined with due regard for the accounting to be employed by the company thereafter. If the fair value of any asset is not readily determinable a conservative estimate may be made, but in that case the amount should be described as an estimate and any material difference arising through realization or otherwise and not attributable to events occurring or circumstances arising after that date should not be carried to income or earned surplus.

.05 Similarly, if potential losses or charges are known to have arisen prior to the date of readjustment but the amounts thereof are then indeterminate, provision may properly be made to cover the maximum probable losses or charges. If the amounts provided are subsequently found to have been excessive or insufficient, the difference should not be carried to earned surplus nor used to offset losses or gains originating after the readjustment, but should be carried to capital surplus.

.06 When the amounts to be written off in a readjustment have been determined, they should be charged first against earned surplus to the full extent of such surplus; any balance may then be charged against capital surplus. A company which has subsidiaries should apply this rule in such a way that no consolidated earned surplus survives a readjustment in which any part of losses has been charged to capital surplus.

.07 If the earned surplus of any subsidiaries cannot be applied against the losses before resort is had to capital surplus, the parent company's interest in such earned surplus should be regarded as capitalized by the readjustment.
just as surplus at the date of acquisition is capitalized, so far as the parent is concerned.

.08 The effective date of the readjustment, from which the income of the company is thereafter determined, should be as near as practicable to the date on which formal consent of the stockholders is given, and should ordinarily not be prior to the close of the last completed fiscal year.

PROCEDURE AFTER READJUSTMENT

.09 When the readjustment has been completed, the company's accounting should be substantially similar to that appropriate for a new company.

.10 After such a readjustment earned surplus previously accumulated cannot properly be carried forward under that title. A new earned surplus account should be established, dated to show that it runs from the effective date of the readjustment, and this dating should be disclosed in financial statements until such time as the effective date is no longer deemed to possess any special significance.  

.11 Capital surplus originating in such a readjustment is restricted in the same manner as that of a new corporation; charges against it should be only those which may properly be made against the initial surplus of a new corporation.

.12 It is recognized that charges against capital surplus may take place in other types of readjustments to which the foregoing provisions would have no application. Such cases would include readjustments for the purpose of correcting erroneous credits made to capital surplus in the past. In this statement the committee has dealt only with that type of readjustment in which either the current income or earned surplus account or the income account of future years is relieved of charges which would otherwise be made thereagainst.

\[^2\text{See section 5582.}\]
AC Section 5582

Discontinuance of Dating Earned Surplus

[Source: ARB 46.]

Issue date, unless otherwise indicated: February, 1956

.01 Section 5581.10, Quasi-Reorganization or Corporate Readjustment, reads as follows:

After such a readjustment earned surplus previously accumulated cannot properly be carried forward under that title. A new earned surplus account should be established, dated to show that it runs from the effective date of the readjustment, and this dating should be disclosed in financial statements until such time as the effective date is no longer deemed to possess any special significance.

.02 The committee believes that the dating of earned surplus following a quasi-reorganization would rarely, if ever, be of significance after a period of ten years. It also believes that there may be exceptional circumstances in which the discontinuance of the dating of earned surplus could be justified at the conclusion of a period less than ten years.

The following statement, approved by the Board, originally appeared in *The Journal of Accountancy*, December 1962, p. 67:

.01 The basic postulates and the broad principles of accounting comprehended in the term *generally accepted accounting principles* pertain to business enterprises in general. These include public utilities, common carriers, insurance companies, financial institutions, and the like that are subject to regulation by government, usually through commissions or other similar agencies.

.02 However, differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the rate-making process, a phenomenon not present in nonregulated businesses. Such differences usually concern mainly the time at which various items enter into the determination of net income in accordance with the principle of matching costs and revenues. For example, if a cost incurred by a regulated business during a given period is treated for rate-making purposes by the regulatory authority having jurisdiction as applicable to future revenues, it may be deferred in the balance sheet at the end of the current period and written off in the future period or periods in which the related revenue accrues, even though the cost is of a kind which in a nonregulated business would be written off currently. However, this is appropriate only when it is clear that the cost will be recoverable out of future revenues, and it is not appropriate when there is doubt, because of economic conditions or for other reasons, that the cost will be so recoverable.
.03 Accounting requirements not directly related to the rate-making process commonly are imposed on regulated businesses by orders of regulatory authorities, and occasionally by court decisions or statutes. The fact that such accounting requirements are imposed by the government does not necessarily mean that they conform with generally accepted accounting principles. For example, if a cost, of a kind which in a nonregulated business would be charged to income, is charged directly to surplus pursuant to the applicable accounting requirements of the regulatory authority, such cost nevertheless should be included in operating expenses or charged to income, as appropriate in financial statements intended for use by the public.

.04 The financial statements of regulated businesses other than those prepared for filing with the government for regulatory purposes preferably should be based on generally accepted accounting principles (with appropriate recognition of rate-making considerations as indicated in paragraph .02) rather than on systems of accounts or other accounting requirements of the government.

.05 Generally Accepted Auditing Standards lists four standards of reporting, the first of which says that "The report shall state whether the financial statements are presented in accordance with generally accepted principles of accounting." In reporting on the financial statements of regulated businesses, the independent auditor should observe this standard and should deal with material variances from generally accepted accounting principles (with appropriate recognition of rate-making considerations as indicated in paragraph .02), if the financial statements reflect any such variances, in the same manner as in his reports on nonregulated businesses.
INTRODUCTION

.001 This Statement establishes standards of financial accounting and reporting for the oil and gas producing activities of a business enterprise. Those activities involve the acquisition of mineral interests in properties, exploration (including prospecting), development, and production of crude oil, including condensate and natural gas liquids, and natural gas (hereinafter collectively referred to as oil and gas producing activities).

.002 Existing authoritative accounting pronouncements do not explicitly or comprehensively establish standards of financial accounting and reporting for those activities. Numerous alternative accounting practices are presently followed by oil and gas producing companies, and the nature and extent of the information they disclose in their financial statements about their oil and gas producing activities vary considerably from company to company. The Board is issuing this Statement to address the financial accounting and reporting issues that led to the alternative practices.

.003 Appendix A contains background information. Appendix B sets forth the basis for the Board's conclusions, including alternatives considered and reasons for accepting some and rejecting others. Appendix C is a glossary of terms.

.004 The accounting standards in this Statement adhere to the traditional historical cost basis. Although the Board considered both discovery value and current value as alternative bases of accounting for oil and gas reserves, it determined for the reasons discussed in paragraphs .133-.141 that any decision on applying value accounting to oil and gas companies should await resolution of the broader issue of the general applicability of value accounting in
the Board’s project, “Conceptual Framework for Financial Accounting and Reporting.”

.005 This Statement supersedes FASB Statement No. 9, “Accounting for Income Taxes—Oil and Gas Producing Companies.”

**SCOPE**

.006 This Statement applies only to oil and gas producing activities; it does not address financial accounting and reporting issues relating to the transporting, refining, and marketing of oil and gas. Also, this Statement does not apply to activities relating to the production of other wasting (nonregenerative) natural resources; nor does it apply to the production of geothermal steam or to the extraction of hydrocarbons as a by-product of the production of geothermal steam and associated geothermal resources as defined in the Geothermal Steam Act of 1970; nor does it apply to the extraction of hydrocarbons from shale, tar sands, or coal.

.007 Accounting for interest on funds borrowed to finance an enterprise’s oil and gas producing activities is excluded from consideration in this Statement because the broader subject of accounting for interest costs in general is a project presently on the Board’s technical agenda.

.008 This Statement prescribes disclosures related to an enterprise’s oil and gas producing activities that are considered necessary for fair presentation of the enterprise’s financial position, results of operations, and changes in financial position in conformity with generally accepted accounting principles. Those disclosures are only part of the information that may be needed for investment, regulatory, or national economic planning and energy policy decisions.

.009 The Addendum [section 6011] to APB Opinion No. 2, “Accounting for the ‘Investment Credit’,” states that “differences may arise in the application of generally accepted accounting principles as between regulated and nonregulated businesses, because of the effect in regulated businesses of the rate-making process” and discusses the application of generally accepted accounting principles to regulated industries. Accordingly, the provisions of the Addendum shall govern the application of this Statement to those oil and gas producing operations of a company that are regulated for rate-making purposes on an individual-company-cost-of-service basis.
STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Definitions

.010 The glossary in Appendix C defines the following terms as they are used in this Statement:

a. Proved reserves.
b. Proved developed reserves.
c. Proved undeveloped reserves.
d. Field.
e. Reservoir.
f. Exploratory well.
g. Development well.
h. Service well.
i. Stratigraphic test well.
   i. Exploratory-type.
   ii. Development-type.
j. Proved area.

Basic Concepts

.011 An enterprise's oil and gas producing activities involve certain special types of assets. Costs of those assets shall be capitalized when incurred. Those types of assets broadly defined are:

a. Mineral interests in properties (hereinafter referred to as properties), which include fee ownership or a lease, concession, or other interest representing the right to extract oil or gas subject to such terms as may be imposed by the conveyance of that interest. Properties also include royalty interests, production payments payable in oil or gas, and other nonoperating interests in properties operated by others. Properties include those agreements with foreign governments or authorities under which an enterprise participates in the operation of the related properties or otherwise serves as "producer" of the underlying reserves (see paragraph .053); but properties do not include other supply agreements or contracts that represent the right to purchase (as opposed to extract) oil and gas. Properties shall be classified as proved or unproved as follows:
   i. Unproved properties—properties with no proved reserves.
   ii. Proved properties—properties with proved reserves.

b. Wells and related equipment and facilities, the costs of which include those incurred to:

1 Often referred to in the oil and gas industry as "lease and well equipment" even though, technically, the property may have been acquired other than by a lease.
i. Drill and equip those exploratory wells and exploratory-type stratigraphic test wells that have found proved reserves.

ii. Obtain access to proved reserves and provide facilities for extracting, treating, gathering, and storing the oil and gas, including the drilling and equipping of development wells and development-type stratigraphic test wells (whether those wells are successful or unsuccessful) and service wells.

c. **Support equipment and facilities used in oil and gas producing activities**, such as seismic equipment, drilling equipment, construction and grading equipment, vehicles, repair shops, warehouses, supply points, camps, and division, district, or field offices.

d. **Uncompleted wells, equipment, and facilities**, the costs of which include those incurred to:
   
i. Drill and equip wells that are not yet completed.
   
ii. Acquire or construct equipment and facilities that are not yet completed and installed.

.012 The costs of an enterprise's wells and related equipment and facilities and the costs of the related proved properties shall be amortized as the related oil and gas reserves are produced. That amortization plus production (lifting) costs become part of the cost of oil and gas produced. Unproved properties shall be assessed periodically, and a loss recognized if those properties are impaired.

.013 Some costs incurred in an enterprise's oil and gas producing activities do not result in acquisition of an asset and, therefore, shall be charged to expense. Examples include geological and geophysical costs, the costs of carrying and retaining undeveloped properties, and the costs of drilling those exploratory wells and exploratory-type stratigraphic test wells that do not find proved reserves.

.014 The basic concepts in paragraphs .011-.013 are elaborated on in paragraphs .015-.041.

**Accounting at the Time Costs Are Incurred**

**Acquisition of Properties**

.015 Costs incurred to purchase, lease, or otherwise acquire a property (whether unproved or proved) shall be capitalized when incurred. They include the costs of lease bonuses and options to purchase or lease properties, the portion of costs applicable to
minerals when land including mineral rights is purchased in fee, brokers' fees, recording fees, legal costs, and other costs incurred in acquiring properties.

**Exploration**

.016 Exploration involves (a) identifying areas that may warrant examination and (b) examining specific areas that are considered to have prospects of containing oil and gas reserves, including drilling exploratory wells and exploratory-type stratigraphic test wells. Exploration costs may be incurred both before acquiring the related property (sometimes referred to in part as prospecting costs) and after acquiring the property.

.017 Principal types of exploration costs, which include depreciation and applicable operating costs of support equipment and facilities (paragraph .026) and other costs of exploration activities, are:

a. Costs of topographical, geological, and geophysical studies, rights of access to properties to conduct those studies, and salaries and other expenses of geologists, geophysical crews, and others conducting those studies. Collectively, those are sometimes referred to as geological and geophysical or "G&G" costs.

b. Costs of carrying and retaining undeveloped properties, such as delay rentals, *ad valorem* taxes on the properties, legal costs for title defense, and the maintenance of land and lease records.

c. Dry hole contributions and bottom hole contributions.

d. Costs of drilling and equipping exploratory wells.

e. Costs of drilling exploratory-type stratigraphic test wells.2

.018 Geological and geophysical costs, costs of carrying and retaining undeveloped properties, and dry hole and bottom hole contributions shall be charged to expense when incurred.

.019 The costs of drilling exploratory wells and the costs of drilling exploratory-type stratigraphic test wells shall be capitalized as part of the enterprise's uncompleted wells, equipment, and facilities pending determination of whether the well has found proved reserves. If the well has found proved reserves (paragraphs .031-.034), the capitalized costs of drilling the well shall become part of the enterprise's wells and related equipment and

2 While the costs of drilling stratigraphic test wells are sometimes considered to be geological and geophysical costs, they are accounted for separately under this Statement for reasons explained in paragraphs .200-.202.
facilities (even though the well may not be completed as a producing well): if, however, the well has not found proved reserves, the capitalized costs of drilling the well, net of any salvage value, shall be charged to expense.

.020 An enterprise sometimes conducts G&G studies and other exploration activities on a property owned by another party, in exchange for which the enterprise is contractually entitled to receive an interest in the property if proved reserves are found or to be reimbursed by the owner for the G&G and other costs incurred if proved reserves are not found. In that case, the enterprise conducting the G&G studies and other exploration activities shall account for those costs as a receivable when incurred and, if proved reserves are found, they shall become the cost of the proved property acquired.

Development

.021 Development costs are incurred to obtain access to proved reserves and to provide facilities for extracting, treating, gathering, and storing the oil and gas. More specifically, development costs, including depreciation and applicable operating costs of support equipment and facilities (paragraph .026) and other costs of development activities, are costs incurred to:

a. Gain access to and prepare well locations for drilling, including surveying well locations for the purpose of determining specific development drilling sites, clearing ground, draining, road building, and relocating public roads, gas lines, and power lines, to the extent necessary in developing the proved reserves.

b. Drill and equip development wells, development-type stratigraphic test wells, and service wells, including the costs of platforms and of well equipment such as casing, tubing, pumping equipment, and the wellhead assembly.

c. Acquire, construct, and install production facilities such as lease flow lines, separators, treaters, heaters, manifolds, measuring devices, and production storage tanks, natural gas cycling and processing plants, and utility and waste disposal systems.

d. Provide improved recovery systems.

.022 Development costs shall be capitalized as part of the cost of an enterprise's wells and related equipment and facilities. Thus, all costs incurred to drill and equip development wells, development-type stratigraphic test wells, and service wells are development costs and shall be capitalized, whether the well is successful or unsuccessful. Costs of drilling those wells and costs of constructing equipment and facilities shall be included in the enterprise's
uncompleted wells, equipment, and facilities until drilling or construction is completed.

**Production**

.023 Production involves lifting the oil and gas to the surface and gathering, treating, field processing (as in the case of processing gas to extract liquid hydrocarbons), and field storage. For purposes of this Statement, the production function shall normally be regarded as terminating at the outlet valve on the lease or field production storage tank; if unusual physical or operational circumstances exist, it may be more appropriate to regard the production function as terminating at the first point at which oil, gas, or gas liquids are delivered to a main pipeline, a common carrier, a refinery, or a marine terminal.

.024 Production costs are those costs incurred to operate and maintain an enterprise's wells and related equipment and facilities, including depreciation and applicable operating costs of support equipment and facilities (paragraph .026) and other costs of operating and maintaining those wells and related equipment and facilities. They become part of the cost of oil and gas produced. Examples of production costs (sometimes called lifting costs) are:

a. Costs of labor to operate the wells and related equipment and facilities.

b. Repairs and maintenance.

c. Materials, supplies, and fuel consumed and services utilized in operating the wells and related equipment and facilities.

d. Property taxes and insurance applicable to proved properties and wells and related equipment and facilities.

e. Severance taxes.

.025 Depreciation, depletion, and amortization of capitalized acquisition, exploration, and development costs also become part of the cost of oil and gas produced along with production (lifting) costs identified in paragraph .024.

**Support Equipment and Facilities**

.026 The cost of acquiring or constructing support equipment and facilities used in oil and gas producing activities shall be capitalized. Examples of support equipment and facilities include seismic equipment, drilling equipment, construction and grading equipment, vehicles, repair shops, warehouses, supply points, camps, and division, district, or field offices. Some support equipment or
facilities are acquired or constructed for use exclusively in a single activity—exploration, development, or production. Other support equipment or facilities may serve two or more of those activities and may also serve the enterprise’s transportation, refining, and marketing activities. To the extent that the support equipment and facilities are used in oil and gas producing activities, their depreciation and applicable operating costs become an exploration, development, or production cost, as appropriate.

Disposition of Capitalized Costs

.027 The effect of paragraphs .015-.026, which deal with accounting at the time costs are incurred, is to recognize as assets: (a) unproved properties; (b) proved properties; (c) wells and related equipment and facilities (which consist of all development costs plus the costs of drilling those exploratory wells and exploratory-type stratigraphic test wells that find proved reserves); (d) support equipment and facilities used in oil and gas producing activities; and (e) uncompleted wells, equipment, and facilities. Paragraphs .028-.041 which follow deal with disposition of the costs of those assets after capitalization. Among other things, those paragraphs provide that the acquisition costs of proved properties and the costs of wells and related equipment and facilities be amortized to become part of the cost of oil and gas produced; that impairment of unproved properties be recognized; and that the costs of an exploratory well or exploratory-type stratigraphic test well be charged to expense if the well is determined not to have found proved reserves.

Assessment of Unproved Properties

.028 Unproved properties shall be assessed periodically to determine whether they have been impaired. A property would likely be impaired, for example, if a dry hole has been drilled on it and the enterprise has no firm plans to continue drilling. Also, the likelihood of partial or total impairment of a property increases as the expiration of the lease term approaches if drilling activity has not commenced on the property or on nearby properties. If the results of the assessment indicate impairment, a loss shall be recognized by providing a valuation allowance. Impairment of individual unproved properties whose acquisition costs are relatively significant shall be assessed on a property-by-property basis, and an indicated loss shall be recognized by providing a valuation allowance. When an enterprise has a relatively large number of unproved properties whose acquisition costs are not individually significant, it may not be practical to assess impairment on a property-by-property basis, in which case the amount of loss to be recognized and the amount
of the valuation allowance needed to provide for impairment of those properties shall be determined by amortizing those properties, either in the aggregate or by groups, on the basis of the experience of the enterprise in similar situations and other information about such factors as the primary lease terms of those properties, the average holding period of unproved properties, and the relative proportion of such properties on which proved reserves have been found in the past.

Reclassification of an Unproved Property

.029 A property shall be reclassified from unproved properties to proved properties when proved reserves are discovered on or otherwise attributed to the property; occasionally, a single property, such as a foreign lease or concession covers so vast an area that only the portion of the property to which the proved reserves relate—determined on the basis of geological structural features or stratigraphic conditions—should be reclassified from unproved to proved. For a property whose impairment has been assessed individually in accordance with paragraph .028, the net carrying amount (acquisition cost minus valuation allowance) shall be reclassified to proved properties; for properties amortized by providing a valuation allowance on a group basis, the gross acquisition cost shall be reclassified.

Amortization (Depletion) of Acquisition Costs of Proved Properties

.030 Capitalized acquisition costs of proved properties shall be amortized (depleted) by the unit-of-production method so that each unit produced is assigned a pro rata portion of the unamortized acquisition costs. Under the unit-of-production method, amortization (depletion) may be computed either on a property-by-property basis or on the basis of some reasonable aggregation of properties with a common geological structural feature or stratigraphic condition, such as a reservoir or field. When an enterprise has a relatively large number of royalty interests whose acquisition costs are not individually significant, they may be aggregated, for the purpose of computing amortization, without regard to commonality of geological structural features or stratigraphic conditions; if information is not available to estimate reserve quantities applicable to royalty interests owned (paragraph .050), a method other than the unit-of-production method may be used to amortize their acquisition costs. The unit cost shall be computed on the basis of the total estimated units of proved oil and gas reserves. (Joint production of both oil and gas is discussed in paragraph .038.) Unit-of-production amortization rates shall be revised
whenever there is an indication of the need for revision but at least once a year; those revisions shall be accounted for prospectively as changes in accounting estimates—see paragraphs 31-33 of APB Opinion No. 20 [section 1051.31-.33], "Accounting Changes."

Accounting When Drilling of an Exploratory Well Is Completed

.031 As specified in paragraph .019, the costs of drilling an exploratory well are capitalized as part of the enterprise's uncompleted wells, equipment, and facilities pending determination of whether the well has found proved reserves. That determination is usually made on or shortly after completion of drilling the well, and the capitalized costs shall either be charged to expense or be reclassified as part of the costs of the enterprise's wells and related equipment and facilities at that time. Occasionally, however, an exploratory well may be determined to have found oil and gas reserves, but classification of those reserves as proved cannot be made when drilling is completed. In those cases, one or the other of the following subparagraphs shall apply depending on whether the well is drilled in an area requiring a major capital expenditure, such as a trunk pipeline, before production from that well could begin:

a. Exploratory wells that find oil and gas reserves in an area requiring a major capital expenditure, such as a trunk pipeline, before production could begin. On completion of drilling, an exploratory well may be determined to have found oil and gas reserves, but classification of those reserves as proved depends on whether a major capital expenditure can be justified which, in turn, depends on whether additional exploratory wells find a sufficient quantity of additional reserves. That situation arises principally with exploratory wells drilled in a remote area for which production would require constructing a trunk pipeline. In that case, the cost of drilling the exploratory well shall continue to be carried as an asset pending determination of whether proved reserves have been found only as long as both of the following conditions are met:

i. The well has found a sufficient quantity of reserves to justify its completion as a producing well if the required capital expenditure is made.

ii. Drilling of the additional exploratory wells is under way or firmly planned for the near future.

Thus if drilling in the area is not under way or firmly planned, or if the well has not found a commercially producible quantity
of reserves, the exploratory well shall be assumed to be impaired, and its costs shall be charged to expense.

b. *All other exploratory wells that find oil and gas reserves.* In the absence of a determination as to whether the reserves that have been found can be classified as proved, the costs of drilling such an exploratory well shall not be carried as an asset for more than one year following completion of drilling. If, after that year has passed, a determination that proved reserves have been found cannot be made, the well shall be assumed to be impaired, and its costs shall be charged to expense.

.032 Paragraph .031 is intended to prohibit, in all cases, the deferral of the costs of exploratory wells that find some oil and gas reserves merely on the chance that some event totally beyond the control of the enterprise will occur, for example, on the chance that the selling prices of oil and gas will increase sufficiently to result in classification of reserves as proved that are not commercially recoverable at current prices.

Accounting When Drilling of an Exploratory-Type Stratigraphic Test Well Is Completed

.033 As specified in paragraph .019, the costs of drilling an exploratory-type stratigraphic test well are capitalized as part of the enterprise's uncompleted wells, equipment, and facilities pending determination of whether the well has found proved reserves. When that determination is made, the capitalized costs shall be charged to expense if proved reserves are not found or shall be reclassified as part of the costs of the enterprise's wells and related equipment and facilities if proved reserves are found.

.034 Exploratory-type stratigraphic test wells are normally drilled on unproved offshore properties. Frequently, on completion of drilling, such a well may be determined to have found oil and gas reserves, but classification of those reserves as proved depends on whether a major capital expenditure—usually a production platform—can be justified which, in turn, depends on whether additional exploratory-type stratigraphic test wells find a sufficient quantity of additional reserves. In that case, the cost of drilling the exploratory-type stratigraphic test well shall continue to be carried as an asset pending determination of whether proved reserves have been found only as long as both of the following conditions are met:

i. The well has found a quantity of reserves that would justify its completion for production had it not been simply a stratigraphic test well.
ii. Drilling of the additional exploratory-type stratigraphic test wells is under way or firmly planned for the near future. Thus if associated stratigraphic test drilling is not under way or firmly planned, or if the well has not found a commercially producible quantity of reserves, the exploratory-type stratigraphic test well shall be assumed to be impaired, and its costs shall be charged to expense.

Amortization and Depreciation of Capitalized Exploratory Drilling and Development Costs

.035 Capitalized costs of exploratory wells and exploratory-type stratigraphic test wells that have found proved reserves and capitalized development costs shall be amortized (depreciated) by the unit-of-production method so that each unit produced is assigned a pro rata portion of the unamortized costs. It may be more appropriate, in some cases, to depreciate natural gas cycling and processing plants by a method other than the unit-of-production method. Under the unit-of-production method, amortization (depreciation) may be computed either on a property-by-property basis or on the basis of some reasonable aggregation of properties with a common geological structural feature or stratigraphic condition, such as a reservoir or field. The unit cost shall be computed on the basis of the total estimated units of proved developed reserves, rather than on the basis of all proved reserves, which is the basis for amortizing acquisition costs of proved properties. If significant development costs (such as the cost of an off-shore production platform) are incurred in connection with a planned group of development wells before all of the planned wells have been drilled, it will be necessary to exclude a portion of those development costs in determining the unit-of-production amortization rate until the additional development wells are drilled. Similarly it will be necessary to exclude, in computing the amortization rate, those proved developed reserves that will be produced only after significant additional development costs are incurred, such as for improved recovery systems. However, in no case should future development costs be anticipated in computing the amortization rate. (Joint production of both oil and gas is discussed in paragraph .038.) Unit-of-production amortization rates shall be revised whenever there is an indication of the need for revision but at least once a year; those revisions shall be accounted for prospectively as changes in accounting estimates—see paragraphs 31-33 of APB Opinion No. 20 [section 1051.31-.33].
Depreciation of Support Equipment and Facilities

.036 Depreciation of support equipment and facilities used in oil and gas producing activities shall be accounted for as exploration cost, development cost, or production cost, as appropriate (paragraph .026).

Dismantlement Costs and Salvage Values

.037 Estimated dismantlement, restoration, and abandonment costs and estimated residual salvage values shall be taken into account in determining amortization and depreciation rates.

Amortization of Costs Relating to Oil and Gas Reserves Produced Jointly

.038 The unit-of-production method of amortization requires that the total number of units of oil or gas reserves in a property or group of properties be estimated and that the number of units produced in the current period be determined. Many properties contain both oil and gas reserves. In those cases, the oil and gas reserves and the oil and gas produced shall be converted to a common unit of measure on the basis of their approximate relative energy content (without considering their relative sales values). However, if the relative proportion of gas and oil extracted in the current period is expected to continue throughout the remaining productive life of the property, unit-of-production amortization may be computed on the basis of one of the two minerals only; similarly, if either oil or gas clearly dominates both the reserves and the current production (with dominance determined on the basis of relative energy content), unit-of-production amortization may be computed on the basis of the dominant mineral only.

Information Available after the Balance Sheet Date

.039 Information that becomes available after the end of the period covered by the financial statements but before those financial statements are issued shall be taken into account in evaluating conditions that existed at the balance sheet date, for example, in assessing unproved properties (paragraph .028) and in determining whether an exploratory well or exploratory-type stratigraphic test well had found proved reserves (paragraphs .031-.034).

Surrender or Abandonment of Properties

.040 When an unproved property is surrendered, abandoned, or otherwise deemed worthless, capitalized acquisition costs relating thereto shall be charged against the related allowance for impair-
ment to the extent an allowance has been provided; if the allow­ance previously provided is inadequate, a loss shall be recognized.

.041 Normally, no gain or loss shall be recognized if only an indi­vidual well or individual item of equipment is abandoned or retired or if only a single lease or other part of a group of proved properties constituting the amortization base is abandoned or retired as long as the remainder of the property or group of properties continues to produce oil or gas. Instead, the asset being aban­doned or retired shall be deemed to be fully amortized, and its cost shall be charged to accumulated depreciation, depletion, or amortization. When the last well on an individual property (if that is the amortization base) or group of properties (if amortization is determined on the basis of an aggregation of properties with a common geological structure) ceases to produce and the entire property or property group is abandoned, gain or loss shall be recognized. Occasionally, the partial abandonment or retirement of a proved property or group of proved properties or the abandon­ment or retirement of wells or related equipment or facilities may result from a catastrophic event or other major abnormality. In those cases, a loss shall be recognized at the time of abandonment or retirement.

Mineral Property Conveyances and Related Transactions

.042 Mineral interests in properties are frequently conveyed to others for a variety of reasons, including the desire to spread risks, to obtain financing, to improve operating efficiency, and to achieve tax benefits. Conveyances of those interests may involve the transfer of all or a part of the rights and responsibilities of operating a property (operating interest). The transferor may or may not retain an interest in the oil and gas produced that is free of the responsibilities and costs of operating the property (a non­operating interest). A transaction may, on the other hand, involve the transfer of a nonoperating interest to another party and retention of the operating interest.

.043 Certain transactions, sometimes referred to as conveyances, are in substance borrowings repayable in cash or its equivalent and shall be accounted for as borrowings. The following are examples of such transactions:

a. Enterprises seeking supplies of oil or gas sometimes make cash advances to operators to finance exploration in return for the right to purchase oil or gas discovered. Funds advanced for exploration that are repayable by offset against purchases of oil or gas discovered, or in cash if insufficient oil or gas is pro-
duced by a specified date, shall be accounted for as a receivable by the lender and as a payable by the operator.

b. Funds advanced to an operator that are repayable in cash out of the proceeds from a specified share of future production of a producing property, until the amount advanced plus interest at a specified or determinable rate is paid in full, shall be accounted for as a borrowing. The advance is a payable for the recipient of the cash and a receivable for the party making the advance. Such transactions, as well as those described in paragraph .047(a) below, are commonly referred to as production payments. The two types differ in substance, however, as explained in paragraph .047(a).

.044 In the following types of conveyances, gain or loss shall not be recognized at the time of the conveyance:

a. A transfer of assets used in oil and gas producing activities (including both proved and unproved properties) in exchange for other assets also used in oil and gas producing activities.

b. A pooling of assets in a joint undertaking intended to find, develop, or produce oil or gas from a particular property or group of properties.

.045 In the following types of conveyances, gain shall not be recognized at the time of the conveyance:

a. A part of an interest owned is sold and substantial uncertainty exists about recovery of the costs applicable to the retained interest.

b. A part of an interest owned is sold and the seller has a substantial obligation for future performance, such as an obligation to drill a well or to operate the property without proportional reimbursement for that portion of the drilling or operating costs applicable to the interest sold.

.046 If a conveyance is not one of the types described in paragraphs .044 and .045, gain or loss shall be recognized unless there are other aspects of the transaction that would prohibit such recognition under accounting principles applicable to enterprises in general.

.047 In accordance with paragraphs .044-.046, the following types of transactions shall be accounted for as indicated in each example.3 No attempt has been made to include the many variations of those arrangements that occur, but paragraphs .044-.046

3 Costs of unproved properties are always subject to an assessment for impairment as required by paragraph .028.
shall, where applicable, determine the accounting for those other arrangements as well.

a. Some production payments differ from those described in paragraph .043(b) in that the seller's obligation is not expressed in monetary terms but as an obligation to deliver, free and clear of all expenses associated with operation of the property, a specified quantity of oil or gas to the purchaser out of a specified share of future production. Such a transaction is a sale of a mineral interest for which gain shall not be recognized because the seller has a substantial obligation for future performance. The seller shall account for the funds received as unearned revenue to be recognized as the oil or gas is delivered. The purchaser of such a production payment has acquired an interest in a mineral property that shall be recorded at cost and amortized by the unit-of-production method as delivery takes place. The related reserve estimates and production data shall be reported as those of the purchaser of the production payment and not of the seller (paragraphs .050-.056).

b. An assignment of the operating interest in an unproved property with retention of a nonoperating interest in return for drilling, development, and operation by the assignee is a pooling of assets in a joint undertaking for which the assignor shall not recognize gain or loss. The assignor's cost of the original interest shall become the cost of the interest retained. The assignee shall account for all costs incurred as specified by paragraphs .015-.041 and shall allocate none of those costs to the mineral interest acquired. If oil or gas is discovered, each party shall report its share of reserves and production (paragraphs .050-.056).

c. An assignment of a part of an operating interest in an unproved property in exchange for a "free well" with provision for joint ownership and operation is a pooling of assets in a joint undertaking by the parties. The assignor shall record no cost for the obligatory well; the assignee shall record no cost for the mineral interest acquired. All drilling, development, and operating costs incurred by either party shall be accounted for as provided in paragraphs .015-.041 of this Statement. If the conveyance agreement requires the assignee to incur geological or geophysical expenditures instead of, or in addition to, a drilling obligation, those costs shall likewise be accounted for by the assignee as provided in paragraphs .015-.041 of this Statement. If reserves are discovered, each party shall report its share of reserves and production (paragraphs .050-.056).
d. A part of an operating interest in an unproved property may be assigned to effect an arrangement called a “carried interest” whereby the assignee (the carrying party) agrees to defray all costs of drilling, developing, and operating the property and is entitled to all of the revenue from production from the property, excluding any third party interest, until all of the assignee's costs have been recovered, after which the assignor will share in both costs and production. Such an arrangement represents a pooling of assets in a joint undertaking by the assignor and assignee. The carried party shall make no accounting for any costs and revenue until after recoupment (payout) of the carried costs by the carrying party. Subsequent to payout the carried party shall account for its share of revenue, operating expenses, and (if the agreement provides for subsequent sharing of costs rather than a carried interest) subsequent development costs. During the payout period the carrying party shall record all costs, including those carried, as provided in paragraphs .015-.041 and shall record all revenue from the property including that applicable to the recovery of costs carried. The carried party shall report as oil or gas reserves only its share of proved reserves estimated to remain after payout, and unit-of-production amortization of the carried party's property cost shall not commence prior to payout. Prior to payout the carrying party's reserve estimates and production data shall include the quantities applicable to recoupment of the carried costs (paragraphs .050-.056).

e. A part of an operating interest owned may be exchanged for a part of an operating interest owned by another party. The purpose of such an arrangement, commonly called a joint venture in the oil and gas industry, often is to avoid duplication of facilities, diversify risks, and achieve operating efficiencies. Such reciprocal conveyances represent exchanges of similar productive assets, and no gain or loss shall be recognized by either party at the time of the transaction. In some joint ventures which may or may not involve an exchange of interests, the parties may share different elements of costs in different proportions. In such an arrangement a party may acquire an interest in a property or in wells and related equipment that is disproportionate to the share of costs borne by it. As in the case of a carried interest or a free well, each party shall account for its own cost under the provisions of this Statement. No gain shall be recognized for the acquisition of an interest in joint assets, the cost of which may have been paid in whole or in part by another party.

f. In a unitization all the operating and nonoperating participants pool their assets in a producing area (normally a field) to form
a single unit and in return receive an undivided interest (of the same type as previously held) in that unit. Unitizations generally are undertaken to obtain operating efficiencies and to enhance recovery of reserves, often through improved recovery operations. Participation in the unit is generally proportionate to the oil and gas reserves contributed by each. Because the properties may be in different stages of development at the time of unitization, some participants may pay cash and others may receive cash to equalize contributions of wells and related equipment and facilities with the ownership interests in reserves. In those circumstances, cash paid by a participant shall be recorded as an additional investment in wells and related equipment and facilities, and cash received by a participant shall be recorded as a recovery of cost. The cost of the assets contributed plus or minus cash paid or received is the cost of the participant's undivided interest in the assets of the unit. Each participant shall include its interest in reporting reserve estimates and production data (paragraphs .050-.056).

g. If the entire interest in an unproved property is sold for cash or cash equivalent, recognition of gain or loss depends on whether, in applying paragraph .028 of this Statement, impairment had been assessed for that property individually or by amortizing that property as part of a group. If impairment was assessed individually, gain or loss shall be recognized. For a property amortized by providing a valuation allowance on a group basis, neither gain nor loss shall be recognized when an unproved property is sold unless the sales price exceeds the original cost of the property, in which case gain shall be recognized in the amount of such excess.

h. If a part of the interest in an unproved property is sold, even though for cash or cash equivalent, substantial uncertainty usually exists as to recovery of the cost applicable to the interest retained. Consequently, the amount received shall be treated as a recovery of cost. However, if the sales price exceeds the carrying amount of a property whose impairment has been assessed individually in accordance with paragraph .028 of this Statement, or exceeds the original cost of a property amortized by providing a valuation allowance on a group basis, gain shall be recognized in the amount of such excess.

i. The sale of an entire interest in a proved property that constitutes a separate amortization base is not one of the types of

---

4 The carrying amount of the interest retained shall continue to be subject to the assessment for impairment as required by paragraph .028.
conveyances described in paragraph .044 or .045. The difference between the amount of sales proceeds and the unamortized cost shall be recognized as a gain or loss.

j. The sale of a part of a proved property, or of an entire proved property constituting a part of an amortization base, shall be accounted for as the sale of an asset, and a gain or loss shall be recognized, since it is not one of the conveyances described in paragraph .044 or .045. The unamortized cost of the property or group of properties a part of which was sold shall be apportioned to the interest sold and the interest retained on the basis of the fair values of those interests. However, the sale may be accounted for as a normal retirement under the provisions of paragraph .041 with no gain or loss recognized if doing so does not significantly affect the unit-of-production amortization rate.

k. The sale of the operating interest in a proved property for cash with retention of a nonoperating interest is not one of the types of conveyances described in paragraph .044 or .045. Accordingly, it shall be accounted for as the sale of an asset, and any gain or loss shall be recognized. The seller shall allocate the cost of the proved property to the operating interest sold and the nonoperating interest retained on the basis of the fair values of those interests.⁵

l. The sale of a proved property subject to a retained production payment that is expressed as a fixed sum of money payable only from a specified share of production from that property, with the purchaser of the property obligated to incur the future costs of operating the property, shall be accounted for as follows:

i. If satisfaction of the retained production payment is reasonably assured. The seller of the property, who retained the production payment, shall record the transaction as a sale, with recognition of any resulting gain or loss. The retained production payment shall be recorded as a receivable, with interest accounted for in accordance with the provisions of APB Opinion No. 21 [section 4111], “Interest on Receivables and Payables.” The purchaser shall record as the cost of the assets acquired the cash consideration paid plus the present value (determined in accordance with APB Opinion No. 21 [section 4111]) of the retained production payment, which shall be recorded as a payable. The oil and gas reserve estimates

⁵ A retained production payment denominated in money is not a mineral interest (see paragraphs .011(a) and .043).
Special Industry Applications

and production data, including those applicable to liquida
tion of the retained production payment, shall be re-
ported by the purchaser of the property (paragraphs .050-.056).

ii. *If satisfaction of the retained production payment is not reasonably assured.* The transaction is in substance a sale with retention of an overriding royalty that shall be ac-
counted for in accordance with paragraph .047(k).

m. The sale of a proved property subject to a retained produc-
tion payment that is expressed as a right to a specified quantity of oil or gas out of a specified share of future production shall be accounted for in accordance with para-
graph .047(k).

Disclosure

.048 An enterprise engaged in oil and gas producing activities shall include in a complete set of annual financial statements the disclosures specified in paragraphs .050-.059. Those disclo-
sures shall be made within the body of the financial state-
ments, in the notes thereto, or in a separate schedule that is an integral part of the financial statements, except that the disclosures of reserve quantities required by paragraphs .050-
.056 may be made as supplementary information accompanying but outside the financial statements." [As amended, effective for fiscal years beginning after December 15, 1978, by FASB Statement No. 25.] (See section 6022.)

.049 Disclosure of capitalized costs (paragraph .057) shall also be included in a complete set of interim financial statements that present financial position, results of operations, and changes in financial position in conformity with generally accepted account-
ing principles. Disclosures of reserve quantities and of costs in-
curred as set forth in paragraphs .050-.056 and .058 and .059 are not required in such interim financial statements, though the Board encourages disclosure in those financial statements of information about a major discovery or other favorable or adverse event that causes a significant change from the reserve data reported in the most recent annual financial statements.

Disclosure of Reserve Quantities

.050 Net quantities of an enterprise’s interests in proved reserves and proved developed reserves of (a) crude oil (including con-
densate and natural gas liquids) and (b) natural gas shall be re-
ported as of the beginning and the end of each year for which a complete set of financial statements is presented. "Net" quantities of reserves include those relating to the enterprise's operating and nonoperating interests in properties as defined in paragraph .011(a). Quantities of reserves relating to royalty interests owned shall be included in "net" quantities if the necessary information is available to the enterprise; if reserves relating to royalty interests owned are not included because the information is unavailable, that fact and the enterprise's share of oil and gas produced for those royalty interests shall be reported for each year for which a complete set of financial statements is presented. "Net" quantities shall not include reserves relating to interests of others in properties owned by the enterprise.

.051 Changes in the net quantities of an enterprise's proved reserves of oil and of gas during each year for which a complete set of financial statements is presented shall be reported. Changes resulting from each of the following shall be separately shown with appropriate explanation of significant changes:

a. Revisions of previous estimates. Revisions represent changes in previous estimates of proved reserves, either upward or downward, resulting from new information (except for an increase in proved acreage) normally obtained from development drilling and production history or resulting from a change in economic factors.

b. Improved recovery. Changes in reserve estimates resulting from application of improved recovery techniques shall be separately shown if significant. If not significant, such changes shall be included in revisions of previous estimates.

c. Purchases of minerals-in-place.

d. Extensions, discoveries, and other additions. Additions to an enterprise's proved reserves that result from (i) extension of the proved acreage of previously discovered (old) reservoirs through additional drilling in periods subsequent to discovery and (ii) discovery of new fields with proved reserves or of new reservoirs of proved reserves in old fields.

e. Production.

f. Sales of minerals-in-place.

.052 If an enterprise's proved reserves of oil and gas are located entirely within its home country, that fact shall be disclosed. If some or all of its reserves are located in foreign countries, the disclosures of net quantities of reserves of oil and of gas and changes in them required by paragraphs .050 and .051 shall be separately reported for (a) the enterprise's home country (if
significant reserves are located there) and (b) each foreign geographic area in which significant reserves are located. Foreign geographic areas are individual countries or groups of countries as appropriate for meaningful disclosure in the circumstances.

.053 Net quantities disclosed in conformity with paragraphs .050-.052 shall not include oil or gas subject to purchase under long-term supply, purchase, or similar agreements and contracts, including such agreements with foreign governments or authorities. However, quantities of oil or gas subject to such agreements with foreign governments or authorities as of the end of each year for which a complete set of financial statements is presented, and the net quantity of oil or gas received under the agreements during each such year, shall be separately disclosed if the enterprise participates in the operation of the properties in which the oil or gas is located or otherwise serves as the "producer" of those reserves, as opposed, for example, to being an independent purchaser, broker, dealer, or importer.

.054 In determining the reserve quantities to be reported in conformity with paragraphs .050-.053:

a. If the enterprise issues consolidated financial statements, 100 percent of the net reserve quantities attributable to the parent company and 100 percent of the net reserve quantities attributable to its consolidated subsidiaries (whether or not wholly owned) shall be included.

b. If the enterprise's financial statements include investments that are proportionately consolidated, the enterprise's reserve quantities shall include its proportionate share of the investee's net oil and gas reserves.

c. If the enterprise's financial statements include investments that are accounted for by the equity method, the investee's net oil

Oil and gas applicable to long-term supply agreements with foreign governments or authorities in which the company acts as producer:

- Proved reserves at end of year: X X X X X X X X X X
- Received during the year: X X X X X X X X X X

Company's proportional interest in reserves of investees accounted for by the equity method, end of year:

X X X X X X X X X X X
and gas reserves shall *not* be included in the disclosures of the enterprise's reserves. However, the enterprise's (investor's) share of the investee's net oil and gas reserves shall be separately reported as of the end of each year for which a complete set of financial statements is presented.

.055 In reporting reserve quantities and changes in them, oil reserves (which include condensate and natural gas liquids) shall be stated in barrels, and gas reserves in cubic feet. Disclosures of the type called for by paragraphs .050-.054 are diagrammed on the previous page.

.056 If important economic factors or significant uncertainties affect particular components of an enterprise's proved reserves, explanation shall be provided. Examples include unusually high expected development or lifting costs; the necessity to build a major pipeline or other major facilities before production of the reserves can begin; or contractual obligations to produce and sell a significant portion of reserves at prices that are substantially below those at which the oil or gas could otherwise be sold in the absence of the contractual obligation.

**Disclosure of Capitalized Costs**

.057 The aggregate amount of capitalized costs relating to an enterprise's oil and gas producing activities (paragraph .011) and the aggregate amount of the related accumulated depreciation, depletion, amortization, and valuation allowances shall be reported as of the end of each period for which financial statements are presented. Paragraph 5 of *APB Opinion No. 12* [section 2043.02], "Omnibus Opinion—1967," requires disclosure of "balances of major classes of depreciable assets, by nature or function." Thus, separate disclosure of the amount of capitalized costs for one or more of asset categories (a) to (d) in paragraph .011 or for a combination of two or more of those categories often may be appropriate.

**Disclosure of Costs Incurred in Oil and Gas Producing Activities**

.058 The financial statements of an oil and gas producing company shall disclose the amounts of each of the following types of costs for each year for which a complete set of financial statements is presented (whether those costs are capitalized or charged to expense at the time they are incurred under the provisions of paragraphs .015-.026). As defined in the paragraphs cited, exploration, development, and production costs *include* depreciation of support equipment and facilities used in those activities and *do not include* the expenditures to acquire support equipment and fa-
cilities. Also, as stated in paragraph .025, production (lifting) costs do not include depreciation, depletion, and amortization of capitalized acquisition, exploration, and development costs.

a. Property acquisition costs (paragraph .015).
b. Exploration costs (paragraph .017).
c. Development costs (paragraph .021).
d. Production (lifting) costs (paragraph .024).

.059 If some or all of those costs are incurred in foreign countries, the amounts shall be disclosed separately for each of the geographic areas for which reserve quantities are disclosed (paragraph .052).

Accounting for Income Taxes

.060 Some costs incurred in an enterprise's oil and gas producing activities enter into the determination of taxable income and pretax accounting income in different periods. A principal example is intangible drilling and development costs, which are deductible in determining taxable income when incurred but which, for successful exploratory wells and for all development wells, are capitalized and amortized for financial accounting purposes under the provisions of this Statement. As another example, some geological and geophysical costs, which are charged to expense when incurred under the provisions of this Statement, are deferred and deducted in subsequent periods for income tax purposes.

.061 Comprehensive interperiod income tax allocation by the deferred method, as described in APB Opinion No. 11 [section 4091], "Accounting for Income Taxes," shall be followed by oil and gas producing companies for intangible drilling and development costs and other costs incurred that enter into the determination of taxable income and pretax accounting income in different periods.

.062 In applying the comprehensive interperiod income tax allocation provision of the preceding paragraph, the possibility that statutory depletion in future periods will reduce or eliminate the amount of income taxes otherwise payable shall not be taken into account. That is, the so-called interaction of book/tax timing differences with any anticipated future excess of statutory depletion allowed as a tax deduction over the amount of cost depletion otherwise allowable as a tax deduction shall not be recognized in determining the appropriate periodic provision for income taxes. Accordingly, the excess of statutory depletion over cost depletion for tax purposes shall be accounted for as a permanent difference.
in the period in which the excess is deducted for income tax purposes; it shall not be anticipated by recognizing interaction.

**Effective Date and Transition**

.063 This Statement shall be effective for financial statements for fiscal years ending after December 25, 1979, although earlier application is encouraged. Accounting changes adopted to conform to the provisions of this Statement, including changes to apply comprehensive interperiod income tax allocation (paragraph .061) and to eliminate the recognition of the interaction of book/tax timing differences with the excess of statutory depletion over cost depletion for tax purposes (paragraph .062), shall be made retroactively by restating the financial statements of prior periods. Financial statements for the fiscal year in which this Statement is first applied, and for interim periods of that year, shall disclose the nature of those accounting changes and their effect on income before extraordinary items, net income, and related per share amounts for each period restated. The disclosures specified by paragraphs .050-.059 shall be made when presenting complete sets of financial statements that have been restated pursuant to the provisions of this paragraph. [As amended, effective for fiscal years beginning after December 15, 1978, by FASB Statement No. 25.] (See section 6022.)

.064 Retroactive application of the provisions of this Statement requires the use of estimates and approximations; a provision that would not have a significant effect on prior years' financial statements need not be retroactively applied. Further, retroactive application of some provisions of this Statement may require the use of estimates of a type that the enterprise had not previously made; information that may have become available some time after the year being restated may be taken into account in making those estimates, except that estimates of quantities of oil and gas reserves that had been made in prior years shall not currently be revised in retrospect.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

BACKGROUND INFORMATION

.065 Financial accounting and reporting for oil and gas producing companies has been debated for many years in the United States by the accounting profession, regulatory agencies, industry groups, and the companies themselves. The principal focus in recent years has been on the two widely different methods of accounting followed by those companies—the full cost method and the successful efforts method.

.066 In 1964, the American Institute of Certified Public Accountants commissioned Robert E. Field, a partner of Price Waterhouse & Co., to study the various accounting methods used by companies in the extractive industries and to make recommendations for consideration by the AICPA Accounting Principles Board in formulating a pronouncement. The study was published by the AICPA in 1969 as Accounting Research Study No. 11, “Financial Reporting in the Extractive Industries.” The recommendations in ARS No. 11 essentially supported the successful efforts method of accounting.

.067 In 1970, the APB asked its Committee on Extractive Industries to (a) study the recommendations in ARS No. 11 and (b) “determine the appropriate accounting practices with the intent of narrowing the different accounting practices in the extractive industries.” In mid-1971, the Committee drafted a proposed APB Opinion dealing only with determination of the appropriate cost center, on the belief that issues associated with the cost center question were at the heart of the full cost/successful efforts controversy. The full APB decided, however, that limiting an Opinion to the cost center question was inappropriate. The APB directed its Committee to prepare a paper containing recommendations on (a) determination of the cost center, (b) accounting for prediscovery and postdiscovery costs, (c) disposition of capitalized costs, and (d) disclosure of supplementary information in financial reports.

.068 The APB Committee paper was published in the fall of 1971 under the title “Accounting and Reporting Practices in the Petroleum Industry.” The paper recommended using the field as the cost center and capitalizing all prediscovery and postdiscovery costs that could be directly associated with oil and gas reserves, including reinstatement of the costs of exploratory dry holes initially written off but later determined to be in a field. The APB sched-
uled a public hearing for November 1971, with the Committee paper to serve as the basis for the hearing.

.069 While the APB Committee was deliberating and preparing its paper, the Federal Power Commission was studying the accounting practices of natural gas producing companies subject to its jurisdiction. In October 1970, the FPC issued a proposal to require application of the full cost concept in FPC filings by natural gas companies. During the following thirteen months, the FPC weighed arguments for and against its proposal, including a request from the APB that the FPC delay final action until an APB Opinion could be issued. On November 5, 1971, the FPC issued Order No. 440 adopting the full cost method for mineral leases acquired after October 6, 1969 with each country as a cost center. Petitions for rehearing, which were filed on December 5, 1971, were denied by the FPC in Order No. 440-A issued January 5, 1972.

.070 The APB's public hearing was held on November 22 and 23, 1971. At the hearing, the recommendations in the APB Committee paper were opposed not only by advocates of the full cost method, who viewed the proposal to use the field as the cost center as effectively banning the full cost concept, but also by many advocates of successful efforts accounting, who disagreed with various aspects of the recommendations including, among other things, the capitalization of the costs of development dry holes and those exploratory dry holes determined to be in a field. After the hearing, the APB Committee on Extractive Industries continued to work on a proposed Opinion. The testimony given at that public hearing and the written submissions to the APB have been studied by the FASB.

.071 On July 1, 1973, the FASB succeeded the APB as the private sector accounting standards-setting body. The APB Committee prepared for the FASB a detailed report on its activities entitled "Accounting and Reporting Practices in the Oil and Gas Industry." That report is reprinted as an appendix to the FASB Discussion Memorandum on the project.

.072 In January 1973, a group of oil and gas producing companies that use the full cost method formed the Ad Hoc Committee (Petroleum Companies) on Full Cost Accounting. That Committee commissioned a research study by John H. Myers, Professor of Accounting at Indiana University. The study, entitled Full Cost vs. Successful Efforts in Petroleum Accounting: An
Empirical Approach, was published in 1974. Dr. Myers simulated the results of accounting for various types of transactions under each of the two methods and concluded that full cost accounting together with disclosure of data on oil and gas reserves better serves the needs of users of financial statements.

In 1975, Congress substantially reduced or eliminated the percentage depletion deduction for many oil and gas producing companies, which led to the issuance in October 1975 of FASB Statement No. 9.

The FASB did not place accounting and reporting in the extractive industries on its initial technical agenda in 1973, but the foreign oil embargo of that year and the resulting substantial increases in world oil prices aroused great interest in the oil and gas industry on the part of both the American public and the federal government. With other energy legislation enacted or under active consideration by Congress, the FASB decided that accounting by oil and gas producing companies should receive high priority. In October 1975, it added to its technical agenda a project entitled “Financial Accounting and Reporting in the Extractive Industries.”

In December 1975, President Gerald R. Ford signed Public Law 94-163, the Energy Policy and Conservation Act [42 U.S. Code, Sec. 6383]. Title V, Section 503 of the Act empowers the Securities and Exchange Commission either:

to prescribe rules applicable to persons engaged in the production of crude oil or natural gas, or make effective by recognition, or by other appropriate means indicating a determination to rely on, accounting practices developed by the Financial Accounting Standards Board, if the Securities and Exchange Commission is assured that such practice will be observed by persons engaged in the production of crude oil or natural gas to the same extent as would result if the Securities and Exchange Commission had prescribed such practices by rule.

The effect of Section 503 is to require that the contemplated accounting practices be developed by December 22, 1977 (24 months after the Act was signed into law) for all persons engaged either exclusively or partially in the production of crude oil or natural gas in the United States. The Act requires the SEC to provide an opportunity for interested persons to submit written comments on whether the Commission should recognize or otherwise rely on the standards developed by the FASB. That comment period can be after December 22, 1977.
The Act further provides that the SEC shall assure that the accounting practices developed pursuant to Section 503 will, to the greatest extent practicable, permit the compilation of a national energy data base consisting of the following data with domestic and foreign operations treated separately:

1. The separate calculation of capital, revenue, and operating cost information pertaining to—
   (A) prospecting,
   (B) acquisition,
   (C) exploration,
   (D) development, and
   (E) production,
   including geological and geophysical costs, carrying costs, unsuccessful exploratory drilling costs, intangible drilling and development costs on productive wells, the cost of unsuccessful development wells, and the cost of acquiring oil and gas reserves by means other than development. Any such calculation shall take into account disposition of capitalized costs, contractual arrangements involving special conveyance of rights and joint operations, differences between book and tax income, and prices used in the transfer of products or other assets from one person to any other person, including a person controlled by, controlling, or under common control with such person.

2. The full presentation of the financial information of persons engaged in the production of crude oil or natural gas, including—
   (A) disclosure of reserves and operating activities, both domestic and foreign, to facilitate evaluation of financial effort and result; and
   (B) classification of financial information by function to facilitate correlation with reserve and operating statistics, both domestic and foreign.

3. Such other information, projections, and relationships of collected data as shall be necessary to facilitate the compilation of such data base.

The Board is issuing this Statement under its authority, which exists entirely apart from the Act, and also to assist the SEC in carrying out its obligations as contemplated by Congress under the Act as well as under the federal securities laws.

The FASB appointed a task force of 18 persons in December 1975 to counsel the Board in preparing a Discussion Memorandum analyzing issues related to the project. Members of the task force came from the oil and gas industry, petroleum geology and engineering, other extractive industries, public accounting, banking, securities underwriting, and academe. Professor Horace R. Brock of North Texas State University was engaged by the Board to serve as chairman of the task force and consult-
ant to the Board during the preparation of the Discussion Memorandum. Meetings of the task force were attended by observers from the following federal agencies and Congressional committee:

a. Cost Accounting Standards Board.

b. Federal Energy Administration.

e. Oversight and Investigations Subcommittee of the Committee on Interstate and Foreign Commerce, United States House of Representatives.

f. United States General Accounting Office.

.080 The task force held its initial meeting in January 1976. Three additional meetings were held during that year. Much of the work of the task force was accomplished by correspondence, with task force members providing the Board with a significant amount of input concerning the accounting and reporting issues that they believed should be addressed in this project. Drafts of all sections of the Discussion Memorandum were sent to task force members and observers for written comment. Although the chairman of the task force and members of the staff of the FASB assumed primary responsibility for drafting the Discussion Memorandum, some sections were initially drafted by task force members expert on the particular matter being discussed.

.081 In February 1976, the FASB concluded, on the basis of a task force recommendation, that the Discussion Memorandum should not be restricted to only the oil and gas industry, but should cover accounting and reporting issues relevant to companies engaged in the search for and production of all wasting (nonregenerative) natural resources. That recommendation was not unanimously supported by the task force. Some members believed that it would be preferable to focus initially on the oil and gas industry, as the APB Committee on Extractive Industries had done. Those members were also concerned that broadening the study could blur important distinctions between oil and gas companies and other extractive industries. The FASB, in accepting the recommendation of a majority of the task force members, concluded that apparent similarities of operations among extractive industries warranted the inclusion of all such industries in the scope of the Discussion Memorandum. The Board noted in the Discussion
Memorandum, however, that inclusion of all extractive industries within the scope of the project at that stage did not mean that the Board intended to issue a single Statement covering all of those industries.

.082 On March 23, 1976, the SEC issued Accounting Series Release No. 190 amending Regulation S-X to require companies that meet specified size tests to disclose certain replacement cost data relating to "inventories" and "productive capacity" in financial statements filed with the Commission for fiscal years ending on or after December 25, 1976. In that Release, the SEC delayed for one year the effective date of the required replacement cost disclosures for "mineral resource assets." SEC Staff Accounting Bulletin No. 10 defines mineral resource assets as "those costs shown on the balance sheet representing assets which are directly associated with and which derive value from mineral reserves." In June 1977, the American Petroleum Institute published and submitted to the SEC a study by Professors Glenn A. Welsch and Edward B. Deakin, of the University of Texas at Austin, entitled Measuring and Reporting the "Replacement" Cost of Oil and Gas Reserves. In transmitting the study to the SEC, the API stated its view that "the concept of replacement cost as envisioned in ASR 190 is not applicable to oil and gas reserves" and urged the SEC to "permanently exempt oil and gas reserves from replacement cost disclosure."

.083 On May 12, 1976, the SEC issued Securities Act Release No. 5706, which requires that information relating to oil and gas properties, reserves, and production be disclosed in registration statements, proxy statements, and reports filed with the Commission.

.084 In preparing the Discussion Memorandum, the task force and the Board considered many research studies and other publications in addition to ARS No. 11 and the study by Dr. Myers, including the proceedings of the APB's public hearing and studies of accounting and reporting practices in the extractive industries by public accounting firms and industry associations. Approximately 100 recent (generally post-1968) publications on accounting and reporting in the extractive industries were reviewed by the FASB staff; a bibliography is included as an appendix to the Discussion Memorandum. Copies of those publications are in the FASB library.

.085 The Board issued the Discussion Memorandum on December 23, 1976 with written comments due by March 7, 1977. In
response to the Discussion Memorandum, the Board received 140 position papers, letters of comment, and outlines (totalling approximately 2,600 pages), copies of which have been available for inspection at the Board’s offices since March 14, 1977 and are available for purchase. Copies were made available to each of the observer groups identified in paragraph .079.

.086 On January 31, 1977, in Securities Act Release No. 5801, the SEC called attention to publication of the FASB Discussion Memorandum and encouraged interested parties to obtain and comment on the Memorandum and to participate in the FASB public hearing. The Release states that “the Commission, consistent with its policy most recently expressed in Accounting Series Release No. 150, contemplates that the Financial Accounting Standards Board (FASB) will be providing the leadership in establishing financial accounting principles and standards for producers of oil and gas.” A part of one of the chapters in the Discussion Memorandum was prepared by the staff of the SEC. It considers matters relating to the SEC’s responsibilities regarding the national energy data base.

.087 The Board held a public hearing on the subject on March 30 and 31 and April 1 and 4, 1977. Thirty-nine presentations were made at the hearing. A transcript of the hearing (nearly 1,000 pages in length) is available for inspection or purchase. Copies were made available to each of the observer groups identified in paragraph .079.

.088 Seven days of concentrated preparatory sessions were held by the Board prior to deliberations on the issues. Those sessions were devoted to detailed examination of (a) the nature of acquisition, exploration, development, and production activities in the oil and gas industry; (b) the features and variations of the full cost method, the successful efforts method, discovery value accounting, and current value accounting; (c) reserve definitions and measurement; (d) reserve valuation; and (e) mineral property conveyances and contracts. Outside experts were invited to make presentations or otherwise assist the Board’s staff in conducting the sessions. Those experts, eight of whom were task force members, included petroleum engineers and geologists, public accountants, corporate executives from the oil and gas industry, and academicians.

.089 Subsequent to issuance of the Discussion Memorandum, the Board and its staff have maintained close contact with representatives of the SEC who, in turn, have been in contact with the other government agencies concerned with implementing the Energy Policy and Conservation Act and other federal energy legislation,
with the mutual objective of keeping all parties informed of the others' activities regarding accounting and reporting by oil and gas producing companies. That close contact has continued after issuance of the FASB's Exposure Draft.

.090 In addition to the Discussion Memorandum and the research studies and other publications mentioned earlier in paragraph .084, two other research efforts were undertaken at the Board's request during its deliberations on the Exposure Draft:

a. Academic consultants conducted interviews to ascertain how investment and credit decisions regarding oil and gas producing companies are reached. The 24 interviewees included loan officers of large and small banks that make loans to large and small oil and gas companies, bank trust department officers, institutional securities underwriters for both large and small companies, securities analysts, and an officer of a bond rating agency. The selection of interviewees from both the Northeast and the Southwest was designed to include organizations that invest or recommend investments in small as well as large companies. While the limited number of interviews did not provide conclusive evidence, the majority of interviewees indicated that the method of accounting would not affect their investment and credit decisions regarding oil and gas producing companies. The key factor in the decisions of a number of interviewees was their own valuations of oil and gas reserves and other assets; others relied heavily on cash flow data rather than earnings; still others took into consideration the method of accounting when evaluating earnings. Several interviewees believed that reduced earnings from accounting changes probably affected some investors and thus could adversely affect some stock prices.

b. A study was made of how FASB Statement No. 9 was applied in practice. The study found no relationship between the way that Statement was applied and the method of accounting employed or company size.

.091 On June 20, 1977, the SEC issued Securities Act Release No. 5837 soliciting comments in connection with the Commission's responsibilities under the Energy Policy and Conservation Act to assure the development and observance of accounting practices to be followed by U.S. producers of crude oil and natural gas. That Release not only raised questions relating to the reporting of financial and operating data to the Federal Energy Administrator but also solicited comments about the extent to which that data should
be “included in filings with the Commission in a manner which would require independent public accountants reporting on registrants’ financial statements to be associated with the data.” The Release indicated that “the Commission recognizes that the FASB is considering for inclusion in its proposed standard the disclosure of functional financial data and information on oil and gas reserves. The Commission will be cognizant of the FASB’s conclusions in this area and will attempt to coordinate the reporting requirements pursuant to the Act and any revisions proposed to the disclosure requirements under the Securities Acts with the disclosures required in financial statements by the FASB. Reporting pursuant to the Act and any changes to the Commission’s disclosure rules may encompass matters . . . in addition to or in greater detail than those required by the FASB.”

.092 The Board issued an Exposure Draft of a proposed Statement on “Financial Accounting and Reporting by Oil and Gas Producing Companies” on July 15, 1977. It received letters of comment on the Exposure Draft from 195 respondents (totalling approximately 1,300 pages). Copies of the letters were made available to each of the observer groups identified in paragraph .079.

.093 After the Exposure Draft was issued, two additional research studies were conducted at the Board's request:

a. A research consultant, with assistance from the FASB staff, studied the effect of the Exposure Draft on the market prices of common stock issued by both full cost and successful efforts oil and gas producing companies. The research was conducted by Professor Thomas R. Dyckman of Cornell University, using data part of which was supplied by the FASB staff. Two research methodologies were employed. The first required two samples of equal size and was applied to companies that derive more than 50 percent of their revenue from exploration and production activities. The market prices of common shares issued by 22 full cost companies and 22 successful efforts companies were studied for the 11 weeks before and the 11 weeks after the Exposure Draft was issued. The study did not find statistically significant evidence that issuance of the Exposure Draft affected the market prices of securities issued by the full cost companies as compared to those of the successful efforts companies—except for some possible effect on the full cost companies during the week preceding and the week of issuance of the Exposure Draft, but the market soon adjusted, and evidence of a permanent or lingering effect was not found. The second methodology
employed different underlying statistical procedures and was applied to broader samples. Those samples were not limited to companies engaged primarily in exploration and production but were limited to oil and gas companies with annual revenues less than $1 billion each. The samples included 65 full cost companies and 40 successful efforts companies. Again, the evidence did not support the hypothesis that the prices of shares issued by full cost companies were adversely affected, other than for a very brief period, by issuance of the Exposure Draft. Both Professor Dyckman and the Board recognize that statistical testing may not necessarily be conclusive. Following issuance of this Statement, the Board will undertake a similar study with respect to whether this Statement adversely affects the market prices of securities of oil and gas producing companies that heretofore had been using the full cost method as compared to those that had been using the successful efforts method.

b. The Board commissioned a telephone interview survey of senior executive officers of 27 relatively small and medium sized, publicly traded, successful efforts oil and gas producing companies (with annual revenues ranging from $1 million to $441 million, average $68 million). No large integrated oil and gas companies were included. The study was conducted under the direction of Professor Horace R. Brock of North Texas State University. The purpose of the survey was to ascertain whether, in the judgment of those corporate officers, the use of the successful efforts method of accounting has had any negative effect on the ability of their companies to raise the capital necessary to finance their exploration and production activities. Most of the surveyed companies have raised capital externally during the past 10 years from one or more of the following sources: public issue of debt securities, public issue of equity securities, private placement of securities, special conveyances, borrowing from a local bank, international bank, or insurance company, and sale of participations in individual projects. None of the executive officers surveyed indicated that the company's use of successful efforts accounting had hindered its ability to raise capital. Four of the officers did indicate an uncertainty as to whether their continued use of the successful efforts method would affect their ability to raise capital in the future.

.094 On August 31, 1977, the SEC issued Securities Act Release No. 5861 proposing to amend the Commission's regulations to incorporate therein the accounting standards set forth in the FASB
Exposure Draft. The Commission stated that the reason for the proposal is to place the Commission in a position to adopt by December 22, 1977 financial accounting and reporting standards for oil and gas producing activities in the unlikely event that the FASB has not adopted final standards by that date. The Release states that the proposed standards would be applicable to both (1) persons filing reports with the Department of Energy and (2) filings with the Commission under federal securities laws. The Commission stated that it proposed the rules pursuant to its authority under the Energy Policy and Conservation Act and the federal securities laws. The Release deals only with accounting standards and does not address disclosure matters.

On October 26, 1977, the SEC issued two Releases dealing with disclosures by oil and gas producing companies. The first Release, Securities Act Release No. 5877, proposes to amend the Commission's regulations to provide for disclosure in financial statements of certain operating and financial data relating to oil and gas producing activities. Like the proposal mentioned in the preceding paragraph, the disclosure standards proposed in this Release would apply both to (1) filings with the Commission pursuant to federal securities laws and (2) reports filed with the Department of Energy pursuant to the Energy Policy and Conservation Act. The SEC's proposed disclosures are generally the same as those proposed in the FASB Exposure Draft.

The second SEC Release of October 26, 1977, Securities Act Release No. 5878, deals with replacement cost disclosures for mineral resource assets. The Release proposes (1) to rescind the requirement adopted in ASR No. 190 for certain registrants to disclose replacement cost information about their mineral resource assets employed in oil and gas producing activities (see paragraph .082 of this Statement) and (2) to require, instead, that registrants with mineral resource assets employed in oil and gas producing activities disclose information based on the present value of future net revenues from estimated production of proved oil and gas reserves. The Release points out that "the proposed disclosures cannot be described as replacement cost information; however, they would provide information on the differences between the historical costs associated with proved oil and gas reserves shown in the financial statements and the future net revenues to be derived from these reserves." That proposal would be effective in filings covering fiscal years end-
Special Industry Applications

ing on or after December 25, 1978. Comments on the proposal are to be submitted to the Commission by March 31, 1978.

Appendix B

BASIS FOR CONCLUSIONS

.097 This Appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including alternatives considered and reasons for accepting some and rejecting others.

Scope

.098 Although the Discussion Memorandum for this project analyzed issues and solicited comments on accounting and reporting by companies in all extractive industries, this Statement applies only to the oil and gas producing industry as had been proposed in the Exposure Draft. Some respondents to the Discussion Memorandum and the Exposure Draft said that the mining industries are sufficiently different from the oil and gas industry to warrant separate pronouncements. For instance, some said that in the mining industries the principal emphasis is on the development and operation of existing mines and known deposits whereas in the oil and gas industry the principal emphasis is on the search for new mineral deposits. Also, some respondents said that mining operations involve substantially lower exploration and acquisition costs and substantially higher development and production costs relative to the oil and gas industry, which, they claimed, is characterized by high finding costs and a high proportion of unsuccessful search activities. In the view of those respondents, discovery is the critical event leading to the production of oil and gas whereas development and extraction are the critical events for most other minerals. Many who favored separating the oil and gas industry from other extractive industries pointed out also that the full cost versus successful efforts controversy has little significance in the mining industry while it is the primary issue for the oil and gas industry. Still others noted that there is greater uniformity in current accounting practices within the mining industries than within the oil and gas industry. Thus, they took the position that current generally accepted accounting principles are adequate for the mining industries and do not require the attention of the FASB at this time. The Board has not yet examined in depth those and other claimed dissimilarities between the oil and gas industry and other extractive industries; nor has it decided whether there is a need to address the other extractive industries in a separate pronouncement.
.099 In response to questions raised in letters of comment on the Exposure Draft, paragraph .007 indicates that this Statement does not deal with accounting for interest costs because that matter is being addressed in another Board agenda project.

The Four Basic Accounting Alternatives

.100 Four basic methods of accounting for a company's oil and gas producing activities were considered by the Board:

a. Full costing.

b. Successful efforts costing.

c. Discovery value accounting.

The principal features of each of those four methods, and variations within each method, are described in paragraphs .104-.127.

.101 Both full costing and successful efforts costing have been considered as conforming to generally accepted accounting principles, and both, in various forms, are widely used today. Discovery value accounting and current value accounting are both proposals that are not presently followed by oil and gas producing companies or by other companies (except in a few specialized industries and then only for certain assets with readily determinable market prices) in preparing their financial statements. The full costing method came into use around 1960 and only since the late 1960s has become widely used. A 1973 survey of nearly 300 oil and gas companies found that roughly half used full cost accounting and half used successful efforts costing. A 1972 survey showed that companies employing the successful efforts method account for approximately 87 percent of U.S. oil and gas production, indicating that full costing has been adopted by relatively more small and medium sized companies than large companies. Testimony given at the Board's public hearing by a spokesperson for an association of independent petroleum producers indicated

---

Basic Differences between Full Costing and Successful Efforts Costing

.102 The principal difference between full costing and successful efforts costing concerns costs that cannot be directly related to the discovery of specific oil and gas reserves. Under full costing those costs are carried forward to future periods as costs of oil and gas reserves generally; under successful efforts costing those costs are charged to expense. Full costing regards the costs of unsuccessful acquisition and exploration activities as necessary for the discovery of reserves. All of those costs are incurred with the knowledge that many of a company's prospects will not result directly in the discovery of reserves. However, the company expects that the benefits obtained from those prospects that do prove successful together with the benefits from past discoveries will be adequate to recover the costs of all activities, both successful and unsuccessful, and will result in an ultimate profit. Thus, all costs incurred in oil and gas producing activities are regarded as integral to the acquisition, discovery, and development of whatever reserves ultimately result from the efforts as a whole, and are thus associated with the company's reserves. Establishing a direct cause-and-effect relationship between costs incurred and specific reserves discovered is not relevant to full costing. Under successful efforts costing, however, except for acquisition costs of properties, a direct relationship between costs incurred and specific reserves discovered is required before costs are identified with assets; costs of acquisition and exploration activities that are known not to have resulted in the discovery of reserves are charged to expense.

.103 Although many variations exist within the successful efforts method, two principal approaches can be identified. One approach relies on an "area-of-interest" (or "project" or "prospect") as a cost center because the oil and gas reserves in that area-of-interest are deemed to represent the asset for which cost is determined. Under that approach, all costs incurred within that cost center are capitalized; if the area-of-interest is abandoned, the costs are charged to expense; if the area-of-interest proves successful, the capitalized costs are amortized as the reserves are produced. The second approach does not rely on a cost center for capitalization purposes; the accounting treatment is determined by the nature of the costs at the time they are incurred. This approach does not assign costs to oil and gas reserves until they are extracted; prior to then, this approach regards properties, wells, equipment,
and facilities as the assets to which costs relate. Under one variation of this approach, all exploratory costs are charged to expense when incurred, but the cost of an exploratory well is later capitalized by reinstatement if the well is successful. Under the other variation, all exploration costs except the costs of exploratory wells are charged to expense when incurred; the costs of exploratory wells are capitalized as "construction-in-progress" when incurred, to be expensed later if the well is determined to be unsuccessful.

Principal Features of Full Costing

.104 Under the full cost concept, all costs incurred in acquiring, exploring, and developing properties within a relatively large geopolitical (as opposed to geological) cost center (such as a country) are capitalized when incurred and are amortized as mineral reserves in the cost center are produced, subject to a limitation that the capitalized costs not exceed the value of those reserves.

.105 Many variations of the full cost method exist, one of which is in the selection of the cost center. Under the broadest concept of full costing, all acquisition, exploration, and development costs wherever and whenever incurred are capitalized and amortized on a pro rata basis over the production of all of the company's oil and gas reserves wherever and whenever discovered, subject to the aforementioned limitation. This approach is referred to as using a company-wide cost center. Most companies that use full costing, however, adopt a country or a continent as the cost center.

.106 If full costing is applied on a less-than-company-wide basis, the limitation (sometimes called a ceiling) on capitalized costs generally is applied separately to each cost center, though sometimes the comparison of unamortized capitalized costs and reserve values is made on the basis of groups of cost centers or on a company-wide basis. Variations also exist in the categories of reserves used in computing the limitation and in the methods of valuing those reserves.

.107 Under the full cost concept, acquisition, exploration, and development costs are sometimes included in the pool of capitalized costs associated with a cost center when incurred, so that if the cost center is producing, those costs are subject to amortization at once. In some cases, however, certain significant costs, such as those associated with offshore U.S. operations, are de-
ferred separately without amortization until the specific property to which they relate is found to be either productive or nonproductive, at which time those deferred costs and any reserves attributable to the property are included in the computation of amortization in the cost center.

.108 Although most proponents of full costing indicate that the reserve value limitation is an essential condition for use of that method, preproduction costs incurred in a nonproducing cost center (for example, a country or continent in which the company has only recently begun its first exploration activity) are sometimes capitalized without regard to a limitation or ceiling test, based on the expectation that reserves will be discovered in the future sufficient to assure recovery of the capitalized costs.

.109 Under full costing and in many cases under successful efforts costing (if the amortization base comprises a number of properties), the unamortized costs relating to a property that is surrendered, abandoned, or otherwise disposed of are accounted for as an adjustment of accumulated amortization, rather than as a gain or loss that enters into the determination of net income, until all of the properties constituting the amortization base are disposed of, at which point gain or loss is recognized. Under full costing, the amortization base is normally a very large cost center—country or continent—whereas under successful efforts costing it is usually either individual properties or groups of properties with a common geological structural feature or stratigraphic condition. Therefore, recognition of gain or loss on abandonment of properties is more likely to be delayed under full costing than under successful efforts costing, although some proponents of full costing would recognize certain unusual or significant losses even before activities in an entire country or continent are discontinued.

.110 Variations within both the full cost method and the successful efforts method exist in (a) the categories of reserves used in computing amortization, (b) whether future development costs are anticipated if capitalized acquisition, exploration, or development costs are amortized on the basis of all proved reserves, (c) the extent to which properties are aggregated for amortization purposes, (d) the bases for determining amortization rates if oil and gas are jointly produced, (e) the categories of reserves and methods of valuation used in computing a limitation on capitalized costs, and (f) allocation of overhead.
Principal Features of Successful Efforts Costing

.111 Under successful efforts costing, except for acquisition costs of properties, a direct relationship between costs incurred and specific reserves discovered is required before costs are identified with assets. An acquired property is regarded as an asset until either a determination is made that it does not contain oil and gas reserves or the property is surrendered. Capitalized costs relating to producing properties are amortized as the reserves underlying those properties are produced.

.112 Many variations of successful efforts accounting exist. As noted in paragraph .103, a conceptual difference centers around the role of the cost center—whether a cost center is needed for cost capitalization purposes or only to compute amortization. For example, some proponents of successful efforts accounting would capitalize all geological and geophysical costs and, possibly, all carrying costs relating to a cost center, such as an area-of-interest, on grounds that any mineral reserves in the cost center represent the asset with which the costs are associated. If mineral reserves are found in that area-of-interest, those capitalized costs are carried forward as the costs of those reserves; otherwise, they are charged to expense. Those proponents of successful efforts thus rely in part on the concept of a cost center for the capitalize/expense decision. Others who favor successful efforts accounting would use a cost center, such as a field or a lease, only for purposes of amortizing costs. They would let the nature of the cost govern the capitalize/expense decision. For example, they might charge all G&G costs and all carrying costs to expense, based on the belief that such costs result in no identifiable future benefits, but they would capitalize all lease bonus expenditures on the basis that an asset (the right to explore for and extract oil and gas) has been acquired.

.113 With respect to property acquisition costs, relatively minor variations exist within the successful efforts method concerning the extent to which such items as brokers’ fees, recording fees, legal costs, other direct costs, and allocations of indirect costs are considered acquisition costs. Those minor variations aside, virtually all advocates of successful efforts accounting capitalize all property acquisition costs when incurred, though different accounting methods are used to dispose of those costs subsequent to capitalization.

.114 Under successful efforts accounting, different methods are sometimes used to account for preacquisition and postacquisition
geological and geophysical costs. With respect to preacquisition G&G, some expense all such costs when incurred; others capitalize preacquisition G&G to the extent that those costs can be related to acquired properties and expense all other such costs. Some follow a practice of reinstating costs charged to expense in a prior period based on events and experience in subsequent periods. Others do not. With respect to postacquisition G&G, alternatives include (a) capitalize all postacquisition G&G as part of the cost of the acquired properties to which the G&G costs relate; (b) charge it all to expense when incurred; and (c) charge it all to expense when incurred but reinstate those costs that relate to reserves that are found. Some persons would capitalize only post-discovery G&G while expensing when incurred all other postacquisition G&G as well as the preacquisition G&G.

.115 At least two variations can be identified in accounting for the costs of carrying undeveloped properties (delay rentals, ad valorem taxes, etc.) under successful efforts accounting: (a) charge all to expense as incurred and (b) charge to expense as incurred but reinstate if subsequently associable with an area-of-interest in which reserves are found.

.116 Some proponents of the successful efforts method defer all exploratory drilling costs as “construction-in-progress” for a period of time until a determination has been made whether reserves have been found, at which time the costs of dry holes are charged to expense. Others expense all exploratory drilling costs as incurred but reinstate costs relating to any reserves that are discovered. The costs of drilling a stratigraphic test well, which is drilled solely to obtain geological information and is not customarily intended to be completed as a producing well, are sometimes charged to expense when incurred; alternatively, those costs are sometimes capitalized to the extent that reserves are found (even though the well is not intended to be used to produce those reserves), with the costs of such wells that did not find reserves charged to expense when that determination is made.

.117 The principal alternative with respect to accounting for development costs within a successful efforts framework concerns the treatment of development dry holes. Some proponents of successful efforts accounting capitalize the costs of drilling unsuccessful development wells on grounds that those costs were incurred as part of the capital investment required to extract reserves that were previously discovered. On the other hand, many
successful efforts proponents take the position that those costs should be charged to expense on the basis that any dry hole, whether exploratory or development, has no future benefit. With respect to other development costs, some companies capitalize all while other companies—principally the smaller and closely held companies—follow the income tax accounting treatment under which intangible development costs are charged to expense as incurred.

.118 Whether capitalized preproduction costs are amortized or otherwise written off before production begins is another area of difference within the successful efforts method. Some companies do not amortize any capitalized costs until production of the related reserves begins. If reserves are not found, the entire cost is written off when the property is surrendered. A variety of methods is used by those companies that do amortize costs before production begins. A distinction normally is made between (a) acquisition costs of unproved properties and (b) preproduction costs relating to properties that become proved. Some companies amortize the acquisition costs of unproved properties or provide an allowance for impairment; other companies carry unproved properties at their cost without regard to diminution of value until either reserves are found or the property is surrendered. With respect to the capitalized preproduction costs relating to proved properties, amortization generally does not begin until production commences. Reinstatement of costs is another accounting alternative, and whether to establish a limitation on capitalized costs of proved properties is yet another area of difference.

.119 A number of other variations within the successful efforts method (which are also variations within full costing) were noted in paragraph .110.

Principal Features of Discovery Value Accounting

.120 Under discovery value accounting as it has generally been proposed, mineral reserves would be recorded at their estimated value when the reserves are discovered or, alternatively, when the reserves are developed. Property acquisition costs and other prediscovery costs generally would be deferred and written off when the areas to which the costs apply have been explored and the underlying reserves, if any, evaluated. Subsequent to discovery, the carrying amount of the reserves would not be adjusted for changes in prices; however, the carrying amount would be adjusted for revisions of estimated reserve quantities. The discov-
cry value would be treated as revenue from the oil and gas exploration activities of the enterprise and would become the recorded value ("cost") of reserves for future accounting purposes. Those discovery value amounts would then be amortized against the revenues resulting from the production and sale of the minerals.

.121 Several variations of discovery value accounting have been proposed. If only proved developed reserves are included in the value computation, generally all development costs associated with the reserves will have been incurred; if additional development costs are incurred, the value of any incremental quantity of reserves discovered is recorded and, simultaneously, the related costs are written off. If undeveloped reserves are included in the value computation, an adjustment must be made for the expected future development costs (generally by reducing the value otherwise attributable to the reserves in the ground). When the development costs are eventually incurred, it is generally proposed that they be added to the carrying value of the reserves.

.122 Determination of the value of oil and gas reserves is critical to both discovery value accounting and current value accounting. Four principal valuation methods that might be used to measure the value of reserves (and other assets) were discussed at length in paragraphs 436-466 of the Discussion Memorandum. Briefly summarized, they are:

a. **Current cost.** Current cost is the amount of cash or its equivalent that would have to be paid if the same asset were acquired currently. The "same asset" may be an identical asset (current reproduction cost or current cost of replacement in kind) or an asset with equivalent productive capacity (current replacement cost).

b. **Current exit value in orderly liquidation.** Current exit value in orderly liquidation is the net amount of cash that could be obtained currently by selling the asset in orderly liquidation (current market value, if a market exists). The value of mineral reserves on a current exit value basis would equal the price at which the reserves could be sold in place by a willing seller to a willing buyer, neither being under any compulsion to sell or buy, both being competent and having reasonable knowledge of the facts.

c. **Expected exit value in due course of business.** Expected exit value in due course of business is the nondiscounted amount of
Special Industry Applications

cash or its equivalent into which an asset is expected to be converted in the due course of business less the direct costs necessary to make that conversion (sometimes referred to as net realizable value). The value of mineral reserves on this basis would be an amount equal to the estimated net cash flows attributable to the reserves.

d. Present value of expected cash flows. The present value of expected cash flows is the present value of future cash inflows into which an asset is expected to be converted in the due course of business, less the present value of cash outflows necessary to obtain those inflows. Present value measurements require information about estimated amounts of future cash inflows and outflows, the timing of those expected cash flows, and the appropriate discount rate. Various discount rates that have been proposed include the (i) rate applicable to long-term government bonds issued by the government of the country in which the reserves are located, (ii) prime rate, (iii) company's weighted average or incremental long-term borrowing rate, (iv) company's weighted average cost of capital, and (v) discount rate used by company management internally to make individual investment decisions.

.123 Considerable disagreement exists as to which of those methods, if any, are suitable for valuation of oil and gas reserves, either at the time of discovery or subsequently. Also, under discovery value accounting, a decision must be made as to which categories of reserves enter into the value computation.

.124 Some discovery value accounting proponents would report the value of periodic discoveries of reserves as operating income. Others would segregate the discovery value from realized revenues and gains reported in the income statement. Still others would report the discovery values in a special unrealized income section of stockholders' equity in the balance sheet until realized through the actual production and sale of oil and gas.

Principal Features of Current Value Accounting

.125 Current value accounting involves the continuous use in the financial statements of one of the four methods of valuation identified in paragraph .122, or some other method. (Current value accounting could, of course, be applied to all of an enterprise's assets and liabilities, not just oil and gas reserves, but applying current value accounting beyond oil and gas reserves was not included in the scope of this project. Alternative methods of
measurement are to be considered in the Board's project to develop a conceptual framework for financial accounting and reporting.)

.126 Most proponents of current value accounting for oil and gas reserves believe that the reserves should be valued at each financial statement date using the most current information available. Some proponents suggest that periodic changes in reserve values should be reflected directly in the income statement; others would report value changes directly in the stockholders' equity section of the balance sheet, perhaps by segregating or otherwise separately identifying the realized and unrealized amounts. Under current value accounting, separate data might be presented for (a) value increases resulting from new discoveries, (b) value changes resulting from adjustment of reserve quantities, and (c) holding gains and losses resulting from revaluing end-of-period reserve quantities to reflect the change in unit value during the period.

.127 As with discovery value accounting, decisions must be made as to which method of valuation should be used and which reserve categories should be included in the current value computations.

**A Single Accounting Method**

.128 The proposal that the two presently accepted accounting methods, full costing and successful efforts costing, be allowed to continue as optional alternatives received little support in the letters of comment submitted to the Board in response to the Discussion Memorandum or in the oral presentations made at the public hearing conducted by the Board before the Exposure Draft was issued. It was principally after the Exposure Draft was issued proposing to proscribe the full costing method that support for retaining both methods was expressed to the Board.

.129 The Board has considered the question of accounting alternatives at length, not only in connection with its oil and gas project but also for other projects on its agenda, and has concluded that differences in accounting may be appropriate when significant differences in facts and circumstances exist, but different accounting among companies for the same types of facts and circumstances impedes comparability of financial statements and significantly detracts from their usefulness to financial statement users.

.130 In the Board's judgment, the facts and circumstances surrounding the search for and development and production of oil and gas do not differ because of the size of a company or whether its securities are publicly traded. Similar types of risks of failure
and potential rewards of success prevail among all companies engaged in oil and gas producing activities; only the magnitude and number of projects vary. Although the scale or location of operations may differ among companies, that should not affect the principles underlying recognition of assets, measurement of the cost of those assets, and measurement of earnings. The costs of exploratory dry holes or abandoned properties, for example, should not be included in the costs of assets for some companies and reported as losses by other companies. Yet if full costing and successful efforts costing were both retained as optional accounting alternatives, different principles of asset recognition and measurement and earnings measurement would be regarded as appropriate for companies whose circumstances are substantially similar.

.131 Some respondents to the Exposure Draft cited the existence of other accounting alternatives—for instance, the use of both the last-in, first-out and the first-in, first-out methods in accounting for inventories—as justification for retaining full costing and successful efforts costing as optional alternatives. The Board does not believe that the availability of alternatives in unrelated areas of accounting should bear on a decision that the Board must make for a project on its agenda. In the Board's judgment, accounting for similar circumstances similarly and for different circumstances differently is a desirable objective in establishing standards of financial accounting and reporting. For that reason, the Board rejected the proposal, made by some respondents to the Exposure Draft, that intercompany comparability be achieved by footnote disclosure with retention of both full costing and successful efforts costing. Also, for that reason, the Board rejected the proposal that it simply “clean up” the many variations in full costing and the many variations in successful efforts costing presently used in practice by mandating only one acceptable approach to full costing and one acceptable approach to successful efforts costing and allowing companies to choose one of those two approaches.

.132 One of the principal criticisms of the work of the FASB's predecessors that led to creation of the FASB was that they did not sufficiently narrow or eliminate free choice accounting alternatives. A report entitled Federal Regulation and Regulatory Reform (the "Moss Report") issued in 1976 by the Subcommittee on Oversight and Investigations of the U.S. House of Representatives and a report entitled The Accounting Establishment (the "Metcalf Report") prepared in 1976 by the staff of the Subcommittee on Reports, Accounting and Management of the U.S. Senate were both strongly critical of the availability of alternative accounting.
principles. In its November 1977 report, “Improving the Ac­
countability of Publicly Owned Corporations and Their Auditors,” Senator Metcalf’s Subcommittee concluded that “uniformity in the
development and application of accounting standards must be a
major goal of the standard-setting system.” Moreover, two major
financial statement user groups—the Financial Accounting Policy
Committee of the Financial Analysts Federation (the national pro­
fessional association of security analysts) and the Robert Morris
Associates (the national professional association of bank lending
officers)—have endorsed elimination of optional accounting alter­
natives not only for oil and gas producing companies but for
other industries as well. The Securities and Exchange Commission,
in Securities Act Release No. 5877 (October 26, 1977), took a
similar position, stating that the Board’s oil and gas project “is
expected to result in significant improvement in financial reporting
through the establishment of uniform accounting standards so that
investors are provided with a valid basis for comparing the financial
statements of different companies.” In the Board’s judgment,
when the same or similar facts and circumstances exist, as they do
in the search for and development of oil and gas reserves, inter­
company comparability requires a single method of accounting.
Comparable reporting by companies competing for capital is, in
the Board’s judgment, in the public interest (see paragraphs .157-
.174).

Reasons for Rejecting Discovery Value Accounting

.133 The Board concluded that financial statements of an oil and
gas producing company should not be prepared on a discovery
value basis for a number of reasons. One group of reasons relates
to problems in measuring the value of reserves with reasonable
accuracy at the point of discovery. Measurements of discovery
value require estimates of (a) the quantity of reserves, (b) the
amount and timing of costs to develop the reserves, (c) the timing
of production of the reserves, (d) the production costs and income
taxes, (e) selling prices, and (f) (for some valuation methods) ap­
propriate discount rates that reflect both an interest element and
a risk factor. Those estimates, in turn, might be based on predic­
tions of changes in government regulations and restrictions (both
domestic and foreign), technological changes (including not only
the technology involved in oil and gas producing activities but
also the technology of transportation, refining, and marketing of
oil and gas products), and domestic and international economic
conditions; or current regulations, technology, and conditions
might be assumed to continue indefinitely. The uncertainties in­
herent in those estimates and predictions tend to make estimates
of reserve values highly subjective and relatively unreliable for
the purpose of providing the basis on which to prepare financial statements of an oil and gas producing company.

.134 Under generally accepted accounting principles followed by companies in nearly all industries, revenue is normally recognized only when the earning process is complete or virtually complete and, then, only after an exchange transaction has taken place. The earning process is the continuum of profit-directed activities by which revenue is earned—purchasing, manufacturing, selling a product or rendering a service, delivery, cash collection, etc. The exchange transaction is the specific point at which the earning process is normally regarded as sufficiently complete to justify accounting recognition of revenue.

.135 Discovery-value accounting recognizes revenue from exploration activities at the point of discovery even though it may be many years until the property is developed and the oil and gas are produced and sold. That is, the earning process is far from complete, at least as completion of that process is generally determined for other industries. Discovery is certainly a critical event in the search for and extraction of oil and gas, but there are many uncertainties standing between discovery of reserves and the ultimate realization of related revenues. Often many years pass, very substantial amounts of money are spent, and significant revisions are made to estimated quantities of reserves discovered.

.136 Exceptions to the general rule for revenue recognition are found in practice today. APB Statement No. 4, "Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises," paragraph 152 [section 1026.16], states:

Sometimes revenue is recognized at the completion of production and before a sale is made. Examples include certain precious metals and farm products with assured sales prices. The assured price, the difficulty in some situations of determining costs of products on hand, and the characteristic of unit interchangeability are reasons given to support this exception.

.137 As noted earlier, reserves often are discovered many years before they are produced, and many dollars often are spent for development and production costs before the oil and gas reserves are extracted. Moreover, while oil and gas may to some extent be regarded as fungible, sales prices, particularly in the present domestic and international economic and regulatory environments, are anything but assured. Thus, the reasons given in support of the special revenue recognition principles for precious metals and farm products that have been produced and have assured sales prices do not apply to oil and gas producing activities.
Proponents of discovery value accounting argue that it provides better information about the success or failure of exploration activities, which activities are the most important ones in oil and gas production. However, discovery value accounting represents a fundamental change from the traditional, historical cost basis of preparing financial statements. Various alternatives to the historical cost measurement basis are under examination as part of the Board's conceptual framework project. Although covered in the Discussion Memorandum for the extractive industries project, valuation methods were addressed by relatively few respondents, and discovery value accounting received only very limited support among respondents. On balance, the Board concluded that estimated discovery values do not provide a satisfactory basis of accounting for oil and gas producing activities for the reasons that (a) values that were current when initially recorded quickly become out-of-date and (b) the mixture of values of minerals measured at different dates of discovery lacks both the verifiability of historical costs and the relevance of current values. The Board believes that issues relating to the accounting measurement basis should await resolution in the conceptual framework project.

Reasons for Rejecting Current Value Accounting

Like discovery value accounting, current value accounting for oil and gas reserves requires estimation of reserve values. The uncertainties inherent in those estimates (discussed in paragraph .133) tend to make them subjective and relatively unreliable for the purpose of providing the underlying basis on which the financial statements of an oil and gas producing company are prepared.

As noted in paragraph .138, the historical cost basis of accounting and certain alternative measurement bases are currently under examination as part of the Board's project on a conceptual framework for financial accounting and reporting. The Board has concluded that it should not attempt to resolve those issues in the narrow context of the extractive industries project.

Moreover, as with discovery value accounting, adoption of current value accounting for oil and gas reserves would require reconsideration of the accounting concept of earnings (discussed in paragraphs .134-137). Decisions would have to be made as to whether the periodic value changes should be reflected in determining earnings or only in the stockholders' equity section of the balance sheet, and whether realized value changes should be treated differently from unrealized. Those issues, too, are part of the Board's conceptual framework project.
Reasons for Accepting Successful Efforts Accounting and for Rejecting Full Costing

.142 None of the assenting or dissenting members of the Board consider it appropriate to capitalize costs of exploration efforts in a geological area in which no reserves are found simply because the company previously discovered valuable reserves in an unrelated geological area.

Successful Efforts Accounting Is Consistent with the Present Accounting Framework

.143 In the presently accepted financial accounting framework, an asset is an economic resource that is expected to provide future benefits, and nonmonetary assets generally are accounted for at the cost to acquire or construct them. Costs that do not relate directly to specific assets having identifiable future benefits normally are not capitalized—no matter how vital those costs may be to the ongoing operations of the enterprise. If costs do not give rise to an asset with identifiable future benefits, they are charged to expense or recognized as a loss.

.144 In the Board’s judgment, successful efforts costing is consistent with that accounting framework, and full costing is not. Under full costing, even costs that are known not to have resulted in identifiable future benefits are nonetheless capitalized as part of the cost of assets to which they have no direct relationship.

.145 In the oil and gas industry, ultimately the expected future benefits that an enterprise is attempting to obtain through its acquisition, exploration, and development activities are represented by oil and gas reserves. But, other than by purchasing minerals-in-place, an enterprise does not acquire reserves directly. Rather, it acquires properties (rights to extract any reserves that may be discovered in the future) and it acquires (develops) systems capable of producing the oil and gas reserves that are discovered. Costs that are known not to relate directly to the discovery of oil and gas reserves or in the development of a system for the extraction of previously discovered reserves should not be capitalized. To capitalize them is inconsistent with the presently accepted accounting framework based on measuring the historical cost of an asset.

.146 Present accounting concepts place boundaries on the assets to be accounted for—boundaries determined by the transaction in which the asset was acquired, by physical attributes of the asset,
by legal attributes of the asset, or by the way in which the asset is used. Full costing aggregates all oil and gas reserves within very broad cost centers (countries or continents), wherever those reserves may be located in the cost center and whenever discovered, and accounts for that aggregation as a single asset. All acquisition, exploration, and development costs incurred in that cost center are deemed to be the cost of the aggregate asset, even if those costs relate to activities that are known not to have been successful in acquiring, discovering, or developing reserves.

.147 The successful efforts method, on the other hand, circumscribes the boundaries of, and accounts separately for, individual assets. Under the “area-of-interest” approach to successful efforts costing, oil and gas reserves located in an individual area-of-interest are the assets accounted for. Under the approach to successful efforts in which no cost center is used for the capitalize/expense decision, individual properties or groups of geologically related properties and wells, equipment, and facilities are the assets accounted for. Either way, boundaries are placed on the assets being accounted for. Only those exploration and development costs that relate directly to specific oil and gas reserves are capitalized; costs that do not relate directly to specific reserves are charged to expense. The successful efforts method of accounting conforms to the traditional concept of the historical cost of an asset.

.148 Under the successful efforts method, certain types of costs may be capitalized as “construction-in-progress” pending further information about the existence of future benefits, but as soon as the additional information becomes available, and it is known whether future benefits exist, those costs are either reclassified as an amortizable asset or charged to expense.

Financial Statements Should Reflect Risk and Unsuccessful Results

.149 The function of the nation’s capital markets is to direct capital to companies and institutions through decisions to invest and lend. Financial accounting and reporting provides one important source of information on which investment, lending, and related decisions are made.

.150 Enterprises seeking capital operate in varying circumstances of possible success or failure. That is, they offer varying degrees of risk and opportunity to those supplying capital. Although in-
vestors and lenders differ among themselves with regard to the risks they are willing to accept, they have one thing in common: They seek a higher expected return for accepting higher risk. Business enterprises seeking capital offer different risks. Capital is equitably allocated if the prices paid are commensurate with the risk.

.151 In the production of oil and gas, significant risks and returns arise in the search for reserves. In other words, discovery of oil and gas reserves is a critical event in determining failure or success, for assessing risks and returns. Because it capitalizes the costs of unsuccessful property acquisitions and unsuccessful exploratory activities as part of the costs of successful acquisitions and activities, full costing tends to obscure failure and risk. Successful efforts accounting, on the other hand, highlights failures and the risks involved in the search for oil and gas reserves by charging to expense costs that are known not to have resulted in identifiable future benefits.

.152 Neither full costing nor successful efforts costing reflects success at the time of discovery. Under both methods, success is reported at the time of sale. It might be said, therefore, that both methods tend to obscure, or at least delay, the reporting of success, but that is the consequence of the historical cost basis of accounting, and its adherence to the realization concept. The obscuring of failure, however, results only from the full cost method. Under successful efforts accounting, unsuccessful costs are charged to expense and not carried forward as assets. In the Board's judgment, financial statements prepared on the successful efforts basis, including disclosures (as required by this Statement) of capitalized costs and costs incurred in oil and gas producing activities (to provide an indication of effort) and of reserve quantities and changes therein (to provide an indication of accomplishment) will provide investors with important information about success as well as failure.

.153 Investors and creditors look to financial statements as an important source of information about companies' risks and returns. Investors and creditors focus on earnings—and in particular on earnings variability—as an indicator of risks and returns. As the Board noted in summarizing its Tentative Conclusions on Objectives of Financial Statements of Business Enterprises:

Earnings (or profits or net income) of a business enterprise are the focal point of the information communicated in financial statements. Earnings are a major motivating force in the economic activities of business enterprises and a major motivating force in the economic activities of those who lend to business enterprises, those who invest in them, and those who manage them. In general, earnings reduce the risk of those who lend funds to an enterprise or acquire its debt securities. Earnings also enable an enterprise to pay cash dividends to those who invest in its equity securities and enhance the prospects for increases in the market price of its stock. Thus, investors and creditors are generally more willing to commit funds to profitable enterprises than to unprofitable ones. Expectations of earnings, often based on a history of earnings, enable an enterprise to obtain both equity and debt financing.

.154 Some persons criticize successful efforts accounting on grounds that a company's earnings tend to fluctuate more under that method than under full cost accounting, depending on the level and degree of success or failure of the company's acquisition and exploration activities in a given accounting period. While fluctuating earnings may, indeed, be a characteristic of successful efforts accounting, it is not a fault. The successful efforts method enables investors and lenders to observe the impact of the risks inherent in oil and gas producing activities on a company's results of operations from period to period.

.155 A similar issue arose in connection with the Board's project on accounting by enterprises in the development stage. The Board concluded in FASB Statement No. 7 [section 2062], "Accounting and Reporting by Development Stage Enterprises," that a development stage enterprise should not be permitted to capitalize costs that would be charged to expense when incurred by an established operating enterprise because to do so would tend to obscure, in financial statements, the impact of risks inherent in starting up a new company.

.156 The same issue has arisen in a number of other Board projects, for example, the projects on self-insurance, catastrophe losses, expropriations, and other contingencies and on foreign currency translation. A basic issue in each of those projects, as it is in the oil and gas project, was whether financial accounting standards should be adopted to normalize or average the effects of events that are inevitable over extended periods but occur at infrequent and relatively unpredictable intervals. Consistent with its conclusion in this Statement, the Board concluded in those projects that financial statements should report the effects of risk and not attempt to normalize them.
Ability to Raise Capital

.157 Many proponents of full costing have said, in written submisions in response to the Discussion Memorandum, at the public hearing, and in comment letters on the Exposure Draft, that adoption of the successful efforts method of accounting will inhibit the ability of oil and gas producing companies to raise capital to finance their exploration activities. In particular, they contend, small exploration companies will have special difficulties in obtaining capital because, under a successful efforts approach, their income statements will be more likely to report earnings fluctuations and in some cases net losses, and their balance sheets could even show cumulative deficits. Potential suppliers of capital will not understand those fluctuations, losses, and deficits, it is argued, and sources of capital will diminish or be more costly. Those results, they say, are at variance with national economic goals. A particular national economic goal they cite is to encourage additional oil and gas exploration.

.158 In the Board's judgment, the arguments put forth by those who say that adoption of successful efforts accounting and proscription of full costing will prevent them from raising the capital needed to finance their exploration and production activities are not persuasive. In a free enterprise economy in which capital is allocated among enterprises largely on the basis of individual investors' decisions, if a company is an economically successful enterprise, it will continue to attract capital. Its financial statements should provide those who supply capital with information that assists them in determining whether the expected returns on that capital are commensurate with the risks involved. In the Board's judgment, financial statements that are prepared in conformity with the provisions of this Statement will provide investors and creditors with that type of information. Many small oil and gas producing companies use the successful efforts method, not full costing; have done so for many years; and have generally been able to obtain capital to finance their exploration activities. Indeed, full costing is a relatively recent development in accounting for oil and gas producing activities. The 1973 survey (cited in paragraph .101 of this Statement), which was sponsored by a group of full costing petroleum companies, identified only one instance of its use prior to 1960, and it was not until the late 1960s that the use of full costing became relatively widespread.

.159 In examining the ability-to-raise-capital issue, the Board focused in particular on three distinct types of small exploration companies:
Financial Accounting and Reporting by Oil and Gas Producing Companies

a. Privately owned exploration companies. (A representative of the Independent Petroleum Association of America at the Board’s public hearing estimated that there are 10,000 such companies in the United States.)

b. Publicly owned exploration companies. (A 1977 list of companies whose securities are registered with the SEC identifies 214 companies in the “petroleum and natural gas extraction” Standard Industrial Classification.)

c. Oil and gas exploration subsidiaries and divisions of companies that are mainly in other lines of business.

.160 As noted in paragraphs .101 and .117, a great many privately owned exploration companies follow federal income tax accounting practices in preparing their financial statements. Income tax accounting is a variation of successful efforts accounting. Those companies have for many years been able to obtain capital from external sources, including loans from local and international banks and insurance companies, from knowledgeable individual investors, and from private placements of securities.

.161 Many publicly owned oil and gas exploration companies follow the successful efforts method. In connection with the research study described in paragraph .093(a) of this Statement, the staff of the FASB identified 79 oil and gas companies that (a) have securities currently traded on a securities exchange or in the over-the-counter market and (b) derive more than 50 percent of their revenue from exploration and production. (The latter criterion eliminates virtually all of the major integrated companies from the group.) Of the publicly owned companies so identified, 41 percent use successful efforts accounting.

.162 Some responses to the Exposure Draft were from companies that are mainly in lines of business other than oil and gas but that have oil and gas exploration subsidiaries and divisions that use the full cost method. A number of the responses came from electric and gas public utility companies with oil and gas exploration subsidiaries recently formed or under active consideration. Those respondents urged retention of full costing for their subsidiaries and divisions on grounds that investors and lenders who supply capital to the enterprise do not regard the enterprise as an oil and gas producing company and thus would not understand the fluctuations of reported earnings or losses that, in their view, would more likely result from using successful efforts accounting, especially by a newly formed exploration subsidiary. In the Board’s judgment, however, that is not an appropriate reason for allowing those subsidiaries and divisions to adopt or continue to use full costing. By choosing to seek the rewards of engaging in oil and
gas exploration activities, those enterprises have assumed the risks associated with the search for oil and gas reserves, and their financial statements should provide information about those risks and not obscure them. Investors and creditors seek a return on their capital commensurate with the risks involved, and financial statements should assist them in assessing those risks. One would expect that those who supply capital for a high-risk activity such as oil and gas exploration would demand a higher return than for capital invested in less risky activity.

.163 The telephone interview survey described in paragraph .093(b) provides additional evidence about the ability of small, publicly owned, successful efforts companies to raise capital. Professor Horace R. Brock of North Texas State University, or a person working under his direction, asked a senior executive officer of each of 27 small, publicly owned, successful efforts companies whether, in the officer's opinion, use of the successful efforts method has affected the company's ability to obtain the capital necessary to finance its exploration and production activities. None of the executive officers surveyed felt that the company's use of successful efforts accounting had hindered its ability to raise capital. Most of the surveyed companies raised capital externally during the past 10 years from public sales of equity and debt securities, loans from banks and insurance companies, private placements, investments by individual investors, or other outside sources. Those corporate officers were also asked whether they felt that their companies were denied access to any particular source of capital and, if so, whether the company's accounting method was a significant factor in any such situation. Again, they said that successful efforts accounting did not adversely affect their companies' ability to obtain capital from a desired source.

.164 Interviews with suppliers of capital to oil and gas producing companies resulted in a similar finding. As described in paragraph .090(a), 24 bank loan officers, bank trust department officers, and securities underwriters, all of whom work directly with oil and gas companies, were interviewed to ascertain how investment and credit decisions regarding such companies are reached. The majority of interviewees indicated that the method of accounting would not affect their investment and credit decisions regarding oil and gas producing companies.

.165 Some who favor retention of full costing argue that use of that method by newly formed exploration companies is essential to their viability, because investors will be disinclined to provide capital to those companies if their financial statements report net
losses from operations and cumulative deficits. The Board found, however, in the course of its deliberations on FASB Statement No. 7 [section 2062], that those who supply capital to companies in the development stage understand the special circumstances of those companies and the possibility that their financial statements will report losses and deficits. In connection with that project, the Board surveyed officers of 15 venture capital companies that provide capital to development stage enterprises (though not necessarily to oil and gas ventures). Those officers said that whether a development stage enterprise defers preoperating costs or charges them to expense has little effect on (a) the amount of venture capital to be provided to that enterprise and (b) the terms under which any venture capital is provided. That survey and related economic impact considerations were supported by a study conducted by the U.S. Department of Commerce, which is described in paragraph 50 of Statement No. 7 [section 2062.50].

.166 Most proponents of full costing indicate that the reserve value ceiling on capitalized costs is an essential condition for use of that method. Except for those new companies that find relatively large quantities of proved reserves in their initial exploration efforts or that purchase interests in proved properties, it seems likely that many new exploration companies would be reporting operating losses and cumulative deficits under full costing as well as under successful efforts costing.

.167 A few respondents to the Exposure Draft have said that their own companies’ property acquisition and exploratory drilling programs would be sharply curtailed if they were forced to change from the full cost method of accounting to the successful efforts method. However, since the prospects of finding commercially recoverable reserves, the prices at which those reserves would be sold, the costs that would be incurred, and the income taxes that would be paid are totally unaffected by the method of accounting for the costs incurred, a decision not to go ahead with an otherwise commercially attractive project simply because successful efforts reporting is required would seem to be unlikely for the vast majority of companies. Conversely, a venture that is not otherwise commercially attractive does not become so simply because a particular method will be used to account for that venture in the company’s financial statements. While a few respondents representing full cost companies did say that their companies would expect to reduce their exploration efforts because successful efforts accounting would reduce reported earnings, other companies that use full costing have said that an FASB Statement mandating successful efforts accounting will not affect their exploration plans.
For example, one such company has publicly stated that while a mandated change to successful efforts accounting would have a substantial effect on previously reported earnings, it would not change the value of the company's assets, its reserves, or its cash flow, and that the company had decided not to change its exploration program if successful efforts accounting is required.

.168 In support of their claim that adopting the successful efforts method will impair their companies' ability to raise capital and thereby reduce exploration activity, some persons have said that in November 1971 the Federal Power Commission adopted its Order No. 440 (which supports the full cost concept) to stimulate the search for and development of new natural gas supplies. (Order No. 440 is described in paragraph .069 of this Statement.) The petitions for rehearing of that Order that were filed with the FPC in December 1971 alleged, among other things, that the Commission had failed to reach any conclusion on what was stated to be the primary factor resulting in issuance of Order No. 440—namely, how full cost accounting would provide a stimulus for companies under the FPC's jurisdiction to conduct a search for and develop new gas supplies. In its Order No. 440-A denying the request for rehearing, the FPC stated: "Since we concluded that full-cost accounting on its merits should be adopted, it is not necessary for us to proceed further and reach a finding as to whether the accounting, as such, would provide a stimulus to discover and develop new gas supplies." (The Federal Power Commission is now the Federal Energy Regulatory Commission, a part of the Department of Energy.)

.169 Some advocates of full costing apparently feel that the securities markets, which bring together those who provide capital and those who seek it, will not understand financial results reported by the successful efforts method. They imply that investors' willingness to provide capital to a given company or industry is affected by that company's or industry's use of a particular method of accounting. However, a number of research studies indicate that the securities markets generally recognize and compensate for intercompany differences in accounting practices for the same or similar events and transactions. In a 1973 summary of the findings of the then-extant research, Stanford University Professor William H. Beaver noted:⁹

The prevailing opinion in the accounting profession is that the market reacts naively to financial statement information.

This view is reinforced by the anecdotal data of the sort described earlier, and by the obvious fact that the market is populated with several million uninformed, naive investors, whose knowledge or concern for the subtleties of accounting matters is nil. However, in spite of this obvious fact, the formal research in this area is remarkably consistent in finding that the market, at least as manifested in the way in which security prices react, is quite sophisticated in dealing with financial statement data.

.170 The research undertaken at the Board's request to examine the effect of the oil and gas Exposure Draft on the market prices of common stock issued by both full cost and successful efforts companies (described in paragraph .093(a) of this Statement) corroborates that the securities markets are generally able to assimilate financial information and to understand the underlying economics of the oil and gas exploration and production industry. That study did not find statistically significant evidence that issuance of the Exposure Draft affected the market prices of common shares issued by full cost companies as compared to successful efforts companies—except for some possible effect on the full cost companies during the week preceding and the week of issuance of the Exposure Draft, but the market soon adjusted, and evidence of a permanent or lingering effect was not found. (As noted in paragraph .093(a), the Board will undertake a similar study of the impact of this Statement following its issuance.)

.171 The Board acknowledges that not all empirical evidence supports the view that the securities markets are entirely able to take into account the differences in accounting methods used by different companies. The studies referred to in paragraph .169 provide evidence only with respect to the securities markets as a whole; those researchers readily admit (and other research substantiates) the likelihood that decisions of individual investors in individual securities can be affected by accounting differences. As noted in paragraph .170, a Board-sponsored study found that the oil and gas Exposure Draft may have affected the prices of full cost companies' securities during the two weeks surrounding its issuance, though the effect was of brief duration. That finding supports the conclusions of other researchers that investors are sometimes unable to properly evaluate the impact of alternative accounting methods. Further, in situations in which accounting changes may have had a long-term effect on securities prices (as
opposed to a temporary disruption), that result might well be viewed as an equitable adjustment of the cost of capital.10

.172 Some respondents to the Exposure Draft said that adopting the successful efforts method and proscribing the full costing method would likely have anticompetitive effects and would be contrary to national economic or policy goals. Any national economic or policy goal that involves the use of data reported in or derived from financial statements can, in the Board's judgment, be best pursued if the relevant financial statements are prepared on a common basis, so that lenders, investors, government regulators, and others involved directly or indirectly in allocating capital can analyze and reach informed decisions on the basis of consistent and comparable financial data. To the extent that furtherance of competition in oil and gas exploration and production and the availability of increased capital resources to finance those efforts are perceived as national economic or policy goals and in the interest of the general public, those goals can best be fostered—and the likelihood of their attainment substantially increased—if all competitors disclose financial data in a marketplace free from the burdens of inconsistency, noncomparability, and misunderstanding, a marketplace in which risks and rewards are reported as objectively and as evenhandedly as possible.

.173 Financial accounting should attempt to report the results of business decisions as nearly as those results can be determined in accordance with the accepted framework of accounting for all enterprises. If an enterprise's operations are subject to economic influences that are manifested in fluctuating earnings, financial statements should report those fluctuations and not obscure them. If the economic influences that affect an enterprise's operations are manifested in only minor fluctuations, that too should be portrayed. Otherwise, accounting is not evenhanded, for it fails to distinguish different characteristics of enterprises that investors

---

10 The contradictory conclusions of the various studies on accounting and securities prices and the implications of those conclusions are discussed in considerable depth in Tentative Conclusions on Objectives of Financial Statements of Business Enterprises, which was issued by the Board in December 1976. A number of specific studies are cited in Chapter 2, "Investors and Creditors," of Tentative Conclusions; additional studies are identified in the bibliography of the extractive industries Discussion Memorandum. Chapter 2 of Tentative Conclusions discusses both the traditional view of investors' and creditors' information needs (which concentrates on analysis of individual securities and enterprises that issue them) and the more recent capital market theory (which concentrates on portfolios and the extent to which individual securities increase or decrease the level of risk of a portfolio). An appendix to Tentative Conclusions provides an even more technical discussion of recent capital market theory.
may perceive as involving different risks. That evenhandedness becomes especially important for equitable allocation of capital. If financial reporting obscures differences that may be perceived as representing differences in risk or creates differences where none exist, it may contribute to channeling some capital into enterprises with expected returns and risks that are disparate—in effect, subsidizing the cost of capital to some companies at the expense of other companies.

.174 As explained in paragraphs .157-.173, the Board has not been presented with or able to obtain persuasive information indicating that adoption of successful efforts accounting and proscription of full costing will inhibit competition in exploration for and production of oil and gas reserves or in financing those activities. Indeed, the Board is of the view that, far from inhibiting competition, the removal of one of two significantly different optional alternative methods of accounting in similar situations will facilitate competition. The weight of the evidence before the Board is that independent oil and gas producing companies using successful efforts accounting do compete successfully and conduct effective exploration and production programs that they are able to finance through a variety of capital sources.

The “Cover” Concept Is Inconsistent with the Present Accounting Framework

.175 Under the full cost method, all costs incurred in acquiring, exploring, and developing properties within a relatively large geopolitical cost center (usually a country or a continent) are capitalized when incurred as costs of obtaining whatever reserves have been found in that cost center as long as the aggregate capitalized costs do not exceed the aggregate value of those reserves. If the value of previously discovered reserves exceeds the aggregate unamortized capitalized costs, unsuccessful acquisition and exploration costs are said to be adequately “covered” by the value of the previously discovered reserves, and a loss need not be recognized. In other words, current failures are “covered” and are not reported to the extent of past successes. Further, an increase in the market prices of previously discovered reserves in a cost center can enhance the amount of “cover” and further delay recognition of failures (losses) in that cost center.

.176 In the Board’s judgment, the “cover” concept is inconsistent with the present accounting framework, and it also obscures risk (see paragraphs .149-.156). Reserves that may have been discovered ten, twenty, thirty, forty, or more years ago by a company
under completely different management, with very different technology, and in very different domestic and international economic and political circumstances, should not be used, as they are under the full cost method, to justify nonrecognition of current failures. Similarly, reserves located in, say, West Texas should not be used to “cover” unsuccessful acquisition and exploration efforts in Louisiana, Alaska, or Canada, or in the offshore U.S. waters.

Successful Efforts Is Comparable to Accounting in Other Extractive Industries

.177 Although not usually labeled as such, successful efforts accounting generally is followed in extractive industries other than the oil and gas industry. Because of its wide acceptance in those industries, requiring it for all oil and gas producing companies is likely to bring about greater comparability of financial statements among companies in the various extractive industries.

The Matching Concept Does Not Justify Full Costing

.178 Some persons contend that full costing is justified because a “better matching” of revenues and expenses is achieved if all costs incurred in acquisition, exploration, and development activities are amortized on a pro rata basis as total reserves are produced. Proponents of full costing argue that it is impossible to discover oil and gas reserves without incurring the costs of some unsuccessful acquisition, exploration, and development activities, and they sometimes compare those activities with manufacturing operations in which spoilage or breakage is unavoidable. They argue that “proper matching” requires that the costs incurred in unavoidable unsuccessful efforts be accounted for as reasonable and necessary costs of successful efforts in the same way that the costs of unavoidable spoilage or breakage are accounted for as costs of good products.

.179 Three pervasive principles by which revenues and expenses are matched are described in paragraphs 156-160 of APB Statement No. 4 [section 1026.20-.24], as follows:

*Associating Cause and Effect.* Some costs are recognized as expenses on the basis of a presumed direct association with specific revenue . . . recognizing them as expenses accompanies recognition of the revenue.

*Systematic and Rational Allocation.* . . . If an asset provides benefits for several periods its cost is allocated to the periods.
in a systematic and rational manner in the absence of a more direct basis for associating cause and effect.

Immediate Recognition. Some costs are associated with the current accounting period as expenses because (1) costs incurred during the period provide no discernible future benefits, (2) costs recorded as assets in prior periods no longer provide discernible benefits, or (3) allocating costs either on the basis of association with revenue or among several accounting periods is considered to serve no useful purpose.

.180 A direct cause and effect justification for associating unsuccessful acquisition and exploration costs with revenues derived from successful activities has not been demonstrated. A direct cause and effect association can be said to exist between the costs of nonproductive fields and the revenues from reserves in productive fields, or between costs applicable to unsuccessful ventures and costs applicable to successful ventures, if there is a reliable association between total costs and reserves discovered as a direct result of incurring those costs. Only then could it be said that a cost gives rise to revenues, that is, causes revenues. Although some persons claim that industry-wide statistics indicate a general predictable relationship between total number of wells or total footage drilled and total reserves added, those relationships have not been constant, particularly over a relatively short period of time such as a year, and there can be no assurance that they will apply to the future. More importantly, to the best of the Board's knowledge no such relationship has been demonstrated to be predictable for an individual company. Accounting is done for individual companies, not for an industry as a whole, and for companies a direct association between finding costs and mineral reserves emerges only at the level of an individual property unit or within a given field or other localized geological structure. Even that association often is not evident at the time the costs are incurred, and that is when accounting decisions must be made.

.181 Systematic and rational allocation likewise does not justify attributing unsuccessful acquisition and exploration costs to the results of successful activities. As APB Statement No. 4 [sections 1021-1029] states, allocation of an asset's cost is justified "if an asset provides benefits for several periods." In the full costing versus successful efforts costing controversy, the question is not whether or how to allocate capitalized costs but which costs to capitalize.

.182 The "immediate recognition" principle referred to in APB Statement No. 4 [sections 1021-1029] is appropriate for unsuc-
cessful acquisition and exploration costs. According to that principle, costs are associated with the current period as expenses if they provide no discernible future benefits (for example, geological and geophysical costs) or, if previously capitalized, they no longer provide discernible benefits (for example, acquisition costs of abandoned properties). The application of the immediate recognition principle in this Statement is consistent with its application by the Board in other pronouncements. In paragraph 49 of FASB Statement No. 2 [section 4211.49], "Accounting for Research and Development Costs," for example, the Board stated that "the general lack of discernible future benefits at the time the costs are incurred indicates that the 'immediate recognition' principle of expense recognition should apply."

.183 In FASB Statement No. 2 [section 4211], moreover, the Board considered and rejected the argument that research and development costs be capitalized when incurred and amortized on a company-wide basis. Paragraphs 51 and 52 [sections 4211.51-.52] state:

51. Enterprises undertake research and development activities with the hope of future benefits. If there were no such hope, the activities would not be conducted. Some persons take the position that the accounting treatment for research and development costs should be determined by considering in the aggregate all of the research and development activities of an enterprise. In their view, if there is a high probability of future benefits from an enterprise's total research and development program, the entire cost of those activities should be capitalized without regard to the certainty of future benefits from individual projects.

52. The Board believes, however, that it is not appropriate to consider accounting for research and development activities on an aggregate or total-enterprise basis for several reasons. For accounting purposes the expectation of future benefits generally is not evaluated in relation to broad categories of expenditures on an enterprise-wide basis but rather in relation to individual or related transactions or projects.

Value Ceiling Is Subjective

.184 Limiting capitalized costs to the estimated value of reserves, which is an integral part of the full cost method of accounting, requires estimation of reserve quantities, development costs, production costs, the timing of development and production, selling prices, and appropriate discount rates. The uncertainties inherent in those estimates and projections tend to make estimates of reserve values highly subjective, and estimates of value made by trained experts can differ markedly. Under the successful efforts method, the need to limit capitalized costs is much less crucial.
because the costs of unsuccessful efforts, which may represent a large part of the total capitalized costs under the full cost method, will have been charged to expense as incurred or recognized as a loss when the effort was determined to be unsuccessful.

**Full Costing Does Not Represent Current Value on the Balance Sheet**

.185 Some persons contend that by using full costing, asset carrying amounts reported in the balance sheet will be closer to the current values of most companies’ oil and gas reserves than they would under successful efforts costing. In the Board’s judgment, however, under neither method do the costs to acquire, explore, and develop mineral properties indicate the values of reserves discovered. Those values change continually, depending on revisions of estimates of reserve quantities, development costs, production costs, income taxes, the timing of future development and production, selling prices, and appropriate discount rates. The capitalized costs, however, do not change. Neither full costing nor successful efforts costing is intended to portray current values; both of those methods are based on historical costs.

**The Ability to Manage Earnings Is Not Unique to Successful Efforts Accounting**

.186 Some proponents of full costing contend that the ability of management to subjectively influence reported earnings is reduced under full costing. In their view, under successful efforts accounting, management may be inclined to smooth or average periodic reported earnings by (a) deciding to delay final determination of the outcome of a project or to delay the write-off of an unsuccessful venture, thus postponing loss recognition, (b) incurring larger or smaller amounts of costs that are charged to expense as incurred, such as in exploration, and (c) postponing or moving forward the times at which such costs are to be incurred.

.187 While a transaction-oriented accounting framework—which is the presently accepted framework—allows opportunities to postpone or accelerate earnings effects, those opportunities are not unique to the oil and gas industry. Nor are they unique to successful efforts accounting since full costing itself may be viewed as a method for averaging reported earnings over long periods of time. Most importantly, the Board does not believe that the potential actions described in the preceding paragraph should bear importantly on the accounting decisions confronting the
Board in this project. Even if accounting results were to influence some managers’ decisions, it does not follow that accounting standards should be designed to accomplish or prevent an action by management. That type of accounting standard would require a judgment by the Board as to which potential actions are desirable and which are undesirable. Accounting should evenhandedly report economic actions taken, regardless of motivation. Accounting should not obscure the effect of actions and events in order to prevent what some believe to be “uneconomic” actions.

**Simplicity Is Not the Overriding Criterion for Selection of Accounting Method**

.188 Some persons advocate full costing on grounds that it reduces the amount of procedural and mechanical accounting work, thus saving time, effort, and cost in maintaining accounting records. They claim that since all costs incurred in acquisition, exploration, and development are capitalized, there is less need to make arbitrary cost allocations or to prepare separate computations of amortization on individual properties. The Board disagrees. Firstly, individual property records must be maintained for purposes of determining royalties, computing taxable income, and making management decisions to commit funds, abandon properties, and so forth, so the amount of additional effort that may be required under successful efforts accounting is not expected to be burdensome. More importantly, in the Board’s judgment, accounting simplicity should not justify nonrecognition of losses at the time they are incurred.

**Reasons for Specific Conclusions within the Successful Efforts Method**

.189 Paragraphs .142-.188 set forth the Board’s reasons for rejecting full cost accounting and accepting successful efforts accounting. As explained in paragraphs .111-.119, however, there are many variations within the successful efforts method. Paragraphs .190-.214 which follow explain the Board’s conclusions regarding the principal variations considered.

**Rejection of Area-of-Interest Approach**

.190 Some proponents of successful efforts accounting believe that a cost center (such as an area-of-interest) has a central role in accumulating certain types of prediscovery costs prior to the time that a reasonable determination can be made as to whether future benefits will result from having incurred those costs. They would capitalize some or all prediscovery costs relating to an area-of-interest until it is determined whether that area contains proved
reserves. If it is determined that the area-of-interest does not contain reserves, the costs are written off and a loss is recognized. Even among proponents of the area-of-interest approach there are differences as to which prediscovery costs relating to an area-of-interest should be capitalized. Some proponents would capitalize prediscovery drilling costs but not G&G; others would capitalize the G&G as well. Other successful efforts proponents use a cost center only for computing amortization rates. They believe that the nature of a cost, and not the nature of a cost center, should be the primary consideration in the capitalize/expense decision (discussed further in paragraph .103).

.191 The Board has adopted the latter view. Until discovery, delineation of the boundaries of a cost center such as an area-of-interest is arbitrary, and intercompany differences in defining cost centers are likely to be significant and unavoidable. Many years often elapse before reserves are discovered in an area-of-interest, if they are discovered at all. Thus, depending on the extent to which an area-of-interest proponent would capitalize prediscovery costs, exploration costs that have no identifiable future benefits may be carried forward as assets potentially for many years. The Board concluded that exploration expenditures that do not directly result in the acquisition of an asset having identifiable future benefits should not be capitalized simply because they fall within lines drawn on a map by individual companies, that is, lines drawn to circumscribe an area-of-interest or, as some would say, a project.

.192 Some persons who advocate capitalization of all costs associated with an area-of-interest say that doing so is essential for financial statements to reflect the total "historical cost" of a project that ultimately proves successful. Many projects, however, do not ultimately prove successful, and determination of success or failure of an area-of-interest often takes a number of years. In the Board's judgment, periodic reporting of financial position and results of operations to investors and creditors is an overriding consideration that precludes the indefinite accumulation of costs of unknown future benefit. The Board reached a similar conclusion in FASB Statement No. 2 [section 4211], "Accounting for Research and Development Costs," in which the Board rejected the indefinite deferral of R&D costs on a project basis pending determination of success or failure of the project.

Charging G&G to Expense

.193 This Statement requires that geological and geophysical costs, whether incurred before or after acquisition of the related
property, be charged to expense when incurred. Those costs are information costs very much like research costs. To a considerable extent, G&G costs are incurred before any properties are acquired, and in the majority of cases the acreage surveyed is either never acquired or, if acquired, is ultimately abandoned or surrendered. It is difficult, and in many cases impossible, to correlate geological and geophysical expenditures with a specific discovery made many months or years later, even with the benefit of hindsight; such correlation clearly cannot be done at the time the G&G expenditures are incurred, which is when accounting decisions are made. For those reasons, the Board has concluded that G&G costs shall be charged to expense when incurred. While the costs of drilling stratigraphic test wells are sometimes considered to be geological and geophysical costs, they are accounted for separately under this Statement for reasons explained in paragraphs .200-.202.

.194 In response to recommendations made by commentators on the Exposure Draft, this Statement makes clear that dry hole contributions and bottom hole contributions are included in exploration costs (paragraph .017(c)). Also, in response to comments on the Exposure Draft, paragraph .020 has been added to provide for capitalization of contractually reimbursable G&G and other exploration costs.

**Charging Carrying Costs to Expense**

.195 Costs of carrying and retaining undeveloped properties do not increase the potential of those properties to contain oil and gas reserves. Carrying costs are incurred to maintain an enterprise's rights, not to acquire those rights. In a sense, they are penalties for having delayed drilling and development activities and, thereby, having delayed potential production of oil and gas. Because carrying costs do not enhance the future benefits from the enterprise's properties and other assets, they are charged to expense when incurred under the provisions of this Statement.

**Charging the Costs of Drilling Unsuccessful Exploratory Wells to Expense**

.196 Charging the costs of drilling unsuccessful exploratory wells to expense is generally regarded as an inherent part of the successful efforts method of accounting. Not all successful efforts proponents agree, however, on what constitutes unsuccessful exploratory wells, and there is also disagreement over the timing of expense recognition. Under this Statement, success is defined in terms of whether proved oil and gas reserves have been found. As to timing, under this Statement the costs of drilling exploratory
wells are initially capitalized when incurred and are subsequently either charged to expense or reclassified as part of the enterprise’s wells and related equipment and facilities when the determination is made as to whether proved reserves have been found. Further, this Statement establishes guidelines for determining whether the costs of drilling exploratory wells may continue to be carried as an asset pending determination of whether proved reserves have been found.

.197 Several alternatives regarding the timing of expense recognition are proposed by successful efforts advocates. Some persons, on grounds that the majority of all exploratory wells (73 percent for the U.S. as a whole in 1976) are unsuccessful, would charge all costs of drilling exploratory wells to expense when incurred, rather than regard them as “construction-in-progress” pending determination of success or failure. Some would subsequently “reinstate” the costs of drilling an exploratory well that is determined to have been successful. In the Board’s judgment, however, reinstatement of costs previously charged to expense is inconsistent with generally accepted accounting principles for other industries. For example, the Board has previously rejected the notion of cost reinstatement with respect to research and development costs (paragraph 57 of FASB Statement No. 2 [section 4211.57]). Consequently, the Board concluded that a method of accounting for oil and gas producing activities based on cost reinstatement is inappropriate.

.198 The best accounting, in the Board’s judgment, is to capitalize as “construction-in-progress” the costs of drilling all exploratory wells pending determination of success or failure, that is, pending determination of whether proved reserves are found. The length of time it takes to drill an exploratory well is relatively short—generally a matter of weeks or months, although a few occasionally take a year or longer—so the period during which costs of undetermined future benefit are capitalized usually is relatively brief, and this Statement requires that the costs be charged to expense as soon as a determination is made that proved reserves have not been found. In the Board’s judgment, it is appropriate that the costs of drilling exploratory wells be treated differently from G&G and similar exploration costs because, first, determination of success or failure is much more clear-cut for exploratory drilling than it is for G&G and similar exploration costs, and, second, because successful exploratory wells result directly in the discovery of proved reserves whereas G&G does not.

.199 The quantity of oil and gas reserves found by an exploratory well is normally estimated on or shortly after completion of drill-
ing; occasionally that assessment takes a matter of weeks or months, rarely longer. If, however, a major capital expenditure is required before production could begin—such as for construction of a trunk pipeline—the reserves found may not be classifiable as proved unless sufficient quantities of additional reserves are found as a result of additional exploratory drilling. The additional exploratory drilling might take several years to complete. Paragraph .031 of this Statement therefore divides exploratory wells that find oil and gas reserves into two types: Those that are not drilled in an area requiring a major capital expenditure such as a trunk pipeline before production could begin and those that are drilled in such an area. For the former type, when classification of the reserves that are found cannot be made at the time drilling is completed, a one-year capitalization period is provided if that is necessary to allow a reasonable period of time for determining whether to classify those reserves as proved. Recognizing, however, that the decision to make a major capital expenditure, such as for a trunk pipeline, must sometimes await the results of additional exploratory wells, the Board concluded not to impose the one-year presumption of impairment on exploratory wells drilled in areas requiring a major capital expenditure before production could begin. Instead, paragraph .031(a) establishes two conditions for continued capitalization that take into account the realities and economics of exploratory drilling in remote areas and, at the same time, prohibit the indefinite deferral of the costs of exploratory wells merely on the hope that the selling prices of oil and gas will increase or on the possibility that unplanned exploratory drilling activity in the indefinite future might find additional quantities of reserves.

Stratigraphic Test Wells Treated Similarly to Exploratory Wells and Development Wells

.200 Stratigraphic test wells are drilled to obtain information. They are not normally intended to be completed for hydrocarbon production and are customarily abandoned after drilling is completed and the information is obtained. Normally, stratigraphic test wells are drilled offshore to determine whether an offshore property contains sufficient reserves to justify the cost of constructing and installing a production platform and to determine where to locate such a platform.

.201 Under this Statement, stratigraphic test wells are divided into two types—exploratory-type and development-type—and the standards of accounting for the two types parallel the accounting for exploratory wells and development wells, respectively. Thus, an
exploratory-type stratigraphic test well is accounted for in a manner similar to an exploratory well drilled in an area requiring a major capital expenditure before production could begin. The costs of drilling the exploratory-type stratigraphic test well are capitalized pending determination of whether proved reserves are found, subject to the condition that those costs not continue to be carried as assets indefinitely if stratigraphic test drilling activity in the area has ceased or if the quantity of reserves found would not justify completion of the well for production had it not been simply a stratigraphic test well. The capitalized costs either are reclassified as part of the cost of the enterprise's wells and related equipment and facilities if proved reserves are found or are charged to expense if proved reserves are not found. Thus if an exploratory-type stratigraphic test well discovers reserves that are classified as proved and facilities are to be installed to produce those reserves, the cost of the exploratory-type stratigraphic test well is accounted for as part of the cost of the facilities even though the particular well itself may be abandoned. Accounting for the other type of stratigraphic test well—development-type—is identical to accounting for development wells and other development costs generally: capitalize as part of the cost of an enterprise's wells and related equipment and facilities (reasons therefor discussed in paragraph .207).

.202 The method of accounting for exploratory-type stratigraphic test wells described in the preceding paragraph represents a change from the Exposure Draft, which had proposed that the costs of all stratigraphic test wells be charged to expense when incurred on grounds that they are similar to G&G costs. A number of respondents to the Exposure Draft pointed out that an important difference exists between the costs of stratigraphic test wells and G&G costs: G&G information, no matter how persuasive, does not provide sufficient evidence to classify reserves as proved; reserves are classified as proved only after an exploratory well or a stratigraphic test well has been drilled. Thus a stratigraphic test well can result directly in the discovery of proved reserves whereas information obtained from geological and geophysical studies cannot. Discovery of proved reserves establishes the existence of future benefits and justifies the continued capitalization of the costs of those stratigraphic test wells that find proved reserves. Because of the foregoing differences, the costs of exploratory-type stratigraphic test wells are more like the costs of drilling exploratory wells than they are like G&G costs. The Board agrees with that view, and this Statement reflects the appropriate modification from the Exposure Draft. Further, paragraph .034 provides for
Special Industry Applications

deferral of the costs of exploratory-type stratigraphic test wells that find commercially producible quantities of reserves, even though those wells cannot be used to produce the reserves. That provision reflects the realities and economics of offshore drilling. Producible exploratory wells often are prohibitively expensive in offshore waters, and offshore exploratory drilling generally involves non-producible, expendable wells.

All Development Costs Capitalized

.203 Under this Statement, discovery of oil and gas reserves is viewed as the single most critical event in the search for and extraction of oil and gas. Discovery of proved reserves establishes the existence of future benefits and justifies the capitalization of the costs of successful exploratory wells and exploratory-type stratigraphic test wells as amortizable assets. After discovery, development costs are incurred to obtain additional access to those proved reserves and to provide facilities for extracting, treating, gathering, and storing the oil and gas. Those development costs result in the creation of a producing system of wells and related equipment and facilities—a system much like the production system of a manufacturing company.

.204 After discovery, all costs incurred to build that producing system, including the costs of drilling unsuccessful development wells and development-type stratigraphic test wells, are capitalized as part of the cost of that system under the provisions of this Statement. With respect to development dry holes, some persons take the position that no costs incurred in drilling a dry hole—exploratory or development—can provide future benefits, and therefore the costs of all dry holes, including development dry holes, should be charged to expense.

.205 In the Board's judgment, however, there is an important difference between exploratory dry holes and development dry holes. The purpose of an exploratory well is to search for oil and gas. The existence of future benefits is not known until the well is drilled. Future benefits depend on whether reserves are found. A development well, on the other hand, is drilled as part of the effort to build a producing system of wells and related equipment and facilities. Its purpose is to extract previously discovered proved oil and gas reserves. By definition (Appendix C, paragraph .274), a development well is a well drilled within the proved area of a reservoir to a depth known to be productive. The existence of future benefits is discernible from reserves already proved at the time the well is drilled. An exploratory well, because it is drilled...
outside a proved area, or within a proved area but to a previously untested horizon, is not directly associable with specific proved reserves until completion of drilling. An exploratory well must be assessed on its own, and the direct discovery of oil and gas reserves can be the sole determinant of whether future benefits exist and, therefore, whether an asset should be recognized. Unlike an exploratory well, a development well by definition is associable with known future benefits before drilling begins. The cost of a development well is a part of the cost of a bigger asset—a producing system of wells and related equipment and facilities intended to extract, treat, gather, and store known reserves.

.206 Moreover, because they are drilled only in proved areas to proved depths, the great majority of development wells are successful; a much smaller percentage (22 percent in the United States in 1976), as compared to exploratory wells (73 percent in the United States in 1976) are dry holes. Development dry holes occur principally because of a structural fault or other unexpected stratigraphic condition or because of a problem that arose during drilling, such as tools or equipment accidentally dropped down the hole, or simply the inability to know precisely the limits and nature of a proven reservoir. Development dry holes are similar to normal, relatively minor "spoilage" or "waste" in manufacturing or construction. The Board believes that there is a significant difference between the exploration for and the development of proved reserves. Therefore, in the Board's judgment, it is appropriate to account for the costs of development dry holes different from exploratory dry holes.

.207 For similar reasons, the Board believes that the costs of development-type stratigraphic test wells should be accounted for as other development costs. Development-type stratigraphic test wells are drilled after proved reserves have been discovered, and they are drilled within the proved area, generally either to assess more accurately the quantity of reserves that has been found or to provide information as to where best to locate the production platform. The existence of future benefits is discernible from reserves already proved at the time the development-type stratigraphic test well is drilled. The costs of drilling the well are part of the costs of developing a system that will produce those reserves. In the Board's judgment, it is inappropriate to account for the costs of development-type stratigraphic test wells different from other development costs. As explained in paragraph .202, the method of accounting for stratigraphic test wells in this Statement
represents a change from the proposal in the Exposure Draft as a result of comments made by respondents to the Exposure Draft.

**Impairment Test for Unproved Properties**

.208 When unproved properties are acquired, their acquisition costs are capitalized when incurred. Whether the unproved property will ultimately provide future benefits—that is, whether it contains proved oil and gas reserves—is unknown at the time of acquisition. However, a property right is acquired. That property right, and the underlying right to search for and extract oil and gas reserves, in themselves are in the Board's judgment a sufficient future benefit to justify capitalizing the acquisition cost of an unproved property at the time it is incurred. Because a purchase price has been paid, there is a presumption that the property right has an independent market value at the time equivalent to the purchase price. Thereafter, either as a result of unsuccessful exploration activities including those of other parties on nearby or adjacent properties or as the expiration of the property right approaches, the future benefits inherent in the right to search for and extract oil and gas in an unproved property may diminish or disappear entirely, with no offsetting benefits in terms of oil and gas discovered. Consequently, this Statement requires that unproved properties be assessed periodically and a loss recognized if those properties have been impaired. Many respondents to the Exposure Draft recommended that for practical reasons the Board should permit recognition of impairment of individually insignificant properties by amortizing their costs, either in the aggregate or by groups, on the basis of the experience of the enterprise and other information. This Statement reflects the appropriate modification of the Exposure Draft to permit amortization of individually insignificant properties.

**Question of a Limitation Test for Proved Properties and Capitalized Exploration and Development Costs**

.209 As explained in paragraphs .190 and .191, a cost center is not the primary consideration in the capitalize/expense decision under the approach to successful efforts accounting adopted by the Board in this Statement. Under that approach, the assets to which the capitalized acquisition, exploratory drilling, and development costs relate are properties, wells, equipment, and facilities. The question of whether to write down the carrying amount of productive assets to an amount expected to be recoverable through future use of those assets is unsettled under present generally accepted accounting principles. This is a pervasive issue that the Board has not addressed. Consequently, this Statement is not
intended to change practice by either requiring or prohibiting an impairment test for proved properties or for wells, equipment, and facilities that constitute part of an enterprise's oil and gas producing systems.

Unit-of-Production Amortization

.210 Nearly all respondents to the Discussion Memorandum and the Exposure Draft favored unit-of-production amortization for capitalized acquisition, exploratory drilling, and development costs. There was some disagreement, however, as to the appropriate reserve categories on which to base amortization. Some persons favor using the same reserve categories for all amortizations. Within that group, some would use only proved developed reserves while others would use all proved reserves. Some who would use all proved reserves would include estimated future development costs in the amortization computation; others would use only actual costs incurred. Some persons would use different reserve categories for different types of capitalized costs.

.211 The Board believes that using estimated future development costs to compute amortization rates introduces an unnecessary and subjective element into the financial accounting and reporting process. Only development costs incurred to date should be amortized. Further, in the Board's judgment, costs should be amortized on the basis of estimates of quantities of proved reserves to which those costs relate. Proved developed reserves, by definition, relate to the costs of wells and related equipment and facilities. Acquisition costs relating to proved properties, on the other hand, were incurred to obtain not only the proved reserves that are already developed but also those proved reserves remaining to be developed. Accordingly, this Statement requires that acquisition costs of proved properties be amortized on the basis of all proved reserves, developed and undeveloped, and that capitalized exploratory drilling and development costs (wells and related equipment and facilities) be amortized on the basis of proved developed reserves.

.212 Respondents to the Exposure Draft cited three important aspects of its provisions regarding unit-of-production amortization that, in their view, required clarification or modification. The Board agrees that clarification or modification is needed for each of those matters, and the following changes have been made in this Statement:

a. Paragraph .029 has been modified to permit reclassification from unproved to proved of only a portion of an unusually
large property to which proved reserves have been attributed. The acquisition cost of the portion remaining as unproved will therefore not be subject to unit-of-production amortization, though it will continue to be subject to assessment for impairment.

b. Paragraph .035 has been modified to permit amortization of natural gas cycling and processing plants by other than the unit-of-production method if another method is deemed more appropriate in the circumstances.

c. Paragraph .035 has been modified to provide for exclusion of certain large front-end development costs that relate to an entire planned group of wells as a whole from immediate early amortization pending completion of drilling the additional wells; similarly, that paragraph now provides for exclusion from the amortization rate determination those proved developed reserves that will be produced only after significant expenditures are made.

.213 Two principal approaches were considered by the Board for equating, in computing amortization rates, oil and gas that are jointly produced from a property or group of properties. One is to equate the oil and gas on the basis of their relative energy content—their heat content based on the British Thermal Unit (BTU). The other approach is to equate oil and gas on the basis of their relative sales values.

.214 The relative energy content approach stresses the physical relationship of oil and gas. The relative sales value method is intended to emphasize their economic relationship. The Board rejected the relative sales value method principally because of problems in determining and using relative sales values. For example, because market prices of much of the oil and gas sold are regulated, sometimes with widely disparate prices prevailing for the same commodity and with relatively significant year-to-year fluctuations, the economic relationship as of a given date could be quite artificial and quite different from a similar determination made for the same reserves as of some prior or future date. Consequently, the Board rejected the relative sales value method.

Importance of the Definition of Proved Reserves

.215 Under the provisions of this Statement, capitalization and asset classification decisions hinge on whether proved reserves
have been found. For that reason, the definition of proved reserves in Appendix C of this Statement assumes great importance. That definition is the one set forth in the rules and regulations of the Securities and Exchange Commission. The Board chose that definition, rather than definitions proposed by others and rather than creating a definition of its own, because the SEC definition is already required to be used in practice by oil and gas producing companies whose securities are publicly traded. The Board believes that conformity of the reserve definitions used in filings with the SEC, in information reported to the Department of Energy for the national energy data base, and in financial statements prepared in conformity with generally accepted accounting principles is desirable.

.216 Under paragraph .011 of this Statement, properties are classified as either unproved or proved depending on whether those properties have proved reserves. Although some oil and gas producing companies currently make a developed/undeveloped or producing/nonproducing distinction among properties, in the Board's judgment discovery, rather than development or production, is the single most critical event in an enterprise's oil and gas producing activities. The Board recognizes that some companies presently refer to properties with no proved reserves as undeveloped or nonproducing, for disclosure purposes; conversely, some companies heretofore have referred to properties with proved reserves as developed or producing properties even though some or all of a property's proved reserves may not be developed or producing.

Information Available after the Balance Sheet Date

.217 In response to questions raised in letters of comment on the Exposure Draft, paragraph .039 has been added to this Statement to clarify that information that becomes available after the balance sheet date but before the financial statements are issued shall be taken into account in evaluating conditions that existed at the balance sheet date, for example, in assessing unproved properties and in determining whether a well has found proved reserves. The Board believes that this position is consistent with the concepts in FASB Statement No. 5 [section 4311], "Accounting for Contingencies."

Mineral Property Conveyances and Related Transactions

.218 Mineral property conveyances and related transactions may be classified according to their nature as a sale, a borrowing, an exchange of nonmonetary assets, a pooling of assets in a joint
undertaking, or some combination thereof. In the Board's judgment, the accounting principles set forth in the authoritative accounting literature and otherwise generally accepted in current practice for similar transactions in other industries should apply to the oil and gas industry. Paragraphs .043 and .047 apply accepted accounting practices to some of the more common types of conveyances.

.219 The transactions described in paragraph .043(a) are classified as borrowings because the funds advanced are repayable in cash or its equivalent. Although the purpose of advancing funds for exploration is to obtain future supplies, successful exploration is not assured, and to the extent production is inadequate to satisfy the obligation, the balance is payable in cash. Accordingly, the transaction is in substance a borrowing.

.220 A production payment repayable in cash out of the proceeds from a specified share of production until the amount advanced has been recovered with interest (paragraph .043(b)), is in substance a borrowing. Some hold the view that the recipient of the advance has no liability except to the extent that oil or gas is produced and that, accordingly, the recipient should account for the advance as deferred revenue. The Board did not find that reasoning persuasive. Normally, the advances are made by banks (often through an intermediary) or by other lenders under conditions that leave little doubt that the proved reserves are more than adequate to recover the funds advanced plus interest. The intent of the transaction is to obtain funds and not to sell oil or gas for future delivery. The recipient of the advance is at risk for any change in the price of oil or gas and for the cost of operating the property. The transaction is in substance a loan secured by reserves and is without recourse to other assets of the party receiving the advance. The reserves and production involved are reported by the recipient, not by the lender.

.221 The Exposure Draft had proposed that neither gain nor loss be recognized at the time of conveyance if a part of an interest owned is sold and either (a) substantial uncertainty exists about recovery of the costs applicable to the retained interest or (b) the seller has a substantial obligation for future performance. While agreeing that because of those uncertainties recognition of a gain is not appropriate in those situations, some respondents to the Exposure Draft said that recognition of a loss should not be prohibited. The Board agrees, and paragraph .045 of this Statement prohibits only the recognition of a gain in those situations. In addition, the phrase "substantial obligation for future per-
formance’’ in paragraph .045(b) has been expanded to include examples, as suggested by some respondents to the Exposure Draft.

.222 A production payment to be satisfied by delivery of a specified quantity of oil or gas out of a specified share of production (paragraph .047(a)) is a sale for which income is not recognized because the earning process is not complete. The seller still has to perform the production and delivery function. Unlike the production payment payable in cash, the amount payable is not fixed, there is no specified or determinable rate of interest, and the risks of price changes rest with the purchaser rather than the seller. The purchaser, not the seller, reports the reserves and production because the substance of the transaction is the purchase of a mineral interest rather than the lending of cash.

.223 In some transactions, the owner of an operating interest in an unproved property arranges for another party to assume some or all of the exploration, drilling, development, and operating obligations in return for a share of the rewards if those efforts are successful. This Statement addresses three types of such arrangements: (a) assignment of the operating interest with retention of a nonoperating interest in return for which the assignee assumes the drilling, development, and operating obligations (paragraph .047(b)); (b) assignment of a part of an operating interest in return for assumption by the assignee of the obligation to drill one or more exploratory wells at assignee’s cost, after which the property is to be jointly owned and operated if the drilling is successful (paragraph .047(c)); and (c) a carried interest arrangement by which the assignee assumes all the exploration drilling and development risk in return for a fractional operating interest but recovers the cost incurred, if the venture is successful, before the assignor shares in the production from the property (paragraph .047(d)).

.224 While the three types of conveyances described in the preceding paragraph have different features, in each instance one party has provided the property and the other party has agreed to incur certain high risk costs, and the benefits, if any, are to be shared in agreed proportions. The Board concluded that all those transactions represent a pooling of assets in a joint undertaking. The investment of each party in the joint operations consists of the carrying amount of the assets contributed by it. Each party will share in the resulting benefits, if any, according to the terms of the agreement. The cost of those benefits to the recipient is the amount of its investment. At the time of the transaction the earning process is incomplete and no gain or loss has been realized by either party. Each party records only its own costs and revenues and does not make a reassignment of costs to reflect the
interest that it obtains, or may obtain, in assets contributed by the other party. Each party looks upon its earning assets as those contributed by it.

.225 Some support the view that when part of an interest in an unproved property is relinquished to obtain another type of interest in the same property or an interest in wells and equipment, both parties to the transaction should reassign the cost each has incurred so that their accounts will reflect some cost for each type of asset. The Board rejected that view because there is no true exchange of assets in this type of transaction. As stated above each party's earning assets are those contributed by it, and the carrying amounts of those assets should be retained at their historical cost.

.226 In applying the above conclusions to carried interests, the Board recognizes that before payout a carried party will reflect no income and that at payout the carried party will own an interest in wells and related equipment and facilities, but its accounts will reflect only the original investment in the property. The Board believes, however, that the pooling concept best reflects the substance of the agreement between the parties. At the time expenditures are made it is not known whether payout will occur, and many carried interests, even in properties where production is obtained, do not pay out. The Board's conclusions in respect to accounting for this type of transaction are that a carried party has no revenue until payout and no cost of assets beyond the original leasehold cost; a carrying party's accounts reflect the investment, operating costs, and revenue that are at its risk or for its benefit; and the disclosures of reserves and production should be consonant with that basis of accounting.

.227 Because an exchange of fractional operating interests in undeveloped mineral properties upon formation of a joint venture (paragraph .047(e)) is a nonmonetary exchange of similar productive assets, accounting as prescribed in APB Opinion No. 29, "Accounting for Nonmonetary Transactions," paragraph 21(b) [section 1041.21(b)] is appropriate. In response to requests for clarification of gain or loss recognition in disproportional cost sharing arrangements paragraph .047(e) was expanded to provide that each party to a joint venture shall record its cost and that gain shall not be recognized if an interest in a property or other assets is acquired without cost or at a cost disproportionate to the interest acquired. This accounting is compatible with that prescribed for a free well or a carried interest.
The Board considered the transactions carried out to effect the unitization of oil and gas properties (paragraph .047(f)) to be a pooling of assets for which the earning process is incomplete. Unitizations result in a group of separate properties being combined and operated as a single property. Each participant normally has essentially the same quantity of oil and gas reserves immediately following the unitization as before. A payment of money to equalize the contributions of wells, equipment, and facilities does not in the Board's judgment change the substance of the transaction.

Paragraph .047(g) has been added to this Statement to clarify the appropriate accounting for the sale of an entire interest in an unproved property. Recognition of gain or loss on the sale of a property whose impairment has been assessed individually is consistent with accounting for the sales of assets generally. Nonrecognition of gain or loss on the sale of a property whose impairment has been assessed by amortizing its cost as part of a group is compatible with the normal accounting for a partial retirement of assets subject to group depreciation; paragraph .047(g) also provides for recognizing gain when the sales price exceeds the original cost of the property sold, a circumstance that does not normally arise in the usual group depreciation situation for other types of assets.

The sale of a part of an interest in an unproved property for cash (paragraph .047(h)) is viewed by some as the sale of an asset that results in a gain or loss. The Board does not agree with that view. The objective of the parties in this type of transaction is generally to diversify risks and jointly participate in any future costs and benefits. Since this Statement requires continuing evaluation of unproved properties for impairment, no loss need be recognized as stemming directly from the sale of a fractional interest. The Board concluded that because of the uncertainty of the recovery of costs applicable to the interest retained in an unproved property, the transaction should be accounted for as a recovery of cost and that a gain should be recognized only to the extent that proceeds from the fractional interest sold exceed the carrying amount of the property. The proposal in the Exposure Draft has been revised to clarify the question of gain recognition if the unproved property in which part or all of an interest is sold is part of a group for which an impairment allowance is provided in the aggregate.
The risk of nonrecovery of the remaining cost is usually not significant if proved properties or parts of interests in proved properties are sold (paragraph .047(i)-(m)). Accordingly, the Board concluded that gain or loss should normally be recognized in those transactions consistent with other sales of capital assets.

Paragraphs .047(l) and .047(m) have been added to clarify that accounting for the sale of a property with retention of a production payment shall be compatible with the accounting for the sale of production payments with retention of the operating interest. A retained production payment expressed in money may sometimes be so large that it is highly improbable that the production payment will be satisfied before the reserves are fully depleted. In those situations, therefore, paragraph .047(l) provides that the retained production payment shall be treated as an overriding royalty interest rather than as a receivable or payable.

Disclosure

In establishing the disclosure standards in paragraphs .048-.059 of this Statement, the Board relied on the following general guidelines:

a. The disclosures in financial statements do not and cannot include all information that may be needed for investment, credit, regulatory, or national economic planning and energy policy decisions, although the accounting standards established by this Statement should contribute importantly to the reliability and uniformity of financial data used in those types of decisions. Financial statements are intended to present fairly an enterprise’s financial position, results of operations, and changes in financial position in conformity with generally accepted accounting principles. Thus, financial statement disclosures are those disclosures that are considered necessary for such a fair presentation. Criteria such as relevance, reliability, verifiability, freedom from bias, and comparability provide guidance in considering which disclosures are necessary for fair financial statement presentation.

b. Oil and gas producing companies currently disclosure a considerable amount of information about their oil and gas producing activities in annual reports to shareholders, in published statistical summaries, in filings with the SEC, Department of Energy, and other regulatory agencies, and in other publicly available documents. Most of that information is currently presented outside the scope of the companies' financial state-
ments. This Statement will result in some of that information being included in financial statements and, for many companies, will result in changes in the bases of preparing the information.

c. The disclosures required by this Statement relate only to those activities (acquisition, exploration, development, and production) for which this Statement establishes accounting standards; therefore, this Statement does not prescribe disclosures related to transporting, refining, and marketing of oil and gas or other activities of an oil and gas producing company.

d. As a general proposition, disclosures required for companies engaged in oil and gas producing activities should be similar to those required for companies in other industries.

e. As elaborated on in paragraphs .149-.152, financial statements by themselves do not adequately portray the success of a company in finding and developing oil and gas reserves under either of the two historical cost methods of accounting for oil and gas producing activities—full costing or successful efforts costing. Under both methods, earnings are recognized at the time of sale, not at the time of discovery or production. Therefore, an important objective of the disclosures included in financial statements prepared by either of those historical cost methods should be to help the user of those statements relate a company's efforts (in terms of costs incurred in searching for and developing oil and gas reserves) and accomplishments (in terms of reserves discovered and developed).

f. The disclosure requirements must be consistent with and derived from the accounting standards established by this Statement. That is, a principal purpose of the disclosures should be to aid in understanding of the information shown in the financial statements of an oil and gas producing company. The disclosures should not be designed to present information that might have been shown in the financial statements had different accounting standards been established by this Statement.

Disclosures in Interim Financial Statements

.234. This Statement does not require that the disclosures of reserve quantities and of acquisition, exploration, development, and production costs be included in interim financial statements, though they are required in annual financial statements. The Board reached that conclusion principally because problems in gathering
Special Industry Applications

data of that type on a timely basis become especially acute at interim reporting dates and, for some companies, the costs of that effort may be unduly burdensome. The Board presently has on its agenda a project on interim financial reporting in which the nature and extent of disclosures in interim financial statements are issues.

Disclosure of Information about Reserves

.235 Most of the respondents to the Discussion Memorandum and most of the interviewees in the research effort described in paragraph .090(a) of Appendix A said that information about quantities of oil and gas reserves is essential to understand and interpret the financial statements of an oil and gas producing company. Many felt that reserve information is the single most important type of disclosure that could be required of an oil and gas producing company. They said that discovery of reserves is the critical event in the oil and gas production cycle and that reserves and changes in reserves are key indicators of the success of a company. In general, the Board agrees with those views. None of the methods of accounting considered by the Board in this project, not even discovery value or current value accounting, would, in the Board’s judgment, result in financial statements that would not need to be accompanied by disclosures of reserves and reserve changes. This Statement requires disclosure of information with respect to a company’s oil and gas reserves.

.236 The Board does not agree with the view, expressed by some, that mineral reserve information is not accounting information and, if disclosed at all, should not be included in financial statements. Those who take that position argue that while reserve information may indeed be important, it is too subjective, too frequently revised, too unreliable, too “soft” to be reported in financial statements. In the Board’s judgment, however, certain reserve information has the qualities of verifiability, reliability, freedom from bias, comparability, and the like to a sufficiently reasonable degree to warrant its inclusion in financial statements. Accordingly, the Board concluded that reserve information is so helpful and essential to an understanding of the financial position, results of operations, and changes in financial position of an oil and gas producing company that the added relevance of the financial statements from including the information more than compensates for the lack of precision of estimates of reserves.

.237 The Board considered the following broad areas of disclosure of information regarding oil and gas reserves:
Disclosure of Reserve Quantities

.238 This Statement relies on estimates of proved reserves and proved developed reserves for a number of capitalization and amortization determinations, and for the reasons discussed in paragraphs .235 and .236 disclosure of quantities of those categories of reserves, and of changes in those quantities, is required. In the Board's judgment, the constraints imposed on the estimator by the definitions of proved reserves and proved developed reserves in paragraph .271 of Appendix C will keep the subjectivity of the estimates to an acceptably low level for financial reporting purposes.

.239 Reserve increases that result from successful exploration and development efforts and from purchases of minerals-in-place, net of decreases from production and sales of minerals-in-place, represent the physical expansion or contraction of the quantity of the company's reserves from the beginning to the end of the period. Revisions of previous estimates, on the other hand, represent a change to the quantity that was perceived to have existed at the beginning of the period. The categories of changes in reserve quantities required to be separately reported by paragraph .051 are intended to reflect those differences. Some respondents to the Exposure Draft disagreed with the inclusion of changes in reserves resulting from application of improved recovery techniques among other additions; they pointed out that such changes are normally classified by industry practice as revisions of previous estimates. This Statement reflects a change from the Exposure Draft in response to the foregoing concerns. Paragraph .051 provides for separate disclosure of changes resulting from improved recov-
ery techniques if significant and for inclusion of those changes as revisions of previous estimates if not significant. Also, in response to comments on the Exposure Draft, paragraph .050 provides for exclusion of reserves relating to royalty interests owned if the reserve information is not available to the royalty owner. Also, paragraph .054(c) reflects a modification of the Exposure Draft to provide for separate disclosure of the investor's share of oil and gas reserves owned by an investee accounted for by the equity method.

.240 Because enterprises' interests in foreign oil and gas reserves are affected by political, economic, and environmental risks and considerations that are often significantly different from the risks associated with domestic reserves, this Statement requires that reserve quantities and changes in them be reported separately for each geographic area in which significant reserves are located. That requirement comports with the conclusions of the Board in FASB Statement No. 14 [section 2081], "Financial Reporting for Segments of a Business Enterprise," which requires that the financial statements of a company that operates in different geographic areas report certain key information by geographic area.

.241 Some persons propose that disclosure be required of estimated future development costs relating to proved undeveloped reserves. In the Board's view, disclosure of cost projections of that nature and tentativeness should not be required in financial statements of oil and gas producing companies. The question is not unique to the oil and gas industry—indeed, the whole area of disclosure of forecasts is unsettled. To provide some indication of the extent to which development of proved reserves has been accomplished, paragraph .050 requires the separate reporting of year-end quantities of proved developed reserves. Further, the Board believes that estimates of reserves that are not classified as proved but that are regarded as probable reserves or possible reserves are too subjective to be required for inclusion in financial statements. Some persons have suggested that disclosure of those quantities be required.

.242 Some foreign governments have nationalized or otherwise taken over, in whole or in part, certain properties in which oil and gas producing companies previously had mineral interests. Some of those interests have been converted into long-term supply, purchase, or similar agreements with the foreign government or a government authority. In some countries, oil and gas producing companies can obtain access to oil and gas reserves only through such agreements, and not through direct acquisition of a traditional
type of mineral interest in a property. If an oil and gas producing company participates in the operation of a property subject to such an agreement or otherwise serves as “producer” of the reserves from the property, it is the Board’s judgment that the reserve quantities identified with, and quantities of oil or gas received under, agreements with foreign governments or authorities should be disclosed in the company’s financial statements. In view of the different nature of those agreements, however, paragraph .053 requires that those reserve quantities be separately reported from the company’s regular proved reserves. The fact that the reserves are available to the company under agreements that differ from domestic agreements does not justify excluding those reserves from the accounting and disclosure provisions of this Statement as long as the foreign agreements, in substance, represent the right to extract oil and gas.

.243 Although the Exposure Draft had proposed to include in an investor’s reserve quantities, for purposes of the disclosures required by paragraphs .050-.056 of this Statement, the investor’s share of reserves owned by an investee accounted for by the equity method, some respondents to the Exposure Draft pointed out that the investor’s financial statements do not include the investee’s individual assets, liabilities, revenues, or expenses. They questioned therefore the propriety of including the investee’s reserves in the investor’s. The Board is persuaded that the better approach is not to commingle the investee’s and investor’s reserves in the investor’s disclosures but, rather, to require separate disclosure of the investee’s reserves at year end. Paragraph .054(c) reflects the revised requirement.

.244 Some persons believe that information about ownership characteristics (for example, whether reserves are owned in fee, by domestic lease agreement, or by concession from a foreign government) and about quality of reserves (for example, sulphur or paraffin content or specific gravity) should accompany disclosure of reserve quantities. Because of differences from property to property in those types of characteristics, for many companies the disclosures either would be so broad and general that they would be of little or no value to financial statement users or they would be so detailed and voluminous that they could overwhelm or confuse financial statement users rather than inform them. Consequently, the Board believes that explanations of that type should not be required in general purpose financial statements. For similar reasons, this Statement does not require a description of the as-
sumptions used and difficulties involved in estimating quantities of oil and gas reserves.

**Disclosure of Reserve Values**

.245 The fact that the Board rejected both discovery value and current value as bases of accounting for oil and gas reserves did not, of itself, mean that the Board automatically had rejected estimated reserve values as additional financial statement disclosures. The Board viewed the use of estimated reserve values as the basis of accounting for oil and gas producing companies and the disclosure of estimated reserve values as part of the financial statements of those companies as separable decisions, although, of course, many common considerations are involved.

.246. The measurement problems discussed in paragraph .133 were important reasons for not requiring disclosure of estimated reserve values, as they were for not accepting discovery value or current value accounting. They were not, however, the only reasons.

.247 As noted in paragraphs .138 and .140, various bases of accounting measurement, including both historical cost and current value measurements, are under consideration as part of the Board's conceptual framework project. The Discussion Memorandum on "Financial Accounting and Reporting in the Extractive Industries" did raise issues relating to methods of valuing mineral reserves. Relatively few respondents supported the use of discovery value or current value accounting or the disclosure of estimated reserve values, and the Board received only limited response to the valuation issues. The Board has decided not to resolve those issues for the limited purpose of this Statement.

.248 The SEC's consideration of whether replacement cost disclosures or other reserve value disclosures can be applied to mineral resource assets (discussed in paragraphs .082 and .096 of Appendix A to this Statement) is another reason that led the Board to reject disclosure of estimated reserve values at this time. The Welsch and Deakin study (paragraph .082) has two fundamental conclusions: that the replacement cost concept of SEC Accounting Series Release No. 190 is not relevant to oil and gas reserves and that the preferred surrogate for replacement cost is a present value method that the study calls "Equivalent Purchase Cost." In its June 15, 1977 letter transmitting that study to the SEC, though, the American Petroleum Institute, sponsor of the study, stated:

We see in the Equivalent Purchase Cost method many of the deficiencies which caused the research team to conclude that
replacement cost is not relevant with respect to oil and gas reserves. The theoretical cost of a stream of future income fails to recognize that revenue sources cannot be replaced in kind and that they will originate in different environments with characteristics substantially different from the current revenue stream.

The large majority of our Accounting Committee members cannot support this method on the grounds that the data provided would make little, if any, contribution to an investor's understanding of the economics of the business and, indeed, could be misleading.

.249 In Securities Act Release No. 5837, dated June 20, 1977, the Commission stated:

The Commission's staff has recently received, and is currently reviewing, the results of the research study together with recommendations of the American Petroleum Institute. No comments are being solicited on the disclosure of current value and current cost data until the evaluation of the American Petroleum Institute project is completed.

.250 On October 26, 1977, in Securities Act Release No. 5878, the Commission proposed to rescind the requirement in ASR No. 190 that certain registrants disclose replacement cost information about their mineral resource assets employed in oil and gas producing activities and, instead, to require registrants with mineral resource assets employed in oil and gas producing activities to disclose, in filings covering fiscal years ending on or after December 25, 1978, information based on the present value of future net revenues from estimated production of proved oil and gas reserves. The Commission has asked that comments on the proposal be submitted by March 31, 1978.

.251 The FASB will be holding a public hearing beginning January 16, 1978 on the broad subject of accounting measurement, including the question of whether one or more of the various types of "current value" measurements should be reported in financial statements of companies generally.

.252 The Board believes, therefore, that a decision as to whether reserve value information should be required to be included in financial statements should await consideration of the comments on the SEC proposal referred to in paragraph.250 and the written submissions and oral presentations in connection with the public hearing referred to in paragraph.251.

Disclosure of Capitalized Costs and of Costs Incurred

.253 The disclosures of capitalized costs (paragraph .057) and of costs incurred (paragraphs .058 and .059) are intended to com-
plement the disclosures of reserve quantities and changes therein. The reserve quantity disclosures are an indicator of accomplishment. Capitalized costs and costs incurred provide an indication of effort.

.254 Reserves are considered the focal point for assessing accomplishment because of the importance of discovery as the most critical event in the oil and gas production cycle and of development as the next most important event. Similarly, effort is much more a function of incurring costs than it is a function of disbursing cash. As a consequence, the disclosures required by paragraphs .058 and .059 include not only expenditures for acquisition, exploration, development, and production but also the depreciation of support equipment and facilities that are used in those activities. It is not the purchase of seismic equipment or a drilling rig, for example, but rather the use of that seismic equipment and the drilling rig in exploration and development activities that is an indication of effort. Thus, as paragraph .058 points out, exploration, development, and production costs include the depreciation of the seismic equipment and drilling rig but exclude the expenditures to acquire that equipment. Likewise, it is the incurrence of acquisition, exploration, and development costs that best indicates effort in terms of finding and developing reserves.

.255 The Exposure Draft had proposed to require certain special disclosures for a rate-regulated company that, under the Addendum to APB Opinion No. 2 [section 6011], follows an accounting policy that involves capitalizing or amortizing costs on a basis different from that otherwise required by this FASB Statement. Since the Exposure Draft, the Board has begun work on a project that involves reconsideration of the Addendum to APB Opinion No. 2 [section 6011]. Because the question of special disclosures such as those proposed in the Exposure Draft will be considered as part of that project, the Board has determined not to require the special disclosures that had been proposed.

Disclosure of Other Functional and Operating Data

.256 Some persons propose that aggregate revenues and expenses for oil and gas producing activities be disclosed in financial statements. In the Board's view, a serious doubt exists as to whether those aggregate revenue and expense disclosures will contribute to an understanding of an enterprise's profitability as reflected in its financial statements. Many oil and gas producing companies do not derive revenue from oil and gas producing activities but rather from the sale of refined oil and gas products. For those companies,
even if practicable, information about the results of operations of oil and gas producing activities standing alone, without similar information for the company's transportation, refining, and marketing activities and for its other operations, would represent only a fragment of the overall picture of the company.

.257 Moreover, under the provisions of *FASB Statement No. 14* [section 2081], the combined activities of acquisition, exploration, development, and production are not considered to be an industry segment of an integrated oil and gas company. Paragraph 10(a) [section 2081.010(a)] of that Statement defines an industry segment as a "component of an enterprise engaged in providing a product or service or a group of related products and services primarily to unaffiliated customers (i.e., customers outside the enterprise) for a profit." (Emphasis added.) That paragraph goes on to say that "by defining an industry segment in terms of products and services that are sold primarily to unaffiliated customers, this Statement does not require the disaggregation of the vertically integrated operations of an enterprise." The Board reconsidered that decision as part of its project on the extractive industries and concluded that *FASB Statement No. 14* [section 2081] should not be amended to apply to oil and gas producing companies a disclosure requirement not required of companies in other industries.

.258 For the reasons in paragraphs .256 and .257 this Statement does not require disclosure of functional data for oil and gas producing activities beyond the disclosures of capitalized costs and of costs incurred.

.259 The Board considered various types of operating data as possible financial statement disclosures, in addition to the required disclosures relating to reserve quantities, including gross and net undeveloped acreage, gross and net productive acreage, and gross and net producing wells and well completions, and has concluded that those disclosures need not be included for a fair presentation of financial position, results of operations, and changes in financial position in conformity with generally accepted accounting principles.

**Accounting for Income Taxes**

.260 This Statement reaffirms the conclusion of *FASB Statement No. 9* that oil and gas producing companies should...
apply interperiod income tax allocation, as described in APB Opinion No. 11 [section 4091], for all timing differences, including those relating to intangible drilling and development costs. FASB Statement No. 9, which this Statement supersedes, had permitted companies to recognize the interaction of book/tax timing differences with an anticipated future excess of statutory depletion over cost depletion in applying interperiod income tax allocation. As indicated in paragraph 16 of FASB Statement No. 9, the question of whether interaction should be recognized was left unresolved by the Accounting Principles Board in APB Opinion No. 11 [section 4091] and was not addressed by the Financial Accounting Standards Board in FASB Statement No. 9. Although recognition of interaction was permitted by FASB Statement No. 9, it was not required. This Statement prohibits the recognition of interaction.

.261 The Board has rejected the concept of interaction for several reasons. First, an excess of statutory depletion over the amount of cost depletion otherwise allowable as a tax deduction becomes a benefit only when it is actually realized via income tax deduction. The interaction concept anticipates the possible future benefit by recognizing it as a reduction of book income tax expense in advance of realization. In the Board's judgment, the uncertainties described in the next paragraph make it inappropriate to anticipate the possible future tax benefit in advance of realization.

.262 Statutory depletion was eliminated or virtually eliminated for many companies by the Tax Reduction Act of 1975 and was substantially reduced for many other companies by that Act. Further reductions are scheduled under that Act and subsequent legislation. Also, the law imposes certain limitations to statutory depletion that depend on future production, future sales prices, and future costs, all of which are difficult to estimate but which must be estimated if interaction is to be recognized. The uncertainties identified in this paragraph cause serious concern about anticipating tax benefits from future statutory depletion.

.263 Moreover, the interaction concept is inconsistent with the deferred method of income tax allocation described in paragraphs 19 and 34-37 of APB Opinion No. 11 [section 4091.18 and section 4091.33-.36]. Although the recognition of interaction is consistent, in some respects, to the “partial allocation” theory discussed in paragraphs 26-28 [sections 4091.25-.27] of that Opinion, the APB rejected the partial allocation theory in favor of comprehensive income tax allocation by the
deferred method (paragraphs 29-32 [section 4091.28-.31] of that Opinion).

.264 The concept of interaction is, essentially, a "cover" concept: Deferred income taxes that otherwise relate to current period pre-tax accounting income need not be recognized to the extent of offsetting possible future income tax benefits from excess statutory depletion. The Board has expressly rejected the "cover" concept in reaching certain decisions in this Statement (see paragraphs .175 and .176) and in FASB Statement No. 8, "Accounting for the Translation of Foreign Currency Transactions and Foreign Currency Financial Statements" (see paragraphs 174-180 [section 1083.174-.180] of that Statement).

Effective Date and Transition

.265 This Statement was made effective for fiscal years beginning after December 15, 1978 to allow an oil and gas producing company sufficient time to gather the necessary data, modify its accounting systems, and otherwise prepare for transition to the accounting standards established by this Statement. The Exposure Draft had proposed a June 15, 1978 effective date; the change to December 15, 1978 is intended to give all companies at least one year to prepare for the change and to explain any impact it may have to investors and creditors. Voluntary adoption of the provisions of this Statement prior to its effective date is not prohibited by this Statement.

.266 For several reasons, the Board has concluded that the provisions of this Statement should be applied retroactively by restating the financial statements of prior periods. First, unlike FASB pronouncements that deal with a comparatively narrow accounting question, the standards established by this Statement prescribe the fundamental basis by which the financial statements of an oil and gas producing company shall be prepared. Moreover, because many variations of successful efforts accounting have heretofore been applied in practice, this Statement is likely to have an impact on the financial statements of a great many oil and gas producing companies, not just those companies presently using the full cost method. In the Board's judgment, because of the magnitude and pervasiveness of the impact of this Statement, restatement will result in the most meaningful and comparable financial statements of all oil and gas producing companies.
Further, in paragraph 27 of APB Opinion No. 20 [section 1051.27], the Accounting Principles Board cited a change to or from the full cost method of accounting in the extractive industries as one of three special types of changes in accounting principle that should be reported by applying retroactively the new method in restatements of prior periods.

The Board recognizes that some companies may encounter some difficulties in accumulating the necessary data or in making after-the-fact estimates or judgments to apply the provisions of this Statement retroactively. The Board believes, however, that the added interperiod and intercompany comparability thus obtained outweighs any cost-saving advantages of prospective application or the cumulative effect method. Further, because of (a) the diversity of cost capitalization and amortization practices heretofore followed by both full cost and successful efforts companies and (b) the fact that amortization of some previously capitalized costs could continue for ten, twenty, thirty, forty, or more years, the Board concluded that prospective application of the standards established by this Statement is inappropriate.

With regard to some of the restatement problems cited by some respondents to the Exposure Draft, paragraph .064 points out that a provision of this Statement that would not have a significant effect on prior years' financial statements need not be retroactively applied. Also, in response to questions raised in letters of comment on the Exposure Draft, paragraph .064 allows the use of "hindsight" information in making the retroactive restatements except that reserve estimates should not now be revised in retrospect.
Appendix C

GLOSSARY

.270 This glossary defines certain terms as they are used in this Statement.

[.271] [Superseded, effective for fiscal years beginning after December 15, 1978, by FASB Statement No. 25.] (See section 6022.)

.272 The following is the definition of a field used in this Statement:

Field. An area consisting of a single reservoir or multiple reservoirs all grouped on or related to the same individual geological structural feature and/or stratigraphic condition. There may be two or more reservoirs in a field which are separated vertically by intervening impervious strata, or laterally by local geologic barriers, or by both. Reservoirs that are associated by being in overlapping or adjacent fields may be treated as a single or common operational field. The geological terms “structural feature” and “stratigraphic condition” are intended to identify localized geological features as opposed to the broader terms of basins, trends, provinces, plays, areas-of-interest, etc.

.273 The foregoing definition of a field relies, in turn, on the definition of a reservoir. The following definition shall be used for purposes of this Statement:

Reservoir. A porous and permeable underground formation containing a natural accumulation of producible oil or gas that is confined by impermeable rock or water barriers and is individual and separate from other reservoirs.

.274 For purposes of this Statement, the following definitions of wells shall be used:

Exploratory well. An exploratory well is a well that is not a development well, a service well, or a stratigraphic test well as those terms are defined below.

Development well. A development well is a well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

Service well. A service well is a well drilled or completed for the purpose of supporting production in an existing field. Wells in this class are drilled for the following specific purposes: gas injection (natural gas, propane, butane, or flue gas), water injection, steam injection, air injection, salt-water disposal, water supply for injection, observation, or injection for in-situ combustion.

Stratigraphic test well. A stratigraphic test is a drilling effort, geologically directed, to obtain information pertaining to a specific geologic condition. Such wells customarily are drilled without the intention of being completed for hydrocarbon production. This classification also includes tests identified as core tests and all types of expendable holes related to hydrocarbon exploration. For purposes of this Statement, stratigraphic test wells (sometimes called “expendable wells”) are classified as follows:

1. Exploratory-type stratigraphic test well. A stratigraphic test well not drilled in a proved area.

2. Development-type stratigraphic test well. A stratigraphic test well drilled in a proved area.

.275 The term proved area is used in the foregoing definitions of development well, exploratory-type stratigraphic test well and development-type stratigraphic test well. As used therein, a proved area is the part of a property to which proved reserves have been specifically attributed.
Suspension of Certain Accounting Requirements for Oil and Gas Producing Companies

an amendment of section 6021
[Source: FASB Statement No. 25.]

INTRODUCTION AND BACKGROUND INFORMATION

.01 FASB Statement No. 19 [section 6021], “Financial Accounting and Reporting by Oil and Gas Producing Companies,” was issued in December 1977. That Statement was to have become effective for financial statements for fiscal years beginning after December 15, 1978 and for interim periods within those years.

.02 By its issuance of Accounting Series Release (ASR) No. 253, “Adoption of Requirements for Financial Accounting and Reporting Practices for Oil and Gas Producing Activities,” on August 31, 1978, the Securities and Exchange Commission (SEC): (a) adopted the form of successful efforts accounting and the disclosures prescribed by FASB Statement No. 19 [section 6021]; (b) indicated its intention to develop a form of the full cost accounting method as an alternative acceptable for SEC reporting purposes; (c) concluded that both the full cost and successful efforts methods of accounting, based essentially on historical costs, fail to provide sufficient information on the financial position and operating results of oil and gas producing companies and, accordingly, that steps should be taken to develop an accounting method based on a valuation of proved oil and gas reserves; (d) adopted rules that require financial statement disclosure of certain financial and operating data regardless of the method of accounting followed; and (e) adopted definitions of proved reserves different from those in effect at the time Statement No. 19 [section 6021] was issued. On December 19, 1978, the SEC issued ASR No. 257, “Requirements for Financial Account-
ing and Reporting Practices for Oil and Gas Producing Activities,” and \textit{ASR No. 258, “Oil and Gas Producers—Full Cost Accounting Practices,”} in which the SEC reaffirmed its conclusions reflected in \textit{ASR No. 253}, adopted definitions of proved reserves developed by the Department of Energy (DOE) for its Financial Reporting System, and prescribed the form of full cost accounting acceptable as an alternative to successful efforts accounting for the SEC’s reporting purposes. Those requirements are effective initially for fiscal years ending after December 25, 1978 that are contained in filings that include fiscal years ending after December 25, 1979.

After considering the foregoing, the Board has decided to suspend the effective date of \textit{FASB Statement No. 19 [section 6021]} for certain provisions related to the basic method of accounting while retaining certain requirements of that Statement related to tax allocation, production payments, and disclosure. Appendix A to this Statement sets forth the basis for the Board’s conclusions.

\section*{STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING}

\section*{Amendment of Section 6021}

The effective date for application of paragraphs 11-41, 44-47, and 60 of \textit{FASB Statement No. 19 [sections 6021.011-.041, 6021.044-.047, and 6021.060]} is suspended insofar as those paragraphs pertain to a \textit{required} form of successful efforts accounting. Those paragraphs are not suspended insofar as they provide definitions of terms in paragraph 11 [section 6021.011] or provide direction and guidance for financial statement disclosures required by paragraphs 57-59 [section 6021.057-.059]. \textit{Statement No. 19}, including paragraphs 11-47 [section 6021.011-.047], continues in effect as a Statement issued by the FASB for the purpose of applying paragraph 16 of \textit{APB Opinion No. 20 [section 1051.16]}, “Accounting Changes.”

If accounting changes are made to adopt the provisions of paragraphs 11-47 of \textit{FASB Statement No. 19 [section 6021.011-.047]}, the burden of justifying other changes rests with the entity proposing the change.

\footnote{Paragraph 16 of \textit{APB Opinion No. 20 [section 1051.16]} states in part: “The presumption that an entity should not change an accounting principle may be overcome only if the enterprise justifies the use of an alternative acceptable accounting principle on the basis that it is preferable. . . . The issuance of [a Statement of Financial Accounting Standards] that creates a new accounting principle, that expresses a preference for an accounting principle, or that rejects a specific accounting principle is sufficient support for a change in accounting principle. The burden of justifying other changes rests with the entity proposing the change.”}
.047], they shall be made by retroactive restatement as pro-
vided in paragraphs 63 and 64 of that Statement [sections
6021.063 and 6021.064]. Enterprises that presently follow a
form of the full cost accounting method and that subsequently
adopt accounting changes to conform to the form of the full
cost accounting method specified by the SEC also shall make
those changes retroactively by restating the financial state-
ments of prior periods.

.06 The disclosure requirements of FASB Statement No. 19
[section 6021] are amended to permit the disclosures of re-
serve quantities to be made as supplementary information
accompanying but outside the financial statements. The last
sentence of paragraph 48 of Statement No. 19 [section 6021.048]
is revised to read as follows: “Those disclosures shall be made
within the body of the financial statements, in the notes thereto,
or in a separate schedule that is an integral part of the financial
statements, except that the disclosures of reserve quantities re-
quired by paragraphs 50-56 [section 6021.050-.056] may be made
as supplementary information accompanying but outside the finan-
cial statements.” The last sentence of paragraph 63 [section
6021.063] is revised to read as follows: “The disclosures speci-
fied by paragraphs 50-59 [section 6021.050-.059] shall be made
when presenting complete sets of financial statements that have
been restated pursuant to the provisions of this paragraph.”

.07 Paragraph 271 of FASB Statement No. 19, in which vari-
ous categories of reserves are defined, is rescinded. For the
purpose of applying this Statement and Statement No. 19
[section 6021], the definitions of proved reserves, proved
developed reserves, and proved undeveloped reserves shall be
the definitions adopted by the SEC for its reporting purposes
that are in effect on the date(s) as of which reserve disclo-
sures are to be made. Previously reported quantities shall
not be revised retroactively if the SEC definitions are changed.

.08 An enterprise engaged in oil and gas producing activities
shall disclose in its financial statements the method of account-
ing for costs incurred in those activities and the manner of
disposing of capitalized costs related to those activities.

.09 Paragraph 63 of FASB Statement No. 19 [section 6021.063]
is amended to change the effective date from “fiscal years
beginning after December 15, 1978 and for interim periods

1 The definitions of proved reserves, proved developed reserves, and
proved undeveloped reserves adopted by the SEC on December 19, 1978
in Accounting Series Release No. 257 are presented in Appendix B to this
Statement.
within those fiscal years" to "fiscal years ending after December 25, 1979, although earlier application is encouraged." The provision of paragraph .04 of this Statement suspending application of a certain form of the successful efforts method of accounting is an indefinite suspension of that method as a mandatory requirement.

Effective Date

.10 This Statement shall be effective for fiscal years beginning after December 15, 1978.

The provisions of this Statement need not be applied to immaterial items.
Appendix A

BASIS FOR CONCLUSIONS

Scope
.11 For many years oil and gas producing companies generally have followed various forms of each of two accounting methods, commonly called successful efforts and full cost. In December 1977 the Board issued FASB Statement No. 19 [section 6021], “Financial Accounting and Reporting by Oil and Gas Producing Companies,” which specified one form of the successful efforts method to be used by all oil and gas producing companies. That Statement was to have become effective for fiscal years beginning after December 15, 1978. The SEC reviewed the Board’s decision and decided that, for the present, oil and gas producing companies subject to its reporting requirements should follow either the successful efforts method as provided by Statement No. 19 [section 6021] or a form of the full cost method specified by the SEC in ASR No. 258. Reporting to the SEC based on one of those two methods is effective initially for fiscal years ending after December 25, 1978 that are contained in filings that include fiscal years ending after December 25, 1979 as provided by ASR No. 257. This Statement addresses conflicts arising because of the differences between Statement No. 19 [section 6021] and the SEC’s regulations.

.12 The SEC also has concluded that, because it believes neither the full cost nor the successful efforts method provides sufficient information on the financial position and operating results of oil and gas producing companies, an accounting method based on valuations of proved oil and gas reserves should be developed. The proposed method is referred to by the SEC as Reserve Recognition Accounting (RRA). This Statement does not address RRA.

.13 The Board issued an Exposure Draft of an amendment of FASB Statement No. 19 [section 6021] on November 7, 1978 with a 60-day comment period. Letters of comment were received from 27 respondents.

Alternatives Considered

.14 The Board considered the following four approaches for resolving conflicts between FASB Statement No. 19’s [section 6021] requirements and the SEC’s decision to accept the continued use of alternative accounting methods while it considers the development of RRA:
Special Industry Applications

a. Amend Statement No. 19 [section 6021] to suspend its effective date with respect to either the entire Statement or only portions of it.

b. Amend Statement No. 19 [section 6021] so as to permit all oil and gas producing companies (including those not subject to SEC reporting requirements) an election to follow the full cost method prescribed by the SEC for as long as the SEC permits that method to be an acceptable alternative for its reporting purposes.

c. Rescind Statement No. 19 [section 6021].

d. Take no action and let the American Institute of Certified Public Accountants (AICPA) amend or interpret its standards of reporting on financial statements or its rules of professional conduct to resolve the conflicts created by the different standards established by the FASB and the SEC.

.15 For the reasons set forth in this Appendix, the Board decided to suspend the effective date for certain provisions of FASB Statement No. 19 [section 6021].

Reasons for Suspending the Effective Date for Certain Paragraphs of Section 6021

.16 The Board considered, during the deliberations that preceded the issuance of FASB Statement No. 19 [section 6021], the issue of whether oil and gas producing companies should be permitted to continue to choose between the full cost method and the successful efforts method. The Board rejected the continued use of alternative accounting methods by oil and gas producing companies for the reasons set forth in paragraphs 128-132 of that Statement [section 6021.128-132]. Paragraph 129 [section 6021.129] states:

The Board has considered the question of accounting alternatives at length, not only in connection with its oil and gas project but also for other projects on its agenda, and has concluded that differences in accounting may be appropriate when significant differences in facts and circumstances exist, but different accounting among companies for the same types of facts and circumstances impedes comparability of financial statements and significantly detracts from their usefulness to financial statement users.

.17 In the Board's view, the reasons cited in those paragraphs for not embracing alternatives continue to be valid. While the Board acknowledges the SEC's statutory authority to differ with the Board on substantive matters, such as in connection with the continued use of alternative methods of accounting for oil and gas producing companies subject to SEC reporting requirements while it considers the develop-
ment of RRA, the Board sees no basis for reversing its earlier decision reached on the basis of extensive due process procedures.  

.18 The Board's recognition of the form of the full cost method as adopted by the SEC as an acceptable alternative would provide companies not subject to SEC reporting requirements with the same alternatives granted to companies that are subject to those requirements. Companies not subject to SEC reporting requirements are usually small, and the burden of implementing an accounting change can be particularly heavy for them. The Board was willing to impose that burden when it adopted FASB Statement No. 19 [section 6021] because of the advantage of comparable reporting by all oil and gas producing companies. Now that two alternative methods are to be permitted for companies subject to SEC reporting requirements and the Commission is considering eventually replacing both of those methods with a completely different method based on RRA, the Board concluded that, at this time, it should not require companies not subject to SEC reporting requirements to adopt either alternative.

.19 In addition, the Board's recognition of the form of the full cost method adopted by the SEC as an acceptable alternative would impose on companies not otherwise subject to SEC reporting requirements the regulations, rules, and interpretations of the SEC. The Board believes it is inappropriate for a private sector standard-setting body to impose requirements determined by a governmental agency.

.20 Paragraph .04 of this Statement explains that FASB Statement No. 19 [section 6021], including paragraphs 11-47 [section 6021.011-.047], continues in effect as an FASB Statement for the purpose of applying paragraph 16 of APB Opinion No. 20 [section 1051.16], “Accounting Changes.” Statement No. 19 [section 6021] "expresses a preference for" the successful efforts method of accounting provided in paragraphs 11-47 [section 6021.011-.047] and "rejects" other methods of accounting for oil and gas producing activities; accordingly, the Board considers it appropriate to indicate that paragraph 16 of Opinion No. 20 [section 1051.16] requires that entities proposing to change to an accounting method other than that provided in paragraphs 11-47 of Statement No. 19 [section 6021.011-.047] bear the burden of justifying that change.

.21 The SEC has indicated that, even though its judgment differs from that of the Board in certain respects in this instance, it reaffirms its basic policy of looking to the FASB for the initiative in establishing and improving accounting
standards. The SEC has incorporated into its rules the provisions of FASB Statement No. 19 [section 6021] related to the successful efforts method of accounting, conveyances, income tax allocation, and disclosure. The Board believes that rescinding Statement No. 19 [section 6021] would invalidate its intention to monitor the Statement and provide interpretations of it as they may be needed.

.22 The Board considers it essential that it accept responsibility to resolve any problems that arise in implementing its standards. The conflicts between FASB Statement No. 19 [section 6021] and the SEC's regulations do result in an implementation problem. Therefore, taking no action and letting the AICPA amend or interpret its standards of reporting on financial statements or its rules of professional conduct was not considered to be an acceptable alternative.

.23 The Exposure Draft proposed to suspend the applicability of all of the conveyance requirements of paragraphs 42-47 of FASB Statement No. 19 [section 6021.042-.047]. It also discussed the possible retention of those conveyance requirements that did not appear to conflict with the form of full cost accounting then proposed by the SEC, but the limited provisions that might have been retained did not appear to have broad applicability, and it was possible that new conflicts could arise if the SEC's final requirements for full cost accounting differed from the proposed requirements. After considering the requirements for full cost accounting adopted by the SEC in ASR No. 258, the Board concluded that it should not suspend the applicability of paragraphs 42 and 43 of Statement No. 19 [section 6021.042-.043], which address accounting for production payments payable in cash and funds advanced for exploration. The Board believes the conclusion stated in Statement No. 19 [section 6021] that production payments payable in cash and funds advanced for exploration are, in substance, borrowings is consistent with the SEC's final regulations on accounting for those transactions under either the full cost or the successful efforts method of accounting. In other respects, the Board has decided to suspend the applicability of the conveyance requirements in paragraphs 44-47 of Statement No. 19 [section 6021.044-.047] as proposed in the Exposure Draft because some of those requirements conflict with the full cost method of accounting.

Reasons for Retaining or Revising Certain Provisions of Section 6021

.24 The SEC has incorporated into its rules the requirements of FASB Statement No. 19 [section 6021] that pertain to income
tax allocation and to disclosures of costs incurred and capitalized costs. The retention of these requirements of Statement No. 19 [section 6021] does not conflict with the SEC's rules.

.25 The income tax allocation provisions of FASB Statement No. 19 [section 6021] superseded FASB Statement No. 9, "Accounting for Income Taxes—Oil and Gas Producing Companies," which had permitted different methods of accounting for income tax allocations. The Board believes the income tax allocation provisions of Statement No. 19 [section 6021] to be as appropriate for companies using the full cost method as they are for companies using the successful efforts method.

.26 Many observers have advised the Board that information about quantities of oil and gas reserves is essential to understand and interpret the financial statements of oil and gas producing companies and that reserve information is the single most important type of disclosure that could be required. In general, the Board concurs with those views. In the Board's judgment, disclosure of reserve quantities and changes in reserve quantities should be required under any method of accounting.

.27 The Board considered suspending the effective date for applicability of the disclosure requirements because they are effectively incremental disclosures only to companies not subject to SEC reporting requirements. However, information about reserves is essential, in the Board's judgment, for assessing the financial position and results of operations of an oil and gas producing company. Some, but not all, users of financial statements of companies not subject to SEC reporting requirements are in a position to obtain reserve information. The Board understood from responses to its Discussion Memorandum, "Financial Accounting and Reporting in the Extractive Industries," and testimony at its public hearing that the principal burden on companies not subject to SEC reporting requirements concerns accounting requirements rather than disclosure requirements. The suspension provision of paragraph .04 permits companies not subject to SEC reporting requirements to continue their present methods of accounting if they so desire.

.28 The Exposure Draft proposed the retention of FASB Statement No. 19's [section 6021] requirement to disclose information about reserve quantities in the financial statements. Some respondents suggested, however, that those disclosures be made outside the financial statements. Their concerns generally related to the cost, time, or difficulty of obtaining an
independent verification of reserve quantity information that may be necessary if disclosure were made in the financial statements. Many companies have staff engineers who prepare estimates of proved reserves quantities, but questions have been raised as to whether there are enough independent professional engineers to verify those estimates on a timely basis or whether generally accepted engineering standards exist whereby an engineer can verify the work of another. The Board considered those comments in light of several recent developments. The issuance of *FASB Statement of Financial Accounting Concepts No. 1* [section 1210], "Objectives of Financial Reporting by Business Enterprises," indicates that the Board intends to establish standards for reporting information outside financial statements, and the Board has issued a proposed Statement that would require disclosure outside financial statements of information about the effects of changing prices. In addition, as part of the Board's conceptual framework project, progress is being made in the development of distinctions between financial reporting and financial statements. The Board also understands that the petroleum engineering profession is initiating studies to develop uniform guidelines for estimating quantities of proved reserves and to develop standards whereby an independent professional engineer can verify the work of another engineer. Finally, the Board understands that the auditing profession is in the process of developing standards that establish an independent accountant's responsibility to review and verify compliance with a required disclosure permitted to be made outside the financial statements. In view of the evolutionary and experimental nature of deciding where information should be disclosed and the degree of independent verification, the Board believes that, for the present, permitting the required disclosure of reserve quantities to be made outside the financial statements will ensure the provision of this essential information without excessive burden.

29 The Board also reviewed the reasons given in Appendix B of *FASB Statement No. 19* [section 6021] for the requirements to disclose costs incurred and capitalized costs and found them equally valid for a full cost company as for a successful efforts company.

30 Because of the SEC action and the suspension of the effective date for the accounting requirements of *FASB Statement No. 19* [section 6021], there will not be a single, uniform method of accounting used by all oil and gas producing companies. Therefore, the Board concluded that it is desirable to
add a requirement to disclose in the financial statements the method of accounting for costs incurred in oil and gas producing activities and the manner of disposition of capitalized costs relating to those activities. Since the provision of this Statement suspending portions of Statement No. 19 [section 6021] allows companies not reporting to the SEC to apply various forms of successful efforts and full cost accounting, reference to those terms alone may not provide an adequate description of the method followed.

.31 Paragraph .07 of this Statement rescinds the definitions of proved reserves, proved developed reserves, and proved undeveloped reserves contained in paragraph 271 of FASB Statement No. 19 and requires the use of definitions adopted by the SEC for its reporting purposes. As stated in Statement No. 19 [section 6021], the Board believes that conformity of the reserve definitions used in filings with the SEC, in information reported to the DOE for its Financial Reporting System, and in financial statements prepared in conformity with generally accepted accounting principles is desirable. On December 19, 1978, the SEC adopted in ASR No. 257 the definitions developed by the DOE for its Financial Reporting System. For convenience purposes, the definitions adopted by the SEC and DOE are reprinted in Appendix B to this Statement.

.32 ASR No. 257 provides an exemption from its disclosure requirements if a company’s oil and gas operations represent 10 percent or less of total revenue, total earnings, and total assets, as defined. The Board considered whether more specific guidance for applying its general materiality provision should be presented in this Statement. The Board concluded that it would be inappropriate to resolve pervasive materiality issues in the context of this project and that more specific guidance should be provided only after having considered those issues on a comprehensive basis. The provisions of this Statement, as with all the Board’s standards, need not be applied to immaterial items.

.33 Paragraph .09 of this Statement amends paragraph 63 of FASB Statement No. 19 [section 6021.063] to change its effective date to “fiscal years ending after December 25, 1979, although earlier application is encouraged.” The SEC’s accounting requirements are “effective initially for fiscal years ending after December 25, 1978 that are contained in filings that include fiscal years ending after December 25, 1979, although earlier application is encouraged.” The Board believes that it would be unreasonable to impose on companies subject
to SEC reporting requirements certain standards related to accounting for oil and gas producing activities, such as Statement No. 19's [section 6021] tax allocation provisions, prior to the time those companies are required to make accounting changes in accordance with the SEC's regulations.
DEFINITIONS OF PROVED RESERVES

.34 The following definitions of proved reserves are those developed by the Department of Energy for its Financial Reporting System and adopted by the Securities and Exchange Commission on December 19, 1978 in ASR No. 257. Reference should be made to the SEC's reporting requirements for revisions that may have been made since the issuance of ASR No. 257.

Proved oil and gas reserves. Proved oil and gas reserves are the estimated quantities of crude oil, natural gas, and natural gas liquids which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions, i.e., prices and costs as of the date the estimate is made. Prices include consideration of changes in existing prices provided only by contractual arrangements, but not on escalations based upon future conditions.

1. Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation test. The area of a reservoir considered proved includes (a) that portion delineated by drilling and defined by gas-oil and/or oil-water contacts, if any, and (b) the immediately adjoining portions not yet drilled, but which can be reasonably judged as economically productive on the basis of available geological and engineering data. In the absence of information on fluid contacts, the lowest known structural occurrence of hydrocarbons controls the lower proved limit of the reservoir.

2. Reserves which can be produced economically through application of improved recovery techniques (such as fluid injection) are included in the “proved” classification when successful testing by a pilot project, or the operation of an installed program in the reservoir, provides support for the engineering analysis on which the project or program was based.

3. Estimates of proved reserves do not include the following: (a) oil that may become available from known
reservoirs but is classified separately as "indicated additional reserves"; (b) crude oil, natural gas, and natural gas liquids, the recovery of which is subject to reasonable doubt because of uncertainty as to geology, reservoir characteristics, or economic factors; (c) crude oil, natural gas, and natural gas liquids, that may occur in undrilled prospects; and (d) crude oil, natural gas, and natural gas liquids, that may be recovered from oil shales, coal, gilsonite and other such sources.

**Proved developed oil and gas reserves.** Proved developed oil and gas reserves are reserves that can be expected to be recovered through existing wells with existing equipment and operating methods. Additional oil and gas expected to be obtained through the application of fluid injection or other improved recovery techniques for supplementing the natural forces and mechanisms of primary recovery should be included as "proved developed reserves" only after testing by a pilot project or after the operation of an installed program has confirmed through production response that increased recovery will be achieved.

**Proved undeveloped reserves.** Proved undeveloped oil and gas reserves are reserves that are expected to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion. Reserves on undrilled acreage shall be limited to those drilling units offsetting productive units that are reasonably certain of production when drilled. Proved reserves for other undrilled units can be claimed only where it can be demonstrated with certainty that there is continuity of production from the existing productive formation. Under no circumstances should estimates for proved undeveloped reserves be attributable to any acreage for which an application of fluid injection or other improved recovery technique is contemplated, unless such techniques have been proved effective by actual tests in the area and in the same reservoir.
AC Section 6110

Accounting and Reporting by Defined Benefit Pension Plans

[Source: FASB Statement No. 35.]

INTRODUCTION

.001 This Statement establishes standards of financial accounting and reporting for the annual financial statements of a defined benefit pension plan (pension plan or plan).* Plans covered are those that principally provide pension benefits but may also provide benefits on death, disability, or termination of employment.

.002 This Statement applies to an ongoing plan that provides pension benefits for the employees of one or more employers, including state and local governments, or for the members of a trade or other employee association. Such a plan may have no intermediary funding agency or it may be financed through one or more trust funds, one or more contracts with insurance companies, or a combination thereof. This Statement applies to plans that are subject to the provisions of the Employee Retirement Income Security Act of 1974 (ERISA or the Act) as well as to those that are not. It is not intended to apply to a plan that is expected to be terminated, nor to a government-sponsored social security plan. This Statement does not require the preparation, distribution, or attestation of any plan’s financial statements (paragraph .051).

.003 Standards of financial accounting and reporting for defined benefit pension plans are presented in paragraphs .004-.030. Background information for this Statement is presented in Appendix A. The basis for the Board’s conclusions, as well as alternatives considered and reasons for their rejection, are discussed in Appendix B. Illustrations of certain applications of the requirements of this Statement appear in Appendixes D and E.

* Terms defined in the Glossary (Appendix C) are in boldface type the first time they appear in this Statement.
STANDARDS OF FINANCIAL ACCOUNTING AND REPORTING

Existing Generally Accepted Accounting Principles

.004 Existing generally accepted accounting principles other than those discussed in this Statement may apply to the financial statements of defined benefit pension plans. The financial accounting standards discussed in this Statement are those of particular importance to pension plans or that differ from existing generally accepted accounting principles for other types of entities.

Primary Objective of Plan Financial Statements

.005 The primary objective of a pension plan's financial statements is to provide financial information that is useful in assessing the plan's present and future ability to pay benefits when due.1 To accomplish that objective, a plan's financial statements should provide information about (a) plan resources and how the stewardship responsibility for those resources has been discharged, (b) the accumulated plan benefits of participants, (c) the results of transactions and events that affect the information regarding those resources and benefits, and (d) other factors necessary for users to understand the information provided.

Financial Statements

.006 The annual financial statements of a plan shall include:

a. A statement that includes information regarding the net assets available for benefits as of the end of the plan year
b. A statement that includes information regarding the changes during the year in the net assets available for benefits
c. Information regarding the actuarial present value of accumulated plan benefits as of either the beginning2 or end of the plan year
d. Information regarding the effects, if significant, of certain factors affecting the year-to-year change in the actuarial present value of accumulated plan benefits.

1 The Board recognizes that (a) information in addition to that contained in a plan's financial statements is needed in assessing the plan's present and future ability to pay benefits when due and (b) financial statements for several plan years can provide information more useful in assessing the plan's future ability to pay benefits than can the financial statements for a single plan year (paragraphs .058-.063).

2 Financial information presented as of the beginning of the year shall be the amounts as of the end of the preceding year.
.007 The primary objective set forth in paragraph .005 is satisfied only if (a) information regarding both the net assets available for benefits and the actuarial present value of accumulated plan benefits is presented as of the same date and (b) information regarding both the changes in net assets available for benefits and the changes in the actuarial present value of accumulated plan benefits is presented for the same period. Therefore, if the benefit information date pursuant to paragraph .006(c) is the beginning of the year, a statement that includes information regarding the net assets available for benefits as of that date and a statement that includes information regarding the changes during the preceding year in the net assets available for benefits shall also be presented. Use of an end-of-year benefit information date is considered preferable. Plans are encouraged to develop procedures to enable them to use that date (paragraph .029).

.008 The Board believes it is desirable to allow certain flexibility in presenting the information regarding the actuarial present value of accumulated plan benefits and the year-to-year changes therein. Therefore, either or both of those categories of information may be presented on the face of one or more financial statements or in notes thereto. Regardless of the format selected, each category of information shall be presented in its entirety in the same location. If a statement format is selected for either category, a separate statement may be used to present that information or, provided the information is as of the same date or for the same period, that information may be presented together with information regarding the net assets available for benefits and the year-to-year changes therein.

Net Assets Available for Benefits

.009 The accrual basis of accounting 3 shall be used in preparing information regarding the net assets available for benefits. The information shall be presented in such reasonable detail as is necessary to identify the plan's resources that are available for benefits.

3 The accrual basis requires that purchases and sales of securities be recorded on a trade-date basis. However, if the settlement date is after the reporting date and (a) the fair value of securities purchased or sold just before the reporting date does not change significantly from the trade date to the reporting date, and (b) the purchases or sales do not significantly affect the composition of the plan's assets available for benefits, accounting on a settlement-date basis for such sales and purchases is acceptable.
Contributions Receivable

.010 Contributions receivable are the amounts due as of the reporting date to the plan from the employer(s), participants, and other sources of funding (for example, state subsidies or federal grants—which shall be separately identified). Amounts due include those pursuant to formal commitments as well as legal or contractual requirements. With respect to an employer's contributions, evidence of a formal commitment may include (a) a resolution by the employer's governing body approving a specified contribution, (b) a consistent pattern of making payments after the plan's year-end pursuant to an established funding policy that attributes such subsequent payments to the preceding plan year, (c) a deduction of a contribution for federal tax purposes for periods ending on or before the reporting date, or (d) the employer's recognition as of the reporting date of a contribution payable to the plan.4

Investments

.011 Plan investments, whether equity or debt securities, real estate, or other (excluding contracts with insurance companies) shall be presented at their fair value at the reporting date. The fair value of an investment is the amount that the plan could reasonably expect to receive for it in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value shall be measured by the market price if there is an active market for the investment. If there is not an active market for an investment but there is such a market for similar investments, selling prices in that market may be helpful in estimating fair value. If a market price is not available, a forecast of expected cash flows may aid in estimating fair value, provided the expected cash flows are discounted at a rate commensurate with the risk involved.5

.012 Contracts with insurance companies shall be presented in the same manner as that contained in the annual report filed by the plan with certain governmental agencies pursuant to ERISA.6 A plan not subject to ERISA shall similarly present its contracts

4 The existence of accrued pension costs does not, by itself, provide sufficient support for recognition of a contribution receivable (paragraph .092).
5 For an indication of factors to be considered in determining the discount rate, see paragraphs 13 and 14 of APB Opinion No. 21 [section 4111.12—.13], Interest on Receivables and Payables. If significant, the fair value of an investment shall reflect the brokerage commissions and other costs normally incurred in a sale.
6 For 1979 plan years, the pertinent governmental reporting requirements relate to item 13 of either Form 5500 or Form 5500-C.
with insurance companies, that is, as if the plan were subject to the reporting requirements of ERISA.

.013 Information regarding a plan's investments shall be presented in enough detail to identify the types of investments and shall indicate whether reported fair values have been measured by quoted prices in an active market or are fair values otherwise determined. (Paragraphs .028(g) and .028(h) require certain additional disclosures related to investments.)

Operating Assets

.014 Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be presented at cost less accumulated depreciation or amortization.

Changes in Net Assets Available for Benefits

.015 Information regarding changes in net assets available for benefits shall be presented in enough detail to identify the significant changes during the year. Minimum disclosure shall include:

a. The net appreciation (depreciation)\(^7\) in fair value for each significant class of investments, segregated between investments whose fair values have been measured by quoted prices in an active market and those whose fair values have been otherwise determined
b. Investment income (exclusive of (a) above)
c. Contributions from the employer(s), segregated between cash and noncash contributions\(^8\)
d. Contributions from participants, including those transmitted by the sponsor
e. Contributions from other identified sources (for example, state subsidies or federal grants)
f. Benefits paid to participants
g. Payments to insurance companies to purchase contracts that are excluded from plan assets\(^9\)
h. Administrative expenses.

---

\(^7\) Realized gains and losses on investments that were both bought and sold during the year shall be included.

\(^8\) A noncash contribution shall be recorded at fair value. The nature of noncash contributions shall be described, either parenthetically or in a note.

\(^9\) Paragraph .028(e) requires disclosure of the plan's dividend income related to excluded contracts and permits that income to be netted against item (g).
Special Industry Applications

Actuarial Present Value of Accumulated Plan Benefits

.016 Accumulated plan benefits are those future benefit payments that are attributable under the plan’s provisions to employees’ service rendered to the benefit information date. Accumulated plan benefits comprise benefits expected to be paid to (a) retired or terminated employees or their beneficiaries, (b) beneficiaries of deceased employees, and (c) present employees or their beneficiaries.

.017 To the extent possible, plan provisions shall apply in measuring accumulated plan benefits. In some plans, benefits are a specified amount for each year of service. Even if a plan does not specify a benefit for each year of service, another of its provisions (for example, a provision applicable to terminated employees or to termination of the plan—if independent of funding patterns) may indicate how to measure accumulated plan benefits. If the benefit for each year of service is not stated by or clearly determinable from the provisions of the plan, the benefit shall be considered to accumulate in proportion to (a) the ratio of the number of years of service completed to the benefit information date to the number that will have been completed when the benefit will first be fully vested, if the type of benefit is includable in vested benefits (for example, a supplemental early retirement benefit that is a vested benefit after a stated number of years of service), or (b) the ratio of completed years of service to projected years of service upon anticipated separation from covered employment, if the type of benefit is not includable in vested benefits (for example, a death or disability benefit that is payable only if death or disability occurs during active service).

.018 In measuring accumulated plan benefits, the following shall apply:

a. Except as indicated in (b) and (c) below, accumulated plan benefits shall be based on employees’ history of pay and service and other appropriate factors as of the benefit information date.10

b. Projected years of service shall be a factor only in determining employees’ expected eligibility for particular benefits, such as:
   i. Increased benefits that are granted provided a specified number of years of service are rendered (for example, a pension benefit that is increased from $9 per month to $10

---

10 An example of the application of paragraphs .018(a) and .018(b) appears in Appendix E.
per month for each year of service if 20 or more years of service are rendered)

ii. Early retirement benefits

iii. Death benefits

iv. Disability benefits.

c. Automatic benefit increases specified by the plan (for example, automatic cost-of-living increases) that are expected to occur after the benefit information date shall be recognized.

d. Benefits to be provided by means of contracts excluded from plan assets for which payments to the insurance company have been made shall be excluded.

e. Plan amendments adopted after the benefit information date shall not be recognized.

f. If it is necessary to take future compensation into account in the determination of Social Security benefits, employees' compensation as of the benefit information date shall be assumed to remain unchanged during their assumed future service. Increases in the wage base or benefit level pursuant to either the existing Social Security law or possible future amendments of the law shall not be recognized.

.019 The actuarial present value of accumulated plan benefits is that amount as of the benefit information date that results from applying actuarial assumptions to the benefit amounts determined pursuant to paragraphs .016-.018, with the actuarial assumptions being used to adjust those amounts to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the benefit information date and the expected date of payment.

.020 An assumption of an ongoing plan shall underlie the other assumptions used in determining the actuarial present value of accumulated plan benefits. Every other significant assumption used in that determination and disclosed pursuant to paragraph .027(b) shall reflect the best estimate of the plan's future experience solely with respect to that individual assumption. As to certain assumptions, the following shall apply:

a. Assumed rates of return shall reflect the expected rates of return during the periods for which payment of benefits is deferred and shall be consistent with returns realistically achievable on the types of assets held by the plan and the plan's investment policy. To the extent that assumed rates of return are based on values of existing plan assets, the values used in determining assumed rates of return shall be the values.
b. Expected rates of inflation assumed in estimating automatic cost-of-living adjustments shall be consistent with the assumed rates of return.

c. Administrative expenses expected to be paid by the plan (not those paid by the sponsor) that are associated with providing accumulated plan benefits shall be reflected either by appropriately adjusting the assumed rates of return or by assigning those expenses to future periods and discounting them to the benefit information date. If the former method is used, the adjustment of the assumed rates of return shall be separately disclosed (paragraph .027(b)).

.021 In selecting certain assumptions to be used in determining the actuarial present value of accumulated plan benefits, an acceptable alternative to that discussed in paragraph .020 is to use those assumptions that are inherent in the estimated cost at the benefit information date to obtain a contract with an insurance company to provide participants with their accumulated plan benefits. Those other assumptions that are necessary but are not inherent in that estimated cost shall be selected pursuant to the requirements in paragraph .020.

Presentation of the Actuarial Present Value of Accumulated Plan Benefits

.022 The total actuarial present value of accumulated plan benefits as of the benefit information date shall be segmented into at least the following categories:

a. Vested benefits of participants currently receiving payments
b. Other vested benefits
c. Nonvested benefits.

Category (a) shall include those benefits due and payable as of the benefit information date. Present employees' accumulated contributions as of the benefit information date (including interest, if any) shall be disclosed. If interest has been credited on employees' contributions, the rate(s) shall be disclosed.

Changes in the Actuarial Present Value of Accumulated Plan Benefits

.023 Changes in actuarial assumptions made to reflect changes in the plan's expected experience shall be viewed as changes in estimates. That is, the effects of those changes shall be accounted for in the year of change (or in the year of change and future
years if the change affects both) and shall not be accounted for by restating amounts reported in financial statements for prior years or by reporting pro forma amounts for prior years.

.024 Assumed rates of return used to determine the actuarial present value of accumulated plan benefits may change periodically due to changes in expected rates of return or as changes occur in the factors affecting estimates. A change in assumed rates of return need not necessarily result when a decision is made to replace fixed-income securities currently held with lower-rated fixed-income securities because the higher yield associated with the lower-rated securities reflects increased risk. Accordingly, a higher ultimate return on the aggregate investment portfolio may not result.

**Presentation of Changes in the Actuarial Present Value of Accumulated Plan Benefits**

.025 If significant, either individually or in the aggregate, the effects of certain factors affecting the change in the actuarial present value of accumulated plan benefits from the preceding to the current benefit information date shall be identified. Effects that are individually significant shall be separately identified. Minimum disclosure shall include the significant effects of factors such as the following:

a. Plan amendments  
b. Changes in the nature of the plan (for example, a plan spin-off or a merger with another plan)  
c. Changes in actuarial assumptions.11

The significant effects of other factors may also be identified, including, for example, benefits accumulated,12 the increase (for interest) as a result of the decrease in the discount period, and benefits paid. If presented, benefits paid shall not include benefit payments made by an insurance company in accordance with a contract that is excluded from plan assets. However, amounts paid by the plan to an insurance company pursuant to such a

---

11 Plans that measure the actuarial present value of accumulated plan benefits by insurance company rates pursuant to the alternative approach described in paragraph .021 shall, if practicable, disclose the effects of changes in actuarial assumptions reflected in changes in those insurance rates.  
12 Actuarial experience gains or losses may be included with the effects of additional benefits accumulated rather than being separately disclosed. If the effects of changes in actuarial assumptions discussed in footnote 11 cannot be separately disclosed, those effects shall be included in benefits accumulated.
contract (including purchasing annuities with amounts allocated from existing investments with the insurance company) shall be included in benefits paid.\footnote{13} If the minimum required disclosure is presented in other than a statement format, the actuarial present value of accumulated plan benefits as of the preceding benefit information date shall also be presented.

.026 Information regarding changes in the actuarial present value of accumulated plan benefits may be presented either (a) in a statement that accounts for the change between two benefit information dates or (b) elsewhere in the financial statements. If only the minimum required disclosure is presented, presentation in a statement format will necessitate an additional unidentified "other" category to reconcile the beginning and ending amounts.

**Additional Financial Statement Disclosures**

.027 Disclosure of the plan's accounting policies\footnote{14} shall include the following:

a. A description of the method(s) and significant assumptions used to determine the fair value of investments and the reported value of contracts with insurance companies.

b. A description of the method and significant assumptions (for example, assumed rates of return, inflation rates, and retirement ages) used to determine the actuarial present value of accumulated plan benefits. Any significant changes of method or assumptions between benefit information dates shall be described.

.028 The financial statements shall include the following additional disclosures, if applicable:

a. A brief, general description of the plan agreement, including—but not limited to—vesting and benefit provisions.\footnote{15}

b. A description of significant plan amendments adopted during the year ending on the latest benefit information date. If significant amendments were adopted between the latest bene-

\footnote{13} Due to the use of different actuarial assumptions, the amount paid by the plan to an insurance company may be different from the previous measure of the actuarial present value of the related accumulated plan benefits. That difference is an actuarial experience gain or loss (footnote 12).

\footnote{14} See APB Opinion No. 22 [section 2045] *Disclosure of Accounting Policies*.

\footnote{15} If a plan agreement or a description thereof providing this information is otherwise published and made available, the description required by paragraph .028(a) may be omitted provided that reference to such other source is made.
fit information date and the plan's year-end, it shall be indicated that the actuarial present value of accumulated plan benefits does not reflect those amendments.

c. A brief, general description of (i) the priority order of participants' claims to the assets of the plan upon plan termination and (ii) benefits guaranteed by the Pension Benefit Guaranty Corporation (PBGC), including a discussion of the application of the PBGC guaranty to any recent plan amendment.¹⁶

d. The funding policy and any changes in such policy during the plan year.¹⁷ For a contributory plan, the disclosure shall state the method of determining participants' contributions. Plans subject to ERISA shall disclose whether the minimum funding requirements of ERISA have been met. If a minimum funding waiver has been granted by the Internal Revenue Service (IRS) or if a request for a waiver is pending before the IRS, that fact shall be disclosed.

e. The policy regarding the purchase of contracts with insurance companies that are excluded from plan assets. The plan's dividend income for the year that is related to excluded contracts shall be disclosed, and for purposes of paragraph .015 may be netted against item (g).

f. The federal income tax status of the plan, if a favorable letter of determination has not been obtained or maintained.

g. Identification of investments that represent five percent or more of the net assets available for benefits.

h. Significant real estate or other transactions in which the plan and any of the following parties are jointly involved: (i) the sponsor, (ii) the employer(s), or (iii) the employee organization(s).

i. Unusual or infrequent events or transactions occurring after the latest benefit information date but before issuance of the financial statements that might significantly affect the usefulness of the financial statements in an assessment of the plan's present and future ability to pay benefits. For example, a

¹⁶ If material providing this information is otherwise published and made available to participants, the descriptions required by paragraph .028(c) may be omitted provided that (a) reference to such other source is made and (b) disclosure similar to the following is made in the financial statements: "Should the plan terminate at some future time, its net assets generally will not be available on a pro rata basis to provide participants' benefits. Whether a particular participant's accumulated plan benefits will be paid depends on both the priority of those benefits and the level of benefits guaranteed by the PBGC at that time. Some benefits may be fully or partially provided for by the then existing assets and the PBGC guaranty while other benefits may not be provided for at all."

¹⁷ If significant costs of plan administration are being absorbed by the employer(s), that fact shall be disclosed.
plan amendment adopted after the latest benefit information date that significantly increases future benefits that are attributable to employees’ service rendered before that date shall be disclosed. If reasonably determinable, the effects of such events or transactions shall be disclosed. If such effects are not quantified, the reasons why they are not reasonably determinable shall be disclosed.

Use of Averages or Reasonable Approximations

.029 The Board recognizes that literal application of certain of the requirements of this Statement could require a degree of detail in recordkeeping and computation that might be unduly burdensome. Accordingly, the use of averages or other methods of approximation is appropriate, provided the results obtained are substantially the same as the results contemplated by this Statement. Thus, rolling back to the beginning of the year or projecting to the end of the year detailed employee service-related data as of a date within the year may be acceptable in approximating beginning- or end-of-year benefit information. The use of averages and other methods of approximation consistent with recommended actuarial practice may be useful in conjunction with other provisions of this Statement, particularly when applied to plans sponsored by small employers. If participants’ individual historical salary data for plan years before the effective date of this Statement are not available, reasonable approximations thereof are acceptable.

Effective Date and Transition

.030 This Statement shall be effective for plan years beginning after December 15, 1980. Earlier application is encouraged. Accounting changes adopted to conform to the provisions of this Statement shall be made retroactively. Financial statements of prior plan years are required to be restated to comply with the provisions of this Statement only if presented together with financial statements for plan years beginning after December 15, 1980. If accounting changes were necessary to conform to the provisions of this Statement, that fact shall be disclosed when financial statements for the year in which this Statement is first applied are presented either alone or only with financial statements of prior years.
Appendix A

BACKGROUND INFORMATION

.031 Financial reporting by defined benefit pension plans in the private sector was generally quite limited before 1976. A few companies included a report of their pension plans in their annual reports to stockholders. Those financial statements that were distributed to participants were frequently limited to summary statements of assets and often did not purport to conform with generally accepted accounting principles.

.032 The Employee Retirement Income Security Act of 1974 established minimum standards for participation, vesting, and funding for employee benefit plans of private enterprises. It also requires annual reporting of certain information to particular governmental agencies and summarized information to plan participants. For many plans, the reporting requirements include financial statements prepared in conformity with generally accepted accounting principles.

.033 The House Pension Task Force Report indicates that many public employee retirement systems do not report important financial and actuarial information to participants, public officials, and taxpayers.18 Although ERISA does not apply to those plans, interest in financial information about them has increased since enactment of ERISA, and proposed legislation19 to establish reporting requirements for them was introduced during the 1978 and 1980 congressional sessions.

.034 Prior to this Statement, no authoritative accounting pronouncement issued by the FASB or its predecessor bodies addressed financial accounting and reporting standards specifically for defined benefit pension plans.

.035 In recognition of the broadened financial reporting requirements for most employee benefit plans, the significance of both the assets held by pension plans and the benefits accumulated by participants in those plans, and the diversity of existing accounting

---

and reporting practices of employee benefit plans, the FASB placed on its technical agenda in November 1974 a project on accounting and reporting for employee benefit plans.

.036 A 10-member task force, composed of individuals from academe, the financial community, government, industry, organized labor, and the public accounting and actuarial professions, was appointed in February 1975 to counsel the Board in preparing a Discussion Memorandum analyzing issues related to the project.

.037 In preparing the Discussion Memorandum, the FASB primarily relied on the published research studies and articles that are cited in that document. The additional research undertaken in connection with this project included (a) a review of relevant literature, (b) an examination of selected published annual reports of employee benefit plans and trust funds, and annual reports to stockholders of corporations that included information about pension plans, (c) interviews with actuaries and employee benefit consultants, and (d) analysis of the provisions of ERISA and its related regulations.

.038 The Board issued the Discussion Memorandum on October 6, 1975 and held a public hearing on February 4 and 5, 1976. The Board received 104 position papers, letters of comment, and outlines of oral presentations in response to the Discussion Memorandum, and 23 presentations were made at the public hearing.

.039 In its deliberations following the public hearing, the Board concluded for the reason expressed in paragraph .071 that the scope of the initial Statement of Financial Accounting Standards resulting from the project should be limited to financial accounting and reporting by defined benefit pension plans.

.040 On April 14, 1977, an FASB Exposure Draft, Accounting and Reporting by Defined Benefit Pension Plans, was issued that, if adopted, would have been effective for plan years beginning on or after December 15, 1977. Approximately 700 letters of comment were received in response to that Exposure Draft. The Board announced on September 30, 1977 that because of the need to analyze the large number of responses and the complexity of the issues involved it would be unable to issue a final Statement in 1977.

.041 Throughout the project, the FASB worked with the United States Department of Labor, the actuarial profession, and others in an attempt to avoid conflicts, duplication, and confusion in providing meaningful financial reporting. In conjunction with that
cooperative effort, the Board decided in the first quarter of 1979 to expose to task force members and certain other interested parties a staff draft of standards that incorporated previously announced tentative conclusions. The Board considered the comments received on that draft. It then concluded that a revised Exposure Draft should be issued for public comment because of the significant changes that had been made to the proposed standards in the April 14, 1977 Exposure Draft.

.042 A revised Exposure Draft, Accounting and Reporting by Defined Benefit Pension Plans, was issued on July 9, 1979. The Board received approximately 300 letters of comment in response to that Exposure Draft.

Appendix B

BASIS FOR CONCLUSIONS

.043 This appendix discusses factors deemed significant by members of the Board in reaching the conclusions in this Statement, including various alternatives considered and reasons for accepting some and rejecting others. Individual Board members gave greater weight to some factors than to others.

REPORTING ENTITY

.044 Deciding whether the plan or pension fund is the reporting entity is related to the objectives of the financial statements, and many respondents who addressed the issue of the reporting entity did so in that context. Thus, the views expressed in paragraphs .045-.047 should be considered together with those expressed in paragraphs .048-.069.

.045 Arguments presented by proponents of the plan as the reporting entity include the view that a plan has many attributes of a legal entity. It gives rise to participants’ rights, plan resources, and employer obligations. That view is reinforced for plans subject to ERISA (ERISA plans) by certain sections of the Act. Further, and more importantly, to report only pension

20 This appendix identifies the specific document on which respondents commented only if such comments are limited in their application to that document. Otherwise, the term respondents refers to those who responded to one or more documents preceding this Statement, that is, the Discussion Memorandum and the initial and revised Exposure Drafts.

21 For example, Section 502(d)(1) includes the following statement: “An employee benefit plan may sue or be sued under this title as an entity.” Any claims for pension benefits are enforceable against the pension plan as an entity, as provided for in Section 502(d)(2) of the Act: “Any money judgment under this title against an employee benefit plan shall be enforceable only against a plan as an entity and shall not be enforceable against any other person unless liability against such person is established in his individual capacity under this title.” The view that the pension plan should be accounted for as if it were a separate accounting entity is also viewed as being compatible with reporting provisions of the Act. For example, Section 103(a)(3) (A) states, in part: “. . . the administrator of an employee benefit plan shall engage, on behalf of all plan participants, an independent qualified public accountant, who shall conduct such an examination of any financial statements of the plan, and of other books and records of the plan, as the accountant may deem necessary to enable the accountant to form an opinion as to whether the financial statements and schedules required to be included in the annual report by subsection (b) of this section are presented fairly in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.”
Special Industry Applications

fund activities omits reporting the significant information about participants' benefits.

.046 Supporting the pension fund as the reporting entity is the view that the pension plan consists only of a set of documents used by various entities, such as the sponsor, trust funds, and insurance companies, to assist in carrying out the terms of the agreement between the employer(s) and the employees. The fact that the plan may possess certain attributes of a legal entity is not viewed as sufficient reason for characterizing it as a reporting entity. Many respondents who supported the pension fund as the reporting entity linked that choice with the impropriety, in their view, of presenting quantitative information about plan benefits in the financial statements.

.047 After considering the alternatives, the Board concluded that the needs of financial statement users and the related primary objective of the financial statements (as set forth in following paragraphs) necessitate establishing the plan, rather than the fund, as the reporting entity. The Board believes that financial information about both the promise to provide benefits and any assets committed to fulfill that promise are essential to present financial statements that are most meaningful to users (paragraphs .048-.053).

PRIMARY OBJECTIVE OF PLAN FINANCIAL STATEMENTS

Users of Financial Statements

.048 Potential users of plan financial statements include those who have an existing or potential relationship with either the plan or the employer(s). The initial Exposure Draft identified plan participants as the primary users of plan financial statements. Many respondents to that Exposure Draft expressed the view that the "typical" plan participant would be uninterested in or unable to properly assimilate the information presented in plan financial statements and thus would be confused and possibly misled.22 Other respondents thought that Exposure Draft gave

---

22 Most respondents commented from the perspective of an employer rather than an employee. Thus, those comments may not reflect the views of the "typical" plan participant. A recent nationwide study of attitudes toward pensions and retirement commissioned by Johnson & Higgins and conducted by Louis Harris and Associates surveyed the views of both employers and employees. It found that "... business leaders widely misjudge the importance employees place on certain types of information about their pension plans. Among employees who read their most recent pension
insufficient attention to the needs of other users, for example, employers, their investors and creditors, plan administrators, and governmental authorities responsible for regulating pension plans.

.049 In response to such comments, the primary objective of plan financial statements as it appeared in that Exposure Draft was revised. Those revisions are intended only as clarifications and shifts in emphasis. For example, the phrase "useful in assessing the plan's present and future ability to pay benefits when due" now appears in place of "useful to plan participants in assessing the security with respect to receipt of their accumulated benefits." Although this Statement does not identify any one group as the primary users, the Board believes that the content of plan financial statements should focus on the needs of plan participants because pension plans exist primarily for their benefit. The Act provides additional support for that view. For example, Section 103(a)(3)(A), quoted in footnote 21, refers to an examination of plan financial statements by an independent accountant engaged on behalf of all plan participants. The Board recognizes, however, that plan financial statements should also be useful to others who either advise or represent participants, are present or potential investors or creditors of the employer(s), are responsible for funding the plan (for example, state legislators), or for other reasons have a derived or indirect interest in the financial status of the plan.

.050 The Board recognizes that participants who have not had previous exposure to financial statements may need to be educated regarding the information presented in plan financial statements. However, the Board does not believe that a possible need to educate some users justifies disregarding the financial information needs of other users who have a reasonable understanding of financial reporting and economic activities and are willing to study the information with reasonable diligence. Financial statements should not exclude relevant information merely because it may be difficult for some to understand or because some members of the expected audience choose not to use it. To enhance their usefulness, plan administrators may wish to supplement the statements with a brief explanation that highlights those matters expected to be of most interest to participants. Including summary report, substantial majorities believe it is 'very important' that they receive information about the current financial status of their plan (83%). . . . However, among business leaders whose employees receive annual reports, just 38% feel it is 'very important' that the report contain [that] information. . . ." (Johnson & Higgins, 1979 Study of American Attitudes Toward Pensions and Retirement, pp. vii and viii.)
financial information for a period of years in such supplementary information, and thereby disclosing trends, may also be helpful.

051 Some respondents to the initial Exposure Draft who expressed concern regarding the usefulness of plan financial statements to participants presumed that it required that plan financial statements be distributed to all participants. Others interpreted that document as requiring plan financial statements to be audited. This Statement does not require the preparation, distribution, or attestation of any financial statements, but only establishes standards of accounting and reporting to be followed in the preparation of plan financial statements that purport to be in accordance with generally accepted accounting principles.

052 The accounting and reporting standards established by this Statement are intended to result in general purpose external financial statements. To include in financial statements designed to serve many the specialized information needed by a few who can otherwise obtain that information may be uneconomical. For example, the plan administrator may need many kinds of specialized and detailed information to decide day-to-day matters and establish policies. But the plan administrator controls the plan’s accounting system, and much of the accounting effort may be managerial accounting designed to help the plan administrator manage and control operations. Similarly, the information needed by the sponsor of a single-employer plan to evaluate potential plan amendments or to determine current minimum funding requirements under the Act is specialized information. But sponsors usually have the ability to acquire the specific information they need. To the extent that governmental authorities responsible for regulating plans wish to indicate their needs for financial information by requiring submitted financial statements to be prepared in accordance with generally accepted accounting principles, it seems appropriate to consider the needs of those authorities in establishing generally accepted accounting principles for plans (provided those needs do not conflict with the needs of participants and do not entail an adverse cost/benefit relationship). To the extent that governmental authorities need specialized information, they can probably obtain it.

053 Information consistent with the primary objective of plan financial statements (set forth in subsequent paragraphs) is likely to be useful to participants and others who are interested in essentially the same financial aspects of the plan, including those who have an existing or potential relationship with the employer(s). Although information presented in plan financial statements may
fulfill certain needs of those who have a relationship with the employer(s), the Board believes that an in-depth consideration of their needs is more appropriately a part of another Board project.23

**Objectives**

.054 The Board considered those user needs that could be reasonably satisfied within the constraints of the characteristics and limitations of financial accounting.

.055 Because employees generally render service long before they receive the benefits to which they are entitled as a result of that service, they are concerned with the security24 for their future benefits. Thus, the primary objective of plan financial statements stated in the initial Exposure Draft was to provide information that is useful to plan participants in assessing the security with respect to receipt of their accumulated benefits.

.056 A number of respondents thought that primary objective was too narrow. Although the initial Exposure Draft was based on an assumption of an ongoing plan, certain aspects (primarily those relating to measuring the actuarial present value of accumulated plan benefits) were seen as emphasizing the security of participants' benefits in the event of plan termination. Many respondents thought participants and other users should be interested not only in immediate security but in whether adequate progress is being made toward achieving security for the benefits participants expect to receive upon retirement or other termination of service. The Board agreed. Therefore, to emphasize the assumption of an ongoing plan, the phrase “plan's present and future ability to pay benefits when due” was substituted for “security with respect to receipt of [participants’] accumulated benefits.”

---

23 Another project on the Board's technical agenda, accounting by employers for pensions, encompasses a reconsideration of present generally accepted accounting principles regarding employer accounting for pension plans.

24 That view of participants' informational needs appears to be supported by the results of the Harris survey. That survey found that 93 percent of the employees who read the last report thought it was very important that they know how certain it is that they will be paid their pension. (Johnson & Higgins, 1979 *Study of American Attitudes Toward Pensions and Retirement*, p. 53.)
.057 Some respondents to the initial Exposure Draft also expressed the view that providing information useful in assessing the performance of pension plan administrators and other fiduciaries in managing the assets they control should be a part of the primary objective of plan financial statements. The Board believes that providing information useful in an assessment of stewardship is inherent in providing information useful in assessing benefit security. However, because of the importance of stewardship to a plan's ability to pay benefits, the Board concluded that that interrelationship should be explicitly indicated. (Paragraph .067 further discusses the use of financial statements in assessing stewardship.)

Other Information Needed in Assessing Benefit Security

.058 Some respondents to the Exposure Drafts expressed the view that (a) the continued viability of the employer as an entity willing and able to meet the funding requirements of the plan and (b) (for ERISA plans) the guaranty of the PBGC were more important to long-range benefit security than the assets held by the plan at any given date. In their view, the Exposure Drafts either ignored or dealt inadequately with those factors, and thus the objective of providing information useful in assessing benefit security would not be achieved.

.059 As indicated in the Exposure Drafts, the Board recognizes that information beyond that presented in plan financial statements is needed to assess benefit security. Whether participants receive their benefits when due depends not only on the existing relationship between plan resources and accumulated plan benefits but also on (a) the commitment and financial ability of the employer(s) to make future contributions to the plan and (b) (for an ERISA plan) the extent to which payment of benefits is insured by the PBGC. Although the commitment and financial ability of the employer(s) to make future contributions to the plan are primary factors in assessing benefit security, that kind of information is not within the limits of financial accounting for the plan itself.

.060 However, a primary purpose of funding a pension plan is to enhance the plan's present and future ability to pay benefits when due. If a funding program is in effect, participants can look to funds that are irrevocably committed to the payment of benefits. Other factors being equal, the higher the ratio of those funds to the actuarial present value of accumulated plan benefits, the greater is the assurance that present accumulated plan benefits will be
Accounting and Reporting by Defined Benefit Pension Plans

10,727

paid. With the information presented in plan financial statements, users can assess the extent to which the plan itself is able to pay participants’ benefits and the extent to which payment of benefits is dependent on other factors, namely, the commitment and financial ability of the employer(s), and, for ERISA plans, the security provided by the PBGC.

.061 The existence of the PBGC guaranty as an element of benefit security was not, as some respondents contended, ignored in the Exposure Drafts. Both drafts required, as does this Statement, that financial statements of ERISA plans include a brief, general description of the PBGC guaranty. However, the initial Exposure Draft’s requirement was expanded to require an explanation of the application of the PBGC guaranty to any recent plan amendments (paragraph .265).

.062 There is also the view that the primary objective is unattainable because a comparison of the net asset and benefit information as presented in a plan’s annual financial statements is not sufficient for an assessment of the plan’s future ability to pay benefits when due. The Board recognizes that information regarding the trend of the relationship over time between plan resources and accumulated plan benefits, on both an absolute and a relative basis, can be more useful than information about that relationship at any given date. Information over time is, however, an aggregation of information as of a series of dates. Without annual information, trend information over a period of years cannot be ascertained. Therefore, the Board believes it is appropriate for the primary objective to indicate that the information provided by plan financial statements should be useful in assessing (as contrasted with portraying) the plan’s future as well as present ability to pay benefits when due. Paragraph .050 acknowledges that the usefulness of annual financial statements may be enhanced by supplementing them with summary financial information for a period of years.

.063 To summarize, the Board does not believe that the need for information beyond that provided by annual plan financial statements implies that the stated objective of providing information useful in assessing the plan’s present and future ability to pay benefits when due is either unattainable or inappropriate. An analogous situation exists with regard to financial reporting by business enterprises. The objectives stated in FASB Concepts Statement No. 1 [section 1210], Objectives of Financial Reporting by Business Enterprises, focus on providing “information that is useful to present and potential investors and creditors and
other users in making rational investment, credit, and similar decisions."²⁵ That document recognizes, however, that financial reporting is but one source of economic information about business enterprises. The financial information provided by financial reporting for business enterprises should be used in combination with pertinent information from other sources, for example, information about general economic conditions or expectations, political events and political climate, or industry outlook.²⁶ Similarly, financial information presented in plan financial statements should be used in combination with other pertinent information, including information about the financial condition of the employer(s) and, for ERISA plans, the guaranty of the PBGC. Concepts Statement 1 also implicitly recognizes that financial reporting by a business enterprise for any one period may be insufficient to fulfill users' needs. For example, paragraph .048 indicates that "... procedures such as averaging or normalizing reported earnings for several periods ... are commonly used in estimating 'earning power'." Users of plan financial statements may likewise need financial information for several years in assessing benefit security.

Alternatives Considered

.064 Alternatives suggested by respondents primarily focused on the objectives presented in the Discussion Memorandum, namely:

a. To provide information useful for assessing the aggregate future benefits payable to participants and the resources available to meet those payments
b. To provide information useful to individual pension plan participants for assessing the degree of risk that may be associated with the future receipt of their pension benefits
c. To provide information useful for assessing, in terms of amount, timing, and related uncertainty, the aggregate future benefits payable to participants should the pension plan be terminated
d. To provide information useful for assessing the performance of pension plan administrators and other fiduciaries in discharging their various responsibilities
e. To provide information useful for assessing the performance of pension plan administrators and other fiduciaries solely with regard to managing the assets that they control
f. To provide information useful for assessing the need for future contributions to the pension plan in terms of amount and timing

²⁵ Concepts Statement 1, par. 34[section 1210.34].
²⁶ Ibid., par. 22[section 1210.22].
g. To provide information useful for assessing future earnings of the pension plan in terms of amount and timing.

.065 As was indicated in the Discussion Memorandum and the Exposure Drafts, selection of a particular objective does not necessarily mean exclusion of an alternative; rather, selection of objectives determines the matters to be emphasized.

.066 The Board views objectives (a)-(c) as falling within the broad objective of providing financial information that is useful in assessing the plan's present and future ability to pay benefits when due. However, each of those objectives and the views of respondents supporting them suggest an alternative manner of either measuring or displaying particular elements of the financial information. Accordingly, those alternatives are addressed in subsequent paragraphs that deal with the determination and presentation of benefit information.

.067 Objectives (d) and (e) are concerned with whether the financial statements should be primarily oriented toward reporting what the plan administrator and other fiduciaries have done to carry out their duties. As indicated in paragraph .057, objective (e) is, to a significant degree, considered inherent in the broad objective adopted by the Board. In accomplishing that objective, plan financial statements will provide information regarding the management of plan assets together with information pertaining to participants' accumulated plan benefits as well as the results of transactions and events that affect those assets and benefits. Although that information should be useful in assessing performance, factors that are beyond the control of plan management, such as the financial condition of the employer(s), participants' longevity, and general economic conditions, may contribute to plan performance. Plan financial statements provide information about a plan when it was under the direction of a particular management but cannot separate the effect of management performance from the effects of other factors. Users therefore need to form their own assessment of the effect of management performance on plan performance. Further, to focus solely on objectives relating to performance might, based on certain respondents' views, result in the exclusion of benefit information. The Board does not believe such exclusion would result in meaningful financial statements. Therefore, the Board does not believe that an objective relating to performance should, by itself, constitute the primary objective of plan financial statements.
.068 Objectives (f) and (g) were rejected as primary objectives for reasons somewhat similar to those expressed in paragraph .067. To the extent that users' expectations about future plan performance are based on past plan performance, information about existing plan assets and the income from those assets together with information about present accumulated plan benefits may be useful in assessing the need for future contributions to the plan and future earnings of the plan. However, plan financial statements cannot provide information about assets or benefits that do not currently exist. Users need to assess the possible impact of factors that may cause change and form their own expectations about the future and its relation to the past.

.069 Some respondents suggested another objective, namely that the financial statements for ERISA plans provide only the information required by ERISA and its related regulations. In their view, Congress established that pension plan financial statements serve plan participants and prescribed the information that it deemed appropriate for that purpose. The Board noted, however, that Section 103(a)(3)(A) (quoted in footnote 21) refers to financial statements “presented fairly in conformity with generally accepted accounting principles.” The Board sees no indication in the Act that those principles of accounting are intended to be found in the Act’s requirements or in regulations to be issued thereunder. It is the purpose of, and the Board believes Congress recognized the need for, financial accounting standards to determine the content of plan financial statements.

SCOPE OF THIS STATEMENT

.070 This Statement establishes standards of financial accounting and reporting for defined benefit pension plans. In contrast, the Discussion Memorandum comprehended various types of employee benefit plans. However, most respondents to the Discussion Memorandum directed their attention to accounting and reporting for defined benefit pension plans—presumably the area of most concern to them. Some respondents to the Exposure Drafts suggested that the scope of this Statement should be expanded to include other types of employee benefit plans. Although requested to do so by paragraph 43 of the initial Exposure Draft, very few respondents to that document identified specific aspects of the accounting and reporting by other types of employee benefit plans that they believed the Board should focus on.
Because of respondents’ overriding interest in reporting by defined benefit pension plans, the Board concluded that this Statement should focus on those plans. That focus is not intended to imply that the Board has concluded that the standards of financial accounting and reporting for other types of employee benefit plans should be the same as or different from those described in this Statement.

Some respondents to the initial Exposure Draft suggested that the scope of this Statement include interim as well as annual financial statements. Because few, if any, plans publish complete interim financial statements and because the consideration of related issues would delay issuance of this Statement, the Board did not consider interim financial statements.

Defined benefit pension plans of state and local governmental units are included in the scope of this Statement. Certain respondents suggested that because of the unique characteristics of governmental units, such as their taxing power and perpetual life, their plans are inherently different from private plans and therefore should be excluded. Others contended that governmental plans should be excluded because they may differ from private plans with respect to funding requirements, vesting and benefit provisions, or both.

Some respondents to the Exposure Drafts expressed the view that plans of state and local governmental units should be excluded because the stated primary objective of plan financial statements was not appropriate for such plans. In their view, because public plans are less likely to terminate than private plans, providing information useful in assessing benefit security is not relevant. The view was also expressed that the initial Exposure Draft’s identification of participants as the primary users of plan financial statements was not appropriate for governmental plans. Those respondents thought the financial statements of such plans should be directed specifically to users other than plan participants (for example, public officials, state legislators, taxpayer groups, bond underwriters, potential investors, etc.) and that those users might have objectives other than assessing benefit security.

The Board recognizes that there are distinctions between business enterprises and governmental units. The Board also recognizes that the financial condition of the employer is of extreme importance for benefit security. However, the Board believes that only the characteristics of the plans themselves, not the
characteristics of their sponsors, should affect the accounting and reporting by pension plans. The Board also did not find persuasive the argument that plans of state and local governmental units should be excluded because their vesting and benefit provisions may differ from those of private plans. The vesting and benefit provisions of private plans are not all the same. Such differences will be reflected in plan financial statements prepared in accordance with this Statement. (Paragraph .165 discusses how the basic method for determining the benefit information accommodates differences in such factors as plan provisions.)

.076 The Board also believes that there is a need, as evidenced by the increasing interest\textsuperscript{27} in financial information about public plans and by the House Pension Task Force Report on Public Employee Retirement Systems,\textsuperscript{28} to establish standards of financial accounting and reporting for plans of state and local governmental units. That report states: "Serious deficiencies exist among public employee retirement systems at all levels of government regarding the extent to which important information is reported and disclosed to plan participants, public officials, and taxpayers."\textsuperscript{29} It also states that participants in such plans "do face the risk of pension benefit reductions or other benefit curtailments due to reasons other than plan termination," and that "the financing of many pension plans covering local government employees lacks stability and predictability due to state imposed taxing restrictions as well as to the indeterminate amount of funds available from federal revenue sharing, state insurance premium taxes, etc."\textsuperscript{30} In view of the foregoing, the Board concluded that the primary objective of providing information useful in assessing the plan's ability to pay benefits when due is as appropriate for plans of state and local governmental units as it is for private plans.

.077 Views regarding the needs of financial statement users other than participants were previously addressed (paragraph .049). Further, the primary objective adopted by the Board does not

\textsuperscript{27} The recent Harris survey (footnote 22) provides evidence of that interest. That survey found that public plan compliance with private plan regulations is favored by 68 percent of current and retired employees (14 percent opposed) and by 93 percent of business leaders. Moreover, such compliance is favored by a sizeable 65 percent majority of employees currently covered by public plans and opposed by only 18 percent. (Johnson & Higgins, \textit{1979 Study of American Attitudes Toward Pensions and Retirement}, p. xi.)

\textsuperscript{29} Ibid., p. 3.

\textsuperscript{30} Ibid., p. 102.
necessarily deny other objectives that are associated with those users. However, to the extent that certain users need specialized or detailed information and can otherwise obtain that information, the Board concluded (paragraph .052) that such information should not be required in general purpose external financial statements.

.078 Government-sponsored social security plans (for example, the U.S. Social Security program and similar plans of foreign countries) are not included in the scope of this Statement. The scope of the Discussion Memorandum did not include those plans nor did the Board consider them in its deliberations.

.079 This Statement does not differentiate among plans based on plan size. Some respondents to the initial Exposure Draft suggested that the cost of implementing that document would be excessive for small plans, and therefore such plans should be exempted. (Paragraphs .272-.279 discuss certain changes made to that Exposure Draft's requirements to reduce the perceived implementation costs.) Other respondents objected because they interpreted the inclusion of small plans as requiring them to issue audited annual financial statements. As indicated in paragraph .002, this Statement does not require the preparation, distribution, or attestation of any plan's financial statements. The Board recognizes that ERISA plans with fewer than 100 participants are not required to have their annual financial statements audited and are subject to less detailed requirements regarding their annual reports to governmental agencies.

.080 The Board believes that small plans should be included in the scope of this Statement. The financial information needed in assessing a plan's ability to pay benefits is not dependent on its size. Further, any size criterion selected for excluding plans would be arbitrary. To exclude small plans from the scope of this Statement would be justified only if the usefulness of the required information did not justify its cost. However, that cost/benefit relationship is difficult to determine. It is recognized that the incremental cost per participant to implement this Statement will be generally higher for smaller plans. Accordingly, the Board considered how the provisions of the Statement, primarily those relating to benefit information, might be modified to apply to small plans. The Board noted that the American Academy of Actuaries in its Interpretation 2, Interpretation of Recommendations Concerning the Calculation of the Actuarial Present Value of Accrued Benefits under an Active Plan, does not differentiate among plans based on plan size. Although their basic method is the same for large and small plans, the Board is aware that certain
actuaries use simplified techniques in applying that method to minimize the costs for small plans. As indicated in paragraph .029, this Statement permits the use of averages or other methods of approximation, including those consistent with recommended actuarial practice, provided the results obtained are substantially the same as the results contemplated by this Statement. That paragraph also notes that such approaches may be particularly useful for plans sponsored by small employers.

.081 The revised Exposure Draft requested respondents, particularly those associated with small plans that intended to issue financial statements in accordance with generally accepted accounting principles, to express their views regarding whether the provisions of that document should be modified for small plans and, if so, to what extent. Of those relatively few respondents who thought modifications should be made, most suggested exempting small plans from the requirement to present benefit information. For such an exemption to be appropriate, it would be necessary to conclude that the primary objective of financial statements for a small plan is different from that for a large plan. The Board does not support that conclusion (paragraph .080).

.082 The Board considered the American Society of Pension Actuaries' response to the revised Exposure Draft regarding specific simplified techniques that, in the Society's view, should be permitted in valuing small plans' ancillary benefits. Paragraph .029 of this Statement permits the use of such simplified techniques. Further, one reason for the delayed effective date of this Statement is so that small plans that intend to adopt this Statement will have additional time to develop the necessary procedures, which may include appropriate simplified techniques.

.083 For plans maintained outside the United States that are similar to plans maintained in the United States, this Statement applies only when financial statements of such plans are intended to conform with U.S. generally accepted accounting principles.

.084 The scope of this Statement excludes a plan that has been or is expected to be terminated. The event of termination, particularly for an ERISA plan, would make various requirements of this Statement inappropriate because they are based on the assumption of an ongoing plan.

.085 This Statement applies to an unfunded plan. Although principally limited to the information required by paragraphs .006(c)
and .006(d), the Board nevertheless considers that financial information useful in assessing such a plan's ability to pay benefits when due.

INFORMATION REGARDING NET ASSETS AVAILABLE FOR BENEFITS

.086 Because a plan's net assets are the existing means by which it may provide benefits, net asset information is necessary in assessing a plan's ability to pay benefits when due. This Statement requires that information to be presented as of the end of the plan year. If the benefit information date is the beginning of the year, a statement that includes net asset information as of that date is also required. (Paragraphs .244-.246 discuss the Board's conclusions regarding the format for presenting that information.)

Basis of Accounting

.087 The Discussion Memorandum referred to the following bases of accounting for the net assets of a pension plan: cash basis, accrual basis, and a modified cash or modified accrual basis. Most respondents who addressed the issue indicated a preference for the accrual basis. Some who favored either the cash basis or a modified basis cited the administrative convenience of such an approach and noted that, in many instances, the difference from the accrual basis would not be material. Respondents favoring the accrual basis generally indicated that it is the only basis that provides complete financial information relating to transactions and events occurring during the period. The Board agreed with the latter argument and believes that basis is the only one that is consistent with the primary objective.

.088 Some respondents to the Discussion Memorandum objected to the accrual basis because it would require that purchases and sales of securities be recorded on a trade-date basis. They contended that present recordkeeping is geared to a settlement-date basis, that a change in reporting would be an administrative burden, and that the information produced by the two methods would not be significantly different for most plans. The Board concluded that, subject to materiality considerations, the accrual basis should be used. Therefore, if the results are not significantly different from the results on a trade-date basis, accounting for sales and purchases of securities on a settlement-date basis is acceptable (footnote 3).
Receivables from Employer(s) and Others

.089 This Statement requires reporting as contributions receivable those amounts that, as of the reporting date, are due the plan from the employer(s), participants, and other sources of funding. Amounts due include those pursuant to formal commitments as well as legal or contractual requirements.

.090 The initial Exposure Draft did not address receivables from sources other than the employer(s) and participants. However, certain other sources (for example, state subsidies and federal grants) constitute a significant source of financing for many plans of state and local governmental units. Accordingly, receivables from such sources should be included and separately identified. However, funds from sources such as federal revenue-sharing programs that are used for plan funding purposes at the employer's discretion are, in effect, employer contributions and should be reported as such.

.091 The initial Exposure Draft limited employer contributions receivable to amounts legally or contractually due the plan. A number of respondents indicated that some employers (but not employers participating in collectively bargained multiemployer plans) contribute amounts in excess of legal or contractual minimums and, in some cases, those contributions are made after the plan's year-end. Respondents questioned the appropriateness of excluding those "excess" amounts from plan receivables. Some indicated that determining the amounts that are "legally or contractually" due could be burdensome if such amounts are less than actual contributions. The Board agreed and concluded that contributions receivable should include amounts evidenced by a formal commitment. Paragraph .010 indicates certain factors that may provide evidence of a formal commitment. The revised Exposure Draft did not include the employer's recognition as of the reporting date of a contribution payable to the plan as possible evidence of a formal commitment. Certain respondents suggested that that factor be added. The Board agreed that such a factor could provide additional support for the existence of a formal commitment. (Paragraph .092 indicates that the existence of accrued pension costs does not, by itself, provide sufficient support.) Receipt of formally committed amounts soon after the plan's year-end provides additional evidence of the existence of a receivable at year-end. In accordance with existing generally accepted ac-

counting principles applicable to receivables, an adequate allowance should be provided for estimated uncollectible amounts.

.092 Certain respondents favored treating as receivables all amounts reported as accrued pension costs by the employer(s). That position was generally founded on the belief that there should be symmetry in the financial reporting of the employer(s) and the plan. The Board has on its technical agenda a project on accounting by employers for pensions. The Board intends to consider further the issue of symmetry in that project. While neither accepting nor rejecting the concept of symmetry at this time (paragraph .163), the Board concluded that present practices of employers in accounting for pension costs are not a sufficient basis on which to account for employer contributions receivable. For various reasons, amounts recorded as accrued pension costs by an employer may differ from amounts formally committed to the plan. For example, the method used for measurement of periodic pension costs for the employer's financial statements may differ from the method used for determining the amount and incidence of employer contributions.

.093 A few respondents to the initial Exposure Draft questioned whether the entire amount of “unfunded prior service costs” is a receivable of the plan. Because at the reporting date that amount is not due from the employer(s), it is not a receivable of the plan. The employer(s) may or may not intend to eventually contribute amounts sufficient to eliminate the “unfunded prior service costs.” Until such payments are formally committed to the plan, “unfunded prior service costs” do not constitute a recordable resource of the plan. For similar reasons, any existing excess of the actuarial present value of accumulated plan benefits over the net assets available for benefits (excluding contributions receivable) is not a plan receivable unless at the reporting date that amount is legally, contractually, or pursuant to a formal commitment due the plan.

**Alternatives Considered for Measuring Investments (Other Than Contracts with Insurance Companies)**

.094 Alternatives presented in the Discussion Memorandum encompassed the following approaches to measuring plan investments: fair value, historical cost, and certain hybrid methods. Opinion was divided among respondents as to whether a single method should be used for all investments.
Single Method

.095 Most respondents to the Discussion Memorandum who favored a single method advocated fair value. In their view, the fair value of plan investments is the most relevant information that can be provided for assessing (a) the security within the plan for participants' benefits and (b) the plan's investment performance. Further, for ERISA plans, a number of respondents noted that there would be no additional administrative burden caused by requiring its use because fair value is presently required in financial data filed with certain governmental agencies.

.096 Some respondents favoring use of only one method advocated historical cost. Generally, they emphasized the high degree of objectivity associated with that method and that its use does not result in the recognition of unrealized gains or losses as do other methods. Certain respondents who advocated that the primary objective of plan financial statements be limited to portraying stewardship responsibility considered historical cost to be the most useful measure for achieving that objective. Many who supported historical cost nevertheless advocated supplemental disclosure of fair value.

.097 A number of respondents preferred a method other than fair value or historical cost. Two such methods were the moving-average-market-value method and the long-range-appreciation method. Support for those methods generally was based on the view that the effects of short-term market fluctuations on financial position and investment performance should be avoided. In addition, because investments are normally held for a long time, the current fair value of those investments is not necessarily indicative of the amount to be ultimately realized.

.098 Some respondents to the Exposure Drafts favored a method other than fair value based on their perceptions of the possible effects that disclosing fluctuations in fair values might have on a plan's investment policy. In their view, measurement of investments at fair value is undesirable because plan sponsors or administrators might attempt to avoid the financial statement effects of fluctuating fair values by adopting a more conservative investment policy or by avoiding certain types of investments whose fair values may be subject to wide fluctuations. Some who expressed that view favored historical cost for either all or certain types of investments; others favored some type of averaging method.
To avoid additional administrative costs and possible confusion of users of plan financial statements, some respondents argued in favor of using whatever method was used in determining the actuarial asset value.

Different Methods

Some respondents favored use of different methods for different types of investments. The principal investment categories addressed were fixed-income securities, not-readily-marketable investments, and contracts with insurance companies. (Paragraphs .112-.126 discuss the last category.) The views supporting particular methods for marketable equity securities were basically the same as those indicated in paragraphs .095-.099.

Regardless of the method(s) used to measure other types of investments, certain respondents advocated use of (amortized) historical cost for long-term, fixed-income investments that the plan had both the intent and ability to hold to maturity. They argued that measuring those investments at fair value does not reflect the amounts ultimately expected to be received. Further, any appreciation or depreciation that is recognized using fair value will ultimately be reversed in subsequent periods.

Certain respondents focused on investments that are not readily marketable. They advocated use of historical cost for those investments. In their view, if market quotations are not available, determining fair value is highly subjective. Because users of plan financial statements might be misled by subjective measurements, historical cost should be used.

Conclusions on Measuring Investments (Other Than Contracts with Insurance Companies)

The Board concluded that plan investments (excluding contracts with insurance companies) should be measured at fair value. The Board believes that basis provides the most relevant information about the resources of a plan consistent with the primary objective of the financial statements. The Board recognizes that there may be practical problems in determining the fair value of certain types of investments. Notwithstanding those difficulties, the Board believes that the relevance of fair value is so great as to override any objections to its use.

If available, the Board considers quoted market prices to be the most objective and relevant measure of fair value. Paragraph .011 provides certain guidelines for determining fair
value if no active market exists. The use of independent experts who are qualified to estimate fair value may be necessary for certain investments.

.105 The Board rejected using historical cost because prices in past exchanges do not provide the most relevant information about the present ability of the plan's assets to provide participants' benefits. Further, the Board does not believe that historical cost is the most appropriate measure for use in assessing how the stewardship responsibility for plan assets has been discharged. Plan administrators or other fiduciaries who manage plan assets are accountable not only for the custody and safekeeping of those assets but also for their efficient and profitable use in producing additional assets for use in paying benefits. Investment performance is an essential element of stewardship responsibility. Measuring changes in fair value provides information necessary for assessing annual investment performance and stewardship responsibility. Historical cost provides that information only when investments are sold.

.106 The Board does not consider perceived effects on investment policies to be an appropriate factor on which to base conclusions concerning measurement of investments. The Board has considered and rejected similar arguments regarding perceived effects of accounting standards on management decisions in conjunction with other projects on its agenda. Even if accounting results were to influence some managers' decisions, it does not follow that accounting standards should be designed to encourage or discourage an action by management. Developing accounting standards on that basis would require a judgment by the Board as to which actions are desirable and which are undesirable. The role of financial reporting is to provide neutral, evenhanded, or unbiased information that is useful to those (including management) who make economic decisions. It is not a function of financial reporting to try to influence those decisions. Even if an approach based on an attempt to avoid possible effects on investment decisions were deemed appropriate, an equally valid argument might be made against the use of historical cost. That is, if investments were presented at historical cost, decisions regarding timing of disposition of investments might be influenced by the effect on reported gains or losses.

.107 For fixed-income investments held to maturity, the Board recognizes that market fluctuations will reverse before maturity (assuming no defaults). However, at the reporting date, it is the fair value, not the historical cost or the expected value at maturity,
that is relevant to an assessment of the plan's ability to pay benefits. Changes in value from period to period are relevant to an assessment of investment performance and discharge of stewardship responsibility. Presenting fixed-income investments at historical cost (whether or not the intent is to hold them to maturity) does not provide essential information about the effect on investment performance of the decision to hold. Further, it may be difficult to determine whether the plan has both the intent and ability to hold a particular fixed-income investment to maturity.

.108 At least two additional issues would need to be considered if fixed-income investments were to be presented at historical cost. First, some respondents contended that recognizing a gain or loss (based on historical cost) is inappropriate for a bond swap, that is, when one bond is sold and replaced by a similar investment-grade bond. Those respondents consider such gains and losses to be, in effect, modifications of future interest income. Therefore, to accomplish the desired results, gain/loss deferral and amortization approaches have been used. Those approaches, however, result in a measure of historical cost of fixed-income investments that other respondents believe is inconsistent with the generally accepted notion that historical cost represents exchange price at date of acquisition. The second issue is that the historical cost of a fixed-income investment reflects the effective interest rate at the date the plan acquired the investment rather than current and prospective interest rates which are considered more relevant for purposes of measuring the actuarial present value of accumulated plan benefits. The use of historical cost would necessitate resolving that inconsistency in order for the net asset and benefit information to be comparably measured. Presenting fixed-income investments at fair value eliminates any need to address those issues.

.109 To address the concerns expressed about the subjectivity of fair value determinations for certain investments, this Statement requires that information regarding a plan's investments indicate whether their fair values have been measured by quoted prices in an active market or are fair values otherwise determined. That requirement replaces the initial Exposure Draft's requirement to segment investments into those that are readily marketable and those that are not. Some respondents expressed the view that a criterion of "readily marketable" would be difficult to apply and would not necessarily be interpreted on a consistent basis among plans. The Board agreed and concluded that the intent of that
requirement, namely to provide an indication of (a) the relative degree of subjectivity in the valuation of plan investments and (b) the relative liquidity of the investments, could be achieved by substituting the revised requirement.

.110 Because the Board believes that quoted market prices, or in their absence other methods (for example, discounted cash flows or appraisals), are more relevant indicators of fair value than are any of the measures produced by hybrid methods, it rejected those methods for measuring investments.

.111 For reasons similar to those expressed in paragraphs .165 and .166, the Board concluded that the measure of investments reported in financial statements should not be dependent on actuarial asset valuations. The Board believes that actuarial asset valuation methods are used in conjunction with objectives, principally determining measures of pension costs for purposes of financial reporting by the employer(s) and for determining periodic funding requirements, that differ from the primary objective of plan financial statements.

Alternatives Considered for Measuring Contracts with Insurance Companies

.112 A plan may enter into various contractual agreements with an insurance company. Such agreements may be distinguished based on whether related payments to the insurance company are currently used to purchase immediate or deferred annuities for participants (allocated contracts) or are accumulated in an unallocated fund (unallocated contracts) to be used to meet benefit payments when employees retire, either directly or through the purchase of annuities. Funds in an unallocated contract may also be withdrawn and otherwise invested.

.113 Under an allocated contract (for example, a group deferred annuity contract), the insurance company has a legal obligation to make all benefit payments for which it has received the premiums or consideration requested.

.114 An example of an unallocated contract is a group deposit administration (DA) contract. Under a DA contract, payments to the insurance company that are intended to provide future benefits to present employees are credited to an account. For investment purposes, the monies in the account are commingled with other assets of the insurance company. The account is credited with interest at the rate specified in the contract; it is
charged with the purchase price of annuities when employees retire and with any incidental benefits (death, disability, and withdrawal) disbursed directly from the account.

.115 The immediate participation guarantee (IPG) contract is a variation of the DA contract. In an IPG contract, the account is credited with the contributions received during the contract period plus its share of the insurance company's actual investment income. The IPG contract is written in two forms. Under either form the insurance company is obligated to make lifetime benefit payments to retired employees. One form provides for the actual purchase of annuities as employees retire. There is an annual adjustment to the account to reflect the insurance company's experience under the annuities. In the other form, the IPG contract may accomplish the same objective through a different technique. When an employee retires, pension payments are made directly from the account without the purchase of an annuity. However, the balance of the account must be maintained at the amount required, according to a premium schedule in the contract, to provide for the remaining pension benefits for all current retirees. That portion of the account is referred to as the retired life fund. Thus, if necessary, the account could always be used to buy all annuities in force.

.116 Allocated contracts may or may not provide for plan participation in the investment performance and experience (for example, mortality experience) of the insurance company. Under those that do (participating contracts), the right to receive future dividends is referred to as a participation right.

.117 The initial Exposure Draft prescribed that contracts whereby an insurance company was required to pay certain specified benefits were to be excluded from plan assets. If no such obligation existed, the contracts were to be included in plan assets.

.118 Certain respondents to that Exposure Draft favored excluding allocated contracts from plan assets and including unallocated contracts. Others favored excluding contracts under which funds were assigned to provide benefits that the insurance company is obligated to pay. Presumably, both proposals are based on the view that when an insurance company agrees to provide certain benefits, it incurs (and removes from the plan) the obligation to pay those benefits. To assess the security for those benefits, one should look to the financial statements of the insurance company rather than those of the plan. By paying pre-
miums for the purchase of annuities, the plan has fulfilled its obligation to provide those benefits and ceases to be the focal point for financial information about those particular benefits and the assets that will be used to pay them.

.119 Although the preceding proposals are similar, there may be a significant distinction between them regarding the retired life fund of an IPG contract. Although an IPG contract is an unallocated contract, the retired life fund could be viewed as having been effectively and permanently transferred to the insurance company (that is, the funds have been assigned) in return for the insurance company's agreement to provide certain benefits. Because no annuities are purchased while the contract is active, the funds are not physically transferred. However, because the plan is required to maintain the retired life fund at a level sufficient to purchase annuity contracts to provide the retired participants' remaining benefits, it could be argued that the insurance company has control of that fund.

.120 Certain respondents favored including in plan assets all contracts with insurance companies. Some expressed the view that all contracts represent plan assets and to exclude certain contracts would be inconsistent with the reporting of assets and liabilities by other types of entities. Others favor such an approach because they believe the value of participation rights under allocated contracts should be included in plan assets. Presumably, those respondents believe that when a plan purchases a participating contract at a cost that is higher than that for a nonparticipating contract, it purchases an asset (the participation right) in exchange for the incremental cost because under either contract the insurance company is obligated to provide the same benefits. Presumably, subsequent values for the participation right can be determined, for example, upon cancellation of the contract. Thus, an asset with a determinable value (the participation right) seems to be created when the contract is purchased. A subsequent valuation of the participation right may be more or less objective depending on when it is made.

.121 The initial Exposure Draft required that contracts included in plan assets be measured at fair value. Certain respondents preferred to measure those contracts at amounts determined by the insurance company in accordance with the terms of the contract. For purposes of this Statement, those values are referred to as contract values. Those respondents argued that, except for investments held in an insurance company's separate account, it is impossible
for anyone other than the insurance company to determine a value for those contracts. They also argued that requiring a fair value approach for contracts under which the plan's investment is maintained in an insurance company's general account would necessitate extra calculations, whereas the information for determining contract values is readily available. Some respondents requested guidance as to how fair value should be determined for specific types of contracts, for example, IPG contracts and deposit administration contracts.

.122 In view of certain respondents' comments, the Board solicited additional information from certain persons, including members of the project's task force and members of the insurance industry, before issuing the revised Exposure Draft. The issues raised were (a) what criteria should be used to determine the elements of contracts with insurance companies that constitute assets to be recognized in plan financial statements and (b) how to measure those elements that do constitute assets. Views regarding whether it was feasible to determine the value of participation rights were specifically requested. Some respondents indicated such valuation could be very difficult. Others indicated that it could be done.

Conclusions on Measuring Contracts with Insurance Companies

.123 The initial Exposure Draft's requirements regarding contracts with insurance companies were changed to require that those contracts be presented in the same manner as that contained in the annual report filed by the plan with certain governmental agencies pursuant to ERISA. A plan not subject to ERISA is required to similarly present its contracts, that is, as if it were subject to the reporting requirements of ERISA. For 1979 plan years, the pertinent governmental reporting requirements relate to item 13 of either Form 5500 or Form 5500-C. Essentially, allocated contracts are excluded from, and unallocated contracts are included in, plan assets.

.124 The Board believes that certain aspects of contracts with insurance companies might be appropriately accounted for in a manner different from the regulatory reporting requirements. For example, the applicable instructions for the 1979 Form 5500 and Form 5500-C appear to result in the inclusion of retired life funds

AICPA Professional Standards  AC § 6110.124
under IPG contracts as plan assets and the exclusion of participation rights from plan assets. As discussed in paragraphs .119 and .120, it may be conceptually more appropriate to exclude retired life funds and include participation rights. Further, Form 5500 and Form 5500-C permit unallocated contracts recognized as plan assets to be measured at either fair value or at amounts determined by the insurance company (that is, contract value). The Board recognizes that presenting contracts with insurance companies at contract value is inconsistent with requiring all other plan investments to be presented at fair value. However, as previously discussed, the information required for determining contract value is readily available, whereas a fair value approach would necessitate extra calculations that, according to information the Board received (paragraph .122), might be extremely complex. The Board concluded that it did not have sufficient information at this time to enable it to reach definitive conclusions concerning matters such as the recognition of retired life funds and participation rights as plan assets and the feasibility of determining a contract’s fair value. Moreover, obtaining the information considered necessary to properly assess both the conceptual and the cost/benefit considerations involved would unduly delay the issuance of this Statement. During the Board’s deliberations, it was noted that the PBGC and the IRS had proposed certain regulations.32 Before reaching definitive conclusions, it was thought advisable to consider any final regulations relating to contracts with insurance companies. For the present, the Board concluded that it should adopt the practical solution stated in paragraph .123.

.125 Certain respondents to the revised Exposure Draft objected to inclusion of a reference to governmental reporting requirements in a Statement of Financial Accounting Standards and suggested that the pertinent instructions to Form 5500 be incorporated into this Statement. Because the Board has not concluded that those instructions contain the conceptually appropriate treatment of contracts with insurance companies, it rejected that suggestion.

.126 Some respondents asked whether benefits to be provided by contracts excluded from plan assets should be excluded from the

benefit information. Paragraph .018(d) provides an affirmative response to that query. As discussed in paragraph .118, the insurance company rather than the plan may be viewed as the principal obligor of such benefits. Nevertheless, the fact that contracts excluded from plan assets exist is considered useful information. Accordingly, the Board concluded that the plan's policy with regard to the purchase of excluded contracts should be disclosed. The Board believes that information together with the required disclosure of payments to insurance companies to purchase contracts that are excluded from plan assets (paragraph .015(g)) will adequately inform users that certain benefits will be provided by means of excluded contracts. To inform users that a plan has participation rights and that plan assets reflect dividend income but not the source of that income, the Board concluded that disclosure of the year's income that is related to excluded contracts should be required.

Assets Employed in Operations

.127 Certain respondents who advocated use of fair value to measure investments also advocated measuring assets employed in operations at fair value. In their view, a consistent measurement basis should be used for all plan assets. They also noted that fair value is presently required in the financial data filed with governmental agencies pursuant to ERISA.

.128 Other respondents favored using historical cost (adjusted for any depreciation or amortization). Some argued that measuring operating assets at historical cost and appropriately allocating that cost to each plan year is the appropriate manner for recognizing that portion of the administrative expenses incurred to provide benefits. Expenditures for operating assets are in the nature of advance payments for future administrative services; in that respect they differ from investments which are expected to generate future cash flows that will be used to provide benefits. Others noted that ERISA reporting requirements are not applicable to plans of state and local governmental units and that requiring fair value could increase their administrative costs.

.129 The Board considered the foregoing views together with the objective of the financial statements and concluded that operating assets should be measured at historical cost less accumulated depreciation or amortization.
INFORMATION REGARDING ACTUARIAL PRESENT VALUE
OF ACCUMULATED PLAN BENEFITS

The Need to Present Benefit Information

.130 To be useful in assessing a plan’s present and future ability to pay benefits when due, it is essential that the financial statements present information about both the net assets available for benefits and the benefits to be paid.

.131 Some respondents opposed disclosure of any benefit information on the basis that it was outside the scope of financial statements. They asserted that the information is appropriately the province of the actuarial report. In their view, to include such information would at least duplicate information available elsewhere (the actuary’s report) and might be confusing and misleading if it differed from amounts reported by the actuary.

.132 Similarly, some respondents interpreted certain provisions of the Act to mean that any disclosure of benefits for an ERISA plan is an issue that should be resolved independently of the plan’s financial statements. Some who expressed that view thought that excluding benefit information from the financial statements is preferable because it alleviates the possibility of conflicts between the responsibilities of auditors and those of actuaries in the certifications required by the Act.

.133 The Board considered whether the need to involve members of the actuarial profession in the development of financial information should be a factor that constrains the content of financial statements. From the project’s inception, the Board has recognized the essential role of actuaries in developing any required benefit information. It undertook an extensive cooperative effort with the American Academy of Actuaries (Academy) to develop a basic method of determining benefit information that would be both meaningful and implementable. The Board appreciates the Academy’s willingness to undertake that effort. The substantial agreement reached (discussed further in subsequent paragraphs of this appendix) should enhance the necessary ongoing cooperative effort among those who have a responsibility regarding the development or dissemination of plan financial information.

.134 The Board believes that actuaries are best qualified to develop the benefit information required by this Statement because of their unique professional qualifications and their existing rela-
tionship with plans on other matters (for example, funding policy and measurement of pension costs). Although it acknowledges the role of the actuarial profession in developing certain financial information, the Board does not accept the notion that if the preparation of information does not fall within the professional qualifications of accountants, it is outside the scope of financial accounting. Certain financial information presently disclosed in financial statements of business enterprises is prepared exclusively by or with the assistance of professionals other than accountants. For example, the aggregate reserves for life, accident, and health policies of stock life insurance companies that appear in those entities’ financial statements and measurements of pension costs in employers’ financial statements are prepared by actuaries. The use of appraisers is common in establishing the value of non-monetary assets acquired in a business combination accounted for as a purchase and may be necessary in conjunction with accounting for certain troubled debt restructurings. (With respect to plan reporting, paragraph .104 of this Statement recognizes that appraisers may be needed to determine the fair value of certain plan investments.) Information oriented to engineering and law may also enter into the preparation of financial accounting information. Thus, the Board rejected the view that the need, by itself, to involve actuaries should be a constraint on the content of financial statements.

.135 The Board believes that unnecessary differences between the benefit information presented in plan financial statements and related information presented in schedules filed by ERISA plans pursuant to the Act could result in additional costs being incurred by preparers of the information and might also cause some confusion to those who use the information. Therefore, the Board worked closely with the Department of Labor (Department) in an attempt to avoid such unnecessary differences. As discussed further in subsequent paragraphs, that cooperative effort was successful in developing a basic method of determining benefit information that will satisfy both financial reporting requirements and Form 5500 reporting requirements.

.136 The Board recognizes that there will be available other actuarial information concerning a plan that may differ from the benefit information in plan financial statements. The Board recognizes (and believes that both the Academy and the Department also recognize) that such differences are unavoidable when the information is intended to serve different purposes. For example, information that is useful in assessing the plan’s ability to pay benefits may not be the most useful for determining periodic cost

AICPA Professional Standards AC § 6110.136
measurements or establishing minimum funding requirements pursuant to ERISA. The Board acknowledges that care needs to be exercised in the presentation of financial accounting information to mitigate any confusion that might result from the presence of other information about the plan. If other information that is made available to users of plan financial statements is accompanied by appropriate disclosure of its nature and purpose, possible confusion on the part of certain users may be avoided.

.137 The view expressed in paragraph .132 apparently reflects a concern that inclusion of benefit information will involve auditors in actuarial matters because of their examination of the plan's financial statements in accordance with generally accepted auditing standards. This Statement does not mandate auditor involvement in financial statements; matters relating to the attest function are not within the scope of the Board's authority. The Board recognizes, however, that both the auditing and actuarial professions have responsibilities under the Act and that their respective professional bodies have promulgated standards or recommendations regarding the conduct of their members. It is not within the Board's authority to attempt to resolve any issues relating to the relationship between those professions. The Board is aware of ongoing efforts by the interested parties to resolve certain such issues and is hopeful that those efforts will result in prompt solutions that are acceptable to all involved. The Board does not agree, however, that the proper manner of resolution is to omit from the financial statements information that is essential to users of those statements. Further, the Board does not believe that considerations relating to whether or by whom certain information should be audited are, of themselves, relevant to a determination of whether the information should be presented in financial statements. For example, Section 2520.103-8 of Department of Labor regulations provides that the auditor's examination need not include any statement or information regarding plan assets held by a bank or insurance carrier if the bank or insurance company is regulated, supervised, and subject to periodic examination by a state or federal agency and the bank or insurance company certifies to the correctness of the statement or information. In the absence of such regulations, it would be equally inappropriate to exclude information regarding those assets from plan financial statements to avoid attestation by an auditor.

Alternatives Considered for Determining Benefit Information

.138 Having concluded that benefit information should be in the financial statements, the Board considered how that information
should be determined. Respondents' recommendations can be broadly categorized as follows:

a. Some focused on benefit information that would represent those benefits to which employees would be entitled if they terminated their employment at the benefit information date. For present employees, the benefit information would include only that portion of the benefits accumulated under the plan's benefit accrual provision that is vested at that date.

b. Some focused on benefit information that would represent those benefits that are at risk at the benefit information date. The benefit information would include the benefits accumulated by present employees under the plan's benefit accrual provision, without adjustment for future withdrawal. This method is independent of the plan's vesting provision.

c. Some focused on benefit information that would represent the benefits attributable to employees' service to the benefit information date. Respondents' recommendations for determining those benefits can be broadly categorized as follows:

   i. Some would include the benefits of present employees determined as in (a) above (vested benefits) plus that portion of present employees' accumulated plan benefits, determined in accordance with the benefit accrual provision, that is expected to become vested. Some proponents of this approach believe that the benefit information should differ from that determined in (b) above only in that future withdrawal should be recognized. Others would include some portion of certain types of benefits (for example, death and disability benefits) for which the plan does not clearly specify the amount attributable to each year of service.

   ii. Others would measure the benefits as some pro rata portion of the expected benefits to be received by present employees who retire or terminate in a vested status after the benefit information date. That pro rata portion would relate in some manner the service rendered to date with total service expected to be rendered.

d. Some focused on the amount that is assigned by the actuarial cost method to periods before the benefit information date.

.139 Categories (a)-(c) above refer to present employees; there is little, if any, difference of opinion about how to determine the accumulated plan benefits of employees who have retired or terminated before reaching retirement age. Accordingly, paragraphs .140-.168 primarily focus on determining the accumulated plan benefits of present employees. Those paragraphs elaborate on the
preceding alternatives. They do not focus on other measurement factors, such as various assumptions (other than withdrawal)\(^\text{33}\) used in determining the benefit information. Paragraphs .169-.204 address that aspect of the measurement process.

**Vested Benefits**

.140 Some respondents emphasized that only vest\(\text{ed benefit information}\) should be presented. Nonvested benefits are forfeitable if certain conditions (primarily age and length of service) are not met, whereas vested benefits are not. Thus, some believe that only vested benefit information could be properly presented as a plan liability. Some respondents to the initial Exposure Draft (which required presentation of information about both vested and nonvested benefits) believe that ERISA supports their view. Under ERISA the legal obligation of the plan upon plan termination cannot exceed vested benefits except to the extent that plan assets are available to provide benefits in excess of vested benefits.

.141 Certain respondents to the Exposure Drafts expressed the view that participants would be confused and unduly alarmed by the fluctuations in the security for nonvested benefits that, in their view, are a likely result of the combination of the subordinate status of nonvested benefits and the presentation of plan investments at fair value. However, others argued that employees do not expect any security until they have met the plan’s vesting requirements. It was also suggested that presenting nonvested benefit information might affect management decisions about plan funding. Respondents who expressed the foregoing views believed that presenting only vested benefit information would avoid such perceived effects and is therefore preferable.

**Benefits at Risk**

.142 Some respondents recommended that the benefit information represent potential claims of employees in the event of plan termination. A defined benefit pension plan normally contains a formula or schedule that specifies the rate at which employees

---

\(^{33}\) All approaches to determining benefit information discussed in this Statement utilize various assumptions to estimate the probability that benefits will be paid. The approaches differ somewhat with respect to which assumptions are recognized. For convenience, the discussion in paragraphs .140-.168 refers to certain assumptions only when necessary to distinguish between approaches. Assumptions relating to the probability of payment of benefits are discussed in more detail in paragraphs .180-.186.
accumulate their benefits. That benefit accrual provision is necessary primarily to determine the benefits attributable to service rendered by an employee who separates from service before retirement. In the view of some, that provision best defines the benefits that are at risk at any time. Because nonvested benefits become vested to the extent of available assets upon plan termination, they are considered equally at risk as vested benefits and therefore could be included in the benefit information under this approach. Because future service is not a factor in measuring benefits at risk, those who support this approach would not adjust the benefit information for future withdrawal. Some view this approach as providing benefit information that is most useful to participants because of its comparability with the computational basis used to prepare the individual statements of accrued benefits that participants in an ERISA plan are entitled to receive. In their view, reflecting future withdrawal would decrease the usefulness of the resulting benefit information. Supporters of this approach do not consider it inconsistent with the concept of an ongoing plan. Providing the specified benefit information is not the same as providing a measure of the benefits that would be paid assuming plan termination. Providing the latter measure would be consistent with the assumption that the plan had, in fact, terminated.

Benefits Attributable to Service Already Rendered

.143 Some respondents recommended that the benefit information represent the benefits to which employees are entitled as a result of their service to the benefit information date. For purposes of this Statement, the two basic approaches to determining those benefits are referred to as (a) vested benefits and those accumulated plan benefits expected to become vested and (b) pro rata allocation of projected benefits.

Vested Benefits and Those Expected to Become Vested

.144 Some respondents recommended that the benefit information include benefits presently vested plus that portion of employees' accumulated plan benefits at the benefit information date that is expected to become vested. Those holding this view object to presenting only vested benefit information because that information fails to recognize the benefits that may be reasonably expected to be paid for services already rendered. Adjusting the benefit information for future withdrawal is inherent in the notion of benefits expected to become vested. Thus, this approach differs in that respect from a benefits-at-risk approach. Some holding this
view would include in the benefit information a portion of certain nonvested benefits for which the plan does not clearly specify the amount attributable to each year of service, for example, death and disability benefits. The benefits-at-risk approach, on the other hand, would include such benefits only to the extent that employees presently have vested rights to them.

**Pro Rata Allocation of Projected Benefits**

.145 Some respondents recommended that the benefit information be determined on the basis of the relationship between the total benefits expected to be ultimately paid to present employees and the service rendered in exchange for those benefits. Inherent in this view is the projection of future benefits determined in accordance with employees’ projected future pay, service, or both. The relationship between projected benefits and service rendered can be determined by various methods. For purposes of this Statement, those methods are referred to as:

a. The benefit-compensation-correlation method
b. The cost-compensation-correlation method
c. The benefit-years of service-correlation method
d. The cost-years of service-correlation method.

**Benefit-compensation-correlation method**

.146 One method of relating benefits to service is to relate the benefits (rather than the cost of such benefits) to compensation. Under that method, the percentage of (a) the actuarial present value at retirement date (or date of termination, if earlier) of the total estimated benefits to (b) the total estimated compensation to retirement (or termination, if earlier) is first determined for each employee. That percentage is then applied to the employee’s compensation each year to determine the benefits attributable to that year’s service. The benefits so determined are then discounted to reflect the time value of money. The benefit information would be the aggregate of those discounted benefits attributable to all present employees’ years of service to the benefit information date, increased for interest for the period from the year of service to the benefit information date.

**Cost-compensation-correlation method**

.147 Under the method in which the cost of providing benefits (rather than the benefits) is correlated with compensation, a deter-

---

34 In practice, the approach probably would be applied to all employees as a group, or to particular groups of employees, rather than on an individual employee basis.
mination is made for each employee of the percentage relationship of (a) the actuarial present value at retirement date (or date of termination, if earlier) of the total estimated benefits to (b) the total estimated compensation to retirement (or termination, if earlier) adjusted to reflect an interest factor from the period that service is rendered to that date. The resulting percentage is then applied to each year's compensation to allocate the employer's cost of providing benefits attributable, on the basis of compensation, to that year's service. This method results in each year's cost allocation remaining a constant percentage of each year's compensation. (That is not the case under the benefit-compensation-correlation method.) The benefit information would be the aggregate cost of benefits attributable to all present employees' years of service to the benefit information date, increased for interest for the period from the year of service to the benefit information date.

_Years of service-correlation methods_

.148 The years of service-correlation methods are basically the same as the compensation-correlation methods described in paragraphs .146 and .147 except for the basis of allocation. Similar to the benefit-compensation-correlation method, the benefit-years of service-correlation method allocates a constant percentage of total estimated benefits to each year of service and discounts that amount to reflect the time value of money. Likewise, the cost-years of service-correlation method allocates to each year of service a constant dollar cost for providing the estimated total benefits.

_Actuarial Cost Methods_

.149 Actuarial cost methods are primarily used to determine annual pension cost estimates; those cost estimates may be used for determining the amount and incidence of employer contributions, establishing tax deductibility of the amounts funded, determining pension expense for recognition in the employer's financial statements, determining the minimum funding required by the Act, and possibly other purposes. The view discussed here is not whether the use of actuarial cost methods is appropriate for financial reporting by the employer but whether actuarial cost methods, in general, produce measures that are acceptable for determining the benefit information to be presented in plan financial statements.

35 See footnote 34.
.150 Certain respondents recommended that determination of any benefit information be left to the discretion of the actuary and that all actuarial cost methods acceptable under the Act be acceptable for plan financial statement purposes. In their view, the actuary is best qualified by training to select the appropriate measure. Certain respondents to the Exposure Drafts (which rejected actuarial cost methods for determining the benefit information) objected to the cost of requiring a method for determining benefit information that might differ from the actuarial cost method. In their view, requiring plans to incur such costs for financial reporting purposes alone would be inappropriate. It was also suggested that the apparent comparability among plans achieved by the initial Exposure Draft's requirement for use of both a uniform basic method and uniform assumptions would be illusory because differences in plan provisions, characteristics of participants, and investment strategies would not be reflected. Other respondents thought use of the actuarial cost method used for funding purposes was appropriate because the resulting benefit information would be determined in the same way as employer contributions.

Conclusions on Determining Benefit Information

.151 The Board concluded that the benefit information should include vested benefits plus employees' nonvested benefits expected to become vested as determined by the plan's benefit accrual provision using primarily employees' history of pay and service to the benefit information date. Projected service should be a factor only in determining employees' expected eligibility for particular benefits such as those listed in paragraph .018(b). The actuarial present value of those benefits should then be determined using appropriate actuarial assumptions to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the benefit information date and the expected date of payment.

.152 The benefit information required by the initial Exposure Draft was based entirely on employees' history of pay and service and other appropriate factors at the benefit information date. Therefore, benefits such as those listed in paragraph .018(b) were not included, except to the extent that employees' eligibility for them at the benefit information date was not dependent on future service. That method of determining benefit information was primarily based on the benefits-at-risk approach. A number of respondents expressed the view that that approach was not as useful in an assessment of benefit security on an ongoing plan basis as
would be an approach that included estimated amounts for benefits such as those listed in paragraph .018(b) for all employees expected to receive such benefits, to the extent those benefits related to service already rendered. For reasons discussed in the following paragraphs, the Board agreed.

.153 The Board believes that the benefit information should relate to the benefits reasonably expected to be paid in exchange for employees' service to the benefit information date. In the Board's view, vested benefits and nonvested benefits expected to become vested, determined primarily in accordance with the benefit accrual provision and employees' history of pay and service to the benefit information date, best represent the benefits attributable to service already rendered. For example, if a plan provides a benefit of 2 percent of final 5-year average salary per year of service, the accumulated pension benefit for an employee with 10 years of service would be 10 times 2 percent of the employee's average salary for the 5 years immediately preceding the benefit information date.

.154 In the Board's view, future service should be considered only in determining employees' expected eligibility for certain benefits. The need to consider projected service for that purpose can be illustrated by assuming an employee becomes eligible for a disability benefit in the 15th year of service pursuant to a plan that provides disability benefits when an active employee with 10 or more years of service becomes totally and permanently disabled. If projected disability in a future year of service is not considered during the first 14 years of service in determining that employee's expected eligibility for the disability benefit, the entire incremental actuarial present value of that benefit (that is, the excess, if any, over the actuarial present value of the normal retirement benefit previously recognized) is recognized in the 15th year of service, as if it were all attributable to that year of service. In the Board's view, the disability benefit should be related to the service rendered during the employee's entire career. A portion of the disability benefit should thus

36 For purposes of illustration, the discussion is in terms of an individual employee. In practice, such benefits would be recognized on an aggregate rather than individual basis because it is usually not possible to predict whether and when an individual employee will become disabled (or elect early retirement, die in active service, etc.). It is, however, possible to estimate the disability (or early retirement, death, etc.) benefits expected to become payable for a group of employees through the application of appropriate probability factors. The basic principle, however, is the same whether the computations are performed on an aggregate or an individual basis.
be attributed to each of the employee’s 15 years of service. Similar illustrations could be developed for other types of benefits. For example, future service should be considered for determining an employee’s expected eligibility for an early retirement benefit in order to appropriately relate that benefit to each year of service rendered; not doing so would result in attributing the entire incremental actuarial present value of the early retirement benefit to years after the employee initially becomes eligible for an early retirement benefit.

.155 In the Board’s view, the approach discussed in paragraphs .153 and .154 results in a measure of accumulated plan benefits that is most useful in assessing the plan’s present and future ability to pay, when due, the benefits to which employees will ultimately be entitled as a result of their service to the benefit information date. Therefore, the approach is consistent with the primary objective of plan financial statements.

.156 For certain types of benefits, the amount attributable to each year of service cannot be directly determined from the plan’s provisions. The manner in which such benefits should be considered to accumulate depends on whether the benefit is includable in vested benefits. To illustrate, assume a plan provides a supplemental early retirement benefit of $200 per month upon early retirement at age 55 with at least 25 years of service, payable from the date of early retirement until age 62 (the eligibility age for collecting Social Security benefits). If that benefit becomes a vested benefit after 25 years of service, it should be considered to accumulate in proportion to the ratio of the number of years of service completed to the benefit information date to the projected number of years of service that will have been completed when the benefit first becomes fully vested. Therefore, 1/25 of the $200 benefit (that is, $8) is attributed to each year of service (assuming the employee is expected to render at least 25 years of service).37 In the case of a benefit that does not become a vested benefit (for example, a $5,000 death benefit that is payable only if death occurs during active service), the benefit should be considered to accumulate in proportion to the ratio of the number of years of service completed at the benefit information date to the number of years of service completed at the estimated time of separation from covered employment. For example, if the foregoing

37 Footnote 36 discusses the estimation of benefits for a group of employees through application of appropriate probability factors. In determining the benefit information, such probability factors are used to estimate whether an employee will render at least 25 years of service, and whether and when that employee will elect early retirement.
$5,000 death benefit is expected to be paid after the 20th year of service (that is, the employee is expected to die at the end of the 20th year of service), 1/20 of the benefit should be attributed to each year of service. Thus, after 5 years of service, the employee's accumulated death benefit is $1,250.38.  

.157 Because the Board considered vested benefit information to be too restrictive of the benefits reasonably expected to be paid as a result of service rendered to the benefit information date, it rejected the views expressed in paragraphs .140 and .141. As further discussed in subsequent paragraphs regarding the location of benefit information, the Board concluded that it need not decide whether any part or all of the benefit information is a plan liability. Therefore, views regarding the liability nature of vested benefit information were not considered relevant.

.158 The Board also did not find persuasive the views regarding perceived effects of presenting nonvested benefit information. If participants are properly educated in the use of financial statements (paragraph .050), the Board believes that they should not be confused or unduly alarmed if the portion of nonvested benefits that is covered by plan assets changes between periods. Further, information about such fluctuations, if they occur, is pertinent to an assessment of the plan's ability to pay benefits. (The Board also notes that the view that participants will be alarmed by information about such fluctuations in security for nonvested benefits and the view that participants do not expect security for nonvested benefits appear somewhat contradictory.)

Arguments similar to the views regarding perceived effects on funding decisions were discussed in paragraph .106. As stated in that paragraph, the Board does not believe that accounting standards should be designed to encourage or discourage an action by management.

.159 The initial Exposure Draft's approach to determining benefit information was primarily a benefits-at-risk approach. For reasons discussed in preceding paragraphs, the Board concluded that the method required by this Statement would result in more useful benefit information for assessing benefit security on an ongoing plan basis. Further, the revised approach is believed to be consistent both with the views of the Department of Labor as reflected in the revised Schedule B, “Actuarial Information,” of Form 5500 (footnote 41) and with the views of the American Academy of Actuaries as reflected in its Interpretation 2 (para-

38 See footnotes 36 and 37.
That Interpretation was developed during the previously mentioned cooperative effort between the Board and the Academy. Paragraphs .017-.020 essentially reiterate the recommendations contained in Interpretation 2 and also provide certain additional guidance to ensure that the resulting benefit information is relevant for financial reporting purposes.

The Board also rejected the pro rata allocation methods discussed in paragraphs .145-.148. In the Board's view, benefit information intended to be useful in assessing the plan's ability to pay benefits attributable to service already rendered should be based primarily on pay already earned and service already rendered. One significant difference between the method adopted by the Board and the pro rata allocation methods relates to whether future salary increases are considered in measuring benefits attributable to service already rendered. Because that difference relates to the assumptions to be considered in determining the benefit information, it is addressed in subsequent paragraphs that focus on that aspect of the measurement process.

The Board recognizes that financial accounting measures are rarely exact and that the uncertainty that surrounds economic activities often requires use of approximations or predictions of various amounts and judgment about their inclusion and disclosure in financial statements. The foregoing is particularly true in determining benefit information. However, because the method it adopted does not necessitate subjective assumptions about future salary increases, the Board believes that method results in benefit information that is more objective and verifiable than the benefit information that results from the pro rata allocation methods.

It was also apparent from the responses of certain supporters of the pro rata allocation methods that their views were significantly affected by the view that there should be symmetry in the accounting by the employer(s) and the plan regarding the measure of earned benefits.

The Board considered and rejected the view that symmetrical reporting should be a necessary factor in selecting the method for determining benefit information for purposes of plan reporting. The information that is useful in assessing the plan's ability to pay benefits may differ from the information that would best serve the objectives of accounting by employers for pensions. The Board will consider those objectives in another project. Further, those

39 See footnote 23.
who support symmetrical reporting are presumably influenced by the view that if benefit information is presented as a liability in the financial statements of both the employer(s) and the plan, the liability should be determined in the same manner by both parties. Because the Board concluded that the benefit information need not be presented as a plan liability (paragraph .231), the issue of symmetry may not be pertinent even though some amount may appear as a liability in financial statements of the employer(s).

.164 The Board rejected the two cost-correlation methods for an additional reason. Those methods focus solely on the principle of income statement cost-allocation rather than on attributing benefits to service rendered. Therefore, the Board does not believe that the measures that are by-products of those methods provide information useful in achieving the primary objective of plan financial statements.

.165 For similar reasons, the Board rejected use of actuarial cost methods. APB Opinion No. 8 [section 4063], Accounting for the Cost of Pension Plans, recognizes several actuarial cost methods as acceptable for determining employers' costs. Likewise, a number of actuarial cost methods are recognized by ERISA as acceptable for funding purposes. Each of those methods is designed to allocate the expected ultimate cost of the plan to particular time periods. (The pro rata allocation methods discussed in preceding paragraphs are, in effect, applications of allocation approaches employed under certain actuarial cost methods.) The portion allocated to periods before a valuation date, formerly identified as prior service costs, the accrued liability, or prior service liability, but now described as the supplemental actuarial value, will vary widely from method to method. Although that variation may be appropriate for funding purposes, the Board considers it inappropriate for plan financial reporting. The Board has previously considered the question of accounting alternatives and has concluded that using different accounting methods for the same types of facts and circumstances impairs the comparability of financial statements and thus significantly detracts from their usefulness. Use of actuarial cost methods for determining the benefit information could result in two plans with essentially the same benefit provisions, participant populations, etc., reporting widely differing benefit information because different actuarial cost methods were used. Further, the Board does not believe that differences in factors such as benefit provisions, participant populations, and investment poli-

cies constitute different facts and circumstances that justify use of a different basic method for determining the benefit information. Differences in such factors are appropriately accommodated by the method adopted by the Board. For example, that method requires that employees' accumulated plan benefits be determined in accordance with the individual plan's benefit provisions. Differences in factors such as rates of disability, withdrawal, or mortality and differences in investment policies are reflected in the selection of assumptions that reflect the best estimate of the plan's expected experience with respect to those factors.

.166 The Board also rejected the view that using the actuarial cost method used for determining employer contributions would result in an appropriate comparison of net asset and benefit information. Determination of benefit information in accordance with the actuarial cost method used for funding purposes might produce a measure that would be useful in assessing the progress of the funding program relative to the actuarial cost method. However, because most actuarial cost methods are not designed to attribute benefits to service rendered, such an approach would not, in most cases, produce benefit information that would be useful in achieving the primary objective of plan financial statements. Further, that view taken to its logical conclusion would mean that no benefit information would be presented by an unfunded plan.

.167 The Board's conclusions with respect to the appropriate method of determining the benefit information are based solely on plan accounting considerations. It recognizes that other methods, including actuarial cost methods and specifically the cost-correlation methods discussed above, are widely used by actuaries in establishing pension funding programs; the Board is not concerned with, nor does it question, their appropriateness for that purpose.

.168 In rejecting the use of actuarial cost methods, the Board is not rejecting the use of actuarial expertise in determining the benefit information. On the contrary, the Board recognizes that it is critical to the measurement process.

Assumptions Used in Determining Benefit Information

.169 The following paragraphs discuss the Board's conclusions regarding the more significant assumptions that may be used in determining the actuarial present value of accumulated plan benefits.
Future Salary Increases

.170 As previously indicated, some believe that an assumption regarding present employees’ future salary increases should be considered in measuring benefits attributable to service already rendered (at least when benefits are stated in terms of future salary as, for example, in a final-pay plan).\(^{41}\) In rejecting that view, some Board members gave greater weight to some factors than to others.

.171 Certain Board members believe that benefits attributable to future salary increases should not be considered “earned” until the related compensation is earned. That view holds that the total increase in an employee’s accumulated plan benefit attributable to compensation earned in a given year of service is properly considered to have been earned in that year, not in an earlier year.

.172 Certain Board members also believe that future salary increases are not unlike certain other future price changes, the accounting effects of which are recognized in the periods in which the price changes occur. Future salary increases may be related to employees’ future productivity levels, as well as to changes in wage levels (either as a result of general price changes or changes in the factors of supply and demand). This view considers it inappropriate to reflect salary increases due to either changing levels of productivity or changes in the exchange prices for constant levels of productivity until the economic conditions giving rise to those changes are also present. However, this view distinguishes those prices to be paid in exchange for future service and future price increases that will affect the exchange prices for past service. Thus, this view does not consider it inconsistent to reflect automatic cost-of-living adjustments (which affect the price paid for past service) and not reflect future salary increases (which are prices paid for future service). (The Board’s conclusions regarding automatic cost-of-living adjustments are discussed in paragraphs .176-.178.)

.173 The American Academy of Actuaries’ position in its Interpretation 2 was an additional factor that influenced certain Board

\(^{41}\) On September 26, 1978, the Department of Labor proposed such an approach for determining the benefit information to be reported by ERISA plans on the revised Schedule B (“Actuarial Information”) of Form 5500. The Board testified in support of the method required by this Statement at hearings concerning the Schedule B proposals held by the Department on November 20, 1978; in that testimony the Board expressed its views regarding future salary increases. The Board is pleased that the revised Schedule B subsequently issued by the Department requires a method that is believed to be consistent with that required by this Statement.
members' conclusions. For both conceptual and practical reasons, the Academy opposes considering future salary increases. Because of the actuary's important role in developing the benefit information, those Board members gave particular weight to the Academy’s views. As a result of not considering future salary increases, the Board's and the Academy's views on the basic method for determining employees' accumulated plan benefits appear to be substantially the same. Therefore, those Board members believe that not considering future salary increases will not only result in benefit information that is meaningful for an assessment of benefit security but will also enhance the necessary ongoing cooperative relationship among those who have a responsibility regarding the development or dissemination of plan financial information.

.174 To a lesser degree, some Board members are concerned about certain implementation problems that might arise were it necessary to consider both past and future salary in determining the benefits attributable to service already rendered. Such potential problems include the availability of historical salary information needed to apply a compensation-allocation basis and the possible need to develop detailed guidelines for applying that allocation basis for various types of benefit formulas and fact situations.

.175 Certain respondents to the Exposure Drafts linked the propriety of considering future salary increases with funding considerations. For example, the view was expressed that not considering future salary increases for a public plan would be inconsistent with assumptions used for funding purposes and might therefore influence the decisions of those responsible for allocating public funds to the plan. As previously stated, the Board's conclusions are based solely on plan accounting considerations. The benefit information presented in plan financial statements is intended to be useful in assessing benefit security. Other measurement methods may be more useful for determining periodic funding requirements. Further, as previously discussed, the Board does not consider it appropriate to establish accounting and reporting standards based on the perceived effects on management decisions. Regarding future salary increases, certain Board members consider it appropriate to note that the concept of long-term funding requirements should not be confused with the concept of benefits accumulated by employees. The former may require projections based on all relevant future factors, including future salary increases. The latter, however, carries with it a notion of "what has occurred to date" to determine the benefits attributable to service rendered to date.
Automatic Cost-of-Living Adjustments

.176 Unlike future salary increases, automatic benefit increases specified by the plan, such as automatic cost-of-living adjustments, may be appropriately considered a part of the benefits exchanged for employee service already rendered. The propriety of that view can be illustrated with an example of a plan that provides that a retiree’s monthly benefit will be increased on each January 1 by the percentage increase reflected in the change in the Consumer Price Index from the preceding January 1, up to a maximum increase of three percent in a single year. Recognizing amounts payable to a retiree pursuant to that plan provision only as benefits are increased would result in attributing the effect of the cost-of-living adjustment to periods after the employee’s retirement, that is, after all service had been rendered. The Board considers that result inappropriate. The effects of automatic cost-of-living adjustments should be attributed in an appropriate manner to each year during which an employee renders service.

.177 The initial Exposure Draft proscribed recognizing automatic cost-of-living adjustments in determining the benefit information. Some respondents expressed the view that exclusion of such amounts was inappropriate for purposes of providing information useful in assessing benefit security on an ongoing plan basis. As indicated in the preceding paragraph, the Board agreed.

.178 This Statement requires that assumed rates of inflation used in measuring benefits attributable to automatic cost-of-living adjustments be consistent with those inherent in assumed rates of return (that is, interest rates). (Paragraphs .187-.197 address the Board’s conclusion regarding assumed rates of return.) Interest rates are generally perceived as comprising several factors, including a factor to compensate the lender for expected inflation during the life of the loan. The assumed rates of return required by this Statement relate to the periods for which payment of benefits is deferred and therefore encompass the periods on which automatic cost-of-living adjustments are based. Thus, the inflation assumptions for such periods used to reflect automatic cost-of-living adjustments should be consistent with the inflation assumptions inherent in the assumed rates of return for those periods. If an automatic cost-of-living adjustment is subject to a maximum annual percentage increase (sometimes referred to as a “cap”), the assumed rate of benefit increase may differ from the assumed rate of inflation. For example, in the illustration discussed in paragraph .176, which has a three percent “cap,” the assumed annual rate of benefit increase would not exceed three percent regardless of the assumed rate of inflation.
Certain plans integrate pension benefits with payments provided under the federal Social Security program. That integration may take a variety of forms. Whatever the form, certain provisions of the Social Security law are used in determining the benefit information. Therefore, an issue arises regarding whether the benefit information should reflect (a) the Social Security provisions in effect at the benefit information date, (b) the provisions of the present Social Security law scheduled to be in effect at employees' assumed dates of retirement or other termination, or (c) the provisions of possible amendments to the Social Security law in effect at employees' assumed dates of retirement or other termination. This Statement requires that Social Security provisions in effect at the benefit information date be used (a) above). Because both levels of Social Security payments and taxable wage bases are related to employees' salary, the Board concluded that use of presently effective provisions of the Social Security law is consistent with use of historical salary information.

Certain Assumptions Relating to the Probability and Timing of Benefit Payments

Among the more significant assumptions relating to whether and when benefits will initially become payable and for how long they will be paid are (a) pre- and post-retirement mortality, (b) withdrawal, (c) disability, and (d) ages at which employees will retire.

Mortality

Pension benefits are not paid unless employees live to retirement, and they cease upon death unless there is a co-annuitant, as in the case of a joint and survivor option. Therefore, accumulated plan benefits should be adjusted to reflect participants' longevity. If a plan provides death benefits, those benefits should also be reflected in the benefit information.

The initial Exposure Draft required that certain plans use the mortality and interest rates prescribed by the PBGC to value benefits upon plan termination. Because most respondents' comments focused on PBGC interest rates rather than mortality rates, their use is discussed in that context (paragraphs .188 and .189).
Withdrawal

.183 For reasons other than death or disability (which are addressed in paragraphs .181 and .185, respectively), employees may cease rendering service. If they do so before their pension benefits become fully vested, some or all of those benefits (depending on the plan's vesting provision) are forfeited. For multiemployer plans, withdrawal includes termination of service resulting from withdrawal of a participating employer from the plan. For reasons discussed in paragraph .142, the initial Exposure Draft proscribed adjusting the benefit information for those benefits that may be so forfeited in the future.

.184 Although not necessarily disagreeing on a conceptual basis with the views stated in that Exposure Draft about the relationship between future withdrawal and benefits at risk, certain respondents nevertheless felt that nonrecognition of future withdrawal overstated the benefits reasonably expected to become payable. The Board agreed. It also believes that consideration of future withdrawal is consistent with consideration of future service in determining employees' expected eligibility for increased benefits (paragraph .154).

Disability

.185 Certain plans provide disability benefits. Because it primarily focused on a benefits-at-risk approach, the initial Exposure Draft required that the benefit information exclude those benefits expected to become payable if an employee became disabled while in service. Some respondents thought excluding such benefits understated the benefits reasonably expected to become payable as a result of service already rendered. As previously indicated, the Board agreed.

Early Retirement

.186 Certain plans provide that an employee may retire early, subject to the attainment of a specified age, typically 55. Additional conditions may also be imposed. As previously discussed, the Board concluded that the benefit information should reflect the estimated early retirement benefits to be paid to those employees expected to become eligible for and to elect early retirement. The initial Exposure Draft's requirements and respondents' comments regarding early retirement benefits were similar to those regarding disability benefits. In addition, a few respondents asked whether rates of early retirement should be assumed based on an
ongoing or a terminating plan. This Statement requires that all assumptions be consistent with an ongoing plan.

Rates of Return

.187 To be of use in assessing benefit security, the net asset and benefit information must be determined on a comparable basis. Therefore, accumulated plan benefits must be discounted to reflect the time value of money in order for the benefit information to be on a basis comparable to the net asset information, which is stated in terms of present dollars. Few, if any, respondents who advocated presenting benefit information in the financial statements disagreed. To increase the comparability of the net asset and benefit information, this Statement requires that assumed rates of return used to discount the accumulated plan benefits reflect the expected rates of return on plan investments applicable to the periods for which payment of benefits is deferred.

.188 A principal factor behind the initial Exposure Draft's requirement that certain plans use PBGC interest (and mortality) rates to determine the benefit information was that the initial interest rates used by the PBGC were derived from annuity price data obtained from the private insurance industry. PBGC rates therefore represented currently available interest rates, and their use resulted in benefit information that was comparable with the net asset information. Certain respondents objected to the use of PBGC rates. They viewed those rates as relating to a “guaranty” basis rather than a “best estimate” basis and thus unduly conservative for an ongoing plan. The view was also expressed that requiring the use of the same interest and mortality rates by a wide divergence of plans was inappropriate. Questions also were raised about the feasibility of mandatory use of PBGC rates; those questions primarily related to the timeliness of their availability.

.189 Because of (a) inherent differences among plans as to investment policies and participants' longevity and (b) questions about the appropriateness of using PBGC rates (that is, the view that their use implies plan termination), the Board concluded that requiring use of assumptions that reflect the plan's expected experience would result in more appropriate benefit information than would requiring the use of PBGC interest and mortality rates.

.190 The determination of assumed rates of return for most plans is, to a significant degree, a matter of judgment. Thus, various factors should be considered in estimating rates of return to be used in determining the actuarial present value of accumulated
plan benefits. Among them are (a) rates of return expected from investments currently held or available in the marketplace, (b) rates of return expected from the reinvestment of actual returns from those investments, and (c) the investment policy of the plan, including the diversity of investments currently held and expected to be held in the future.

.191 Accordingly, accumulated plan benefits will generally not be discounted solely at rates of return expected on existing investments, and changes in assumed rates of return will probably not equal the change during the reporting period in either short-term or long-term interest rates. However, to the extent that assumed rates of return are affected by the rates of return expected from existing investments, this Statement requires that those expected rates be based on the values presented for those investments in the plan’s financial statements. Further, the assumed rates of return at which accumulated plan benefits are discounted should be reconsidered in light of changes in the fair values of investments between one period and another.

.192 Some believe that year-to-year changes in reported benefit information as a result of changes in assumed rates of return should be avoided to the maximum extent possible. In their view, some averaging technique should be used to smooth out potential year-to-year changes so that assumed rates of return are changed only when it is apparent that the long-term trend has changed. The Board recognizes that long-term rates of return must be considered in determining appropriate assumed rates of return. However, it rejects the view that apparent material changes in long-term rates should be ignored on an annual basis solely to avoid annually adjusting assumed rates of return. Over a period of years, plan financial statements may display a trend of assumed rates of return. However, the Board believes that an assessment of that trend should be based on information determined in a neutral manner rather than on information that is biased so as to produce a presumed trend.

.193 Some who object to potential year-to-year changes in assumed rates of return are apparently influenced by funding considerations. An approach to selecting assumed rates of return designed to avoid changing the size of annual contributions may

---

42 A factor to consider in assessing the extent to which short-term and long-term interest rates should impact assumed rates of return is the degree to which the timing of cash inflows from related existing or potential investments matches the timing of payments of accumulated plan benefits.
be appropriate for funding purposes. However, the Board does not believe that such a smoothing approach is appropriate for purposes of determining the benefit information to be presented in plan financial statements. As discussed in paragraph .187, determining the benefit and net asset information on a consistent basis is necessary for an appropriate assessment of benefit security. Therefore, to employ a smoothing approach to determining assumed rates of return would require employing a similar approach (for example, certain actuarial asset valuation methods) to determining the values at which investments are presented in plan financial statements. As discussed in paragraph .111, the Board rejected such asset valuation methods for purposes of plan financial statements.

.194 Certain respondents to the revised Exposure Draft expressed the view that if it was inappropriate to recognize future salary increases in determining the accumulated plan benefits under plans whose benefit formulas include employees' compensation (for example, final-pay plans), it was equally inappropriate to discount those benefits at rates of return that inherently reflect anticipated future inflation. Those respondents would prefer to recognize future salary increases (at least the inflation component thereof) in determining employees' accumulated plan benefits. However, as a less preferable alternative, they suggested excluding any inflation component from the rates of return used to discount benefits.

.195 As acknowledged by its supporters, excluding the inflation component from the assumed rates of return is essentially an attempt to compensate for the exclusion of future salary increases in determining accumulated plan benefits. For the reasons discussed in paragraphs .170-.175, the Board rejected considering future salary increases in determining accumulated plan benefits. The Board rejected the suggested approach because it attempts to nullify that decision.

.196 In the Board's view, the appropriate method of determining accumulated plan benefits and the selection of assumed rates of return at which to discount those benefits are separate issues. The purpose of the former is to determine the benefits attributable under a plan's benefit formula to the service employees have rendered. The latter, however, is designed to present the net asset and benefit information on comparable bases and is independent of the plan's benefit formula. That is, the purpose of the discounting process is the same regardless of a plan's benefit formula, for example, whether it is a final-pay or flat-benefit plan. Given the
purpose of the discounting process, the Board believes the appropriate relationship is between the measurement bases for plan investments and assumed rates of return, not between the method of determining accumulated plan benefits and assumed rates of return. Rates of return on plan investments are economic factors related to the plan's existing investments and investment policy, not to its benefit formula. Further, to be consistent, the suggested approach might make it necessary to attempt to exclude the effects of future inflation from all factors used in determining the actuarial present value of accumulated plan benefits, and perhaps also from the values of plan investments. The Board believes that such potential modifications, if adopted, would result in financial information that is less useful in achieving the primary objective of plan financial statements.

.197 The suggested approach of discounting benefits at assumed rates of return that exclude future inflation seems inappropriate for additional reasons. For example, future salary increases are a factor only in determining nonvested benefits. Therefore, to achieve the result desired by its supporters (that is, to compensate for the nonrecognition of future salary increases), it would seem necessary to modify the approach so that it would affect only the determination of the actuarial present value of nonvested benefits. Also, the period for which salary increases due to inflation might be a factor (that is, an employee's service period) is less than the period for which payment of benefits is deferred. Therefore, without certain modifications, the suggested approach would not result in the same total actuarial present value of accumulated plan benefits as that which would result from incorporating future salary increases into the measurement process. Modifications of the suggested approach that might be necessary for it to accomplish its intended purpose could be impractical to implement as well as difficult for users of plan financial statements to understand.

Administrative Expenses

.198 Because administrative expenses are incurred when making benefit payments, those expenses should be considered in determining the benefit information. That is commonly done by reducing assumed rates of return by an appropriate factor. The initial Exposure Draft required use of that method. Certain respondents

43 Factors that may be directly or indirectly affected by future inflation are discussed in "Recognition of Inflation in the Calculation of Actuarial Present Values under Pension Plans," American Academy of Actuaries, Bylaws, Guide to Professional Conduct, Standards of Practice, February 1, 1978 (Chicago: American Academy of Actuaries), pp. 98-103.
expressed the view that assigning anticipated administrative expenses to future periods and discounting them to the benefit information date should also be acceptable. Because the Board is not aware of any conceptual arguments supporting the preferability of either method and because the resulting benefit information should be the same, the Board concluded that both methods are acceptable. However, in similar circumstances, their use results in the disclosure (pursuant to paragraph .027(b)) of different rates of return. The Board therefore concluded that the adjustment of assumed rates of return should be disclosed if that method is used.

**Explicit Approach**

.199 This Statement requires that each significant assumption used in determining the benefit information reflect the best estimate of the plan’s future experience solely with respect to that assumption. That method of selecting assumptions is referred to as an *explicit approach*. An *implicit approach*, on the other hand, means that two or more assumptions do not individually represent the best estimate of the plan’s future experience with respect to those assumptions. Rather, the aggregate effect of their combined use is presumed to be approximately the same as that of an explicit approach. The Board believes that an explicit approach results in more useful information regarding (a) components of the benefit information, (b) changes in the benefit information, and (c) the choice of significant assumptions used to determine the benefit information.

.200 The following illustrates the preferability of an explicit approach as it relates to measuring components of the benefit information (that is, vested benefits of participants currently receiving payments, other vested benefits, and nonvested benefits). Under an implicit approach, it might be assumed that the net result of assuming no withdrawal before vesting and increasing assumed rates of return by a specified amount would approximate the same actuarial present value of total accumulated plan benefits as that which would result from using assumed rates of return and withdrawal rates determined by an explicit approach. Even if that were true, increasing assumed rates of return to compensate for withdrawal before vesting might significantly misstate components of the benefit information. Withdrawal before vesting relates only to nonvested benefits. Therefore, discounting vested benefits at rates of return that have been adjusted to implicitly reflect that withdrawal understates that component of the benefit information and correspondingly overstates the nonvested benefit information.
.201 The disadvantage of an implicit approach with respect to information regarding changes in the benefit information can be similarly illustrated. Assume that under an implicit approach, assumed rates of return are decreased to implicitly reflect the effects of a plan's provision for an automatic cost-of-living adjustment (COLA). In that situation, the effect of a plan amendment relating to the automatic COLA, for example, an amendment to increase the "cap" on the COLA from three percent to four percent, might be obscured. If significant, the effect of such an amendment should, pursuant to the requirements of this Statement, be disclosed as the effect of a plan amendment. If an implicit approach is used, however, assumed rates of return would be adjusted to reflect the effect of that amendment and accordingly, some part or all of the effect might be presented as the effect of a change in an actuarial assumption rather than as the effect of a plan amendment (particularly if assumed rates of return are also changed for other reasons).

.202 In addition to the foregoing possible disadvantages, an implicit approach might result in less meaningful disclosure of the significant assumptions used to determine the benefit information. For example, disclosure of the assumed rates of return resulting from the implicit approaches described in paragraphs .200 and .201 could mislead users of the financial statements regarding the plan's investment return expectations and could result in non-comparable reporting for two plans with the same investment return expectations. Users might also draw erroneous conclusions about the relationship between the plan's actual and assumed rates of return.

Insurance Company Premium Rates

.203 Paragraph .021 provides that in selecting certain assumptions, an acceptable alternative to the requirements in paragraph .020 is to use those assumptions that are inherent in the estimated cost at the benefit information date to obtain a contract with an insurance company to provide participants with their accumulated plan benefits. Those other assumptions that are necessary but are not inherent in that estimated cost should be selected pursuant to the requirements in paragraph .020. For plans below a certain size, that alternative may be preferable to selection of certain assumptions (for example, mortality rates) appropriate for the participant group because the validity of actuarial assumptions is dependent on the law of large numbers. It has also been suggested that use of insurance company premium rates might reduce for some plans the cost of implementing this Statement. Because the alternative approach results in benefit information that is useful in assessing
benefit security and because it also appears desirable on a prac­tical basis, the Board concluded that it should be allowed.

.204 The revised Exposure Draft requested those plans that used or intended to use the alternative approach to comment about the difficulty of obtaining information about the significant assump­tions inherent in premium rates. The few respondents who com­mented expressed differing views regarding the difficulty of ob­taining that information. It should be noted that paragraph .021 merely establishes an alternative; it does not require any plan to use that alternative. Because some plans apparently wish to use the alternative and expect to be able to obtain the necessary in­formation, the insurance company premium rate approach has been retained.

Date of Required Benefit Information

.205 The initial Exposure Draft required that the benefit infor­mation and net asset information be determined as of the same date. Thus, if the plan's annual financial statements were as of the end of the plan year, end-of-year benefit information was required. A number of respondents expressed the view that determination of end-of-year benefit information on a timely basis was not prac­tical and would cause increased actuarial fees. They indicated that most actuarial valuations are performed during the year using data as of the beginning of the year. Changing that practice at this time might create significant timing problems in terms of scheduling the actuaries' workload and, in some cases, obtaining necessary end-of-year data.

.206 Schedule B of Form 5500, as revised, requires that both net asset and benefit information be presented as of the beginning of the plan year. As originally proposed, the revised Schedule B would have required end-of-year benefit information. In response to that proposal, the Department received comments similar to those received by the Board in response to the initial Exposure Draft.

.207 After considering the letters of comment on the initial Ex­posure Draft and certain of those received by the Department on the Schedule B proposal, the Board concluded that, at present, the perceived costs of requiring end-of-year benefit information may exceed the potential benefits of such information. Among the costs considered was the cost to ERISA plans of financial reporting requirements that would differ from Schedule B re­quirements. Therefore, this Statement provides for the presenta-
tion of benefit information as of either the beginning or end of the year. However, the Board continues to believe that presenting both net asset and benefit information as of the same date is necessary for a presentation of the financial status of the plan. Therefore, if the benefit information date is the beginning of the year, only the net asset and benefit information presented as of that date may be considered to present the financial status of the plan. In that situation, the year-end net asset information required by paragraph .006(a) is an incomplete presentation of the plan's financial status.

.208 The Board considered allowing the benefit information date to be any date within the year. However, presentation of benefit information as of an interim date would necessitate presentation of net asset information, at least the aggregate amount thereof, as of that interim date if the financial statements were to be useful in assessing the plan's ability to pay benefits. The Board believes that (a) requiring net asset information as of an interim date might cause certain difficulties (for example, determining contributions receivable at that date) and could cause plans to incur additional expense (for example, determining fair values of investments more often than annually) and (b) use of benefit information dates other than the beginning or end of the year is not a common practice. Accordingly, the Board decided not to permit interim benefit information dates.

.209 The revised Exposure Draft encouraged respondents that used a benefit information date other than the beginning or end of the year to comment on whether disallowing interim benefit information dates would cause substantial problems. Follow-up discussions with most of those respondents who indicated that such action would cause them substantial problems revealed that the majority had interpreted the revised Exposure Draft as disallowing the roll-back to the beginning of the year of detailed employee data as of a date within the year. Paragraph .029 indicates that that method of approximating beginning-of-year benefit information is acceptable, provided the results obtained are substantially the same as those that would be determined using employee data as of the beginning of the year.

.210 Although the Board decided not to require end-of-year benefit information, it considers presentation of such information to be a desirable goal. Plans are encouraged to develop procedures to enable them to use an end-of-year benefit information date. In that regard, paragraph .029 of this Statement provides, as
did the Exposure Drafts, that detailed service-related data for individual employees as of a date preceding the end of the year may be projected to that latter date, provided the results obtained are substantially the same as those that would be determined using data as of the end of the year.

.211 Because ERISA permits benefit valuations for funding purposes to be performed on a triennial rather than annual basis, certain respondents opposed requiring annual benefit valuations for financial reporting purposes. This Statement permits detailed service-related data for individual employees collected at an earlier date to be projected to the benefit information date. However, based on testimony by certain actuaries at hearings held by the Department of Labor regarding the proposed revision of Schedule B of Form 5500 (footnote 41), projecting beginning-of-year employee data to year-end would be difficult. Therefore, it is expected that only in unusual circumstances will projecting the data collected during a triennial valuation to a benefit information date in a subsequent year satisfy the criterion of providing results that are substantially the same as those that would be obtained using data as of that latter date. An example of such unusual circumstances might be a small plan with a stable participant population.

Minimum Required Display of Benefit Information

.212 Unless all participants' benefits represent claims against plan assets of equal status and timing, any assessment of benefit security for an individual participant or group of similarly situated participants would be impaired to the extent it was based solely on the relationship between total net assets available for benefits and the actuarial present value of all accumulated plan benefits. (Paragraph .219 discusses required disclosure regarding the priority order of participants' claims to plan assets.) It seems reasonable to assume, however, that the benefits of participants who are already receiving payments (benefits in pay status) will generally be paid sooner than will the benefits of present or terminated employees. In determining their respective actuarial present values, fewer subjective assumptions are required for benefits in pay status than are required for benefits not in pay status. For example, assumptions regarding when benefit payments will begin are required for the latter but not for the former. Thus, the actuarial present value of benefits in pay status is a more objective measurement. Similar relationships exist between other vested benefits and nonvested benefits.
.213 Some respondents view vested and nonvested benefits differently. As previously indicated, some believe that only vested benefits are a plan liability. For an ERISA plan, nonvested benefits do not enter into the determination of an employer's contingent liability to the PBGC upon plan termination. That contingent liability relates to the value of PBGC-guaranteed benefits, and that value will probably differ from the vested benefit information presented in plan financial statements. Nevertheless, in the absence of more accurate information, some consider vested benefit information useful in assessing an employer's potential liability in the event of plan termination.

.214 This Statement requires that the benefit information be segmented into at least the following categories:

a. Vested benefits of participants currently receiving payments
b. Other vested benefits
c. Nonvested benefits.

The Board concluded that such minimum segmentation would be useful in assessing a plan's near-term vs. long-range liquidity requirements. It might also provide some indication of the relative degree of objectivity or subjectivity inherent in determining the benefit information and would provide information needed by those who wish to make certain judgments or wish to compute certain financial ratios, for example, net asset information to vested benefit information. (Paragraph .221 discusses another ratio sometimes used.) Certain actuaries with whom the Board consulted indicated that the required segmentation could be provided at minimal cost.

.215 The initial Exposure Draft required similar benefit segmentation. However, it also required further segmentation if that would provide information particularly useful in assessing the security for the benefits of a significant number of participants. That additional requirement was consistent with that Exposure Draft's focus on a benefits-at-risk approach and its requirement that certain plans use PBGC rates to determine the benefit information.

.216 Only in the event of plan termination is the security for each participant's benefits actually determined. Should that event occur, the degree of risk that particular participants bear depends on their benefits' priority position in the allocation of plan assets. For most noncontributory plans, benefits in pay status generally have the highest priority, followed by other vested benefits and then nonvested benefits. (In contributory plans, benefits derived
from participants' contributions normally have the highest priority. Additional priority positions may be specified within those broad classifications. In an ERISA plan, for example, vested benefits that are insured by the PBGC generally have a higher priority than do vested benefits that are not so insured.

The initial Exposure Draft recognized that, particularly for ERISA plans, segmenting the benefit information by plan termination priority class could be a complex procedure, and its intent was to require that procedure only in certain limited circumstances. Because termination priorities govern the allocation of plan assets upon plan termination, those priorities are an essential element in assessing benefit security. Further, when an ERISA plan terminates, PBGC rates are used to value participants' benefits for purposes of determining plan sufficiency and allocating the assets of an insufficient plan. Thus, for ERISA plans, that Exposure Draft's requirement for the use of PBGC rates would (when the further segmentation provisions applied) generally have allocated to each applicable termination priority category the same actuarial present value that would have been allocated to it if the plan had been terminated at the benefit information date.

Many respondents objected to the benefit segmentation requirements of the initial Exposure Draft. Some objected to the basic segmentation. However, most objections focused on the possible additional segmentation requirement. Reasons for those objections included (a) the complexity and expense of making the termination priority allocations pursuant to Section 4044 of ERISA, (b) the view that termination priorities are irrelevant for an ongoing plan, and (c) concern that employers might become reluctant to improve benefits because of the resulting disclosure of the effect that plan amendments have in reallocating available assets among various categories of benefits in the event of plan termination.

Because (a) this Statement places more emphasis than did the initial Exposure Draft on providing information useful in assessing future rather than immediate security and (b) the requirement for use of PBGC rates was deleted, the Board concluded that the further segmentation requirement should not be retained. If the benefit information for an ERISA plan is determined using other than PBGC rates, the amount allocated to a given termination priority category may differ significantly from the amount that would be allocated to that category in the event of plan termination. However, because the primary objective
adopted by the Board encompasses both the present and future ability of the plan to pay benefits (that is, both immediate and future security) the Board does not agree that disclosure of termination priorities is irrelevant for an ongoing plan. Therefore, this Statement requires that plan financial statements include a brief, general description of the priority order of participants' claims to the assets of the plan upon plan termination. The Board concluded that such a description will serve to alert participants that a comparison of total net assets with the total actuarial present value of accumulated plan benefits (or with the three minimum required categories of benefit information) does not necessarily indicate which benefits would be covered by plan assets in the event of plan termination. However, the Board believes that unnecessary duplication of disclosures should be avoided. Therefore, if a description of termination priorities is otherwise published and made available to participants, the required description may be omitted if both a reference to such other source and a statement such as that illustrated in footnote 16 are made.

.220 For reasons similar to those in paragraph .106, respondents' views regarding perceived effects on employers' decisions were rejected. Even if they had been accepted, the Board believes that at least as strong a case might be made that disclosure of termination priorities is appropriate because both employers and participants should understand the effect of plan amendments on benefit security.

.221 Certain respondents to the initial Exposure Draft indicated that disclosure of present employees' accumulated contributions (including interest, if any) would provide useful information. Terminating employees are generally entitled to return of their accumulated contributions (sometimes with interest). Therefore, regardless of their overall view on the accounting nature of the benefit information, some view present employees' accumulated contributions as a plan liability. Others consider present employees' accumulated contributions to be a contingent liability that should be disclosed. It has been suggested that the relationship between net assets and the sum of accumulated employee contributions (including interest, if any) and the actuarial present value of benefits in pay status provides a useful measure for assessing minimum funding adequacy. That is, some believe that net assets available for benefits should, at a minimum, be adequate to provide all benefits in pay status and to refund present employees' accumulated contributions. The recommended disclosure would also provide some indication of relative amounts of plan assets that
originated from employee contributions. Based on the foregoing, the Board concluded that disclosure of present employees' accumulated contributions (including interest, if any) should be required. Because the rate of interest credited on employees' contributions may vary among plans, disclosure of that interest rate is also required. Because plans generally maintain records of employee contributions, the Board believes that the benefits of the required disclosure can be obtained at minimal incremental cost.

If some or all employee contributions have been used to purchase contracts with insurance companies that are excluded from plan assets, comparison of the total amount of present employees' accumulated contributions with plan assets might be misleading as an indication of relative amounts of plan assets that originated from employee contributions. Therefore, employee contributions that have been so used should be excluded when making the required disclosure. The revised Exposure Draft asked respondents that have used employee contributions in the manner described to comment on the feasibility of determining the amount to be excluded. Responses generally indicated that that determination would be feasible.

Alternatives Considered for Location of Benefit Information

Respondents suggested the following alternative locations for presenting benefit information: as a liability, as an equity interest, as supplemental disclosure, or as a combination of the foregoing.

Certain respondents contended that a liability should be recognized to the extent that participants have legally enforceable rights to their benefits. They argued that generally accepted accounting principles require other accounting entities to recognize as liabilities those claims that are legally enforceable against them and that there is no reason to apply a different standard to pension plans. Other respondents advocated a liability presentation because they believed that, regardless of the legal relationship, benefits are an equitable obligation of the plan. In their view, participants earn their benefits as they perform services. Therefore, the financial statements should present as a liability those benefits considered earned by participants.

Certain respondents advocated presentation of benefit information as participants' equity in the net assets of the plan. Some did not believe that the benefit information satisfied present criteria for recognizing an accounting liability. Because they considered it necessary to display the measure in a prominent manner
so users could focus on the relationship between the plan's resources and the benefits accumulated under the plan, they favored presentation of benefit information as an equity interest. Others considered that presentation appropriate because they view the relationship between the plan and its participants primarily as a fiduciary one. In their view, the plan's resources are held in trust for participants who have a beneficial interest in those resources.

.226 Some respondents favored presenting benefit information in the notes to the financial statements. Others preferred a separate financial statement. For some, presenting the benefit information as either a liability or an equity interest limited the information to less than that considered necessary in assessing the plan's ability to pay benefits. Others did not view benefit information as satisfying the criteria for either a liability or an equity interest. Certain respondents who expressed that view nevertheless felt that the benefit and net asset information should be combined and presented in a single financial statement. Those respondents believed that the relationship between the net assets available for benefits and the actuarial present value of accumulated plan benefits should be made explicit.

.227 Certain respondents advocated some combination of the foregoing. Generally, those recommendations were based on what was perceived to be (a) an appropriate measure of a liability for an ongoing plan and (b) information necessary in assessing benefit security. Thus, certain respondents advocated presenting vested benefit information as a liability in the basic financial statements and nonvested benefit information in the accompanying notes.

.228 For reasons similar to those discussed in paragraphs .131 and .132, other respondents favored presenting the benefit information as supplemental information, that is, in a financial report but outside of the financial statements.

Conclusions on Location of Benefit Information

.229 Certain Board members are not convinced that the benefit information required by this Statement satisfies the criteria for presentation as a liability of the plan. Employees render services to the employer in exchange for their benefits. Therefore, if any liability exists, it is more likely that of the employer(s) rather than that of the plan.44 Other Board members believe that

44 Board members did not focus on the issue of what is the appropriate measure of the employer's obligation. That issue is presently covered by Opinion 8 [section 4063] and will be reconsidered in another Board project (footnote 23).
the benefit information does represent a liability of the plan. Certain Board members believe that provided the benefit information is located in the financial statements, the primary objective is satisfied; that is, it is not necessary to resolve whether the benefit information constitutes a liability of the plan or the employer(s).

.230 Although there is a fiduciary relationship between a plan and its participants, an equity presentation would have the disadvantage of limiting the net equity of participants to the plan's net assets available for benefits.

.231 Notwithstanding the divergence of individual Board members' views regarding the accounting nature of the benefit information, the Board concluded that that issue need not be resolved at this time. As part of its ongoing effort to develop a conceptual framework for financial accounting and reporting, another project on the Board's agenda addresses the definitions of elements of financial statements. If in the future it becomes necessary to readdress the accounting nature of the benefit information, that effort should be facilitated by the existence of a Statement of Financial Accounting Concepts that contains definitions of assets, liabilities, and equity interests. Because of its decision not to resolve the issue at this time, the Board concluded that this Statement should not restrict the location of the benefit information within the financial statements. However, because the primary objective of plan financial statements focuses on providing information useful in assessing the plan's ability to pay, when due, the aggregate benefits attributable to service already rendered, the Board concluded that the benefit information (that is, categories (a), (b), and (c) identified in paragraph .022) should be presented together. The Board believes that the usefulness of the financial statements in assessing benefit security might be impaired if the user had to extract portions of the benefit information from various locations. Further, those who favored a combination approach (paragraph .227) generally did so because of their views about the liability nature of certain components of the benefit information. Although it decided not to resolve the issue of whether some part or all of the benefit information is a plan liability, the Board considered it inappropriate to have differing views on that issue serve as a basis for allowing portions of the benefit information to be presented in different locations.

45 An FASB revised Exposure Draft, Elements of Financial Statements of Business Enterprises, was issued on December 28, 1979.
The Board decided not to restrict the location of the benefit information within the financial statements, but it did conclude that the benefit information should not be presented as supplemental information outside of the financial statements. To require presentation outside of the financial statements, the Board believes it would be necessary to conclude that no part of the benefit information is an essential element of plan financial statements, that is, that the benefit information, either in part or in total, is neither a liability of nor an equity interest in the plan. The Board did not reach that conclusion; rather, it decided that it was not necessary at this time to resolve the nature of the benefit information.

The Board has on its agenda a project to develop guidelines for determining where information that meets the objectives of financial reporting should be disclosed—either within or outside of financial statements. In the absence of such guidelines, the Board compared the benefit information with the types of information that it has previously decided should be presented outside of financial statements (for example, the current cost and historical cost/constant dollar information required by FASB Statement No. 33, Financial Reporting and Changing Prices [section 1072]). It noted that other information permitted to be reported outside of financial statements was supplemental to the primary information about elements presented in an enterprise’s financial statements (that is, the enterprise’s assets, liabilities, owners’ equity, revenues, expenses, etc.). Such supplemental information is not the only information about those elements that appears in the financial report of the enterprise. In the absence of that supplemental information, the information contained in the financial statements would still present the enterprise’s financial condition and results of operations. An analogous situation does not exist with regard to the benefit information. The benefit information does not supplement other information about an element in a plan’s financial statements. It is the only information required to be presented about the benefits attributable to the service rendered by employees—which information is necessary to present the plan’s financial status and to achieve the primary objective of plan financial statements. The Board believes that distinction supports requiring the benefit information to be presented within the financial statements.

Some who favored reporting the benefit information outside of the financial statements expressed views similar to those discussed in paragraphs .131 and .132. That is, they thought the benefit information was appropriately the province of actuaries.
rather than accountants. Some also wished to exclude the benefit information from the scope of an independent accountant's audit. As discussed in paragraph .134, the Board does not accept the notion that if the preparation of financial information is not within the professional qualifications of accountants, it is outside the scope of financial statements. Further, inclusion of the benefit information within plan financial statements does not necessarily require it to be audited by an independent accountant. A plan administrator's assessment of various factors, including the needs of particular users of the plan's financial statements, may determine the extent of auditor involvement. For example, as allowed by ERISA regulations, some plan administrators are presently choosing to exclude certain plan investments from the scope of an audit (paragraph .137). The Board does not believe it is appropriate or necessary to exclude the benefit information from plan financial statements solely for the purpose of avoiding auditor involvement.

CHANGES IN NET ASSET AND BENEFIT INFORMATION

.235 The information about a plan's ability to pay benefits when due that is provided by the plan's financial statements is affected whenever transactions and other events affect the net asset or benefit information presented in those statements. Normally, a plan's ability to pay participants' benefits does not remain constant. Therefore, users of the financial statements are concerned with assessing the plan's ability to pay participants' benefits not only as of a point in time but also on a continuing basis. To facilitate that latter assessment, users need to know whether perceived changes in the plan's ability to pay benefits result from changes in investment performance, levels of contributions, improvements of benefits, changes in assumptions, or other factors. Further, as previously indicated, information regarding changes in the value of plan assets is essential in assessing stewardship responsibility. Accordingly, this Statement requires that plan financial statements include (a) a statement that contains information regarding changes during the year in the plan's net assets and (b) disclosure of the effects, if significant, of certain factors affecting the year-to-year change in the benefit information. Presenting information regarding both the changes in the net assets available for benefits and the changes in the actuarial present value of accumulated plan benefits for the same period is necessary to present the changes in the plan's financial status for that period. Therefore, if the benefit information date is the beginning of the year, this Statement requires that information regarding changes in the net asset informa-
tion for the preceding year also be presented. In that situation, information regarding changes in the net asset information during the current year is an incomplete presentation of the changes in the plan's financial status during that year.

**Changes in Net Asset Information**

.236 Information regarding changes in net assets available for benefits is to be presented in enough detail to identify the significant changes during the year. Paragraph .015 indicates particular items to be separately identified. The Board considered those items to be of such significance that they are required, to the extent applicable, for all plans. Paragraph .015 is not intended to limit the amount of detail or manner of presenting information regarding changes in the net asset information. Subclassifications and additional classifications may be useful. For example, separately reporting refunds of terminated employees' contributions may be useful. Alternatively, such refunds may be netted against contributions received from participants or included in benefits paid. The Board has not considered issues relating to detailed application of the general guidance provided in paragraph .015. Accordingly, plan administrators should use their best judgment in light of the relevant circumstances.

.237 The initial Exposure Draft required separate disclosure of (a) the net change in the fair value of investments sold during the year and (b) the net change in the fair value of investments held at year-end. Some respondents suggested that combining those two amounts would provide a sufficiently informative measure of the change in the fair value of the plan's investments during the year and would avoid substantial detailed calculations. The Board agreed.

.238 That Exposure Draft also required disclosure of the net gain or loss realized during the year on sales of investments. Some respondents expressed the view that disclosure of realized gains and losses is not relevant in a fair value reporting environment. The Board is not convinced that disclosing the net gain or loss realized on investments sold during the year would enhance an assessment of the plan's ability to pay benefits when due. The Board believes that the basic rationale for requiring a fair value reporting basis for plan investments (excluding contracts with insurance companies) does not support requiring disclosure of realized gains and losses. Such disclosure, however, is not proscribed.

.239 To further assist users in understanding the changes in net assets during the year, this Statement requires disclosure of the
net change in fair value for each significant class of investment, segregated between investments whose fair values have been measured by quoted prices in an active market and those whose fair values have been otherwise determined. The Board believes that information may be useful in assessing the relative degree of objectivity or subjectivity in measuring the plan’s investments and the relationship thereof to investment performance during the year. Disclosure of the change in fair value for each significant class of investments provides useful information because different types of investments may perform differently and those differences may be assessed differently. For example, a decrease in the fair value of bonds during a period of rising interest rates may be assessed differently than a decrease or an increase in the fair value of equity securities during the same period.

Changes in Benefit Information

.240 The initial Exposure Draft required that the effects of all significant factors affecting the year-to-year change in the benefit information be presented in a statement format. Although such presentation remains acceptable, that requirement has been modified to permit disclosure of only the significant effects of certain factors such as plan amendments and changes in actuarial assumptions. A number of respondents expressed concern about the perceived complexity and expense of developing the information required by the initial Exposure Draft. However, certain respondents and certain actuaries with whom the Board consulted, including representatives of the American Academy of Actuaries and the American Society of Pension Actuaries, agreed that disclosure of at least certain factors having significant effects is important in understanding the year-to-year change in the benefit information. The Board concluded that the minimum required disclosure specified in paragraph .025 would provide that information. The Board believes that each of those factors is distinct in nature. Therefore, their effects should be separately disclosed. The minimum required disclosure may be presented either in a statement format (with the addition of an unidentified “other” category to reconcile beginning and ending balances) or elsewhere in the financial statements.

.241 The Board believes that identification of the significant effects of all factors affecting the year-to-year change in the benefit information provides additional information useful in understanding that change. Therefore, disclosure of the effects of the additional factors identified in paragraph .025 is encouraged. The items specified in paragraph .025 are not intended to be an exhaustive list of all factors that may affect the change in the
benefit information during the year. If additional information regarding that change is presented, it need not be limited to nor include all other factors identified in paragraph .025.

.242 Certain respondents expressed concern that disclosing the effects of plan amendments might affect union negotiations or result in pitting one group of participants against another, as in the case of a benefit increase for retirees that present employees believe decreases the security for their benefits. Similar arguments regarding perceived effects of accounting and reporting standards on the decisions of those responsible for managing plan assets, plan funding, or deciding whether to amend the plan were addressed in preceding paragraphs (paragraphs .106, .158, and .220). The Board considers the reasons stated in those paragraphs for rejecting such arguments to be equally applicable to this concern.

.243 Certain respondents to the Exposure Drafts suggested that the Board prescribe a uniform order for calculating the effects of individual factors on the change in the benefit information. They indicated that the effects of factors such as those enumerated in paragraph .025 are not all independent and that the order in which they are calculated will vary among plans. The Board recognizes that the determined effects of factors comprising the net change in the benefit information will vary depending on the order in which the effects are calculated. The Board solicited additional information from certain sources for use in considering the order in which the effects of individual factors should be determined; such information, however, was not forthcoming. Because the Board is not aware of any conceptual basis supporting a particular approach to determining the effects of individual factors, any prescribed order would be somewhat arbitrary. Thus, the Board concluded that at this time it would not prescribe an order.

FORMAT FOR PRESENTING FINANCIAL INFORMATION

.244 The Board recognizes that divergent views exist about the appropriate format for presenting the net asset and benefit information (and changes therein) required by this Statement. Certain of those views have been previously discussed. In addition, many respondents to the Discussion Memorandum favored presenting net asset information in the format of a statement of net assets available for benefits because that is the statement that ERISA plans presently file with governmental agencies.
.245 In view of the Board's conclusion not to restrict the location of benefit information in the financial statements, this Statement permits certain flexibility in presenting the benefit information and changes therein required by paragraphs .006(c) and .006(d). Net asset and benefit information may be presented with equal prominence but in separate financial statements, or benefit information may be presented in notes to a statement of net assets available for benefits. A statement that combines net asset and benefit information is also acceptable. Similar alternative methods of presenting information regarding changes in benefit information are permitted.

.246 All financial information presented in a single financial statement is generally understood to be determined as of the same date or for the same period. For a comparison of two amounts or a deduction of one amount from the other to be valid, both amounts must be determined on a comparable basis. Therefore, this Statement permits a single statement that combines benefit and net asset information only if the benefit information is determined as of the same date as the net asset information. Likewise, a single statement that combines information regarding changes in the benefit and net asset information is permitted only if the respective change information is for the same period.

DISCLOSURES

.247 The Board concluded that the financial statements should provide (a) information about the results of transactions and events that affect the net asset and benefit information and (b) other factors necessary for users to understand the information provided. Disclosure of underlying methods, assumptions, and estimates, including an indication of their objective/subjective nature, aids users in evaluating the information provided.

.248 The Discussion Memorandum considered 4 broad areas of disclosure and within those areas 23 possible disclosures. A number were of the type required for business enterprises; others were specifically enumerated by ERISA as worthy of consideration for disclosure in financial statements filed pursuant to the Act. Opinion was divided among respondents who addressed the issue as to which specific disclosures should be required. The basis for the Board's conclusions regarding certain disclosures required by paragraphs .028(c) and .028(e) were previously discussed (paragraphs .219 and .126, respectively). The following paragraphs discuss the Board's conclusions with respect to other disclosure requirements. As indicated in paragraph .004, the finan-
cial accounting standards dealt with in this Statement are those of particular importance to pension plans or that differ from existing generally accepted accounting principles. Accordingly, this Statement does not address all disclosures required by generally accepted accounting principles for other types of entities that are also applicable to pension plans.

**Plan Description**

.249 The Board concluded that a brief plan description could assist users, particularly nonparticipants, in understanding the financial statements. Of those who addressed the issue, many respondents favored that disclosure. Others were opposed because, for many plans, that information is available from other sources. The view was also expressed that it would be difficult to describe briefly but adequately the possibly numerous and complex provisions of a plan. The Board did not find those arguments persuasive. The Board believes that the usefulness of plan financial statements will be increased with a brief description of the plan and that, although there may be some difficulty in initially preparing that information, there should be little, if any, difficulty in presenting it in subsequent plan financial statements. Additionally, for plans not covered by ERISA, a summary plan description may not be readily available. However, the Board also believes that unnecessary duplication of disclosures should be avoided. Accordingly, the Board concluded that if a plan agreement or a description thereof providing the required information is otherwise published and made available, the plan description required by this Statement may be omitted provided reference to such other source is made.

**Methods and Assumptions Used to Determine Fair Value of Investments and Reported Value of Contracts with Insurance Companies**

.250 This Statement requires that the plan's accounting policy disclosure include a description of the methods and assumptions used to determine the fair value of investments and the reported value of contracts with insurance companies. Investments are normally the principal resource of a plan. Therefore, their measurement can significantly affect an assessment of the plan's ability to pay benefits when due. Most respondents who addressed the issue urged disclosure of the methods and assumptions used for measuring investments. The Board agreed.
Significant Investments

.251 Some respondents to the initial Exposure Draft favored disclosure of significant investments. Presumably, they believe that such information is useful in assessing stewardship and investment performance and the degree of risk related to future changes in the fair value of a plan's investments. Because (a) certain securities' market prices may fluctuate more than others and (b) determination of the fair value of investments by means other than quoted prices in an active market may be subjective, the degree of risk related to changes in the fair value of a plan's investments may depend, to some extent, on the degree of diversification and the nature of a plan's investment portfolio.

.252 Presumably, the more information that is disclosed about plan investments, the more useful are the financial statements in assessing the plan's ability to pay benefits when due. However, there is a cost associated with detailed disclosure. Therefore, this Statement requires only identification of significant investments, that is, those that represent five percent or more of the net assets available for benefits. Identification of other investments, however, is not proscribed. Because no more than 20 investments need be identified, the Board believes the incremental cost to provide the information will not be significant.

Cost Basis of Investments Presented at Fair Value

.253 The initial Exposure Draft required that the historical cost of investments, at least for each significant category, be disclosed. A number of respondents urged deleting that requirement because, in their view, historical cost information is not relevant in a fair value reporting environment and does not provide information useful in assessing benefit security. Questions were raised regarding how to determine historical cost, including its application to bond swaps (paragraph .108). The Board is not convinced that knowledge of the historical cost of significant classes of plan investments would necessarily enhance a user's assessment of the plan's ability to pay benefits when due. Thus, it concluded that such disclosure should not be required. However, it is not proscribed. Given the Board's conclusion, it was not deemed necessary to resolve issues relating to determination of historical cost.

Transactions with Certain Related Parties

.254 A number of respondents advocated disclosure of investments in, or transactions with, related parties—primarily the plan sponsor, the employer(s), and the employee organization(s).
An investment in an employer is viewed as increasing the degree to which a plan's ability to pay participants' benefits depends on the financial condition of the employer. Accordingly, disclosure is considered necessary to allow financial statement users to evaluate the relative significance of such investments. Because the sponsor, employer(s), and employee organization(s) may have close relationships with the plan, disclosure of transactions with those parties may provide information useful in assessing stewardship responsibility.

.255 Because this Statement requires identification of investments that represent five percent or more of the net assets available for benefits, the Board concluded that it need not specifically require disclosure of investments in the employer(s). However, disclosure of other significant transactions with the employer(s), the sponsor (if not the employer), or the employee organization(s) is required.

Method and Assumptions Used to Determine the Benefit Information

.256 The actuarial present value of accumulated plan benefits is an essential factor for assessing a plan's ability to pay benefits when due. Many users will be unaware of this Statement's requirements regarding how that amount is calculated. Therefore, the Board concluded that the usefulness of the financial statements would be enhanced by requiring disclosure of the method and significant assumptions used to determine the benefit information.

.257 Numerous assumptions are used in determining the benefit information. A given percentage variation in certain of those assumptions may be expected to result in a greater percentage variation in the actuarial present value of accumulated plan benefits than would the same variation in other assumptions (that is, the benefit information is more sensitive with respect to certain assumptions than to others). The Board believes that users of financial statements should be aware of the degree to which financial information is affected by estimates and judgment. Accordingly, the Board believes that the usefulness of plan financial statements would be enhanced by disclosure of the estimated effect on the benefit information, or on the difference between the net asset information and the benefit information, of a given variation in the assumptions to which that information is most sensitive. Examples of such assumptions are assumed rates of return and, for plans that provide automatic cost-of-living adjustments, assumed inflation rates. However, the Board does not have sufficient
information to assess the cost/benefit implications of requiring that disclosure. Therefore, at this time it is only encouraging plans to experiment with such disclosure.

**Changes in the Plan, Methods of Measurement, or Assumptions**

.258 The requirement that plan financial statements include (a) a description of significant plan amendments made during the year ending on the latest benefit information date and (b) a description of significant changes in assumptions stems from the conclusion that the financial statements should include information about other factors necessary for users to understand the information provided. The Board believes that users’ understanding of the significant effects of plan amendments and changes in actuarial assumptions will be enhanced if descriptions of those events are provided. In addition, users need to know what plan provisions serve as a basis for the benefit information. Accordingly, the Board concluded that if any significant amendments are adopted between the latest benefit information date and year-end, the financial statements should indicate that the benefit information does not reflect those amendments.

.259 Some respondents to the initial Exposure Draft opposed requiring a description of significant plan amendments because such information is included in the ERISA-required summary plan description. The Board recognizes that a supplement to the summary plan description concerning any “material modifications” to the plan must be provided to participants by 210 days after the end of the plan year during which the modification became effective. However, because of the potential significance of plan amendments to the year-to-year change in the actuarial present value of accumulated plan benefits and thus to an assessment of the plan’s ability to pay benefits, the Board concluded that providing a brief description of the plan amendment in the notes is preferable to incorporating by reference that supplement to the summary plan description in the financial statements. Further, for plans not subject to ERISA, a description of the plan amendment may not be readily available elsewhere.

.260 The Board concluded that disclosure of changes in methods or assumptions used to determine the net asset information should be in accordance with existing generally accepted accounting principles. For example, a change from contract value to fair value for measuring contracts with insurance companies should be viewed as a change in accounting principles pursuant to APB Opinion No. 20 [section 1051], *Accounting Changes*. **AC § 6110.258** Copyright © 1980, American Institute of Certified Public Accountants, Inc.
Funding Policy

.261 Many respondents advocated disclosure of the funding policy. A primary purpose of funding is to enable a plan to pay benefits when due. Assessment of the plan’s ability to pay benefits is therefore enhanced if information about the pattern of funding adopted by the employer(s) and, if applicable, participants and other sources is also disclosed. Accordingly, this Statement requires disclosure of the funding policy and any changes therein. Some respondents to the initial Exposure Draft suggested that the disclosure for ERISA plans indicate whether the minimum funding requirements of the Act have been met. The Board agreed that such information could be useful in assessing benefit security. Thus, that disclosure is required.

.262 Certain respondents to that Exposure Draft suggested that the requirement for disclosure of the funding policy be more specific about the nature of the required information. For example, it was suggested that the actuarial cost method and the amortization period for the unfunded supplemental actuarial value be disclosed. Other respondents suggested that the funding policy be specifically related to the benefit information, to any existing difference between the net asset and benefit information, or to both. Although the Board believes it unlikely that a funding policy disclosure incorporating the technical name of the actuarial cost method and the amortization period for the unfunded supplemental actuarial value would be meaningful to most users, such disclosure is not proscribed. The Board believes that a brief description, in general terms and in layman’s language, of how contributions are determined pursuant to the actuarial cost method would be more understandable and therefore more useful. Thus, the latter disclosure is considered preferable.

.263 The Board agreed that information regarding the estimated future impact of the funding policy on an existing difference between the net asset and benefit information would be useful in assessing the plan’s future ability to pay benefits. However, at this time, sufficient information to develop and evaluate specific requirements regarding that type of disclosure has not been received. Therefore, it is not required. However, the Board encourages plans to experiment with such disclosures.

Tax Status of the Plan

.264 A principal reason for funding a pension plan through a qualified trust or contract with an insurance company is to avoid
having participants or the plan pay current federal income taxes on employer contributions and the plan's investment earnings. Virtually all defined benefit pension plans are designed to qualify for exemption from income taxes. Failure to obtain, or to maintain, an exempt status could have a significant effect on a plan. Because of its significance, some respondents recommended that the tax status of the plan be disclosed in all cases. However, because (a) the vast majority of private defined benefit pension plans receive favorable letters of determination from the IRS as to their tax-exempt status, (b) it is the lack or loss of an exempt status that could have a significant effect on a plan's ability to pay benefits, and (c) the Board believes that disclosures required annually for all plans should be kept to a minimum, the Board concluded that disclosure of a plan's tax status should be required only if the plan has not received a favorable letter of determination, or if that letter has not been maintained. However, disclosure of the plan's tax status is not proscribed in other circumstances.

**Description of Benefits Guaranteed by the PBGC**

.265 For plans that are subject to Title IV of ERISA, the guaranty of the PBGC provides an additional source of security for certain participants' benefits. Providing information about that guaranty enhances the usefulness of the financial statements in assessing benefit security. Accordingly, the Board concluded that ERISA plans should provide a brief description of the benefits guaranteed by the PBGC. Because coverage by the PBGC of increased benefits resulting from plan amendments is phased-in over a period of years, the Board also concluded that the description should include an indication of the application of the PBGC guaranty to any recent plan amendments. For the same reason as that stated in paragraph .219, if the required disclosure is otherwise published and made available, it may be omitted from the financial statements provided the statements make reference to such other source.

.266 Some respondents favored placing more emphasis on the PBGC guaranty, and a few favored disclosure of quantified amounts of PBGC-guaranteed benefits. Others, however, contended that calculation of the benefits guaranteed by the PBGC would be administratively burdensome for an ongoing plan. The Board has not assessed the additional cost of measuring the benefits guaranteed by the PBGC, but has concluded that requiring that disclosure is not necessary to achieve the primary objective of plan financial statements.
Unusual or Infrequent Events

.267 The benefit information presented in plan financial statements is intended to provide information as of a specific date, that is, the benefit information date. Measures of that information at subsequent dates will necessarily change as events (for example, service rendered) affect the measurement basis. This Statement does not contemplate disclosure of normal changes after the benefit information date, such as benefits attributable to service rendered after that date. However, the Board recognizes that an unusual or infrequent event or transaction that might significantly affect an assessment of the plan's ability to pay participants' benefits may occur after the latest benefit information date and therefore should be disclosed. For example, a plan amendment that significantly increases benefits for service rendered before the latest benefit information date should be disclosed. If reasonably determinable, the effects of such an event or transaction should be disclosed.

EFFECTIVE DATE AND TRANSITION

.268 The effective date in paragraph .030 is one year later than that proposed in the revised Exposure Draft. ERISA plans with at least 100 participants are presently required to prepare benefit information for Form 5500 reporting purposes that is similar to that required by this Statement. The Board believes that many of those plans should be able to comply with this Statement in financial statements prepared for the 1980 plan year, and they are encouraged to do so. However, the Board recognizes that small plans and plans of state and local governmental units are not presently required to prepare the benefit information. Those that choose to issue financial statements in accordance with this Statement may need additional time to develop the necessary procedures. Accordingly, the Board concluded that the effective date specified in paragraph .030 is appropriate.

.269 In the Board's view, the usefulness of the financial statements in assessing benefit security and changes therein over time will be enhanced by restating the financial statements of prior years if those prior years' statements are presented together with financial statements for plan years that are subject to this Statement. Accordingly, the Board concluded that retroactive application of this Statement is appropriate.

.270 Certain respondents to the initial Exposure Draft expressed
the view that restating the financial statements of prior years could be difficult and expensive and suggested that the requirement be eliminated. The Board believes that some respondents misinterpreted that Exposure Draft as requiring presentation of restated prior years' statements, rather than as requiring only that such statements be restated if they are presented. This Statement does not require presentation of the financial statements of prior years.

.271 A few respondents to the Exposure Drafts suggested that information regarding changes in the net asset and benefit information not be required for the initial year of compliance with this Statement. Regarding changes in net asset information, the Board notes that ERISA plans presently file similar information with governmental agencies. For plans not subject to ERISA, it does not appear that initially providing that information should be that difficult. Because of the Board's conclusions that (a) beginning-of-year benefit information is acceptable, (b) a statement of changes in benefit information that identifies the effects of all significant factors is not required, and (c) the Statement is not effective until the 1981 plan year, the Board concluded that there should be sufficient time to develop the required information regarding changes in the benefit information. Accordingly, the Board concluded that an exemption for the initial year of compliance should not be provided.

REDUCTIONS IN PERCEIVED COST OF IMPLEMENTING INITIAL EXPOSURE DRAFT

.272 Many respondents to the initial Exposure Draft were concerned that compliance with its requirements would impose a substantial and inappropriate cost burden on plans. Those concerns primarily related to the required benefit information and the changes therein, although some concerns addressed other requirements, including the required net asset information and the changes therein. Certain of those concerns were apparently based at least partially on misinterpretations of the requirements. For example, some respondents apparently interpreted that Exposure Draft as requiring that annual financial statements for a plan, regardless of its size, be prepared, audited, and distributed to all participants. Others thought that restated financial statements for one or more prior years were required. This Statement does not require the preparation, attestation, or distribution of any financial statements. It is applicable only to financial information that purports to be in accordance with generally accepted accounting principles. Whether a plan prepares such information;
who, if anyone, attests to that information, either in part or in total; and who receives that information are issues that are not within the scope of this Statement.

273 The Board recognizes that certain other concerns were not based on misinterpretations. The Board agrees that the benefits of providing financial information should be expected to exceed (or at least equal) the cost involved. A number of changes made to the initial Exposure Draft's requirements were directly related to the Board's desire to reduce the perceived implementation costs.

274 Most concerns about implementing the requirements regarding the net asset information and the changes therein related to (a) determination of the fair value of contracts with insurance companies and (b) segregating the net change in fair value of investments during the year into the net change in fair value of investments held at year-end and the net change in fair value of investments sold during the year. Those requirements have been deleted. This Statement permits contracts with an insurance company to be measured at amounts determined by the insurance company. It also provides for disclosing in a single amount the net change during the year in the fair value of investments.

275 Rather extensive changes were made to the initial Exposure Draft's requirements relating to benefit information and the changes therein. In response to concerns that determination of end-of-year benefit information would impose a substantial cost burden for many plans, this Statement permits a benefit information date that is either the beginning or the end of the year. Because of the cooperative effort between the Board and the Department of Labor, it appears that the benefit information determined pursuant to this Statement should serve both financial reporting purposes and, for ERISA plans, Form 5500 reporting purposes. The Board's desire to avoid unnecessary differences between those requirements was a significant factor that influenced its conclusion regarding the benefit information date.

276 Another concern regarding the benefit information was the requirement that certain plans use PBGC interest and mortality rates in determining that information. Some viewed that requirement as creating timing problems and causing plans to incur additional costs. They indicated that issuance of PBGC rates has, in the past, generally been subject to a lag of several months. If those rates were not available when other aspects of the benefit information were determined, plans might incur additional costs when the determination process was completed at a later date.
For that reason and others previously discussed, this Statement does not require use of PBGC rates.

.277 Many respondents objected to the complexity and resulting expense relating to the initial Exposure Draft's requirement that the benefit information be segmented beyond certain categories if that would provide information particularly useful to a significant class of participants in their assessment of the security for their benefits. Although some objections were apparently based on a misinterpretation that such further segmentation would be required annually for all plans, that requirement has been deleted upon consideration of respondents' concerns and other reasons indicated in paragraph .219.

.278 Many respondents contended that it would be complex and costly to comply with the initial Exposure Draft's requirement for a statement of changes in benefit information that identified the effects of all significant factors. As an alternative, this Statement permits disclosing only the significant effects of certain factors affecting the year-to-year change in the benefit information.

.279 The Board believes that the changes discussed in the preceding paragraphs, on an individual and aggregate basis, should significantly reduce the perceived incremental costs that were of concern to respondents. The Board believes that the implementation of this Statement will have a favorable cost/benefit relationship. The Board recognizes that neither all benefits from nor all costs of financial information can be measured objectively; different persons may honestly disagree about whether the benefits of providing certain information justify the related costs.

Appendix C

GLOSSARY

.280 This appendix defines certain terms, acronyms, and phrases used for convenience in this Statement.

Accumulated plan benefits
Benefits that are attributable under the provisions of a pension plan to employees’ service rendered to the benefit information date.

Act

Actuarial asset value
A value assigned by an actuary to the assets of a plan generally for use in conjunction with an actuarial cost method.

Actuarial cost method
An recognized actuarial technique used for establishing the amount and incidence of employer contributions or accounting charges for pension cost under a pension plan.

Actuarial present value of accumulated plan benefits
The amount as of a benefit information date that results from applying actuarial assumptions to the benefit amounts determined pursuant to paragraphs .016-.018 of this Statement (that is, the accumulated plan benefits), with the actuarial assumptions being used to adjust those amounts to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the benefit information date and the expected date of payment.

Allocated contract
A contract with an insurance company under which related payments to the insurance company are currently used to purchase immediate or deferred annuities for individual participants.

Benefit information
The actuarial present value of accumulated plan benefits.
Benefit information date
The date as of which the actuarial present value of accumulated plan benefits is presented.

Benefit security
The plan's present and future ability to pay benefits when due.

Benefits
Payments to which participants may be entitled under a pension plan, including pension benefits, disability benefits, death benefits, and benefits due on termination of employment.

Contract value
The value of an unallocated contract that is determined by the insurance company in accordance with the terms of the contract.

Contributory plan
A pension plan under which participants bear part of the cost.

Defined benefit pension plan
A pension plan that specifies a determinable pension benefit, usually based on factors such as age, years of service, and salary. Even though a plan may be funded pursuant to periodic agreements that specify a fixed rate of employer contributions (for example, a collectively bargained multiemployer plan), such a plan may nevertheless be a defined benefit pension plan as that term is used in this Statement. For example, if the plan prescribes a scale of benefits and experience indicates or it is expected that employer contributions are or will be periodically adjusted to enable such stated benefits to be maintained, this Statement considers such a plan to be a defined benefit pension plan. Further, a plan that is subject to ERISA and considered to be a defined benefit pension plan under the Act is a defined benefit pension plan for purposes of applying this Statement.

Employee
A person who has rendered or is presently rendering service.

ERISA
ERISA plan
A plan that is subject to ERISA.

Funding agency
An organization or individual, such as a specific corporate or individual trustee or an insurance company, that provides facilities for the accumulation of assets to be used for paying benefits under a pension plan; an organization, such as a specific life insurance company, that provides facilities for the purchase of such benefits.

Funding policy
The program regarding the amounts and timing of contributions by the employer(s), participants, and any other sources (for example, state subsidies or federal grants) to provide the benefits a pension plan specifies.

General account
An undivided fund maintained by an insurance company that commingles plan assets with other assets of the insurance company for investment purposes. That is, funds held by an insurance company that are not maintained in a separate account are in its general account.

Net asset information
Information regarding the net assets available for benefits.

Net assets available for benefits
The difference between a plan’s assets and its liabilities. For purposes of this definition, a plan’s liabilities do not include participants’ accumulated plan benefits.

Noncontributory plan
A pension plan under which participants do not make contributions.

Nonvested benefit information
The actuarial present value of nonvested accumulated plan benefits.

Participant
Any employee or former employee, or any member or former member of a trade or other employee association, or the beneficiaries of those individuals, for whom there are accumulated plan benefits.
Participating contract
An allocated contract that provides for plan participation in the investment performance and experience (for example, mortality experience) of the insurance company.

Participation right
A plan's right under a participating contract to receive future dividends from the insurance company.

PBGC
The Pension Benefit Guaranty Corporation.

Pension benefits
Periodic (usually monthly) payments made to a person who has retired from employment.

Pension fund
The assets of a pension plan held by a funding agency.

Pension plan
See defined benefit pension plan.

Plan
See defined benefit pension plan.

Plan administrator
The person or group of persons responsible for the content and issuance of a plan's financial statements in much the same way that management is responsible for the content and issuance of a business enterprise's financial statements.

Prior service costs
See supplemental actuarial value.

Reporting date
The date as of which information regarding the net assets available for benefits is presented.

Retired life fund
That portion of the funds under an immediate participation guarantee contract that is designated as supporting benefit payments to current retirees.
Separate account
A special account established by an insurance company solely for the purpose of investing the assets of one or more plans. Funds in a separate account are not commingled with other assets of the insurance company for investment purposes.

Service
Periods of employment taken into consideration under a pension plan.

Sponsor
In the case of a pension plan established or maintained by a single employer, the employer; in the case of a plan established or maintained by an employee organization, the employee organization; in the case of a plan established or maintained jointly by two or more employers or by one or more employers and one or more employee organizations, the association, committee, joint board of trustees, or other group of representatives of the parties who have established or who maintain the pension plan.

Supplemental actuarial value
The amount assigned under the actuarial cost method in use to years before a given date.

Unallocated contract
A contract with an insurance company under which related payments to the insurance company are accumulated in an unallocated fund to be used to meet benefit payments when employees retire, either directly or through the purchase of annuities. Funds in an unallocated contract may also be withdrawn and otherwise invested.

Vested benefit information
The actuarial present value of vested accumulated plan benefits.

Vested benefits
Benefits that are not contingent on an employee's future service.

Appendix D

ILLUSTRATION OF FINANCIAL STATEMENTS

.281 This appendix illustrates certain applications of the requirements of this Statement that are applicable for the 1981 annual financial statements of a hypothetical plan, the C&H Company Pension Plan. It does not illustrate other requirements of this Statement that might be applicable in circumstances other than those assumed for the C&H Company Pension Plan. The formats presented and the wording of accompanying notes are only illustrative and do not necessarily reflect a preference of the Board. Further, the circumstances assumed for the C&H Company Pension Plan are designed to facilitate illustration of many of this Statement's requirements. Therefore, the notes to the illustrative financial statements probably are more extensive than would be expected for a typical plan.

.282 Included are illustrations of the following alternatives permitted by paragraphs .006, .008, .025, and .026:

a. An end-of-year vs. beginning-of-year benefit information date
b. Separate vs. combined statements for presenting information regarding (a) the net assets available for benefits and the actuarial present value of accumulated plan benefits and (b) changes in the net assets available for benefits and changes in the actuarial present value of accumulated plan benefits
c. A separate statement that reconciles the year-to-year change in the actuarial present value of accumulated plan benefits vs. presenting the effects of a change in actuarial assumptions on the face of the statement of accumulated plan benefits.

Although not illustrated, paragraph .008 of this Statement permits the information regarding the actuarial present value of accumulated plan benefits and changes therein to be presented as notes to the financial statements.

The next page is 10,819.

At December 31, 1979, the total actuarial present value of accumulated plan benefits was $10,544,000. During 1980, the actuarial present value of accumulated plan benefits increased $700,000 as a result of a change in actuarial assumptions (Note B(2)). Also see Note G.

The accompanying notes are an integral part of the financial statements.
C&H COMPANY PENSION PLAN

NOTES TO FINANCIAL STATEMENTS\(^{46}\)

A. Description of Plan

The following brief description of the C&H Company Pension Plan (Plan) is provided for general information purposes only. Participants should refer to the Plan agreement for more complete information.

1. General. The Plan is a defined benefit pension plan covering substantially all employees of C&H Company (Company). It is subject to the provisions of the Employee Retirement Income Security Act of 1974 (ERISA).

2. Pension Benefits. Employees with 10 or more years of service are entitled to annual pension benefits beginning at normal retirement age (65) equal to 1\(\frac{1}{2}\)% of their final 5-year average annual compensation for each year of service. The Plan permits early retirement at ages 55-64. Employees may elect to receive their pension benefits in the form of a joint and survivor annuity. If employees terminate before rendering 10 years of service, they forfeit the right to receive the portion of their accumulated plan benefits attributable to the Company’s contributions. Employees may elect to receive the value of their accumulated plan benefits as a lump-sum distribution upon retirement or termination, or they may elect to receive their benefits as a life annuity payable monthly from retirement. For each employee electing a life annuity, payments will not be less than the greater of (a) the employee’s accumulated contributions plus interest or (b) an annuity for five years.

3. Death and Disability Benefits. If an active employee dies at age 55 or older, a death benefit equal to the value of the employee’s accumulated pension benefits is paid to the employee’s beneficiary. Active employees who become totally disabled receive annual disability benefits that are equal to the normal retirement benefits they have accumulated as of the time they become disabled. Disability benefits are paid until normal retirement age at which time disabled participants begin receiving normal retirement benefits computed as though they had been employed to normal

\(^{46}\) The notes are for the accompanying illustrative financial statements that use an 'end-of-year benefit information date. Modifications necessary to accompany the illustrative financial statements that use a beginning-of-year benefit information date are presented in brackets.
retirement age with their annual compensation remaining the same as at the time they became disabled.

B. Summary of Accounting Policies

The following are the significant accounting policies followed by the Plan:

1. *Valuation of Investments.* If available, quoted market prices are used to value investments. The amounts shown in Note E for securities that have no quoted market price represent estimated fair value. Many factors are considered in arriving at that fair value. In general, however, corporate bonds are valued based on yields currently available on comparable securities of issuers with similar credit ratings. Investments in certain restricted common stocks are valued at the quoted market price of the issuer’s unrestricted common stock less an appropriate discount. If a quoted market price for unrestricted common stock of the issuer is not available, restricted common stocks are valued at a multiple of current earnings less an appropriate discount. The multiple chosen is consistent with multiples of similar companies based on current market prices.

Mortgages have been valued on the basis of their future principal and interest payments discounted at prevailing interest rates for similar instruments. The fair value of real estate investments, principally rental property subject to long-term net leases, has been estimated on the basis of future rental receipts and estimated residual values discounted at interest rates commensurate with the risks involved.

The Plan’s deposit administration contract with the National Insurance Company (*National*) (Note F) is valued at contract value. Contract value represents contributions made under the contract, plus interest at the contract rate, less funds used to purchase annuities and pay administration expenses charged by National. Funds under the contract that have been allocated and applied to purchase annuities (that is, National is obligated to pay the related pension benefits) are excluded from the Plan’s assets.

2. *Actuarial Present Value of Accumulated Plan Benefits.* Accumulated plan benefits are those future periodic payments, including lump-sum distributions, that are attributable under the Plan’s provisions to the service employees have rendered. Accumulated plan benefits include benefits expected
to be paid to (a) retired or terminated employees or their beneficiaries, (b) beneficiaries of employees who have died, and (c) present employees or their beneficiaries. Benefits under the Plan are based on employees' compensation during their last five years of credited service. The accumulated plan benefits for active employees are based on their average compensation during the five years ending on the date as of which the benefit information is presented (the valuation date). Benefits payable under all circumstances—retirement, death, disability, and termination of employment—are included, to the extent they are deemed attributable to employee service rendered to the valuation date. Benefits to be provided via annuity contracts excluded from plan assets are excluded from accumulated plan benefits.

The actuarial present value of accumulated plan benefits is determined by an actuary from the AAA Company and is that amount that results from applying actuarial assumptions to adjust the accumulated plan benefits to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the valuation date and the expected date of payment. The significant actuarial assumptions used in the valuations as of December 31, 1981 [1980] and December 31, 1980 [1979] were (a) life expectancy of participants (the 1971 Group Annuity Mortality Table was used), (b) retirement age assumptions (the assumed average retirement age was 60), and (c) investment return. The 1981 [1980] and 1980 [1979] valuations included assumed average rates of return of 7% [6.25%] and 6.25% [6.75%], respectively, including a reduction of .2% to reflect anticipated administrative expenses associated with providing benefits. The foregoing actuarial assumptions are based on the presumption that the Plan will continue. Were the Plan to terminate, different actuarial assumptions and other factors might be applicable in determining the actuarial present value of accumulated plan benefits.

C. Funding Policy

As a condition of participation, employees are required to contribute 3% of their salary to the Plan. Present employees' accumulated contributions at December 31, 1981 [1980] were $2,575,000 [$2,325,000], including interest credited at an
interest rate of 5% compounded annually. The Company's funding policy is to make annual contributions to the Plan in amounts that are estimated to remain a constant percentage of employees' compensation each year (approximately 5% for 1981 [and 1980]), such that, when combined with employees' contributions, all employees' benefits will be fully provided for by the time they retire. Beginning in 1982, the Company's contribution is expected to increase to approximately 6% to provide for the increase in benefits attributable to the Plan amendment effective July 1, 1981 (Note G). The Company's contributions for 1981 [and 1980] exceeded the minimum funding requirements of ERISA.

Although it has not expressed any intention to do so, the Company has the right under the Plan to discontinue its contributions at any time and to terminate the Plan subject to the provisions set forth in ERISA.

D. Plan Termination

In the event the Plan terminates, the net assets of the Plan will be allocated, as prescribed by ERISA and its related regulations, generally to provide the following benefits in the order indicated:

a. Benefits attributable to employee contributions, taking into account those paid out before termination.

b. Annuity benefits former employees or their beneficiaries have been receiving for at least three years, or that employees eligible to retire for that three-year period would have been receiving if they had retired with benefits in the normal form of annuity under the Plan. The priority amount is limited to the lowest benefit that was payable (or would have been payable) during those three years. The amount is further limited to the lowest benefit that would be payable under plan provisions in effect at any time during the five years preceding plan termination.

c. Other vested benefits insured by the Pension Benefit Guaranty Corporation (PBGC) (a U.S. governmental agency) up to the applicable limitations (discussed below).

d. All other vested benefits (that is, vested benefits not insured by the PBGC).

e. All nonvested benefits.

Benefits to be provided via contracts under which National (Note F) is obligated to pay the benefits would be excluded for allocation purposes.
Certain benefits under the Plan are insured by the PBGC if the Plan terminates. Generally, the PBGC guarantees most vested normal age retirement benefits, early retirement benefits, and certain disability and survivor's pensions. However, the PBGC does not guarantee all types of benefits under the Plan, and the amount of benefit protection is subject to certain limitations. Vested benefits under the Plan are guaranteed at the level in effect on the date of the Plan's termination. However, there is a statutory ceiling on the amount of an individual's monthly benefit that the PBGC guarantees. For plan terminations occurring during 1981 and 1980, that ceiling which is adjusted periodically was $X,XXX.XX and $1,159.09 per month, respectively. That ceiling applies to those pensioners who elect to receive their benefits in the form of a single-life annuity and are at least 65 years old at the time of retirement or plan termination (whichever comes later). For younger annuitants or for those who elect to receive their benefits in some form more valuable than a single-life annuity, the corresponding ceilings are actuarially adjusted downward. Benefit improvements attributable to the Plan amendment effective July 1, 1981 (Note G) may not be fully guaranteed even though total benefit entitlements fall below the aforementioned ceilings. For example, none of the improvement would be guaranteed if the plan were to terminate before July 1, 1982. After that date, the PBGC would guarantee 20% of any benefit improvements that resulted in benefits below the ceiling, with an additional 20% guaranteed each year the plan continued beyond July 1, 1982. If the amount of the benefit increase below the ceiling is also less than $100, $20 of the increase (rather than 20%) becomes guaranteed by the PBGC each year following the effective date of the amendment. As a result, only the primary ceiling would be applicable after July 1, 1986.

Whether all participants receive their benefits should the Plan terminate at some future time will depend on the sufficiency, at that time, of the Plan's net assets to provide those benefits and may also depend on the level of benefits guaranteed by the PBGC.

E. Investments Other Than Contract with Insurance Company

Except for its deposit administration contract (Note F), the Plan's investments are held by a bank-administered trust fund. The following table presents the fair values of those investments. Investments that represent 5% or more of the Plan's net assets are separately identified.

F. Contract with Insurance Company

In 1978, the Company entered into a deposit administration contract with the National Insurance Company under which the Plan deposits a minimum of $100,000 a year. National maintains the contributions in an unallocated fund to which it adds interest at a rate of 8%. The interest rate is guaranteed through 1983 but is subject to change for each succeeding five-year period. When changed, the new rate applies only to funds deposited from the date of change. At the direction of the Plan's administrator, a single premium to buy an annuity for a retiring employee is withdrawn by National from the unallocated fund. Purchased annuities are contracts under which National is obligated to pay benefits to named employees or their beneficiaries. The premium rates for such annuities to be purchased in the future and maximum administration expense charges against the fund are also guaranteed by National on a five-year basis. The annuity contracts provide for periodic dividends at National's discretion on the basis of its experience under the contracts. Such dividends received by the Plan for the year[s] ended December 31, 1981 [and 1980] were $25,000 [and $24,000, respectively]. In reporting changes in net assets, those dividends have been
netted against amounts paid to National for the purchase of annuity contracts.

G. Plan Amendment

Effective July 1, 1981, the Plan was amended to increase future annual pension benefits from 1\(\frac{1}{4}\)% to 1\(\frac{1}{2}\)% of final 5-year average annual compensation for each year of service, including service rendered before the effective date. The retroactive effect of the Plan amendment, an increase in the actuarial present value of accumulated plan benefits of $2,410,000, was accounted for in the year ended December 31, 1981. [The actuarial present values of accumulated plan benefits at December 31, 1980 and December 31, 1979 do not reflect the effect of that Plan amendment. The Plan's actuary estimates that the amendment's retroactive effect on the actuarial present value of accumulated plan benefits at December 31, 1980 was an increase of approximately $1,750,000, of which approximately $1,300,000 represents an increase in vested benefits.]

H. Accounting Changes

In 1981, the Plan changed its method of accounting and reporting to comply with the provisions of Statement of Financial Accounting Standards No. 35 issued by the Financial Accounting Standards Board. Previously reported financial information pertaining to 1980 [and 1979] has been restated to present that information on a comparable basis.
Appendix E

ILLUSTRATION OF MEASUREMENT OF ACCUMULATED PLAN BENEFITS

.283 It is assumed that the actuary uses a full range of decrements including termination rates and disablement rates at ages below age 65, early retirement rates at ages when eligible below age 65, and normal retirement rates at ages 65 and over.

(a) Given:

(i) Benefit rate of $10 per month per year of service.

(ii) Normal retirement at age 65, irrespective of service. Retirement not compulsory.

(iii) Unreduced immediate benefit upon early retirement from active employment at age 62 with 20 years of service.

(iv) Unreduced immediate benefit upon early retirement from active employment before age 62 with 30 years of service. Social Security make-up benefit of $200 per month payable until age 62.

(v) Reduced immediate benefit upon early retirement from active employment after age 55 and before age 62 with 20 years of service. Reduction is 4% for each year by which retirement precedes age 62.

(vi) Unreduced immediate benefit upon total and permanent disability before age 65 with 10 years of service.

(vii) Deferred vested benefit, commencing at age 65, upon termination with 10 years of service. Benefit payments (at full actuarially reduced value) may also be elected to commence as early as age 55 if 20 or more years of service have been completed.

(viii) Spouse's benefit upon death in service after meeting eligibility requirements for early or normal retirement (30 years of service, age 55 and 20 years of service, or age 65) equal to $5 per month per year of service.

47 This appendix illustrates the measurement of accumulated plan benefits pursuant to the provisions of paragraphs .018(a) and .018(b) of this Statement. The example has been reproduced from Interpretation 2: Interpretation of Recommendations Concerning the Calculation of the Actuarial Present Value of Accrued Benefits under an Active Plan, as presented in American Academy of Actuaries, Bylaws, Guides to Professional Conduct, Standards of Practice, February 1, 1979 (Chicago: American Academy of Actuaries), pp. 106-113.
(c) If, in the example, there were a maximum service limit of 30 years applicable at normal or early retirement or disablement, with a pro-rata portion of the expected normal retirement benefit payable on vested termination, the only changes in the amount of benefit would be for the deferred vested benefit:

- Age 25 and 5 Years of Service: $33 (5/45 of $300)
- Age 50 and 20 Years of Service: 171 (20/35 of $300)

*Because this benefit type is one which is includible in the computation of the present value of vested benefits, the $200 monthly benefit is assumed to accrue uniformly over the first 30 years of service (see (b) (ii)). If, on the other hand, there had been specified a benefit which never is includible in the computation of the present value of vested benefits, such as a $200 monthly benefit payable in the event of the employee's death after 30 years of service, the accrued death benefit to be valued in the age 25 and 5 years of service example would have been $33 (5/30 of $200) for death at age 50, $32 (5/31 of $200) for death at age 51, etc.
INTERNATIONAL ACCOUNTING STANDARDS

Introduction

In June, 1973, the American Institute of Certified Public Accountants became one of the founding members of the International Accounting Standards Committee. The objectives of IASC as set out in paragraph 1 of the revised Agreement are "to formulate and publish in the public interest, standards to be observed in the presentation of audited financial statements and to promote their worldwide acceptance and observance. . . ."

One of the provisions of the Agreement and Constitution of the IASC calls for the members of IASC

"to use their best endeavours:

(i) to ensure that published financial statements comply with these standards or that there is disclosure of the extent to which they do not and to persuade governments, the authorities controlling securities markets and the industrial and business community that published financial statements should comply with these standards;

(ii) to ensure (1) that the auditors satisfy themselves that the financial statements comply with these standards or, if the financial statements do not comply with these standards, that the fact of non-compliance is disclosed in the financial statements, (2) that in the event of non-disclosure reference to non-compliance is made in the audit report;

(iii) to ensure that, as soon as practicable, appropriate action is taken in respect of auditors whose audit reports do not meet the requirements of (ii) above . . . ."

Statements of International Accounting Standards do not establish standards enforceable under the Code of Professional Ethics of the American Institute of Certified Public Accountants.

The following sets forth the views of the AICPA Board of Directors regarding the work of the International Accounting Standards Committee and compliance with the AICPA's commitment under the "best endeavours" clause set forth in the Agreement and Constitution of the IASC.
Work of the International Accounting Standards Committee

A. The Board of Directors subscribes to the philosophy of, and practical need for, harmonisation of basic accounting and reporting standards. The Board recognises that such harmonisation will not happen of its own accord and, therefore, supports the work of the International Accounting Standards Committee to formulate and publish basic international standards. They believe that the IASC should be supported to the maximum extent practicable and given every opportunity of fulfilling its purpose.

B. The Board believes that although the IASC is a relatively new body it is expected to have a significant impact on accounting and reporting standards worldwide. If such goal is to be achieved, it is essential that the confidence and respect for the work of the IASC must be gained as a result of a demonstrated capacity to produce timely and high quality standards responsive to the international needs of the professional and business communities throughout the world.

Implementation of “Best Efforts”

A. The Preface to Statements of International Accounting Standards [section 9000] states that national regulations or pronouncements govern financial reporting in each country. To achieve such acceptance in the United States, international accounting standards will have to be specifically adopted by the Financial Accounting Standards Board. In this regard, when an international accounting standard is issued it will be compared with U. S. practice to find out whether there are significant differences between the two.

B. If there are no significant differences, financial statements which comply with U. S. generally accepted accounting principles will automatically comply with the international accounting standards with respect to those subjects.

C. If there are significant differences, the AICPA will urge the FASB to give early consideration to such differences with a view to achieving harmonisation of those areas in which a significant difference exists.

D. Published pronouncements of the IASC will be included in this volume of AICPA Professional Standards together with an indication of whether there are any significant differences between international standards and United States GAAP.

E. Continued effort will be made to ensure that the status of international accounting standards vis-à-vis accounting and reporting practices generally accepted in the U. S. and devel-
opments therein are clearly understood by government au-
thorities, securities commissions, stock exchanges and the
business community. It is important that such groups be
encouraged to put forth their views on drafts of the IASC
since collectively they represent a broad base of experience
and diversity of background which will add significantly to
the process of harmonisation of U. S. and international ac-
counting standards.

Accordingly, each Standard is followed by a summary of those situa-
tions in which the Standards established by the IASC are more
demanding than or conflict with accounting principles generally
accepted in the United States. This volume does not identify those
matters with respect to which International Accounting Standards
permit, but do not require, the use of a practice that is contrary to
accounting principles generally accepted in the United States.

AC Section 9000

Preface to Statements of International Accounting Standards

This Preface is issued to set out the objectives and operating procedures of the International Accounting Standards Committee (IASC) and to explain the scope and authority of the Statements of International Accounting Standards. The Preface was approved in October 1977 for publication in March 1978 and supersedes the Preface published in January 1975. The approved text of this Preface is that published by the International Accounting Standards Committee in the English language.

.01 The International Accounting Standards Committee (IASC) came into existence on 29 June, 1973 as a result of an agreement by the leading professional bodies of Australia, Canada, France, Germany, Japan, Mexico, the Netherlands, the United Kingdom and Ireland, and the United States of America. A revised Agreement and Constitution was signed on 10 October, 1977. Under the terms of the revised Constitution,* accountancy bodies which were Associate Members become members of IASC and other accountancy bodies may become members. The business of the committee is conducted by a Board comprising representatives of the Founder Member bodies and from not more than two Member bodies.

THE OBJECTIVES

.02 The relationship which existed between IASC and the International Co-ordination Committee for the Accountancy Profession is carried forward to the International Federation of Accountants on the same general basis. IASC continues to be the body having responsibility and authority to issue, in its own name, pronouncements on International Accounting Standards.

.03 The objectives of IASC as set out in paragraph 1 of the 1977 Agreement* are “to formulate and publish in the public interest, standards to be observed in the presentation of audited financial statements and to promote their worldwide acceptance and observance”.

* Note. Copies of the 1977 Agreement and Constitution may be obtained on request by application to the secretary of the International Accounting Standards Committee.
11,052  International Accounting Standards

.04 By the same Agreement, the Members agree to support these objectives by undertaking the following obligations:

(a) to support the standards promulgated by the Committee;
(b) to use their best endeavours:

(i) to ensure that published financial statements comply with these standards or that there is disclosure of the extent to which they do not and to persuade governments, the authorities controlling securities markets and the industrial and business community that published financial statements should comply with these standards;

(ii) to ensure (1) that the auditors satisfy themselves that the financial statements comply with these standards or, if the financial statements do not comply with these standards, that the fact of non-compliance is disclosed in the financial statements, (2) that in the event of non-disclosure reference to non-compliance is made in the audit report;

(iii) to ensure that, as soon as practicable, appropriate action is taken in respect of auditors whose audit reports do not meet the requirements of (ii) above;

(c) to seek to secure similar general acceptance and observance of these standards internationally."

AUDITED FINANCIAL STATEMENTS

.05 The term “financial statements” used in paragraphs .03 and .04 covers balance sheets, income statements or profit and loss accounts, statements of changes in financial position, notes and other statements and explanatory material which are identified as being part of the financial statements. Usually, financial statements are made available or published once each year and are the subject of a report by an auditor. International Accounting Standards apply to such financial statements of any commercial, industrial, or business enterprise.

.06 The management of such an enterprise may prepare financial statements for its own use in a number of different ways best suited for internal management purposes. When financial statements are issued to other persons, such as shareholders, creditors, employees, and the public at large, they should conform to International Accounting Standards.

.07 The responsibility for the preparation of financial statements and for adequate disclosure is that of the management of the enterprise. The auditor’s responsibility is to form his opinion and to report on the financial statements.
ACCOUNTING STANDARDS

.08 Within each country, local regulations govern, to a greater or lesser degree, the issue of financial statements. Such local regulations include accounting standards which are promulgated by the regulatory bodies and/or the professional accountancy bodies in the countries concerned.

.09 The accounting standards already published in many countries, as referred to in paragraph .08, sometimes differ in form and content. IASC takes cognisance of exposure drafts, or of accounting standards already issued on each subject and in the light of such knowledge produces an International Accounting Standard for worldwide acceptance. One of the objects of the formation of IASC was to harmonise as far as possible the diverse accounting standards and accounting policies at present in use in different countries.

.10 In carrying out this task of adaptation of existing standards, and in formulating International Accounting Standards on new subjects, it is the intention of IASC to concentrate on essentials. It therefore endeavours not to make the International Accounting Standards so complex that they cannot be applied effectively on a world wide basis. In the years to come it is to be expected that the International Accounting Standards issued by IASC will undergo revision and a greater degree of sophistication may then be appropriate.

.11 International Accounting Standards promulgated by IASC do not override the local regulations, referred to in paragraph .08 above, governing the issue of financial statements in a particular country. If the International Accounting Standards issued by IASC conform with local regulations on a particular subject, the financial statements issued in that country which comply with the local regulations will automatically comply with the International Accounting Standards in respect of that subject. The obligations undertaken by the Members of IASC, as explained in this Preface, are designed to ensure that when the International Accounting Standards differ from, or are in conflict with, the local regulations, either the financial statements or the auditor's report will indicate, in accordance with paragraph .04(b)(i) and (ii) of this Preface, in what respects the International Accounting Standards have not been observed.

THE SCOPE OF THE STANDARDS

.12 Any limitation of the applicability of specific International Accounting Standards is made clear in the statements of those Standards. International Accounting Standards are not intended
to apply to immaterial items. An International Accounting Standard applies from a date specified in the Standard and unless indicated to the contrary is not retroactive.

**WORKING PROCEDURE—EXPOSURE DRAFTS AND STANDARDS**

.13 The agreed working procedure is to select certain subjects for detailed study by Steering Committees. As a result of this work an exposure draft is prepared on a particular subject for consideration by the Board. If approved by a two-thirds majority, the exposure draft is addressed to professional accountancy bodies and to such governments, securities markets, regulatory and other agencies as the Board may determine. Adequate time is allowed for each exposure draft to be considered by the persons or organisations to whom it is sent for comment.

.14 The comments and suggestions received as a result of this exposure are then examined by the Board and the exposure draft is revised as necessary. Provided that the revised draft is approved by at least three-quarters of the total voting rights of the Board, it is issued as a definitive International Accounting Standard and becomes operative from a date stated in the Standard.

**VOTING**

.15 For the purpose of voting referred to in paragraphs .13 and .14 above, each country represented on the Board has one vote.

**LANGUAGE**

.16 The approved text of any exposure draft or Standard is that published by IASC in the English language. Members are responsible, under the authority of the Board, for preparing translations of exposure drafts and Standards so that, where appropriate, such translations may be issued in the languages of their own countries. These translations indicate the name of the accountancy body that prepared the translation and that it is a translation of the approved text.

**THE AUTHORITY ATTACHING TO THE STANDARDS**

.17 It is important to observe the degree of authority which attaches to the issue of the definitive International Accounting Standards when published in accordance with the procedure indicated above.

.18 The accounting profession cannot normally impose its views except upon its own members and the task therefore is to persuade by example, leadership, and exhortation, the classes of persons
preface to statements of international accounting standards

referred to in paragraph .04(b)(i) above to support the standards. In most countries of the world, the accounting profession has a prestige and standing which is of great significance in successfully achieving this task of persuasion. This explains, in this context, the use of the words "to use their best endeavours".

.19 Under the obligations referred to in paragraph .04(b)(ii) and (iii), Members of IASC must use their best endeavours to ensure that auditors comply with the provisions of paragraph .04(b)(ii) and that appropriate action, which may be of a disciplinary character, can be taken, in accordance with paragraph .04(b)(iii) if they do not comply. This is the most important and serious obligation which Members of IASC have undertaken.

CONCLUSION

.20 The Members of IASC believe that the adoption in their countries of International Accounting Standards, or disclosure of the extent to which they have not been observed will, over the years, have an important effect. It is to be expected that the quality of presentation of financial statements will be improved and that there will be an increasing degree of uniformity. Information will be provided as a routine which is necessary for a proper understanding of financial statements.

The next page is 11,065.
AC Section 9001

Disclosure of Accounting Policies

INTRODUCTION

.01 This Statement deals with the disclosure of all significant accounting policies which have been adopted in the preparation and presentation of financial statements.

.02 The purpose of International Accounting Standards and the authority attaching to them are set out in the Preface to Statements of International Accounting Standards [section 9000].

.03 The definition of financial statements as presently set out in the Preface to Statements of International Accounting Standards [section 9000] is repeated here for convenience. The term financial statements covers balance sheets, income statements or profit and loss accounts, statements of changes in financial position, notes and other statements and explanatory material which are identified as being part of the financial statements. International Accounting Standards apply to the financial statements of any commercial, industrial, or business enterprise.

.04 The management of such an enterprise may prepare financial statements for its own use in a number of different ways best suited for internal management purposes. When financial statements are issued to other persons, such as shareholders, creditors, employees, and the public at large, they should conform to International Accounting Standards.

.05 Usually, financial statements are made available once each year and are the subject of a report by an auditor.

Fundamental Accounting Assumptions

.06 Certain fundamental accounting assumptions underlie the preparation of financial statements. They are usually not specifically stated because their acceptance and use are assumed. Disclosure is necessary if they are not followed, together with the reasons.
The following are recognised by the International Accounting Standards Committee as fundamental accounting assumptions:

(a) Going Concern
The enterprise is normally viewed as a going concern, that is, as continuing in operation for the foreseeable future. It is assumed that the enterprise has neither the intention nor the necessity of liquidation or of curtailing materially the scale of its operations.

(b) Consistency
It is assumed that accounting policies are consistent from one period to another.

(c) Accrual
Revenues and costs are accrued, that is, recognised as they are earned or incurred (and not as money is received or paid) and recorded in the financial statements of the periods to which they relate. (The considerations affecting the process of matching costs with revenues under the accrual assumption are not dealt with in this Statement.)

Accounting Policies

Accounting policies encompass the principles, bases, conventions, rules, and procedures adopted by managements in preparing and presenting financial statements. There are many different accounting policies in use even in relation to the same subject; judgment is required in selecting and applying those which, in the circumstances of the enterprise, are best suited to present properly its financial position and the results of its operations.

Three considerations should govern the selection and application by management of the appropriate accounting policies and the preparation of financial statements:

(a) Prudence
Uncertainties inevitably surround many transactions. This should be recognised by exercising prudence in preparing financial statements. Prudence does not, however, justify the creation of secret or hidden reserves.

(b) Substance Over Form
Transactions and other events should be accounted for and presented in accordance with their substance and financial reality and not merely with their legal form.

(c) Materiality
Financial statements should disclose all items which are material enough to affect evaluations or decisions.
Disclosure of Accounting Policies

EXPLANATION

.10 Financial statements must be clear and understandable. They are based on accounting policies which vary from enterprise to enterprise, both within a single country and among countries. Disclosure of the significant accounting policies on which the financial statements are based is therefore necessary so that they may be properly understood. The disclosure of these policies should be an integral part of the financial statements; it is helpful to users if they are all disclosed in one place. Sometimes a wrong or inappropriate treatment is adopted for items in balance sheets, income statements or profit and loss accounts, or other statements. Disclosure of the treatment adopted is necessary in any case, but disclosure cannot rectify a wrong or inappropriate treatment.

Users of Financial Statements

.11 Financial statements give information which is used by a variety of users, especially shareholders and creditors (present and potential) and employees. Other important categories of users include suppliers, customers, trade unions, financial analysts, statisticians, economists, and taxing and regulatory authorities.

.12 The users of financial statements require them as part of the information needed, among other purposes, for making evaluations and financial decisions. They cannot make reliable judgments on these matters unless the financial statements clearly disclose the significant accounting policies which have been adopted in preparing them.

Variations in Accounting Policies and in their Disclosure

.13 The task of interpreting financial statements is complicated by the adoption of diverse policies in many areas of accounting. There is no single list of accepted policies to which users may refer and the diverse accounting policies that are presently available for adoption can produce significantly different sets of financial statements based on the same events and conditions. The following are examples of areas in which differing accounting policies exist and which therefore require disclosure of the treatment selected:

General
Consolidation policy
Conversion or translation of foreign currencies including the disposition of exchange gains and losses
Overall valuation policy (e.g., historical cost, general purchasing power, replacement value)
Events subsequent to the balance sheet date
Leases, hire purchase, or instalment transactions and related interest
Taxes
Long term contracts
Franchises

Assets
Receivables
Inventories (stock and work in progress) and related cost of goods sold
Depreciable assets and depreciation
Growing crops
Land held for development and related development costs
Investments: subsidiary companies, associated companies, and other investments
Research and development
Patents and trademarks
Goodwill

Liabilities and provisions
Warranties
Commitments and contingencies
Pension costs and retirement plans
Severance and redundancy payments

Profits and losses
Methods of revenue recognition
Maintenance, repairs, and improvements
Gains and losses on disposals of property
Reserve accounting, statutory or otherwise, including direct charges and credits to surplus accounts.

Accounting policies are not at present regularly and fully disclosed in all financial statements. Considerable variation in format, clarity, and completeness of disclosure exists among and within those countries in which accounting policies are disclosed. In a single set of financial statements some significant accounting policies may be disclosed while other significant policies are not. Even in countries where disclosure of all significant accounting policies is required, guidelines to secure uniformity in the method of disclosure are not always available. The growth of international enterprises and finance has increased the neces-
sity for greater uniformity of financial statements across national boundaries.

.15 Financial statements should show corresponding figures for the preceding period. If a change in an accounting policy is made which has a material effect it is necessary to disclose that a change has been made and to qualify the effect. A change in an accounting policy which may not have a material effect in the current year should nevertheless be disclosed if it may have a material effect in subsequent years.

INTERNATIONAL ACCOUNTING STANDARD 1

DISCLOSURE OF ACCOUNTING POLICIES

*International Accounting Standard 1 comprises paragraphs .16—.23 of this Statement. The Standard should be read in the context of paragraphs .01—.15 of this Statement and of the Preface to Statements of International Accounting Standards [section 9000].*

.16 Going concern, consistency, and accrual are fundamental accounting assumptions. Where fundamental accounting assumptions are followed in financial statements, disclosure of such assumptions is not required. If a fundamental accounting assumption is not followed, that fact should be disclosed together with the reasons.

.17 Prudence, substance over form, and materiality should govern the selection and application of accounting policies.

.18 Financial statements should include clear and concise disclosure of all significant accounting policies which have been used.

.19 The disclosure of the significant accounting policies used should be an integral part of the financial statements. The policies should normally be disclosed in one place.

.20 Wrong or inappropriate treatment of items in balance sheets, income statements or profit and loss accounts, or other statements is not rectified either by disclosure of accounting policies used or by notes or explanatory material.

.21 Financial statements should show corresponding figures for the preceding period.

.22 A change in an accounting policy that has a material effect in the current period or may have a material effect in subsequent periods should be disclosed together with the reasons.
The effect of the change should, if material, be disclosed and quantified.

.23 This International Accounting Standard becomes operative for financial statements covering periods beginning on or after 1 January 1975.

COMPARISON OF INTERNATIONAL ACCOUNTING STANDARD 1 WITH GENERALLY ACCEPTED ACCOUNTING PRINCIPLES IN THE UNITED STATES

Paragraph 21 of International Accounting Standard 1 states “Financial statements should show corresponding figures for the preceding period.” Generally accepted accounting principles in the U.S. do not require the presentation of comparative financial statements. However, U.S. companies ordinarily issue comparative financial statements, and the benefits to users of presenting amounts for the preceding period for comparative purposes are widely recognized. In this regard, Chapter 2A of ARB 43 [section 2041] states:

“The presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise. Such presentation emphasizes the fact that statements for a series of periods are far more significant than those for a single period and that the accounts for one period are but an installment of what is essentially a continuous history.”
Valuation and Presentation of
Inventories in the Context
of the Historical
Cost System

INTRODUCTION

.01 This Statement deals with the valuation and presentation of inventories\(^1\) in financial statements in the context of the historical cost system, which is the most widely adopted basis on which financial statements are presented.

.02 The Committee is aware of other systems that are proposed or used in financial statements, including systems that are based on replacement costs or other current values. Inventory valuation and presentation in the context of those other systems are beyond the scope of this Statement. International Accounting Standard 1, Disclosure of Accounting Policies [section 9001], requires that the system adopted must be clearly stated.

.03 This Statement does not deal with inventories accumulated under long-term construction contracts and with inventory treatment of by-products.

Definitions

.04 The following terms are used in this Statement with the meanings specified.

*Inventories* are tangible property (a) held for sale in the ordinary course of business, (b) in the process of production for such sale, or (c) to be consumed in the production of goods or services for sale.

*Historical cost* of inventories is the aggregate of costs of purchase, costs of conversion, and other costs incurred in bringing the inventories to their present location and condition.

*Costs of purchase* comprise the purchase price including import duties and other purchase taxes, transport and handling costs,

\(^1\) The term "inventories" is used throughout this Statement; in some countries inventories are described as "stock and work in progress."
and any other directly attributable costs of acquisition less trade discounts, rebates, and subsidies.

*Costs of conversion* are those costs, in addition to the costs of purchase, that relate to bringing the inventories to their present location and condition.

*Net realisable value* is the estimated selling price in the ordinary course of business less costs of completion and less costs necessarily to be incurred in order to make the sale.

**EXPLANATION**

.05 Inventories comprise a significant portion of the assets of many enterprises. The valuation and presentation of inventories therefore have a significant effect in determining and presenting the financial position and results of operations of those enterprises.

**Determination of Historical Cost**

.06 In determining historical cost as defined in paragraph .04, different interpretations arise in practice as regards production overhead, other overheads, and the cost formula to be used.

**Production Overhead**

.07 Production overhead is comprised of costs incurred for production other than direct materials and labour. Examples are indirect materials and labour, depreciation and maintenance of factory buildings and equipment, and the cost of factory management and administration.

.08 Production overhead requires analysis to determine the portion related to bringing the inventories to their present location and condition and thus to be included in the costs of conversion when determining the historical cost of inventories.

.09 Both fixed and variable production overhead incurred during production are usually allocated to costs of conversion. That practice is based on the view that they are both incurred in putting inventories in their present location and condition. Fixed production overhead is sometimes excluded in whole or in part from costs of conversion on the grounds that it is not considered to relate directly to putting inventories in their present location and condition.

.10 In a period of low production or if there is idle plant, it is customary to restrict the allocation of fixed production overhead to the costs of conversion by relating it to the capacity of the production facilities and not to the actual level of throughput. Capacity of the production facilities is variously interpreted, for example, as the normal production expected to be achieved over
Valuation and Presentation of Inventories

a number of periods or seasons or as the maximum production that as a practical matter can be achieved. The interpretation is determined in advance and applied consistently, and is not modified for temporary conditions.

.11 Similarly, exceptional amounts of waste—material, labour, or other expenses—which do not relate to bringing the inventories to their present location and condition are excluded from conversion costs.

Other Overheads

.12 Overheads other than production overhead are sometimes incurred in bringing inventories to their present location and condition, for example, expenditures incurred in designing products for specific customers. On the other hand, selling expenses, general administrative overheads, research and development costs, and interest are usually considered not to relate to putting the inventories in their present location and condition.

Cost Formula Used

.13 Several different formulas with widely different effects are in current use for the purpose of assigning costs, including the following:

(a) First-in, first-out (FIFO)
(b) Weighted average cost
(c) Last-in, first-out (LIFO)
(d) Base stock
(e) Specific identification
(f) Next-in, first-out (NIFO)
(g) Latest purchase price.

.14 The FIFO, weighted average cost, LIFO, base stock, and specific identification formulas use costs that have been incurred by the enterprise at one time or another. The NIFO and latest purchase price methods use costs that have not all been incurred and are therefore not based on historical cost.

.15 Specific identification is a formula that attributes specific costs to identified items of inventory. This is an appropriate treatment for goods that have been bought or manufactured and are segregated for a specific project. If it is used, however, in respect of items of inventory which are ordinarily interchangeable, the selection of items could be made in such a way as to obtain predetermined effects on profit.
Valuation of Inventories Below Historical Cost

.16 The historical cost of inventories may not be realisable if their selling prices have declined, if they are damaged, or if they have become wholly or partially obsolete. The practice of writing inventories down below historical cost to net realisable value accords with the view that current assets should not be carried in excess of amounts expected to be realised. Declines in value are computed separately for individual items, groups of similar items, an entire class of inventory (for example, finished goods), or items relating to a class of business, or they are computed on an overall basis for all the inventories of the enterprise. The practice of writing inventories down based on a class of inventory, on a class of business, or on an overall basis results in offsetting losses incurred against unrealised gains.

.17 In some countries, writedowns are made which are not based on the practices described in paragraph .16. For example, writedowns below historical cost are arrived at by applying an arbitrary percentage to the amounts otherwise computed or by undisclosed reductions that result in secret reserves; these produce inappropriate effects on financial statements.

Presentation of Inventories

.18 The sub-classification of inventories in financial statements informs readers of the amounts held in different categories and the extent of the changes from period to period. Common sub-classifications are materials, work in progress, finished goods, merchandise, and production supplies.

.19 “Inventories” in balance sheets usually consist of items included in the definition of inventories in paragraph .04. Other items are sometimes shown under the heading “Inventories”, for example, nonproduction supplies and research and development supplies.

INTERNATIONAL ACCOUNTING STANDARD 2

VALUATION AND PRESENTATION OF INVENTORIES IN THE CONTEXT OF THE HISTORICAL COST SYSTEM

International Accounting Standard 2 comprises paragraphs .20—.36 of this Statement. The Standard should be read in the context of paragraphs .01—.19 of this Statement and of the Preface to Statements of International Accounting Standards [section 9000].

.20 Inventories should be valued at the lower of historical cost and net realisable value.
Valuation and Presentation of Inventories

Ascertainment of Historical Cost

.21 The historical cost of manufactured inventories should include a systematic allocation of those production overhead costs that relate to putting the inventories in their present location and condition. Allocation of fixed production overhead to the costs of conversion should be based on the capacity of the facilities. If fixed production overhead has been entirely or substantially excluded from the valuation of inventories on the grounds that it does not directly relate to putting the inventories in their present location and condition, that fact should be disclosed.

.22 Overheads other than production overhead should be included as part of inventory cost only to the extent that they clearly relate to putting the inventories in their present location and condition.

.23 Exceptional amounts of wasted material, labour, or other expenses should not be included as part of inventory cost.

.24 Except as set out in paragraphs .25 and .26, the historical cost of inventories should be accounted for using the FIFO formula or a weighted average cost formula.

.25 Inventories of items that are not ordinarily interchangeable or goods manufactured and segregated for specific projects should be accounted for by using specific identification of their individual costs.

.26 The LIFO or base stock formulas may be used provided that there is disclosure of the difference between the amount of the inventories as shown in the balance sheet and either (a) the lower of the amount arrived at in accordance with paragraph .24 and net realisable value or (b) the lower of current cost at the balance sheet date and net realisable value.

.27 Techniques such as the standard cost method of valuing products or the retail method of valuing merchandise may be used for convenience if they approximate consistently the results that would be obtained in accordance with paragraph .20.

Ascertainment of Net Realisable Value

.28 Estimates of net realisable value should be based not on temporary fluctuations of price or cost but on the most reliable evidence available at the time the estimates are made as to what the inventories are expected to realise.

.29 Inventories should be written down to net realisable value item by item or by groups of similar items; whichever method is used should be consistently applied.
.30 The net realisable value of the quantity of inventory held to satisfy firm sales contracts should be based on the contract price. If the sales contracts are for less than the inventory quantities held, net realisable value for the excess should be based on general market prices.²

.31 Normal quantities of materials and other supplies held for incorporation in the production of goods should not be written down below historical cost if the finished products in which they will be incorporated are expected to be realised at or above historical cost. Nevertheless, a decline in the price of materials may indicate that the historical cost of finished products to be produced will exceed net realisable value in which event a writedown of the materials inventories should be made; in this event, replacement cost may be the best available measure of the net realisable value of those materials.

Presentation in the Financial Statements

.32 The profit and loss of the period should be charged with the amount of inventories sold or used (unless allocated to other asset accounts) and with the amount of any writedown in the period to net realisable value.

.33 Inventories should be sub-classified in balance sheets or in notes to the financial statements in a manner which is appropriate to the business and so as to indicate the amounts held in each of the main categories.

.34 The accounting policies adopted for the purpose of valuation of inventories, including the cost formula used, should be disclosed. A change in an accounting policy related to inventories that has a material effect in the current period or may have a material effect in subsequent periods should be disclosed together with the reasons. The effect of the change should, if material, be disclosed and quantified. (See International Accounting Standard 1, Disclosure of Accounting Policies [section 9001].)

.35 If items are shown under the caption “Inventories” other than those comprehended by the definition in paragraph .04, their nature, amounts and basis of valuation should be disclosed.

Effective Date

.36 This International Accounting Standard becomes operative for financial statements covering periods beginning on or after 1 January 1976.

² Firm sales contracts beyond inventory quantities held, and firm purchase contracts are beyond the scope of this Statement.
COMPARISON OF INTERNATIONAL ACCOUNTING STANDARD 2 WITH GENERALLY ACCEPTED ACCOUNTING PRINCIPLES IN THE UNITED STATES

Valuation of Inventories at the Lower of Cost or Market

Paragraphs 20 and 31 of International Accounting Standard 2 state:

"Inventories should be valued at the lower of historical costs and net realisable value.

* * * * *

"Normal quantities of materials and other supplies held for incorporation in the production of goods should not be written down below historical cost if the finished products in which they will be incorporated are expected to be realised at or above the historical cost. Nevertheless, a decline in the price of materials may indicate that the historical cost of finished products to be produced will exceed net realisable value in which event a writedown of the materials inventories should be made; in this event, replacement cost may be the best available measure of the net realisable value of those materials."

On the other hand, Statement 6 in Chapter 4 of ARB 43 [section 5121] provides that inventory is to be valued at the lower of cost or market as follows:

"As used in the phrase lower of cost or market the term market means current replacement cost (by purchase or by reproduction, as the case may be) except that:

(1) Market should not exceed the net realizable value (i.e., estimated selling price in the ordinary course of business less reasonably predictable costs of completion and disposal); and

(2) Market should not be less than net realizable value reduced by an allowance for an approximately normal profit margin."

Thus, literal application of the provision of ARB 43 that inventories be written down to replacement cost where replacement cost is less than net realizable value (but not less than net realizable value reduced by an allowance for an approximately normal profit margin) conflicts with the international standard (except where replacement cost is the best available measure of net realizable value).

As noted in FASB Interpretation No. 17 [section 1083-2], the discussion in Chapter 4 of ARB 43 [section 5121] states "because of the many variations of circumstances encountered in inventory pricing, Statement 6 is intended as a guide rather than a literal rule."

Valuation of Inventories at Quoted Market Prices

Chapter 4 of ARB 43 [section 5121] provides an exception to the general rule that inventories be valued at the lower of cost or market. The exception is as follows:
"Only in exceptional cases may inventories properly be stated above cost. For example, precious metals having a fixed monetary value with no substantial cost of marketing may be stated at such monetary value; any other exceptions must be justifiable by inability to determine appropriate approximate costs, immediate marketability at quoted market price, and the characteristic of unit interchangeability. Where goods are stated above cost this fact should be fully disclosed."

International Accounting Standard 2 provides no exceptions to its basic requirement that inventories be valued at the lower of historical cost or net realizable value.
INTRODUCTION

.01 The subject of this Statement is the presentation of consolidated financial statements for a group of companies under the control of one parent company. Consolidated financial statements have been developed to meet the need for information concerning the financial position and results of operations of a group of companies.

.02 This Statement also establishes as an International Accounting Standard the use of the equity method of accounting for the presentation of certain types of long-term investments in the consolidated financial statements. It does not deal with the equity method in the presentation of other forms of financial statements.

.03 This Statement does not deal with the following specialised subjects:

(a) Methods of accounting for business mergers or combinations and their effects on consolidation
(b) Accounting for goodwill
(c) Accounting for bonus share issues (stock dividends)
(d) Accounting for step-by-step acquisitions and disposals of subsidiaries and associated companies
(e) Accounting for shares issued by a subsidiary
(f) Accounting for reciprocal shareholdings when two companies in the group hold shares in each other
(g) Methods of translating financial statements expressed in foreign currencies
(h) Disclosure by product lines or activities in the financial statements of diversified companies
(i) Accounting for joint ventures.

Definitions

.04 The following terms are used for the purpose of this Statement.
An **investor** is a company that holds an interest in the voting power of another company (the investee).

An **investee** is a company in whose voting power an interest is held by another company (the investor).

A **subsidiary** is a company which is controlled by another company (known as the parent company).

A **parent company** is a company that has one or more subsidiaries.

**Consolidated financial statements** are statements which present the assets, liabilities, shareholders' accounts, revenue, and expenses of a parent company and its subsidiaries as those of a single enterprise.

**Control** is ownership, directly, or indirectly through subsidiaries, of more than one half of the voting power of a company.

A **group** is a parent company and all its subsidiaries.

**Minority interest** is that part of the net results of operations, or of net assets, of a subsidiary attributable to shares owned other than by the parent company or another subsidiary.

**Equity capital** is the issued share capital of a company which is neither limited nor preferred in its participation in distributions of the profits of a company or in the ultimate distribution of its assets.

An **associated company** is an investee company that is not a subsidiary and in respect of which

(a) the investor's interest in the voting power of the investee is substantial, and

(b) the investor has the power to exercise significant influence over the financial and operating policies of the investee, and

(c) the investor intends to retain its interest as a long-term investment.

**Significant influence** is participation in the financial and operating policy decisions of the investee but not control of those policies. An investor may exercise significant influence in several ways, usually by representation on the board of directors but also by participation in policy making processes, material intercompany transactions, interchange of managerial person-

---

1 Voting power refers to the rights attaching to voting shares issued and outstanding, that is, shares other than those held as "treasury stock". Treasury stock are a company's own shares which have been acquired by the issuing company and are legally available for reissue. This practice is not permitted in some countries.

AC § 9003.04
nel, or dependency on technical information. If the investor holds less than 20% of the voting power of the investee, it should be presumed that the investor does not have the power to exercise significant influence, unless such power can be clearly demonstrated.

The equity method is a method of accounting by an investor for certain types of long-term investments in associated companies and for certain unconsolidated subsidiaries. Under the equity method, the investment account of the investor is adjusted in the consolidated financial statements for the change in the investor's share of net assets of the investee. The income statement reflects the investor's share of the results of operations of the investee.

DISCUSSION

Consolidated Financial Statements

Need for Consolidated Financial Statements

.05 Certain parties with interests in the parent company of a group, such as present and potential shareholders, employees, customers, and in some circumstances creditors, are concerned with the fortunes of the entire group. Consequently, they need to be informed about the results of operations and the financial position of the group as a whole.

.06 This need is served by consolidated financial statements, which present financial information concerning the group as that of a single enterprise without regard for the legal boundaries of the separate legal entities. The consolidated financial statements normally include the parent company and all its subsidiaries. In certain rare circumstances companies other than subsidiaries are treated as subsidiaries in the consolidated financial statements of a company that:

(a) owns a majority of the equity capital, but less than a majority of the voting power, or

(b) has the power to control by statute or contract the financial and operating policies of those companies. These policies are controlled, for example, by the power to nominate a majority of the board of directors, by management contract or by court decree.

.07 The needs of those interested in the financial position of a parent company or of individual subsidiaries, in particular, creditors and minority interests, are served by the separate financial statements of the parent company or of those subsidiaries.
Exclusion from Consolidation

.08 Subsidiaries are commonly excluded from consolidation in circumstances in which control is likely to be temporary or the ability of the parent company to control the assets is impaired.

.09 In some countries, it is considered appropriate to exclude from consolidation a subsidiary whose business activities are so dissimilar from those of the other companies within the group that the presentation of separate subsidiary financial statements with the consolidated financial statements would provide better information for the parent company shareholders and other users of the statements. An alternative to exclusion in such cases is the grouping, by type of business, of the assets and liabilities within the consolidated balance sheet and the revenue and expenses within the consolidated income statement.

.10 Further grounds considered by some as sufficient for excluding a subsidiary from consolidation include impracticability of consolidation, the likelihood of disproportionate expense or delay, or the opinion of the directors that the effect of consolidation would be misleading or harmful. Exclusions on these grounds are often subjective and may result in wide variations in practice among companies accounting for similar situations.

Consolidation Procedures

.11 In the consolidated financial statements, the accounts of the parent company and its subsidiaries are combined on a line by line basis by adding together like items of assets, liabilities, revenue, and expenses. The following are eliminated in consolidation:

(a) intercompany balances and intercompany transactions, including intercompany sales, intercompany charges, and intercompany dividends

(b) the cost to the parent of its investment in each subsidiary and the parent company's portion of share capital, preacquisition reserves, and preacquisition profits and losses of each subsidiary.²

.12 Unrealised profits resulting from intercompany transactions which are included in the carrying value of assets, such as inventories and fixed assets, are eliminated.³ The portion of un-

²The preacquisition reserves, and preacquisition profits and losses are not eliminated under the method of accounting for business combinations described as "mergers" or "pooling of interests", which is used in some countries.

³In some countries intercompany profits and losses of public utilities are not eliminated to the extent that they are recognised in the determination of the rates charged to consumers in accordance with regulations determined by government authorities.
realised profits arising in the current period is charged against consolidated income after giving appropriate consideration to minority interests. However, the profits are realised profits in the accounts of the selling company and therefore may be subject to tax. Since the tax relates to income which will not be reported in the consolidated financial statements until subsequent periods, the applicable tax expense is carried forward until the profit is so reported. If intercompany transactions have resulted in assets being stated in the consolidated financial statements at an amount lower than cost to the group, then the resulting unrealised losses and any related tax effects are eliminated on consolidation unless cost cannot be recovered.

.13 At the date of acquisition the cost of a parent company's investment in a subsidiary is allocated, if possible, to the subsidiary's individual identifiable assets and liabilities on the basis of their values, and the allocated amounts serve as the basis on which the subsidiary's assets and liabilities are reported in the parent company's consolidated financial statements subsequent to the acquisition. Any difference between the cost of the parent company's investment and the parent company's share in the amounts allocated to individual identifiable assets and liabilities is shown in the consolidated balance sheet appropriately described.4

.14 Taxes payable by either the parent company or by subsidiaries on distribution to the parent company of the undistributed profits of subsidiaries are accrued if it is reasonable to assume that any part of those profits will eventually be distributed, by way of dividend or otherwise, and will result in a tax liability at the time of remittance. If taxes are not accrued in respect of undistributed profits, there is sometimes disclosure of the cumulative amount of the undistributed profits on which taxes have not been recognised by the parent company because of the parent company's intention and power to undertake the long-term reinvestment of those profits.

.15 It is preferable that the parent company and its subsidiaries should have a common financial reporting period. If financial statements with different reporting dates are consolidated, significant transactions or events which have occurred in the intervening period are recognised through adjustments or disclosure. If a difference exists, the dates to which the financial statements of the subsidiaries have been prepared are disclosed. The consistency principle dictates that the length of the reporting periods

4 Not applicable to mergers or pooling of interests referred to in footnote 2.
and any difference in the balance sheet dates should be consistent from period to period.

.16 The results of operations of a subsidiary for the financial reporting period in which the subsidiary is acquired are included in the consolidated income statement only from the date of its acquisition. Similarly, the results of operations are included in consolidated income in the period of disposal only to the date of disposal.

.17 The losses applicable to the minority interest in a consolidated subsidiary may exceed the minority interest in the shareholders' equity of the subsidiary. The excess and any further losses applicable to the minority interest are charged against the majority interest except to the extent that the minority interest has a binding obligation to make good the losses. If future profits are reported by the subsidiary, the majority interest is credited with all such profits until the minority's share of losses previously absorbed by the majority has been recovered.

.18 If a subsidiary has outstanding cumulative preferred shares which are held outside the group, the investor computes its share of profits or losses after adjusting for the subsidiary's preferred dividends, whether or not dividends have been declared.

Investments in Associated Companies and Unconsolidated Subsidiaries

.19 There are two principal methods of accounting for investments in associated companies and in unconsolidated subsidiaries: the "cost" method and the "equity" method.

The Cost Method

.20 Under the cost method, an investor records an investment in the shares of an investee at cost; income is recognised only to the extent that dividends are distributed from net accumulated profits of the investee arising subsequent to the date of acquisition by the investor. Dividends received in excess of such subsequent profits are considered a recovery of investment and are recorded as reductions of the cost of the investment.

The Equity Method

.21 If an investor holds an investment in an associated company, the recognition of income on the basis of dividends received may not be an adequate measure of the income earned on the investment because the receipt of dividends may bear little relationship to the performance of the investee. The application of the equity method of accounting results in more informative reporting of the net assets and income of the investor.

* Not applicable to mergers or pooling of interests referred to in footnote 2.
.22 Under the equity method, the carrying amount of an investment in the shares of an investee is increased or decreased to recognise the investor's share of the profits or losses of the investee after the date of acquisition. Adjustments in the carrying amount of the investment may also be necessary to account for alterations in the investor's proportionate interest in the investee as a consequence of changes in the investee's share capital. Dividends received from an investee reduce the carrying amount of the investment.

Other Considerations

.23 If an investee ceases to fall within the definition of a subsidiary but the former parent company retains the power to exercise significant influence over the investee, the investment is accounted for as an associated company. However, an investee ceases to fall within the definition of a subsidiary and does not become an associated company if the investor loses both control and the power to exercise significant influence over the investee. Also, an investee ceases to fall within the definition of an associated company if the investor loses the power to exercise significant influence over the investee. For example, loss of control and the power to exercise significant influence might occur if the investee were placed under the control of a court or if bankruptcy or insolvency proceedings were instituted against it.

.24 Under the equity method as well as under the cost method of accounting, if the value of the investment is below the carrying amount for other than a temporary period, the investor's assets are overstated unless there is appropriate recognition of the decline in value.

Application of the Equity Method

.25 Many of the procedures appropriate for the application of the equity method of accounting are similar to those which are applicable in the consolidation of investments in subsidiaries.

.26 The investor's share of profits or losses is adjusted to eliminate unrealised profits and losses included in the carrying amounts of assets acquired by either the investor or the investee through intercompany transactions, after appropriate recognition of outside interests.

.27 The most recent available financial statements are used by the investor in applying the equity method. If the investor's and the investee's financial statements do not have a common date, significant transactions or events which have occurred in the intervening period are recognised through adjustments or disclosure. If a difference exists, the dates to which the financial
statements of the investees have been prepared are disclosed. The consistency principle dictates that the length of the reporting periods and any differences in the balance sheet dates should be consistent from period to period.

.28 In order to determine in subsequent financial periods the appropriate amount of the investor's share of the investee's income to be included in the consolidated income statement, the broad concepts underlying the consolidation procedures used on the acquisition of a subsidiary are adopted on the acquisition of an associated company. The consolidation procedures to be applied on the acquisition of a subsidiary are described in paragraph .13.

.29 Taxes that would be payable on distribution to the investor of the investor's share of the undistributed profits of the investee or on the disposal of the investment are accrued when the profits are recognised by the investor since taxes can be expected to become payable upon later dividend distribution or on disposal of the investment.

.30 If an investor's share of losses of an investee equals or exceeds the carrying amount of an investment accounted for by the equity method, the investor ordinarily discontinues applying the equity method. The investment is recorded at nil value. Additional losses are then provided for only if the investor has guaranteed obligations of the investee or is otherwise committed to provide further financial support of the investee. If the investee subsequently reports net income, the investor resumes applying the equity method only after its share of that net income equals the share of net losses not recognised during the period when the equity method was suspended.

.31 If the carrying amount of an investment is written down to recognise the decline in its value, the write-down is charged to consolidated income and deducted from the carrying amount of the related investment.

.32 If an investee has outstanding cumulative preferred shares, which are held outside the group, an investor computes its share of profits or losses after adjusting for the investee's preferred dividends, whether or not the dividends have been declared.

Disclosure

.33 Consolidated financial statements show the aggregate financial position and results of operations for a group of companies. In order that users of financial statements may obtain a clear understanding of the group's affairs, it may be necessary to pro-
vide additional information showing the composition of the group and an analysis of certain balances in the financial statements. In a large diversified group it may be helpful to disclose the name, nature of business, and proportion of voting power held of each significant subsidiary and associated company. It may also be important to present an analysis of retained income as related to the parent, subsidiaries, and associated companies and to disclose any statutory or contractual restrictions on the distribution of profits because this may affect the ability of the parent company to distribute dividends. In international companies an analysis of the geographical distribution of assets and liabilities may be useful in assessing the group's exposure to exceptional risks of operating in other countries, including the risk of foreign currency exchange rate fluctuations.

**INTERNATIONAL ACCOUNTING STANDARD 3**

**CONSOLIDATED FINANCIAL STATEMENTS**

*International Accounting Standard 3 comprises paragraphs .34—.52 of this Statement. The Standard should be read in the context of paragraphs .01—.33 of this Statement and of the Preface to Statements of International Accounting Standards [section 9000].*

**Consolidated Financial Statements**

.34 A parent company should issue consolidated financial statements, except that it need not do so when it is a wholly-owned subsidiary.

.35 A parent company which issues consolidated financial statements should consolidate all subsidiaries, foreign and domestic, as defined in paragraph .04, other than those referred to in paragraphs .36 and .37.

.36 A subsidiary should be excluded from consolidation if:

(a) control is to be temporary, or
