ARCHIVE—STATEMENTS OF POSITION ACCOUNTING

Introduction

The guidance included in this section has been codified into the Financial Accounting Standards Board (FASB) *Accounting Standards Codification*™ (ASC) effective July 1, 2009. However, these Statements of Position are included herein for archival purposes until further notice.

Disclaimer: The Statements of Position in this section have not been updated for certain recently issued FASB Statements, including FASB Statement No 157, *Fair Value Measurements*, and FASB Statement No. 165, *Subsequent Events*.

Statements of Position of the Accounting Standards Division present the conclusions of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards (SAS) No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. SAS No. 69 is effective for audits of financial statements for periods ending after March 15, 1992. An entity following an accounting treatment as of March 15, 1992, need not change to an accounting treatment specified in a Statement of Position whose effective date is before March 15, 1992. For Statements of Position whose effective date is subsequent to March 15, 1992, and for entities initially applying an accounting principle after March 15, 1992, the accounting treatment specified by that Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Statement of Position 75-2 Accounting Practices of Real Estate Investment Trusts

[Recommendation to Financial Accounting Standards Board]

AICPA **American Institute of Certified Public Accountants**
1211 Avenue of the Americas, New York, New York 10036 (212) 575-6200

June 27, 1975

Marshall S. Armstrong, CPA
Chairman
Financial Accounting Standards Board
High Ridge Park
Stamford, Connecticut 06905

Dear Mr. Armstrong:

The accompanying Statement of Position presents recommendations of the Accounting Standards Division on *Accounting Practices of Real Estate Investment Trusts*. It was prepared on behalf of the Division by the Accounting Standards Executive Committee for consideration by the Financial Accounting Standards Board and for such action as the Board deems appropriate. The scope of the Statement is restricted to REITs, although it is acknowledged that the conclusions therein may also be appropriate for companies which are not REITs.

The Statement takes the position that the allowance for losses on loans and foreclosed properties should now be determined based on an evaluation of the recoverability of individual loans and properties and, in this evaluation, the principle of providing for all losses when they become evident should now require the inclusion of all holding costs, including interest, in determining such losses.

The individual evaluation of the loans and foreclosed properties should be made, according to the Statement, as of the close of all annual and interim stockholder reporting periods. This may well result in a need to increase or decrease the allowance for losses with a corresponding charge or credit to income. However, in the case of foreclosed property which the REIT elects to hold as a long-term investment, the Statement concludes that the net realizable value of such property at the date of foreclosure becomes its new basis, and subsequent increases in market values of such properties should generally not be recorded until the time of a later exchange transaction which confirms the amount of any increase.

The Statement also takes the position that recognition of interest revenue should be discontinued when it is not reasonable to expect that the revenue will be received and enumerates conditions which should now be regarded as establishing a presumption that the recording of interest should be discontinued.

Finally, the Statement concludes that commitment fees should be amortized over the combined commitment and loan period, and provides guidance with respect to appropriate accounting by a REIT for operating support from its adviser.

The Division would appreciate being advised as to the Board's proposed action on the recommendations set forth in this Statement of Position.

Sincerely yours,

STANLEY J. SCOTT
Chairman
Accounting Standards Division

cc: Securities and Exchange Commission

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Accounting Practices of Real Estate Investment Trusts[*]

Introduction

.01 Real estate investment trusts (REITs) have in recent years assumed an increasingly important role in the real estate industry. REITs are business trusts and are generally publicly-held. They employ equity capital, coupled with substantial amounts of debt financing, in making real estate loans and investments.

.02 A REIT, if it so elects, will not be required to pay Federal corporate income taxes (other than that on "tax preference" items) if, among other things, at least 90% of its taxable income, as defined, is distributed to its shareholders. This Statement, however, is not restricted to those REITs which have elected such tax treatment.

.03 The accounting problems discussed in this Statement of Position may also be encountered by other companies which are not REITs but which are engaged in the business of making loans on or investing in real estate. The conclusions in this Statement of Position may, therefore, also be appropriate for those companies. However, the accounting practices of companies which are not REITs are beyond the scope of this Statement of Position.

.04 REITs have engaged in a variety of lending and investing activities, some of which are listed below.

Construction loans are generally short-term first mortgage loans to finance the construction of residential, commercial or industrial properties. Interest revenue on such loans is usually accrued and added to the loan balance, which is paid from the proceeds of permanent financing.

Development loans are short-term first mortgage loans to finance site development costs. They are usually paid from proceeds of a construction loan.

Land acquisition loans are first mortgage loans to finance the acquisition (not the development) of sites.

[*] [Footnote deleted.]

Long and intermediate term loans are generally conventional mortgage loans to finance completed properties.

Purchase leasebacks consist of the simultaneous purchase and leaseback to the seller of real estate properties.

Equity investments in real estate are direct ownership interests, under a variety of forms, in improved or unimproved real estate.

Junior mortgage loans are real estate loans subject to the lien of a prior mortgage.

Wrap-around loans are junior mortgage loans to provide an owner with funds without disturbing a prior first mortgage loan which, for various reasons, is not liquidated.

Gap loans are junior mortgage loans to finance a temporary spread between amounts advanced and amounts committed under a prior first mortgage loan.

Warehousing loans are short-term loans secured by the pledge of mortgage loans.

.05 In connection with real estate loans, a REIT may issue a commitment, which is an agreement to make a mortgage loan in the future at specified terms.

.06 A REIT's financial success is often dependent upon external factors, among which are the operations of its contractor-borrowers, the availability to those contractors of long-term mortgage funds when projects are completed, and the general condition of the real estate industry. The success of the REIT is also dependent upon its ability to obtain financing at rates less than that earned on its portfolio of investments.

.07 Considerable attention has recently been given to the accounting practices of REITs, particularly those which relate to loans which are in default or may become in default. This Statement of Position addresses certain of those practices.

Losses From Loans

[.08–.29] [Effectively superseded by FASB Statement No. 114, *Accounting by Creditors for Impairment of a Loan,* and FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,* effective for financial statements for fiscal years beginning after December 15, 1994, and December 15, 1995, respectively.][1–2]

Assets Affected by Troubled Debt Restructurings

[.29A–.29C] [Effectively superseded by FASB Statement No. 114, *Accounting by Creditors for Impairment of a Loan*, and FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*, effective for financial statements for fiscal years beginning after December 15, 1994, and December 15, 1995, respectively.]

Discontinuance of Interest Revenue Recognition

.30 While some REITs argue that recognition of interest revenue should never be discontinued, it seems clear that there is no sound basis in theory or

---

[1–2] [Footnotes effectively superseded by FASB Statement No. 114, *Accounting by Creditors for Impairment of a Loan*, and FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*, effective for financial statements for fiscal years beginning after December 15, 1994, and December 15, 1995, respectively.]

practice for such a position, since it is well established in accounting that if sufficient doubt or uncertainty exists as to realization, recognition may not be appropriate.

.31 In practice, the recognition of interest revenue has usually been discontinued at one of the following points:

(1) When the amount of any final loss can be determined with a high degree of precision (e.g., upon final settlement).

(2) Upon the occurrence of certain specified events (e.g., interest or principal is a certain number of days past due, cost overruns are at a certain percentage, foreclosure proceedings are being initiated, etc.)

(3) When judgment—often involving an evaluation of total loan recoverability, including estimated recoverability from foreclosure and sale—indicates that any additional interest would not be realized.

.32 Postponing the discontinuance of interest recognition until a loss can be determined with a high degree of precision is in conflict with general practice and theory.

.33 A common practice is to discontinue the recognition of interest upon the occurrence of certain specified events. Its attractiveness lies in the ability to determine objectively if the criteria have been met and, as a result, it is presumed there would be a greater uniformity in the reported results of REITs following this practice.

.34 Opponents of this practice acknowledge that specific criteria may be useful in identifying potential problem loans but believe that arbitrary rules cannot be a substitute for management's judgment. It is argued that even though a loan may meet an established criterion for the discontinuance of interest recognition, it is still possible that the loan and the interest will ultimately be collected; thus, to discontinue recognition in such a situation is as incorrect as recognizing interest when it is clear it will not be collected.

.35 The Division believes that the recognition of interest revenue should be discontinued when it is not reasonable to expect that the revenue will be received. The Division also believes that certain conditions, such as any one of the following, should now be regarded as establishing a presumption (which may be overcome if other facts clearly refute the presumption) that the recording of interest should be discontinued.

(1) Payments of principal or interest are past due.

(2) The borrower is in default under the terms of the loan agreement.

(3) Foreclosure proceedings have been or are expected to be initiated.

(4) The credit-worthiness of the borrower is in doubt because of pending or actual bankruptcy proceedings, the filing of liens against his assets, etc.

(5) Cost overruns and/or delays in construction cast doubt on the economic viability of the project.

(6) The loan has been renegotiated.

These conditions may also be an indication that an allowance for losses should be provided.

.36 The Division supports the view that the discontinuance of interest revenue recognition is related to the question of realization and, consequently, such recognition should not be resumed, nor should unrecorded interest be recognized, until it is evident that the principal and interest will be collected.

.37 Some believe that even though the recognition of interest is discontinued, interest revenue should be "grossed up" with an offsetting charge to an expense account. They believe that this presentation will more clearly reflect the planned income from the portfolio as well as the deviations, in the form of provisions for possible losses, from that plan.

.38 Others maintain that since the interest recognition was discontinued because realization was doubtful, it would not be appropriate to include such amounts in interest revenue in the financial statements because such a presentation would contradict economic reality. The Division supports this view.

Commitment Fees

[.39–.46] [Effectively superseded by FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, effective for lending and leasing transactions entered into and commitments granted in fiscal years beginning after December 15, 1987.][3]

Operating Support of the REIT by the Adviser

.47 Various methods are or have been employed by advisers to insure a certain return to the REIT for certain periods. Some of these methods are summarized below.

(1) Purchasing a loan or a property at an amount in excess of market value

(2) Forgiving indebtedness

(3) Reducing advisory fees

(4) Providing required compensating balances

(5) Making outright cash payments

.48 In situations of this type, few would challenge the need for disclosure of the nature of the relationship between the REIT and its adviser and the nature and amount of the transactions between them. The accounting for the transaction, however, is not quite as clear.

.49 Some believe that operating support given to a REIT by its adviser can be determined to be either income or a contribution to capital on the basis of the form of the transaction.

.50 Others hold that such support should always be accounted for as income since it is difficult, if not impossible, to distinguish items of income from capital contributions. In some cases, for example, determining what the terms of an "arms-length" transaction would be might pose significant problems. Distinguishing between the types of operating support would also pose problems—why, for example, should a loan purchased at more than market value by the adviser be viewed differently from a reduction in the advisory fee?

.51 The Division believes that in the present framework of generally accepted accounting principles, appropriate accounting by a REIT for operating support from its adviser would include the following:

---

[3] [Footnote effectively superseded by FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, effective for lending and leasing transactions entered into and commitments granted in fiscal years beginning after December 15, 1987.]

(1) Adjustment of any assets (or liabilities) which will be transferred between the companies to current market value as of the date of the transaction.

(2) Recognition, as income or as a reduction of advisory fees, of the operating support effectively obtained, with full disclosure of (*a*) the relationship between the parties and (*b*) the nature and amount of the transactions.

.52 The effect of such transactions, when material, should be reported separately in the income statement.

Statement of Position 76-3 Accounting Practices for Certain Employee Stock Ownership Plans

[Recommendation to the Financial Accounting Standards Board]

AICPA **American Institute of Certified Public Accountants**
1211 Avenue of the Americas, New York, New York 10036 (212) 575-6200

December 20, 1976

Marshall S. Armstrong, CPA
Chairman
Financial Accounting Standards Board
High Ridge Park
Stamford, Connecticut 06905

Dear Mr. Armstrong:

The accompanying Statement of Position presents recommendations of the Accounting Standards Division on *Accounting Practices for Certain Employee Stock Ownership Plans* (ESOPs). It was prepared on behalf of the Division by the Accounting Standards Executive Committee for consideration by the Financial Accounting Standards Board and for such action as the Board deems appropriate.

The Statement deals primarily with accounting and reporting issues that have arisen with respect to those ESOPs that borrow funds from a bank or other lender to acquire shares of stock in the employer company or that issue notes to existing shareholders in exchange for shares of stock. However, certain conclusions in the Statement are also applicable to ESOPs that have not entered into such transactions.

The Statement's major recommendations are briefly summarized below:

- An obligation of an ESOP should be recorded as a liability in the financial statements of the employer when the obligation is covered by either a guarantee of the employer or a commitment by the employer to make future contributions to the ESOP sufficient to meet the debt service requirements.
- The offsetting debit to the liability recorded by the employer should be accounted for as a reduction of shareholders' equity.
- The liability recorded by the employer and the offsetting debit should both be reduced as the ESOP makes payments on the debt.

- The amount contributed or committed to be contributed to an ESOP with respect to a given year should be charged to expense by the employer; the compensation and interest elements of the contribution should be separately reported.
- All shares held by an ESOP should be treated as outstanding shares in the determination of earnings per share. Dividends paid on those shares should be charged to retained earnings.
- Any additional investment tax credit should be accounted for as a reduction of income tax expense in the year in which the contribution to the ESOP is charged to expense.

The Division would appreciate being advised as to the Board's proposed action on the recommendations set forth in this Statement of Position.

Sincerely yours,

Raymond C. Lauver
Chairman
Accounting Standards Division

cc: Securities and Exchange Commission

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Accounting Practices for Certain Employee Stock Ownership Plans

Introduction

.01 The Employee Retirement Income Security Act of 1974 describes an Employee Stock Ownership Plan (ESOP) as a qualified stock bonus plan, or a combination stock bonus and money purchase pension plan, designed to invest primarily in "qualifying employer securities."[1] Qualifying employer securities include the employer's stock and its other marketable obligations. The essential differences between an ESOP and other qualified stock bonus plans are that (*a*) an ESOP is permitted, in certain circumstances, to incur liabilities in the acquisition of employer securities and (*b*) the employer may be permitted to increase his maximum allowable investment tax credit by as much as an additional 1½% if that amount is contributed to an ESOP.

.02 In some cases, funds are borrowed from a bank or other lender by the ESOP and are used to acquire shares of stock in the employer company. The stock may be outstanding shares, treasury shares, or newly issued shares, and is held by the ESOP until it is distributed to the employees. (In some cases, an ESOP may issue notes to existing shareholders in exchange for qualifying employer securities.) The stock may be allocated to individual employees even though it may not be distributed to them until a future date. The debt of the ESOP is usually collateralized by a pledge of the stock and by either a guarantee of the employer or a commitment by the employer to make future contributions to the ESOP sufficient to meet the debt service requirements. The employer company makes annual contributions to the ESOP that are deductible for tax purposes, subject to the limitations of the Internal Revenue Code. Cash contributions and dividends received are used by the ESOP to:

(*a*) Satisfy the annual amortization of the outstanding debt principal.

(*b*) Satisfy the annual interest costs on such debt.

(*c*) Obtain short-term investments to provide for liquidity.

(*d*) Pay other expenses.

---

[1] Employee Retirement Income Security Act of 1974, Title II, Subtitle B, Section 2003.

(*e*) Acquire additional shares of the employer company's stock, to the extent of the excess, if any, over that required by (*a*) through (*d*) above.

.03 Several accounting and reporting issues have arisen with respect to those ESOPs that borrow funds from a bank or other lender to acquire shares of stock in the employer company, or that issue notes to existing shareholders in exchange for shares of stock.[2] These issues are being dealt with in practice in different ways. This Statement of Position has been issued because the Division believes it is desirable to narrow the range of alternative accounting practices in this area.

.04 Final regulations clarifying the rights and duties of the parties affected by an ESOP have not been issued by the Internal Revenue Service. Readers of this Statement of Position should also be cognizant of the content of such regulations, when they are issued.

Accounting for an Obligation of an ESOP Guaranteed by the Employer

Recording an ESOPs Obligation in the Employer's Financial Statements

.05 The Division believes that an obligation of an ESOP should be recorded as a liability in the financial statements of the employer when the obligation is covered by either a guarantee of the employer or a commitment by the employer to make future contributions to the ESOP sufficient to meet the debt service requirements. The employer's guarantee or commitment is, in substance, the assumption of the ESOP's debt and the related obligation to reduce that debt. The employer has assumed these obligations either (*a*) to buy back its own shares (in the case where the ESOP uses the loan proceeds to acquire previously outstanding shares) or (*b*) to finance additional working capital or other fund needs (in the case where the ESOP uses the loan proceeds to acquire previously unissued or treasury shares from the employer).

.06 It does not follow from the above that assets held by an ESOP should be included in the financial statements of the employer. Ownership of these assets rests in the employees, not in the employer.

Recording the Offsetting Debit to the Recorded Liability

.07 The Division believes that the offsetting debit to the liability recorded by the employer should be accounted for as a reduction of shareholders' equity. Therefore, when new shares are issued to the ESOP by the employer, an increase in shareholders' equity should be reported only as the debt that financed that increase is reduced. (The offsetting debit in shareholders' equity in this case is akin to the unearned compensation discussed in APB Opinion No. 25, paragraph 14.) When outstanding shares, as opposed to unissued shares, are acquired by the ESOP, shareholders' equity should similarly be reduced by the offsetting debit until the debt is repaid.

Reducing the Recorded Liability

.08 The Division believes that the liability recorded by the employer should be reduced as the ESOP makes payments on the debt. The liability is

[2] This Statement of Position does not deal directly with ESOPs that might invest in qualifying employer securities other than equity securities.

initially recorded because the guarantee or commitment is in substance the employer's debt. Therefore, it should not be reduced until payments are actually made. Similarly, the amount reported as a reduction of shareholders' equity should be reduced only when the ESOP makes payments on the debt. These two accounts should move symmetrically.

Measuring Compensation Expense

.09 The Division believes that the amount contributed or committed to be contributed to an ESOP with respect to a given year should be the measure of the amount to be charged to expense by the employer.[3] Such contributions measure the amount of expense irrevocably incurred whether or not they are used concurrently to reduce the debt guaranteed by the employer.

.10 Since the debt of the ESOP is, in substance, the employer's debt, the Division believes that the employer should report separately the compensation element and the interest element of the annual contribution, and should disclose the related interest rate and debt terms in the footnotes to the financial statements. However, a significant minority within the Division believes that the entire annual contribution should be reported as compensation expense.

Reporting Dividends Paid and Earnings Per Share

.11 The Division believes that all shares held by an ESOP should be treated as outstanding shares in the determination of earnings per share. An ESOP is a legal entity holding shares issued by the employer, whether or not those shares have been allocated to employee accounts.

.12 Dividends paid on shares held by an ESOP should be charged to retained earnings. Such dividends should not be included at any time in compensation expense.

.13 A minority within the Division believes that when trust debt proceeds are transferred to the employer corporation, a transaction of a predominantly financing nature has occurred. The minority believes that shares should be considered outstanding for earnings per share calculations only to the extent that they become constructively unencumbered by repayments of debt principal. To do otherwise, according to this minority view, would result in an inconsistent and initially excessive effect on earnings per share in that the total number of shares purchased by the ESOP would be immediately included in the calculation of earnings per share, even though the related compensation expense would be spread over a period of time on the basis of the employer's contribution to the trust. Consistent with this position, the minority would also charge dividends to retained earnings only to the extent that trust shares are unencumbered. Any remaining balance would be reported as additional compensation expense in the period the dividends were declared.

Other Matters

Investment Tax Credit

.14 The Division believes that the additional investment tax credit should be accounted for (to the extent that it is available and utilized) as a reduction of income tax expense in the same year in which the contribution to the ESOP

---

[3] This conclusion is also applicable to ESOPs that have not borrowed funds from a bank or other lender (or issued notes to existing shareholders) to acquire shares of stock in the employer company.

is charged to expense, irrespective of the accounting for the normal investment tax credit on property acquisitions.[4] This additional credit arises from the contribution to the ESOP, not solely from the property acquisitions of the employer.[5]

Applicability of APB Opinion No. 11

[.15] [Effectively superseded by FASB Statement No. 109, *Accounting for Income Taxes*, effective for fiscal years beginning after December 15, 1992.][6]

Statement of Position 78-9 Accounting for Investments in Real Estate Ventures

[Proposal to Financial Accounting Standards Board]

AICPA

American Institute of Certified Public Accountants
1211 Avenue of the Americas, New York, New York 10036 (212) 575-6200

December 29, 1978

Donald J. Kirk, CPA
Chairman
Financial Accounting Standards Board
High Ridge Park
Stamford, Connecticut 06905

Dear Mr. Kirk:

The accompanying statement of position, *Accounting for Investments in Real Estate Ventures*, has been prepared on behalf of the division by the AICPA Committee on Real Estate Accounting and approved by the AICPA Accounting Standards Executive Committee.

The statement presents the division's recommendations on accounting for investments in real estate ventures (corporate joint ventures, general and limited partnerships, and undivided interests). The recommendations are primarily an application of the existing authoritative accounting literature to the specialized accounting problems related to such investments and are intended to narrow the range of alternative practices.

Representatives of the division are available to discuss this proposal with you or your staff at your convenience.

Sincerely,

Arthur R. Wyatt
Chairman
Accounting Standards Division

cc: Securities and Exchange Commission

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

SOP 78-9 is amended by FASB Staff Position SOP 78-9-1*, Interaction of AICPA Statement of Position 78-9 and EITF Issue No. 04-5*. FASB Staff Position 78-9-1 is effective: for general partners of all new partnerships formed, and for existing partnerships for which the partnership agreements are modified, after June 29, 2005; for general partners in all other partnerships, no later than the beginning of first reporting period in fiscal years beginning after December 15, 2005.

Accounting for Investments in Real Estate Ventures

Introduction

.01 Ownership of real estate or real estate development projects by two or more entities may take several forms. The most common forms are as follows:

a. *A corporate joint venture*—a corporation owned and operated by a small group of ventures to accomplish a mutually beneficial venture or project, as described in paragraph 3 of APB Opinion 18, *The Equity Method of Accounting for Investments in Common Stock*.

b. *A general partnership*—an association in which each partner has unlimited liability.

c. *A limited partnership*—an association in which one or more general partners have unlimited liability and one or more partners have limited liability. A limited partnership is usually managed by the general partner or partners, subject to limitations, if any, imposed by the partnership agreement.

d. *An undivided interest*—an ownership arrangement in which two or more parties jointly own property, and title is held individually to the extent of each party's interest.

In this statement of position, the terms *real estate venture* and *venture* apply to all of the ownership arrangements described in this paragraph.

.02 These forms of ownership differ in legal form and economic substance, and the authoritative accounting literature dealing with the specialized accounting problems related to such investments is limited. In practice, those accounting problems are dealt with in a variety of ways, and the division believes narrowing the range of those alternative practices is desirable.

.03 This statement of position presents the division's recommendations on accounting for investments in real estate ventures in financial statements prepared in conformity with generally accepted accounting principles. It does not apply to regulated investment companies and other entities that are required to account for investments at quoted market value or fair value.

The Applicability of the Equity Method of Accounting

Corporate Joint Ventures

.04 APB Opinion 18 requires investments in corporate joint ventures to be accounted for by the equity method and includes guidance for applying that method in the financial statements of the investor. That opinion applies to corporate joint ventures created to own or operate real estate projects.

.05 Paragraph 3 of APB Opinion 18 states that "an entity which is a subsidiary of one of the 'joint venturers' is not a corporate joint venture." A subsidiary, according to that opinion, refers to

> . . . a corporation which is controlled, directly or indirectly, by another corporation. The usual condition for control is ownership of a majority (over 50 percent) of the outstanding voting stock. The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other stockholders, or by court decree.

Accordingly, an investment in a corporate subsidiary that is a real estate venture should be accounted for by the investor-parent using the principles applicable to investments in subsidiaries rather than those applicable to investments in corporate joint ventures. Minority shareholders in such a real estate venture should account for their investment using the principles applicable to investments in common stock set forth in APB Opinion 18 or in FASB Statement No. 115, *Accounting for Certain Investments in Debt and Equity Securities*. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

General Partnerships

.06 The staff of the American Institute of Certified Public Accountants issued an interpretation of APB Opinion 18 in November, 1971, which concludes that many of the provisions of APB Opinion 18 are appropriate in accounting for investments in certain unincorporated entities. The division believes that the principal difference, aside from income tax considerations, between corporate joint ventures and general partnerships is that the individual investors in general partnerships usually assume joint and several liability. The division believes, however, that the equity method enables noncontrolling investors in general partnerships to reflect the underlying nature of their investments in those ventures as well as it does for investors in corporate joint ventures. Accordingly, the division believes that investments in noncontrolled real estate general partnerships should be accounted for and reported under the equity method. This recommendation requires the one-line equity method of presentation in both the balance sheet and the statement of income.[1] Paragraph 19 of APB Opinion 18 should be used as a guide in applying the equity method. Investors in general partnerships should provide for income taxes on the profits accrued on their investment in the partnership regardless of the tax basis used in the partnership return. Differences between the investor's tax basis of the investment and the reported amount of the investment in the financial statements of the investor that will result in taxable or deductible amounts in future years (temporary differences) should

---

[1] Pro rata consolidation is not appropriate except in the limited circumstances described in paragraph .11.

be accounted for in conformity with FASB Statement No. 109, *Accounting for Income Taxes*. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.07 The division believes a general partnership that is controlled, directly or indirectly, by an investor is, in substance, a subsidiary of the investor. APB Opinion No. 18 states that the usual condition for control of a corporation is ownership of a majority (over 50 percent) of the outstanding voting stock. However, if partnership voting interests are not clearly indicated, a condition that would usually indicate control is ownership of a majority (over 50 percent) of the financial interests in profits or losses (see paragraph .25). The power to control may also exist with a lesser percentage of ownership, for example, by contract, lease, agreement with other partners, or by court decree. On the other hand, the majority interest holder may not control the entity if one or more of the other partners have substantive participating rights that permit those other partners to effectively participate in significant decisions that would be expected to be made in the ordinary course of business. The determination of whether the rights of the other partners are substantive participating rights should be evaluated in accordance with the guidance for "substantive participating rights" in EITF Issue No. 04-5, *Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights*. If the other partners have substantive participating rights, the presumption of control by the majority interest holder is overcome. The division believes that a controlling investor should account for its investment under the principles of accounting applicable to investments in subsidiaries. Accordingly, intercompany profits and losses on assets remaining within the group should be eliminated. A noncontrolling investor in a general partnership should account for its investment by the equity method and should be guided by the provisions of paragraph 19 of APB Opinion No. 18 as amended. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144. As amended, effective: for general partners of all new partnerships formed, and for existing partnerships for which the partnership agreements are modified, after June 29, 2005; for general partners in all other partnerships, no later than the beginning of first reporting period in fiscal years beginning after December 15, 2005, by FASB Staff Position SOP 78-9-1.]

Limited Partnerships

.08 The division believes that the accounting recommendations for use of the equity method of accounting for investments in general partnerships are generally appropriate for accounting by limited partners for their investments in limited partnerships. A limited partner's interest may be so minor that the limited partner may have virtually no influence over partnership operating and financial policies. Such a limited partner is, in substance, in the same position with respect to the investment as an investor that owns a minor common stock interest in a corporation, and, accordingly, accounting for the investment using the cost method may be appropriate. Under the cost method, income recognized by the investor is limited to distributions received, except that distributions that exceed the investor's share of earnings after the date of the investment are applied to reduce the carrying value of the investment. Differences between the investor's tax basis of the investment and the reported amount of the investment in the financial statements of the investor that will result in taxable or deductible amounts in future years (temporary differences) should be accounted for in conformity with FASB Statement No. 109, *Accounting for Income Taxes*. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.09 The rights and obligations of the general partners in a limited partnership are different from those of the limited partners and, accordingly, the general partners should be presumed to control the limited partnership. However, the rights of the limited partners may overcome that presumption of control. The guidance in EITF Issue No. 04-5 should be used to determine whether the rights of the limited partners overcome the presumption of control by the general partners. If the presumption of control by the general partners is overcome by the rights of the limited partners, the general partners should apply the equity method of accounting to their interests. If the presumption of control by the general partners is not overcome by the rights of the limited partners and no single general partner controls the limited partnership, the general partners should apply the equity method of accounting to their interests. If the presumption of control is not overcome by the rights of the limited partners and a single general partner controls the limited partnership, that general partner should consolidate the limited partnership and apply the principles of accounting applicable for investments in subsidiaries. [As amended, effective: for general partners of all new partnerships formed, and for existing partnerships for which the partnership agreements are modified, after June 29, 2005; for general partners in all other partnerships, no later than the beginning of first reporting period in fiscal years beginning after December 15, 2005, by FASB Staff Position SOP 78-9-1.]

.10 The division believes that if the substance of the partnership arrangement is such that the general partners are not in control of the major operating and financial policies of the partnership, a limited partner may be in control. An example could be a limited partner holding over 50 percent of the total partnership interest. A controlling limited partner should be guided in accounting for its investment by the principles for investments in subsidiaries. Noncontrolling limited partners should account for their investments by the equity method and should be guided by the provisions of paragraph 19 of APB Opinion 18, as discussed in paragraphs .06 and .07, or by the cost method, as discussed in paragraph .08, as appropriate.

Undivided Interests

.11 In an interpretation of APB Opinion 18 issued by the staff of the American Institute of Certified Public Accountants in November, 1971, the staff concluded that most of the provisions of paragraph 19 of APB Opinion 18 generally would be appropriate in accounting for partnerships and unincorporated ventures, but that if

> . . . the investor-venturer owns an undivided interest in each asset and is proportionately (i.e., severally) liable for its share of each liability, the provisions of the equity method set forth in paragraph 19(c) of the Opinion may not apply in some industries. For example, where it is the established industry practice . . ., the investor-venturer may account in its financial statements for its *pro rata* share of the assets, liabilities, revenues, and expenses of the venture.

If real property owned by undivided interests is subject to joint control by the owners, the division believes that investor-venturers should not present their investments by accounting for their pro rata share of the assets, liabilities, revenues, and expenses of the ventures. Such property is subject to joint control if decisions regarding the financing, development, sale, or operations require the approval of two or more of the owners. Most real estate ventures with ownership in the form of undivided interests are subject to some level of joint control. Accordingly, the division believes that such investments should be presented in the same manner as investments in noncontrolled partnerships.

If, however, the approval of two or more of the owners is not required for decisions regarding the financing, development, sale, or operations of real estate owned and each investor is entitled to only its pro rata share of income, is responsible to pay only its pro rata share of expenses, and is severally liable only for indebtedness it incurs in connection with its interest in the property, the investment may be presented by recording the undivided interest in the assets, liabilities, revenue, and expenses of the venture.

General Matters

Disclosure

.12 The division believes that investors in real estate ventures should be guided by the provisions of paragraph 20 of APB Opinion 18 in determining the disclosures to be made in their financial statements.

Statement of Cash Flows

.13 FASB Statement No. 95, *Statement of Cash Flows*, governs the form and content of statements of cash flows. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Investor Accounting for Losses

General

.14 Some investors have suggested that their equity in losses of a real estate venture need not be recorded under the equity method of accounting as long as the value of their investment has not been impaired; for example, if it is expected that the venture's assets can be sold for more than their carrying value. The division believes that investors should record their share of the real estate venture's losses, determined in conformity with generally accepted accounting principles, without regard to unrealized increases in the estimated fair value of the venture's assets.

Accounting for an Investor's Share of Losses in Excess of Its Investment, Including Loans and Advances

.15 The division believes that an investor that is liable for the obligations of the venture or is otherwise committed to provide additional financial support to the venture should record its equity in real estate venture losses in excess of its investment, including loans and advances.[2] The following are examples of such circumstances:

a. The investor has a legal obligation as a guarantor or general partner.

b. The investor has indicated a commitment, based on considerations such as business reputation, intercompany relationships, or credit standing, to provide additional financial support. Such a commitment might be indicated by previous support provided by the investor or statements by the investor to other investors or third parties of the investor's intention to provide support.

.16 An investor in a real estate venture should report its recorded share of losses in excess of its investment, including loans and advances, as a liability in its financial statements.

---

[2] An investor, though not liable or otherwise committed to provide additional financial support, should provide for losses in excess of investment when the imminent return to profitable operations by the venture appears to be assured. For example, a material nonrecurring loss of an isolated nature, or start-up losses, may reduce an investment below zero through the underlying profitable pattern of an investee is unimpaired.

.17 If an investor does not recognize venture losses in excess of its investment, loans, and advances and the venture subsequently reports net income, the investor should resume applying the equity method only after its share of such net income equals the share of net losses not recognized during the period in which equity accounting was suspended.

.18 If it is probable that one or more investors cannot bear their share of losses, the remaining investors should record their proportionate shares of venture losses otherwise allocable to investors considered unable to bear their share of losses.[3] When the venture subsequently reports income, those remaining investors should record their proportionate share of the venture's net income otherwise allocable to investors considered unable to bear their share of losses until such income equals the excess losses they previously recorded. The division also believes that an investor who is deemed by other investors to be unable to bear its share of losses should continue to record its contractual share of losses unless it is relieved from the obligation to make payment by agreement or operation of law.

.19 The division believes that the accounting by an investor for losses otherwise allocable to other investors should be governed by the provisions of FASB Statement No. 5 relating to loss contingencies. Accordingly, the investor should record a proportionate share of the losses otherwise allocable to other investors if it is probable that they will not bear their share. In this connection, the division believes that each investor should look primarily to the fair value of the other investors' interests in the venture and the extent to which the venture's debt is nonrecourse in evaluating their ability and willingness to bear their allocable share of losses.[4] However, there may be satisfactory alternative evidence of an ability and willingness of other investors to bear their allocable share of losses. Such evidence might be, for example, that those investors previously made loans or contributions to support cash deficits, possess satisfactory financial standing (as may be evidenced by satisfactory credit ratings), or have provided adequately collateralized guarantees.

Loss in Value of an Investment, Including Loans and Advances, Other Than a Temporary Decline

.20 A loss in value of an investment other than a temporary decline should be recognized. Such a loss in value may be indicated, for example, by a decision by other investors to cease providing support or reduce their financial commitment to the venture. Loans and advances should be evaluated under FASB Statement No. 114, *Accounting by Creditors for Impairment of a Loan*. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Other Accounting Matters Related to the Use of the Equity Method

Eliminating Interentity Profits and Losses

.21 As noted elsewhere in this statement, APB Opinion 18 should be used as a guide when applying the equity method. Paragraph 19(*a*) of that opinion provides that, in applying the equity method, intercompany profits and losses should be eliminated until realized by the investor or investee as if the investee

---

[3] This recommendation does not apply for real property jointly owned and operated as undivided interests in assets if the claims or liens of investor's creditors are limited to investors' respective interests in such property.

[4] An investor may not be able to apply the general rule to an investment in an undivided interest because the extent to which the interests of other investors are encumbered by liens may not be known.

company were consolidated. The division believes that intercompany profit should be eliminated by the investor in relation to the investor's ownership interest in the investee, except that an investor that controls the investee and enters into a transaction with the investee should eliminate all of the intercompany profit on assets remaining within the group.

.22 AICPA industry accounting guide, *Accounting for Profit Recognition on Sales of Real Estate*,* sets out similar rules in paragraph 58:

> A sale of property in which the seller holds or acquires an equity interest in the buyer should result in recognizing only the part of the profit proportionate to the outside interest in the buyer. No profit should be recognized if the seller controls the buyer . . . until realized from transactions with outside parties through sale or operations of the property.

.23 The division believes that if a transaction with a real estate venture confirms that there has been a loss in the value of the asset sold that is other than temporary and that has not been recognized previously, the loss should be recognized on the books of the transferor.

Accounting Principles Used by the Venture

.24 In the real estate industry, the accounts of a venture may reflect accounting practices, such as those used to prepare tax basis data for investors, that vary from generally accepted accounting principles. If the financial statements of the investor are to be prepared in conformity with generally accepted accounting principles, such variances that are material should be eliminated in applying the equity method.

Allocation Ratios for the Determination of Investor Income

.25 Venture agreements may designate different allocations among the investors of the venture's (*a*) profits and losses, (*b*) specified costs and expenses, (*c*) distributions of cash from operations, and (*d*) distributions of cash proceeds from liquidation. Such agreements may also provide for changes in the allocations at specified times or on the occurrence of specified events. Accounting by the investors for their equity in the venture's earnings under such agreements requires careful consideration of substance over form and consideration of underlying values as discussed in paragraph .19. The division believes that in order to determine the investor's share of venture net income or loss, such agreements or arrangements should be analyzed to determine how an increase or decrease in net assets of the venture (determined in conformity with generally accepted accounting principles) will affect cash payments to the investor over the life of the venture and on its liquidation. The division believes that specified profit and loss allocation ratios should not be used to determine an investor's equity in venture earnings if the allocation of cash distributions and liquidating distributions are determined on some other basis. For example, if a venture agreement between two investors purports to allocate all depreciation expense to one investor and to allocate all other revenues and expenses equally, but further provides that irrespective of such allocations, distributions to the investors will be made simultaneously and divided equally between them, there is no substance to the purported allocation of depreciation expense.

---

* The Financial Accounting Standards Board has extracted the specialized accounting and reporting principles and practices contained in this AICPA Accounting Guide, see FASB Statement No. 66, *Accounting for Sales of Real Estate*, October 1982.

Accounting for a Difference Between the Carrying Amount of an Investment in a Real Estate Venture and the Underlying Equity in Net Assets

.26 Differences between the carrying amount of an investment in a real estate venture and the investor's equity in the underlying net assets recorded by the venture may arise, for example, from unrecognized profit on transfers of real estate to the venture or differences in accounting methods. In addition, differences may arise from the acquisition of an investment in a venture at a price different from the investor's share of the net assets as recorded on the books of the venture.

.27 Differences that arise from a business combination with a venture accounted for as a purchase should be accounted for in accordance with the provisions of FASB Statement No. 141, *Business Combinations*.[†] Paragraph 35 of FASB Statement No. 141 states that the acquiring entity should allocate the cost of an acquired entity to the assets acquired, including intangible assets, and liabilities assumed based on their estimated fair values at date of acquisition. [‡] The division believes that an excess of the cost of the investment acquired over the equity in the underlying net assets usually would be ascribed to the fair values of real property interest owned by the venture. However, any excess of the cost of an acquired entity over the net of the amounts assigned to assets acquired and liabilities assumed should be recognized as goodwill and should not be amortized.[||] [Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement Nos. 141 and 142.]

.28 Paragraph 19(b) of APB Opinion No. 18, as amended by paragraph 40 of FASB Statement No. 142, provides that the difference between the cost of an investment and the amount of the underlying equity in net assets of the investee "should affect the determination of the amount of the investor's share of earnings or losses of an investee as if the investee were a consolidated subsidiary." The differences, other than goodwill, should be recognized by the investor as an adjustment to the amount of the venturer's depreciation, cost of sales, or other expenses, as appropriate, in recording income or loss from the venture on the equity basis. Paragraph 40 of FASB Statement No. 142 states that the portion of the difference between the cost of an investment and the amount of underlying equity in net assets of an equity method investee that is recognized as goodwill (equity method goodwill) should not be amortized. However, equity method goodwill should not be tested for impairment in accordance with FASB Statement No. 142. Equity method investments should continue to be reviewed for impairment in accordance with paragraph 19(h) of APB Opinion No. 18, as amended by FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. [Revised, March 2003, to

---

[†] FASB Statement No. 141, *Business Combinations*, supersedes APB Opinion 16. Effective for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 31, 2008, the guidance in FASB Statement No. 141 (revised 2007), *Business Combinations*, should be applied. [Footnote added, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 141. Footnote revised, May 2008, due to the issuance of FASB Statement No. 141(R).]

[‡] Paragraphs 35–39 of FASB Statement No. 141 provide guidance on the recognition of assets, including intangible assets, and liabilities apart from goodwill. Effective for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 31, 2008, the guidance in FASB Statement No. 141 (revised 2007) should be applied. [Footnote added, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 141. Footnote revised, May 2008, due to the issuance of FASB Statement No. 141(R).]

[||] Paragraphs 12–14 of FASB Statement No. 142, *Goodwill and Other Intangible Assets*, provide guidance on intangible assets subject to amortization. [Footnote added, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 142.]

reflect conforming changes necessary due to the issuance of FASB Statement No. 142. Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144.]

Accounting by the Investor for Certain Transactions With a Real Estate Venture

Capital Contributions

.29 *Contribution of Cash.* If all investors contribute cash at the formation of the real estate venture, each investor should record its investment at the amount of the cash contributed.

.30 *Contribution of Real Estate.*The division believes an investor that contributes real estate to the capital of a real estate venture generally should record its investment in the venture at the investor's cost (less related depreciation and valuation allowances) of the real estate contributed, regardless of whether the other investors contribute cash, property, or services. The division believes that an investor should not recognize profit on a transaction that in economic substance is a contribution to the capital of an entity, because a contribution to the capital of an entity is not the culmination of the earnings process. The division understands, however, that some transactions, structured in the form of capital contributions, may in economic substance be sales. The recommendations in paragraph .36 of this statement on accounting for sales of real estate to a venture by an investor apply to those transactions. An example of such a transaction is one in which investor *A* contributes to a venture real estate with a fair value of $2,000 and investor *B* contributes cash in the amount of $1,000 which is immediately withdrawn by investor *A*, and, following such contributions and withdrawals, each investor has a 50 percent interest in the venture (the only asset of which is the real estate). Assuming investor *A* is not committed to reinvest the $1,000 in the venture, the substance of this transaction is a sale by investor *A* of a one-half interest in the real estate in exchange for cash. A minority of the division disagrees with the conclusion that an investor contributing real estate to a real estate venture should record its investment at the cost of the real estate contributed. They believe that profit recognition by such an investor to the extent of the other investors' interests in the profits and losses of the venture may be appropriate if the other investors contribute cash or other hard assets (such as marketable securities) for their interests and the investor contributing the real estate has no continuing involvement with the real estate that would require deferral of profit under the AICPA industry accounting guide, *Accounting for Profit Recognition on Sales of Real Estate*.[#] The majority of the division believes that unless the investor that contributes real estate to the venture withdraws cash (or other hard assets) and has no commitment to reinvest, such a transaction is not the culmination of an earnings process.

.31 An investor contributing property to a venture may obtain a disproportionately small interest in the venture based on a comparison of the carrying amount of the property with the cash contributed by the other investors. That situation might indicate that the investor contributing the property has suffered a loss that should be recognized.

[#] The Financial Accounting Standards Board has extracted the specialized accounting and reporting principles and practices contained in this AICPA Accounting Guide, see FASB Statement No. 66, *Accounting for Sales of Real Estate*, October 1982.

.32 *Contribution of Services or Intangibles.*[**] The division believes the accounting considerations that apply to real property contributed to a partnership or joint venture also apply to contributions of services or intangibles. The investor's cost of such services or intangibles to be allocated to the cost of the investment should be determined by the investor in the same manner as for an investment in a wholly owned real estate project.

Income From Loans or Advances to a Venture

.33 Interest on loans and advances that are in substance capital contributions (for example, if all the investors are required to make loans and advances proportionate to their equity interests) should be accounted for as distributions rather than as interest income by the investors.

.34 An investor-lender that does not capitalize interest on its own real estate construction and development projects should account for interest on loans and advances that are not in substance capital contributions in accordance with the recommendations in this paragraph.

a. All interest income on the investor's loans or advances to the venture should be deferred if either of the following conditions is present.

   (i) Collectibility of the principal or interest is in doubt. This condition may exist if adequate collateral and other terms normally required by an independent lender are not present.

   (ii) There is a reasonable expectation that the other investors will not bear their shares of losses, resulting in uncertainty as to the lender's share of the venture's related interest expense.

b. If neither of the conditions in (*a*) is present and either the venture has recorded interest as an expense or the venture has capitalized the interest but in order to conform to the investor's accounting policies, the investor has recorded its equity in the income or loss of the venture as if the venture had charged the interest to expense, the entire interest income accrued on loans or advances to a venture should be recorded as earned.

c. If the conditions in (*a*) or (*b*) are not present, a portion of interest income from loans and advances to a venture should be deferred based on the investor's percentage interest in the profits and losses of the venture. However, an evaluation similar to that discussed in paragraphs .18 and .19 for recording the investor's share of losses should be made to avoid recording as interest income amounts that may ultimately be borne as losses by the investor making the loan.

[.35] [Effectively superseded by FASB Statement No. 34, *Capitalization of Interest Cost,* effective for fiscal years beginning after December 15, 1979.]

Sales of Real Estate to a Venture

.36 Sales of real estate by an investor to a real estate venture are subject to all of the provisions set forth in the AICPA industry accounting guide, *Accounting for Profit Recognition on Sales of Real Estate.*[#]

[**] The provisions of this paragraph do not apply to real estate syndication activities in which the syndicators receive or retain partnership interests. Such activities are discussed in SOP 92-1, *Accounting for Real Estate Syndication Income* [section 10,500].

[#] The Financial Accounting Standards Board has extracted the specialized accounting and reporting principles and practices contained in this AICPA Accounting Guide, see FASB Statement No. 66, *Accounting for Sales of Real Estate*, October 1982.

Sales of Services to a Venture

.37 If services are performed for a venture by an investor and their cost is capitalized by the venture, profit may be recognized by the investor to the extent attributable to the outside interests in the venture if the following conditions are met:

a. The substance of the transaction does not significantly differ from its form.

b. There are no substantial uncertainties about the ability of the investor to complete performance (as may be the case if the investor lacks experience in the business of the venture) or the total cost of services to be rendered.

c. There is a reasonable expectation that the other investors will bear their share of losses, if any.

The method of recognizing income from services rendered should be consistent with the method followed for services performed for unrelated parties.

Purchases of Real Estate or Services From a Venture

.38 An investor should not record as income its equity in the venture's profit from a sale of real estate to that investor; the investor's share of such profit should be recorded as a reduction in the carrying amount of the purchased real estate and recognized as income on a pro rata basis as the real estate is depreciated or when it is sold to a third party. Similarly, if a venture performs services for an investor and the cost of those services is capitalized by the investor, the investor's share of the venture's profit in the transaction should be recorded as a reduction in the carrying amount of the capitalized cost.

Accounting for the Sale of an Interest in a Real Estate Venture

.39 The division believes that a sale of an investment in a real estate venture (including the sale of stock in a corporate real estate venture) is the equivalent of a sale of an interest in the underlying real estate and should be evaluated under the guidelines set forth in the AICPA industry accounting guide, *Accounting for Profit Recognition on Sales of Real Estate*.[#]

[.40] [Effectively superseded by FASB Statement No. 66, *Accounting for Sales of Real Estate*, effective for real estate sales transactions entered into after December 31, 1982.]

Transition

.41 The division recommends applying this statement of position to financial statements issued for fiscal years and interim periods beginning after December 24, 1978. Adjustments resulting from a change in accounting method to comply with the recommendations in this statement should be applied retroactively, if material, and, to enhance comparability between periods, financial statements presented for the periods affected should be restated for as many periods as is practicable to give retroactive effect to such adjustments and to changes in presentation. The division encourages earlier application of

---

[#] The Financial Accounting Standards Board has extracted the specialized accounting and reporting principles and practices contained in this AICPA Accounting Guide, see FASB Statement No. 66, *Accounting for Sales of Real Estate*, October 1982.

the recommendations in this statement for fiscal years beginning before December 25, 1978, in financial statements not previously issued.

Statement of Position 81-1[*] Accounting for Performance of Construction-Type and Certain Production-Type Contracts

July 15, 1981

[Proposal to the Financial Accounting Standards Board]

Note: Statement of Position 81-1, *Accounting for Performance of Construction-Type and Certain Production-Type Contracts*, has been modified by the AICPA staff to include certain changes necessary due to the issuance of authoritative pronouncements since it was originally issued. The changes are identified in a schedule in Appendix D of the statement.

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Introduction

.01 This statement of position provides guidance on the application of generally accepted accounting principles in accounting for the performance of contracts for which specifications are provided by the customer for the construction of facilities or the production of goods or for the provision of related services. Changes in the business environment have increased significantly the variety and uses of those types of contracts and the types of business enterprises that use them. In the present business environment, diverse types of contracts, ranging from relatively simple to highly complex and from relatively short- to long-term, are widely used in many industries for construction, production, or provision of a broad range of goods and services. However, existing principles related to accounting for contracts were written in terms of long-term construction-type contracts, and they are not stated in sufficient detail for the scope of activities

[*] Transactions within the scope of SOP 81-1 are not subject to the views expressed in Staff Accounting Bulletin (SAB) 101, *Revenue Recognition in Financial Statements*, issued by the Securities and Exchange Commission.

to which they presently are applied. Those activities range far beyond the traditional construction-type activity (the design and physical construction of facilities such as buildings, roads, dams, and bridges) to include, for example, the development and production of military and commercial aircraft, weapons delivery systems, space exploration hardware, and computer software. The accounting standards division believes that guidance is now needed in this area of accounting.

The Basic Accounting Issue

.02 The determination of the point or points at which revenue should be recognized as earned and costs should be recognized as expenses is a major accounting issue common to all business enterprises engaged in the performance of contracts of the types covered by this statement. Accounting for such contracts is essentially a process of measuring the results of relatively long-term events and allocating those results to relatively short-term accounting periods. This involves considerable use of estimates in determining revenues, costs, and profits and in assigning the amounts to accounting periods. The process is complicated by the need to evaluate continually the uncertainties inherent in the performance of contracts and by the need to rely on estimates of revenues, costs, and the extent of progress toward completion.

Present Accounting Requirements and Practices

.03 The pervasive principle of realization and its exceptions and modifications are central factors underlying accounting for contracts. APB Statement 4[†] states:

> Revenue is generally recognized when both of the following conditions are met: (1) the earnings process is complete or virtually complete, and (2) an exchange has taken place. [Paragraph 150]
>
> Revenue is sometimes recognized on bases other than the realization rule. For example, on long-term construction contracts revenue may be recognized as construction progresses. This exception to the realization principle is based on the availability of evidence of the ultimate proceeds and the consensus that a better measure of periodic income results. [Paragraph 152]
>
> The exception to the usual revenue realization rule for long-term construction-type contracts, for example, is justified in part because strict adherence to realization at the time of sale would produce results that are considered to be unreasonable. The judgment of the profession is that revenue should be recognized in this situation as construction progresses. [Paragraph 174]

.04 Accounting Research Bulletin No. 45 (ARB No. 45), *Long-Term Construction-Type Contracts,* issued by the AICPA Committee on Accounting Procedure in 1955, describes the two generally accepted methods of accounting for long-term construction-type contracts for financial reporting purposes:

- *The percentage-of-completion method* recognizes income as work on a contract progresses; recognition of revenues and profits generally is related to costs incurred in providing the services required under the contract.
- *The completed-contract method* recognizes income only when the contract is completed, or substantially so, and all costs and related revenues are reported as deferred items in the balance sheet until that time.

[†] Statement of Position 93-3, *Rescission of Accounting Principles Board Statements*, rescinds APB Statement No. 4. FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, discusses matters similar to those in APB Statement No. 4. [Footnote added, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

The units-of-delivery is a modification of the percentage-of-completion method of accounting for contracts.

- *The units-of-delivery method* recognizes as revenue the contract price of units of a basic production product delivered during a period and as the cost of earned revenue the costs allocable to the delivered units; costs allocable to undelivered units are reported in the balance sheet as inventory or work in progress. The method is used in circumstances in which an entity produces units of a basic product under production-type contracts in a continuous or sequential production process to buyers' specifications.

The use of either of the two generally accepted methods of accounting involves, to a greater or lesser extent, three key areas of estimates and uncertainties: (*a*) the extent of progress toward completion, (*b*) contract revenues, and (*c*) contract costs. Although the ultimate amount of contract revenue is often subject to numerous uncertainties, the accounting literature has given little attention to the difficulties of estimating contract revenue. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.05 ARB No. 45, paragraph 15, describes the circumstances in which each method is preferable as follows:

> The committee believes that in general when estimates of costs to complete and extent of progress toward completion of long-term contracts are reasonably dependable, the percentage-of-completion method is preferable. When lack of dependable estimates or inherent hazards cause forecasts to be doubtful, the completed-contract method is preferable.

Both of the two generally accepted methods are widely used in practice. However, the two methods are frequently applied differently in similar circumstances. The division believes that the two methods should be used in specified circumstances and should not be used as acceptable alternatives for the same circumstances. Accordingly, identifying the circumstances in which either of the methods is preferable and the accounting that should be followed in the application of those methods are among the primary objectives of this statement of position. This statement provides guidance on the application of ARB No. 45 and does not amend that bulletin.

.06 In practice, methods are sometimes found that allocate contract costs and revenues to accounting periods on (*a*) the basis of cash receipts and payments or (*b*) the basis of contract billings and costs incurred. Those practices are not generally accepted methods of accounting for financial reporting purposes. However, those methods are appropriate for other purposes, such as the measurement of income for income tax purposes, for which the timing of cash transactions is a controlling factor. Recording the amounts billed or billable on a contract during a period as contract revenue of the period, and the costs incurred on the contract as expenses of the period, is not acceptable for financial reporting purposes because the amounts billed or billable on a contract during a period are determined by contract terms and do not necessarily measure performance on the contract. Only by coincidence might those unacceptable methods produce results that approximate the results of the generally accepted method of accounting for contracts that are appropriate in the circumstances.

Other Pronouncements and Regulations Affecting Contract Accounting

.07 Accounting Research Bulletin No. 43, chapter 11, "Government Contracts," prescribes generally accepted principles in three areas of accounting for government contracts. Section A of that chapter deals with accounting problems arising under cost-plus-fixed-fee contracts. Section B deals with certain aspects of the accounting for government contracts and subcontracts that are subject to renegotiation. Section C deals with problems involved in accounting for certain terminated war and defense contracts. Those pronouncements govern accounting for contracts in the areas indicated.

.08 The pricing and costing of federal government contracts are governed by cost principles contained in procurement regulations such as the Federal Procurement Regulation (FPR) and the Defense Acquisition Regulation (DAR). Also, most major government contractors are subject to cost accounting standards issued by the Cost Accounting Standards Board (CASB). CASB standards apply to the cost accounting procedures that government contractors use to allocate costs to contracts; CASB standards are not intended for financial reporting.

.09 Accounting for contracts for income tax purposes is prescribed by the Internal Revenue Code and the related rules and regulations. The methods of accounting for contracts under those requirements are not limited to the two generally accepted methods for financial reporting. For numerous historical and practical reasons, tax accounting rules and regulations differ from generally accepted accounting principles. Numerous nonaccounting considerations are appropriate in determining income tax accounting. This statement deals exclusively with the application of generally accepted accounting principles to accounting for contracts in financial reporting. It does not apply to income tax accounting and is not intended to influence income tax accounting.

Need for Guidance

.10 Because of the complexities and uncertainties in accounting for contracts, the increased use of diverse types of contracts for the construction of facilities, the production of goods, or the provision of related services, and present conditions and practices in industries in which contracts are performed for those purposes, additional guidance on the application of generally accepted accounting principles is needed. This statement of position provides that guidance. Appendix A contains a schematic chart showing the organization of the statement.

Scope of Statement of Position

.11 This statement of position applies to accounting for performance of contracts for which specifications are provided by the customer for the construction of facilities or the production of goods or the provision of related services that are reported in financial statements prepared in conformity with generally accepted accounting principles.[1] Existing authoritative accounting literature uses the terms "long-term" and "construction-type" in identifying the types of contracts that are the primary focus of interest. The term "long-term" is not used in this statement of position as an identifying characteristic because

[1] This statement is not intended to apply to "service transactions" as defined in the FASB's October 23, 1978 Invitation to Comment, *Accounting for Certain Service Transactions*. However, it applies to separate contracts to provide services essential to the construction or production of tangible property, such as design, engineering, procurement, and construction management (see paragraph .13 for examples).

other characteristics are considered more relevant for identifying the types of contracts covered. However, accounting for contracts by an entity that primarily has relatively short-term contracts is recommended in paragraph .31 of this statement. The scope of the statement is not limited to construction-type contracts.

Contracts Covered

.12 Contracts covered by this statement of position are binding agreements between buyers and sellers in which the seller agrees, for compensation, to perform a service to the buyer's specifications.[2] Contracts consist of legally enforceable agreements in any form and include amendments, revisions, and extensions of such agreements. Performance will often extend over long periods, and the seller's right to receive payment depends on his performance in accordance with the agreement. The service may consist of designing, engineering, fabricating, constructing, or manufacturing related to the construction or the production of tangible assets. Contracts such as leases and real estate agreements, for which authoritative accounting literature provides special methods of accounting, are not covered by this statement.

.13 Contracts covered by this statement include, but are not limited to, the following:

- Contracts in the construction industry, such as those of general building, heavy earth moving, dredging, demolition, design-build contractors, and specialty contractors (for example, mechanical, electrical, or paving).
- Contracts to design and build ships and transport vessels.
- Contracts to design, develop, manufacture, or modify complex aerospace or electronic equipment to a buyer's specification or to provide services related to the performance of such contracts.
- Contracts for construction consulting service, such as under agency contracts or construction management agreements.
- Contracts for services performed by architects, engineers, or architectural or engineering design firms.

.14 Contracts not covered by this statement include, but are not limited to, the following:

- Sales by a manufacturer of goods produced in a standard manufacturing operation, even if produced to buyers' specifications, and sold in the ordinary course of business through the manufacturer's regular marketing channels if such sales are normally recognized as revenue in accordance with the realization principle for sales of products and if their costs are accounted for in accordance with generally accepted principles of inventory costing.
- Sales or supply contracts to provide goods from inventory or from homogeneous continuing production over a period of time.
- Contracts included in a program and accounted for under the program method of accounting. For accounting purposes, a program consists of

---

[2] Specifications imposed on the buyer by a third party (for example, a government or regulatory agency or a financial institution) or by conditions in the marketplace are deemed to be "buyer's specifications."

a specified number of units of a basic product expected to be produced over a long period in a continuing production effort under a series of existing and anticipated contracts.[3]

- Service contracts of health clubs, correspondence schools, and similar consumer-oriented organizations that provide their services to their clients over an extended period.
- Magazine subscriptions.
- Contracts of nonprofit organizations to provide benefits to their members over a period of time in return for membership dues.

.15 Contracts covered by this statement may be classified into four broad types based on methods of pricing: (*a*) fixed-price or lump-sum contracts, (*b*) cost-type (including cost-plus) contracts, (*c*) time-and-material contracts, and (*d*) unit-price contracts. A fixed-price contract is an agreement to perform all acts under the contract for a stated price. A cost-type contract is an agreement to perform under a contract for a price determined on the basis of a defined relationship to the costs to be incurred, for example, the costs of all acts required plus a fee, which may be a fixed amount or a fixed percentage of the costs incurred. A time-and-material contract is an agreement to perform all acts required under the contract for a price based on fixed hourly rates for some measure of the labor hours required (for example, direct labor hours) and the cost of materials. A unit-price contract is an agreement to perform all acts required under the contract for a specified price for each unit of output. Each of the various types of contracts may have incentive, penalty, or other provisions that modify their basic pricing terms. The pricing features of the various types are discussed in greater detail in Appendix B.

Definition of a Contractor

.16 The term "contractor" as used in this statement refers to a person or entity that enters into a contract to construct facilities, produce goods, or render services to the specifications of a buyer either as a general or prime contractor, as a subcontractor to a general contractor, or as a construction manager.

Definition of a Profit Center

.17 For the purpose of this statement, a "profit center" is the unit for the accumulation of revenues and costs and the measurement of income. For business enterprises engaged in the performance of contracts, the profit center for accounting purposes is usually a single contract; but under some specified circumstances it may be a combination of two or more contracts, a segment of a contract or of a group of combined contracts. This statement of position provides guidance on the selection of the appropriate profit center. The accounting recommendations, usually stated in terms of a single contract, also apply to alternative profit centers in circumstances in which alternative centers are appropriate.

Application and Effect on Existing Audit Guides and SOPs

.18 This statement of position presents the division's recommendations on accounting for contracts (as specified in paragraphs .11 to .17) in all indus-

---

[3] [Footnote deleted, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

tries. The recommendations in this statement need not be applied to immaterial items. Two existing AICPA Audit and Accounting Guides, *Construction Contractors* and *Federal Government Contractors*, provide additional guidance on the application of generally accepted accounting principles to the construction industry and to federal government contracts, respectively. The recommendations in this statement take precedence in those areas. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.19 The guidance on contract accounting and financial reporting in *Federal Government Contractors* is essentially consistent with the recommendations in this statement. Since the recommendations in this statement provide more comprehensive and explicit guidance on the application of generally accepted accounting principles to contract accounting than does the guide, *Federal Government Contractors*, the guide incorporates this statement as an appendix. The provisions of that guide should be interpreted and applied in the context of the recommendations in this statement. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.20 This statement is not intended to supersede recommendations on accounting in other AICPA industry accounting or audit guides or in other statements of position.

The Division's Conclusions

Determining a Basic Accounting Policy for Contracts

.21 In accounting for contracts, the basic accounting policy decision is the choice between the two generally accepted methods: the percentage-of-completion method including units of delivery and the completed-contract method. The determination of which of the two methods is preferable should be based on a careful evaluation of circumstances because the two methods should not be acceptable alternatives for the same circumstances. The division's recommendations on basic accounting policy are set forth in the sections on "The Percentage-of-Completion Method" and "The Completed-Contract Method," which identify the circumstances appropriate to the methods, the bases of applying the methods, and the reasons for the recommendations. The recommendations apply to accounting for individual contracts and to accounting for other profit centers in accordance with the recommendations in the section on "Determining the Profit Center." As a result of evaluating individual contracts and profit centers, a contractor should be able to establish a basic policy that should be followed in accounting for most of his contracts. In accordance with the requirements of APB Opinion No. 22, *Disclosure of Accounting Policies,* a contractor should disclose in the note to the financial statements on accounting policies the method or methods of determining earned revenue and the cost of earned revenue including the policies relating to combining and segmenting, if applicable. Appendix C contains a summary of the disclosure requirements in this statement.

The Percentage-of-Completion Method

.22 This section sets forth the recommended basis for using the percentage-of-completion method and the reasons for the recommendation. Under most contracts for construction of facilities, production of goods, or provision of related services to a buyer's specifications, both the buyer and the seller (contractor) obtain enforceable rights. The legal right of the buyer to require specific performance of the contract means that the contractor has, in effect, agreed to sell his rights to work-in-progress as the work progresses. This view is consistent with the contractor's legal rights; he typically has no ownership claim to the work-in-progress but has lien rights. Furthermore, the contractor has the right to require the buyer, under most financing arrangements, to make progress payments to support his ownership investment and to approve the facilities constructed (or goods produced or services performed) to date if they meet the contract requirements. The buyer's right to take over the work-in-progress at his option (usually with a penalty) provides additional evidence to support that view. Accordingly, the business activity taking place supports the concept that in an economic sense performance is, in effect, a continuous sale (transfer of ownership rights) that occurs as the work progresses. Also under most contracts for the production of goods and the provision of related services that are accounted for on the basis of units delivered, both the contractor and the customer obtain enforceable rights as the goods are produced or the services are performed. As units are delivered, title to and the risk of loss on those units normally transfer to the customer, whose acceptance of the items indicates that they meet the contractual specifications. For such contracts, delivery and acceptance are objective measurements of the extent to which the contracts have been performed. The percentage-of-completion method recognizes the legal and economic results of contract performance on a timely basis. Financial statements based on the percentage-of-completion method present the economic substance of a company's transactions and events more clearly and more timely than financial statements based on the completed-contract method, and they present more accurately the relationships between gross profit from contracts and related period costs. The percentage-of-completion method informs the users of the general purpose financial statements of the volume of economic activity of a company.

Circumstances Appropriate to the Method

.23 The use of the percentage-of-completion method depends on the ability to make reasonably dependable estimates. For the purposes of this statement, "the ability to make reasonably dependable estimates" relates to estimates of the extent of progress toward completion, contract revenues, and contract costs. The division believes that the percentage-of-completion method is preferable as an accounting policy in circumstances in which reasonably dependable estimates can be made and in which all the following conditions exist:

- Contracts executed by the parties normally include provisions that clearly specify the enforceable rights regarding goods or services to be provided and received by the parties, the consideration to be exchanged, and the manner and terms of settlement.
- The buyer can be expected to satisfy his obligations under the contract.
- The contractor can be expected to perform his contractual obligations.

.24 For entities engaged on a continuing basis in the production and delivery of goods or services under contractual arrangements and for whom contracting represents a significant part of their operations, the presumption is that they have the ability to make estimates that are sufficiently dependable to justify the use of the percentage-of-completion method of accounting.[4] Persuasive evidence to the contrary is necessary to overcome that presumption. The ability to produce reasonably dependable estimates is an essential element of the contracting business. For a contract on which a loss is anticipated, generally accepted accounting principles require recognition of the entire anticipated loss as soon as the loss becomes evident. An entity without the ability to update and revise estimates continually with a degree of confidence could not meet that essential requirement of generally accepted accounting principles.

.25 Accordingly, the division believes that entities with significant contracting operations generally have the ability to produce reasonably dependable estimates and that for such entities the percentage-of-completion method of accounting is preferable in most circumstances. The method should be applied to individual contracts or profit centers, as appropriate.

a. Normally, a contractor will be able to estimate total contract revenue and total contract cost in single amounts. Those amounts should normally be used as the basis for accounting for contracts under the percentage-of-completion method.

b. For some contracts, on which some level of profit is assured, a contractor may only be able to estimate total contract revenue and total contract cost in ranges of amounts. If, based on the information arising in estimating the ranges of amounts and all other pertinent data, the contractor can determine the amounts in the ranges that are most likely to occur, those amounts should be used in accounting for the contract under the percentage-of-completion method. If the most likely amounts cannot be determined, the lowest probable level of profit in the range should be used in accounting for the contract until the results can be estimated more precisely.

c. However, in some circumstances, estimating the final outcome may be impractical except to assure that no loss will be incurred. In those circumstances, a contractor should use a zero estimate of profit; equal amounts of revenue and cost should be recognized until results can be estimated more precisely. A contractor should use this basis only if the bases in (*a*) or (*b*) are clearly not appropriate. A change from a zero estimate of profit to a more precise estimate should be accounted for as a change in an accounting estimate.

An entity using the percentage-of-completion method as its basic accounting policy should use the completed-contract method for a single contract or a group of contracts for which reasonably dependable estimates cannot be made or for which inherent hazards make estimates doubtful. Such a departure from the basic policy should be disclosed.

Nature of Reasonable Estimates and Inherent Hazards

.26 In practice, contract revenues and costs are estimated in a wide variety of ways ranging from rudimentary procedures to complex methods and

---

[4] The division recognizes that many contractors have informal estimating procedures that may result in poorly documented estimates and marginal quality field reporting and job costing systems. Those conditions may influence the ability of an entity to produce reasonably dependable estimates. However, procedures and systems should not influence the development of accounting principles and should be dealt with by management as internal control, financial reporting, and auditing concerns.

systems. Regardless of the techniques used, a contractor's estimating procedures should provide reasonable assurance of a continuing ability to produce reasonably dependable estimates.[5] Ability to estimate covers more than the estimating and documentation of contract revenues and costs; it covers a contractor's entire contract administration and management control system. The ability to produce reasonably dependable estimates depends on all the procedures and personnel that provide financial or production information on the status of contracts. It encompasses systems and personnel not only of the accounting department but of all areas of the company that participate in production control, cost control, administrative control, or accountability for contracts. Previous reliability of a contractor's estimating process is usually an indication of continuing reliability, particularly if the present circumstances are similar to those that prevailed in the past.

.27 Estimating is an integral part of contractors' business activities, and there is a necessity to revise estimates on contracts continually as the work progresses. The fact that circumstances may necessitate frequent revision of estimates does not indicate that the estimates are unreliable for the purpose for which they are used. Although results may differ widely from original estimates because of the nature of the business, the contractor, in the conduct of his business, may still find the estimates reasonably dependable. Despite these widely recognized conditions, a contractor's estimates of total contract revenue and total contract costs should be regarded as reasonably dependable if the minimum total revenue and the maximum total cost can be estimated with a sufficient degree of confidence to justify the contractor's bids on contracts.

.28 ARB No. 45 discourages the use of the percentage-of-completion method of accounting in circumstances in which inherent hazards make estimates doubtful. "Inherent hazards" relate to contract conditions or external factors that raise questions about contract estimates and about the ability of either the contractor or the customer to perform his obligations under the contract. Inherent hazards that may cause contract estimates to be doubtful usually differ from inherent business risks. Business enterprises engaged in contracting, like all business enterprises, are exposed to numerous business risks that vary from contract to contract. The reliability of the estimating process in contract accounting does not depend on the absence of such risks. Assessing business risks is a function of users of financial statements.

.29 The present business environment and the refinement of the estimating process have produced conditions under which most business entities engaged in contracting can deal adequately with the normal, recurring business risks in estimating the outcome of contracts. The division believes that inherent hazards that make otherwise reasonably dependable contract estimates doubtful involve events and conditions that would not be considered in the ordinary preparation of contract estimates and that would not be expected to recur frequently, given the contractor's normal business environment. Such hazards are unrelated to, or only incidentally related to, the contractor's typical activities. Such hazards may relate, for example, to contracts whose validity is seriously in question (that is, which are less than fully enforceable), to contracts whose completion may be subject to the outcome of pending legislation

---

[5] The type of estimating procedures appropriate in a particular set of circumstances depends on a careful evaluation of the costs and benefits of developing the procedures. The ability to produce reasonably dependable estimates that would justify the use of the percentage-of-completion method as recommended in paragraph .25 does not depend on the elaborateness of the estimating procedures used.

or pending litigation, or to contracts exposed to the possibility of the condemnation or expropriation of the resulting properties. Reasonably dependable estimates cannot be produced for a contract with unrealistic or ill-defined terms or for a contract between unreliable parties. However, the conditions stated in paragraph .23 for the use of the percentage-of-completion method of accounting, which apply to most bona fide contracts, make the existence of some uncertainties, including some of the type described in ARB No. 45, paragraph 15, unlikely for contracts that meet those conditions. Therefore, the division believes that there should be specific, persuasive evidence of such hazards to indicate that use of the percentage-of-completion method on one of the bases in paragraph .25 is not preferable.

The Completed-Contract Method

.30 This section sets forth the recommended basis for using the completed-contract method and the reasons for the recommendation. Under the completed-contract method, income is recognized only when a contract is completed or substantially completed. During the period of performance, billings and costs are accumulated on the balance sheet, but no profit or income is recorded before completion or substantial completion of the work. This method precludes reporting on the performance that is occurring under the enforceable rights of the contract as work progresses. Although the completed-contract method is based on results as finally determined rather than on estimates for unperformed work, which may involve unforeseen costs and possible losses, it does not reflect current performance when the period of a contract extends beyond one accounting period, and it therefore may result in irregular recognition of income. Financial statements based on this method may not show informative relationships between gross profit reported on contracts and related period costs.

Circumstances of Use

.31 The completed-contract method may be used as an entity's basic accounting policy in circumstances in which financial position and results of operations would not vary materially from those resulting from use of the percentage-of-completion method (for example, in circumstances in which an entity has primarily short-term contracts). Although this statement does not formally distinguish on the basis of length between long-term and short-term contracts, the basis for recording income on contracts of short duration poses relatively few problems. In accounting for such contracts, income ordinarily is recognized when performance is substantially completed and accepted. Under those circumstances, revenues and costs in the aggregate for all contracts would be expected to result in a matching of gross profit with period overhead or fixed costs similar to that achieved by use of the percentage-of-completion method. For example, the completed-contract method, as opposed to the percentage-of-completion method, would not usually produce a material difference in net income or financial position for a small plumbing contractor that performs primarily relatively short-term contracts during an accounting period; performance covers such a short span of time that the work is somewhat analogous to the manufacture of shelf production items for sale. An entity using the completed-contract method as its basic accounting policy should depart from that policy for a single contract or a group of contracts not having the features described in this paragraph and use the percentage-of-completion method on one of the bases described in paragraph .25. Such a departure should be disclosed.

.32 The completed-contract method is preferable in circumstances in which estimates cannot meet the criteria for reasonable dependability discussed in the section on the percentage-of-completion method or in which there are inherent hazards of the nature of those discussed in that section. An entity using the percentage-of-completion method as its basic accounting policy should depart from that policy and use the completed-contract method for a single contract or a group of contracts only in the circumstances described in paragraph .25.

.33 The use of the completed-contract method is recommended for the circumstances described in paragraphs .31 and .32. However, for circumstances in which there is an assurance that no loss will be incurred on a contract (for example, when the scope of the contract is ill-defined but the contractor is protected by a cost-plus contract or other contractual terms), the percentage-of-completion method based on a zero profit margin, rather than the completed-contract method, is recommended until more precise estimates can be made. The significant difference between the percentage-of-completion method applied on the basis of a zero profit margin and the completed-contract method relates to the effects on the income statement. Under the zero profit margin approach to applying the percentage-of-completion method, equal amounts of revenue and cost, measured on the basis of performance during the period, are presented in the income statement; whereas, under the completed-contract method, performance for a period is not reflected in the income statement, and no amount is presented in the income statement until the contract is completed. The zero profit margin approach to applying the percentage-of-completion method gives users of general purpose financial statements an indication of the volume of a company's business and of the application of its economic resources.

Determining the Profit Center

.34 The basic presumption should be that each contract is the profit center for revenue recognition, cost accumulation, and income measurement. That presumption may be overcome only if a contract or a series of contracts meets the conditions described for combining or segmenting contracts. A group of contracts (combining), and a phase or segment of a single contract or of a group of contracts (segmenting) may be used as a profit center in some circumstances. Since there are numerous practical implications of combining and segmenting contracts, evaluation of the circumstances, contract terms, and management intent are essential in determining contracts that may be accounted for on those bases.

Combining Contracts

.35 A group of contracts may be so closely related that they are, in effect, parts of a single project with an overall profit margin, and accounting for the contracts individually may not be feasible or appropriate. Under those circumstances, consideration should be given to combining such contracts for profit recognition purposes. The presumption in combining contracts is that revenue and profit are earned, and should be reported, uniformly over the performance of the combined contracts. For example, a group of construction-type contracts may be negotiated as a package with the objective of achieving an overall profit margin, although the profit margins on the individual contracts may vary. In those circumstances, if the individual contracts are performed and reported in different periods and accounted for separately, the reported profit margins in those periods will differ from the profit margin contemplated in the negotiations for reasons other than differences in performance.

.36 Contracts may be combined for accounting purposes only if they meet the criteria in paragraphs .37 and .38.

.37 A group of contracts may be combined for accounting purposes if the contracts

a. Are negotiated as a package in the same economic environment with an overall profit margin objective. Contracts not executed at the same time may be considered to have been negotiated as a package in the same economic environment only if the time period between the commitments of the parties to the individual contracts is reasonably short. The longer the period between the commitments of the parties to the contracts, the more likely it is that the economic circumstances affecting the negotiations have changed.

b. Constitute in essence an agreement to do a single project. A project for this purpose consists of construction, or related service activity with different elements, phases, or units of output that are closely interrelated or interdependent in terms of their design, technology, and function or their ultimate purpose or use.

c. Require closely interrelated construction activities with substantial common costs that cannot be separately identified with, or reasonably allocated to, the elements, phases, or units of output.

d. Are performed concurrently or in a continuous sequence under the same project management at the same location or at different locations in the same general vicinity.

e. Constitute in substance an agreement with a single customer. In assessing whether the contracts meet this criterion, the facts and circumstances relating to the other criteria should be considered. In some circumstances different divisions of the same entity would not constitute a single customer if, for example, the negotiations are conducted independently with the different divisions. On the other hand, two or more parties may constitute in substance a single customer if, for example, the negotiations are conducted jointly with the parties to do what in essence is a single project.

Contracts that meet all of these criteria may be combined for profit recognition and for determining the need for a provision for losses in accordance with ARB No. 45, paragraph 6. The criteria should be applied consistently to contracts with similar characteristics in similar circumstances.

.38 Production-type contracts that do not meet the criteria in paragraph .37 or segments of such contracts may be combined into groupings such as production lots or releases for the purpose of accumulating and allocating production costs to units produced or delivered on the basis of average unit costs in the following circumstances:[6]

a. The contracts are with one or more customers for the production of substantially identical units of a basic item produced concurrently or sequentially.

b. Revenue on the contracts is recognized on the units-of-delivery basis of applying the percentage-of-completion method.

---

[6] [Footnote deleted to reflect the conforming changes necessary due to the issuance of recent authoritative literature.]

Segmenting a Contract

.39 A single contract or a group of contracts that otherwise meet the test for combining may include several elements or phases, each of which the contractor negotiated separately with the same customer and agreed to perform without regard to the performance of the others. If those activities are accounted for as a single profit center, the reported income may differ from that contemplated in the negotiations for reasons other than differences in performance. If the project is segmented, revenues can be assigned to the different elements or phases to achieve different rates of profitability based on the relative value of each element or phase to the estimated total contract revenue. A project, which may consist of a single contract or a group of contracts, with segments that have different rates of profitability may be segmented if it meets the criteria in paragraph .40, paragraph .41, or paragraph .42. The criteria for segmenting should be applied consistently to contracts with similar characteristics and in similar circumstances.

.40 A project may be segmented if all the following steps were taken and are documented and verifiable:

a. The contractor submitted bona fide proposals on the separate components of the project and on the entire project.

b. The customer had the right to accept the proposals on either basis.

c. The aggregate amount of the proposals on the separate components approximated the amount of the proposal on the entire project.

.41 A project that does not meet the criteria in paragraph .40 may be segmented only if it meets all the following criteria:

a. The terms and scope of the contract or project clearly call for separable phases or elements.

b. The separable phases or elements of the project are often bid or negotiated separately.

c. The market assigns different gross profit rates to the segments because of factors such as different levels of risk or differences in the relationship of the supply and demand for the services provided in different segments.

d. The contractor has a significant history of providing similar services to other customers under separate contracts for each significant segment to which a profit margin higher than the overall profit margin on the profit is ascribed.[7]

e. The significant history with customers who have contracted for services separately is one that is relatively stable in terms of pricing policy rather than one unduly weighted by erratic pricing decisions (responding, for example, to extraordinary economic circumstances or to unique customer-contractor relationships).

---

[7] In applying the criterion in paragraph .41(*d*), values assignable to the segments should be on the basis of the contractor's normal historical prices and terms of such services to other customers. The division considered but rejected the concept of allowing a contractor to segment on the basis of prices charged by other contractors, since it does not follow that those prices could have been obtained by a contractor who has no history in the market.

f. The excess of the sum of the prices of the separate elements over the price of the total project is clearly attributable to cost savings incident to combined performance of the contract obligations (for example, cost savings in supervision, overhead, or equipment mobilization). Unless this condition is met, segmenting a contract with a price substantially less than the sum of the prices of the separate phases or elements would be inappropriate even if the other conditions are met. Acceptable price variations should be allocated to the separate phases or elements in proportion to the prices ascribed to each. In all other situations a substantial difference in price (whether more or less) between the separate elements and the price of the total project is evidence that the contractor has accepted different profit margins. Accordingly, segmenting is not appropriate, and the contracts should be the profit centers.

g. The similarity of services and prices in the contract segments and services and the prices of such services to other customers contracted separately should be documented and verifiable.

.42 A production-type contract that does not meet the criteria in paragraphs .40 or .41 may also be segmented and included in groupings such as production lots or releases for the purpose of accumulating and allocating production costs to units produced or delivered on the basis of average unit cost under the conditions specified in paragraph .38.

Measuring Progress on Contracts

.43 This section describes methods of measuring the extent of progress toward completion under the percentage-of-completion method and sets forth criteria for selecting those methods and for determining when a contract is substantially completed. Meaningful measurement of the extent of progress toward completion is essential since this factor is used in determining the amounts of estimated contract revenue and estimated gross profit that will be recognized as earned in any given period.

Methods of Measuring Extent of Progress Toward Completion

.44 In practice, a number of methods are used to measure the extent of progress toward completion. They include the cost-to-cost method, variations of the cost-to-cost method, efforts-expended methods, the units-of-delivery method, and the units-of-work-performed method. Those practices are intended to conform to ARB No. 45, paragraph 4.[8] Some of the measures are sometimes made and certified by engineers or architects, but management should review and understand the procedures used by those professionals.

.45 Some methods used in practice measure progress toward completion in terms of costs, some in terms of units of work, and some in terms of values

---

[8] ARB No. 45, paragraph 4, states:

The committee recommends that the recognized income [under the percentage-of-completion method] be that percentage of estimated total income, either:

(*a*) that incurred costs to date bear to estimated total costs after giving effect to estimates of costs to complete based upon most recent information, or

(*b*) that may be indicated by such other measure of progress toward completion as may be appropriate having due regard to work performed.

Costs as here used might exclude, especially during the early stages of a contract, all or a portion of the cost of such items as materials and subcontracts if it appears that such an exclusion would result in a more meaningful periodic allocation of income.

added (the contract value of total work performed to date). All three of these measures of progress are acceptable in appropriate circumstances. The division concluded that other methods that achieve the objective of measuring extent of progress toward completion in terms of costs, units, or value added are also acceptable in appropriate circumstances. However, the method or methods selected should be applied consistently to all contracts having similar characteristics. The method or methods of measuring extent of progress toward completion should be disclosed in the notes to the financial statements. Examples of circumstances not appropriate to some methods are given within the discussion of input and output measures.

Input and Output Measures

.46 The several approaches to measuring progress on a contract can be grouped into input and output measures. Input measures are made in terms of efforts devoted to a contract. They include the methods based on costs and on efforts expended. Output measures are made in terms of results achieved. They include methods based on units produced, units delivered, contract milestones, and value added. For contracts under which separate units of output are produced, progress can be measured on the basis of units of work completed. In other circumstances, progress may be measured, for example, on the basis of cubic yards of excavation for foundation contracts or on the basis of cubic yards of pavement laid for highway contracts.

.47 Both input and output measures have drawbacks in some circumstances. Input is used to measure progress toward completion indirectly, based on an established or assumed relationship between a unit of input and productivity. A significant drawback of input measures is that the relationship of the measures to productivity may not hold, because of inefficiencies or other factors. Output is used to measure results directly and is generally the best measure of progress toward completion in circumstances in which a reliable measure of output can be established. However, output measures often cannot be established, and input measures must then be used. The use of either type of measure requires the exercise of judgment and the careful tailoring of the measure to the circumstances.

.48 The efforts-expended method is an input method based on a measure of the work, such as labor hours, labor dollars, machine hours, or material quantities. Under the labor-hours method, for example, extent of progress is measured by the ratio of hours performed to date to estimated total hours at completion. Estimated total labor hours should include (*a*) the estimated labor hours of the contractor and (*b*) the estimated labor hours of subcontractors engaged to perform work for the project, if labor hours of subcontractors are a significant element in the performance of the contract. A labor-hours method can measure the extent of progress in terms of efforts expended only if substantial efforts of subcontractors are included in the computation. If the contractor is unable to obtain reasonably dependable estimates of subcontractors' labor hours at the beginning of the project and as work progresses, he should not use the labor-hours method.

.49 The various forms of the efforts-expended method generally are based on the assumption that profits on contracts are derived from the contractor's efforts in all phases of operations, such as designing, procurement, and management. Profit is not assumed to accrue merely as a result of the acquisition of material or other tangible items used in the performance of the contract or the awarding of subcontracts. As previously noted, a significant drawback of efforts-expended methods is that the efforts included in the measure may not all be productive.

.50 Measuring progress toward completion based on the ratio of costs incurred to total estimated costs is also an input method. Some of the costs incurred, particularly in the early stages of the contract, should be disregarded in applying this method because they do not relate to contract performance. These include the costs of items such as uninstalled materials not specifically produced or fabricated for the project or of subcontracts that have not been performed. For example, for construction projects, the cost of materials not unique to the project that have been purchased or accumulated at job sites but that have not been physically installed do not relate to performance.[9] The costs of such materials should be excluded from costs incurred for the purpose of measuring the extent of progress toward completion. Also, the cost of equipment purchased for use on a contract should be allocated over the period of its expected use unless title to the equipment is transferred to the customer by terms of the contract. For production-type contracts, the complement of expensive components (for example, computers, engines, radars, and complex "black boxes") to be installed into the deliverable items may aggregate a significant portion of the total cost of the contract. In some circumstances, the costs incurred for such components, even though the components were specifically purchased for the project, should not be included in the measurement before the components are installed if inclusion would tend to overstate the percentage of completion otherwise determinable.

.51 The acceptability of the results of input or output measures deemed to be appropriate to the circumstances should be periodically reviewed and confirmed by alternative measures that involve observation and inspection. For example, the results provided by the measure used to determine the extent of progress may be compared to the results of calculations based on physical observations by engineers, architects, or similarly qualified personnel. That type of review provides assurance somewhat similar to that provided for perpetual inventory records by periodic physical inventory counts.

Completion Criteria Under the Completed-Contract Method

.52 As a general rule, a contract may be regarded as substantially completed if remaining costs and potential risks are insignificant in amount. The overriding objectives are to maintain consistency in determining when contracts are substantially completed and to avoid arbitrary acceleration or deferral of income. The specific criteria used to determine when a contract is substantially completed should be followed consistently and should be disclosed in the note to the financial statements on accounting policies. Circumstances to be considered in determining when a project is substantially completed include, for example, delivery of the product, acceptance by the customer, departure from the site, and compliance with performance specifications.

Income Determination—Revenue Elements

.53 Estimating the revenue on a contract is an involved process, which is affected by a variety of uncertainties that depend on the outcome of a series of

---

[9] The cost of uninstalled materials specifically produced, fabricated, or constructed for a project should be included in the costs used to measure extent of progress. Such materials consist of items unique to a project that a manufacturer or supplier does not carry in inventory and that must be produced or altered to meet the specifications of the project.

future events. The estimates must be periodically revised throughout the life of the contract as events occur and as uncertainties are resolved.

.54 The major factors that must be considered in determining total estimated revenue include the basic contract price, contract options, change orders, claims, and contract provisions for penalties and incentive payments, including award fees and performance incentives. All those factors and other special contract provisions must be evaluated throughout the life of a contract in estimating total contract revenue to recognize revenues in the periods in which they are earned under the percentage-of-completion method of accounting.

Basic Contract Price—General

.55 The estimated revenue from a contract is the total amount that a contractor expects to realize from the contract. It is determined primarily by the terms of the contract and the basic contract price. Contract price may be relatively fixed or highly variable and subject to a great deal of uncertainty, depending on the type of contract involved. Appendix B describes basic contract types and major variations in the basic types. The total amount of revenue that ultimately will be realized on a contract is often subject to a variety of changing circumstances and accordingly may not be known with certainty until the parties to the contract have fully performed their obligations. Thus, the determination of total estimated revenue requires careful consideration and the exercise of judgment in assessing the probabilities of future outcomes.

.56 Although fixed-price contracts usually provide for a stated contract price, a specified scope of the work to be performed, and a specified performance schedule, they sometimes have adjustment schedules based on application of economic price adjustment (escalation), price redetermination, incentive, penalty, and other pricing provisions. Determining contract revenue under unit-price contracts generally involves the same factors as under fixed-price contracts. Determining contract revenue from a time-and-material contract requires a careful analysis of the contract, particularly if the contract includes guaranteed maximums or assigns markups to both labor and materials; and the determination involves consideration of some of the factors discussed below in regard to cost-type contracts.

Basic Contract Price—Cost-Type Contracts

.57 Cost-type contracts have a variety of forms (see Appendix B). The various forms have differing contract terms that affect accounting, such as provisions for reimbursable costs (which are generally spelled out in the contract), overhead recovery percentages, and fees. A fee may be a fixed amount or a percentage of reimbursable costs or an amount based on performance criteria.[10] Generally, percentage fees may be accrued as the related costs are incurred, since they are a percentage of costs incurred, and profits should therefore be recognized as costs are incurred. Cost-type contracts often include provisions for guaranteed maximum total reimbursable costs or target penalties and rewards relating to underruns and overruns of predetermined target prices, completion dates, plant capacity on completion of the project, or other criteria.

.58 One problem peculiar to cost-type contracts involves the determination of the amounts of reimbursable costs that should be reflected as revenue. Under some contracts, particularly service-type contracts, a contractor acts sol-

[10] Cost-type government contracts with fees based on a percentage of cost are no longer granted under government regulations.

ely in the capacity of an agent (construction manager) and has no risks associated with costs managed. This relationship may arise, for example, if an owner awards a construction management contract to one entity and a construction contract to another. If the contractor, serving as the construction manager, acts solely as an agent, his revenue should include only the fee and should exclude subcontracts negotiated or managed on behalf of the owner and materials purchased on behalf of the owner.

.59 In other circumstances, a contractor acts as an ordinary principal under a cost-type contract. For example, the contractor may be responsible to employees for salaries and wages and to subcontractors and other creditors for materials and services, and he may have the discretionary responsibility to procure and manage the resources in performing the contract. The contractor should include in revenue all reimbursable costs for which he has risk or on which his fee was based at the time of bid or negotiation. In addition, revenue from overhead percentage recoveries and the earned fee should be included in revenue.

Customer-Furnished Materials

.60 Another concern associated with measuring revenue relates to materials furnished by a customer or purchased by the contractor as an agent for the customer. Often, particularly for large, complex projects, customers may be more capable of carrying out the procurement function or may have more leverage with suppliers than the contractor. In those circumstances, the contractor generally informs the customer of the nature, type, and characteristics or specifications of the materials required and may even purchase the required materials and pay for them, using customer purchase orders and checks drawn against the customer's bank account. If the contractor is responsible for the nature, type, characteristics, or specifications of material that the customer furnishes or that the contractor purchases as an agent of the customer, or if the contractor is responsible for the ultimate acceptability of performance of the project based on such material, the value of those items should be included as contract price and reflected as revenue and costs in periodic reporting of operations. As a general rule, revenues and costs should include all items for which the contractor has an associated risk, including items on which his contractual fee was based.

Change Orders

.61 Change orders are modifications of an original contract that effectively change the provisions of the contract without adding new provisions. They may be initiated by either the contractor or the customer, and they include changes in specifications or design, method or manner of performance, facilities, equipment, materials, sites, and period for completion of the work. Many change orders are unpriced; that is, the work to be performed is defined, but the adjustment to the contract price is to be negotiated later. For some change orders, both scope and price may be unapproved or in dispute. Accounting for change orders depends on the underlying circumstances, which may differ for each change order depending on the customer, the contract, and the nature of the change. Change orders should therefore be evaluated according to their characteristics and the circumstances in which they occur. In some circumstances, change orders as a normal element of a contract may be numerous, and separate identification may be impractical. Such change orders may be evaluated statistically on a composite basis using historical results as modified by current conditions. If such change orders are considered by the parties to be a normal element within the original scope of the contract, no change in the contract price is required. Otherwise, the adjustment to the contract price may be routinely negotiated. Contract revenue and costs should be adjusted to reflect change orders approved by the customer and the contractor regarding both scope and price.

.62 Accounting for unpriced change orders depends on their characteristics and the circumstances in which they occur. Under the completed-contract method, costs attributable to unpriced change orders should be deferred as contract costs if it is probable that aggregate contract costs, including costs attributable to change orders, will be recovered from contract revenues. For all unpriced change orders, recovery should be deemed probable if the future event or events necessary for recovery are likely to occur. Some of the factors to consider in evaluating whether recovery is probable are the customer's written approval of the scope of the change order, separate documentation for change order costs that are identifiable and reasonable, and the entity's favorable experience in negotiating change orders, especially as it relates to the specific type of contract and change order being evaluated. The following guidelines should be followed in accounting for unpriced change orders under the percentage-of-completion method.

a. Costs attributable to unpriced change orders should be treated as costs of contract performance in the period in which the costs are incurred if it is *not* probable that the costs will be recovered through a change in the contract price.

b. If it is probable that the costs will be recovered through a change in the contract price, the costs should be deferred (excluded from the cost of contract performance) until the parties have agreed on the change in contract price, or, alternatively, they should be treated as costs of contract performance in the period in which they are incurred, and contract revenue should be recognized to the extent of the costs incurred.

c. If it is probable that the contract price will be adjusted by an amount that exceeds the costs attributable to the change order and the amount of the excess can be reliably estimated, the original contract price should also be adjusted for that amount when the costs are recognized as costs of contract performance if its realization is probable. However, since the substantiation of the amount of future revenue is difficult, revenue in excess of the costs attributable to unpriced change orders should only be recorded in circumstances in which realization is assured beyond a reasonable doubt, such as circumstances in which an entity's historical experience provides such assurance or in which an entity has received a bona fide pricing offer from a customer and records only the amount of the offer as revenue.

.63 If change orders are in dispute or are unapproved in regard to both scope and price, they should be evaluated as claims (see paragraphs .65–.67).

Contract Options and Additions

.64 An option or an addition to an existing contract should be treated as a separate contract in any of the following circumstances:

a. The product or service to be provided differs significantly from the product or service provided under the original contract.

b. The price of the new product or service is negotiated without regard to the original contract and involves different economic judgments.

c. The products or services to be provided under the exercised option or amendment are similar to those under the original contract, but the contract price and anticipated contract cost relationship are significantly different.

If an option or addition to an existing contract does not meet any of the above conditions, it may be combined with the original contract if it meets the criteria in paragraph .37 or .38. Exercised options or additions that do not meet the criteria for treatment as separate contracts or for combining with the original contracts should be treated as change orders on the original contracts.

Claims

.65 Claims are amounts in excess of the agreed contract price (or amounts not included in the original contract price) that a contractor seeks to collect from customers or others for customer-caused delays, errors in specifications and designs, contract terminations, change orders in dispute or unapproved as to both scope and price, or other causes of unanticipated additional costs. Recognition of amounts of additional contract revenue relating to claims is appropriate only if it is probable that the claim will result in additional contract revenue and if the amount can be reliably estimated. Those two requirements are satisfied by the existence of all the following conditions:

a. The contract or other evidence provides a legal basis for the claim; or a legal opinion has been obtained, stating that under the circumstances there is a reasonable basis to support the claim.

b. Additional costs are caused by circumstances that were unforeseen at the contract date and are not the result of deficiencies in the contractor's performance.

c. Costs associated with the claim are identifiable or otherwise determinable and are reasonable in view of the work performed.

d. The evidence supporting the claim is objective and verifiable, not based on management's "feel" for the situation or on unsupported representations.

If the foregoing requirements are met, revenue from a claim should be recorded only to the extent that contract costs relating to the claim have been incurred. The amounts recorded, if material, should be disclosed in the notes to the financial statements. Costs attributable to claims should be treated as costs of contract performance as incurred.

.66 However, a practice such as recording revenues from claims only when the amounts have been received or awarded may be used. If that practice is followed, the amounts should be disclosed in the notes to the financial statements.

.67 If the requirements in paragraph .65 are not met or if those requirements are met but the claim exceeds the recorded contract costs, a contingent asset should be disclosed in accordance with FASB Statement No. 5, paragraph 17.

Income Determination—Cost Elements

.68 Contract costs must be identified, estimated, and accumulated with a reasonable degree of accuracy in determining income earned. At any time during the life of a contract, total estimated contract cost consists of two components: costs incurred to date and estimated cost to complete the contract. A company should be able to determine costs incurred on a contract with a relatively high degree of precision, depending on the adequacy and effectiveness of its cost accounting system. The procedures or systems used in accounting for costs vary from relatively simple, manual procedures that produce relatively modest amounts of detailed analysis to sophisticated, computer-based systems that produce a great deal of detailed analysis. Despite the diversity of systems and procedures, however, an objective of each system or of each set of procedures should be to accumulate costs properly and consistently by contract with a sufficient degree of accuracy to assure a basis for the satisfactory measurement of earnings.

Contract Costs

.69 Contract costs are accumulated in the same manner as inventory costs and are charged to operations as the related revenue from contracts is recognized. Contract costs generally include all direct costs, such as materials, direct labor, and subcontracts, and indirect costs identifiable with or allocable to the contracts. However, practice varies for certain types of indirect costs considered allocable to contracts, for example, support costs (such as central preparation and processing of job payrolls, billing and collection costs, and bidding and estimating costs).

.70 Authoritative accounting pronouncements require costs to be considered period costs if they cannot be clearly related to production, either directly or by an allocation based on their discernible future benefits.

.71 Income is recognized over the term of the contract under the percentage-of-completion method or is recognized as units are delivered under the units-of-delivery modification and is deferred until performance is substantially complete under the completed-contract method. None of the characteristics peculiar to those methods, however, require accounting for contract costs to deviate in principle from the basic framework established in existing authoritative literature applicable to inventories or business enterprises in general.

.72 A contracting entity should apply the following general principles in accounting for costs of construction-type and those production-type contracts covered by this statement. The principles are consistent with generally accepted accounting principles for inventory and production costs in other areas, and their application requires the exercise of judgment.

a. All direct costs, such as material, labor, and subcontracting costs, should be included in contract costs.

b. Indirect costs allocable to contracts include the costs of indirect labor, contract supervision, tools and equipment, supplies, quality control and inspection, insurance, repairs and maintenance, depreciation and amortization, and, in some circumstances, support costs, such as central preparation and processing of payrolls. For government contractors, other types of costs that are allowable or allocable under pertinent government contract regulations may be allocated to contracts as indirect costs if otherwise allowable under GAAP.[11] Methods of allocating indirect costs should be systematic and rational. They include, for example, allocations based on direct labor costs, direct

---

[11] The AICPA Audit and Accounting Guide *Federal Government Contractors* states, "Practice varies among government contractors concerning the extent to which costs are included in inventory. Some contractors include in inventory all direct costs and only certain indirect costs. . . . Other contractors record as inventory all costs identified with the contract, including an allocation of general and administrative . . . expenses." The guide points out that many accountants believe that the practice of allocating general and administrative expenses to contract costs, which is permitted under the completed-contract method by ARB No. 45, paragraph 10, may appropriately be extended to government contracts because they believe that "costs incurred pursuant to a government contract are associated directly with the contract's revenue, and both should be recognized in the same period." [Footnote revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

labor hours, or a combination of direct labor and material costs. The appropriateness of allocations of indirect costs and of the methods of allocation depend on the circumstances and involve judgment.

c. General and administrative costs ordinarily should be charged to expense as incurred but may be accounted for as contract costs under the completed-contract method of accounting[12] or, in some circumstances, as indirect contract costs by government contractors.[13]

d. Selling costs should be excluded from contract costs and charged to expense as incurred unless they meet the criteria for precontract costs in paragraph .75.

e. Costs under cost-type contracts should be charged to contract costs in conformity with generally accepted accounting principles in the same manner as costs under other types of contracts because unrealistic profit margins may result in circumstances in which reimbursable cost accumulations omit substantial contract costs (with a resulting larger fee) or include substantial unallocable general and administrative costs (with a resulting smaller fee).

f. In computing estimated gross profit or providing for losses on contracts, estimates of cost to complete should reflect all of the types of costs included in contract costs.

g. Inventoriable costs should not be carried at amounts that when added to the estimated cost to complete are greater than the estimated realizable value of the related contracts.

Interest costs should be accounted for in accordance with FASB Statement No. 34, *Capitalization of Interest Cost.*

Precontract Costs

.73 In practice, costs are deferred in anticipation of future contract sales in a variety of circumstances. The costs may consist of (*a*) costs incurred in anticipation of a specific contract that will result in no future benefit unless the contract is obtained (such as the costs of mobilization, engineering, architectural, or other services incurred on the basis of commitments or other indications of interest in negotiating a contract), (*b*) costs incurred for assets to be used in connection with specific anticipated contracts (for example, costs for the purchase of production equipment, materials, or supplies), (*c*) costs incurred to acquire or produce goods in excess of the amounts required under a contract in anticipation of future orders for the same item, and (*d*) learning, start-up, or mobilization costs incurred for anticipated but unidentified contracts.

.74 Learning or start-up costs are sometimes incurred in connection with the performance of a contract or a group of contracts. In some circumstances, follow-on or future contracts for the same goods or services are anticipated. Such costs usually consist of labor, overhead, rework, or other special costs that must be incurred to complete the existing contract or contracts in progress and

---

[12] Paragraph 10 of ARB No. 45, *Long-Term Construction-Type Contracts,* states:

When the completed-contract method is used, it may be appropriate to allocate general and administrative expenses to contract costs rather than to periodic income. This may result in a better matching of costs and revenues than would result from treating such expenses as period cost, particularly in years when no contracts were completed.

[13] See the discussion of the AICPA Audit and Accounting Guide *Federal Government Contractors* in footnote 11. [Footnote revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

are distinguished from research and development costs.[14] A direct relationship between such costs and the anticipated future contracts is often difficult to establish, and the receipt of future contracts often cannot reasonably be anticipated.

.75 The division recommends the following accounting for precontract costs:

a. Costs that are incurred for a specific anticipated contract and that will result in no future benefits unless the contract is obtained should not be included in contract costs or inventory before the receipt of the contract. However, such costs may be otherwise deferred, subject to evaluation of their probable recoverability, but only if the costs can be directly associated with a specific anticipated contract and if their recoverability from that contract is probable.[‡]

b. Costs incurred for assets, such as costs for the purchase of materials, production equipment, or supplies, that are expected to be used in connection with anticipated contracts may be deferred outside the contract cost or inventory classification if their recovery from future contract revenue or from other dispositions of the assets is probable.

c. Costs incurred to acquire or produce goods in excess of the amounts required for an existing contract in anticipation of future orders for the same items may be treated as inventory if their recovery is probable.

d. Learning or start-up costs incurred in connection with existing contracts and in anticipation of follow-on or future contracts for the same goods or services should be charged to existing contracts.[15]

e. Costs appropriately deferred in anticipation of a contract should be included in contract costs on the receipt of the anticipated contract.

f. Costs related to anticipated contracts that are charged to expenses as incurred because their recovery is not considered probable should not be reinstated by a credit to income on the subsequent receipt of the contract.

Cost Adjustments Arising From Back Charges

.76 Back charges are billings for work performed or costs incurred by one party that, in accordance with the agreement, should have been performed or incurred by the party to whom billed. These frequently are disputed items. For example, owners bill back charges to general contractors, and general contractors bill back charges to subcontractors. Examples of back charges include charges for cleanup work and charges for a subcontractor's use of a general contractor's equipment.

.77 A common practice is to net back charges in the estimating process. The division recommends the following procedures in accounting for back charges:

- Back charges to others should be recorded as receivables and, to the extent considered collectible, should be applied to reduce contract costs.

---

[14] FASB Statement No. 2, *Accounting for Research and Development Costs,* requires that research and development costs be charged to expense when incurred.

[‡] SOP 98-5, *Reporting on the Costs of Start-Up Activities*, amends this SOP by requiring precontract costs that are start-up activities to be expensed as incurred if they are determined to be within the scope of SOP 98-5. [Footnote revised, July 2002, to reflect conforming changes necessary due to the issuance of Statement of Position 98-5.]

[15] [Footnote deleted, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

However, if the billed party disputes the propriety or amount of the charge, the back charge is in effect a claim, and the criteria for recording claims apply.

- Back charges from others should be recorded as payables and as additional contract costs to the extent that it is probable that the amounts will be paid.

Estimated Cost to Complete

.78 The estimated cost to complete, the other component of total estimated contract cost, is a significant variable in the process of determining income earned and is thus a significant factor in accounting for contracts. The latest estimate may be determined in a variety of ways and may be the same as the original estimate. Practices in estimating total contract costs vary, and guidance is needed in this area because of the impact of those practices on accounting. The following practices should be followed:

a. Systematic and consistent procedures that are correlated with the cost accounting system should be used to provide a basis for periodically comparing actual and estimated costs.

b. In estimating total contract costs, the quantities and prices of all significant elements of cost should be identified.

c. The estimating procedures should provide that estimated cost to complete includes the same elements of cost that are included in actual accumulated costs; also, those elements should reflect expected price increases.

d. The effects of future wage and price escalations should be taken into account in cost estimates, especially when the contract performance will be carried out over a significant period of time. Escalation provisions should not be blanket overall provisions but should cover labor, materials, and indirect costs based on percentages or amounts that take into consideration experience and other pertinent data.

e. Estimates of cost to complete should be reviewed periodically and revised as appropriate to reflect new information.

Computation of Income Earned for a Period Under the Percentage-of-Completion Method

.79 Total estimated gross profit on a contract, the difference between total estimated contract revenue and total estimated contract cost, must be determined before the amount earned on the contract for a period can be determined. The portion of total revenue earned or the total amount of gross profit earned to date is determined by the measurement of the extent of progress toward completion using one of the methods discussed in paragraphs .44 to .51 of this statement. The computation of income earned for a period involves a determination of the portion of total estimated contract revenue that has been earned to date (earned revenue) and the portion of total estimated contract cost related to that revenue (cost of earned revenue). Two different approaches to determining earned revenue and cost of earned revenue are widely used in practice. Either of the alternative approaches may be used on a consistent basis.[16]

---

[16] The use of Alternative A in the discussion and in the presentation of some of the provisions of this statement is for convenience and consistency and is not intended to imply that Alternative A is the preferred approach.

Alternative A

.80 The advocates of this method believe that the portion of total estimated contract revenue earned to date should be determined by the measurement of the extent of progress toward completion and that, in accordance with the matching concept, the measurement of extent of progress toward completion should also be used to allocate a portion of total estimated contract cost to the revenue recognized for the period. They believe that this procedure results in reporting earned revenue, cost of earned revenue, and gross profit consistent with the measurement of contract performance. Moreover, they believe that, if there are no changes in estimates during the performance of a contract, the procedure also results in a consistent gross profit percentage from period to period. However, they recognize that a consistent gross profit percentage is rarely obtained in practice because of the need to be responsive in the accounting process to changes in estimates of contract revenues, costs, earned revenue, and gross profits. In accordance with this procedure, earned revenue, cost of earned revenue, and gross profit should be determined as follows:

a. *Earned Revenue* to date should be computed by multiplying total estimated contract revenue by the percentage of completion (as determined by one of the acceptable methods of measuring the extent of progress toward completion). The excess of the amount over the earned revenue reported in prior periods is the earned revenue that should be recognized in the income statement for the current period.

b. *Cost of Earned Revenue* for the period should be computed in a similar manner. Cost of earned revenue to date should be computed by multiplying total estimated contract cost by the percentage of completion on the contract. The excess of that amount over the cost of earned revenue reported in prior periods is the cost of earned revenue that should be recognized in the income statement for the current period. The difference between total cost incurred to date and cost of earned revenue to date should be reported on the balance sheet.

c. *Gross Profit* on a contract for a period is the excess of earned revenue over the cost of earned revenue.

Alternative B

.81 The advocates of this method believe that the measurement of the extent of progress toward completion should be used to determine the amount of gross profit earned to date and that the earned revenue to date is the sum of the total cost incurred on the contract and the amount of gross profit earned. They believe that the cost of work performed on a contract for a period, including materials, labor, subcontractors, and other costs, should be the cost of earned revenue for the period. They believe that the amount of costs incurred can be objectively determined, does not depend on estimates, and should be the amount that enters into the accounting determination of income earned. They recognize that, under the procedure that they advocate, gross profit percentages will vary from period to period unless the cost-to-cost method is used to measure the extent of progress toward completion. However, they believe that varying profit percentages are consistent with the existing authoritative literature when costs incurred do not provide an appropriate measure of the extent of progress toward completion. In accordance with Alternative B, earned revenue, cost of earned revenue, and gross profit are determined as follows:

a. *Earned Revenue* is the amount of gross profit earned on a contract for a period plus the costs incurred on the contract during the period.

b. *Cost of Earned Revenue* is the cost incurred during the period, excluding the cost of materials not unique to a contract that have not been used for the contract and costs incurred for subcontracted work that is still to be performed.

c. *Gross Profit* earned on a contract should be computed by multiplying the total estimated gross profit on the contract by the percentage of completion (as determined by one of the acceptable methods of measuring extent of progress toward completion). The excess of that amount over the amount of gross profit reported in prior periods is the earned gross profit that should be recognized in the income statement for the current period.

Revised Estimates

.82 Adjustments to the original estimates of the total contract revenue, total contract cost, or extent of progress toward completion are often required as work progresses under the contract and as experience is gained, even though the scope of the work required under the contract may not change. The nature of accounting for contracts is such that refinements of the estimating process for changing conditions and new developments are continuous and characteristic of the process. Additional information that enhances and refines the estimating process is often obtained after the balance sheet date but before the issuance of the financial statements; such information should result in an adjustment of the unissued financial statements. Events occurring after the date of the financial statements that are outside the normal exposure and risk aspects of the contract should not be considered refinements of the estimating process of the prior year but should be disclosed as subsequent events.

.83 Revisions in revenue, cost, and profit estimates or in measurements of the extent of progress toward completion are changes in accounting estimates and, as such, should be accounted for in accordance with FASB Statement No. 154, *Accounting Changes and Error Corrections—a replacement of APB Opinion No. 20 and FASB Statement No. 3*.[17] A change in accounting estimate shall be accounted for in (*a*) the period of change if the change affects that period only or (*b*) the period of change and future periods if the change affects both. A change in accounting estimate shall not be accounted for by restating or retrospectively adjusting amounts reported in financial statements of prior periods or by reporting pro forma amounts for prior periods. FASB Statement No. 154 carries forward the following two alternative methods of accounting for changes in accounting estimates identified in APB Opinion No. 20, *Accounting Changes*:

- *Cumulative Catch-up.* Account for the change in estimate in the period of change so that the balance sheet at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.
- *Reallocation.* Account for the effect of the change ratably over the period of change in estimate and subsequent periods.

---

[17] [Footnote deleted, June 2007, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Although both methods are used in practice to account for changes in estimates of total revenue, total costs, or extent of progress under the percentage-of-completion method, the cumulative catch-up method is more widely used. Accordingly, to narrow the areas of differences in practice, such changes should be accounted for by the cumulative catch-up method. [Paragraph revised, June 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 154.]

.84 Although estimating is a continuous and normal process for contractors, FASB Statement No. 154, paragraph 22 requires disclosure of the effect of significant revisions if the effect is material.[18] The effect on income from continuing operations, net income (or other appropriate captions of changes in the applicable net assets or performance indicator), and any related per-share amounts of the current period shall be disclosed for a change in estimate that affects several future periods. If a change in estimate does not have a material effect in the period of change but is reasonably certain to have a material effect in later periods, a description of that change in estimate shall be disclosed whenever the financial statements of the period of change are presented. [Paragraph revised, June 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 154.]

Provisions for Anticipated Losses on Contracts

.85 When the current estimates of total contract revenue and contract cost indicate a loss, a provision for the entire loss on the contract should be made. Provisions for losses should be made in the period in which they become evident under either the percentage-of-completion method or the completed-contract method. If a group of contracts are combined based on the criteria in paragraph .37 or .38, they should be treated as a unit in determining the necessity for a provision for a loss. If contracts are segmented based on the criteria in paragraph .40, .41, or .42 of this statement, the individual segments should be considered separately in determining the need for a provision for a loss.

.86 Losses on cost-type contracts, although less frequent, may arise if, for example, a contract provides for guaranteed maximum reimbursable costs or target penalties. In recognizing losses for accounting purposes, the contractor's normal cost accounting methods should be used in determining the total cost overrun on the contract, and losses should include provisions for performance penalties.

.87 The costs used in arriving at the estimated loss on a contract should include all costs of the type allocable to contracts under paragraph .72 of this statement. Other factors that should be considered in arriving at the projected loss on a contract include target penalties and rewards, nonreimbursable costs on cost-plus contracts, change orders, and potential price redeterminations. In circumstances in which general and administrative expenses are treated as contract costs under the completed-contract method of accounting, the estimated loss should include the same types of general and administrative expenses.

.88 The provision for loss arises because estimated cost for the contract exceeds estimated revenue. Consequently, the provision for loss should be accounted for in the income statement as an additional contract cost rather

---

[18] [Footnote deleted, June 2007, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

than as a reduction of contract revenue, which is a function of contract price, not cost. Unless the provision is material in amount or unusual or infrequent in nature, the provision should be included in contract cost and need not be shown separately in the income statement. If it is shown separately, it should be shown as a component of the cost included in the computation of gross profit.

.89 Provisions for losses on contracts should be shown separately as liabilities on the balance sheet, if significant, except in circumstances in which related costs are accumulated on the balance sheet, in which case the provisions may be deducted from the related accumulated costs. In a classified balance sheet, a provision shown as a liability should be shown as a current liability.

Transition

.90 An accounting change from the completed-contract method or from the percentage-of-completion method to conform to the recommendations of this statement of position should be made retrospectively by restating the financial statements of prior periods. The restatement should be made on the basis of current information if historical information is not available. If the information for restatement of prior periods is not available on either a historical or current basis, financial statements and summaries should be restated for as many consecutive prior periods preceding the transition date of this statement as is practicable, and the cumulative effect on the retained earnings at the beginning of the earliest period restated (or at the beginning of the period in which the statement is first applied if it is not practicable to restate any prior periods) should be included in determining net income for that period (see paragraphs 8 and 9 of FASB Statement No. 154). [Paragraph revised, June 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 154.]

.91 Accounting changes to conform to the recommendations of this statement of position, other than those stated in paragraph .90, should be made prospectively for contracting transactions, new contracts, and contract revisions entered into on or after the effective date of this statement. The division recommends the application of the provisions of this statement for fiscal years, and interim periods in such fiscal years, beginning after June 30, 1981. The division encourages earlier application of this statement, including retroactive application to all contracts regardless of when they were entered into. Disclosures should be made in the financial statements in the period of change in accordance with paragraph 17 of FASB Statement No. 154. [Paragraph revised, June 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 154.]

Appendix B

Types of Contracts

Four basic types of contracts are distinguished on the basis of their pricing arrangements in paragraph .15 of this statement: (*a*) fixed-price or lump-sum contracts, (*b*) time-and-material contracts, (*c*) cost-type (including cost-plus) contracts, and (*d*) unit-price contracts. This appendix describes the basic types of contracts in greater detail and briefly describes common variations of each basic type.

Fixed-Price or Lump-Sum Contracts

A fixed-price or lump-sum contract is a contract in which the price is not usually subject to adjustment because of costs incurred by the contractor. Common variations of fixed-price contracts are:

1. *Firm fixed-price contract*—A contract in which the price is not subject to any adjustment by reason of the cost experience of the contractor or his performance under the contract.
2. *Fixed-price contract with economic price adjustment*—A contract which provides for upward or downward revision of contract price upon the occurrence of specifically defined contingencies, such as increases or decreases in material prices or labor wage rates.
3. *Fixed-price contract providing for prospective periodic redetermination of price*—A contract which provides a firm fixed-price for an initial number of unit deliveries or for an initial period of performance and for prospective price redeterminations either upward or downward at stated intervals during the remaining period of performance under the contract.
4. *Fixed-price contract providing for retroactive redetermination of price*—A contract which provides for a ceiling price and retroactive price redetermination (within the ceiling price) after the completion of the contract, based on costs incurred, with consideration being given to management ingenuity and effectiveness during performance.
5. *Fixed-price contract providing for firm target cost incentives*—A contract which provides at the outset for a firm target cost, a firm target profit, a price ceiling (but not a profit ceiling or floor), and a formula (based on the relationship which final negotiated total cost bears to total target cost) for establishing final profit and price.
6. *Fixed-price contract providing for successive target cost incentives*—A contract which provides at the outset for an initial target cost, an initial target profit, a price ceiling, a formula for subsequently fixing the firm target profit (within a ceiling and a floor established along with the formula, at the outset), and a production point at which the formula will be applied.
7. *Fixed-price contract providing for performance incentives*—A contract which incorporates an incentive to the contractor to surpass stated performance targets by providing for increases in the profit to the extent that such targets are surpassed and for decreases to the extent that such targets are not met.

8. *Fixed-price level-of-effort term contract*—A contract which usually calls for investigation or study in a specific research and development area. It obligates the contractor to devote a specified level of effort over a stated period of time for a fixed dollar amount.[1]

Time-and-Material Contracts

Time-and-material contracts are contracts that generally provide for payments to the contractor on the basis of direct labor hours at fixed hourly rates (that cover the cost of direct labor and indirect expenses and profit) and cost of materials or other specified costs. Common variations of time and material contracts are:

1. Time at marked-up rate.
2. Time at marked-up rate, material at cost.
3. Time and material at marked-up rates.
4. Guaranteed maximum cost—labor only or labor and material.

Cost-Type Contracts

Cost-type contracts provide for reimbursement of allowable or otherwise defined costs incurred plus a fee that represents profit. Cost-type contracts usually only require that the contractor use his best efforts to accomplish the scope of the work within some specified time and some stated dollar limitation. Common variations of cost-plus contracts are

1. *Cost-sharing contract*—A contract under which the contractor is reimbursed only for an agreed portion of costs and under which no provision is made for a fee.
2. *Cost-without-fee contract*—A contract under which the contractor is reimbursed for costs with no provision for a fee.
3. *Cost-plus-fixed-fee contract*—A contract under which the contractor is reimbursed for costs plus the provision for a fixed fee.
4. *Cost-plus-award-fee contract*—A contract under which the contractor is reimbursed for costs plus a fee consisting of two parts: (*a*) a fixed amount which does not vary with performance and (*b*) an award amount based on performance in areas such as quality, timeliness, ingenuity, and cost-effectiveness. The amount of award fee is based upon a subjective evaluation by the government of the contractor's performance judged in light of criteria set forth in the contract.
5. *Cost-plus-incentive-fee contract (Incentive based on cost)*—A contract under which the contractor is reimbursed for costs plus a fee which is adjusted by formula in accordance with the relationship which total allowable costs bear to target cost. At the outset there is negotiated a target cost, a target fee, a minimum and maximum fee, and the adjustment formula.

---

[1] AICPA Audit and Accounting Guide *Federal Government Contractors*, chapter 1. [Footnote revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

6. *Cost-plus-incentive-fee contract (Incentive based on performance)*—A contract under which a contractor is reimbursed for costs plus an incentive to surpass stated performance targets by providing for increases in the fee to the extent that such targets are surpassed and for decreases to the extent that such targets are not met.[2]

Unit-Price Contracts

Unit-price contracts are contracts under which the contractor is paid a specified amount for every unit of work performed. A unit-price contract is essentially a fixed-price contract with the only variable being units of work performed. Variations in unit-price contracts include the same type of variations as fixed-price contracts. A unit-price contract is normally awarded on the basis of a total price that is the sum of the product of the specified units and unit prices. The method of determining total contract price may give rise to unbalanced unit prices because units to be delivered early in the contract may be assigned higher unit prices than those to be delivered as the work under the contract progresses.

Statement of Position 82-1 Accounting and Financial Reporting for Personal Financial Statements

October 1, 1982

[Amendment to AICPA Industry Audit Guide *Audits of Personal Financial Statements*]

NOTE

This statement of position significantly amends the recommendations on accounting principles in the AICPA Industry Audit Guide, *Audits of Personal Financial Statements* (1968), for personal financial statements dated June 30, 1983, or after.

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Introduction

.01 This statement of position deals with the preparation and presentation of personal financial statements, that is, financial statements of individuals or groups of related individuals (families). Personal financial statements are prepared for individuals either to formally organize and plan their financial affairs in general or for specific purposes, such as obtaining of credit, income tax planning, retirement planning, gift and estate planning, or public disclosure of their financial affairs. Users of personal financial statements rely on them in determining whether to grant credit, in assessing the financial activities of individuals, in assessing the financial affairs of public officials and candidates for public office, and for similar purposes.

.02 The 1968 AICPA Industry Audit Guide, *Audits of Personal Financial Statements,* supported historical cost as the primary basis of measurement for personal financial statements and recommended the presentation of estimated current values as additional information. The preface to that guide stated that "generally accepted accounting principles and auditing standards developed for commercial enterprises are applicable in general to personal financial statements." However, the increasing use of personal financial statements and experience with the use of the guide suggested the need to reassess those conclusions in light of the purposes for which personal financial statements are prepared, the users to whom they are directed, and the ways in which they are used. This statement of position is the result of that reassessment; it supersedes the accounting provisions of the 1968 AICPA Industry Audit Guide, *Audits of Personal Financial Statements,* in accordance with the transition and effective date set forth in paragraph .33 of this statement of position.

Basis of Presentation of Personal Financial Statements

.03 The primary focus of personal financial statements is a person's assets and liabilities, and the primary users of personal financial statements normally consider estimated current value information to be more relevant for their decisions than historical cost information. Lenders require estimated current value information to assess collateral, and most personal loan applications require estimated current value information. Estimated current values are required for estate, gift, and income tax planning, and estimated current value information about assets is often required in federal and state filings of candidates for public office.

.04 The accounting standards division therefore believes personal financial statements should present assets at their estimated current values and liabilities at their estimated current amounts at the date of the financial statements. Paragraph .12 of this statement of position defines estimated current values of assets. Paragraph .27 defines estimated current amounts of liabilities. This statement of position explains how the estimated current values of assets and the estimated current amounts of liabilities should be determined and applied in the preparation and presentation of personal financial statements.[1]

Presentation of Personal Financial Statements

The Reporting Entity

.05 Personal financial statements may be prepared for an individual, a husband and wife, or a family.

The Form of the Statements

.06 Personal financial statements consist of—

a. *A statement of financial condition.* This is the basic personal financial statement. It presents the estimated current values of assets, the estimated current amounts of liabilities, estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases, and net worth at a specified date. The term *net worth* should be used in the statement to designate the difference between total assets and total liabilities, after deducting estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases.

---

[1] The division recognizes that users of personal financial statements may sometimes request certain historical cost information. This statement of position does not prohibit supplemental presentation of such information.

b. *A statement of changes in net worth.* This statement presents the major sources of increases and decreases in net worth. It should present the major sources of increases in net worth: income, increases in the estimated current values of assets, decreases in the estimated current amounts of liabilities, and decreases in estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases. It should present the major sources of decreases in net worth: expenses, decreases in the estimated current values of assets, increases in the estimated current amounts of liabilities, and increases in estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases. One statement combining income and other changes is desirable because of the mix of business and personal items in personal financial statements. The presentation of a statement of changes in net worth is optional.

c. *Comparative financial statements.* The presentation of comparative financial statements of the current period and one or more prior periods may sometimes be desirable. Such a presentation is more informative than the presentation of financial statements for only one period. The presentation of comparative financial statements is optional.

Illustrative financial statements are presented in appendix A [paragraph .34] to this statement of position.

The Methods of Presentation

.07 Assets and liabilities and changes in them should be recognized on the accrual basis, not on the cash basis.

.08 The most useful and readily understood presentation of assets and liabilities in personal financial statements is by order of liquidity and maturity, without classification as current and noncurrent, since the concept of working capital applied to business enterprises is inappropriate for personal financial statements.

.09 If personal financial statements are prepared for one of a group of joint owners of assets, the statements should include only the person's interest as a beneficial owner, as determined under the property laws of the state having jurisdiction. If property is held in joint tenancy, as community property, or through a similar joint ownership arrangement, the legal status of the separate equities of the parties may not be evident. In that case, the person may require legal advice to determine whether an interest in the property should be included among the person's assets and, if so, the proper allocation of the equity in the property under the applicable state laws.

.10 Business interests that constitute a large part of a person's total assets should be shown separately from other investments. The estimated current value of an investment in a separate entity, such as a closely held corporation, a partnership, or a sole proprietorship, should be shown in one amount as an investment if the entity is marketable as a going concern. Assets and liabilities of the separate entity should not be combined with similar personal items.

.11 The estimated current values of assets and the estimated current amounts of liabilities of limited business activities not conducted in a separate business entity, such as an investment in real estate and a related mortgage, should be presented as separate amounts, particularly if a large portion of the liabilities may be satisfied with funds from sources unrelated to the investment.

Guidelines for Determining the Estimated Current Values of Assets and the Estimated Current Amounts of Liabilities

General

.12 Personal financial statements should present assets at their estimated current values and liabilities at their estimated current amounts. The estimated current value of an asset in personal financial statements is the amount at which the item could be exchanged between a buyer and seller, each of whom is well informed and willing, and neither of whom is compelled to buy or sell. Costs of disposal, such as commissions, if material, should be considered in determining estimated current values.[2] The division recognizes that the estimated current values of some assets may be difficult to determine and the cost of obtaining estimated current values of some assets directly may exceed the benefits of doing so; therefore, the division recommends that judgment be exercised in determining estimated current values.

.13 Recent transactions involving similar assets and liabilities in similar circumstances ordinarily provide a satisfactory basis for determining the estimated current value of an asset and the estimated current amount of a liability. If recent sales information is unavailable, other methods that may be used include the capitalization of past or prospective earnings, the use of liquidation values, the adjustment of historical cost based on changes in a specific price index, the use of appraisals, or the use of the discounted amounts of projected cash receipts and payments.

.14 In determining the estimated current values of some assets (for example, works of art, jewelry, restricted securities, investments in closely held businesses, and real estate), the person may need to consult a specialist.

.15 The methods used to determine the estimated current values of assets and the estimated current amounts of liabilities should be followed consistently from period to period unless the facts and circumstances dictate a change to different methods.

Receivables

.16 Personal financial statements should present receivables at the discounted amounts of cash the person estimates will be collected, using appropriate interest rates at the date of the financial statements.

Marketable Securities

.17 Marketable securities include both debt and equity securities for which market quotations are available. The estimated current values of such securities are their quoted market prices. The estimated current values of securities traded on securities exchanges are the closing prices of the securities

---

[2] Paragraph .27 defines the estimated current amount of a liability.

on the date of the financial statements (valuation date) if the securities were traded on that date. If the securities were not traded on that date but published bid and asked prices are available, the estimated current values of the securities should be within the range of those prices.

.18 For securities traded in the over-the-counter market, quotations of bid and asked prices are available from several sources, including the financial press, various quotation publications and financial reporting services, and individual broker-dealers. For those securities, the mean of the bid prices, of the bid and asked prices, or of the prices of a representative selection of broker-dealers quoting the securities may be used as the estimated current values.

.19 An investor may hold a large block of the equity securities of a company. A large block of stock might not be salable at the price at which a small number of shares were recently sold or quoted. Further, a large minority interest may be difficult to sell despite isolated sales of a small number of shares. However, a controlling interest may be proportionately more valuable than minority interests that were sold. Consideration of those factors may require adjustments to the price at which the security recently sold. Moreover, restrictions on the transfer of a security may also suggest the need to adjust the recent market price in determining the estimated current value.[3]

Options

.20 If published prices of options are unavailable, their estimated current values should be determined on the basis of the values of the assets subject to option, considering such factors as the exercise prices and length of the option periods.

Investment in Life Insurance

.21 The estimated current value of an investment in life insurance is the cash value of the policy less the amount of any loans against it. The face amount of life insurance the individuals own should be disclosed.

Investments in Closely Held Businesses

.22 The division recognizes that the estimated current values of investments in closely held businesses usually are difficult to determine. The problems relate to investments in closely held businesses in any form, including sole proprietorships, general and limited partnerships, and corporations. As previously stated, only the net investment in a business enterprise (not its assets and liabilities) should be presented in the statement of financial condition. The net investment should be presented at its estimated current value at the date of the financial statement. Since there is usually no established ready market for such an investment, judgment should be exercised in determining the estimated current value of the investment.

.23 There is no one generally accepted procedure for determining the estimated current value of an investment in a closely held business. Several procedures or combinations of procedures may be used to determine the estimated current value of a closely held business, including a multiple of earnings, liquidation value, reproduction value, appraisals, discounted amounts of projected cash receipts and payments, or adjustments of book value or cost of the

---

[3] For further discussion on valuing marketable securities, see the section in AICPA Audit and Accounting Guide *Investment Companies* titled *Methods of Valuing Investments*, paragraphs 2.28–.40.

person's share of the equity of the business.[4] The owner of an interest in a closely held business may have entered into a buy-sell agreement that specifies the amount (or the basis of determining the amount) to be received in the event of withdrawal, retirement, or sale. If such an agreement exists, it should be considered, but it does not necessarily determine estimated current value. Whatever procedure is used, the objective should be to approximate the amount at which the investment could be exchanged between a buyer and a seller, each of whom is well informed and willing, and neither of whom is compelled to buy or sell.

Real Estate (Including Leaseholds)

.24 Investments in real estate (including leaseholds) should be presented in personal financial statements at their estimated current values. Information that may be used in determining their estimated current values includes—

a. Sales of similar property in similar circumstances.

b. The discounted amounts of projected cash receipts and payments relating to the property or the net realizable value of the property, based on planned courses of action, including leaseholds whose current rental value exceeds the rent in the lease.

c. Appraisals based on estimates of selling prices and selling costs obtained from independent real estate agents or brokers familiar with similar properties in similar locations.

d. Appraisals used to obtain financing.

e. Assessed value for property taxes, including consideration of the basis for such assessments and their relationship to market values in the area.

Intangible Assets

.25 Intangible assets should be presented at the discounted amounts of projected cash receipts and payments arising from the planned use or sale of the assets if both the amounts and timing can be reasonably estimated. For example, a record of receipts under a royalty agreement may provide sufficient information to determine its estimated current value. The cost of a purchased intangible should be used if no other information is available.

Future Interests and Similar Assets

.26 Nonforfeitable rights to receive future sums that have all the following characteristics should be presented as assets at their discounted amounts:

- The rights are for fixed or determinable amounts.
- The rights are not contingent on the holder's life expectancy or the occurrence of a particular event, such as disability or death.
- The rights do not require future performance of service by the holder.

Nonforfeitable rights that may have those characteristics include—

- Guaranteed minimum portions of pensions.

[4] The book value or cost of a person's share of the equity of a business adjusted for appraisals of specific assets, such as real estate or equipment, is sometimes used as the estimated current value.

- Vested interests in pension or profit sharing plans.
- Deferred compensation contracts.
- Beneficial interests in trusts.
- Remainder interests in property subject to life estates.
- Annuities.
- Fixed amounts of alimony for a definite future period.

Payables and Other Liabilities

.27 Personal financial statements should present payables and other liabilities at the discounted amounts of cash to be paid. The discount rate should be the rate implicit in the transaction in which the debt was incurred. If, however, the debtor is able to discharge the debt currently at a lower amount, the debt should be presented at the lower amount.[5]

Noncancellable Commitments

.28 Noncancellable commitments to pay future sums that have all the following characteristics should be presented as liabilities at their discounted amounts:

- The commitments are for fixed or determinable amounts.
- The commitments are not contingent on others' life expectancies or the occurrence of a particular event, such as disability or death.
- The commitments do not require future performance of service by others.

Noncancellable commitments that may have those characteristics include fixed amounts of alimony for a definite future period and charitable pledges.

Income Taxes Payable

.29 The liability for income taxes payable should include unpaid income taxes for completed tax years and an estimated amount for income taxes accrued for the elapsed portion of the current tax year to the date of the financial statements. That estimate should be based on the relationship of taxable income earned to date to total estimated taxable income for the year, net of taxes withheld or paid with estimated income tax returns.

Estimated Income Taxes on the Differences Between the Estimated Current Values of Assets and the Estimated Current Amounts of Liabilities and Their Tax Bases

.30 A provision should be made for estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases, including consideration of negative tax bases of tax shelters, if any. The provision should be computed as if the estimated current values of all assets had been realized and the estimated current amounts of all liabilities had been liquidated on the statement

---

[5] For a further discussion of the setting of a discount rate for payables and other liabilities, see APB Opinion 21, *Interest on Receivables and Payables,* paragraph 13.

date, using applicable income tax laws and regulations, considering recapture provisions and available carryovers. The estimated income taxes should be presented between liabilities and net worth in the statement of financial condition. The methods and assumptions used to compute the estimated income taxes should be fully disclosed. Appendix B [paragraph .35] to this statement of position illustrates how to compute the provision.

Financial Statement Disclosures

.31 Personal financial statements should include sufficient disclosures to make the statements adequately informative. The disclosures may be made in the body of the financial statements or in the notes. The following enumeration is intended not to be all-inclusive but simply indicative of the nature and type of information that ordinarily should be disclosed:

a. A clear indication of the individuals covered by the financial statements

b. That assets are presented at their estimated current values and liabilities are presented at their estimated current amounts

c. The methods used in determining the estimated current values of major assets and the estimated current amounts of major liabilities or major categories of assets and liabilities, since several methods are available, and changes in methods from one period to the next

d. If assets held jointly by the person and by others are included in the statements, the nature of the joint ownership

e. If the person's investment portfolio is material in relation to his or her other assets and is concentrated in one or a few companies or industries, the names of the companies or industries and the estimated current values of the securities

f. If the person has a material investment in a closely held business, at least the following:

- The name of the company and the person's percentage of ownership
- The nature of the business
- Summarized financial information about assets, liabilities, and results of operations for the most recent year based on the financial statements of the business, including information about the basis of presentation (for example, generally accepted accounting principles, income tax basis, or cash basis) and any significant loss contingencies

g. Descriptions of intangible assets and their estimated useful lives

h. The face amount of life insurance the individuals own

i. Nonforfeitable rights that do not have the characteristics discussed in paragraph .26, for example, pensions based on life expectancy

j. The following tax information:

- The methods and assumptions used to compute the estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases and a statement that the provision will probably differ from the amounts of income taxes that might eventually be paid because those amounts are determined by the timing and the method of disposal, realization, or liquidation and the tax laws and regulations in effect at the time of disposal, realization, or liquidation

- Unused operating loss and capital loss carryforwards
- Other unused deductions and credits, with their expiration periods, if applicable
- The differences between the estimated current values of major assets and the estimated current amounts of major liabilities or categories of assets and liabilities and their tax bases

k. Maturities, interest rates, collateral, and other pertinent details relating to receivables and debt

l. Noncancellable commitments that do not have the characteristics discussed in paragraph .28, for example, operating leases

.32 Generally accepted accounting principles other than those discussed in this statement of position may apply to personal financial statements. For example, FASB Statement No. 5, *Accounting for Contingencies,* and related amendments and interpretations, provide guidance on accounting for contingencies, and FASB Statement No. 57, *Related Party Disclosures,* provides guidance on related-party disclosures.

Transition and Effective Date

.33 The accounting standards division recommends that the provisions of this statement of position should apply to personal financial statements dated June 30, 1983, or after. Comparative statements of prior periods should be restated to comply with the provisions of this statement of position.

.34

Appendix A

Illustrative Financial Statements

James and Jane Person
Statements of Financial Condition
December 31, 19X3 and 19X2

	December 31,	
	19X3	*19X2*
Assets		
Cash	$ 3,700	$ 15,600
Bonus receivable	20,000	10,000
Investments		
Marketable securities (Note 2)	160,500	140,700
Stock options (Note 3)	28,000	24,000
Kenbruce Associates (Note 4)	48,000	42,000
Davekar Company, Inc. (Note 5)	550,000	475,000
Vested interest in deferred profit sharing plan	111,400	98,900
Remainder interest in testamentary trust (Note 6)	171,900	128,800
Cash value of life insurance ($43,600 and $42,900), less loans payable to insurance companies ($38,100 and $37,700) (Note 7)	5,500	5,200
Residence (Note 8)	190,000	180,000
Personal effects (excluding jewelry) (Note 9)	55,000	50,000
Jewelry (Note 9)	40,000	36,500
	$1,384,000	$1,206,700

	December 31, 19X3	December 31, 19X2
Liabilities		
Income taxes—current year balance	$ 8,800	$ 400
Demand 10.5 % note payable to bank	25,000	26,000
Mortgage payable (Note 10)	98,200	99,000
Contingent liabilities (Note 11)		
	132,000	125,400
Estimated income taxes on the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases (Note 12)	239,000	160,000
Net worth	1,013,000	921,300
	$ 1,384,000	$ 1,206,700

Statements of Changes in Net Worth
For the Years Ended December 31, 19X3 and 19X2

	Year ended December 31,	
	19X3	*19X2*
Realized increases in net worth		
Salary and bonus	$ 95,000	$ 85,000
Dividends and interest income	2,300	1,800
Distribution from limited partnership	5,000	4,000
Gains on sales of marketable securities	1,000	500
	103,300	91,300
Realized decreases in net worth		
Income taxes	26,000	22,000
Interest expense	13,000	14,000
Real estate taxes	4,000	3,000
Personal expenditures	36,700	32,500
	79,700	71,500
Net realized increase in net worth	23,600	19,800

	Year ended December 31,	
	19X3	19X2
Unrealized increases in net worth		
Marketable securities (net of realized gains on securities sold)	$ 3,000	$ 500
Stock options	4,000	500
Davekar Company, Inc.	75,000	25,000
Kenbruce Associates	6,000	
Deferred profit sharing plan	12,500	9,500
Remainder interest in testamentary trust	43,100	25,000
Jewelry	3,500	
	147,100	60,500
Unrealized decrease in net worth		
Estimated income taxes in the differences between the estimated current values of assets and the estimated current amounts of liabilities and their tax bases	79,000	22,000
Net unrealized increase in net worth	68,100	38,500
Net increase in net worth	91,700	58,300
Net worth at the beginning of year	921,300	863,000
Net worth at the end of year	$ 1,013,000	$ 921,300

The accompanying notes are an integral part of these financial statements.

James and Jane Person

Notes to Financial Statements

Note 1. The accompanying financial statements include the assets and liabilities of James and Jane Person. Assets are stated at their estimated current values, and liabilities at their estimated current amounts.

Note 2. The estimated current values of marketable securities are either (*a*) their quoted closing prices or (*b*) for securities not traded on the financial statement date, amounts that fall within the range of quoted bid and asked prices.

Marketable securities consist of the following:

	December 31, 19X3		December 31, 19X2	
	Number of shares or bonds	*Estimated current values*	*Number of shares or bonds*	*Estimated current values*
Stocks				
Jaiven Jewels, Inc.	1,500	$ 98,813		
McRae Motors, Inc.	800	11,000	600	$ 4,750
Parker Sisters, Inc.	400	13,875	200	5,200
Rosenfield Rug Co.			1,200	96,000
Rubin Paint Company	300	9,750	100	2,875
Weiss Potato Chips, Inc.	200	20,337	300	25,075
		153,775		133,900
Bonds				
Jackson Van Lines, Ltd. (12 % due 7/1/X9)	5	5,225	5	5,100
United Garvey, Inc. (7% due 11/15/X6)	2	1,500	2	1,700
		6,725		6,800
		$160,500		$140,700

Note 3. Jane Person owns options to acquire 4,000 shares of stock of Winner Corp. at an option price of $5 per share. The option expires on June 30, 19X5. The estimated current value is its published selling price.

Note 4. The investment in Kenbruce Associates is an 8% interest in a real estate limited partnership. The estimated current value is determined by the projected annual cash receipts and payments capitalized at a 12% rate.

Note 5. James Person owns 50% of the common stock of Davekar Company, Inc., a retail mail order business. The estimated current value of the investment is determined by the provisions of a shareholders' agreement, which restricts the sale of the stock and, under certain conditions, requires the company to repurchase the stock based on a price equal to the book value of the net assets plus an agreed amount for goodwill. At December 31, 19X3, the agreed amount for goodwill was $112,500, and at December 31, 19X2, it was $ 100,000.

A condensed balance sheet of Davekar Company, Inc., prepared in conformity with generally accepted accounting principles, is summarized below:

	December 31, 19X3	December 31, 19X2
Current assets	$ 3,147,000	$ 2,975,000
Plant, property and equipment—net	165,000	145,000
Other assets	120,000	110,000
Total assets	3,432,000	3,230,000
Current liabilities	2,157,000	2,030,000
Long-term liabilities	400,000	450,000
Total liabilities	2,557,000	2,480,000
Equity	875,000	750,000
Total Liabilities and Equity	3,432,000	3,230,000

The sales and net income for 19X3 were $ 10,500,000 and $125,000 and for 19X2 were $9,700,000 and $80,000.

Note 6. Jane Person is the beneficiary of a remainder interest in a testamentary trust under the will of the late Joseph Jones. The amount included in the accompanying statements is her remainder interest in the estimated current value of the trust assets, discounted at 10%.

Note 7. At December 31, 19X3 and 19X2, James Person owned a $300,000 whole life insurance policy.

Note 8. The estimated current value of the residence is its purchase price plus the cost of improvements. The residence was purchased in December 19X1, and improvements were made in 19X2 and 19X3.

Note 9. The estimated current values of personal effects and jewelry are the appraised values of those assets, determined by an independent appraiser for insurance purposes.

Note 10. The mortgage (collateralized by the residence) is payable in monthly installments of $815 a month, including interest at 10% a year through 20Y8.

Note 11. James Person has guaranteed the payment of loans of Davekar Company, Inc., under a $500,000 line of credit. The loan balance was $300,000 at December 31, 19X3, and $400,000 at December 31, 19X2.

Note 12. The estimated current amounts of liabilities at December 31, 19X3, and December 31, 19X2, equaled their tax bases. Estimated income taxes have been provided on the excess of the estimated current values of assets over their tax bases as if the estimated current values of the assets had been realized on the statement date, using applicable tax laws and regulations. The provision will probably differ from the amounts of income taxes that eventually might be paid because those amounts are determined by the timing and the method of disposal or realization and the tax laws and regulations in effect at the time of disposal or realization.

The estimated current values of assets exceeded their tax bases by $850,000 at December 31, 19X3, and by $770,300 at December 31, 19X2. The excess of estimated current values of major assets over their tax bases are—

	December 31,	
	19X3	*19X2*
Investment in Davekar Company, Inc.	$ 430,500	$ 355,500
Vested interest in deferred profit sharing plan	111,400	98,900
Investment in marketable securities	104,100	100,000
Remainder interest in testamentary trust	97,000	53,900

.35

Appendix B

Computing the Excess of the Estimated Current Values of Assets Over Their Tax Bases and the Estimated Income Taxes on the Excess

This appendix relates to the preceding illustrative financial statements of James and Jane Person (appendix A) and illustrates how to compute the excess of the estimated current values of assets over their tax bases and the provision for estimated income taxes on the excess.[1]

The excess or deficit of the estimated current values of major assets or categories of assets over their tax bases should be disclosed.[2] The provision for estimated income taxes should be presented in the statement of financial condition between liabilities and net worth.

The assumptions and the tax basis information used in computing the excess of the estimated current values of assets over their tax bases and the estimated income taxes on the excess depend on the facts, circumstances, tax laws and regulations, and assumptions that apply to the individual or individuals for whom the financial statements are prepared. The facts, circumstances, tax laws and regulations, and assumptions used in the following are illustrative only.

---

[1] The provision for estimated income taxes should also reflect tax consequences that result from differences between the estimated current amounts of liabilities and their tax bases.

[2] Differences between the estimated current amounts of major liabilities or categories of liabilities and their tax bases should also be disclosed.

Description	(A) Estimated current values	(B) Tax bases	Excess of (A) over (B)	Effective income tax rates	Amount of estimated income taxes	Assumptions used
Cash	$ 3,700	$ 3,700	—	—	—	No tax effect.
Bonus receivable	20,000	—	$ 20,000	50 %	$ 10,000	Maximum tax rate.
Investments						
Market securities	160,500	56,400	104,100	36 %	37,500	Weighted average of short-term and long-term capital gain rates based on composition of portfolio.
Stock options	28,000	20,000	8,000	50 %	4,000	Short-term capital gain rate.
Kenbruce Associates	48,000	24,000	24,000	38 %	9,100	Weighted average of short-term and long-term capital gain rates.
Davekar Company, Inc.	550,000	119,500	430,500	20 %	86,100	Long-term capital gain rate.
Vested interest in deferred profit sharing plan	111,400	—	111,400	50 %	55,700	Maximum tax rate.
Remainder interest in testamentary trust	171,900	74,900	97,000	26 %	25,200	Weighted average of short-term and long-term capital gain rates.
Cash value of life insurance	5,500	5,500	—	—	—	No tax effect.
Residence	190,000	190,000	—	—	—	No tax effect.
Personal effects	55,000	30,000	25,000	20 %	5,000	Long-term capital gain rate.
Jewelry	40,000	10,000	30,000	20 %	6,000	Long-term capital gain rate.
	$1,384,000	$ 534,000	$ 850,000[1]		$ 239,000[2]	

[1] The excess or deficit of the estimated current values of major assets or categories of assets over their tax bases should be disclosed.
[2] This amount should be presented in the statement of financial condition between liabilities and net worth.

Section 10,390

Statement of Position 85-3 Accounting by Agricultural Producers and Agricultural Cooperatives

April 30, 1985

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Introduction

.001 This statement discusses accounting by agricultural producers and agricultural cooperatives that intend to present financial statements in conformity with generally accepted accounting principles. The issues discussed are—

- Accounting for inventories by producers
- Accounting for development costs of land, trees and vines, intermediate-life plants, and animals
- Accounting by patrons for product deliveries to cooperatives
- Accounting by cooperatives for products received from patrons
- Accounting for investments in and income from cooperatives

This statement does not apply to personal financial statements of agricultural producers or statements prepared on a comprehensive basis of accounting other than generally accepted accounting principles, for example, the income tax or the cash basis of accounting. This statement also does not apply to growers of timber; growers of pineapple and sugarcane in tropical regions; raisers of animals for competitive sports; or merchants or noncooperative processors of agricultural products that purchase commodities from growers, contract harvesters, or others serving agricultural producers.

Definitions

.002 For purposes of this statement, the following definitions apply.

Advances. Generally used in marketing and pooling cooperatives to denote amounts paid to patrons prior to final settlement; for example, amounts paid to patrons on delivery of crops.

Agricultural cooperatives. See paragraphs .006 through .022.

Agricultural producers. See paragraphs .003 through .005.

Assigned amounts. Amounts used to record products delivered by patrons of a marketing cooperative operating on a pooling basis, and the related liability to patrons if the ultimate amounts to be paid to patrons are determined when the pool is closed. These amounts may be established on the basis of current prices paid by other buyers (sometimes referred to as "field prices"), or they may be established by the cooperative's board of directors. The assigned amounts are sometimes referred to as "established values."

Cash advance method. A method of accounting for inventories of a marketing cooperative operating on a pooling basis. Under this method, inventories are accounted for at the amount of cash advances made to patrons. (This is sometimes referred to as the "cost advance method.")

Commercial production. The point at which production from an orchard, vineyard, or grove first reaches a level that makes operations economically feasible, based on prices normally expected to prevail.

Crop development costs. Costs incurred up to the time crops are produced in commercial quantities, including the costs of land preparation, plants, planting, fertilization, grafting, pruning, equipment use, and irrigation.

Crops. Grains, vegetables, fruits, berries, nuts, and fibers grown by agricultural producers.

Exempt and nonexempt cooperatives. Cooperatives classified according to their federal income tax status. Both types are permitted to deduct from taxable income patronage distributed or allocated on a qualified basis to patrons to the extent that the distributions represent earnings of the cooperative derived from business done with or for the patrons. In addition, cooperatives meeting the requirements of Internal Revenue Code section 521 (exempt cooperatives) are permitted to deduct (1) limited amounts paid as dividends on capital stock and (2) distributions to patrons of income from business done with the U.S. government or its agencies and income from nonpatronage sources.

Farm price method. A method of accounting for inventories at the sales prices in the nearest local market for the quantities that the producer normally sells less the estimated costs of disposition.

Futures contract. A standard and transferable form of contract that binds the seller to deliver to the bearer a standard amount and grade of a commodity to a specific location at a specified time. It usually includes a schedule of premiums and discounts for quality variation.

Growing crop. A field, row, tree, bush, or vine crop before harvest.

Grove. Fruit or nut trees planted in geometric patterns to economically facilitate care of the trees and harvest of the fruit or nuts.

Harvested crop. An agricultural product, gathered but unsold.

Livestock. Registered and commercial cattle, sheep, hogs, horses, poultry, and small animals bred and raised by agricultural producers.

Market order prices. Prices for raw products established by federal or state agencies.

Marketing cooperative. A cooperative that markets the products (crops, livestock, and so on) produced by its patrons.

Member and nonmember (of a cooperative). A member is an owner-patron who is entitled to vote at corporate meetings of a cooperative. A nonmember patron is not entitled to voting privileges. A nonmember patron may or may not be entitled to share in patronage distributions, depending on the articles and bylaws of the cooperative or on other agreements.

Net realizable value. Valuation of inventories at estimated selling prices in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation.

Orchard. Fruit trees planted in geometric patterns to economically facilitate care of the trees and harvest of the fruit.

Patron. Any individual, trust, estate, partnership, corporation, or cooperative with or for whom a cooperative does business on a cooperative basis, whether a member or nonmember of the cooperative association.

Patronage. The amount of business done with a cooperative by one of its patrons. Patronage is measured by either the quantity or value of commodities received from patrons by a marketing cooperative and the quantity or value of the goods and services sold to patrons by a supply cooperative.

Patronage allocations. Patronage earnings distributed, or allocated, to individual patrons on the basis of each patron's proportionate share of total patronage. Such allocations, which include notification to the patron, may be made on a qualified or nonqualified basis.

Patronage earnings. The excess of a cooperative's revenues over its costs arising from transactions done with or for its patrons. Generally a significant portion of those earnings is allocated to the cooperative's patrons in the form of cash, allocated equities, or both.

Pools. Accounting control centers used for determining earnings and patronage refunds due to particular patrons.

Open pools are accounting control centers that are not closed at the end of each accounting period. Open pools are sometimes used by marketing cooperatives for crops that may not be sold for two or more years after their receipt from patrons.

A single pool cooperative determines net proceeds or patronage refunds on the basis of overall operating results for all commodities marketed during an accounting period.

A multiple pool cooperative determines net proceeds or patronage refunds on the basis of separate commodities, departments, or accounting periods.

Progeny. Offspring of animals or plants.

Raised animals. Animals produced and raised from an owned herd, as opposed to purchased animals.

Recurring land development costs. Costs that do not result in permanent or long-term improvements to land, for example, maintenance costs that occur annually or periodically.

Retains. Amounts determined on a per-unit basis or as a percentage of patronage earnings that are withheld by cooperatives from distributions and allocated to patrons' capital accounts.

Supply cooperative. A cooperative that supplies to its patrons goods and services used by them in producing their products.

Unit livestock method. Accounting for livestock by using an arbitrary fixed periodic charge. For raised animals the amount is accumulated by periodic increments from birth to maturity or disposition. For purchased animals the arbitrary fixed periodic amount is added to the acquisition cost until maturity or disposition of the animal.

Vineyards. Grapevines planted in patterns for commercial cultivation and production.

Written notice of allocation. Any capital stock, revolving fund certificate, retain certificate, certificate of indebtedness, letter of advice, or other written notice to the recipient that states the dollar amount allocated to the patron by the cooperative and the portion that constitutes a patronage dividend.

Agricultural Producers

.003 In this statement, farmers and ranchers are referred to as "agricultural producers," a term that includes, for example, those who raise crops from seeds or seedlings, breed livestock (whether registered or commercial), and feed livestock in preparation for slaughter. The term excludes, for example, merchants and processors of agricultural products who purchase commodities from growers, contract harvesters, or others serving agricultural producers, although they are covered by the term "agribusiness" as it is generally used. The term also excludes growers of timber and raisers of animals for competitive sports, although some of the accounting principles discussed in this statement may apply to such activities.

.004 Agricultural producers use every form of business organization, from sole proprietorship to a large publicly held corporation. They engage in numerous activities, for example:

- Growing wheat, milo, corn, and other grains
- Growing soybeans, vegetables, sugar beets, and sugarcane
- Growing citrus fruits, other fruits, grapes, berries, and nuts
- Growing cotton and other vegetable fibers
- Operating plant nurseries
- Breeding and feeding cattle, hogs, and sheep, including animals for wool production
- Operating dairies
- Operating poultry and egg production facilities
- Breeding horses
- Raising mink, chinchilla, and similar small animals

In addition, the operations of agricultural producers often involve various combinations of those activities. Agricultural practices and products may vary still further because of differences in temperature, soil, rainfall, and regional economics. Farm products may be used in related activities, such as the feeding of hay and grain to livestock, or they may be marketed directly by the producer. Producers often sell products in accordance with government programs or through agricultural cooperatives. Marketing strategies may include forward contracts or commodity futures contracts to reduce the risks of fluctuations in market prices.

.005 Agricultural producers often borrow to finance crop development costs and the costs of acquiring facilities and equipment.

Agricultural Cooperatives

[.006-.008] [Paragraphs deleted to remove outdated information.]

.009 Section 1141(j) of the Agricultural Marketing Act of 1929, as amended, contains the following definition of a cooperative association:

> The term "cooperative association" means any association in which farmers act together in processing, preparing for market, handling, and/or marketing the farm products of persons so engaged, and also means any association in which farmers act together in purchasing, testing, grading, processing, distributing, and/or furnishing farm supplies and/or farm business services. Provided, however, that such associations are operated for producers or purchasers and conform to one or both of the following requirements:
>
> First. That no member of the association is allowed more than one vote because of the amount of stock or membership capital he may own therein; and
>
> Second. That the association does not pay dividends on stock or membership capital in excess of 8 per centum per annum.
>
> And in any case to the following:
>
> Third. That the association shall not deal in farm products, farm supplies, and farm business services with or for nonmembers in an amount greater in value than the total amount of such business transacted by it with or for members. All business transacted by any cooperative association for or on behalf of the United States or any agency or instrumentality thereof shall be disregarded in determining the volume of member and nonmember business transacted by such association.

.010 A cooperative typically has the following characteristics:

a. Assets are distributed periodically to patrons on a patronage basis. In certain situations, however, assets in the amount of net-of-tax earnings may be accumulated by the cooperative and may or may not be allocated to patrons' accounts.

b. Members control the organization in their capacity as patrons and not as equity investors.

c. Membership is limited to patrons.

d. The return that can be paid on capital investment is limited.

e. At least 50 percent of the cooperative's business is done on a patronage basis.

.011 Virtually all agricultural cooperatives meet the definition of cooperatives that is used to determine eligibility for borrowing from the banks for cooperatives and for exemption from the annual reporting requirements of the Securities and Exchange Act of 1934. Failure to meet the definition, however, does not necessarily prevent an entity from being considered as operating on a cooperative basis under subchapter T of the Internal Revenue Code.

.012 The main difference between cooperatives and other business enterprises is that cooperatives and their patrons operate as single economic units to accomplish specific business purposes, such as the marketing of farm products, the purchase of supplies, or the performance of services for the benefit of the patrons. The aim is to reduce costs, increase sales proceeds, and share risks through the increased bargaining power that results from the patrons' combined resources and buying power.

.013 The patron's role as an investor is secondary and incidental to his business relationship with the cooperative.

.014 If certain requirements are met, the Internal Revenue Code permits cooperatives tax deductions for earnings allocated to their patrons. Earnings not so allocated are taxed at corporate income tax rates. Cooperatives may use other terms for earnings, such as "margins," "net proceeds," or "savings."

.015 Another difference between cooperatives and other business corporations is that the cooperative's bylaws usually require it to distribute assets to patrons, or allocate to patrons' accounts amounts equal to its earnings, on the basis of their patronage. Distributions to patrons are different from dividend payments to stockholders in other corporations. The distribution of earnings on the basis of patronage has been termed the "price adjustment theory."

.016 Under the price adjustment theory, a cooperative agrees to do business at cost. In a purchasing cooperative, for example, a patron may be charged more than cost at the time of purchase; however, the cooperative normally must return to the patron all amounts received in excess of cost, including costs of operation and processing.

.017 Both exempt and nonexempt cooperatives are subject to federal income taxes on patronage earnings that are not distributed in cash or allocated on a qualified basis. Nonexempt cooperatives are subject to income taxes on earnings arising from sources other than patronage.

.018 Cooperatives generally try to buy or sell at the current market price. Periodically, they determine total costs and make distributions to patrons in the form of cash, certificates, or other notices of allocation based on the excess of revenues over costs.

.019 The two major types of cooperatives are supply cooperatives and marketing cooperatives. *Supply cooperatives* obtain or produce such items as building materials, equipment, feed, seeds, fertilizer, and petroleum products for their patrons. *Marketing cooperatives* provide means for agricultural producers to process and sell their products.

.020 Services related to those functions are provided by some supply and marketing cooperatives; they are also provided by separate associations known as *service cooperatives,* which provide such services as trucking, storage, accounting, and data processing. A special type of service cooperative is a *bargaining cooperative,* which serves its members by negotiating with processors on their behalf.

.021 Many marketing cooperatives commingle patrons' fungible products in pools. The excess of revenues over costs for each pool is allocated to patrons on the basis of their pro rata contributions to the pool, which may be determined by the number of units delivered, the volume of product delivered, or another equitable method.

.022 The members of *local cooperatives* are agricultural producers whose activities are generally centralized. The members of *federated cooperatives* are other cooperatives whose activities are regional. Some cooperatives have both individual producers and other cooperatives as members.

Accounting for Inventories of Crops by Agricultural Producers

.023 Previously existing accounting literature does not specifically cover accounting by agricultural producers, and available material is predominantly tax oriented. Accounting Research Bulletin (ARB) No. 43, chapter 4, provides the following information about accounting for inventories:

STATEMENT 9

> Only in exceptional cases may inventories properly be stated above cost. For example, precious metals having a fixed monetary value with no substantial cost of marketing may be stated at such monetary value; any other exceptions must be justifiable by inability to determine appropriate approximate costs, immediate marketability at quoted market price, and the characteristic of unit interchangeability. Where goods are stated above cost this fact should be fully disclosed.
>
> *Discussion*
>
> It is generally recognized that income accrues only at the time of sale, and that gains may not be anticipated by reflecting assets at their current sales prices. For certain articles, however, exceptions are permissible. Inventories of gold and silver, when there is an effective government-controlled market at a fixed monetary value, are ordinarily reflected at selling prices. A similar treatment is not uncommon for inventories representing agricultural, mineral, and other products, units of which are interchangeable and have an immediate marketability at quoted prices and for which appropriate costs may be difficult to obtain. Where such inventories are stated at sales prices, they should of course be reduced by expenditures to be incurred in disposal, and the use of such basis should be fully disclosed in the financial statements.

.024 Accounting Principles Board (APB) Statement No. 4, chapter 6, paragraph 152, states the following:

> Revenue is sometimes recognized on bases other than the realization rule. For example, on long-term construction contracts revenue may be recognized as construction progresses. This exception to the realization principle is based on the availability of evidence of the ultimate proceeds and the consensus that a better measure of periodic income results. Sometimes revenue is recognized at the completion of production and before a sale is made. Examples include certain precious metals and farm products with assured sales prices. The assured price, the difficulty in some situations of determining costs of products on hand, and the characteristic of unit interchangeability are reasons given to support this exception.

Statement of Position 93-3, *Rescission of Accounting Principles Board Statements* [section 10,560], rescinds APB Statement No. 4. FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, discusses matters similar to those in APB Statement No. 4. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.025 Accounting Research Study (ARS) 13, chapter 9, page 156, states—

> *Market as the Accounting Basis of Inventories*
>
> Exceptional cases exist in which it is not practicable to determine an appropriate cost basis for products. A market basis is acceptable if the products (1) have immediate marketability at quoted market prices that cannot be influenced by the producer, (2) have characteristics of unit interchangeability, and (3) have relatively insignificant costs of disposal. The accounting basis of those kinds of inventories should be their realizable value, calculated on the basis of quoted market prices less estimated direct costs of disposal. Examples are precious metals produced as joint products or by-products of extractive processes and fresh dressed meats produced in meat packing operations.

Paragraph 67 of FASB Concepts Statement No. 5 also discusses measurement of assets at current market value. [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Diversity in Practice

.026 Published financial statements reveal several ways that agricultural producers account for growing crops:

- Charging costs to operations when they are incurred
- Including crop development costs in deferred charges and amortizing them
- Stating costs on the balance sheet at unchanging amounts substantially less than the costs incurred and charging all current costs to operations when they are incurred
- Deferring all costs and writing them off at harvest or, for perennial crops, over the estimated productive life of the planting

Agricultural producers report harvested crops using the farm price method, at cost (LIFO, FIFO, or average cost), and at the lower of cost or market.

Some producers use the farm price method (market) to account for inventories of harvested crops. Other agricultural producers, particularly those whose securities are publicly held, account for harvested crops at the lower of cost or market.

Pros and Cons

.027 A study of accounting for producers' inventories involves an examination of chapter 4, statement 9, of ARB No. 43, which has been used as authority for accounting for producers' inventories at market.

.028 Some accountants believe that many producers cannot determine costs, and some believe that market is an appropriate valuation, whether or not cost data are available. Many accountants believe that users of producers' financial statements would find them less useful if inventories were valued at the lower of cost or market.

.029 Other reasons for the preference for market value are its long established use and the need to identify separately the gains and losses attributable to the production cycle and the marketing function, which is discussed in paragraph .035.

.030 For most business activities, the accounting literature requires an exchange of goods or services before income is recognized. That precludes accounting for inventories of unsold goods at market unless market value is less than cost. The principal exceptions to that rule are identified in chapter 9 of ARS 13 as "metals produced as joint products or by-products of extractive processes and fresh dressed meats produced in meat packing operations." Those products have unique cost identification problems. Chapter 9 of ARS 13 further states that carrying products at market is acceptable if those products "(1) have immediate marketability at quoted market prices that cannot be influenced by the producer, (2) have characteristics of unit interchangeability, and (3) have relatively insignificant costs of disposal."

.031 The first of the three conditions in ARB No. 43, statement 9, is the inability to determine costs. While many producers may not keep detailed cost records, costs usually either are available or can be determined with acceptable accuracy.

.032 Accountants who favor accounting for producers' inventories at market recognize that ARB No. 43 requires an *inability* to determine appropriate approximate costs. They point out, however, that the discussion interprets the statement to apply when "appropriate costs may be *difficult* to obtain" [emphasis added]. They also note that APB Statement No. 4,[1] chapter 6, referred to the "difficulty in some situations of determining costs of products" as a partial justification for the use of market price. Thus, they interpret statement 9 as allowing the use of market if costs are difficult to determine, not only if they are impossible to determine.

.033 A major argument for accounting for inventories at market is the availability of established markets that provide quoted market prices for most agricultural commodities. However, because variations in grade and quantity, distance from central markets, shipping hazards, and other restrictions may affect the ultimate realization of quoted market prices for agricultural products, there are often serious difficulties in determining the market price for a given product in a given place. Also, many products have no central market with established prices, and determination of their market prices may be subjective and incapable of verification.

.034 While ARS 13 does not cover inventories of agricultural products, it questions the appropriateness of accounting for inventories at market even if an established market exists. The study notes that present principles appear to allow the use of market price in accounting for inventories of precious metals if there is a fixed selling price and insignificant marketing cost regardless of whether it is practicable to determine costs. The study states—

> The apparent preferential treatment may have originally been considered appropriate because metals having fixed monetary values clearly demonstrated the "immediate marketability at quoted market prices and the characteristic of interchangeability" required in the cases in which it is impracticable to determine costs. Further question as to why preferential treatment was originally accorded to precious metals might now be considered academic. Silver no longer has a fixed monetary price, and gold has a fluctuating free market price for nonmonetary purposes. That raises questions as to whether the inventory basis for gold and silver should now be considered the same as for other metals produced as by-products or joint products.

.035 Some proponents of accounting for agricultural producers' inventories at market distinguish the production of a crop from its marketing; they believe that delays in the disposal of a harvested crop are due principally to the producer's desire to sell the commodities later at a higher price. They contend that, in order to separate the results of the two functions, the inventories should be accounted for at market prices after they are harvested. They point out that both functions are likely to cause significant gains and losses. Some opponents counter that the same argument can be made for many nonagricultural enterprises that are not permitted to recognize income at the end of production.

.036 The securities of most agricultural producers are not traded publicly, and their financial statements are prepared primarily for management and lenders. Advocates of the use of market prices contend that lenders are concerned with the market price of inventories to be used as collateral. Moreover, most producers are not required to use cost information for income tax purposes. Thus, some

---

[1] Statement of Position 93-3, *Rescission of Accounting Principles Board Statements* [section 10,560], rescinds APB Statement No. 4. [Footnote added to reflect conforming changes necessary due to the issuance of recent authoritative literature; Footnote renumbered, August 2008, for editorial purposes.]

accountants argue that determining cost for financial statements is an unproductive additional burden to the producer. Conversely, cost advocates point out that both public and nonpublic producers require long-term financing, and cost-basis financial statements may provide better information for those purposes.

.037 Some accountants believe that it is difficult to argue persuasively for charging the periodic costs of growing crops to expense as they are incurred since a valuable asset is being developed. Some contend that the use of a fixed amount less than cost violates existing principles of accounting for assets. Others believe it is acceptable and consistent with a market basis of accounting to account for growing crops at net realizable value or at no value.

Division Conclusions

.038 All direct and indirect costs of growing crops should be accumulated and growing crops should be reported at the lower of cost or market.

.039 An agricultural producer should report inventories of harvested crops held for sale at (a) the lower of cost or market or (b) in accordance with established industry practice, at sales price less estimated costs of disposal, when all the following conditions exist:

- The product has a reliable, readily determinable and realizable market price.
- The product has relatively insignificant and predictable costs of disposal.
- The product is available for immediate delivery.

Accounting for Development Costs of Land, Trees and Vines, Intermediate-Life Plants, and Animals

.040 Development costs of land, trees and vines, intermediate-life plants, and animals are different from costs incurred in raising crops for harvest, which were discussed in the previous section, "Accounting for Inventories of Crops by Agricultural Producers."

.041 Land development generally includes improvements to bring the land into a suitable condition for general agricultural use and to maintain its productive condition. Some improvements are permanent; some have a limited life. Permanent land developments include, for example, clearing, initial leveling, terracing, and construction of earthen dams; they involve changes to the grade and contour of the ground and generally have an indefinite life if they are properly maintained. Limited-life developments usually include such items as water distribution systems and fencing and may also include the costs of wells, levees, ponds, drain tile, and ditches, depending on the climate, topography, soil conditions, and farming practices in the area.

.042 Orchards, vineyards, and groves generally develop over several years before they reach commercial production. Production continues for varying numbers of years, depending on such influences as type of plant, soil, and climate. During development, the plants normally require grafting, pruning, spraying, cultivation, or other care.

.043 Intermediate-life plants have growth and production cycles of more than one year but less than those of trees and vines. They include, for example, artichokes, various types of berries, asparagus, alfalfa, and grazing grasses. Development costs of intermediate-life plants include the cost of land preparation, plants, and cultural care until the plant, bush, or vine begins to produce in commercial quantities.

.044 The terms *livestock* and *animals* are used interchangeably and are meant to include cattle, sheep, hogs, horses, poultry, and other small animals. The development of animals requires care and maintenance of the breeding stock and their progeny until their transfer from the brood herd. Animals purchased before maturity also require care and maintenance to ready them for productive use or sale. The animals are ultimately identified for transfer to breeding herds, dairy herds, or other productive functions, are selected for sale, or are transferred to a feeding or other marketing operation.

Diversity in Practice

.045 Development costs of land, trees and vines, intermediate-life plants, and animals are accounted for in the following ways:

- Charged to operations when they are incurred
- Included in deferred charges
- Included on the balance sheet at fixed amounts substantially less than the costs incurred, with all or a majority of the current costs charged to operations as they are incurred
- Capitalized and amortized over the estimated productive life of the animal, tree, vine, or plant
- Carried at market values

.046 In the case of annual field crops that are planted and harvested in the same accounting period, producers generally match costs with revenues. When the growing cycle continues beyond the accounting period, costs often are not matched with revenues.

.047 Few significant diversities of practice are apparent in the financial statements primarily because of lack of disclosure. However, some agricultural producers charge land development costs to expense based on provisions of the income tax laws.

.048 In accounting for development costs of trees and vines, some producers agree that the costs should be capitalized and depreciated over the expected productive life, but the costs to be capitalized and those to be charged to expense are not identified uniformly. Income tax concepts have had a strong influence on accounting practices for those development costs.

.049 Crops from intermediate-life plants have generally been accounted for in the same way as annual crops, with no distinctions for variations in the periods of development and productivity.

.050 Many livestock producers charge the costs of developing animals to expense without regard to their productive lives or future use or sales value. Animals are sometimes reported at cost and other times at market values. Some producers use the unit livestock method, and in many instances, the annual unit cost increments are below market and probably below cost.

Pros and Cons

.051 Some accountants believe that large-scale improvements that transform the land to new and better uses are permanent land improvements to be capitalized and that subsequent modifications and improvements are necessary and should be classified as period expenses.

.052 Others believe that it is difficult, or nearly impossible, to distinguish between permanent, limited-life, and recurring land development costs. Land improvements that an owner has made over many years tend to lose their original characteristics. Such improvements are usually accompanied by increasingly intensive land use over relatively long periods. Prior improvements are modified, improved on, or eliminated, and the resulting land configuration and use are noticeably changed. The characteristics of continuing land improvements accomplished over long periods are given as justification for classifying those costs as recurring.

.053 Many accountants believe that all direct and related indirect costs of land development, such as leveling, clearing of brush, terracing, and installation of drain tile, should be capitalized. They further believe that land development costs that waste away or diminish in efficiency through use, such as drainage tile, should be depreciated or amortized over the number of seasons that the land can reasonably be expected to produce without renovation or renewal of the particular development.

.054 It is generally agreed that development costs of orchards, vineyards, and groves should be capitalized, but there is no agreement on the specific costs that should be capitalized. Many believe it necessary to capitalize only those costs that the income tax laws require to be capitalized.

.055 Some accountants believe that all direct and indirect costs for orchards, vineyards, and groves incurred during the development period should be capitalized until commercial production is achieved. Others believe all such costs, except annual maintenance costs, should be capitalized. All agree that capitalized costs should be depreciated or amortized over the useful life of the plantings.

.056 Accounting practices for development costs of intermediate-life plants are inconsistent. Producers who deduct expenses before revenues are realized for intermediate-life plants and orchardists and vineyardists who do not want to capitalize development costs and depreciate them over the estimated productive life of the developed asset are motivated by the same reasons. The question of capitalization and depreciation is similar for producers of intermediate-life plants and for producers of trees and vines. The principal distinctions are in development period and productive life. For example, orchard trees may require four to seven years before nominal production, while limited production may occur during the first year of such crops as alfalfa, some berries, and asparagus.

.057 Some accountants have resisted accumulating development costs for growing animals, based on the difficulty and expense of accumulating such information and, in some instances, the problem of identifying individual animals or groups and categories of animals. Instead of cost, the unit livestock method or a market value has been used for assigning amounts to the animals at each level of maturity in the belief that such accounting methods, if consistently applied, would not adversely affect income recognition.

.058 Others believe that all direct and indirect development costs of raising livestock should be accumulated and capitalized until the livestock have reached maturity and have been selected for breeding or other productive purposes. Many believe that income-producing livestock should be depreciated on the basis of their expected productive lives.

Division Conclusions

.059 Permanent land development costs should be capitalized and should not be depreciated or amortized, since they have, by definition, an indefinite useful life.

.060 Limited-life land development costs and direct and indirect development costs of orchards, groves, vineyards, and intermediate-life plants should be capitalized during the development period and depreciated over the estimated useful life of the land development or that of the tree, vine or plant.

.061 All direct and indirect costs of developing animals should be accumulated until the animals reach maturity and are transferred to a productive function. At that point the accumulated development costs, less any estimated salvage value, should be depreciated over the animals' estimated productive lives.

.062 All direct and indirect development costs of animals raised for sale should be accumulated, and the animals should be accounted for at the lower of cost or market until they are available for sale. Agricultural producers should report animals available and held for sale (*a*) at the lower of cost or market or (*b*) in accordance with established industry practice at sales price, less estimated costs of disposal, when all of the following conditions exist:

- There are reliable, readily determinable and realizable market prices for the animals.
- The costs of disposal are relatively insignificant and predictable.
- The animals are available for immediate delivery.

Accounting for Patrons' Product Deliveries to Marketing Cooperatives Operating on a Pooling Basis

.063 Agricultural marketing cooperatives process and market their patrons' products. There are frequently good bases for recording transfers of products between cooperatives and their patrons. For example, dairy cooperatives record transfers of products on the basis of market order prices, and grain cooperatives record transfers of products on the basis of readily determined cash prices. Many cooperatives, therefore, transfer patrons' products at market prices, and the transactions are treated as purchases by the cooperatives and as sales by the patrons.

.064 However, cooperatives operating on a pooling basis may receive products from their patrons without paying a fixed price to the patrons. A cooperative may assign amounts to products based on current prices paid by other buyers or on amounts established by the cooperative's board of directors, or it may assign no amount. The cooperative estimates a liability to patrons equal to the assigned amount for the delivered product, and it usually pays this liability on a short-term basis. The excess of revenues over the assigned amounts and operating costs at the end of a pool period, which may be a week, a month, a year, or longer, is paid or allocated to patrons. Assets equal to that excess may be distributed to the patrons or retained by the cooperative.

.065 The different accounting methods used by pooling cooperatives have been developed to satisfy provisions of their bylaws and contractual arrangements with patrons and to provide equitable methods of settlement from pool period to pool period, as well as among the various classes of patrons. For pooling cooperatives, accounting methods have been developed to allow the use of the single-pool or multiple-pool methods of accounting.

Diversity in Practice

.066 Significant information about the accounting practices of patrons in recording the delivery of raw products to marketing cooperatives is scarce. Among the practices used are recognition (1) at the estimated net return, presumably at the time of delivery, and (2) at the time of sale by the cooperative to an outside party. Those two examples provide the extremes, one recognizing the delivery to the cooperative as a sale and the other continuing to carry the product as inventory of the producer until it is sold by the cooperative. Transfer prices for products delivered to cooperatives are established in diverse ways:

- At market order price or governmental support price
- At market price
- At an assigned amount determined by the cooperative's board of directors to approximate market price
- At the amount of advances
- At cost to the producer
- At no amount until the cooperative advises the producer of the expected proceeds from the ultimate disposition of the product

.067 Cooperatives that receive products from patrons and pay their patrons a firm market price, at or shortly after delivery, treat the payments as purchases. In those situations the prices are paid regardless of the amount of the cooperatives' earnings. Those cooperatives normally report inventories at the lower of cost or market. However, pooling cooperatives estimate amounts due to patrons at the time of delivery, and those amounts are later adjusted on the basis of the pool's earnings. This presents a significant accounting problem. The following paragraphs discuss only the accounting issues that result from deliveries of products by patrons to cooperatives operating on a pooling basis.

.068 In cooperatives operating on a pooling basis, products delivered by patrons are commingled with other patrons' products, processed, and marketed. Earnings from the sale of finished products are returned to patrons, either in cash or in some form of equity, whether or not those earnings were determined on the basis of current market prices at the time of delivery. Many cooperatives value patrons' products at assigned amounts (usually current market prices) set by the board of directors at delivery. A corresponding estimated liability is accrued for amounts due to patrons. At the end of the pool period, the pool's net earnings are credited to amounts due patrons on a patronage basis.

.069 Some cooperatives cannot determine the market prices of patrons' products when they receive them because of limited cash purchases by other processors. They are usually cooperatives that process and market a high percentage of limited specialty crops. Many of those cooperatives account for inventories of goods in process and finished goods at net realizable value, determined by deducting estimated completion and disposition costs from the estimated sales value of the processed inventory, because a reliable price for the unprocessed product is not available to account for inventories at the lower of cost or market. Furthermore, many cooperatives must determine net realizable value to comply with bylaw provisions and contractual obligations and to facilitate equitable pool settlements from pool period to pool period and among various classes of patrons.

.070 A 1973 survey by the National Council of Farmer Cooperatives indicated that many marketing cooperatives use net realizable value to account for inventories. An excerpt from an article on this subject prepared for the council's legal, tax, and accounting committee appears below.

> The National Council of Farmer Cooperatives made a survey of the inventory valuation methods used by its marketing cooperatives. The results of this survey confirm what has been the private belief of most cooperative accountants, that the net realizable market value method is perhaps the most widely used and accepted method of inventory valuation by marketing cooperatives. This survey reflects the responses of 49 cooperatives and, in summary, indicates that the following inventory methods are in use.

Method	*Cooperactives*	*Sales (In Thousands)*	*% of Total Sales*
Net realizable market value	24	$2,310,938	48 %
Lower of cost or market, using field price as the established value of raw product	8	630,898	13
Net realizable market, value and lower of cost or market, using field price as the established value of raw product	5	802,567	17
Cost	2	53,400	1
Rev. Rul. 69-67[2]	7	367,469	8
Other	3	621,925	13
	49	$4,787,197	100 %

.071 The net realizable value method of accounting for inventories permits the recognition of the pool's estimated net earnings at the end of the fiscal period in which the patrons supply their crops to the cooperative or when pools are closed. Inventories are stated at net realizable value, and the amounts due to patrons are credited with the earnings. The net realizable value method of accounting for inventories permits the closing of the pools and provides equitable treatment to patrons if the cooperative transfers the inventories forward to the next period's pool at estimated market value.

.072 Some marketing cooperatives receive products from patrons without assigning amounts to them. During the year, cash is advanced to patrons on the basis of anticipated earnings. Inventories are recorded at amounts advanced plus costs of processing, and patrons' products are valued at the amount of advances made to the date of the financial statements. This is commonly called the "cash advance method."

[2] Note: Rev. Rul. 69–67 refers to the cash advance method. [Footnote renumbered, August 2008, for editorial purposes.]

Authoritative Literature

.073 The primary source of authoritative guidance for accounting for inventories that result from deliveries of products by patrons to cooperatives has been ARB No. 43.

Pros and Cons

.074 A transaction is usually completed when a patron delivers his product to a cooperative. The patron's product is commingled with that of other patrons, and title and individual risk of loss have passed. Some accountants believe that no accounting is necessary at the time of delivery because the transfer price is frequently not known until some later date. Nevertheless, accrual basis accounting calls for reporting the transaction according to the best information available at the time. While greater accuracy may be achieved by waiting for the cooperative to advise the patron of the net proceeds, the handicap of not having current financial information could outweigh the benefit of greater accuracy, and the lack of consistency in reporting could be confusing to the users of the financial statements.

.075 Some accountants argue that pooling cooperatives should not use an assigned amount for products received from patrons for financial accounting and reporting purposes because the amounts may not be reliable and the patrons may be paid more or less than that amount at the end of the pool period. Others argue that the use of an assigned amount permits the establishment of a tentative liability due patrons and allows inventories to be stated at the lower of cost or market. The method also facilitates allocation of pool proceeds to patrons.

.076 Some accountants believe that the net realizable value method of accounting for inventories is unacceptable because it anticipates cooperative earnings. Further, they believe that future selling prices and disposition costs are too uncertain to base accounting on them. Alternatively, those who favor the use of the net realizable value method believe that the problems of determining net realizable value do not differ from those of determining market under the lower of cost or market method. They also consider the method to be acceptable in accounting for pools because it enables the cooperative to settle pools annually and to comply with bylaw provisions and contractual obligations. In essence, they claim, the inventory is transferred to the next period's pool on an equitable basis.

.077 Some accountants believe that cooperatives may record products received from patrons at assigned amounts and then account for the inventories at net realizable value. That method permits the closing of pools at least annually on an equitable basis. Others believe that, if assigned amounts are used on receipt of the product, the inventories should be accounted for at the lower of cost or market.

.078 Some accountants favor the cash advance method of accounting for inventories. They believe that the only product cost that should be accounted for is the total of cash advanced to patrons to the date of the financial statements, because the cooperative has no liability to pay more unless more is earned. Others favor the cash advance method because the Internal Revenue Service has held in several rulings that pooling cooperatives should use that method in tax computations. Others reject the cash advance method because advances to patrons are primarily determined on availability of cash, the percentage of the pool production sold to the date of the financial statements, and short-term inventory loan restrictions rather than on the value of products received. Further, they reject the method because the amount and timing of advances are generally subject to the board of directors' action and may vary from period to period.

Division Conclusions

Accounting by Patrons for Products Delivered to Pooling Cooperatives

.079 If control over the future economic benefits relating to the product has passed, which ordinarily is evidenced by the transfer of title, and if a price is available by reference to contemporaneous transactions in the market, or if the cooperative establishes an assigned amount, a delivery to the cooperative should be recorded as a sale by the patron at that amount on the date of delivery. If there is a reasonable indication that the proceeds from the cooperative will be less than the market price or the assigned amount, the lower amount should be used.

.080 If control over the future economic benefits relating to the product has passed, which ordinarily is evidenced by the transfer of title, and there are neither prices determined by other market buyers nor amounts assigned by the cooperative, or if such amounts are erratic, unstable, or volatile, the patron should record the delivery to the cooperative as a sale at the recorded amount of the inventory and should record an unbilled receivable. If there is a reasonable indication that the proceeds from the cooperative will be less than the receivable, the lower amount should be used.

.081 If title has not passed, the identity of the individual patron's product is maintained by the cooperative, and the price to the patron is to be based on the identified product's sale, the transaction is not complete, and the product should be included in the patron's inventory until it is sold by the cooperative, at which time the patron should record the sale.

.082 Advances are financing devices and should be treated as reductions in the unbilled receivable and should not be used as amounts for recording sales.

Accounting by Pooling Cooperatives for Products Received From Patrons

.083 If the boards of directors of agricultural marketing cooperatives operating on a pooling basis with no obligation to pay patrons fixed prices (pooling cooperatives) assign amounts that approximate estimated market to unprocessed products received from patrons, the assigned amounts are cost and should be charged to cost of goods sold and credited to amounts due patrons. The inventories should be accounted for at the lower of cost or market or, as described more fully in paragraph .084, at net realizable value. When assigned amounts are used, they should approximate estimated market of unprocessed products delivered by patrons (an example of inventories at lower of cost or market is provided in the appendix [paragraph .107], column A). The method used and the dollar amounts assigned to members' products should be disclosed.

.084 If the boards of directors of pooling cooperatives assign amounts to products received from patrons, the cooperatives should use those assigned amounts in determining the estimated amounts due patrons. Such cooperatives may use net realizable value for determining pool proceeds, transferring inventory amounts to subsequent pools, or for other purposes (an example is provided in the appendix [paragraph .107], column B). The method used and the dollar amounts assigned to members' products should be disclosed.

.085 If the boards of directors of pooling cooperatives do not assign amounts that approximate market to unprocessed products received from patrons, the cooperatives should account for inventories at net realizable value (an example is provided in the appendix [paragraph .107], column C). Because amounts that approximate estimated market are not assigned to products received from patrons, cost of goods sold will not include a charge for unprocessed products under this method.

.086 Pooling cooperatives should not use the cash advance method to account for inventories.

Accounting for Investments in and Income From Cooperatives

.087 Member patrons of cooperatives can be producers or other cooperatives. Member patrons provide most of the capital required by cooperatives. The capital usually represents long-term investments acquired through initial cash investments, retains, or noncash patronage allocations. Voting rights for those investments are usually based on one-member-one-vote or limited weighted voting rather than on the number or amount of securities or other evidence of equity ownership held. The investments are made primarily to obtain an economical source of supply or marketing services and not on the expectation of a return on investment. The sale of such investments, other than back to the issuing cooperative, is usually restricted or prohibited.

Diversity in Practice

.088 Investments in cooperatives are generally carried by producers at cost, at cost plus declared retains, at cost plus estimated retains, or at an amount less than cost.

.089 Most cooperatives carry their investments in other cooperatives at cost if they are purchased or at face amount if they are received in other than purchase transactions (retains or noncash patronage allocations). However, they usually write the investments down to estimated net realizable value if evidence indicates they will be unable to recover the full carrying amount of the investments. That practice has been endorsed in Accounting Research Bulletin 2, issued by the National Society of Accountants for Cooperatives, which states—

> Investments in cooperatives made by user patrons for the purpose of providing capital for operations of the investee cooperative should be carried at cost, if purchased, or at face value if received in transactions other than purchases such as non-cash patronage dividends. Such investments should be written down to an appropriate amount if reliable evidence indicates that their value has been permanently impaired.
>
> It should be noted that in most instances accounting for investments in other cooperatives (including banks for cooperatives and other cooperative financing organizations, such as the National Rural Utilities Cooperative Finance Corporation) on the basis outlined above results in investment carrying values equal to the equity values of the investing cooperative's interest in the investee

cooperatives; therefore, it would appear that the basis outlined complies with APB Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock*, to the extent that the intent of the opinion is applicable to investments of cooperatives. In the infrequent instances where the investor's share of unallocated retained earnings of an investee cooperative is material to the investor, the principles set forth in APB Opinion No. 18 should be applied.

.090 Cooperatives that invest in other cooperatives usually recognize allocated equities in the cooperative investor's fiscal year within which written notice of allocation is received, and the investment is carried at cost plus allocated equities. That method of revenue recognition conforms with federal income tax requirements. It is the most practical method of reporting because many investee cooperatives issue financial statements and determine patronage allocations only at the close of their accounting years. Many cooperatives do that because they find determination of patronage allocations to be complex and time consuming, since their operations may include both marketing and supply functions, as well as several departments under each function.

.091 Diversity in practice has developed in accounting for unallocated equities. Some patrons who hold at least a 20 percent ownership interest recognize their interest in unallocated equities in accordance with APB Opinion No. 18. Others do not recognize unallocated equities, primarily because the equity ownership percentage changes according to patronage and because voting is usually based on the one-member-one-vote principle, which does not necessarily provide significant influence. Interpretation and application of APB Opinion No. 18 may become more significant in financial reporting for cooperatives because 1978 changes in the Internal Revenue Code, relating to the investment tax credit, may encourage cooperatives to reduce distributions of assets to patrons and increase unallocated net after-tax earnings for the purchase of assets.

.092 Most patrons recognize their patronage allocations when they are notified, which conforms with federal income tax reporting requirements. Other patrons accrue patronage allocations on the basis of the cooperatives' interim financial statements.

.093 Presentation of patronage allocations in patrons' financial statements is also diverse. Some patrons recognize patronage allocations as reductions of purchase or interest costs on purchases from supply or financing cooperatives or as increases in sales for deliveries to marketing cooperatives. Other patrons recognize all patronage allocations as nonoperating income.

Authoritative Literature

.094 Authoritative literature on marketable investments—FASB Statement No. 115, *Accounting for Certain Investments in Debt and Equity Securities*,[*] and FASB Interpretation No. 16, *Clarification of Definitions and Accounting for Marketable Equity Securities That Become Nonmarketable*—has little applicability to investments in cooperatives. Investments in cooperatives are not equity securities and usually are not readily marketable, and transfer or sale, other than back to the issuing cooperative, is usually restricted or

[*] FASB Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities—Including an amendment of FASB Statement No. 115*, amends certain parts of FASB Statement No. 115, *Accounting for Certain Investments in Debt and Equity Securities*. [Footnote added to reflect conforming changes necessary due to the issuance of recent authoritative literature; Footnote renumbered, August 2008, for editorial purposes.]

prohibited. Current accounting literature supports the carrying of long-term investments, such as nonmarketable investments in agricultural cooperatives, at cost if the value of the investments is not impaired. Carrying amounts are reduced when the investor becomes unable to recover the full carrying amounts. APB Opinion No. 18 requires the equity method of accounting for investments in which the investor has significant influence over an investee's operating and financial policies.

.095 The significance of investments by patrons results primarily from the purchasing or marketing rights and participation in the operating earnings. As such, the operations of cooperatives have many of the attributes of corporate joint ventures or partnerships.

Pros and Cons

.096 Some accountants argue that the investment in a cooperative is in substance a long-term investment and, as such, should be carried at cost or at cost plus allocated equities. Others believe that the investments should be discounted to their present value. The carrying amounts would be adjusted downward as required by generally accepted accounting principles when the patron becomes unable to recover the full carrying amounts.

.097 Those that support discounting of investments in cooperatives to present value believe that it results in satisfactory presentation in the financial statements because allocated equities are usually not redeemed or are redeemed over a long period. However, others believe that patrons contribute amounts to cooperatives not as investments but to obtain supply or marketing sources, and the allocated equities represent a proportionate share of the cooperative's earnings for the period of patronage. That is similar to accounting for equities in partnerships or corporate joint ventures, in which undistributed earnings are recognized for accounting purposes on the same basis as for federal income tax reporting. Proponents of the stated amount method also believe that it produces symmetry, since the investee records the issuance of securities or book credits at par or face amounts rather than on the basis of discounted values. They argue further that the method conforms with the underlying price-adjustment theory of cooperatives, which holds that such allocated equities are merely reductions of the cost of supply purchases or increases in the proceeds of products marketed through the cooperative and that they should therefore be reflected in the patrons' results of operations.

.098 Accountants who believe that a cooperative's unallocated losses should not be recognized by the patrons base their contention on the premise that operating losses may indicate temporary rather than permanent declines in value because they may result from identifiable, isolated, or nonrecurring events. Accordingly, they should not be recognized. Furthermore, because many investor cooperatives determine patronage allocations on the basis of financial statement reporting rather than federal income tax reporting, some accountants argue that financial statement recognition by investor cooperatives of unallocated losses will cause the payment of federal income taxes by the investor cooperative that would not otherwise be payable and such taxes will not be recoverable if the losses are later allocated. That adverse effect is the result of federal income tax regulations that limit the patronage refund deduction to the lesser of the patronage refund "paid" and the patronage refund "allowable," as determined in accordance with federal income tax rules and regulations.

.099 Those who believe that unallocated losses should be recognized argue that patrons must recognize allocated losses for consistent reporting, much as if the investment were in a corporate joint venture or partnership rather than a cooperative. They further contend that failure to recognize unallocated losses permits manipulation of earnings because patrons often serve on the cooperative's board of directors or can influence the board of directors, which has the authority to determine the portions, if any, of the losses that will be allocated to patrons.

.100 Accountants who believe that unallocated equities should not be recognized by the patrons generally contend that APB Opinion No. 18 does not apply because equity ownership generally does not convey voting control and because ownership interests in unallocated equities may be temporary, being subject to changes in patronage participation and the redemption of equities. However, others argue that APB Opinion No. 18 should apply to all investments in cooperatives in which the patrons hold at least 20 percent of the equity securities, regardless of the one-member-one-vote requirement and the fact that ownership interests may change. They believe that the patron frequently has significant influence due to patronage volume, assured representation on the board of directors, or other means.

.101 Some accountants believe that patronage allocations should be recognized in the accounting period in which the supply is purchased or the product is marketed, since those transactions are the source of the patronage allocations and are adjustments of the price at which the supply is purchased or the product marketed. Others believe that the accrual of estimated patronage allocations is impractical because many cooperatives do not determine patronage allocations during interim periods and the amount of the allocations usually cannot be determined from the cooperatives' interim financial statements. Further, existing federal income tax rules and regulations, as well as the bylaws of most investee cooperatives, require the investee's patronage allocations to be included in taxable income in the period the investor is notified of the patronage allocation. This requirement may cause adverse tax effects for investors.

.102 Some accountants argue that allocated and unallocated equities should be reflected in the statement of operations as reductions of costs or increases in proceeds because such amounts result from the transactions by which supplies are purchased, interest is paid, or products are sold. Accordingly, the proponents believe that the equities should be reported in the same manner as the original transactions to report sales, cost of sales, and operating expenses. Other accountants believe that the allocations should be reported as other income rather than as increases or decreases in sales, cost of sales, or operating expenses; they argue that including the allocations in sales, cost of sales, or operating expenses could misstate gross profit or expenses.

Division Conclusions

.103 Investments in cooperatives should be accounted for at cost, including allocated equities and retains. The carrying amount of an investment in a cooperative should be reduced if the patron is unable to recover the full carrying value of the investment. Losses unallocated by the investee may indicate such an inability, and, at a minimum, the excess of unallocated losses over unallocated equities should be recognized by the patron based on the patron's proportionate share of the total equity of the investee cooperative, or any other appropriate method, unless the patron demonstrates that it is probable that the carrying amount of the investment in the cooperative can be fully recovered.

.104 Patrons should recognize patronage refunds either—

a. When the related patronage occurs if it is then probable that (1) a patronage refund applicable to the period will be declared, (2) one or more future events confirming the receipt of a patronage refund are expected to occur, (3) the amount of the refund can be reasonably estimated, and (4) the accrual can be consistently made from year to year or

b. On notification by the distributing cooperative.

The accrual should be based on the latest available reliable information and should be adjusted on notification of allocation.

.105 Either (1) the classification of the allocations in the financial statements should follow the recording of the costs or proceeds or (2) the allocations should be presented separately.

Effective Date and Transition

.106 The Accounting Standards Division recommends application of this statement to financial statements prepared for fiscal years, and interim periods in such fiscal years, beginning after June 15, 1985. Accounting changes to conform to the recommendations of this statement should be made prospectively for transactions or activities occurring on or after the effective date of this statement. Application for earlier years, including retroactive application, is encouraged for all transactions or activities regardless of when they occurred. Disclosures should be made in the financial statements in the period of change in accordance with FASB Statement No. 154, *Accounting Changes and Error Corrections*, which supersedes APB Opinion No. 20, *Accounting Changes*.[†]

.107

Appendix

Accounting by Pooling Cooperatives for Products Received From Patrons

The following illustrates the statement of net earnings prepared under each of two possible methods of accounting for inventories (columns A and B), the statement of net proceeds prepared under the net realizable value method (column C), and the respective statements of amounts due patrons, if such latter statement is included in the financial statements. (See paragraphs .083, .084, and .085.) Column A demonstrates the lower of cost or market method with patrons' raw product being charged to cost of production at assigned amounts. Column B demonstrates the net realizable value method with patrons' raw product being charged to cost of production at assigned amounts. Column C demonstrates the net realizable value method when no amounts are assigned to patrons' raw product; therefore, there is no charge to cost of production for patrons' raw product. The assumed facts are as follows:

Sales	$129,630
Beginning inventory	
Net realizable value	31,128
Lower of cost or market	28,380
Assigned value of patrons' raw product received	56,500
Ending inventory	
Net realizable value	35,596
Lower of cost or market	32,360
Income taxes	1,250
Other costs and expenses	56,580
Amounts paid to patrons, retains, and non-patronage earnings	74,430
Amounts due patrons at beginning of year	
Lower of cost or market method	8,910
Net realizable value method	11,748

Statements of Net Earnings (columns A and B)

Statement of Net Proceeds (column C)

	Inventories Valued At		
	Lower of Cost or Market—A	Net Realizable Value—B	Net Realizable Value—C
Sales	$129,630	$129,630	$129,630
Costs and expenses (I)	109,100	108,702	52,202
Earnings before income taxes	20,530	20,928	—
Proceeds before income taxes	—	—	77,428
Income taxes	1,250	1,250	1,250
Net earnings	$ 19,280	$ 19,678	
Net proceeds			$ 76,178
I. Beginning inventory	$ 28,380	$31,218	$31,218
Assigned value of patrons' raw product received	56,500	56,500	—
Ending inventory	(32,360)	(35,596)	(35,596)
Other costs and expenses	56,580	56,580	56,580
	$109,100	$108,702	$ 52,202

Statements of Amounts Due Patrons

	Inventories Valued At		
	Lower of Cost or Market—A	Net Realizable Value—B	Net Realizable Value—C
Amounts due patrons at beginning of year	$ 8,910	$11,748	$11,748
Net earnings	19,280	19,678	—
Net proceeds	—	—	76,178
Assigned value of patrons' raw product received	56,500	56,500	—
	84,690	87,926	87,926
Less amounts paid to patrons, retains, and non-patronage earnings	74,430	74,430	74,430
Amounts due patrons at end of year	$10,260	$13,496	$13,496

Under the two inventory methods presented, the difference in amounts due patrons at the end of the year results from the difference in the ending inventory valuations, illustrated as follows:

Inventories of finished goods and goods in process at:	
Net realizable value	$35,596
Lower of cost or market	(32,360)
	3,236
Amounts due patrons at end of year on lower of cost or market basis	10,260
Amounts due patrons at end of year on net realizable value basis	$13,496

Section 10,430

Statement of Position 88-1 Accounting for Developmental and Preoperating Costs, Purchases and Exchanges of Take-off and Landing Slots, and Airframe Modifications

September 30, 1988

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Summary

This statement of position (SOP) provides guidance on applying generally accepted accounting principles in accounting for developmental and preoperating costs, purchases and exchanges of take-off and landing slots, and airframe modifications. Briefly, the SOP recommends the following:

- Developmental costs related to preparation of operations of new routes should not be capitalized as previously permitted under *Audits of Airlines*, the AICPA Industry Audit Guide. However, preoperating costs related to integration of new types of aircraft would continue to be eligible to be capitalized, as permitted by the guide. The amortization period for such deferred preoperating costs should begin when the new aircraft is ready to be placed in service.
- The costs of acquiring take-off and landing slots are identifiable intangible assets that should be accounted for in conformity with FASB Statement No. 142, *Goodwill and Other Intangible Assets*. When airlines exchange slots, the slots acquired should be recorded in conformity with FASB Statement No. 142 and APB Opinion No. 29, *Accounting for Nonmonetary Transactions*.
- The costs associated with airframe modifications that enhance the usefulness of the aircraft should be capitalized and depreciated over the estimated useful life of the aircraft or the modifications, whichever is less. The cost of the replaced asset net of accumulated depreciation and anticipated recovery value should be charged to income in the current period.

The provisions of this statement are effective for transactions initiated after September 30, 1988. [Paragraph added, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Industry Developments

Deregulation

.01 In 1981, when the AICPA Industry Audit Guide, *Audits of Airlines*, was issued, airlines were regulated by the Civil Aeronautics Board (CAB). However, the Airline Deregulation Act of 1978 (ADA) terminated the CAB's authority over rates and route access on January 1, 1983, and its responsibility for evaluating the fitness of new entrants on January 1, 1985.

.02 In addition to liberalizing the general provisions for awarding certificates to new airlines, the ADA established new provisions for automatic market entry and issuance of experimental certificates on a temporary basis. Other provisions eased restrictions on suspension and reduction of service and expedited market entry and exit. As a result, the ADA has enabled many new entrants to gain access to domestic markets and has allowed trunk, local service, and commuter carriers to expand and otherwise alter their service patterns. Airlines are now classified as certificated scheduled (route) airlines, certificated nonscheduled (charter) airlines, air-cargo airlines, and intrastate airlines. Within the route airline classification, airlines are now identified as major, national, regional, and air-taxi operators.

.03 In addition, the ADA transferred responsibility for overseeing airline operations to the Department of Transportation (DOT). The DOT has assumed responsibility for both monitoring the air safety and fitness characteristics of the various airlines and approving merger proposals and sales of airline routes. In this new competitive environment, marketing strategies, pricing of tickets, and costs of service have become important business issues for the airlines.

International Air Transportation

.04 Airline operations between countries continue to be governed by specific bilateral agreements between the countries. The access of U.S. airlines to routes between the United States and other countries requires the approval of the respective countries for both landing rights at specified airports and frequency of flights.

.05 The International Air Transport Association (IATA), a voluntary organization of international airlines, was established in 1946 to negotiate international air fares, cargo rates, conditions of service, and ancillary matters. The Federal Aviation Act required U.S. airlines participating in such an organization to obtain approval from the CAB. In 1946, the CAB granted U.S. airlines immunity from antitrust laws, permitting them to participate in IATA conferences for the purpose of establishing fares and rates. Agreements reached by the airlines at those meetings are subject to the approval of the respective governments.

.06 In anticipation of deregulation in the United States, IATA established two types of airline participation: one deals with facilitation matters and is mandatory for all members; the other sets fares and rates for air transportation. Participation in the latter is optional, but a member choosing to participate in fare and rate conferences must do so for all areas served.

Air Transport Association of America (ATA)

.07 Founded in 1936, the Air Transport Association of America is a trade and service organization representing member U.S.-scheduled airlines. The joint interests of the airlines as an industry are expressed through a system of councils and related committees on which airline and ATA representatives work together.

.08 Because travel agent sales constitute a significant portion of the airline business, the ATA designed the Area Settlement Plan (ASP), which is operated by the Airlines Reporting Corporation. The plan enables each travel agent to submit one sales report to an area processing center that then distributes the agent's sales and receivable transactions to the respective airlines. Because the dollar volumes involved and competitive needs for sales information are substantial, the ASP program requires continuous monitoring and updating. This service is provided to the airlines and travel agents by the ATA.

.09 Other plans, called bank settlement plans (BSPs), have been established recently in Japan, the United Kingdom, the Federal Republic of Germany, and other countries. The BSPs, although not identical to the ASP, contain many of the same features.

Regional Airline Association

.10 The Regional Airline Association, formerly the Commuter Airline Association, is the national association of member airlines engaged in scheduled air transportation of passengers and cargo in local, feeder, and short-haul markets throughout the United States and its territories. In addition, the association's finance and accounting committee has developed a uniform system of accounts for regional airline use.

Regulations and Reporting

.11 Although the CAB is no longer in existence, airline accounting information continues to be reported to the DOT in conformity with the Uniform System of Accounts and Reports (USAR) previously issued by the CAB. The USAR consists of a list of titles and account numbers and instructions for their use. DOT—and, previously, CAB—policy has been to conform its accounting requirements to generally accepted accounting principles.

.12 Financial data and reports based on the USAR must be filed with the DOT on Form 41 quarterly and annually. Securities and Exchange Commission filings and annual financial reports frequently follow the wording and captions of the USAR accounts.

Computerized Reservation Systems (CRSs)

.13 Computerized reservation systems (CRSs) developed by several airlines (CRS vendors) allow travel agents to access airline schedules and information regarding hotels, car rentals, and so forth. The CRSs permit the agency user to, among other things, check seat availability, make reservations, and print tickets for flights on participating domestic and international airlines. In 1984, the CAB ordered the elimination of display preference in the systems for all participating airlines (those paying a fee to participate) and required CRS vendors to charge uniform booking fees for airline users of CRSs, based on the level of service received. Nonparticipating airline schedules are also included in the CRSs for informational purposes. [Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.14 The CRS vendors receive booking fees per segment from participating airlines on which flights are booked and user fees from the travel agencies. Some airlines have contracted with CRS vendors to process all of their reservations through the CRS vendors' reservation systems, thereby eliminating the need for the airlines' in-house reservation systems.

.15 The CRSs increase the amount of information that may be captured online at the time the reservation is booked. This information normally includes passenger name, ticket number, the travel agent selling the ticket, itinerary, class of service, and price.

Marketing Arrangements

.16 One of the developments in the deregulated environment is the *hub and spoke strategy* that has been adopted by many airlines. Under this concept, the airline identifies certain cities as hub cities to serve both long-haul flights and connecting short-haul flights. This strategy has led carriers operating from a hub city to enter into agreements with other carriers to coordinate flight schedules at the hub city to facilitate the interchange of passengers. The advantage to both airlines is that each feeds passengers to the other. The agreements may include joint promotion and advertising efforts, use of the major carrier's reservation system, and dual designation of flights in a CRS or other reservation systems and the official airline guide. The dual designation of flights (that is, a national or regional flight arriving at or departing the hub city using the same flight number as the major carrier) is the subject of controversy within the industry.

Commissions

.17 Before deregulation, commissions to travel agents were limited to amounts authorized by the CAB or foreign governments. Since deregulation, a myriad of commission arrangements has evolved both domestically and internationally. In addition to basic commissions, travel agents may be entitled to incentive commissions for certain routes, travel periods, and defined volumes. Auditors should consider the significant cost and complexity of travel agents' commission arrangements when assessing risk and planning and performing audit procedures related to commissions expense. [Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Accounting Issues

.18 The guidance presented in this statement modifies certain aspects of the guide and addresses issues that have developed as a result of deregulation.

Developmental and Preoperating Costs

.19 Developmental and preoperating costs are as follows:

Developmental costs include those types of costs directly related to the development of new routes (or extension of existing routes), such as advertising and promotion expenses, related travel and incidental expenses, and expenses of regulatory proceedings.

> *Preoperating costs* include flight crew training, maintenance training, prerevenue flight expenses, insurance, and depreciation. Like developmental costs, preoperating costs relate directly to specific preoperating projects, such as preparation for operation of new routes . . . or integration of new types of aircraft . . .

[Revised to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.20 Before deregulation, costs meeting the foregoing criteria for developmental and preoperating costs were normally deferred and amortized over the expected period of benefit, generally two-to-five years. In that regulated environment, the expected future benefit and recoverability of such costs was generally not in doubt.

.21 Under the ADA, new domestic routes can be obtained more readily without regulatory delay, and there is presently little domestic protection against new entrants. The designation of additional U.S. cities as gateway cities with direct service to various international cities, as well as the increased competition over traditional international routes, has altered the historical competitive relationship and earnings potential that previously existed on given routes. Therefore, the future benefits to be derived from new routes may be uncertain in the present operating environment.

Division's Conclusions

.22 Because of the current deregulated environment and the uncertainty regarding the recoverability of route developmental costs, the majority of the Accounting Standards Executive Committee (AcSEC) believes that developmental costs, other than advertising costs, related to preparation of operations of new routes should not be capitalized, as previously permitted under the guide. (Advertising costs should be accounted for in conformity with the gui dance in SOP 93-7, *Reporting on Advertising Costs* [ACC sec. 10,590].) Route expansion or alteration has become a recurring activity among the airlines, and any related cost is considered a normal and recurring cost of conducting business. [As amended, effective for financial statements for years beginning after June 15, 1994, by Statement of Position 93-7. Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 Preoperating costs related to the integration of new types of aircraft should be expensed as incurred.[*] [As amended, effective for financial statements for fiscal years beginning after December 15, 1998, by Statement of Position 98-5. Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.24 A minority of AcSEC believes that the current accounting model permits the capitalization of developmental costs. They believe that the airline industry should not be precluded from capitalizing those costs.

[.25] [Paragraph deleted, February 2008, by Statement of Position 98-5, *Reporting on the Costs of Start-Up Activities*, effective for financial statements for fiscal years beginning after December 15, 1998.]

---

[*] [Footnote deleted, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Take-off and Landing Slots

.26 New entrants to a market and airlines expanding in markets need gates, and take-off and landing slots available to them at the airports in those markets. At certain airports, the frequency of take-offs and landings at all times is generally at capacity. At other airports, the slots during popular travel times are at capacity.

.27 Because an airline cannot enter a market where no slots are available, the DOT has adopted a rule under which airlines may sell or trade slots. These transactions frequently include the sale of or access to gates for the acquiring airlines. Although slots, particularly those in high-demand time periods, have always had intrinsic value, the DOT policy of transferability through sale or exchange has made the slot a salable right.

Division's Conclusions

.28 When airlines buy slots, the recorded asset is an intangible asset that should be accounted for in conformity with FASB Statement No. 142, *Goodwill and Other Intangible Assets*. When determining a useful life of such intangible assets, the following factors should be considered, in addition to the factors indicated in FASB Statement No. 142:

- The accelerated pace of change in the airline industry and the effects of competition among airports
- The uncertainty of the continuation of the current governmental policy regarding sale of and access to landing slots
- The terms of existing facility leases at airports
- Probability of new airport construction to serve the same metropolitan area
- Traffic patterns and trends and local operating restrictions

[Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 142, which superseded APB Opinion No. 17, *Intangible Assets*. Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.[†]]

.29 When an airline exchanges slots with another airline, the slots acquired in the exchange are nonmonetary assets that should be recorded in conformity with APB Opinion No. 29, *Accounting for Nonmonetary Transactions,* and accounted for in accordance with FASB Statement No. 142. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 142, which superseded APB Opinion No. 17, *Intangible Assets*. Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Airframe Modifications‡

.30 Historically, airlines have undertaken major programs to modify interior configurations of certain aircraft types—including the reconfiguration and replacement of seats, galley equipment, and storage space—in response to

[†] [Footnote deleted, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

‡ Readers should consider the requirements of FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and its implications regarding airframe modifications.

market forces and passenger demands. Since deregulation, such changes have been more frequent.

Division's Conclusions

.31 If the modifications enhance the usefulness of the aircraft, the costs associated with the changes should be capitalized and depreciated over the estimated useful life of the aircraft or the modifications, whichever is less. The cost of the replaced asset net of accumulated depreciation and anticipated recovery value should be charged to income in the current period. However, detailed records may often be inadequate to permit identification of the cost of the replaced asset; therefore, estimates may be required.

Effective Date

.32 The conclusions in this statement of position should be applied to transactions initiated after September 30, 1988. Restatement of previously issued financial statements is not permitted. [Paragraph revised, February 2008, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Statement of Position 90-3
Definition of the Term Substantially the Same *for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position*

February 13, 1990

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Scope

.01 This Statement of Position provides guidance for determining whether two debt instruments are *substantially the same*. The recommendations herein are limited to transactions involving a sale and purchase or exchange of debt instruments between entities who hold the debt instruments as an asset. The term *debt instruments* is used in this statement of position to include instruments usually considered to be securities such as notes, bonds, and debentures, as well as other evidence of indebtedness such as money market instruments, certificates of deposit, mortgage loans, commercial loans, and commercial paper, that often are not referred to as securities. Debt instruments also include evidence of indebtedness that represents aggregations of debt instruments, such as mortgage-backed certificates.

.02 The conclusions in this statement of position are not intended to modify, in any way, Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (SFAS) No. 15, *Accounting by Debtors and Creditors for Troubled Debt Restructurings*. Paragraph 42 of SFAS No. 15 discusses certain situations in which troubled debt restructurings may involve substituting debt of other business enterprises, individuals, or governmental units for that of the troubled debtors. The accounting principles in paragraph 42 of SFAS No. 15 are not affected by this statement of position. Also, this statement of position is not intended to apply to situations in which financial institutions originate or buy whole loan mortgages and exchange those loans for a participation certificate issued by government-sponsored enterprises or agencies (FHLMC, FNMA, or GNMA) representing direct ownership of the same mortgages. However, the statement of position does apply to exchanges of participation certificates.

.03 The recommendations in this statement of position amend AICPA Industry Audit Guide *Audits of Banks* (Bank Audit Guide)[1] and Audit and Accounting Guide *Audits of Brokers and Dealers in Securities* (Broker-Dealer Guide).

Background

.04 The preface of the Bank Audit Guide (May 1994) stated that certain issues affecting the banking industry were not included in the guide or were under study by the AICPA or the FASB. One of those issues related to the definition of the term *substantially the same* as used in the guide.[2]

.05 In paragraphs 5.19 and 5.20 of the Bank Audit Guide (May 1994), the term *substantially the same* was used in describing wash sales as follows:[3]

> Bank supervisory agencies currently prescribe that investment security gains and losses be recognized according to the completed transaction method. In practice, serious questions develop about the proper definition of "completed transactions" when securities are sold with the intent to reacquire the same or *substantially the same* securities, most often to obtain income tax or other benefits. In such transactions, known as "wash sales," the period of time between sale and reacquisition varies. It is often very short, especially when readily marketable securities are involved. In some cases, the security or evidence of ownership of the security remains in the possession of the seller or his agent; only brokers' advices provide evidence of the sale and reacquisition.
>
> In a sale, the risks and opportunities of ownership are transferred for a reasonable period of time; such a transfer is necessary to constitute realization and permit recognition of revenue. Therefore, when a bank sells a security and concurrently reinvests the proceeds from the sale in the same or *substantially the same* security, no sale should be recognized, since the effect of the sale and repurchase transaction leaves the bank in essentially the same position as before, notwithstanding the fact that the bank has incurred brokerage fees and taxes. When the proceeds are not reinvested immediately, but soon thereafter, the test is whether the bank was at risk for a reasonable period of time to warrant recognition of a sale. The period of time cannot be defined exactly; rather, the type of securities involved and the circumstances of the particular transaction should enter into the determination of what constitutes a reasonable period of time. For example, a day may be appropriate for a quoted stock or bond that has a history of significant market price fluctuations over short periods of time. Similarly, a bank's liquidity requirements may require that a

---

[1] The AICPA Audit and Accounting Guide *Banks and Savings Institutions*, incorporated and superseded Statement of Position (SOP) 90-3 to the extent SOP 90-3 amended previous editions of the Bank Audit Guide and the AICPA Audit and Accounting Guide *Audits of Savings Institutions*. [Footnote added, April 1996, to reflect the conforming changes necessary due to the issuance of recent authoritative literature.]

[2] See footnote 1. [Footnote added, April 1996, to reflect the conforming changes necessary due to the issuance of recent authoritative literature.]

[3] See footnote 1. [Footnote added, April 1996, to reflect the conforming changes necessary due to the issuance of recent authoritative literature.]

> long-term bond be replaced by a short-term money market instrument; but, a week later, the bank's liquidity requirements may change, and reacquisition of the bond previously sold may be a reasonable business decision, wholly independent of the previous decision to sell the bond. [*Emphasis added.*]

.06 The terms *substantially the same, substantially similar,* and *substantially identical* are also used to describe a factor that is considered in determining whether a sale of a debt instrument under an agreement to repurchase should be accounted for as a sale and a purchase or as a financing transaction. Dollar repurchase—dollar reverse repurchase agreements involve similar but not identical securities. The terms of the agreements often provide data to determine whether the securities are similar enough to make the transaction in substance a borrowing and lending of funds or whether the securities are so dissimilar that the transaction is a sale and purchase of securities.

.07 A dollar repurchase—dollar reverse repurchase agreement is an agreement (contract) to sell and repurchase or to purchase and sell back securities of the same issuer but not the original securities. Fixed coupon and yield maintenance dollar agreements comprise the most common agreement variations. In a fixed coupon agreement, the seller and buyer agree that delivery will be made with securities having the same stated interest rate as the interest rate stated on the securities sold. In a yield maintenance agreement, the parties agree that delivery will be made with securities that will provide the seller a yield that is specified in the agreement.

[.08] [Paragraph deleted, August 1991, by the issuance of the Audit and Accounting Guide *Audits of Savings Institutions*.]

.09 The term *substantially identical* is also used by brokers and dealers in discussing repurchase transactions. The AICPA Audit and Accounting Guide, *Audits of Brokers and Dealers in Securities* states the following in paragraph 1.40:

> A repurchase transaction, commonly known as a repo transaction, is a sale of security coupled with an agreement by the seller to repurchase the same or *substantially identical* security at a stated price . . . .
>
> A reverse repurchase agreement, known as a reverse repo, is the purchase of a security at a specified price with an agreement to resell the same or *substantially identical* security at a definite price at a specific future date. [*Emphasis added.*]

The Broker/Dealer Guide does not provide any guidance for determining whether the securities are *substantially identical.*

.10 Because of the lack of an authoritative definition of *substantially the same,* alternative accounting practices have developed or may develop for the exchange of *substantially the same* assets.

Current Accounting Practices

.11 The issue of whether two debt instruments are *substantially the same* is generally encountered in connection with determining whether a transaction involving debt instruments results in a sale or a financing, for example, the sale of a debt instrument under an agreement to repurchase another debt instrument. If the debt instrument to be repurchased is *substantially the same* as a debt instrument sold, it may be viewed as a financing transaction. However, if the debt instrument to be repurchased is viewed as not being *substantially the same,* that transaction is generally recorded as a sale with a commitment to buy another debt instrument.

.12 Two debt instruments can differ in a variety of ways, such as the obligor, maturity, interest rate, and yield. If two debt instruments are exchanged and many of the characteristics of the instruments differ, for example, exchange of a U.S. Treasury bill for a mortgage-backed security, virtually all would agree that a transaction has taken place that requires accounting recognition as a sale, not a financing. In contrast, if two debt instruments are exchanged and most of the characteristics of the instruments are the same, many would view the exchange as involving *substantially the same* securities prohibiting accounting recognition, for example, the exchange of two GNMA securities bearing the identical contractual interest rate that are collateralized by similar pools of mortgages resulting in approximately the same yield. Thus, the issue to resolve is how similar the characteristics of two debt instruments have to be viewed as *substantially the same.*

Conclusions

.13 To minimize diversity in practice, the AICPA Banking Committee, Savings and Loan Associations Committee, and Stockbrokerage and Investment Banking Committee believe the definition of *substantially the same* should be narrow. Therefore, the committees have concluded that for debt instruments, including mortgage-backed securities, to be *substantially the same, all* the following criteria must be met:[4]

a. The debt instruments must have the same primary obligor, except for debt instruments guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and terms of the guarantee must be the same.[5]

b. The debt instruments must be identical in form and type so as to give the same risks and rights to the holder.[6]

c. The debt instruments must bear the identical contractual interest rate.

d. The debt instruments must have the same maturity except for mortgage-backed pass-through and pay-through securities for which the mortgages collateralizing the securities must have similar remaining weighted average maturities (WAMs) that result in approximately the same market yield.[7]

---

[4] See footnote 1. [Footnote added, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[5] The exchange of pools of single-family loans would not meet this criterion because the mortgages comprising the pool do not have the same primary obligor, and would therefore not be considered *substantially the same.* [Footnote renumbered, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[6] For example, the following exchanges would not meet this criterion: GNMA I securities for GNMA II securities; loans to foreign debtors that are otherwise the same except for different U.S. foreign tax credit benefits (because such differences in the tax receipts associated with the loans result in instruments that vary "in form and type"); commercial paper for redeemable preferred stock. [Footnote renumbered, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[7] For example, the exchange of a "fast-pay" GNMA certificate (that is, a certificate with underlying mortgage loans that have a high prepayment record) for a "slow-pay" GNMA certificate would not meet this criterion because differences in the expected remaining lives of the certificates result in different market yields. [Footnote renumbered, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

e. Mortgage-backed pass-through and pay through securities must be collateralized by a similar pool of mortgages, such as single-family residential mortgages.

f. The debt instruments must have the same aggregate unpaid principal amounts, except for mortgage-backed pass-through and pay-through securities, where the aggregate principal amounts of the mortgage-backed securities given up and the mortgage-backed securities reacquired must be within the accepted "good delivery" standard for the type of mortgage-backed security involved.[8]

Effective Date and Transition

.14 The conclusions of this statement of position should be applied prospectively to transactions entered into after March 31, 1990. Earlier application to transactions occurring in periods for which financial statements have not been issued is encouraged. However, previously issued annual or interim financial statements should not be restated.

---

[8] Participants in the mortgage-backed securities market have established parameters for what is considered acceptable delivery. These specific standards are defined by the Public Securities Association (PSA) and can be found in *Uniform Practices for the Clearance and Settlement of Mortgage-Backed Securities and Other Related Securities*, which is published by PSA. [Footnote renumbered, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Section 10,460

Statement of Position 90-7 Financial Reporting by Entities in Reorganization Under the Bankruptcy Code

November 19, 1990

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity with Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances. However, an entity need not change an accounting treatment followed as of March 15, 1992 to the accounting treatment specified in this Statement of Position.

Introduction

.01 This statement of position (SOP) was prepared by the Task Force on Financial Reporting by Entities in Reorganization Under the *Bankruptcy Code* to provide guidance on financial reporting by entities that have filed petitions with the *Bankruptcy Court* and expect to reorganize as going concerns under *Chapter 11* of title 11 of the United States Code ("Chapter 11").[1]

Petition, Proceeding, and Plan

.02 An entity enters reorganization under Chapter 11 by filing a petition with the Bankruptcy Court, an adjunct of the United States District Courts. The filing of the *petition* starts the *reorganization proceeding*. The goal of the proceeding is to maximize recovery by creditors and shareholders by preserving it as a viable entity with a going concern value. For that purpose, the entity prepares a *plan of reorganization* intended to be confirmed by the court. The plan provides for treatment of all the assets and liabilities of the debtor, which might result in forgiveness of indebtedness. For the plan to be confirmed and the reorganization proceedings thereby concluded, the consideration to be received by parties in interest under the plan must exceed the consideration they would otherwise receive on liquidation of the entity under *Chapter 7* of the

[1] A glossary of defined terms, which are in *italics* when they first appear in the text, is in paragraph .69.

Bankruptcy Code. The court may confirm a plan even if some classes of creditors or some of the stockholders have not accepted it, provided that it meets standards of fairness required by Chapter 11 to the dissenting class of creditors or the dissenting stockholders.

.03 The plan is the heart of every Chapter 11 reorganization. The provisions of the plan specify the treatment of all creditors and equity holders upon its approval by the Bankruptcy Court. Moreover, the plan shapes the financial structure of the entity that emerges.

.04 Chapter 11 provides that, unless a *trustee* is appointed, the debtor has the exclusive right to file a plan for the first 120 days of the case, or such longer or shorter time as the Bankruptcy Court decrees, for cause. If a plan is filed within the exclusive period, additional time is provided to allow the debtor to obtain plan acceptance. The appointment of the trustee immediately terminates the debtor's exclusive right to file a plan, and any party in interest may then do so.

.05 Except to the extent that specific debts are determined by the Bankruptcy Court not to be discharged by the plan, the provisions of a *confirmed plan* bind the debtor, any entity issuing securities under the plan, any entity acquiring assets under the plan, and any creditor, equity security holder, or general partner in the debtor, regardless of whether the *claim* is impaired under the plan and whether such creditor, equity security holder, or general partner has accepted the plan. A claim is impaired if, subject to certain rights to cure defaults, its legal rights are affected adversely by the plan.

.06 In general, except as provided in the plan or in the order confirming the plan, confirmation of the plan discharges the debtor from all preconfirmation claims and terminates all rights and interest of equity security holders or general partners as provided for in the plan.

.07 The Bankruptcy Court confirms a plan if it finds all of the following:

- The plan and the plan proponent have complied with various technical requirements of the Bankruptcy Code.
- Disclosures made in soliciting acceptance of the plan have been adequate.
- Dissenting members of *consenting classes of impaired claims* would receive under the plan at least the amount they would have received under a Chapter 7 proceeding.
- Claims entitled to priority under the Bankruptcy Code will be paid in cash.
- Confirmation of the plan is not likely to be followed by liquidation or further reorganization.
- At least one class of impaired claims, apart from insiders, has accepted the plan.
- The plan proponent has obtained the consent of all impaired classes of claims or equity securities, or the plan proponent can comply with the *cram-down provisions* of the Bankruptcy Code. (Under the cram-down provisions, the court may confirm a plan even if one or more classes of holders of impaired claims or equity securities do not accept it, as long as the court finds the plan does not discriminate unfairly and is fair and equitable to each *nonconsenting class* impaired by the plan.)

.08 In general, a *secured claim* is deemed to be treated fairly and equitably if it remains adequately collateralized and will receive a stream of payments whose discounted value equals the amount of the secured claim on the effective date of the plan. In general, an *unsecured claim* is deemed to be treated fairly and equitably if it receives assets whose discounted value equals the allowed amount of the claim, or if the holder of any claim or equity security interest that is junior to the dissenting class will not receive or retain any assets under the plan. Similarly, an equity security interest is deemed fairly and equitably treated if that interest receives assets whose discounted value equals the greatest of any fixed liquidation preference, any fixed redemption price, or the value of such interest, or if no junior equity security interest will receive any assets under the plan.

Reorganization Value

.09 An important part of the process of developing a plan is the determination of the *reorganization value* of the entity that emerges from bankruptcy. Reorganization value generally approximates fair value of the entity before considering liabilities and approximates the amount a willing buyer would pay for the assets of the entity immediately after the restructuring. The reorganization value of an entity is the amount of resources available and to become available for the satisfaction of postpetition liabilities and *allowed claims* and interest, as negotiated or litigated between the *debtor-in-possession* or trustee, the creditors, and the holders of equity interests. Reorganization value includes the sum of the value attributed to the reconstituted entity and other assets of the debtor that will not be included in the reconstituted entity. Reorganization value and the terms of the plan are determined only after extensive arms-length negotiations or litigation between the interested parties. Before the negotiations, the debtor-in-possession, creditors, and equity holders develop their own ideas on the reorganization value of the entity that will emerge from Chapter 11. Several methods are used to determine the reorganization value; however, generally it is determined by discounting future cash flows for the reconstituted business that will emerge from Chapter 11 and from expected proceeds or collections from assets not required in the reconstituted business, at rates reflecting the business and financial risks involved.

The Disclosure Statement

.10 A *disclosure statement* approved by the court is transmitted to all parties entitled to vote on the plan at or before the time their acceptance of the plan is solicited. The disclosure statement provides information that enables them to make informed judgments about the plan.

.11 No postpetition solicitation of acceptance of a plan may be made unless by the time of the solicitation a disclosure statement previously approved by the Bankruptcy Court has been sent to those whose acceptance is required. The disclosure statement must contain adequate information, which is defined in the Bankruptcy Code as information that would enable a hypothetical reasonable investor typical of holders of claims or interests of the relevant class to make an informed judgment about the plan, as far as it is reasonably practicable to provide in light of the nature and history of the *emerging entity* and the condition of the emerging entity's records. Examples of the kinds of items that may be included in disclosure statements to provide such information include a summary of the reorganization plan, historical and prospective financial information, and a pro forma balance sheet reporting the reorganization value and the capital structure of the emerging entity.

.12 What constitutes adequate information depends on the circumstances of the entity in Chapter 11, the nature of the plan, and the sophistication of the various classes whose acceptance is required. Although a valuation is not required for a Bankruptcy Court's approval of a disclosure statement, the instances in which valuations are not made are generally restricted to those in which the reorganization value of the emerging entity is greater than the liabilities or in which holders of existing voting shares retain more than 50 percent of the emerging entity's voting shares when the entity emerges from reorganization.

.13 After reorganization proceedings have started, acceptances of a plan may not be solicited by any person without a disclosure statement approved by the court, but acceptances obtained before the proceedings started may be counted if (*a*) they were solicited in compliance with applicable nonbankruptcy law governing the adequacy of disclosure or (*b*) there is not any applicable nonbankruptcy law but there was in fact adequate information provided at the time of the prebankruptcy solicitation of acceptances of the plan.

Current Literature and Reporting Practices

.14 The current financial reporting literature provides no specific guidance for financial reporting by entities in reorganization proceedings. Entities generally continue to apply the financial reporting principles they applied before filing petitions; these principles usually do not adequately reflect all changes in the entity's financial condition caused by the proceeding. The financial statements prepared while entities are in Chapter 11 reorganization are therefore not as useful to users of financial statements as they should be. For example, the Bankruptcy Code allows the debtor to reject executory contracts such as leases and take-or-pay contracts. Some entities report the resulting claims at the estimated amounts of the allowed claims, while others report them at the estimated amounts at which they will be settled.

.15 Another area in which reporting is diverse during the Chapter 11 reorganization is the classification of liabilities. Some entities report all *prepetition liabilities* as current, whereas others report them as long-term debt or as a separate item between current and long-term liabilities. Financial Accounting Standards Board (FASB) Statement No. 6, *Classification of Short-Term Obligations Expected to Be Refinanced,* states that all short-term obligations resulting from transactions in the normal course of business that are due in customary terms, such as trade payables, advance collections, and accrued expenses, are to be classified as current liabilities. However, FASB Statement No. 6 does not address reporting by entities in Chapter 11 reorganization whose unsecured debt may not be paid without approval of the Bankruptcy Court and therefore may neither be paid within one year, or the operating cycle, if longer, nor satisfied with current assets.

.16 Further, the financial reporting literature provides no specific guidance for financial reporting by entities emerging from Chapter 11 reorganization under confirmed plans. As a result, practice is diverse. For example, FASB Statement No. 15, *Accounting by Debtors and Creditors for Troubled Debt Restructurings,* in footnote 4, and FASB Technical Bulletin No. 81-6, *Applicability of Statement 15 to Debtors in Bankruptcy Situations,* indicate that Statement No. 15 does not apply to troubled debt restructurings in which debtors restate their liabilities generally under the purview of the Bankruptcy Court. A majority of reorganizations of businesses result in general restructuring of liabilities, and considerable confusion exists on how to report the restructured liabilities. FASB Interpretation No. 2, *Imputing Interest on Debt Arrangements Made under the Federal Bankruptcy Act,* states that Accounting Principles Board (APB) Opinion 21, *Interest on Receivables and Payables,* should apply to cases under the Bankruptcy Code. However, that interpretation was superseded by FASB Statement No. 15. An analysis of reporting by entities emerging from bankruptcy indicates that some report their debt at discounted amounts and others follow the guidelines in FASB Statement No. 15.

.17 There is no specific guidance on whether an emerging entity should restate assets. For example, some restate their assets—though there generally is no net write-up—through quasi-reorganizations, and others do not. An analysis of reporting by emerging entities indicates that some eliminate deficits in their retained earnings by reducing additional paid-in capital while others retain such deficits.

Scope

.18 This statement of position applies to financial reporting both by entities that have filed petitions with the Bankruptcy Court and expect to reorganize as going concerns under Chapter 11 and by entities that have emerged from Chapter 11 (emerging entities) under confirmed plans.

.19 It does not apply to entities that restructure their debt outside Chapter 11, to governmental organizations, or to entities that liquidate or adopt plans of liquidation under the Bankruptcy Code.

Conclusions

.20 The following is a summary of the conclusions reached by the Accounting Standards Division. They should be read in conjunction with the discussion of conclusions, which follows this summary and explains the basis for the conclusions.

Financial Reporting During Reorganization Proceedings

.21 Entering a reorganization proceeding, although a significant event, does not ordinarily affect or change the application of generally accepted accounting principles followed by the entity in the preparation of its financial statements. However, the needs of financial statement users change, and thus changes in the reporting practices previously followed by the entity are necessary.

.22 An objective of financial statements issued by an entity in Chapter 11 should be to reflect its financial evolution during the proceeding. For that purpose, the financial statements for periods including and subsequent to filing the Chapter 11 petition should distinguish transactions and events that are directly associated with the reorganization from the ongoing operations of the business.

Balance Sheet

.23 The balance sheet of an entity in Chapter 11 should distinguish prepetition liabilities subject to compromise from those that are not (such as fully secured liabilities that are expected not to be compromised) and *postpetition liabilities.* Liabilities that may be affected by the plan should be reported at the amounts expected to be allowed, even if they may be settled for lesser amounts. If there is uncertainty about whether a secured claim is *undersecured,* or will be impaired under the Plan, the entire amount of the claim should be included with prepetition claims subject to compromise; such a claim should not be reclassified unless it is subsequently determined that the claim is not subject to compromise.

.24 Prepetition liabilities, including claims that become known after a petition is filed, should be reported on the basis of the expected amount of the allowed claims in accordance with FASB Statement No. 5, *Accounting for Contingencies,* as opposed to the amounts for which those allowed claims may be settled. Claims not subject to reasonable estimation should be disclosed in the notes to the financial statements based on the provisions of FASB Statement No. 5. Once these claims satisfy the accrual provisions of FASB Statement No. 5, they should be recorded in the accounts in accordance with the first sentence of this paragraph.

.25 Debt discounts or premiums as well as debt issue costs should be viewed as valuations of the related debt. When the debt has become an allowed claim and the allowed claim differs from the net carrying amount of the debt, the recorded amount should be adjusted to the amount of the allowed claim (thereby adjusting existing discounts or premiums, and deferred issue costs to the extent necessary to report the debt at this allowed amount). The gain or loss resulting from the entries to record the adjustment should be classified as *reorganization items,* as discussed in paragraph .27. Premiums and discounts as well as debt issuance cost on debts that are not subject to compromise, such as fully secured claims, should not be adjusted.

.26 Liabilities subject to compromise should be segregated from those that are not subject to compromise on the balance sheet. The principal categories of the claims subject to compromise should be disclosed in the notes to the financial statements. Circumstances arising during reorganization proceedings may require a change in the classification of liabilities between those subject to compromise and those not subject to compromise. Liabilities not subject to compromise should be further segregated into current and noncurrent classifications if the entity presents a classified balance sheet.

Statement of Operations

.27 The statement of operations should portray the results of operations of the reporting entity while it is in Chapter 11. Revenues, expenses (including professional fees), realized gains and losses, and provisions for losses resulting from the reorganization and restructuring of the business should be reported separately as reorganization items, except for those required to be reported as discontinued operations and extraordinary items in conformity with APB Opinion 30, *Reporting the Results of Operations*, as amended by FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*. [Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement Nos. 144 and 145.]

.28 Some entities defer professional fees and similar types of expenditures until the plan is confirmed and then reduce gain from debt discharge to the extent of the previously deferred expenses. Others accrue professional fees and similar types of expenditures upon the filing of the Chapter 11 petition. Still others expense professional fees and similar types of expenditures as incurred. The task force concluded that professional fees and similar types of expenditures directly relating to the Chapter 11 proceeding do not result in assets or liabilities and thus should be expensed as incurred and reported as reorganization items.

.29 Interest expense should be reported only to the extent that it will be paid during the proceeding or that it is probable that it will be an allowed priority, secured, or unsecured claim. Interest expense is not a reorganization item. The extent to which reported interest expense differs from stated contractual interest should be disclosed. The task force understands that the staff of the Securities and Exchange Commission (SEC) prefers that SEC registrants disclose this parenthetically on the face of the statement of operations.

.30 Interest income earned by an entity in Chapter 11 that it would not have earned but for the proceeding (normally all interest income) should be reported as a reorganization item.

Statement of Cash Flows

.31 Reorganization items should be disclosed separately within the operating, investing, and financing categories of the statement of cash flows. This presentation can be better accomplished by the use of the direct method of presenting the statement. If the indirect method is used, details of operating cash receipts and payments resulting from the reorganization should be disclosed in a supplementary schedule or in the notes to the financial statements.

Condensed Combined Financial Statements

.32 Consolidated financial statements that include one or more entities in reorganization proceedings and one or more entities not in reorganization proceedings should include condensed combined financial statements of the entities in reorganization proceedings. The combined financial statements should be prepared on the same basis as the consolidated financial statements.

.33 Intercompany receivables and payables of entities in reorganization proceedings should be disclosed in the condensed combined financial statements. In addition, the propriety of the carrying amounts of intercompany receivables from entities in Chapter 11 should be evaluated.

Earnings Per Share

.34 Earnings per share should be reported, when required, in conformity with FASB Statement No. 128, *Earnings Per Share*. If it is probable that the plan will require the issuance of common stock or common stock equivalents, thereby diluting current equity interests, that fact should be disclosed. [Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

Financial Reporting When Entities Emerge From Chapter 11 Reorganization

.35 Entities whose plans have been confirmed by the court and have thereby emerged from Chapter 11 should apply the reporting principles in the following paragraphs as of the confirmation date or as of a later date when all material conditions precedent to the plan's becoming binding are resolved.

Fresh-Start Reporting

.36 If the reorganization value of the assets of the emerging entity immediately before the date of confirmation is less than the total of all postpetition liabilities and allowed claims, and if holders of existing voting shares immediately before confirmation receive less than 50 percent of the voting shares of the emerging entity, the entity should adopt fresh-start reporting upon its emergence from Chapter 11. The loss of control contemplated by the plan must be substantive and not temporary. That is, the new controlling interest must not revert to the shareholders existing immediately before the plan was filed or confirmed.

.37 While the court determines the adequacy of the disclosure statement, entities that expect to adopt fresh-start reporting should report information about the reorganization value in the disclosure statement, so that creditors and stockholders can make an informed judgment about the plan. The most likely place to report the reorganization value is in the pro forma balance sheet that is commonly part of the disclosure statement. Because reorganization value may not have been allocated to individual assets concurrently with the preparation of the pro forma balance sheet included in the disclosure statement in some cases, it may be necessary to include in the pro forma balance sheet a separate line item to reflect the difference of the total reorganization value of the emerging entity over recorded amounts. When possible, reorganization value should be segregated into major categories.

.38 Entities that adopt fresh-start reporting in conformity with paragraph .36 should apply the following principles:

- The reorganization value of the entity should be allocated to the entity's assets in conformity with the procedures specified by FASB Statement No. 141, *Business Combinations*.[*] If any portion of the reorganization value cannot be attributed to specific tangible or identified intangible assets of the emerging entity, such amounts should be reported as goodwill in accordance with paragraph 6 of FASB Statement No. 142, *Goodwill and Other Intangible Assets*.
- Each liability existing at the plan confirmation date, other than deferred taxes, should be stated at present values of amounts to be paid determined at appropriate current interest rates.[*]
- Deferred taxes should be reported in conformity with generally accepted accounting principles. Benefits realized from preconfirmation net operating loss carryforwards should first reduce reorganization value in excess of amounts allocable to identifiable assets and other intangibles until exhausted and thereafter be reported as a direct addition to paid-in capital.[*]

[Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement Nos. 141 and 142. Revised, May 2008, to reflect conforming changes necessary due to the issuance of FASB Staff Position (FSP) SOP 90-7-1, *An Amendment of AICPA Statement of Position 90-7*.]

.39 The financial statements of the entity as of and for the period immediately preceding the date determined in conformity with the guidance in paragraph .35 should reflect all activity through that date in conformity with the guidance in paragraphs .21 through .34. Additionally, the effects of the adjustments on the reported amounts of individual assets and liabilities resulting from the adoption of fresh-start reporting and the effects of the forgiveness of debt should be reflected in the predecessor entity's final statement of operations. Forgiveness of debt, if any, should be reported as an extinguishment of debt and classified in accordance with

[*] Effective for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 31, 2008, the guidance in FASB Statement No. 141 (revised 2007), *Business Combinations*, should be applied. [Footnote added, May 2008, due to the issuance of FASB Statement No. 141(R).]

APB Opinion 30, as amended.[†] Adopting fresh-start reporting results in a new reporting entity with no beginning retained earnings or deficit. When fresh-start reporting is adopted, the notes to the initial financial statements should disclose the following:

- Adjustments to the historical amounts of individual assets and liabilities.
- The amount of debt forgiveness.
- Significant matters relating to the determination of reorganization value, such as:

— The method or methods used to determine reorganization value and factors such as discount rates, tax rates, the number of years for which cash flows are projected, and the method of determining *terminal value*.

— Sensitive assumptions—that is, assumptions about which there is a reasonable possibility of the occurrence of a variation that would have significantly affected measurement of reorganization value.

— Assumptions about anticipated conditions that are expected to be different from current conditions, unless otherwise apparent.

[Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145.]

Comparative Financial Statements

.40 Chapter 2A of Accounting Research Bulletin (ARB) No. 43, *Restatement and Revision of Accounting Research Bulletins*, state the following in paragraph 1:

> The presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise.

Paragraph 3 of that chapter requires comparative financial statements that are presented to be comparable from year to year, with any exceptions to comparability being clearly disclosed. Fresh-start financial statements prepared by entities emerging from Chapter 11 will not be comparable with those prepared before their plans were confirmed because they are, in effect, those of a new entity. Thus, comparative financial statements that straddle a confirmation date should not be presented.[2]

Reporting by Entities Not Qualifying for Fresh Start

.41 Entities emerging from Chapter 11 that do not meet the criteria in paragraph .36 do not qualify for a fresh start. Liabilities compromised by confirmed plans should be stated at present values of amounts to be paid,

---

[†] FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*, eliminated the requirement to classify all gains and losses associated with extinguishment of debt as extraordinary items. As noted in paragraph A5 of FASB Statement No. 145, the rescission of FASB Statement No. 4 does not preclude gains and losses from extinguishment of debt that meet the criteria in APB Opinion 30 from being classified as extraordinary items. [Footnote added, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145; Footnote renumbered due to the issuance of FASB Statement No. 141(R), May 2008.]

[2] The SEC and other regulatory agencies may require the presentation of predecessor financial statements. However, such presentations should not be viewed as a continuum because the financial statements are those of a different reporting entity and are prepared using a different basis of accounting, and, therefore, are not comparable. Attempts to disclose and explain exceptions that affect comparability would likely result in reporting that is so unwieldy it would not be useful.

determined at appropriate current interest rates. Forgiveness of debt, if any, should be reported as an extinguishment of debt and classified in accordance with APB Opinion 30, as amended. ‡ [Revised, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145.]

.42 Because this statement of position applies to financial reporting for entities that enter and intend to emerge from Chapter 11 reorganization, quasi-reorganization accounting should not be used at the time of the reorganization.

Discussion of Conclusions

Reporting Prepetition Liabilities

.43 The task force believes that entities in Chapter 11 reorganization should segregate liabilities subject to compromise from those that are not subject to compromise. Therefore, prepetition liabilities that may be impaired by a plan and that are eligible for compromise because they are either unsecured or undersecured should be separately classified and designated in the balance sheet as prepetition liabilities subject to compromise, because that provides the most meaningful presentation while in Chapter 11 reorganization.

.44 The financial reporting literature does not specifically address the balance sheet classification issues that result from filing a petition. Guidance for classifying liabilities as current in a classified balance sheet is provided in paragraph 7 of ARB No. 43, chapter 3A, which states the following:

> The term *current liabilities* is used to designate obligations whose liquidation is reasonably expected to require the use of existing resources properly classified as current assets, or the creation of other current liabilities . . . .

Trade payables that are incurred in the normal course of business are usually classified as current in classified balance sheets because they meet the ARB No. 43 criteria cited above. However, filing a petition generally causes the payment of unsecured or undersecured prepetition liabilities to be prohibited before the plan is confirmed. The Chapter 11 reorganization ending in confirmation of a plan typically takes more than one year or one operating cycle, if longer.

.45 It might be argued that prepetition liabilities classified as current in a classified balance sheet, such as trade payables, should retain that classification under the provisions of FASB Statement No. 6, *Classification of Short-Term Obligations Expected to Be Refinanced.* That Statement requires all short-term liabilities incurred in the normal course of business and due in customary terms to be classified as current. Other short-term liabilities are excluded from the current liability classification under FASB Statement No. 6 if the entity intends to refinance the obligations on a long-term basis and such intent is supported by the facts. However, FASB Statement No. 6 does not address what occurs when a petition is filed.

.46 FASB Statement No. 78, *Classification of Obligations That Are Callable by the Creditor,* amended paragraph 7 of ARB No. 43, chapter 3A, by

‡ FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*, eliminated the requirement to classify all gains and losses associated with extinguishment of debt as extraordinary items. As noted in paragraph A5 of FASB Statement No. 145, the rescission of FASB Statement No. 4 does not preclude gains and losses from extinguishment of debt that meet the criteria in APB Opinion 30 from being classified as extraordinary items. [Footnote added, March 2003, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145; Footnote renumbered due to the issuance of FASB Statement No. 141(R), May 2008.]

requiring current liabilities classification in a classified balance sheet for long-term liabilities that, by their terms, are due on demand or will be due on demand within one year, or the operating cycle, if longer. This definition also includes long-term liabilities that are or will be callable by the creditor because of a violation of a provision of the debt agreement. The *automatic stay provisions* of Chapter 11 make it unnecessary to reclassify prepetition long-term liabilities even though prepetition creditors might demand payment or there is a violation of a covenant in the debt agreement.

.47 Prepetition liabilities should be reported at the amounts of allowed claims—that is, at the amount allowed by the court, even though such liabilities may not be paid in full.

.48 When prepetition claims become known after a petition is filed (for example, a claim resulting from the rejection of an operating lease), they should be reported at the estimated amounts of the allowed claims. Some believe that such prepetition claims should be reported at estimates of the settlement amounts. However, these prepetition claims should be reported at an amount allowed by the court because that is the amount of the liability until it is settled and the use of allowed amounts is consistent with the amounts at which other prepetition liabilities are stated and thereby provides comparability among the various kinds of claims.

Statement of Operations

.49 Losses as a result of restructuring or disposal of assets directly related to reorganization proceedings are best included as reorganization items to the extent that they are not otherwise reported as part of the results of discontinued operations in conformity with APB Opinion 30, *Reporting the Results of Operations*. That does not result in reclassification of revenues and expenses from operations sold or abandoned, except those that meet the criteria in APB Opinion 30. Rather, gains or losses classified as reorganization items might include a gain or loss on disposal of assets plus related employee costs and charges or other costs directly related to the assets disposed of or the operations restructured. Also, income, expenses, realized gains, and losses that can be directly associated with the proceeding are best segregated and presented as reorganization items in the statement of operations. Examples include interest income (as indicated in paragraph .30), professional fees, and losses on executory contracts.[3]

.50 The task force believes that segregation of reorganization items provides meaningful disclosure and is consistent with APB Opinion 30, paragraph 26, which states the following:

> A material event or transaction that is unusual in nature or occurs infrequently but not both, and therefore does not meet both criteria for classification as an extraordinary item, should be reported as a separate component of continuing operations.

Interest Expense

.51 Certain provisions of the Bankruptcy Code may relieve the entity from its obligation to pay interest. Generally, interest on secured claims accrues only to the extent that the value of underlying collateral exceeds the principal amount of the secured claim. In addition, interest on unsecured claims does not

---

[3] Appendix A [paragraph .67] illustrates a statement of operations that includes reorganization items.

accrue during the proceeding if the entity is insolvent; therefore, disclosure of contractual interest is considered useful because it may differ from interest actually being reported.

Interest Income

.52 An entity in reorganization typically accumulates cash during the proceeding because it is not paying its obligations currently. The cash ultimately is distributed to creditors or others in conformity with the plan. The amount of cash accumulated does not reflect the entity's prepetition activities, and it is not expected that such an accumulation would recur in the reorganized entity. The interest income earned during the proceeding on cash accumulated during the proceeding, therefore, is a reorganization item. To the extent that management can reasonably estimate that portion of interest income applicable to normal invested working capital, it should be reported as an operating item in the ordinary manner.

Statement of Cash Flows

.53 FASB Statement No. 95, *Statement of Cash Flows*, requires information on the cash activity of reporting entities. The task force believes that such information is the most beneficial information that can be provided in the financial statements of an entity in Chapter 11. It also believes the direct method is the better method to provide such information by such entities.

.54 Paragraph 27 of FASB Statement No. 95 lists the operating items that should be reported separately when the direct method is used. That paragraph encourages further breakdown of those operating items if the entity considers such a breakdown meaningful and it is feasible to do so. Further identification of cash flows from reorganization items should be provided to the extent feasible. For example, interest received might be segregated between estimated normal recurring interest received and interest received on cash accumulated because of the reorganization. Appendix A [paragraph .67] illustrates a statement of cash flows for an entity operating under Chapter 11.

Fresh-Start Reporting

.55 The effects of a plan should be included in the entity's financial statements as of the date the plan is confirmed. However, inclusion should be delayed to a date not later than the effective date if there is a material unsatisfied condition precedent to the plan's becoming binding on all the parties in interest or if there is a stay pending appeal. That might occur, for example, if obtaining financing for the plan or for the transfer of material assets to the debtor by a third party is a condition to the plan's becoming effective.

.56 Financial statements prepared as of the date after the parties in interest have approved a plan through the voting process, and issued after the plan has been confirmed by the court, should report the effects of the plan if there are no material unsatisfied conditions.

.57 An essential element in negotiating a plan with the various classes of creditors and equity interests is the determination of reorganization value by the parties in interest. The plan provides for allocating the reorganization value among the parties in interest in accordance with their legal priorities: first to secured claims to the extent of the value of the collateral securing the claims, then to claims entitled to priority under the Bankruptcy Code, and then to the various classes of unsecured debt and equity interests in accordance with their legal priorities or as the parties may otherwise agree. In the event that the parties in interest cannot agree on the reorganization value and presumably the plan of reorganization, the court may be called upon to determine the reorganization value of the entity before a plan of reorganization can be confirmed.

.58 The task force concluded that reorganization value can be a more objective measure of fair value than a purchase price in a business combination. This view is based on two factors. First, a purchase price in a nonbankruptcy business combination may exceed the fair value of the acquired entity, because such determinations may be influenced by a variety of factors unrelated to that entity. Second, in the reorganization process, extensive information available to the parties in interest, the adversarial negotiation process, the involvement of the Bankruptcy Court, the use of specialists by one or more of the parties in interest, and the fact that all elements of the determination are focused solely on the economic viability of the emerging entity result in an objective and reliable determination of reorganization value.

.59 If, based on reorganization value, the parties in interest allow the entity to survive as a going concern and emerge from Chapter 11, the financial reporting should reflect that fact. The ability to reflect reorganization value would enhance the representational faithfulness of the emerging entity's financial statements.

.60 Under the *absolute priority doctrine* of the Bankruptcy Code, if the amount of postpetition liabilities and allowed claims exceeds the reorganization value of the emerging entity, existing shareholders lose their legal right to any economic interest without the consent of creditors. Therefore, any equity interest in the emerging entity ultimately held by existing shareholders is given to them by the creditors. Among the reasons the creditors might give such shareholders equity interests in the emerging entity are to avoid the expensive and time-consuming legal proceedings necessary to implement the cram-down provisions of the Bankruptcy Code or to preserve continuity of management.

.61 Based on the factors described in paragraphs .57, .58, and .60, some would conclude that the combination of change in majority ownership and voting control—that is, loss of control by the existing shareholders, a court-approved reorganization, and a reliable measure of the entity's fair value—results in a fresh start, creating, in substance, a new reporting entity. Others believe that a change in control and the exchange of debt and equity based on reorganization value is in substance an acquisition at fair value by new shareholders in exchange for extinguishing their debt. Although the former shareholders can receive a portion of the new equity, they have lost their rights to any equity interest in the reorganized entity and receive such interest only with the consent of the real stakeholders, the creditors who will become the new shareholders. The task force concluded that under each view a new reporting entity is created and assets and liabilities should be recorded at their fair values. That is, assets should be recorded on the basis of reorganization value and liabilities should be recorded at fair value.

.62 Some believe that the recognition of reorganization value in the balance sheet of an emerging entity that meets the criteria for fresh-start reporting should be limited to no net write-up of assets, similar to the SEC staff's interpretation of FRR Section 210 (ASR 25). That view is a combination of the notion that assets and liabilities should be reported at fair value in a fresh start and the belief that assets cannot be written up in a historical cost transaction-based accounting model. The task force did not accept that view for the reasons stated in paragraph .61.

Fair Value of Liabilities

.63 In a typical Chapter 11 reorganization, there is a general restructuring of liabilities. FASB Statement No. 15, *Accounting by Debtors and Creditors for Troubled Debt Restructurings,* does not apply in a general restructuring of liabilities.

.64 A general restructuring of liabilities involves negotiation between the parties in interest. The negotiation and distribution under the confirmed plan constitutes an exchange of resources and obligations. By analogy, the guidance provided by APB Opinion 16[||] for recording liabilities assumed in a business combination accounted for as a purchase should be applied in reporting liabilities by an entity emerging from Chapter 11.

Analogous Literature

.65 The task force believes that the principles of quasi-reorganization accounting are not applicable to Chapter 11 reorganizations. Some argue that such a requirement would conflict with ARB No. 43 because it would prohibit adopting an accounting procedure that is now generally accepted. The task force does not believe that is the case. ARB No. 43 relates to a procedure called a quasi-reorganization. Webster's dictionary defines *quasi* as "having some resemblance." The task force interprets ARB No. 43 to apply to situations that resemble but are not reorganizations under Chapter 11. There is no specific guidance for a legal reorganization, so practice has sometimes looked to ARB No. 43 when reporting a legal reorganization. The task force believes that is the case with many emerging entities. This statement of position provides specific guidance for all reorganizations under Chapter 11, and an analogy to ARB No. 43 is not appropriate.

Effective Date and Transition

.66 This entire statement of position shall become effective for financial statements of enterprises that have filed petitions under the Bankruptcy Code after December 31, 1990. Additionally, for enterprises that file petitions prior to January 1, 1991, and that have plans of reorganization confirmed after June 30, 1991, paragraphs .35 through .42 of this SOP shall be applied to their financial statements. Earlier application by entities in reorganization is encouraged.

[||] Effective for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 31, 2008, the guidance in FASB Statement No. 141(R) should be applied by analogy. [Footnote added, May 2008, due to the issuance of FASB Statement No. 141(R).]

Appendix A

Illustrative Financial Statements and Notes to Financial Statements for an Entity Operating Under Chapter 11

A-1. XYZ Company is a manufacturing concern headquartered in Tennessee, with a fiscal year ending on December 31. On January 10, 19X1, XYZ filed a petition for relief under Chapter 11 of the federal bankruptcy laws. The following financial statements (balance sheet and statements of operations and cash flows) are presented as of and for the year ended December 31.

XYZ Company
(Debtor-in-Possession)
Balance Sheet
December 31, 19X1

Assets	*(000s)*
Current Assets	
Cash	$ 110
Accounts receivable, net	300
Inventory	250
Other current assets	30
Total current assets	690
Property, plant and equipment, net	430
Goodwill	210
Total Assets	$1,330

Liabilities and Shareholders' Deficit	*(000s)*	
Liabilities Not Subject to Compromise		
Current Liabilities:		
Short-term borrowings	$ 25	
Accounts payable—trade	200	
Other liabilities	50	
Total current liabilities	275	
Liabilities Subject to Compromise	1,100	(a)
Total liabilities	1,375	
Shareholders' (deficit):		
Preferred stock	325	
Common stock	75	
Retained earnings (deficit)	(445)	
	(45)	
Total Liabilities & Shareholders' (Deficit)	$ 1,330	

(a) Liabilties subject to compromise consist of the following:

Secured debt, 14%, secured by first mortgage on building	$ 300,000	(b)
Priority tax claims	50,000	
Senior subordinated secured notes, 15%	275,000	
Trade and other miscellaneous claims	225,000	
Subordinated debentures, 17%	250,000	
	$1,100,000	

(b) The secured debt in this case should be considered, due to various factors, subject to compromise.

The accompanying notes are an integral part of the financial statements.

XYZ Company
(Debtor-in-Possession)
Statement of Operations
For the Year Ended December 31, 19X1
(000s)

	19X1
Revenues:	
Sales	$2,400
Cost and expenses:	
Cost of goods sold	1,800
Selling, operating and administrative	550
Interest (contractual interest $5)	3
	2,353
Earnings before reorganization items and income tax benefit	47
Reorganization items:	
Loss on disposal of facility	(60)
Professional fees	(50)
Provision for rejected executory contracts	(10)
Interest earned on accumulated cash resulting from Chapter 11 proceeding	1
	(119)
Loss before income tax benefit and discontinued operations	(72)
Income tax benefit	10
Loss before discontinued operations	(62)
Discontinued operations:	
Loss from operations of discontinued products segment	(56)
Net loss	$ (118)
Loss per common share:	
Loss before discontinued operations	$ (.62)
Discontinued operations	$ (.56)
Net loss	$ (1.18)

The accompanying notes are an integral part of the financial statements.

XYZ Company
(Debtor-in-Possession)
Statement of Cash Flows
For the Year Ended December 31, 19X1
Increase in Cash and Cash Equivalents
(000s)

	19X1
Cash flows from operating activities:	
Cash received from customers	$ 2,220
Cash paid to suppliers and employees	(2,070)
Interest paid	(3)
Net cash provided by operating activities before reorganization items	147
Operating cash flows from reorganization items:	
Interest received on cash accumulated because of the Chapter 11 proceeding	1
Professional fees paid for services rendered in connection with the Chapter 11 proceeding	(50)
Net cash used by reorganization items	(49)
Net cash provided by operating activities	98
Cash flows from investing activities:	
Capital expenditures	(5)
Proceeds from sale of facility due to Chapter 11 proceeding	40
Net cash provided by investing activities	35
Cash flows used by financing activities:	
Net borrowings under short-term credit facility (post petition)	25
Repayment of cash overdraft	(45)
Principal payments on prepetition debt authorized by court	(3)
Net cash provided by financing activities	(23)
Net increase in cash and cash equivalents	110
Cash and cash equivalents at beginning of year	—
Cash and cash equivalents at end of year	$ 110
Reconciliation of net loss to net cash provided by operating activities	
Net loss	$ (118)
Adjustments to reconcile net loss to net cash provided by operating activities	
Depreciation	20
Loss on disposal of facility	60
Provision for rejected executory contracts	10
Loss on discontinued operations	56
Increase in postpetition payables and other liabilities	250
Increase in accounts receivable	(180)
Net cash provided by operating activities	$ 98

The accompanying notes are an integral part of the financial statements.

XYZ Company
Notes to Financial Statements
December 31, 19X1

Note X—Petition for Relief Under Chapter 11

On January 10, 19X1, XYZ Company (the "Debtor") filed petitions for relief under Chapter 11 of the federal bankruptcy laws in the United States Bankruptcy Court for the Western District of Tennessee. Under Chapter 11, certain claims against the Debtor in existence prior to the filing of the petitions for relief under the federal bankruptcy laws are stayed while the Debtor continues business operations as Debtor-in-possession. These claims are reflected in the December 31, 19X1, balance sheet as "liabilities subject to compromise." Additional claims (liabilities subject to compromise) may arise subsequent to the filing date resulting from rejection of executory contracts, including leases, and from the determination by the court (or agreed to by parties in interest) of allowed claims for contingencies and other disputed amounts. Claims secured against the Debtor's assets ("secured claims") also are stayed, although the holders of such claims have the right to move the court for relief from the stay. Secured claims are secured primarily by liens on the Debtor's property, plant, and equipment.

The Debtor received approval from the Bankruptcy Court to pay or otherwise honor certain of its prepetition obligations, including employee wages and product warranties. The Debtor has determined that there is insufficient collateral to cover the interest portion of scheduled payments on its prepetition debt obligations. Contractual interest on those obligations amounts to $5,000, which is $2,000 in excess of reported interest expense; therefore, the debtor has discontinued accruing interest on these obligations. Refer to note XX [*see Appendix B (paragraph .68), note X*] for a discussion of the credit arrangements entered into subsequent to the Chapter 11 filings.

.68

Appendix B

Fresh-Start Accounting and Illustrative Notes to Financial Statements

B-1. The Bankruptcy Court confirmed XYZ's plan of reorganization as of June 30, 19X2. It was determined that XYZ's reorganization value computed immediately before June 30, 19X2, the date of plan confirmation, was $1,300,000, which consisted of the following:

Cash in excess of normal operating requirements generated by operations	$ 150,000
Net realizable value of asset dispositions	75,000
Present value of discounted cash flows of the emerging entity	1,075,000
Reorganization value	$1,300,000

XYZ Company adopted fresh-start reporting because holders of existing voting shares immediately before filing and confirmation of the plan received less than 50% of the voting shares of the emerging entity and its reorganization value is less than its postpetition liabilities and allowed claims, as shown below:

Postpetition current liabilities	$ 300,000
Liabilities deferred pursuant to Chapter 11 proceeding	1,100,000
Total postpetition liabilities and allowed claims	1,400,000
Reorganization value	(1,300,000)
Excess of liabilities over reorganization value	$ 100,000

B-2. The reorganization value of the XYZ Company was determined in consideration of several factors and by reliance on various valuation methods, including discounting cash flow and price/earnings and other applicable ratios. The factors considered by XYZ Company included the following:

- Forecasted operating and cash flow results which gave effect to the estimated impact of
  - — Corporate restructuring and other operating program changes
  - — Limitations on the use of available net operating loss carryovers and other tax attributes resulting from the plan of reorganization and other events
- The discounted residual value at the end of the forecast period based on the capitalized cash flows for the last year of that period
- Market share and position
- Competition and general economic considerations
- Projected sales growth
- Potential profitability

- Seasonality and working capital requirements

B-3. After consideration of XYZ Company's debt capacity and other capital structure considerations, such as industry norms, projected earnings to fixed charges, earnings before interest and taxes to interest, free cash flow to interest, and free cash flow to debt service and other applicable ratios, and after extensive negotiations among parties in interest, it was agreed that XYZ's reorganization capital structure should be as follows:

Postpetition current liabilities	$ 300,000	
IRS note	50,000	
Senior debt	275,000	(1)
Subordinated debt	175,000	
Common stock	350,000	
	$1,150,000	(2)

(1) Due $50,000 per year for each of the next four years, at 12% interest, with $75,000 due in the fifth year.

(2) See paragraph B-5 for the balance sheet adjustments required to reflect XYZ Company's reorganization value as of the date of plan confirmation.

B-4. The following entries record the provisions of the plan and the adoption of fresh-start reporting:

Entries to record debt discharge:		
Liabilities subject to compromise	1,100,000	
Senior debt—current		50,000
Senior debt—long-term		225,000
IRS note		50,000
Cash		150,000
Subordinated debt		175,000
Common stock (new)		86,000
Additional paid-in capital		215,000
Gain on debt discharge		149,000
Entries to record exchange of stock for stock:		
Preferred stock	325,000	
Common stock (old)	75,000	
Common stock (new)		14,000
Additional paid-in capital		386,000
Entries to record the adoption of fresh-start reporting and to eliminate the deficit:		
Inventory	50,000	
Property, plant, and equipment	175,000	
Reorganization value in excess of amounts allocable to identifiable assets	175,000	
Gain on debt discharge	149,000	
Additional paid-in capital	351,000	
Goodwill		200,000
Deficit		700,000

B-5. The effect of the plan of reorganization on XYZ Company's balance sheet, as of June 30, 19X2, is as follows:

		Adjustments to Record Confirmation of Plan			
	Preconfirmation	*Debt discharge*	*Exchange of stock*	*Fresh Start*	*XYZ Company's Reorganized Balance Sheet*
Assets:					
Current Assets					
Cash	$ 200,000	$ (150,000)			$ 50,000
Receivables	250,000				250,000
Inventory	175,000			$ 50,000	225,000
Assets to be disposed of valued at market, which is lower than cost	25,000				25,000
Other current assets	25,000				25,000
	675,000	(150,000)		50,000	575,000
Property, plant, and equipment	175,000			175,000	350,000
Assets to be disposed of valued at market, which is lower than cost	50,000				50,000
Goodwill	200,000			(200,000)	
Reorganization value in excess of amounts allocable to identifiable assets				175,000	175,000
	$1,100,000	$ (150,000)		$ 200,000	$1,150,000
Liabilities and Shareholders' Deficit:					
Liabilities Not Subject to Compromise Current liabilities					
Short-term borrowings	$ 25,000				$ 25,000
Current maturities of senior debt		$ 50,000			50,000
Accounts payable trade	175,000				175,000
Other liabilities	100,000				100,000
	300,000	50,000			350,000
Liabilities Subject to Compromise					
Prepetition liabilities	1,100,000	(1,100,000)			
IRS note		50,000			50,000
Senior debt, less current maturities		225,000			225,000
Subordinated debt		175,000			175,000
Shareholders' deficit:					
Preferred stock	325,000		$(325,000)		
Additional paid-in capital		215,000	386,000	$(351,000)	250,000
Common stock-old	75,000		(75,000)		
Common stock-new		86,000	14,000		100,000
Retained earnings (deficit)	(700,000)	149,000		700,000 (149,000)	
	(300,000)	450,000	0	200,000	350,000
	$1,100,000	$ (150,000)	$ 0	$ 200,000	$1,150,000

B-6. The following illustrative footnote disclosure discusses the details of XYZ Company's confirmed plan of reorganization. In this illustration a tabular presentation entitled "Plan of Reorganization Recovery Analysis" is incorporated in the footnote. The plan of reorganization recovery analysis may alternatively be presented as supplementary information to the financial statements.

Note X—Plan of Reorganization

On June 30, 19X2, the Bankruptcy Court confirmed the Company's plan of reorganization. The confirmed plan provided for the following:

Secured Debt—The Company's $300,000 of secured debt (secured by a first mortgage lien on a building located in Nashville, Tennessee) was exchanged for $150,000 in cash and a $150,000 secured note, payable in annual installments of $27,300 commencing on June 1, 19X3, through June 1, 19X6, with interest at 12% per annum, with the balance due on June 1, 19X7.

Priority Tax Claims—Payroll and withholding taxes of $50,000 are payable in equal annual installments commencing on July 1, 19X3, through July 1, 19X8, with interest at 11% per annum.

Senior Debt—The holders of approximately $275,000 of senior subordinated secured notes received the following instruments in exchange for their notes: (*a*) $87,000 in new senior secured debt, payable in annual installments of $15,800 commencing March 1, 19X3, through March 1, 19X6, with interest at 12% per annum, secured by first liens on certain property, plants, and equipment, with the balance due on March 1, 19X7; (*b*) $123,000 of subordinated debt with interest at 14% per annum due in equal annual installments commencing on October 1, 19X3, through October 1, 19X9, secured by second liens on certain property, plant, and equipment; and (*c*) 11.4% of the new issue of outstanding voting common stock of the Company.

Trade and Other Miscellaneous Claims—The holders of approximately $225,000 of trade and other miscellaneous claims received the following for their claims: (*a*) $38,000 in senior secured debt, payable in annual installments of $6,900 commencing March 1, 19X3, through March 1, 19X6, with interest at 12% per annum, secured by first liens on certain property, plants, and equipment, with the balance due on March 1, 19X7; (*b*) $52,000 of subordinated debt, payable in equal annual installments commencing October 1, 19X3, through October 1, 19X8, with interest at 14% per annum; and (*c*) 25.7% of the new issue of outstanding voting common stock of the Company.

Subordinated Debentures—The holders of approximately $250,000 of subordinated unsecured debt received, in exchange for the debentures, 48.9% of the new issue outstanding voting common stock of the Company.

Preferred Stock—The holders of 3,250 shares of preferred stock received 12% of the outstanding voting common stock of the new issue of the Company in exchange for their preferred stock.

Common Stock—The holders of approximately 75,000 outstanding shares of the Company's existing common stock received, in exchange for their shares, 2% of the new outstanding voting common stock of the Company.

The Company accounted for the reorganization using fresh-start reporting. Accordingly, all assets and liabilities are restated to reflect their reorganization value, which approximates fair value at the date of reorganization. The following table ("Plan of Reorganization Recovery Analysis") summarizes the adjustments required to record the reorganization and the issuance of the various securities in connection with the implementation of the plan.

XYZ Company
Plan of Reorganization
Recovery Analysis

Deficit	(700,000)	700,000									
Total	$1,100,000	$ 200,000	$300,000	$150,000	$50,000	$275,000	$175,000	100%	$350,000	$1,300,000	

[#] The aggregate par value of the common stock issued under the plan is $100,000. [Footnote renumbered due to the issuance of FASB Statement No. 141(R), May 2008.]

.69

Glossary

Absolute priority doctrine. A doctrine that provides that if an impaired class does not vote in favor of a plan, the court may nevertheless confirm the plan under the cram-down provisions of the Bankruptcy Code. The absolute priority doctrine is triggered when the cram-down provisions apply. The doctrine states that all members of the senior class of creditors and equity interests must be satisfied in full before the members of the second senior class of creditors can receive anything, and the full satisfaction of that class must occur before the third senior class of creditors may be satisfied, and so on.

Administrative expenses (claims). Claims that receive priority over all other unsecured claims in a bankruptcy case. Administrative claims (expenses) include the actual, necessary costs and expenses of preserving the estate, including wages, salaries, or commissions for services rendered after the commencement of the case. Fees paid to professionals for services rendered after the petition is filed are considered administrative expenses.

Allowed claim(s). The amount allowed by the Court as a claim against the Estate. This amount may differ from the actual settlement amount.

Automatic stay provisions. Provisions causing the filing of a petition under the Bankruptcy Code to automatically stay virtually all actions of creditors to collect prepetition debts. As a result of the stay, no party, with minor exceptions, having a security or adverse interest in the debtor's property can take any action that will interfere with the debtor or the debtor's property, regardless of where the property is located or who has possession, until the stay is modified or removed.

Bankruptcy Code. A federal statute, enacted October 1, 1979, as title 11 of the United States Code by the Bankruptcy Reform Act of 1978, that applies to all cases filed on or after its enactment and that provides the basis for the current federal bankruptcy system.

Bankruptcy Court. The United States Bankruptcy Court is an adjunct of the United States District Courts. Under the jurisdiction of the District Court, the Bankruptcy Court is generally responsible for cases filed under Chapters 7, 11, 12, and 13 of the Bankruptcy Code.

Chapter 7. A liquidation, voluntarily or involuntarily initiated under the provisions of the Bankruptcy Code, that provides for liquidation of the business or the debtor's estate.

Chapter 11. A reorganization action, either voluntarily or involuntarily initiated under the provisions of the Bankruptcy Code, that provides for a reorganization of the debt and equity structure of the business and allows the business to continue operations. A debtor may also file a plan of liquidation under Chapter 11.

Claim. As defined by Section 101(4) of the Bankruptcy Code, (*a*) a right to payment, regardless of whether the right is reduced to judgment, liquidated, unliquidated, fixed, contingent, matured, unmatured, disputed, undisputed, legal, secured, or unsecured, or (*b*) a right to an equitable remedy for breach of performance if such breach results in a right to payment, regardless of whether the right is reduced to a fixed, contingent, matured, unmatured, disputed, undisputed, secured, or unsecured right.

Confirmed plan. An official approval by the court of a plan of reorganization under a Chapter 11 proceeding that makes the plan binding on the debtors and creditors. Before a plan is confirmed, it must satisfy eleven requirements in section 1129(a) of the Bankruptcy Code.

Consenting classes. Classes of creditors or stockholders that approve the proposed plan.

Cram-down provisions. Provisions requiring that for a plan to be confirmed, a class of claims or interests must either accept the plan or not be impaired. However, the Bankruptcy Code allows the Court under certain conditions to confirm a plan even though an impaired class has not accepted the plan. To do so, the plan must not discriminate unfairly and must be fair and equitable to each class of claims or interests impaired under the plan that have not accepted it. The Code states examples of conditions for secured claims, unsecured claims, and stockholder interests in the fair and equitable requirement.

Debtor-in-possession. Existing management continuing to operate an entity that has filed a petition under Chapter 11. The debtor-in-possession is allowed to operate the business in all Chapter 11 cases unless the court, for cause, authorizes the appointment of a trustee.

Disclosure statement. A written statement containing information approved as adequate by the court. It is required to be presented by a party before soliciting the acceptance or rejection of a plan of reorganization from creditors and stockholders affected by the plan. Adequate information means information of a kind, and in sufficient detail, as far as is reasonably practicable in light of the nature and history of the debtor and the condition of the debtor's records, that would enable a hypothetical reasonable investor typical of holders of claims or interests of the relevant class to make an informed judgment about the plan.

Emerging entity (reorganized entity). An entity that has had its plan confirmed and begins to operate as a new entity.

Impaired claims. In determining which class of creditors' claims or stockholders' interests must approve the plan, it is first necessary to determine if the class is impaired. A class of creditors' claims or stockholders' interests under a plan is not impaired if the plan (*a*) leaves unaltered the legal, equitable, and contractual right of a class, (*b*) cures defaults that lead to acceleration of debt or equity interest, or (*c*) pays in cash the full amount of the claim, or for equity interests, the greater of the fixed liquidation preference or redemption price.

Nonconsenting class. A class of creditors or stockholders that does not approve the proposed plan.

Obligations subject to compromise. Includes all prepetition liabilities (claims) except those that will not be impaired under the plan, such as claims where the value of the security interest is greater than the claim.

Petition. A document filed in a court of bankruptcy, initiating proceedings under the Bankruptcy Code.

Plan (plan of reorganization). An agreement formulated in Chapter 11 proceedings under the supervision of the Bankruptcy Court that enables the debtor to continue in business. The plan, once confirmed, may affect the rights of undersecured creditors, secured creditors, and stockholders as well as those of unsecured creditors. Before a plan is confirmed by the Court, it must comply with general provisions of the Code. Those provisions mandate, for example, that (*a*) the plan is feasible, (*b*) the plan is in the best interest of the creditors, and, (*c*) if an impaired class does not accept the plan, the plan must be determined to be fair and equitable before it can be confirmed.

Postpetition liabilities. Liabilities incurred subsequent to the filing of a petition that are not associated with prebankruptcy events. Thus, these liabilities are not considered prepetition liabilities.

Prepetition liabilities. Liabilities that were incurred by an entity prior to its filing of a petition for protection under the Code, including those considered by the Bankruptcy Court to be prepetition claims, such as a rejection of a lease for real property.

Reorganization items. Items of income, expense, gain, or loss that are realized or incurred by an entity because it is in reorganization.

Reorganization proceeding. A Chapter 11 case from the time at which the petition is filed until the plan is confirmed.

Reorganization value. The value attributed to the reconstituted entity, as well as the expected net realizable value of those assets that will be disposed before reconstitution occurs. Therefore, this value is viewed as the fair value of the entity before considering liabilities and approximates the amount a willing buyer would pay for the assets of the entity immediately after the restructuring.

Secured claim. A liability that is secured by collateral. A fully secured claim is one where the value of the collateral is greater than the amount of the claim.

Terminal value. Reorganization value calculated based on the discounting of cash flows normally consists of three parts: (*a*) the discounted cash flows determined for the forecast period, (*b*) residual value or terminal value, and (*c*) the current value of any excess working capital or other assets that are not needed in reorganization. Terminal or residual value represents the present value of the business attributable to the period beyond the forecast period.

Trustee. A person appointed by the Bankruptcy Court in certain situations based on the facts of the case, not related to the size of the company or the amount of unsecured debt outstanding, at the request of a party in interest after a notice and hearing.

Undersecured claim (liability). A secured claim whose collateral is worth less than the amount of the claim.

Unsecured claim (liability). A liability that is not secured by collateral. In the case of an undersecured creditor, the excess of the secured claim over the value of the collateral is an unsecured claim, unless the debtor elects in a Chapter 11 proceeding to have the entire claim considered secured. The term is generally used in bankruptcy to refer to unsecured claims that do not receive priority under the Bankruptcy Code.

About the Task Force

In addition to the chairman, John Robbins of Kenneth Leventhal & Company, Warren Petraglia and Alan Jacobs of Ernst & Young, and Peter Gibbons of Price Waterhouse specialize in reorganizations. Grant Newton is professor of accounting at Pepperdine University and author of a book on bankruptcy and insolvency accounting practice and procedures. Ron Orr specializes in bankruptcy proceedings with the law firm of Gibson, Dunn & Crutcher, Keith Rowden was on the FASB staff as an accounting fellow until returning to Coopers & Lybrand, and Clarence Staubs was on the SEC staff until his retirement. George F. Patterson, Jr. of Kenneth Leventhal & Company did most of the drafting.

Section 10,500

Statement of Position 92-1 Accounting for Real Estate Syndication Income

February 6, 1992

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 This statement of position (SOP) provides guidance for the recognition of income from real estate syndication activities. Syndication activities are efforts to directly or indirectly sponsor the formation of entities that acquire interests in real estate by raising funds from investors. As consideration for their investments, the investors receive ownership of or other financial interests in the sponsored entities.

.02 The sponsored entities are generally organized as limited partnerships, trusts, or joint ventures, but they may also be organized in other forms. For convenience, the term *partnership* is used in this SOP to refer to such entities regardless of their form.

Scope

.03 This SOP applies to the recognition of income from real estate syndication activities and to all entities that perform those activities. For purposes of applying the guidance in this SOP, entities that perform real estate syndication activities are syndicators regardless of whether their primary business is related to real estate syndication. Entities that may function as syndicators include real estate companies, brokers and dealers in securities, banks, savings and loan associations, insurance companies, finance companies, and entities organized solely to syndicate real estate.

.04 This SOP applies to the combined activities of entities in the consolidated or combined financial statements of syndicators, including those entities in which the syndicators have investments accounted for under the equity method, as set forth in Accounting Principles Board (APB) Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock*. However, it does not apply to the separate financial statements of subsidiaries or affiliates of syndicators, unless such entities are also considered to be syndicators on the basis of the separate activities included in their consolidated or combined financial statements. For example, this SOP does not apply to the separate financial statements issued by a broker-dealer subsidiary of a syndicator if the role of the subsidiary and its subsidiaries, if any, in the transaction is limited to the sale of partnership interests.

.05 This SOP does not address accounting by the partnerships in which the interests are syndicated, and it does not apply to syndications of assets other than real estate.

Definitions

.06 Significant terms used in this SOP are defined as follows:

Blind pool or partially blind pool partnerships. Partnerships in which investment units are sold before some or all of the properties to be acquired are identified.

Flip transactions. Transactions in which syndicators acquire ownership interests and resell them to the partnerships shortly thereafter.

Investor notes. Promissory notes, generally with full recourse, that are payable by investors to partnerships in connection with purchases of partnership interests.

Ownership interests. Title to real estate or other interests in real estate, such as partnership interests or shares in joint ventures; also, options or contracts to acquire specified real estate or real estate interests.

Partnership notes. Notes payable to syndicators by partnerships in connection with acquisitions of property or in payment of fees. Partnership notes may be collateralized by investor notes, mortgages, or other liens against partnership assets.

Syndication activities. Efforts to directly or indirectly sponsor the formation of entities that acquire interests in real estate by raising funds from investors. As consideration for their investments, the investors receive ownership or other financial interests in the sponsored entities. For purposes of applying the guidance in this SOP, all general partners in syndicated partnerships are deemed to perform syndication activities.

Syndication (or securities-placement) fees. Compensation, including commissions and reimbursement of expenses, for selling debt or equity interests in partnerships. Such fees are generally paid in cash, notes, or partnership interests.

Background

.07 In order to earn commissions and fees, syndicators perform a variety of services and activities. For example, they organize partnerships, sell (syndicate) debt or equity interests in the partnerships to third parties, sell real estate to the partnerships, arrange for the partnerships to purchase real estate directly from (or sell it directly to) third parties, develop partnership properties, supervise construction of partnership properties, raise or provide funds for use by the partnerships, provide income or cash-flow guarantees to the partnerships, and provide initial and long-term property management services to the partnerships. They also earn income from a variety of other sources, such as incentive arrangements and participations in profits on future sales of real estate by the partnerships.

.08 Syndicators may receive cash, notes or other receivables, partnership interests, or rights to share in the proceeds of the sale or refinancing of the properties. At the time of syndication, partnerships generally pay cash to the syndicators for portions of their fees. The sources of the cash are generally initial payments by the investors to the partnerships or proceeds of borrowings secured by investor notes. Subsequent payments are expected to be made to the syndicators based on the availability of cash from installments on investor notes, partnership operations, mortgage refinancing, or sales of properties.

.09 Syndicators may arrange for partnerships to acquire properties in the following ways:

- By acquiring ownership interests and reselling them to the partnerships in flip transactions
- By selling to the partnerships properties that the syndicators already own, or by transferring options or contracts to buy properties
- By arranging for the partnerships to acquire the properties directly from third parties

Selling prices may be greater than the syndicators' acquisition costs, or the syndicators may receive compensation for arranging the acquisitions.

.10 In some syndication transactions, the syndicators have substantial risks of ownership in properties they sell to the partnerships or arrange for the partnerships to acquire, as indicated by some or all of the following characteristics:

- The partnerships make only nominal down payments.
- The syndicators receive partnership notes that are subject to future subordination by the partnerships to the claims of other creditors.
- The syndicators, or affiliates of the syndicators, are general partners in the partnerships.
- The syndicators are obligated to or intend to continue supporting the properties after syndication.

.11 In some syndication transactions, the syndicators market no-load investment units.[1] Some syndicators that sponsor such transactions initially own the entire partnership and, after completing the syndication, generally retain an ownership interest in the partnership. Other syndicators that do not initially have an ownership interest in the partnership generally receive an ownership interest in lieu of selling commissions. In addition, syndicators that market no-load investment units pay expenses related to organization and syndication activities in excess of contractual reimbursement allowances, such as charges for lawyers and broker-dealers. Such syndicators generally expect

---

[1] The North American Securities Administrators' Association, Inc. (NASAA) defines a carried interest in the "Real Estate Programs" section of its *Statements of Policy* as an equity interest (other than a "promotional interest") that participates in all allocations and distributions and for which full consideration is neither paid nor to be paid. A syndication in which the syndicator receives a carried interest is known in the industry as a "no load" offering.

to recover their costs by charging fees for various other services, such as property acquisition and asset management.

.12 Investors in partnerships expect to realize appreciation, earn operating income, receive distributions of cash, obtain tax benefits, or obtain some or all of those benefits. The interests in real estate may be represented by direct ownership, mortgages, master leases, sale-leasebacks, or options to acquire real estate. Some partnership agreements require investors to pay their total capital contributions to the partnerships immediately; others require the investors to pay some cash immediately and permit them to issue investor notes to the partnerships for the balance.

Current Practice

.13 Syndicators use various methods of accounting for income from syndications. Some recognize profit on the sales of real estate in conformity with Financial Accounting Standards Board (FASB) Statement No. 66, *Accounting for Sales of Real Estate*, and recognize additional fee income either as part of the real estate sales transactions or separately. Others believe that FASB Statement No. 66 does not apply to syndication transactions, and they either recognize all syndication profits immediately upon entering into the syndication transaction or follow methods based on discounting cash flows.

.14 Some syndicators that apply FASB Statement No. 66 to syndication transactions in which they sell real estate to the partnerships do not apply it to syndication transactions in which they do not have ownership interests in the real estate acquired by the partnerships.

.15 Some syndicators do not apply FASB Statement No. 66 to flip transactions because they believe the brief ownership period involved in a flip transaction is not substantive.

.16 Syndicators that use discounted cash-flow methods include in reported revenue the discounted amounts of expected cash flows from partnerships. The discount rates are determined by reference to the estimated market rate of interest, using APB Opinion No. 21, *Interest on Receivables and Payables*, as guidance. Discounts or premiums on notes are determined to the extent that the stated or implicit interest rates of the notes differ from the market rates of interest. Some syndicators use the stated payment periods of principal and interest in determining the timing of the expected cash flows from the notes, whereas others use anticipated payment dates corresponding to the dates on which the syndicators expect the properties to be sold.

.17 Some syndicators determine the projected depreciated cost of the properties and subtract the estimated balances of senior mortgage debt at the properties' anticipated dates of disposal (before the maturity of partnership notes). The difference is discounted to determine the amounts at which the partnership notes should be carried.

.18 Syndicators that use discounted cash-flow methods recognize the discounted amounts of notes received from partnerships as income at the time capital is raised from investors in the partnerships. In subsequent periods, discounts or premiums on the notes, if any, are recognized in income ratably using the interest method.

.19 Some syndicators recognize all revenue as of the date of syndication. Others use the guidance in FASB Statement No. 66 and, because of continuing involvement, defer recognizing some portion of the revenue.

.20 Some syndicators use the criteria in FASB Statement No. 66 to account for fee revenue from real estate syndication transactions because they believe the transactions are, in substance, sales of real estate.

.21 Some syndicators that account for fees by applying the revenue-recognition criteria in FASB Statement No. 66 exclude from the sales value of the properties, as the term *sales value* is defined in paragraph 7 of that Statement, some or all of the fees charged to the partnerships. Accordingly, they do not include the related payments of such fees in determining whether the buyers' initial and continuing investments in the properties are adequate for the seller to recognize profit in full on the sales. Other syndicators include all fees and related payments in determining sales value and in assessing whether the buyers' initial and continuing investment criteria have been met.

.22 Syndicators of blind pool or partially blind pool transactions are often entitled to nonrefundable syndication fees at the time of syndication, which would generally be before some or all of the properties are acquired by the partnerships. The general practice is to recognize nonrefundable syndication fees or partnership interests in income when received if there will be adequate fees to compensate the syndicators for whatever future services they may have to perform for the partnerships.

.23 Syndicators may receive or retain partnership interests as compensation for services. Some syndicators do not record their partnership interests, and others record them based principally on the following amounts:

- Estimated fair values
- The proportionate shares of (*a*) the amounts at which the syndicators carried the properties, if the syndicators had ownership interests in the properties, or (*b*) the partnerships' acquisition costs, if the syndicators never had ownership interests in the properties
- The costs incurred by the syndicators in excess of amounts charged to the partnerships
- Nominal amounts

Conclusions

.24 The following conclusions should be read in conjunction with the "Discussion of Conclusions and Implementation Guidance," beginning with paragraph .40 of this SOP, which explains the bases for the conclusions and provides guidance for implementing them.

Applicability of FASB Statement No. 66 to Syndication Activities

.25 FASB Statement No. 66 applies to the recognition of profit on the sale of real estate by syndicators to partnerships. This SOP concludes that the guidance in FASB Statement No. 66 should also be applied to the recognition of profit on real estate syndication transactions even if the syndicators never had ownership interests in the properties acquired by the real estate partnerships. For purposes of applying the profit recognition criteria of FASB Statement No. 66 to transactions in which syndicators never had such ownership interests, the syndicators should recognize profit on the transactions in the same way that they would have recognized such profit had they acquired the real estate and sold it to the partnerships.

Determining the Sales Value of Property and Fee Income

.26 All fees charged by syndicators should be included in the determination of sales value in applying FASB Statement No. 66, except (*a*) fees for which future services must be performed and (*b*) syndication fees. FASB Statement No. 66 does not apply to the recognition of fees excluded from sales value.

.27 *Fees for Future Services.* Syndicators should recognize fees for future services when they render the services. If fees designated for future services are excessive or inadequate, they should be adjusted for accounting purposes and the adjustments should be allocated to or from the real estate sales portion of the transaction. However, the buyer's initial and continuing investment should not include cash payments on amounts reallocated from fees for future services until the services have been performed.

.28 *Syndication Fees.* Syndicators should not recognize syndication fees until the earnings process is complete and collectibility is reasonably assured. Further, if a syndicator receives or retains a partnership interest as compensation for a portion of the syndication fee, the profit recognized on that portion of the fee should not exceed the amount that would be recognized by applying partial sale accounting to the underlying partnership interest, as set forth in paragraph .38 of this SOP.

.29 If stated syndication fees are not reasonable, they should be adjusted for accounting purposes to amounts that are reasonable, and the adjustments should be allocated to or from the real estate sales portion of the transaction. Guidance on accounting for nonrefundable fees received from blind pools before property acquisition is provided in paragraph .32 of this SOP.

.30 The syndication fee for a transaction, which consists of cash and the value of any notes or partnership interests designated as consideration for the syndication fee, is reasonable if it falls within the range of syndication fees charged by independent brokers in similar transactions and is at least adequate to reimburse the syndicator for amounts paid to independent brokers or other third parties associated with the transaction. The range of reasonable fees can generally be determined by reference to various sources, including independent brokers, publicly offered transactions, and industry-monitoring reports.

.31 If, in addition to cash or notes, a syndicator receives a partnership interest as compensation for the syndication fee, the syndicator should include the value of the partnership interest in determining the reasonableness of the syndication fee. If the amount of the syndication fee is determined not to be reasonable, the fee should be adjusted for accounting purposes, as described in paragraph .29 of this SOP. However, the adjustment should not reduce the syndication fee by more than the sum of the cash and notes received for the syndication fee. Further, the syndication fee should not be adjusted if all, or substantially all, of the compensation to the syndicator consists of partnership interests received or retained, as in the no-load transactions discussed in paragraph .11 of this SOP.

Accounting for Nonrefundable Fees Received From Blind Pools Before Property Acquisition

.32 Syndication fees received from blind pool transactions should be recognized in income ratably as the syndication partnership invests in property acquisitions, but only to the extent that the syndication fees are nonrefundable and meet all conditions for recognition in income, as set forth in paragraphs .28 to .31 of this SOP.

Exposure to Losses or Costs From Syndicator Involvement and Collectibility Risk

.33 If syndicators are exposed to future losses or costs from (*a*) material involvement with the properties, partnerships, or partners or (*b*) uncertainties regarding the collectibility of partnership notes, they should defer income recognition on syndication fees and fees for future services until the losses or costs can be reasonably estimated. Syndicators should reduce income recognized by the estimated losses or costs. The guidance in paragraphs 29 and 30 of FASB Statement No. 66 should be used in estimating potential losses or costs of support obligations. If such losses or costs cannot be estimated, the income recognized should be reduced by the maximum exposure. Paragraphs .61 to .63 of this SOP provide examples of syndicator involvement and uncertainties surrounding the collectibility of partnership notes that should be considered in recognizing real estate syndication income.

Allocating Cash Payments

.34 For the purpose of determining whether buyers' initial and continuing investments satisfy the requirements for recognizing profit in full in conformity with FASB Statement No. 66, cash received by syndicators should be allocated to unpaid syndication fees before being allocated to the initial and continuing investment. After the syndication fee has been fully paid, additional cash received should be allocated to unpaid fees for future services, to the extent that those services have been performed by the time the cash is received, before being allocated to the initial and continuing investment.

.35 If, at or near the time of syndication, syndicators pay cash or unconditionally commit to pay cash to the partners or partnerships or to third parties on behalf of the partners or partnerships, the syndicators should account for those amounts as reductions of cash received from the partnerships, rather than as separate cash outlays.

Recognition of Partnership Interests Received or Retained

.36 This SOP amends paragraph 32 of SOP 78-9, *Accounting for Investments in Real Estate Ventures* [section 10,240.32], which requires the investor's costs of services or intangibles contributed to a partnership or joint venture to be allocated to the cost of the investment. The following footnote is appended to paragraph 32 of that SOP immediately following the paragraph heading "Contribution of Services or Intangibles":

> The provisions of this paragraph do not apply to real estate syndication activities in which the syndicators receive or retain partnership interests. Such activities are discussed in SOP 92-1, *Accounting for Real Estate Syndication Income*.

.37 *Participation in Future Profits Without Risk of Loss.* If syndicators receive or retain limited partnership interests that are subordinate for any distributions to the majority class of ownership interests, they should generally account for the interests as participations in future profits without risk of loss. Profits should be recognized when they are realized, in conformity with paragraph 43 of FASB Statement No. 66.

.38 *Partial Sale.* If the partnership interests received by the syndicators have the same pro rata rights as the majority class of ownership interests for all distributions, the syndicators should account for their partnership interests as retained interests from partial sales of real estate, in conformity with FASB Statement No. 66, regardless of whether the syndicators ever held title to the underlying properties. Syndication fees should be accounted for as set forth in paragraphs .28 to .31 of this SOP.

Effective Date and Transition

.39 The recommendations in this SOP should be applied to transactions for which the initial closing with investors occurs after March 15, 1992. Earlier application is encouraged for financial statements that have not been previously issued.

Discussion of Conclusions and Implementation Guidance

.40 The following discussion explains the bases for the conclusions reached in this SOP and provides implementation guidance.

Applicability of FASB Statement No. 66 to Syndication Activities

.41 In some syndication transactions, the syndicator acquires the properties, or options to acquire the properties, and sells them to the partnership. Paragraph 1 of FASB Statement No. 66 indicates that such real estate sales transactions are within the scope of that Statement, as follows: "This Statement establishes standards for recognition of profit on all real estate sales transactions without regard to the nature of the seller's business." Ownership interests provide evidence that syndicators are sellers of real estate, and FASB Statement No. 66 therefore applies to real estate syndication transactions in which ownership interests in properties pass from the syndicators to the partnerships. FASB Statement No. 66 does not specify the duration of ownership, so it applies as much to a brief ownership as to a lengthy one.

.42 In other transactions, the syndicator arranges for the partnership to acquire the property from a third party without ever having acquired the property or an option to acquire the property. Although the form of such transactions differs from those described previously, the substance is the same: The syndicator is primarily compensated for arranging the acquisition of property by the partnership and for arranging the sale of partnership shares to investors. Accordingly, this SOP takes the position that the guidance in FASB Statement No. 66 should be applied to the recognition of profit on real estate syndication transactions even if the syndicators never had ownership interests in the properties acquired by the real estate partnerships.

.43 The following describes how a syndicator should apply the profit-recognition criteria in FASB Statement No. 66 to a real estate syndication transaction in which a partnership acquires real estate from a third party rather than from the syndicator:

- The syndicator should impute a purchase of the real estate from the third party at the amount paid by the partnership to the third party. The syndicator should also impute a corresponding sale of the real estate to the partnership at the same price.

- Except for fees for which future services must be performed and syndication fees, all fees charged by the syndicator to the partnership as part of the syndication transaction should be added to the sales price in the imputed sales transaction to arrive at the deemed sales value of the real estate syndication transaction.
- The syndicator should recognize profit on the real estate syndication transaction to the extent that profit could be recognized in conformity with FASB Statement No. 66 on an otherwise identical transaction with the deemed sales value described in the preceding bullet. In determining whether the partnership would meet the initial and continuing investment criteria for recognition of profit in full on the imputed sales transaction, as described in paragraphs 11 and 12 of FASB Statement No. 66, the syndicator should include amounts paid by the partnership to the third party on the real estate sale.

Example 1b of appendix B of this SOP [paragraph .73] illustrates the accounting methods described previously.

Determining the Sales Value of Property and Fee Income

.44 Paragraph 7 of FASB Statement No. 66 states that sales value is determined by—

a. Adding to the stated sales price the proceeds from the issuance of a real estate option that is exercised and other payments that are *in substance additional sales proceeds*. These nominally may be management fees, points, or prepaid interest or fees that are required to be maintained in an advance status and applied against the amounts due to the seller at a later date. [*Emphasis added.*]

b. Subtracting from the sale price a discount to reduce the receivable to its present value and by the net present value of services that the seller commits to perform without compensation or by the net present value of the services in excess of the compensation that will be received.

.45 In reviewing fees charged in connection with syndication transactions, the Real Estate Committee found that syndication fees and fees for future services are the only fees that are consistently separable from the corresponding real estate sales transaction. This SOP therefore concludes that all other fees should be included in the calculation of sales value, as described in part *a* of the foregoing quotation. This SOP also concludes that fees for future services associated with syndication transactions should be accounted for in the same manner as similar fees associated with real estate sales transactions, as described in part *b* of the foregoing quotation. Guidance on accounting for syndication fees is provided in paragraphs .28 to .31 of this SOP.

.46 *Fees for Future Services.* Fees for future services excluded from sales value include fees for managing properties and brokerage commissions on sales of properties by partnerships but do not include fees directly related to the acquisition or initial financing of syndication properties, such as cash flow guarantee fees, initial loan fees, and rent-up guarantee fees.

.47 Fees for future services that are deemed to be excessive or inadequate should be adjusted for accounting purposes. If the fees for future services are deemed to be excessive, the adjustments reduce amounts accounted for as fees for future services, and the sales value of the real estate is adjusted upward. However, until the services are performed, the syndicator remains contractually obligated to the partnership for the stated amount of the fees for future services regardless of whether they have been reallocated to sales value for reporting purposes. Payments made in consideration of such services are thus not included in the determination of the buyer's initial and continuing investment until the services are performed.

.48 Conversely, if the fees are deemed to be inadequate, the adjustments increase amounts accounted for as fees for future services. The sales value of the real estate is adjusted downward, because the real estate sales price is assumed to be overstated by the amount by which the fees for future services are understated. Furthermore, the payments made on the portion of sales value reallocated to fees for future services are not considered in evaluating whether the buyer has demonstrated a commitment to pay for the real estate, as described in paragraph 8 of FASB Statement No. 66. Profit is recognized on the amounts reallocated to the fees as the services are performed.

.49 *Syndication Fees.* This SOP recommends excluding syndication fees from sales value because they relate to the raising of equity rather than to the acquisition or operation of property. Recognition of syndication fees in income on completion of the earnings process is consistent with paragraph 11 of FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, which states that the "enterprise managing a loan syndication (the syndicator) shall recognize loan syndication fees when the syndication is complete."

.50 Syndication fees are usually paid in cash at the time of syndication, and thus, their inclusion in sales value would unsoundly accelerate recognition of income on the real estate transaction, because the cash received would be included in calculating the down payment on the transaction, as provided in paragraph 8 of FASB Statement No. 66.

.51 This SOP recommends adjusting unreasonable stated syndication fees for accounting purposes to amounts that are reasonable, and allocating the adjustments to the real estate sales portion of the transaction. Such adjustments are necessary to account for the substance of the transaction.

.52 Syndication fees are generally based on a percentage of funds raised from investors. The variety of real estate syndication transactions precludes the applicability of a particular rate of syndication fee in all circumstances. For example, the rate may be affected by—

- The size of the offering.
- The effort expected to be required to market the offering.
- The tax consequences to the partnership and to the investors.
- The stated syndication fees in similar syndication transactions.
- Regulatory constraints.
- Any payments to independent brokers or other independent third parties associated with the transaction.
- Any costs incurred in connection with the syndication, such as the preparation of offering circulars or prospectuses.
- The choice of a public or private offering.
- The existence of competitors.

.53 If the adjustments increase amounts accounted for as syndication fees, the sales value of the real estate is adjusted downward because the real estate sales price is considered to be overstated by the amount by which the syndication fees are understated. The adjustments reduce the sales value of the real estate, and the payments made on the portion of sales value reallocated to syndication fees are not considered in evaluating whether the partnership has demonstrated a commitment to pay for the real estate, as described in paragraph 8 of FASB Statement No. 66, because such payments do not give the partnership an increased stake in the property.

.54 Conversely, if adjustments reduce amounts accounted for as syndication fees, the sales value of the real estate is adjusted upward, and the payments made on the portion of sales value reallocated from syndication fees are accounted for as part of the partnership's initial or continuing investment in the property, because such payments create an increased stake in the property from the partnership's perspective.

.55 Example 2 in appendix B of this SOP [paragraph .73] illustrates transactions in which syndication fees are adjusted.

.56 Syndication fees should not be adjusted in transactions in which partnership interests are received or retained by the syndicators in lieu of cash syndication fees, as in the no-load transactions discussed in paragraph .11 of this SOP, because the partnership interests represent the total compensation to which the syndicator is entitled, unless additional future services are performed. To be consistent with that guidance, this SOP prohibits adjustment of the syndication fee by more than the sum of the cash and notes received for the syndication fee.

.57 *All Other Fees.* All fees charged by syndicators, other than syndication fees and fees for which future services must be performed, are included in the determination of sales value, in conformity with FASB Statement No. 66, because they cannot be consistently distinguished from the corresponding real estate transaction as discussed in paragraph .44 of this SOP.

Accounting for Nonrefundable Fees Received From Blind Pools Before Property Acquisition

.58 In blind pool and partially blind pool syndications, partnerships generally pay syndication fees to syndicators, or promise to pay them, before the syndicators acquire properties for the partnerships. Such fees are usually stated separately from the property acquisition fees.

.59 Although the syndication fees may be contractually nonrefundable even if the syndicators do not ultimately locate properties to acquire, a syndicator that could not successfully complete that phase of the transaction would soon be out of business. As a result, the earnings process is incomplete until both the partnership shares are sold and the corresponding properties are acquired.

.60 If the syndicator arranges for the partnership to acquire a property in which the syndicator has or expects to have significant involvement, or if the syndicator has a history of such transactions, revenue recognition should be deferred for all fees related to all properties, in conformity with the guidance in the following section.

Exposure to Losses or Costs From Syndicator Involvement and Collectibility Risk

.61 If syndicators are exposed to future losses or costs from (*a*) material involvement with the properties, partnerships, or partners or (*b*) uncertainties regarding the collectibility of partnership notes, they should defer income recognition on syndication fees and fees for future services until the losses or costs can be reasonably estimated. This SOP recommends that the syndicators reduce income recognized by the estimated losses or costs. The guidance in paragraphs 29 and 30 of FASB Statement No. 66 is used in estimating potential losses or costs of support obligations. If such losses or costs cannot be estimated, the income recognized should be reduced by the maximum exposure.

.62 *Involvement.* The following scenarios describe some common forms of involvement that may expose syndicators to future losses or costs:

- The syndicator agrees to reimburse the partnership or partners for any loss of amounts invested.
- The syndicator guarantees a minimum return on amounts invested by the partnership or partners.
- The syndicator is required to operate properties belonging to the partnership or partners, or to support the operations of those properties, at its own risk.
- The syndicator is required to construct or renovate properties acquired, or to be acquired, by the partnership or partners.
- The syndicator guarantees obligations or debt of the partnership or partners.

.63 *Collectibility.* The following factors associated with syndication transactions may expose syndicators to future losses or costs beyond those normally associated with the collection of receivables:

- Collection may depend primarily on income, cash flows, gain on sale, or gain on refinancing, which are affected by future events that cannot be assured.
- Minimal levels of capital in the partnership, coupled with operating losses, may dilute the equity of the partnership in the property to such an extent that the risk of loss by default no longer sufficiently motivates the partnership or partners to honor their obligations to the syndicators.
- Certain partnership notes (for example, notes in payment of syndication fees) may be unsecured or may otherwise be subject to future subordination, as described in paragraph 17 of FASB Statement No. 66. Syndicators should determine whether any notes accounted for as proceeds of real estate sales are subject to future subordination, particularly if notes originally designated for payment of syndication fees are adjusted and reclassified as sales proceeds in conformity with paragraphs .28 to .31 of this SOP.

Allocating Cash Payments

.64 Because syndication fees have historically been paid in cash at the time of syndication, all payments should be allocated to unpaid syndication fees before being allocated to any other unpaid amounts. After the syndication fee has been fully paid, additional cash received should be allocated to unpaid fees for future services excluded from sales value, to the extent those services have been performed by the time the cash is received, before being allocated to the initial and continuing investment and to fees included in sales value. Such additional cash received does not demonstrate an additional commitment to pay for the property, as described in paragraph 8 of FASB Statement No. 66, and applying it to the initial and continuing investment would thereby unsoundly accelerate the recognition of profit in full on the real estate sales portion of the transaction.

.65 Some transactions provide for syndicators to both receive cash from the partnerships and pay cash to them. Payments received by syndicators in such transactions may effectively be refundable to the extent that the syndicators later make payments to the partnerships. Consequently, if the syndicators pay cash to the partnerships or unconditionally commit to pay cash at or near the time of syndication, the syndicators should account for those amounts as reductions of cash already received from the partnerships, rather than as separate cash outlays. The reductions are allocated first to partnership down payment, next to other fees excluded from sales value to the extent performed, and last to syndication fees.

Recognition of Partnership Interests Received or Retained

.66 As stated in paragraph .36 of this SOP, syndication services for which partnership interests are received or retained are not contributions of services to the partnership, as described in paragraph 32 of SOP 78-9 [section 10,240.32]. They are, instead, services for which a syndication fee is paid through receipt or retention of the partnership interest. Such accounting is consistent with the premise of this SOP that the guidance in FASB Statement No. 66 should be applied to the recognition of profit on real estate syndication transactions.

.67 *Participation in Future Profits Without Risk of Loss.* Transfers of subordinate limited partnership interests by partnerships to syndicators are similar to transfers of rights to participate in future profits without risk of loss. The syndicators' profits are contingent upon the ability of the partnerships to produce sufficient profits to pay their majority security holders, and the syndicators are not liable for partnership losses. Paragraph 43 of FASB Statement No. 66 provides the following guidance for accounting for participations in future profits without risk of loss:

> If the transaction otherwise qualifies for recognition of profit by the full accrual method, the transfer of risks and rewards of ownership and absence of continuing involvement criterion shall be considered met. The contingent future profits shall be recognized when they are realized. [*Footnote omitted.*]

.68 *Partial Sale.* In general, syndicators should recognize as retained interests from partial sales of real estate those partnership interests received or retained that have the same pro rata rights as the majority class of ownership interests for all distributions. Partnership interests are typically received or retained as compensation for selling properties to partnerships, arranging sales of properties to partnerships by independent third parties, or performing other services in connection with syndication transactions.

.69 If a syndicator receives or retains a partnership interest as compensation for syndication services performed, the syndication fee for performing the services should be accounted for as follows:

a. All real estate owned by the partnership should be assumed to have been sold to the partnership by the syndicator, as described in paragraph .25 of this SOP.

b. The partnership interest received or retained by the syndicator should be accounted for as a retained interest from a partial sale of the real estate by the syndicator to the partnership, as described in paragraph .38 of this SOP.

c. The amount of profit recognized as the syndication fee should be equal to the carrying amount of such a retained interest.

.70 Paragraph 33 of FASB Statement No. 66 states that a "sale is a partial sale if the seller retains an equity interest in the property or has an equity interest in the buyer." That Statement requires the use of partial sale accounting if properties acquired by the partnerships are owned by the syndicators before the syndication transactions. As noted in the preceding paragraph and in paragraph .25 of this SOP, even if a syndicator never owns a property and, for example, a transaction is a sale of securities, the guidance in FASB Statement No. 66 should be applied if real estate is the principal underlying asset.

.71 If a syndicator receives or retains a general partnership interest in a limited partnership as consideration for the portion of the syndication transaction classified as a real estate sale, the syndicator should recognize any associated profit in conformity with FASB Statement No. 66. Receipt or retention of a general partnership interest may expose a syndicator to losses or costs that should be evaluated as described in paragraphs .33 and .61 to .63 of this SOP.

.72

Appendix A

Other Relevant Literature

A-1. This appendix provides background information on literature discussed only briefly in the body of this SOP. It also discusses literature that is not cited in the body of this SOP but that may be relevant, directly or by analogy, to the recognition of income from syndication activities.

FASB Statement No. 5, *Accounting for Contingencies*

A-2. Paragraph 17 of FASB Statement No. 5, *Accounting for Contingencies*, states: "Contingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization."

FASB Statement No. 13, *Accounting for Leases*

A-3. FASB Statement No. 13, *Accounting for Leases*, specifies the accounting by lessors of residual interests in real and personal property leased under leases accounted for as sales-type and direct financing leases. In general, unguaranteed residual values are determined at the inceptions of the leases, thereby affecting the amounts of income to be recognized over the lease terms. Residual values are required to be reviewed at least annually, and downward adjustments made currently, if declines in estimated residual values are deemed to be other than temporary.

FASB Statement No. 66, *Accounting for Sales of Real Estate*

A-4. Paragraphs 29 and 30 of FASB Statement No. 66 provide the following guidance for estimating potential costs of support obligations:

> 29. *The seller is required to initiate or support operations or continue to operate the property at its own risk, or may be presumed to have such a risk, for an extended period, for a specified limited period, or until a specified level of operations has been obtained, for example, until rentals of a property are sufficient to cover operating expenses and debt service.* If support is required or presumed to be required[10] for an *extended* period of time, the transaction shall be accounted for as a financing, leasing, or profit-sharing arrangement. If support is required or presumed to be required for a *limited* time, profit on the sale shall be recognized on the basis of performance of the services required. Performance of those services shall be measured by the costs incurred and to be incurred over the period during which the services are performed. Profit shall begin to be recognized when there is reasonable assurance that future rent receipts will cover operating expenses and debt service including payments due the seller under the terms of the transaction. Reasonable assurance that rentals will be adequate would be indicated by objective information regarding occupancy levels and rental rates in the immediate area. In assessing whether rentals will be adequate to justify recognition of profit, total estimated future rent receipts of the property shall be reduced by one-third as a reasonable safety factor unless the amount so computed is less than the rents to be received from signed leases. In this event, the rents from signed leases shall be substituted for the computed amount . . . .
>
> 30. If the sales contract does not stipulate the period during which the seller is obligated to support operations of the property, support shall be presumed for at least two years from the time of initial rental unless actual rental operations cover operating expenses, debt service, and other contractual commitments before that time. If the seller is contractually obligated for a longer time, profit

recognition shall continue on the basis of performance until the obligation expires.

---

[10] Support shall be presumed to be required if: (*a*) a seller obtains an interest as a general partner in a limited partnership that acquires an interest in the property sold; (*b*) a seller retains an equity interest in the property, such as an undivided interest or an equity interest in a joint venture that holds an interest in the property; (*c*) a seller holds a receivable from a buyer for a significant part of the sales price and collection of the receivable depends on the operation of the property; or (*d*) a seller agrees to manage the property for the buyer on terms not usual for the services to be rendered, and the agreement is not terminable by either the seller or the buyer.

FASB Technical Bulletin No. 88-1, *Issues Relating to Accounting for Leases*

A-5. Paragraphs 21 and 22 of FASB Technical Bulletin No. 88-1, *Issues Related to Accounting for Leases*, requires "wrap lease" transactions to be accounted for in the following manner:

Question 5

21. An enterprise purchases an asset, leases the asset to a lessee, obtains nonrecourse financing using the lease rentals or the lease rentals and the asset as collateral, sells the asset subject to the lease and the nonrecourse debt to a third-party investor, and leases the asset back while remaining the substantive principal lessor under the original lease (commonly referred to as a wrap lease transaction). Other than as required by Statement 13, as amended by Statements 28, 66, and 98, should an enterprise ever recognize any profit on the wrap lease transaction at its inception? If not, how should the enterprise account for the transaction?

Response

22. If the property involved is real estate, the provisions of Statement 98 apply to the sale-leaseback transaction. If the property involved is not real estate, the enterprise should account for the transaction as a sale-leaseback transaction. If the property involved is not real estate, the enterprise should account for the transaction as a sale-leaseback transaction in accordance with paragraphs 32–34 of Statement 13, as amended, and the lease to the end user should be accounted for as a sublease in accordance with paragraph 36 of Statement 13. Under Statement 13 the asset should be removed from the books of the original enterprise, the leaseback should be classified in accordance with paragraph 6 of Statement 13, and any gain on the transaction should be recognized or deferred and amortized in accordance with paragraph 33 of Statement 13, as amended. The enterprise would also reflect the retained residual interest, gross sublease receivable, nonrecourse third-party debt, the leaseback obligation, and the note receivable from the investor in the statement of financial position. As in accounting for a money-over-money lease transaction . . ., the sublease asset and the related nonrecourse debt should not be offset in the statement of financial position unless a right of setoff exists.

AICPA Statement of Position No. 78-9, *Accounting for Investments in Real Estate Ventures*

A-6. SOP 78-9 [section 10,240] provides guidance on accounting for investments in real estate ventures in financial statements prepared in conformity with generally accepted accounting principles. Paragraph 32 [section 10,240.32] states the following:

Contribution of Services or Intangibles. The division believes the accounting considerations that apply to real property contributed to a partnership or joint venture also apply to contributions of services or intangibles. The investor's cost of such services or intangibles to be allocated to the cost of the investment should be determined by the investor in the same manner as for an investment in a wholly owned real estate project.

A-7. Paragraph 37 [section 10,240.37] states the following:

If services are performed for a venture by an investor and their cost is capitalized by the venture, profit may be recognized by the investor to the extent attributable to the outside interests in the venture if the following conditions are met:

a. The substance of the transaction does not significantly differ from its form.

b. There are no substantial uncertainties about the ability of the investor to complete performance (as may be the case if the investor lacks experience in the business of the venture) or the total cost of services to be rendered.

c. There is a reasonable expectation that the other investors will bear their share of losses, if any.

The method of recognizing income from services rendered should be consistent with the method followed for services performed for unrelated parties.

FASB Emerging Issues Task Force Issue No. 85-37, *Recognition of Notes Received for Real Estate Syndication Activities*

A-8. Issue No. 85-37, *Recognition of Notes Received for Real Estate Syndication Activities*, discusses a number of methods of accounting for syndication transactions, including a method described as the "cash method," under which no carrying amount is recorded for notes receivable by syndicators from the partnerships except for portions of the notes that will be paid from the proceeds of the investors' contributions. The Emerging Issues Task Force (EITF) did not reach a consensus on the issue and referred it to the AICPA Real Estate Committee. However, the Securities and Exchange Commission (SEC) observer attending the EITF meeting stated that without a task force consensus, the SEC staff would challenge registrants that use a method other than the cash method. He also stated that the SEC objects to extending the 1980 AICPA Issues Paper *Accounting by Lease Brokers* to activities other than those of lease brokers. The SEC staff has also specifically objected to accretion of income on purchased, unguaranteed lease residuals and to income recognition and accretion of income on residual interests, realization of which depends on transactions whose occurrence in the future and whose terms are currently only anticipated.

AICPA Issues Paper, *Accounting by Lease Brokers*

A-9. The 1980 AICPA Issues Paper, *Accounting by Lease Brokers*, explicitly applies to equipment-leasing transactions, but the paper has been applied to real estate syndication transactions by analogy. Under lease-broker accounting, income is recognized at the inception of a lease based on cash received and the discounted amount of the expected residual (subject to an assessment of realizability). Until the FASB issued Technical Bulletin No. 86-2, *Accounting for an Interest in the Residual Value of a Leased Asset*, the residual could be accreted until realized. The amount of income to be recognized at the inception of a lease in money-over-money lease brokerage transactions was significantly restricted in FASB Technical Bulletin No. 88-1.

.73

Appendix B

Examples

Example 1

B-1. The following examples illustrate the determination of sales value, the allocation of cash payments, and the calculation of syndication fees, as described in paragraphs .26 to .31, .34, and .35 of this SOP.

B-2. ***Example 1a.*** A syndicator arranges for a newly formed partnership to acquire a single-tenancy property using part of the proceeds raised through the sale of partnership interests to unrelated third parties, as follows:

- Limited partners contribute $4,000, of which $700 is retained for working capital, and the unrelated general partner contributes $100.
- The partnership acquires real estate from the syndicator at the syndicator's cost of $20,000. The partnership gives the following consideration:
  - — $3,000 in cash.
  - — The assumption of a $16,250 nonrecourse first mortgage note, payable in monthly installments over fifteen years with interest at a market rate.
  - — A second mortgage note, payable to the syndicator for the balance of $750. The second mortgage is payable on the same terms as the first mortgage.
- The cash flow on the property is currently sufficient to meet the required principal and interest payments on the first and second mortgage notes.
- In addition, the syndicator receives the following:
  - — Syndication fee:

Cash	$ 100
Note bearing a market rate of interest due in three years secured by a lien on the property that is not subject to future subordination	300
	$ 400

  - — Other fees—rent-up fee for activities prior to acquisition (accounted for as part of sales value)

Cash	$ 300
Note bearing a market rate of interest due in three years secured by a lien on the property that is not subject to future subordination	650
	$ 950
Total fees	$ 1,350

Sales Value

Purchase price		$20,000
Other fees accounted for as part of sales value—rent-up fee for activities prior to acquisition		950
Adjusted sales value		$20,950

Cash Down Payment

Per sales contract		$ 3,000
Add: Fees paid in cash that are included in sales value	$300	
Less: Portion of syndication fee not paid in cash	300	-0-
Adjusted cash down payment		$ 3,000

Gain Calculation

Sales value	$20,950
Syndicator's cost	20,000
Gain	$ 950

Gain Recognition

Down-payment test:

$$\frac{\text{Down payment } \$3{,}000}{\text{Sales value } \$20{,}950} = 14\%$$

Required minimum down payment set forth in paragraph 54 of FASB Statement No. 66 15%

The sale does not meet the minimum required down-payment test for full profit recognition.

Use of the installment method[2] would result in profit recognition of:

$$\frac{\text{Down payment } \$3{,}000}{\text{Sales value } \$20{,}950} \times \$950 = \$136^{3}$$

Syndication Fee Recognition

The syndication fee of $400 is deemed to have been received in cash and, accordingly, to have been collected. In addition, the syndicator's involvement with the property does not indicate that a funding obligation by the syndicator is likely. Therefore, the entire fee is recognizable currently. The collectibility of the balance of the amount designated as the note in payment of the syndication fee ($300) is evaluated as part of the evaluation of the collectibility of all notes from the real estate sale.

If the $300 note were unsecured or otherwise subject to future subordination, profit to the extent of the note would be recognized under the cost-recovery

[2] The method used is consistent with FASB Emerging Issues Task Force Issue No. 88-24, *Effect of Various Forms of Financing under FASB Statement No. 66*.

[3] Because the seller's receivable of $1,700 ($750 second mortgage plus $300 designated for syndication fees plus $650 designated for other fees) for the sales price and the fees exceeds the amount of deferred gain of $814 ($950 total gain less $136 profit recognized), no additional gain is currently recognized.

method. Profit to be recognized under the installment method would thus be reduced to $650 ($950 total less $300 under the cost-recovery method) and recognized as follows:

$$\frac{\text{Down payment } \$3{,}000}{\text{Sales value } \$20{,}650^{4}} \times \$650 = \$94$$

B-3. ***Example 1b.*** The same facts apply as in example 1a, except that the property is purchased from an independent third party for $20,000.

Sales Value		
Same as in example 1a		$20,950
Cash Down Payment		
Same as in example 1a		$ 3,000
Gain Calculation		
Same as in example 1a		$ 950

Gain Recognition

Same as in example 1a

The sale does not meet the minimum required down-payment test for full profit recognition.

Use of the installment method would result in profit recognition of $136.

Syndication Fee Recognition

Same as in example 1a

B-4. ***Example 1c.*** The same facts apply as in example 1a, except that the syndicator retains a 3 percent limited partnership interest.

Sales Value		
Same as in example 1a		$20,950
Cash Down Payment		
Same as in example 1a		$ 3,000
Gain Calculation		
Sales value		$20,950
Syndicator's cost	$20,000	
Less: 3% limited partnership interest—partial sale	112[5]	19,888
Gain		$ 1,062

---

[4] In the calculation of profit under the installment method, the $20,950 sales value determined in example 1a is reduced by the $300 note that is being recognized under the cost-recovery method.

[5] The $112 partial sale amount is computed by applying the limited partnership percentage (3 percent) to the difference between the syndicator's cost ($20,000) and the amount of the nonrecourse first mortgage note ($16,250) assumed at purchase by the partnership.

Gain Recognition

Down-payment test:

$$\frac{\text{Down payment } \$3{,}000}{\text{Sales value } \$20{,}950} = 14\%$$

Required minimum down payment set forth in paragraph 54 of FASB Statement No. 66	15%

The sale does not meet the minimum required down-payment test for full profit recognition.

Use of the installment method would result in profit recognition of—

$$\frac{\text{Adjusted cash down payment } \$3{,}000}{\text{Sales value } \$20{,}950} \times \$1{,}062 = \$152$$[6]

Syndication Fee Recognition

Same as in example 1a

B-5. ***Example 1d.*** The same facts apply as in example 1a, except that the syndicator agrees to fund cash-flow deficiencies for the first three years, up to a maximum of $1,500. In calculating the profit to be recognized based on performance of the services required (including reduction of rents by the one-third safety factor described in paragraph 29 of FASB Statement No. 66), there is a $1,100 exposure to loss. Current forecasts indicate discounted cash-flow losses of $500 in year 1, $300 in year 2, $200 in year 3, and positive cash flow thereafter. The partnership also pays an additional $200 of the $400 syndication fee in cash.

Sales Value	
Same as in example 1a	$20,950
Cash Down Payment	
Down payment as calculated in example 1a	$ 3,000
Additional cash	200
Adjusted cash down payment	$ 3,200
Gain Calculation	
Gain as calculated in example 1a	$ 950
Less: Syndicator's exposure to loss under paragraph 29 of FASB Statement No. 66	1,100
Gain	NONE

[6] Because the seller's receivable of $1,700 ($750 second mortgage plus $300 designated for syndication fees plus $650 designated for other fees) for the sales price and the fees exceeds the amount of deferred gain of $910 ($1,062 total gain less $152 profit recognized), no additional gain is currently recognized.

Gain Recognition

Down-payment test:

$$\frac{\text{Down payment } \$3{,}200}{\text{Sales value } \$20{,}950} = 15\%$$

Required minimum down payment set forth in paragraph 54 of FASB Statement No. 66	15%

Although the sale meets the minimum required down-payment test for full profit recognition, no gain is recognizable because the exposure to loss exceeds the gain.

Syndication Fee Recognition

The syndicator would recognize $250 in syndication fee income, which is equal to the $400 syndication fee less the $150 excess of the syndicator's expected funding obligation ($1,100) over other fee income ($950).

Example 2

B-6. The following example illustrates the adjustment of syndication fees when stated fees are not reasonable, as described in paragraphs .28 to .31 of this SOP. The property is an office building subject to lease on a long-term basis to parties with a satisfactory credit rating; cash flow is currently sufficient to service all indebtedness.

	Case 1	*Case 2*
Stated real estate sales price	$1,000	$ 900
Cost	$ 800	$ 800
Payments:		
Cash		
Stated syndication fees	$ 40	$ 140
Stated down payment	100	0
Total cash paid at closing	140	140
Assumption of existing noncourse debt for which the seller has no contingent liability	800	800
Second mortgage not payable to seller	100	100
Total payments	$1,040	$1,040
Required minimum down payment for full recognition of profit in conformity with FASB Statement No. 66	10%	10%
Reasonable fee[7]	$ 100	$ 100

[7] The syndication fee that is reasonable depends on circumstances unique to the individual transaction. The amount used in the example is not intended to serve as a benchmark for determining whether syndication fees are reasonable in practice.

	Case 1		Case 2	
	Syndication Fees	Real Estate Sale	Syndication Fees	Real Estate Fees
Stated terms	$ 40	$1,000	$140	$900
Reallocation of fees	60	(60)	(40)	40
Adjusted balances	$100	$ 940	$100	$940

	Case 1	Case 2
Syndication fee recognized in income at date of sale:		
Stated fee	$ 40	$140
Adjustment	60	(40)
Total	$100	$100

	Case 1	Case 2
Allocation of cash:		
Stated syndication fees	$ 40	$140
Syndication fee allocated from real estate sale	60	0
Syndication fee allocated to real estate sale	0	(40)
Adjusted syndication fee	100	100
Real estate down payment	40	40
Total Cash	$140	$140

	Case 1	Case 2
Cash down payment required for full profit recognition:		
10% of adjusted sales price	$ 94	$ 94
Real estate down payment	40	40
Additional cash required for full profit recognition	$ 54	$ 54
Total profit on real estate transaction:		
Adjusted sales price	$940	$940
Cost	800	800
Total profit	$140	$140
Profit on real estate sales transaction recognizable under installment method—greater of.[8]		
(a) ($40/$940) × $140	$ 6	$ 6
or		
(b) Total accounted for as real estate profit	$140	$140
Less: Second mortgage receivable	100	100
Less: Buyer's debt secured by the property for which the seller is contingently liable	0	0
Total profit recognizable on real estate sale	$ 40	$ 40

[8] The method used is consistent with FASB Emerging Issues Task Force Issue No. 88-24.

	Case 1	Case 2
Total profit recognizable at closing:		
Syndication fee	$100	$100
Real estate sale	40	40
Total	$140	$140

The remaining balance of $100 in profit is deferred and recognized as cash payments are received by the syndicator.

Example 3

B-7. The following example illustrates the recognition of syndication fees received from blind pool transactions, as described in paragraph .32 of this SOP. The terms of the transaction are as follows:

- In June 19X1, syndication A raises $50,000 for investment in real estate in a blind pool transaction; at the time the equity is raised, no properties have been acquired or identified for acquisition.
- The offering memorandum states that $45,000 will be available for investment in property after payment of the following items:
  - — $3,000 in syndication fees
  - — $1,000 in expenses
  - — $1,000 set aside for working-capital funds

  In addition, the offering memorandum states that it is anticipated that $15,000 of debt financing will be obtained in connection with the property acquisition.
- In July 19X1, a property is acquired for $15,000 cash and the assumption of an existing $5,000 first mortgage loan. The partnership is to use an additional $4,000 of its funds to renovate the property.

Syndication Fee Recognition

Assuming that the syndication fees to be recognized are nonrefundable and meet all conditions for recognition in income, as set forth in paragraphs .28 to .31 of this SOP, $1,200 should be recognized in July 19X1, as follows:

Cash purchase price	$15,000
Portion of purchase price financed with debt	5,000
Cash committed for renovation	4,000
Total invested	$24,000

$$\frac{\text{Total invested } \$24{,}000}{\text{Cash committed for investment } \$60{,}000} = 40\%$$

The syndication fee to be recognized in July 19X1 is $1,200 (40% × $3,000 total syndication fee).

The remaining syndication fee of $1,800 ($3,000 total less $1,200 recognized in July 19X1) would be recognized in income ratably as the syndication partnership invests in property acquisitions.

Section 10,520

Statement of Position 92-5 Accounting for Foreign Property and Liability Reinsurance

June 1, 1992

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 The promulgation of rules and regulations by state insurance departments and the adoption of specialized insurance industry accounting standards by the Financial Accounting Standards Board (FASB) have resulted in considerable uniformity in accounting practices in the insurance industry in the United States. Outside the United States, insurance accounting and reporting practices vary widely. The diversity in insurance accounting and reporting practices of foreign insurance companies has led to questions on how U.S. insurance companies should account for property and liability reinsurance assumed from foreign companies (foreign reinsurance).

.02 Reinsurers assuming business from domestic companies have historically had sufficient information to monitor and account for contract results. In contrast, some reinsurers assuming business from foreign companies do not receive such information, because in some foreign jurisdictions, insurance companies' accounting and reporting practices concerning periodic recognition of revenue and incurred claims are substantially different from U.S. practices. Therefore, reinsurers assuming business from foreign ceding companies cannot always obtain sufficient information to periodically estimate earned premiums for the business assumed from the foreign ceding companies.

.03 A significant amount of reinsurance is transacted through syndicates organized by Lloyd's of London. Lloyd's syndicates report the amounts of premiums, claims, and expenses recorded in an underwriting account for a particular year to the assuming companies that participate in the syndicates. The syndicates generally keep accounts open for three years. Traditionally, three years have been necessary to report substantially all premiums associated with an underwriting year and to report most related claims, although claims may remain unsettled after the account is closed. A Lloyd's syndicate typically closes an underwriting account by reinsuring outstanding claims on that account with a syndicate for the next underwriting year. The ceding syndicate pays the assuming syndicate an amount based on the unearned premiums and outstanding claims in the underwriting account at the date of the assumption and distributes the remaining balance to its participants.

Current Practices

.04 Three methods are currently used in the United States to account for foreign property and liability reinsurance: the periodic method, the zero balance method, and the open year method.

Periodic Method

.05 The periodic method of accounting for reinsurance provides for current recognition of profits and losses. It is used when ultimate premiums and the period of recognition can be reasonably estimated currently. Premiums are recognized as revenue over the policy term, and claims, including an estimate of claims incurred but not reported, are recognized as they occur. The periodic method is consistent with current practice for primary insurance and domestic reinsurance for which sufficient information is available to reasonably estimate and recognize earned premiums and related claims. (Refer to FASB Statement of Financial Accounting Standards No. 60, *Accounting and Reporting by Insurance Enterprises*.)

.06 Some foreign ceding companies maintain the information necessary to estimate earned premiums, incurred claims, and related expenses currently. As a result, U.S. reinsurers doing business with these foreign ceding companies are able to account for reinsurance assumed by applying the same periodic method of accounting that they use to account for domestic reinsurance. Although not all foreign ceding companies maintain and report current information necessary to estimate earned premiums, incurred claims, and related expenses, some U.S. reinsurers have sufficient experience with the foreign business assumed to estimate earned premiums. When earned premiums can be estimated, sufficient information usually exists to estimate incurred claims and related expenses. Anticipated results based on either the reinsurer's experience or reported data make it possible to reasonably estimate underwriting results and use the periodic method.

Zero Balance Method

.07 Many foreign ceding companies do not maintain the information necessary to estimate earned premiums. As a result, U.S. reinsurers doing business with these foreign companies generally are not able to apply the periodic method of accounting. Some of these companies use the zero balance method, which is a modified cash basis of accounting. This method is similar to the cost recovery method described in FASB Statement No. 60, paragraph 14. Because of the inherent lag in reporting claims, profits reported by foreign ceding companies in early years often exceed the total profits that will ultimately be realized. To avoid reporting overstated profits, companies using this method adjust the records with arbitrary provisions for claims incurred in amounts that exactly offset the cash basis profits.

Open Year Method

.08 Under the open year method, underwriting results of foreign reinsurance are not included in the income statement until sufficient information becomes available to provide reasonable estimates of earned premiums. The open year method is similar to the deposit method as defined in FASB Statement No. 60. Because the measurement period extends over more than one accounting period, premiums, claims, and expenses are not immediately included in operating results. Instead, they are accumulated and reported in the balance sheet as an open underwriting balance. The underwriting balance is disaggregated and reported in the income statement as premiums, claims, and expenses only when earned premiums become reasonably determinable. If it is probable that a loss has been incurred before an underwriting balance is closed, a provision for a loss generally is recorded. Examples of situations in which a provision may be recorded before an underwriting balance is closed include catastrophic losses, higher-than-expected claim frequency, significant unanticipated adverse events, or a negative open year account. The accounting treatment is similar to that for premium deficiencies described in FASB Statement No. 60, paragraph 32.

Comparison With Practices in Other Industries

.09 Deferral of revenue occurs in industries that sell goods subject to rights of return. If a right of return exists, current recognition of a sale is not permitted unless the amount of future returns is reasonably estimable. If that amount is not reasonably estimable, recognition of income is postponed until the return privilege has substantially expired. Income recognition is also postponed for certain real estate sales through the use of the installment and cost recovery methods. Those methods are analogous to the open year method.

Discussion

.10 Methods that defer recognition of underwriting profits raise financial accounting issues concerning (*a*) whether premiums and claims should be reported as income currently, even though the related underwriting balance[1] is deferred, and (*b*) whether the underwriting balance should be recorded as deferred income or as an addition to claim liabilities. Most companies that follow the zero balance method record premium and claim amounts currently and defer recognition of profits by additions to claim liabilities. Although this presentation provides timely information on the volume of business being conducted by the enterprise, the usefulness of the information is limited because the related profit margins are not also reported.

.11 Current accounting literature supports alternative methods of financial presentation when profit recognition is deferred. For example, recognition as income of both revenues and related costs is deferred under the completed contract method until the contract is substantially completed. However, if either the installment method or cost recovery method is used to defer the recognition of gain on the sale of real estate, the sale and related costs are ordinarily reported on the date of the transaction. The deferred profit is reported separately in the income statement as a deduction from sales in the year the transaction occurs and as a separate item of revenue in future years' income statements, when the profit is recognized.

.12 Proponents of presenting premiums, claims, and expenses in the income statement when the amounts are reported to the reinsurer point out

---

[1] The term *underwriting balance* refers to the excess of reported premiums over reported claims and expenses. This amount is not intended to represent income realized on a contract.

that excluding those amounts from the income statement until an underwriting year is closed does not reflect the economic substance of current period activities under the reinsurance contract. In response to criticism that presentation of the amounts in the income statement may cause profit margins to be misstated, they argue that disclosure of profits deferred and profits recognized provides sufficient information for users to evaluate operating results.

.13 Proponents of reporting deferred amounts in the balance sheet until the profits relating to the underwriting year are recognized point out that the income statement should reflect profit margins associated with the premium volume reported in the income statement, and that this can best be done by recognizing the related premiums in the periods the profits are recognized. They acknowledge that premiums, claims, and expenses associated with a contract in a period may be important information to users, but they argue that the information could be disclosed in the notes to the financial statements or in the statement of cash flows to avoid misstating the profit margins.

Conclusions

.14 The periodic method should be used to account for foreign reinsurance except in the circumstance described in paragraph .15.

.15 If, due to local revenue recognition policies, the foreign ceding company cannot provide the information required by the assuming company to estimate both the ultimate premiums and the appropriate periods of recognition in accordance with U.S. generally accepted accounting principles, then the open year method should be used.[2] The presence of uncertainties that may be inherent in estimating earned premiums is not an acceptable basis for using the open year method. As discussed in paragraph .08, premiums, claims, commissions, and related direct taxes should not be reported currently as income under the open year method; instead, they should be included in the open underwriting balance to which they pertain. The underwriting balances should be aggregated and included in the balance sheet as a liability. Each underwriting balance should be kept open until sufficient information becomes available to record a reasonable estimate of earned premiums. The underwriting balance should be disaggregated and reported in the income statement as premiums, claims, commissions, and related direct taxes when earned premiums are reasonably determinable.

.16 If it becomes probable that a loss has been incurred before an underwriting balance is closed, a provision for the loss should be recorded.

.17 The periodic and open year methods are not interchangeable in the same circumstances. The periodic method should be used to account for foreign reinsurance. Only if reasonable estimates cannot be made currently, for the reason discussed in paragraph .15, should the open year method be used. The periodic and open year methods are not alternative accounting principles as discussed in Accounting Principles Board (APB) Opinion No. 20, *Accounting Changes*. Rather, one or the other is to be used depending on the circumstances. As such, changes between these methods are not accounting changes. In addition, changes from the periodic method to the open year method would be seldom.

---

[2] If the foreign ceding company maintains supplementary records that are sufficient to reasonably estimate earned premiums currently, then the U.S. assuming company should obtain the necessary information and use the periodic method to account for the foreign reinsurance.

.18 The zero balance method should not be used because it results in misstatement of the income statement by arbitrarily recognizing revenues and costs. The method also causes the profit to be reported in periods other than those in which the related premiums, claims, and expenses are reported.

Disclosures

.19 Disclosure in the financial statements of an insurance company's accounting policies should include a description of the methods used to account for foreign reinsurance. In addition, for foreign reinsurance accounted for by the open year method, the following should be disclosed for each period for which an income statement is presented:

- The amounts of premiums, claims, and expenses recognized as income on closing underwriting balances
- The additions to underwriting balances for the year for reported premiums, claims, and expenses.

Also, the amounts of premiums, claims, and expenses in the underwriting account should be disclosed for each balance sheet presented.

Effective Date and Transition

.20 This SOP should be applied prospectively to contracts or arrangements covered by it and entered into in fiscal years beginning on or after December 15, 1992. Retroactive application, by restating all prior years presented, is encouraged but not required.

Section 10,530

Statement of Position 92-6 Accounting and Reporting by Health and Welfare Benefit Plans

August 3, 1992

NOTE

Statements of Position (SOPs) of the Accounting Standards Division present the conclusions of at least a majority of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this SOP should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SOP 92-6 is amended by SOP 94-4, *Reporting of Investment Contracts Held by Health and Welfare Benefit Plans and Defined-Contribution Pension Plans*. SOP 94-4 is effective for financial statements for plan years beginning after December 15, 1994, except that the application of SOP 94-4 to investment contracts entered into before December 15, 1993, is delayed to plan years beginning after December 15, 1995. Earlier application of SOP 94-4 is encouraged. Accounting changes adopted to conform to the provisions of SOP 94-4 should be made as of the beginning of the year in which the change is adopted. The effect of initially applying SOP 94-4 should be reported in a manner similar to the cumulative effect of a change in accounting principle (APB Opinion No. 20, *Accounting Changes*, paragraph 20). Pro forma effects of retroactive application (APB Opinion No. 20, paragraph 21) are not required. Restatement of financial statements of prior years is not permitted.

SOP 92-6 is also amended by SOP 99-3, *Accounting for and Reporting of Certain Defined Contribution Plan Investments and Other Disclosure Matters*. SOP 99-3 is effective for financial statements for plan years ending after December 15, 1999. Earlier application is encouraged for fiscal years for which annual financial statements have not been issued. If the previously required "by fund" disclosures are eliminated, the reclassification of comparative amounts in financial statements for earlier periods is required.

SOP 92-6 is also amended by SOP 01-2, *Accounting and Reporting by Health and Welfare Benefit Plans*. SOP 01-2 is effective for financial statements for plan years beginning after December 15, 2000. Earlier application is encouraged. Financial statements presented for prior plan years are required to be restated to comply with the provisions of this SOP. The effect of restating the beginning balance of benefit obligations for the earliest year presented should be disclosed.

(continued)

SOP 92-6 is also amended by FASB Staff Position (FSP) AAG INV-1 and SOP 94-4-1, *Reporting of Fully Benefit-Responsive Investment Contracts Held by Certain Investment Companies Subject to the AICPA Investment Company Guide and Defined-Contribution Health and Welfare and Pension Plans*. The financial statement presentation and disclosure guidance in paragraphs 8–11 of FSP AAG INV-1 and SOP 94-4-1 is effective for financial statements for plan years ending after December 15, 2006. The revised definition of fully benefit-responsive in paragraph 7 of the FSP shall be effective for all investment contracts as of the last day of the annual period ending after December 15, 2006. Earlier application is permitted for fiscal years in which annual financial statements have not been issued. If comparative financial statements are presented, the guidance in that FSP shall be applied retroactively to all prior periods presented. If an investment contract is considered fully benefit-responsive under the revised definition as of the last day of the annual period ending after December 15, 2006, that contract shall be considered fully benefit-responsive for all periods presented, provided that contract would have been considered fully benefit-responsive in accordance with the then existing provisions of this SOP.

Scope

.01 Health and welfare benefit plans include plans that provide—

a. Medical, dental, visual, psychiatric, or long-term health care; life insurance (offered separately from a pension plan); certain severance benefits; or accidental death or dismemberment benefits.

b. Benefits for unemployment, disability, vacations, or holidays.

c. Other benefits such as apprenticeships, tuition assistance, day care, dependent care, housing subsidies, or legal services.

This statement of position (SOP) applies to both defined-benefit and defined-contribution health and welfare benefit plans (referred to hereafter as *health and welfare benefit plans*).

.02 Defined-benefit health and welfare plans specify a determinable benefit, which may be in the form of a reimbursement to the covered plan participant or a direct payment to providers or third-party insurers for the cost of specified services. Such plans may also include benefits that are payable as a lump sum, such as death benefits. The level of benefits may be defined or limited based on factors such as age, years of service, and salary. Contributions may be determined by the plan's actuary or be based on premiums, actual claims paid, hours worked or other factors determined by the plan sponsor. Even when a plan is funded pursuant to agreements that specify a fixed rate of employer contributions (for example, a collectively bargained multiemployer plan), such a plan may nevertheless be a defined-benefit health and welfare plan if its substance is to provide a defined benefit. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.03 Defined-contribution health and welfare plans maintain an individual account for each plan participant. They have terms that specify the means of determining the contributions to participants' accounts, rather than the amount of benefits the participants are to receive. The benefits a plan participant will receive are limited to the amount contributed to the participant's account, investment experience, expenses, and any forfeitures allocated to the participant's account. These plans also include flexible spending arrangements.

.04 Health and welfare benefit plans generally are subject to certain fiduciary, reporting, and other requirements of the Employee Retirement Income Security Act of 1974 (ERISA). Plans that are unfunded (that is, those whose benefits are paid solely and directly out of the general assets of the employer), are fully insured (through the direct payment of premiums to the insurance company by the employer; see paragraphs .14 and .15), or are certain combinations thereof (for example, self-funded plans with stop-loss coverage; see paragraph .17) may not be required to include financial statements in their ERISA filings.[1] An understanding of the health and welfare benefit plan is needed to determine its accounting and reporting requirements. It is also important to consider the new forms of funding vehicles that are emerging, particularly with respect to postretirement health benefits.

.05 This SOP describes generally accepted accounting principles (GAAP) that are particularly important to defined-benefit and defined-contribution health and welfare plans. Generally accepted accounting principles other than those discussed in this SOP may also apply. This SOP does not address the preparation of financial statements on a comprehensive basis of accounting other than GAAP; however, the financial statements may be prepared on such bases as the cash basis or modified cash basis, as defined by the requirements of financial reporting to the Department of Labor (DOL). If the financial statements are prepared on a comprehensive basis of accounting other than GAAP, disclosure of the plan's benefit obligation information as described in paragraph .20 is necessary. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.06 The most significant changes in accounting and reporting by health and welfare benefit plans that this SOP, as amended, makes to the AICPA Audit and Accounting Guide *Audits of Employee Benefit Plans* (the Guide) are the following:

- The objective of financial reporting by a defined-benefit health and welfare plan has been clarified and is the same as the objective of financial reporting by a defined-benefit pension plan (see paragraph .19).
- Single-employer, multiemployer, and multiple-employer defined-benefit health and welfare plans should account for and separately report benefit obligations, including postretirement benefit obligations (see paragraphs .41 through .57). Information about the benefit obligation should be presented in a separate statement, combined with other information on another financial statement, or presented in the notes to the financial statements. Regardless of the format selected, the plan financial statements should present the benefit obligations information in its entirety in the same location (see paragraph .20).[*]
- The requirement to recognize claims incurred but not reported (IBNR) has been clarified. For a self-funded plan, the cost of IBNR includes the present value of the estimated ultimate cost of settling the claims, including estimated costs to be incurred after the financial statement date (for example, the cost of disability; see paragraph .44).

---

[1] Refer to appendix A of the AICPA Audit and Accounting Guide *Audits of Employee Benefit Plans.*

[*] SOP 01-2 [section 10,830] amends this SOP to provide accounting and reporting guidance in the following areas:

a. Presentation of benefit obligations information
b. Accounting for and reporting of postemployment benefit obligations
c. Measurement date for benefit obligations
d. Disclosure of information about retirees' relative share of the plan's estimated cost of providing postretirement benefits
e. Disclosure of discount rate used for measuring the plan's obligation for postemployment benefits
f. Disclosure of investments representing 5 percent or more of the net assets available for benefits

[Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 01-2.]

- Benefit obligations should not include death benefits actuarially expected to be paid during the active service period of participants (see paragraph .41).
- Defined-contribution health and welfare plans are distinguished from defined-benefit health and welfare plans (see paragraphs .03 and .23).
- The calculation of the obligation for accumulated eligibility credits has been clarified and generally should consider mortality rates and the probability of employee turnover (see paragraph .48).

[Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.07 Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 35, *Accounting and Reporting by Defined Benefit Pension Plans*, does not apply to health and welfare benefit plans; however, as set forth in the guide, the methods of valuing plan investments and requirements for financial statement disclosures are the same as those specified in FASB Statement No. 35 and are not changed by this SOP.

.08 FASB Statement No. 106, *Employers' Accounting for Postretirement Benefits Other Than Pensions*, establishes standards of financial accounting and reporting by *employers* for health and welfare benefits expected to be provided to a participant during retirement. While FASB Statement No. 106 does not apply to health and welfare benefit plans, this SOP adopts certain of its measurement concepts (see paragraphs .49 through .57). Terminology used in discussing postretirement benefits in this SOP is intended to follow usage and definitions provided in FASB Statement No. 106.

.09 FASB Statement No. 112, *Employers' Accounting for Postemployment Benefits*, establishes standards of financial accounting and reporting by employers for certain postemployment benefits provided to former or inactive employees after employment but before retirement. Benefits provided may include salary continuation, supplemental unemployment benefits, severance, disability-related job training and counseling, and continuation of health care and life insurance. While FASB Statement No. 112 does not apply to health and welfare plans, this SOP adopts certain of its measurement concepts (see paragraphs .58 through .60). Terminology used in discussing postemployment benefits in this SOP is intended to follow usage and definitions provided in FASB Statement No. 112. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 112.]

Background

.10 Plan participants may be active or terminated employees (including retirees), as well as covered dependents and beneficiaries, of a single employer or group of employers. Employer contributions may be voluntary or required under the terms of a collective bargaining agreement negotiated with one or more labor organizations. Plans may require contributions from employers and participants (contributory plans) or from employers only (noncontributory plans). During periods of unemployment, a noncontributory plan may require contributions by participants to maintain their eligibility for benefits. Benefits may be provided through insurance contracts paid for by the plan (an insured plan), from net assets accumulated in a trust established by the plan (a self-funded plan), or both.

.11 As noted above, a plan may establish a trust to hold assets to pay all or part of the covered benefits. The assets may be segregated and legally restricted under a trust arrangement (such as a voluntary employees' beneficiary association or a 501(c)(9) trust, a 401(h) account, or other funding vehicles). Generally, if a separate trust exists, financial statements are required under ERISA. A trust always exists for a multiemployer plan. Such trusteed plans with more than 100 participants generally will require an audit. For ERISA filings, the DOL will not accept an accountant's report that covers the assets of more than one plan. For example, where the assets of more than one plan are held in a 501(c)(9) Voluntary Employees' Beneficiary Association (VEBA) trust, separate reports must be prepared for each plan. Some plans may pay only a portion of the plan's benefit payments and other expenses through the VEBA. Plan transactions, including contributions, benefit payments, and expenses whether paid through the VEBA trust or otherwise, should be recorded in a plan's financial statements and subject to audit procedures. If the trustee of the VEBA is a bank or trust company, and the trust holds the assets of more than one plan sponsored by a single employer or by a group of companies under common control, it is a master trust subject to the DOL's master trust filing requirements. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.12 A health and welfare plan may process benefit payments directly or it may retain a third-party administrator (see paragraph .18). In either case, a plan that is fully or partially self-funded is obligated for the related benefits (see paragraphs .41 through .57). [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Arrangements With Insurance Companies

.13 The nature of, and method of accounting for, the assets and benefit obligations of a health and welfare benefit plan may be determined by the arrangement with the insurance company. The insurance company may assume all or a portion of the financial risk (see paragraphs .14 through .17), or it may provide only administrative services (see paragraph .18) or investment management services.[2] It is important to have an understanding of the insurance arrangement to determine whether any or all of the risks associated with benefit payments or claims have been transferred to the insurance company. Also, other arrangements are being developed that may involve new types of contracts that involve other parties, including those involving payments to providers, risk sharing of administrative expense with carriers, and so on. Details of these arrangements must also be reviewed carefully.

.14 In a fully insured, pooled arrangement, specified benefits are covered by the insurance company. The insurance company pools the experience of the plan with that of other similar businesses and assumes the financial risk of adverse experience. In such an arrangement, a plan generally has no obligation for benefits covered by the arrangement other than the payment of premiums due to the insurance company (see paragraph .45).

.15 In a fully insured experience-rated arrangement, specified benefits are paid by the insurance company that assumes all the financial risk. Contract experience is monitored by the insurance company. Contract experience may or may not include the experience of other similar contract holders. To the extent that

---

[2] Refer to chapter 7 of the guide.

benefits incurred plus risk charges and administration costs are less than premiums paid, the plan is entitled to an experience-rating refund or dividend (see paragraphs .34 and .35). If the total of benefits incurred, risk charges, and administrative costs exceeds premiums, the accumulated loss is generally borne by the insurance company but may be carried over to future periods until it has been recovered (see paragraphs .46 and .47). The plan often has no obligation to continue coverage or to reimburse the carrier for any accumulated loss, although there are certain types of contracts that require additional payments by the plan.

.16 In a minimum premium plan arrangement, specified benefits are also paid by the insurance company. The insurance contract establishes a dollar limit, or *trigger point*. All claims paid by the insurance company below the trigger point are reimbursed by the plan to the insurance company. The insurance company is not reimbursed for benefits incurred that exceed the trigger point. This type of funding arrangement requires the plan to fund the full claims experience up to the trigger point. Minimum premium plan arrangements may have characteristics of both self-funded and fully insured experience-rated arrangements. Details of each arrangement must be reviewed carefully to determine the specific benefit obligations assumed by the insurance company.

.17 In a stop-loss insurance arrangement, a plan's obligation for any plan participant's claims may be limited to a fixed dollar amount, or the plan's total obligation may be limited to a maximum percentage (for example, 125 percent) of a preset expected claims level. These arrangements are commonly used with administrative service arrangements. The insurance company assumes the benefit obligation in excess of the limit. Stop-loss insurance arrangements may have characteristics of both self-funded and fully insured arrangements. Stop-loss arrangements of this type may be described by a variety of terms; therefore, details of all insurance or administrative arrangements should be reviewed carefully to determine if stop-loss provisions are included and to determine the specific benefit obligations assumed by the insurance company.

.18 In an administrative service arrangement, the plan retains the full obligation for plan benefits. The plan may engage an insurance company or other third party to act as the plan administrator. The administrator makes all benefit payments, charges the plan for those payments, and collects a fee for the services provided.

Financial Statements of Defined-Benefit Health and Welfare Plans

.19 The objective of financial reporting by defined-benefit health and welfare plans is the same as that of defined-benefit pension plans; both types of plans provide a determinable benefit. Accordingly, the primary objective of the financial statements of a defined-benefit health and welfare plan is to provide financial information that is useful in assessing the plan's present and future ability to pay its benefit obligations when due. To accomplish that objective, a plan's financial statements should provide information about (*a*) plan resources and the manner in which the stewardship responsibility for those resources has been discharged, (*b*) benefit obligations, (*c*) the results of transactions and events that affect the information about those resources and obligations, and (*d*) other factors necessary for users to understand the information provided.[3]

[3] It should be recognized that (*a*) information in addition to that contained in a plan's financial statements is needed in assessing the plan's present and future ability to pay its benefit obligations when due and (*b*) financial statements for several plan years may provide more useful information in assessing the plan's future ability to pay benefit obligations than can financial statements for a single year.

.20 The financial statements of a defined-benefit health and welfare plan prepared in accordance with GAAP[4] should be prepared on the accrual basis of accounting and include—

- A statement of net assets available for benefits as of the end of the plan year (see paragraphs .25 through .38).
- A statement of changes in net assets available for benefits for the year then ended (see paragraphs .39 and .40).
- Information regarding the plan's benefit obligations as of the end of the plan year (see paragraphs .41 through .57).
- Information regarding the effects, if significant, of certain factors affecting the year-to-year change in the plan's benefit obligations (see paragraphs .61 and .62).

Information about the benefit obligations should be presented in a separate statement, combined with other information on another financial statement, or presented in the notes to financial statements. Regardless of the format selected, the plan financial statements should present the benefit obligations information in its entirety in the same location. The information should be presented in such reasonable detail as is necessary to identify the nature and classification of the obligations.[5] [As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.21 FASB Statement No. 102, *Statement of Cash Flows—Exemption of Certain Enterprises and Classification of Cash Flows from Certain Securities Acquired for Resale*, provides that employee benefit plans other than pension plans (such as health and welfare plans, both defined benefit and defined contribution) that provide information similar to that required by FASB Statement No. 35 are not required to provide a statement of cash flows. However, FASB Statement No. 102 encourages that a statement of cash flows be included in the financial statements of an employee benefit plan when such a statement would provide relevant information about the ability of the plan to meet future obligations (for example, when the plan invests in assets that are not highly liquid or obtains financing for investments).

Financial Statements of Defined-Contribution Health and Welfare Plans

.22 The objective of financial reporting by a defined-contribution health and welfare plan is to provide financial information that is useful in assessing the plan's present and future ability to pay its benefits. To accomplish that objective, a plan's financial statements should provide information about (*a*) plan resources and the manner in which the stewardship responsibility for those resources has been discharged, (*b*) the results of transactions and events that affect the information about those resources, and (*c*) other factors necessary for users to understand the information provided.[6] For example vacation,

---

[4] Financial statements prepared on a comprehensive basis of accounting other than GAAP should disclose information regarding benefit obligations (see paragraphs 13.19 through 13.22 of the guide, which discuss auditor's report considerations).

[5] The appendix [paragraph .74] of this SOP provides illustrative financial statements of two health and welfare benefit plans.

[6] See footnote 3.

holiday, and legal are typical plans whose benefits are limited to the balance in the participant's accounts. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 The financial statements of a defined-contribution health and welfare plan prepared in accordance with GAAP[7] should be prepared on the accrual basis of accounting and include—

- A statement of net assets available for benefits of the plan as of the end of the plan year (see paragraphs .25 through .38).
- A statement of changes in net assets available for benefits of the plan for the year then ended (see paragraphs .39 and .40).

Because a plan's obligation to provide benefits is limited to the amounts accumulated in an individual's account, information regarding benefit obligations is not applicable.

ERISA Reporting Requirements

.24 ERISA established annual reporting requirements for employee benefit plans, including health and welfare benefit plans.[8] The financial statements required by ERISA are comparative statements of assets and liabilities and a statement of changes in net assets available for benefits. The schedules required by ERISA include Schedule H, line 4i—Schedule of Assets (Held at End of Year), Schedule H, line 4j—Schedule of Reportable Transactions, Schedule G, Part I—Schedule of Loans or Fixed Income Obligations in Default or Classified as Uncollectible, Schedule G, Part II—Schedule of Leases in Default or Classified as Uncollectible, and Schedule G, Part III, Nonexempt Transactions. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Statement of Net Assets Available for Benefits

Investments

.25 Plan investments, whether they are in the form of equity or debt securities, real estate, or other investments (*excluding insurance contracts*), should be reported at their fair value at the financial statement date.[9] The fair value of an investment is the amount that the plan could reasonably expect to receive for it in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value should be measured by the market price if there is an active market for the investment. If there is no active market for the investment but there is a market for similar investments, selling prices in that market may be helpful in estimating fair value. If a market price is not available, a forecast of expected cash flows, discounted at a

---

[7] See footnote 4.

[8] ERISA annual reporting requirements, as well as the common exemptions, are described in appendix A of the guide.

[9] The accrual basis of accounting requires that purchases and sales of securities be recorded on a trade-date basis. However, if the settlement date is later than the financial statement date and (*a*) the fair value of the securities purchased or sold just before the financial statement date does not change significantly from the trade date to the financial statement date and (*b*) the purchases or sales do not significantly affect the composition of the plan's assets available for benefits, accounting on a settlement-date basis for such sales and purchases is acceptable.

rate commensurate with the risk involved, may be used to estimate fair value.[10] [As amended, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature. As amended, effective for financial statements for plan years ending after December 15, 2006; the revised definition of fully benefit-responsive is effective for all investment contracts as of the last day of the annual period ending after December 15, 2006, by FASB Staff Position AAG-INV-1 and SOP 94-4-1.]

.26 Insurance contracts, as defined by FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*, should be presented in the same manner as specified in the annual report filed by the plan with certain governmental agencies pursuant to ERISA; that is, either at fair value or at amounts determined by the insurance enterprise (contract value). Plans not subject to ERISA should present insurance contracts as if the plans were subject to the reporting requirements of ERISA.[11] [As amended, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4.]

.27 Investment contracts held by defined-benefit health and welfare benefit plans should be reported at their fair values. [Paragraph added, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4.]

.28 Defined-contribution health and welfare benefit plans provide benefits based on the amounts contributed to employees' individual accounts plus or minus forfeitures, investment experience, and administrative expenses. In such plans, plan participants have a vested interest in monitoring the financial condition and operations of the plan since they bear investment risk under these plans, and plan transactions can directly affect their benefits (for example, investment mix, and risk and return). [Paragraph added, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4.]

.29 Plan assets of defined-contribution health and welfare benefit plans should be measured and reported at values that are meaningful to financial statement users including plan participants. The contract value of a *fully benefit-responsive* investment contract held by a defined-contribution health and welfare benefit plan is the amount a participant would receive if he or she were to initiate transactions under the terms of the ongoing plan. Defined-contribution health and welfare benefit plans should report fully benefit-responsive investment contracts (including derivative contracts) at fair value. However, contract value is the relevant measurement attribute for that portion of the net assets available for benefits of a defined-contribution health and welfare benefit plan attributable to fully benefit-responsive investment contracts. [Paragraph added, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4. As amended, effective for financial statements for plan years ending after December 15, 2006; the revised definition of fully benefit-responsive is effective for all

---

[10] For an indication of the factors to be considered in determining the discount rate, see paragraph 27 of FASB Statement No. 107, *Disclosures about Fair Value of Financial Instruments*. The fair value of an investment should be reported net of the brokerage commissions and other costs normally incurred in a sale, if significant (see also paragraphs 2.10 and 2.11 of the guide). [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[11] [Footnote deleted, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

investment contracts as of the last day of the annual period ending after December 15, 2006, by FASB Staff Position AAG-INV-1 and SOP 94-4-1.]

.30 An investment contract is considered fully benefit-responsive for purposes of this SOP, if *all* of the following criteria are met for that contract, analyzed on an individual basis:

a. The investment contract is effected directly between the plan and the issuer and prohibits the plan from assigning or selling the contract or its proceeds to another party without the consent of the issuer.

b. Either (1) the repayment of principal and interest credited to participants in the plan is a financial obligation of the issuer of the investment contract or (2) prospective interest crediting rate adjustments are provided to participants in the plan on a designated pool of investments held by the plan or the contract issuer, whereby a financially responsible third party, through a contract generally referred to as a wrapper, must provide assurance that the adjustments to the interest crediting rate will not result in a future interest crediting rate that is less than zero. If an event has occurred such that realization of full contract value for a particular investment contract is no longer probable (for example, a significant decline in creditworthiness of the contract issuer or wrapper provider), the investment contract shall no longer be considered fully benefit-responsive.

c. The terms of the investment contract require all permitted participant-initiated transactions with the plan to occur at contract value with no conditions, limits, or restrictions. Permitted participant-initiated transactions are those transactions allowed by the plan, such as withdrawals for benefits, loans, or transfers to other funds within the plan.

d. An event that limits the ability of the plan to transact at contract value with the issuer (for example, premature termination of the contracts by the plan, plant closings, layoffs, plan termination, bankruptcy, mergers, and early retirement incentives) that also limits the ability of the plan to transact at contract value with the participants in the plan must be probable of not occurring.

e. The plan itself must allow participants reasonable access to their funds.

If access to funds is substantially restricted by plan provisions, investment contracts held by those plans may not be considered to be fully benefit-responsive. For example, if plan participants are allowed access at contract value to all or a portion of their account balances only upon termination of their participation in the plan, it would not be considered reasonable access and, therefore, investment contracts held by that plan would generally not be deemed to be fully benefit-responsive. However, in plans with a single investment fund that allow reasonable access to assets by inactive participants, restrictions on access to assets by active participants consistent with the objective of the plan (for example, retirement or health and welfare benefits) will not affect the benefit responsiveness of the investment contracts held by those single-fund plans. Also, if a plan limits participants' access to their account balances to certain specified times during the plan year (for example, semiannually or quarterly) to control the administrative costs of the plan, that limitation generally would not affect the benefit responsiveness of the investment contracts held by that plan. In addition, administrative provisions that place short-term restrictions (for example, three or six months) on transfers to competing fixed income investment options to limit arbitrage among those investment options (*equity wash* provisions) would not affect a contract's benefit responsiveness. [Paragraph added, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4. As amended, effective for financial statements for plan years ending after December 15, 2006; the revised definition of fully benefit-responsive is effective for all investment contracts as of the last day of the annual period ending after December 15, 2006, by FASB Staff Position AAG-INV-1 and SOP 94-4-1.]

.31 If a plan holds multiple contracts, each contract should be evaluated individually for benefit responsiveness. If a plan invests in pooled funds that hold investment contracts, each contract in the pooled fund should be evaluated individually for benefit responsiveness. However, if the pooled fund places any restrictions on access to funds for the payment of benefits, the underlying investment contracts would not be considered fully benefit-responsive. Contracts that provide for prospective interest adjustments may still be fully benefit-responsive provided that the terms of the contracts specify that the crediting interest rate cannot be less than zero. [Paragraph added, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4.]

.32 Information regarding a plan's investments should be presented in enough detail to identify the types of investments and should indicate whether reported fair values have been measured by quoted prices in an active market or have been determined otherwise (paragraph .64 specifies additional disclosures related to investments). [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Contributions Receivable

.33 Contributions receivable are the amounts due, as of the date of the financial statements, to the plan from employers, participants, and other sources of funding (for example, state subsidies or federal grants), each of which should be separately identified. They include amounts due pursuant to firm commitments, as well as legal or contractual requirements. With respect to employers' contributions, evidence of a formal commitment may include (*a*) a resolution by the employer's governing body approving a specified contribution; (*b*) a consistent pattern of making payments after the end of the plan year, pursuant to an established funding policy that attributes such subsequent payments to the preceding plan year; (*c*) a deduction of a contribution for federal income tax purposes for periods ending on or before the financial statement date; or (*d*) the employer's recognition as of the financial statement date of a contribution payable to the plan.[12] Contributions receivable should include an allowance for estimated uncollectible amounts. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

[The next page is 79,591.]

[12] The existence of an accrued liability in the employer's statement of financial position or a plan's benefit obligations exceeding its net assets available for benefit obligations does not, by itself, provide sufficient support for recognition of a contribution receivable by the plan.

Deposits With and Receivables From Insurance Companies and Other Service Providers

.34 Whether a premium paid to an insurance company represents payment for the transfer of risk or merely represents a deposit will depend on the circumstances of the arrangement. As noted earlier, the nature of payments made to an insurance company should be analyzed to determine the extent to which financial risk has been transferred from the plan to the insurance company. Insurance companies may require that a deposit be maintained that can be applied against possible future losses in excess of current premiums. These deposits should be reported as plan assets until such amounts are used to pay premiums. Similarly, premium stabilization reserves, which exist when premiums paid to an insurance company exceed the total of claims paid and other charges, are held by an insurance company and used to reduce future premium payments. Premium stabilization reserves generally should be reported as assets of the plan until such amounts are used to pay premiums. Disclosure of the nature of this type of deposit or reserve should be made. If such reserves are forfeitable when the insurance contract terminates, this possibility should be considered in recognizing this asset. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.35 Certain group insurance contracts covering health and welfare benefit plans include a provision for a refund, at the end of the policy year, of the excess of premiums paid over the total of paid claims, required reserves, and the fee charged by the insurance company. Often such experience-rating refunds (or dividends) are not determined by the insurance company for several months after the end of the policy year. In this event, and in cases when the policy year does not coincide with the plan's fiscal year, the refund due as of the financial statement date should be reported as a plan asset if it is probable that a refund is due and the amount can be reasonably estimated. If the amount of the refund cannot be reasonably estimated, that fact should be disclosed. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.36 Service providers may require that deposits by the plan be applied against claims paid on behalf of plan participants. Such deposits should be reported as plan assets until the deposit is applied against paid claims. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

Operating Assets

.37 Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) should be reported at cost less accumulated depreciation or amortization. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

Accrued Liabilities

.38 A plan may have liabilities (other than for benefits) that should be accrued. Such liabilities may be for amounts owed for securities purchased, income taxes payable by the plan, or other expenses (for example, third-party administrator fees). These liabilities should be deducted to arrive at net assets available for benefits. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

Statement of Changes in Net Assets Available for Benefits

.39 The statement of changes in net assets available for benefits should be presented in enough detail to identify the significant changes during the year including, as applicable—

- Contributions from employers, segregated between cash and noncash contributions. A noncash contribution should be reported at fair value at the date of the contribution. The nature of noncash contributions should be described either parenthetically or in a note.
- Contributions from participants, including those collected and remitted by the sponsor.
- Contributions from other identified sources (for example, state subsidies or federal grants).
- The net appreciation or depreciation[13] in fair value for each significant class of investments, segregated between investments whose fair values have been measured by quoted prices in an active market and those whose fair values have been otherwise determined.
- Investment income, excluding the net appreciation or depreciation.
- Income taxes paid or payable, if applicable.
- Payments of claims, excluding payments made by an insurance company pursuant to contracts that are excluded from plan assets.
- Payments of premiums to insurance companies to purchase contracts that are excluded from plan assets.[14]
- Operating and administrative expenses.
- Other changes (such as transfers of assets to or from other plans), if significant.

[Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.40 The list of minimum disclosures is not intended to define the degree of detail or the manner of presenting the information, and subclassifications or additional classifications may be useful. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

Benefit Obligations

.41 Benefit obligations[15] for single-employer, multiple-employer, and multiemployer defined-benefit health and welfare benefit plans should include the actuarial present value, as applicable, of the following:

---

[13] Net appreciation or depreciation includes realized gains and losses on investments that were both purchased and sold during the period. Ordinarily, information regarding the net appreciation or depreciation in the fair value of investments is found in the notes to the financial statements.

[14] Refer to paragraphs 7.32 and 7.33 of the guide for further discussion of allocated insurance contracts. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[15] Administrative expenses expected to be paid by the plan (but not those paid directly by the plan's participating employer(s)) that are associated with providing the plan's benefits should be reflected either by including the estimated costs in the benefits expected to be paid by the plan or by reducing the discount rate(s) used in measuring the benefit obligation. If the latter method is used, the resulting reduction in the discount rate(s) should be disclosed. [As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

a. Claims payable, claims IBNR,[16] and premiums due to insurance companies

b. Accumulated eligibility credits and postemployment benefits, net of amounts currently payable

c. Postretirement benefits for the following groups of participants:[16]

   (1) Retired plan participants, including their beneficiaries and covered dependents, net of amounts currently payable and claims IBNR[16]

   (2) Other plan participants fully eligible for benefits

   (3) Plan participants not yet fully eligible for benefits.

Aggregating claims payable and claims IBNR is often appropriate if adequate time has passed to provide sufficient data on costs incurred and the actuarially determined expected cost of long-term medical claims is insignificant. Benefits expected to be earned for future service by active participants (for example, vacation benefits) during the term of their employment should not be included. Benefit obligations should be reported as of the end of the plan year.[17] The effect of plan amendments should be included in the computation of the expected and accumulated postretirement benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods. For example, if a plan amendment grants a different benefit level for employees retiring after a future date, that increased or reduced benefit level should be included in current-period measurements for employees expected to retire after that date. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

.42 To the extent they exist, the amounts of benefit obligations in each of the three major classifications identified above should be shown as separate line items in the financial statements or notes to financial statements. Regardless of the format selected, the plan financial statements should present the benefit obligations information in its entirety in the same location. For negotiated plans, benefit obligations due during a plan's contract period may, but need not, be disclosed. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

---

[16] Claims IBNR may be computed in the aggregate for active participants and retirees. Alternatively, if claims IBNR are not calculated in the aggregate for active participants and retirees, the claims IBNR for retirees are included in the postretirement benefit obligation. [As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

[17] The financial status of the plan considers assets and obligations as of the same date. Because plan assets are required to be presented as of the plan's year end, the benefit obligations also should be measured and presented as of the plan's year end. That requirement does not, however, preclude the plan from using the most recent benefit obligations valuation rolled forward to the plan's year end to account for subsequent events (such as employee service and benefit payments), provided that it is reasonable to expect that the results will not be materially different from the results of an actuarial valuation as of the plan's year end. In rolling forward the benefit obligations to the plan's measurement date, the discount rates should be adjusted as appropriate to reflect current rates of return on high-quality fixed-income investments. For example, if a valuation was performed at September 30 and the plan has a calendar year end, the benefit obligations as of September 30 should be rolled forward to December 31, by making appropriate adjustments, such as for additional employee service; the time value of money; benefits paid; and changes in the number of participants, actuarial assumptions, discount rates, per capita claims costs, and plan terms. [As amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

Claims

.43 In an insured health and welfare benefit plan, claims payable and currently due and claims incurred but not yet reported to the plan will be paid by the insurance company. Consequently, they should be excluded from the benefit obligations of the plan. Benefit obligations of a self-funded plan should present the amount of claims payable and currently due for active and retired participants, dependents, and beneficiaries and IBNR for active participants. IBNR for retired participants is included in the postretirement benefit obligation.[18] [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.44 For a self-funded plan, the cost of IBNR should be measured at the present value, as applicable, of the estimated ultimate cost to the plan of settling the claims. Estimated ultimate cost should reflect the plan's obligation to pay claims to or for participants, regardless of status of employment, beyond the financial statement date pursuant to the provisions of the plan or regulatory requirements. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Premiums Due Under Insurance Arrangements

.45 Benefits to participants may be provided through insurance arrangements that transfer the risks of loss or liability to an insurance company (see paragraphs .14 through .17). Group insurance contracts for health and welfare plans are usually written for a one-year period, although the contract may provide for annual renewal. The contract generally specifies, among other things, the schedule of benefits, eligibility rules, premium rate per eligible participant, and the date that premiums are due. The benefit obligations should include any obligation for premiums due but not paid. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.46 If the insurance contract requires payment of additional premiums (for example, retrospective premiums) when the loss ratio exceeds a specified percentage, an obligation for the estimated additional premiums should be included in the benefit obligations. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.47 Experience ratings determined by the insurance company or by estimates (see paragraph .15) may result in a premium deficit. Premium deficits should be included in the benefit obligations if (*a*) it is probable that the deficit will be applied against the amounts of future premiums or future experience-rating refunds[19] and (*b*) the amount can be reasonably estimated. If no obligation is included for a premium deficit because either or both of the conditions are not met, or if an exposure to loss exists in excess of the amount accrued, disclosure of the premium deficit should be made if it is reasonably possible that a loss or an additional loss has been incurred. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

Accumulated Eligibility Credits

.48 Plans may provide for the payment of insurance premiums or benefits for a period of time for those participants who have accumulated a sufficient

---

[18] See footnote 16.

[19] This determination should consider (*a*) the extent to which the insurance contract requires payment of such deficits and (*b*) the plan's intention, if any, to transfer coverage to another insurance company.

number of eligibility credits or hours i.e., bank of hours. Eligible participants are provided with insurance coverage during periods of unemployment, when employer contributions to the plan would not otherwise provide coverage or benefits. At the financial statement date, such accumulated eligibility credits represent an obligation of the plan arising from prior employee service for which employer contributions have been received. This benefit obligation is generally determined by applying current insurance premium rates to accumulated eligibility credits or, for a self-funded plan, by applying the average cost of benefits per eligible participant to accumulated eligibility credits. In either case, the obligation for accumulated eligibility credits should consider assumptions for mortality and expected employee turnover or other appropriate adjustments, to reflect the obligation at the amount expected to be paid. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Postretirement Benefit Obligations

.49 Health and welfare benefit plans may continue to provide benefits to participants after retirement (postretirement benefits). Those benefits may commence immediately upon termination of service or payment may be deferred until the participant attains a specified age. If a plan provides postretirement benefits to participants, an estimated amount for those benefits, as described below should be included in the benefit obligations. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.50 The postretirement benefit obligation as of the measurement date is the actuarial present value of all future benefits attributed to plan participants' services rendered to that date, assuming the plan continues in effect and all assumptions about future events are fulfilled. Postretirement benefits comprise benefits expected to be paid to or on behalf of any retired or active participant, terminated participant, beneficiary, or covered dependent who is expected to receive benefits under the health and welfare benefit plan. Postretirement benefits expected to be paid to or for an active participant, beneficiary, or covered dependent who is still earning his or her postretirement benefits (that is, one who is not yet fully eligible) should be measured over the participant's credited period of service up to the date when full eligibility for benefits is attained.[20] [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.51 If a multiemployer health and welfare benefit plan provides postretirement benefits, the benefit obligations must include the postretirement benefit obligation. Consideration should be given to the promises currently made to employees and the history of making such payments to retirees. The fact that benefits may be reduced or even potentially eliminated would not ordinarily affect the promise made as of the end of the plan year unless the change meets the substantive plan criteria of FASB Statement No. 106 (for example, an amendment is in place or has been communicated to employees). The fact that the contributing employers of a multiemployer plan do not record a similar obligation under FASB Statement No. 106 does not affect the accounting for the obligations by the plan. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

---

[20] For example, if a participant has worked eight years and must work another sixteen to be fully eligible for benefits after retirement, one-third of the postretirement benefits have been earned and should be included in the postretirement benefit obligation if it is probable that the employee will work the remaining sixteen years.

.52 The postretirement benefit obligation should be measured using the plan's written provisions to the extent possible, as well as the substantive plan if it differs from the written plan. In many health and welfare benefit plans, postretirement benefits are not defined as a specified amount for each year of service. FASB Statement No. 106, paragraphs 23 through 44, describes the measurement of the postretirement benefit obligation. For multiemployer plans that do not have date-of-hire information as required by paragraph 44 of FASB Statement No. 106, reasonable estimates thereof should be used to measure the obligation. Death or disability benefits provided outside of a pension plan (when the employee is considered to be retired) should also be included in the calculation of the postretirement benefit obligation. Benefits that are provided through an insurance contract should be excluded.[21] [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.53 In measuring the postretirement benefit obligation explicit assumptions must be used, each of which represents the best estimate of a particular future event. All assumptions should presume that the plan will continue in its present form, unless there is evidence to the contrary. Principal actuarial assumptions used should include—

- Discount rates, used to reflect the time value of money in determining the present value of future cash outflows currently expected to be required to satisfy the liability in the due course of business.
- The timing and amount of future postretirement benefit payments (taking into consideration per capita claims cost by age, health care cost-trend rates, current Medicare reimbursement rates, retirement age, dependency status, and mortality).
- Salary progression (for pay-related plans).
- The probability of payment (considering turnover, retirement age, dependency status, and mortality).
- Participation rates (for contributory plans).

[Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

.54 The postretirement benefit obligation information should include the following classifications:

- Obligations related to retired plan participants, including their beneficiaries and covered dependents
- Obligations related to active or terminated participants who are fully eligible to receive benefits
- Obligations related to other plan participants not yet fully eligible for benefits

Separate disclosure for each classification for each significant benefit (for example, medical and death) may be appropriate. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994.]

---

[21] Insured plans should be reviewed carefully to determine the extent to which postretirement benefits are insured. Currently, except for single-premium life insurance contracts, few, if any, insurance contracts unconditionally obligate an insurance company to provide most forms of postretirement benefits.

.55 Certain retiree health benefits may be funded through a 401(h) account in a defined benefit pension plan, pursuant to Section 401(h) of the Internal Revenue Code (IRC). Refer to Chapter 2 of the guide for a detailed discussion of 401(h) accounts. The 401(h) account assets and liabilities used to fund retiree health benefits, and the changes in those assets and liabilities, should be reported in the financial statements of the health and welfare benefit plan. The 401(h) account assets and liabilities and changes in them can be shown in the health and welfare benefit plan financial statements in one of two ways. An entity can present that information either as a single line item on the face of the statements or included in individual line items with separate disclosure in the footnotes about the 401(h) amounts included in those individual line items. If the assets and liabilities are shown as a single line item in the statement of net assets, the changes in net assets also should be shown as a single line item in the statement of changes in net assets. If the assets and liabilities are included in individual asset and liability line items in the statement of net assets, the changes in individual 401(h) amounts should be included in the changes in the individual line items in the statement of changes in net assets, with separate disclosure in the footnotes about the 401(h) amounts included in those individual line items. The notes to the financial statements should disclose the significant components of net assets and changes in net assets of the 401(h) account. The 401(h) obligations are reported in the health and welfare benefit plan's statement of benefit obligations. Likewise, the health and welfare benefit plan's statement of changes in benefit obligations should include claims paid through the 401(h) account. [Paragraph added, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

.56 If retiree health benefit obligations are funded partially through a 401(h) account of the defined benefit pension plan, the plan should also disclose the fact that the assets are available only to pay retiree health benefits. The notes to the financial statements should disclose the significant components of net assets and changes in net assets of the 401(h) account. Additionally, the notes should include a reconciliation of amounts reported in the financial statements to the amounts reported in the Form 5500. [Paragraph added, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

.57 Because ERISA requires 401(h) accounts to be reported as assets of the pension plan, a reconciliation of the net assets reported in the financial statements to those reported in Form 5500 is required for the health and welfare benefit plan. Additionally, any assets held for investment purposes in the 401(h) account should be shown on Schedule H, line 4i—Schedule of Assets (Held at End of Year) and Schedule H, line 4j—Schedule of Reportable Transactions for the pension plan. [Paragraph added, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

Postemployment Benefits

.58 Plans that provide postemployment benefits should recognize a benefit obligation for current participants, based on amounts expected to be paid in subsequent years, if all the following conditions are met:

a. The participants' rights to receive benefits are attributable to services already rendered.

b. The participants' benefits vest or accumulate.[22]

c. Payment of benefits is probable.

d. The amount can be reasonably estimated.

The postemployment benefit obligation should be measured as the actuarial present value of the future benefits attributed to plan participants' services rendered to the measurement date, reduced by the actuarial present value of future contributions expected to be received from the current plan participants. That amount represents the benefit obligation that is to be funded by contributions from the plan's participating employer(s) and from existing plan assets. The obligation is to be measured assuming the plan continues in effect and all assumptions about future events are met. Any anticipated forfeitures or integration with other related programs (for example, state unemployment benefits) should be considered. The benefit obligation should be discounted using rates of return on high-quality fixed-income investments currently available with cash flows that match the timing and amount of expected benefit payments and expected participant contributions. [Paragraph added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Paragraph renumbered, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

.59 For postemployment benefits that do not meet conditions (*a*) and (*b*) of the preceding paragraph, the plan should recognize a benefit obligation if the event that gives rise to a liability has occurred and the amount can be reasonably estimated. For example, if all participants receive the same medical coverage upon disability regardless of length of service (the benefits do not accumulate) and the benefits do not vest, medical benefits for disabled participants should be accrued at the date of disability and not over the participants' working lives. When participant contributions are required after the event triggering postemployment benefits occurs, the postemployment benefit obligation should be measured in a manner consistent with the preceding paragraph. As a result, in those situations the benefit obligation should represent the amount that is to be funded by contributions from the participating employer(s) and from existing plan assets. [Paragraph added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Paragraph renumbered, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

.60 If an obligation for postemployment benefits is not recognized in accordance with the two preceding paragraphs only because the amount cannot be reasonably estimated, the financial statements should disclose that fact. [Paragraph added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Paragraph renumbered, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

Changes in Benefit Obligations

.61 Information regarding changes in the benefit obligations within a plan period should be presented to identify significant factors affecting year-

---

[22] For example, the supplemental unemployment benefit is fifty-two weeks' pay if a participant worked three years, seventy-eight weeks' pay if a participant worked five years, and 104 weeks' pay if a participant worked seven years. In this situation, the benefits would be considered accumulating. Benefits that increase solely as a function of wage or salary increases are not considered accumulating. [Footnote added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

to-year changes in benefit obligations. Changes in each of the three major classifications of benefit obligations should be presented in the body of the financial statements or in the notes to the financial statements; the information may be presented in either a reconciliation or narrative format. Providing such information in the following three categories will generally be sufficient: (*a*) claims payable, claims IBNR, and premiums due to insurance companies, (*b*) accumulated eligibility credits and postemployment benefits, net of amounts currently payable, and (*c*) postretirement benefits for retired plan participants, including their beneficiaries and covered dependents, net amounts currently payable and claims IBNR; other plan participants fully eligible for benefits; and plan participants not yet fully eligible for benefits. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered and amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.62 Minimum disclosure regarding changes in benefit obligations should include the significant effects of (*a*) plan amendments, (*b*) changes in the nature of the plan (mergers or spinoffs), and (*c*) changes in actuarial assumptions (health care cost-trend rate or interest rate). Changes in actuarial assumptions are to be considered as changes in accounting estimates and, therefore, previously reported amounts should not be restated. The significant effects of other factors may also be identified. These include, for example, benefits accumulated,[23] the effects of the time value of money (for interest), and benefits paid. If presented, benefits paid should not include benefit payments made by an insurance company pursuant to a contract that is excluded from plan assets. However, amounts paid by the plan to an insurance company pursuant to such a contract (including purchases of annuities with amounts allocated from existing investments with the insurance company) should be included in benefits paid.[24] If only the minimum disclosure is presented, presentation in a statement format will necessitate an additional unidentified "other" category to reconcile the initial and ultimate amounts. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

Additional Financial Statement Disclosures

.63 Disclosure of a health and welfare benefit plan's accounting policies should include—[25]

---

[23] Actuarial experience gains or losses may be included with the effects of additional benefits accumulated rather than separately disclosed. If the effects of changes in actuarial assumptions cannot be separately determined, those effects should be included in benefits accumulated and described accordingly. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

[24] Because of the use of different actuarial assumptions, the amount paid by the plan to an insurance company may be different from the previous measure of the actuarial present value of the related accumulated plan benefits. If that information is available, it should be presented as an actuarial experience gain or loss. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

[25] See Accounting Principles Board (APB) Opinion No. 22, *Disclosure of Accounting Policies*. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

- A description of the methods and significant assumptions used to determine the fair value of investments and the reported value of insurance contracts.
- A description of the methods and significant actuarial assumptions used to determine the plan's benefit obligations. Any significant changes in assumptions made between financial statement dates and their effects should be described.

[Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of Statement of Position 99-2.]

.64 The plan's financial statements should also disclose other information.[26] Separate disclosures may be made to the extent that the plan provides both health and other welfare benefits. The disclosures should include, when applicable—

- A brief, general description of the plan agreement, including, but not limited to, participants covered, vesting, and benefit provisions. If a plan agreement or a description thereof providing this information is otherwise published or made available, the description in the financial statement disclosures may be omitted, provided that a reference to the other source is made.
- A description of significant plan amendments adopted during the period, as well as significant changes in the nature of the plan (for example, a plan spin-off or merger with another plan) and changes in actuarial assumptions.
- The funding policy and any changes in the policy made during the plan year. If the benefit obligations exceed the net assets of the plan, the method of funding this deficit, as provided for in the plan agreement or collective bargaining agreement, also should be disclosed.[27] For a contributory plan, the disclosure should state the method of determining participants' contributions. For each year for which a year-end statement of net assets available for benefits is presented, the plan should disclose a description of the portion of the plan's estimated cost[28] of providing postretirement benefits funded by retiree contributions. If the plan terms provide that a shortfall in attaining the intended cost sharing in the prior year(s) is to be recovered by increasing the retiree contribution in the current year, that incremental contribution should be separately disclosed. Similarly, if the plan terms provide that participant

---

[26] Certain of the disclosures relate to plans with accumulated assets rather than those with trusts that act more as conduits for benefit payments or insurance premiums. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

[27] If significant plan administration or related costs are being borne by the employer, that fact should be disclosed. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

[28] The plan's estimated cost of postretirement benefits is the plan's expected claims cost for the year. It excludes benefit costs paid by Medicare and costs, such as deductibles and copayments, paid directly to the medical provider by participants. The portion of the plan's estimated cost that is funded by retiree contributions is determined at the beginning of the year based on the plan sponsor's cost-sharing policy. In determining that amount, the retirees' required contribution for the year should be reduced by any amounts intended to recover a shortfall (or increased by amounts intended to compensate for an overcharge) in attaining the desired cost-sharing in prior year(s). [Footnote added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

contributions in the current year are to be reduced by the amount by which participant contributions in prior year exceeded the amount needed to attain the desired cost-sharing, the resulting reduction in the current year contribution should be separately disclosed. The information about retiree contributions should be provided for each significant group of retired participants to the extent their contributions differ.

- The federal income tax status of the plan. There is no determination letter program for health and welfare plans; however a 501(c)(9) VEBA trust must obtain a determination letter to be exempt from taxation.
- The policy regarding the purchase of contracts with insurance companies that are excluded from plan assets. Consideration should be given to disclosing the type and extent of insurance coverage, as well as the extent to which risk is transferred (for example, coverage period and claims reported or claims incurred).
- Identification of investments that represent 5 percent or more of the net assets available for benefits as of the end of the year. Consideration should be given to disclosing provisions of insurance contracts included as plan assets that could cause an impairment of the asset value upon liquidation or other occurrence (for example, surrender charges and market value adjustments).
- The amounts and types of securities of the employer and related parties included in plan assets, and the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer and related parties.
- Significant real estate or other transactions in which the plan and any of the following parties are jointly involved: the sponsor, the plan administrator, employers, or employee organizations.
- Unusual or infrequent events or transactions occurring after the financial statement date, but before issuance of the financial statements, that might significantly affect the usefulness of the financial statements in an assessment of the plan's present and future ability to pay benefits. For example, a plan amendment adopted after the latest financial statement date that significantly increases future benefits attributable to an employee's service rendered before that date, a significant change in the market value of a significant portion of the plan's assets, or the emergence of a catastrophic claim should be disclosed. If reasonably determinable, the effects of such events or transactions should be disclosed. If such effects are not reasonably determinable, the reasons why they are not quantifiable should be disclosed.
- Material lease commitments, other commitments, or contingent liabilities.
- The assumed health care cost-trend rate(s) used to measure the expected cost of benefits covered by the plan for the next year, a general description of the direction and pattern of change in the assumed trend rates thereafter, the ultimate trend rate(s), and when that rate is expected to be achieved.
- For health and welfare benefit plans providing postretirement health care benefits, the effect of a one-percentage-point increase in the assumed health care cost-trend rates for each future year on the postretirement benefit obligation.

- Any modification of the existing cost-sharing provisions that are encompassed by the substantive plan(s) and the existence and nature of any commitment to increase monetary benefits provided by the plan and their effect on the plan's financial statements.
- Termination provisions of the plan and priorities for distribution of assets, if applicable.
- Restrictions, if any, on plan assets (for example, legal restrictions on multiple trusts).

SOP 94-4, as amended, contains the following financial statement presentation and disclosure requirements:

- The statement of net assets available for benefits of the plan shall present amounts for (1) total assets, (2) total liabilities, (3) net assets reflecting all investments at fair value, and (4) net assets available for benefits. The amount representing the difference between (3) and (4) shall be presented on the face of the statement of net assets available for benefits as a single amount, calculated as the sum of the amounts necessary to adjust the portion of net assets attributable to each fully benefit-responsive investment contract from fair value to contract value. The statement of changes in net assets available for benefits shall be prepared on a basis that reflects income credited to participants in the plan and net appreciation or depreciation in the fair value of only those investment contracts that are not deemed to be fully benefit responsive.
- Defined-contribution plans, including both health and welfare, and pension plans, shall disclose the following in connection with fully benefit-responsive investment contracts, in the aggregate:

  a. A description of the nature of those investment contracts, how they operate, and the methodology for calculating the interest crediting rate, including the key factors that could influence future average interest crediting rates, the basis for and frequency of determining interest crediting rate resets, and any minimum interest crediting rate under the terms of the contracts. This disclosure should explain the relationship between future interest crediting rates and the amount reported on the statement of net assets available for benefits representing the adjustment for the portion of net assets attributable to fully benefit-responsive investment contracts from fair value to contract value.

  b. The average yield earned by the plan for all fully benefit-responsive investment contracts (which may differ from the interest rate credited to participants in the plan) for each period for which a statement of net assets available for benefits is presented. This average yield shall be calculated by dividing the annualized earnings of all fully benefit-responsive investment contracts in the plan (irrespective of the interest rate credited to participants in the plan) by the fair value of all fully benefit-responsive investment contracts in the plan.

  c. The average yield earned by the plan for all fully benefit-responsive investment contracts with an adjustment to reflect the actual interest rate credited to participants in the plan for each period for which a statement of net assets available for benefits is presented. This average yield shall be calculated by dividing the annualized earnings credited to participants in the plan for all fully benefit-responsive investment contracts in the plan (irrespective of the actual earnings of those investments) by the fair value of all fully benefit-responsive investment contracts in the plan.

d. A description of the events that limit the ability of the plan to transact at contract value with the issuer (for example, premature termination of the contracts by the plan, plant closings, layoffs, plan termination, bankruptcy, mergers, and early retirement incentives), including a statement as to whether the occurrence of those events that would limit the plan's ability to transact at contract value with participants in the plan is probable or not probable. [The term *probable* is used in this Statement consistent with its use in FASB Statement No. 5, *Accounting for Contingencies*.]

e. A description of the events and circumstances that would allow issuers to terminate fully benefit-responsive investment contracts with the plan and settle at an amount different from contract value.

- For ERISA-covered plans, if a fully benefit-responsive investment contract does not qualify for contract-value reporting in the DOL Form 5500 but is reported in the financial statements at contract value, and the contract value does not approximate fair value, the DOL's rules and regulations require that a statement explaining the differences between amounts reported in the financial statements and DOL Form 5500 be added to the financial statements.
- The weighted-average assumed discount rate used to measure the plan's obligation for postemployment benefits.

This list does not include information that, in accordance with ERISA requirements, must be disclosed in the schedules filed as part of a plan's annual report. It is important to note that any information required by ERISA to be disclosed in the schedules must be disclosed in the schedules; disclosure of the information in the footnotes to the financial statements but not in the schedules is not acceptable to the DOL. [Paragraph renumbered and amended, effective for financial statements for plan years beginning after December 15, 1994, by Statement of Position 94-4. As amended, effective for financial statements for plan years ending after December 15, 1999, by Statement of Position 99-3. Paragraph subsequently renumbered and amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, June 2006, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[The next page is 79,603.]

.65 FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts (collectively referred to as derivatives), and for hedging activities. It requires that an entity recognize all derivatives as either assets or liabilities in the statement of financial position and measure those instruments at fair value. In April 2003 the FASB issued Statement No. 149, *Amendment of Statement 133 on Derivative Instruments and Hedging Activities*. This Statement amends and clarifies financial accounting and reporting for derivatives and hedging activities under FASB Statement No. 133. In particular, FASB Statement No. 149 says that a contract that is accounted for under either paragraph 4 of FASB Statement No. 110 or paragraph 12 of FASB Statement No. 35, as amended, is not subject to FASB Statement No. 133. Similarly, a contract that is accounted for under either paragraph 4 or 5 of SOP 94-4, *Reporting of Investment Contracts Held by Health and Welfare Benefit Plans and Defined-Contribution Pension Plan*, is not subject to FASB Statement No. 133. Those exceptions apply only to the party that accounts for the contract under FASB Statement No. 35 and No. 110, or SOP 94-4. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.66 FASB Statement No. 107, as amended by FASB Statement No. 126 and No. 133, requires all entities except for those covered by the exemption in FASB Statement No. 126,[†] for which the disclosure is optional, to disclose the fair value of financial instruments, both assets and liabilities recognized and not recognized in the statement of financial position, for which it is practicable to estimate fair value. Generally, financial instruments of a health and welfare plan are included in the scope of FASB Statement No. 107, as amended, and are subject to the disclosure requirements of paragraphs 10 through 14 of that Statement. [Paragraph added, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.67 FASB Statement No. 107, as amended, requires entities except for those covered by the exemption in FASB Statement No. 126,[†] for which the disclosure is optional, to disclose, within the body of the financial statements or in the accompanying notes, the fair value of financial instruments for which it is practicable to estimate that value. An entity also should disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.68 FASB Statement No. 107, as amended, requires disclosure of all significant concentrations of credit risk arising from all financial instruments.

[†] FASB Statement No. 126 amends FASB Statement No. 107 to make the disclosures prescribed in FASB Statement No. 107 optional for plans that meet all of the following criteria:

a. The plan is a nonpublic entity.

b. The plan's total assets are less than $100 million on the date of the financial statements.

c. The plan has no instrument that, in whole or in part, is accounted for as a derivative instrument under FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities*, during the reporting period.

[Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

The following information shall be disclosed about each significant concentration:

- Information about the (shared) activity, region, or economic characteristic that identifies the concentration
- The maximum amount of loss due to credit risk that, based on the gross fair value of the financial instrument, the entity would incur if parties to the financial instruments that make up the concentration failed completely to perform according to the terms of the contracts and the collateral or other security, if any, for the amount due proved to be of no value to the entity
- The entity's policy of requiring collateral or other security to support financial instruments subject to credit risk, information about the entity's access to that collateral or other security, and the nature and a brief description of the collateral or other security supporting those financial instruments
- The entity's policy of entering into master netting arrangements to mitigate the credit risk of financial instruments, information about the arrangements for which the entity is a party, and a brief description of the terms of those arrangements, including the extent to which they would reduce the entity's maximum amount of loss due to credit risk

[Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Terminating Plans

.69 The auditing interpretation "Reporting on Financial Statements Prepared on a Liquidation Basis of Accounting" (AICPA, *Professional Standards*, vol. 1, AU section 9508.33–.38) contains applicable guidance regarding the auditor's reporting responsibilities for terminating plans. For purposes of this discussion, a terminating plan includes all plans about which a termination decision has been made regardless of whether the terminating plan will be replaced. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.70 When the decision has been made to terminate a plan,[29] or a wasting trust—that is, a plan under which participants no longer accrue benefits but that will remain in existence as long as necessary to pay already accrued benefits—exists, complete and prominent disclosure of the relevant circumstances is essential in all subsequent financial statements issued by the plan. If the decision to terminate a plan is made before the end of the plan year, it is also necessary for the plan's year-end financial statements to be prepared on

---

[29] See paragraph 12.11 of the guide, which states that the auditor should obtain from the plan trustee, administrator, or administrative agent written representation about whether there is a present intention to terminate the plan. Refer also to paragraph 10.33 of the guide, which states that the auditor should consider confirming with the plan's actuary knowledge of an intent on the part of the employer to terminate the plan. [Footnote renumbered by the issuance of Statement of Position 01-2, April 2001.]

the *liquidation* basis of accounting, as described below. If the decision is made after the year end but before the year-end financial statements have been issued, the decision is generally a *type two* subsequent event requiring the disclosure described in SAS No. 1, *Codification of Auditing Standards and Procedures* [section 560.05]. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.71 Plan financial statements for periods ending after the termination decision are prepared on the liquidation basis of accounting. For plan assets, changing to the liquidation basis will usually cause little or no change in values, most of which are current market values. Assets that may not be carried at market values include operating assets, insurance and certain investment contracts carried at *contract values*, or large blocks of stock or other assets that cannot be readily disposed of at their quoted market prices. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered and revised, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.72 Benefit obligations should be determined on a liquidation basis, and their value may differ from the actuarial present value of benefit obligations reported for an ongoing plan. Consideration should be given upon termination to whether any or all benefits become vested. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Effective Date and Transition

.73 This SOP is effective for audits of financial statements of single-employer plans for plan years beginning after December 15, 1992, except that the application of this SOP to plans of single employers with no more than 500 participants in the aggregate is effective for plan years beginning after December 15, 1994. This SOP is effective for audits of financial statements of multiemployer plans for plan years beginning after December 15, 1995. Earlier application is encouraged. Accounting changes adopted to conform to the provisions of this SOP shall be made retroactively. Financial statements of prior plan years are required to be restated to comply with the provisions of this SOP *only* if they are presented together with financial statements for plan years beginning after December 15, 1992. If accounting changes were necessary to conform to the provisions of this SOP, that fact shall be disclosed when financial statements for the year in which this SOP is first applied are presented either alone or with financial statements of prior years. [Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered by the issuance of Statement of Position 01-2, April 2001. Paragraph subsequently renumbered, June 2004, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.74

Appendix

Illustrative Financial Statements and Disclosures of Employee Health and Welfare Benefit Plans

A-1. This appendix illustrates certain applications of the provisions of this SOP that apply to the annual financial statements of three hypothetical health and welfare benefit plans that have assets in underlying trusts. They are—

a. Allied Industries Health Care Benefit Plan, a multiemployer defined benefit health and welfare plan that provides an example of financial reporting where retirees contribute a portion of the cost for their medical coverage (exhibit A).

b. Classic Enterprises Benefit Plan, a single-employer plan that displays the benefit obligation information on the face of the financial statements along with the net asset information (exhibit B).

c. ABC Company Supplemental Unemployment Benefit Plan, a multiemployer plan that provides postemployment benefits to covered employees (exhibit C).

A-2. The plan in exhibit A pays all benefits directly from plan assets. The plan in exhibit B obtains insurance for current benefits from its assets. It is assumed that both plans provide health benefits and life insurance coverage to both active and retired participants. Exhibit A also assumes that the plan provides long-term disability benefits and limited coverage during periods of unemployment based on accumulated eligibility credits.

A-3. This appendix illustrates certain applications of the provisions of this Statement of Position (SOP). It does not illustrate other provisions of this SOP that might apply in circumstances other than those assumed in these examples. It also does not illustrate all disclosures required for a fair presentation in conformity with generally accepted accounting principles (GAAP). The formats presented and the wording of the accompanying notes are illustrative and are not necessarily the only possible presentations.

A-4. Although GAAP does not require comparative financial statements, the Employee Retirement Income Security Act of 1974 (ERISA) requires a comparative statement of net assets available for benefits. The illustrative financial statements are intended to comply with the requirements of ERISA.

A-5. ERISA and U.S. Department of Labor (DOL) regulations require that certain information be included in supplemental schedules, which are not required under GAAP. See appendix A of AICPA Audit and Accounting Guide *Audits of Employee Benefit Plans* for a further discussion of the ERISA and DOL requirements.

Allied Industries Health Care Benefit Plan
Statement of Changes in Plan's Benefit Obligations
Year Ended December 31, 20X1

	20X1
Amounts currently payable	
Balance at beginning of year	$ 1,050,000
Claims reported and approved for payment, including benefits reclassified from benefit obligations	16,920,000
Claims paid	(16,770,000)
Balance at end of year	1,200,000
Postemployment benefit obligations, net of amounts currently payable	
Balance at beginning of year	1,000,000
Increase (decrease) in postemployment benefits attributable to: Benefits earned	600,000
Benefits reclassified to amounts currently payable	(450,000)
Interest	90,000
Changes in actuarial assumptions and other actuarial gains and losses	110,000
Balance at end of year	1,350,000
Postretirement benefit obligations, net of amounts currently payable	
Balance at beginning of year	9,665,000
Increase (decrease) in postretirement benefits attributable to: Benefits earned	1,150,000
Benefits reclassified to amounts currently payable	(650,000)
Interest	750,000
Plan amendment	(175,000)
Changes in actuarial assumptions and other actuarial gains and losses	260,000
Balance at end of year	11,000,000
PLAN'S TOTAL BENEFIT OBLIGATIONS AT END OF YEAR	$13,550,000

The accompanying notes are an integral part of the financial statements.

Allied Industries Health Care Benefit Plan
Notes to Financial Statements

NOTE 1: DESCRIPTION OF PLAN

The following description of the Allied Industries Benefit Plan (the Plan) provides only general information. Participants should refer to the Plan agreement for a complete description of the Plan's provisions.

General. The Plan provides health and other benefits covering all participants in the widgets industry in the Greater Metropolis area. The Plan and related trust were established on May 8, 1966, pursuant to a collective bargaining agreement between the Allied Employers' Trade Association and the Allied Union, Local 802. It is subject to the provisions of the Employee Retirement Income Security Act of 1974 (ERISA), as amended.

Benefits. The Plan provides health benefits (medical, hospital, surgical, major medical, and dental), permanent disability benefits, and death benefits to full-time participants (with at least 450 hours of work in the industry during a consecutive three-month period) and to their beneficiaries and covered dependents. Retired employees are entitled to similar health benefits (in excess of Medicare coverage) provided they have attained at least age sixty-two and have fifteen years of service with participating employers before retirement.

The Plan also provides health benefits to participants during periods of unemployment, provided they have accumulated in the current year or in prior years credit amounts (expressed in hours) in excess of the hours required for current coverage. Accumulated eligibility credits equal to one year's coverage may be carried forward.

Health, disability, and death claims of active and retired participants, dependents, and beneficiaries are processed by the Administrator Group, but the responsibility for payments to participants and providers is retained by the Plan.

In 20X2 the board of trustees amended the Plan to increase the deductible under major medical coverage from $100 to $300 and to extend dental coverage to employees retiring after December 31, 20X2. The amendment will not affect participating employers' contributions to the Plan in 20X3 under the current collective bargaining agreement.

Contributions. Participating employers contribute 5.5 percent of wages pursuant to the current collective bargaining agreement between employers and the union (expiring February 19, 20X5). Employees may contribute specified amounts, determined periodically by the Plan's actuary, to extend coverage to eligible dependents. The costs of the postretirement benefit plan are shared by the Plan's participating employers and retirees. In addition to deductibles and copayments, participant contributions in the current (and prior, if applicable) year were as follows:

Participants Retiring	*20X1 Retiree Contribution*	*20X0 Retiree Contribution*
(1) Pre-1990	(1) None	(1) None
(2) 1990–1994	(2) Retirees contribute 20% of estimated cost of providing their postretirement benefits‡	(2) Retirees contribute 20% of estimated cost of providing their postretirement benefits
(3) 1995–1999	(3) Retirees pay the cost of providing their postretirement benefits in excess of $200 per month "cap" (approximately 60% of the estimated cost)	(3) Retirees pay the cost of providing their postretirement benefits in excess of $200 per month "cap" (approximately 50% of the estimated cost)
(4) 2000 and after	(4) Retirees pay 100% of estimated cost of providing their postretirement benefits	(4) Retirees pay 100% of estimated cost of providing their postretirement benefits

Other. The Plan's board of trustees, as Sponsor, has the right under the Plan to modify the benefits provided to active employees. The Plan may be terminated only by joint agreement between industry and union, subject to the provisions set forth in ERISA.

NOTE 2: SUMMARY OF ACCOUNTING POLICIES

A. Valuation of Investments. The Plan's investments are stated at fair value. Securities traded on the national securities exchange are valued at the last reported sales price on the last business day of the plan year. Investments traded in the over-the-counter market and listed securities for which no sale was reported on that date are valued at the average of the last reported bid and asked prices. For certain corporate bonds that do not have an established fair value, the Plan's board of trustees has established a fair value based on yields currently available on comparable securities of issuers with similar credit ratings.

B. Postretirement Benefits. The amount reported as the postretirement benefit obligation represents the actuarial present value of those estimated future benefits that are attributed by the terms of the plan to employees' service rendered to the date of the financial statements, reduced by the actuarial present value of contributions expected to be received in the future from current plan participants. Postretirement benefits include future benefits expected to be paid to or for (1) currently retired or terminated employees and their beneficiaries and dependents and (2) active employees and their beneficiaries and dependents after retirement from service with participating employers. The postretirement benefit obligation represents

‡ Excluding $15 per month per capita increase in 20X1 due to adverse claims experience in 20X0. [Footnote added, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

the amount that is to be funded by contributions from the plan's participating employers and from existing plan assets. Prior to an active employee's full eligibility date, the postretirement benefit obligation is the portion of the expected postretirement benefit obligation that is attributed to that employee's service in the industry rendered to the valuation date.

The actuarial present value of the expected postretirement benefit obligation is determined by an actuary and is the amount that results from applying actuarial assumptions to historical claims-cost data to estimate future annual incurred claims costs per participant and to adjust such estimates for the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as those for death, disability, withdrawal, or retirement) between the valuation date and the expected date of payment.

For measurement purposes, a 9.5 percent annual rate of increase in the per capita cost of covered health care benefits was assumed for 20X3; the rate was assumed to decrease gradually to 8.0 percent for 20X8 and to remain at that level thereafter. These assumptions are consistent with those used to measure the benefit obligation at December 31, 20X1.

The following were other significant assumptions used in the valuations as of December 31, 20X2 and 20X1.

Weighted-average discount rate	8.0%—20X2; 8.25%—20X1
Average retirement age	60
Mortality	1971 Group Annuity Mortality Table

The foregoing assumptions are based on the presumption that the Plan will continue. Were the Plan to terminate, different actuarial assumptions and other factors might be applicable in determining the actuarial present value of the postretirement benefit obligation.

C. Other Plan Benefits. Plan obligations at December 31 for health claims incurred by active participants but not reported at that date, for accumulated eligibility of participants, and for future disability payments to members considered permanently disabled at December 31 are estimated by the Plan's actuary in accordance with accepted actuarial principles. Such estimated amounts are reported in the accompanying statement of the Plan's benefit obligations at present value, based on an 8.0 percent discount rate. Health claims incurred by retired participants but not reported at year end are included in the postretirement benefit obligation.

NOTE 3: INVESTMENTS

The Plan's investments are held by a bank-administered trust fund. During 20X2 and 20X1 the Plan's investments (including investments bought, sold, and held during the year) appreciated in value by $300,000 and $200,000, respectively, as follows:

	20X2		*20X1*	
	Net Increase (Decrease) in Value During Year	*Fair Value at End of Year*	*Net Increase (Decrease) in Value During Year*	*Fair Value at End of Year*
Fair value as determined by quoted market price:				
U.S. government securities	$200,000	$5,000,000	$ (75,000)	$4,000,000
Corporate bonds and debentures	(25,000)	1,750,000	50,000	1,375,000
Common stocks	100,000	1,000,000	200,000	600,000
	275,000	7,750,000	175,000	5,975,000
Fair value as estimated by Plan's board of trustees:				
Corporate bonds	25,000	250,000	25,000	225,000
	$300,000	$8,000,000	$200,000	$6,200,000

The fair value of individual investments that represent 5.0 percent or more of the Plan's net assets are as follows:

	20X2	*20X1*
Commonwealth Power Co., 9.0% bonds due 2014 ($500,000 face amount)	$475,000	$450,000
ABC Company common stock (2,000 shares)	500,000	450,000
U.S. Treasury bond, 8.5% due 20X6 ($360,000 face amount)		350,000

NOTE 4: BENEFIT OBLIGATIONS

The Plans deficiency of net assets over benefit obligations at December 31, 20X2 and 20X1, relates primarily to the postretirement benefit obligation, the funding of which is not covered by the contribution rate provided by the current bargaining agreement. It is expected that the deficiency will be funded through future increases in the collectively bargained contribution rates.

The weighted-average health care cost-trend rate assumption (see note 2B) has a significant effect on the amounts reported in the accompanying financial statements. If the assumed rates increased by one percentage point in each year, it would increase the obligation as of December 31, 20X2 and 20X1, by $2,600,000 and $2,500,000, respectively.

NOTE 5: OTHER MATTERS

The trust established under the Plan to hold the Plan's assets is qualified pursuant to Section 501(c)9 of the Internal Revenue Code, and, accordingly, the trust's net investment income is exempt from income taxes. The Plan has obtained a favorable tax determination letter from the Internal Revenue Service, and the Plan sponsor believes that the Plan, as amended, continues to qualify and to operate as designed.

Classic Enterprises Benefit Plan
Notes to Financial Statements

NOTE 1: DESCRIPTION OF PLAN

The following description of the Classic Enterprises Benefit Plan (the Plan) provides only general information. Participants should refer to the Plan agreement for a complete description of the Plan's provisions.

General. The Plan provides health and death benefits covering substantially all active and retired employees of Classic Enterprises (the Sponsor). It is subject to the provisions of the Employee Retirement Income Security Act of 1974 (ERISA), as amended.

Benefits. The Plan provides health benefits (medical, hospital, surgical, major medical, and dental) and death benefits to full-time employees of the Sponsor (with at least 1,000 hours of service each year) and to their beneficiaries and covered dependents. Retired employees are entitled to similar health and death benefits provided they have attained at least age fifty-five and have at least ten years of service with the Sponsor.

Current health claims of active and retired participants and their dependents and beneficiaries are provided under group insurance contracts with ABC Carrier, which are experience rated after the anniversary dates of the policies (generally March 31). Death benefits are covered by a group-term policy with DEF Carrier.

Contributions. The Sponsor's policy is to contribute the maximum amounts allowed as a tax deduction by the Internal Revenue Code. Under present law, the Sponsor is not permitted to deduct amounts for future benefits to current employees and retirees.

Employees and retirees may contribute specified amounts, determined periodically by the Plan's insurance companies, to extend coverage to eligible dependents.

In 20X2 the Plan was amended to increase the deductible under major medical coverage from $100 to $300 and to extend dental coverage to employees retiring after December 31, 20X2. The amendment is not expected to significantly affect the Sponsor's contribution to the Plan in 20X3.

Other. Although it has not expressed any intention to do so, the Sponsor has the right under the Plan to modify the benefits provided to active employees, to discontinue its contributions at any time, and to terminate the Plan subject to the provisions set forth in ERISA.

NOTE 2: SUMMARY OF ACCOUNTING POLICIES

A. Valuation of Investments. The Plan's investments are stated at fair value. Securities traded on the national securities exchange are valued at the last reported sales price on the last business day of the plan year. Investments traded in the over-the-counter market and listed securities for which no sale was reported on that date are valued at the average of the last reported bid and asked prices. For certain corporate bonds that do not have an established fair value, the Classic Enterprises Benefits Committee has established a fair value based on yields currently available on comparable securities of issuers with similar credit ratings.

B. Plan Benefits. The postretirement benefit obligation (see note 4) represents the actuarial present value of those estimated future benefits that are attributed to employee service rendered to December 31. Postretirement benefits include future benefits expected to be paid to or for (1) currently retired employees and their beneficiaries and dependents and (2) active employees and their beneficiaries and dependents after retirement from service with the Sponsor. Prior to an active employee's full eligibility date, the postretirement benefit obligation is the portion of the expected postretirement benefit obligation that is attributed to that employee's service rendered to the valuation date.

The actuarial present value of the expected postretirement benefit obligation is determined by an actuary and is the amount that results from applying actuarial assumptions to historical claims-cost data to estimate future annual incurred claims costs per participant and to adjust such estimates for the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as those for death, disability, withdrawal, or retirement) between the valuation date and the expected date of payment, and to reflect the portion of those costs expected to be borne by Medicare, the retired participants, and other providers.

For measurement purposes at December 31, 20X2, a 9.5 percent annual rate of increase in the per capita cost of covered health care benefits was assumed for 20X3; the rate was assumed to decrease gradually to 8.0 percent for 20X8 and to remain at that level thereafter. These assumptions are consistent with those used to measure the benefit obligation at December 31, 20X1.

The following were other significant assumptions used in the valuations as of December 31, 20X2 and 20X1.

Weighted-average discount rate	8.0%
Average retirement age	60
Mortality	1971 Group Annuity Mortality Table

The foregoing assumptions are based on the presumption that the Plan will continue. Were the Plan to terminate, different actuarial assumptions and other factors might be applicable in determining the actuarial present value of the postretirement benefit obligation.

NOTE 3: INVESTMENTS

The Plan's investments are held by a bank-administered trust fund. During 20X2 and 20X1, the plan's investments (including investments bought, sold, and held during the year) appreciated in value by $300,000 and $200,000, respectively, as follows:

	20X2		*20X1*	
	Net Increase (Decrease) in Value During Year	*Fair Value at End of Year*	*Net Increase (Decrease) in Value During Year*	*Fair Value at End of Year*
Fair value as determined by quoted market price:				
U.S. government securities	$200,000	$5,000,000	$ (75,000)	$4,000,000
Corporate bonds and debentures	(25,000)	1,750,000	50,000	1,375,000
Common stocks	100,000	1,000,000	200,000	600,000
	275,000	7,750,000	175,000	5,975,000
Fair value as estimated by Classic Enterprise Benefits Plan Investment Committee:				
Corporate bonds	25,000	250,000	25,000	225,000
	$300,000	$8,000,000	$200,000	$6,200,000

The fair value of individual investments that represent 5.0 percent or more of the Plan's net assets is as follows:

	20X2	*20X1*
Commonwealth Power Co., 9.0% bonds due 2014 ($500,000 face amount)	$475,000	$450,000
ABC Company common stock (2,000 shares)	500,000	450,000
U.S. Treasury bond, 8.5% due 20X6 ($360,000 face amount)		350,000

NOTE 4: BENEFIT OBLIGATIONS

Health costs incurred by participants and their beneficiaries and dependents are covered by insurance contracts maintained by the Plan. It is the present intention of the Sponsor and the Plan to continue obtaining insurance coverage for benefits. As stated in note 1, the Sponsor is not permitted under present tax law to deduct amounts for future benefits (beyond one year). Insurance premiums for future years in respect of the Plan's postretirement benefit obligation will be funded by Sponsor contributions to the Plan in those later years.

The postretirement benefit obligation at December 31, 20X2 and 20X1, principally health benefits, related to the following categories of participants (including their beneficiaries and dependents):

	20X2	*20X1*
Current retirees	$ 3,900,000	$3,500,000
Other participants fully eligible for benefits	2,100,000	2,000,000
Participants not yet fully eligible for benefits	5,000,000	4,165,000
	$11,000,000	$9,665,000

The health care cost-trend rate assumption (see note 2B) has a significant effect on the amounts reported. If the assumed rates increased by one percentage point in each year, that would increase the obligation as of December 31, 20X2 and 20X1, by $2,600,000 and $2,500,000, respectively.

NOTE 5: OTHER MATTERS

The trust established under the Plan to hold the Plan's net assets is qualified pursuant to Section 501(c)9 of the Internal Revenue Code, and, accordingly, the trust's net investment income is exempt from income taxes. The Sponsor has obtained a favorable tax determination letter from the Internal Revenue Service and the Sponsor believes that the Plan, as amended, continues to qualify and to operate as designed.

TOTAL DEDUCTIONS	1,456,570
NET DECREASE DURING THE YEAR	(88,545)
Net assets available for benefits	
Beginning of year	100,010
End of year	$ 11,465

The accompanying notes are an integral part of the financial statements.

Supplemental Unemployment Benefit Plan for Employees of ABC Company Established Pursuant to Agreement With United Workers of America Notes to Financial Statements

NOTE 1: DESCRIPTION OF PLAN

In connection with a negotiated contract, the Supplemental Unemployment Benefit Plan for Employees of ABC Company Established Pursuant to Agreement With United Workers of America (the Plan) provides for payment of supplemental unemployment benefits to covered employees who have completed two years of continuous service. Payments are made to (*a*) employees on layoff and (*b*) certain employees who work less than 32 hours in any week. The following description is provided for general information purposes. The Plan document should be referred to for specific information regarding benefits and other Plan matters.

NOTE 2: SUMMARY OF ACCOUNTING POLICIES

Basis of Accounting. The financial statements of the Plan are prepared under the accrual method of accounting.

Investment Valuation. The Plan's investments consist of shares of a money market portfolio. The investments are reported at fair value.

Use of Estimates. The preparation of financial statements in conformity with generally accepted accounting principles (GAAP) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Benefit Obligations. The Plan's obligation for accumulated eligibility credits is discounted using a weighted-average assumed rate of 7½ percent.

NOTE 3: FUNDING AND OPERATION OF THE PLAN

Funding of the Plan. Contributions funded by ABC Company, the Plan's sponsor, pursuant to the Plan are invested in assets held in a trust fund (the Fund). General Bank, the trustee of the Fund (the Trustee), invests the Fund's money as set forth in the Plan document. Investments consist of money market funds and are reported in the accompanying financial statements at fair value. Interest income from investments is recognized when earned.

Administration. The ABC Company Benefit Plan Administrative Committee has responsibility for administering the Plan. The ABC Company Benefit Plan Asset Review Committee has responsibility for the management and control of the assets of the Trust.

Benefits Under the Plan. The Plan provides for the payment of weekly and short-week supplemental unemployment benefits. The benefits payable are reduced by any state unemployment benefits or any other compensation received. Also, a "waiting-week" benefit of $100 will be payable if a participant fails to receive a state unemployment benefit solely because of the state's waiting-week requirement. Benefits paid for any week for which the employee received state unemployment benefits are limited to $180. Benefits paid for all other weeks are limited to $235. The Plan provides for a possible reduction of weekly benefits for employees with less than twenty years of service based upon a percentage determined generally by dividing the net assets of the Plan, as defined in the Plan document, by the "maximum financing" (see "ABC's Obligations Under the Plan"). Employees earn one-half credit unit for each week in which hours are worked or, in some situations, in which hours are not worked (vacation, disability, serving on grievance committee, and so on) up to a maximum of fifty-two credit units for employees with less than twenty years of service and 104 credit units for employees with twenty or more years of service. Generally, one credit unit is canceled for each weekly benefit paid and one-half credit unit is canceled for each short-week benefit paid.

ABC's Obligations Under the Plan. The "maximum financing" of the Plan at any month end is the lesser of (a) the product of $.40 and the number of hours worked by covered employees during the first twelve of the fourteen months next preceding the first day of the month and (b) 100 times the sum of the monthly benefits paid for the sixty of the preceding sixty-two months divided by sixty. ABC's monthly contribution to the Plan is computed as the lesser of (a) the product of $.175 and the number of hours worked by covered employees in the month and (b) the amount that, when added to the net assets of the Plan, as defined by the Plan document, as of the end of the preceding month, will equal the "maximum financing." In addition, ABC contributes an income security contribution of $.25 per hour worked by covered employees in the month. In the event of a plan deficit, ABC intends to make sufficient contributions to fund benefits as they become payable.

The following tables present the components of the plan's benefit obligations and the related changes in the plan's benefit obligations.

Benefit Obligations
December 31, 20X1 and 20X0

	20X1	*20X0*
Accumulated eligibility credits and total benefit obligations	$1,107,777	$1,095,620

Changes in Benefit Obligations
Year Ended December 31, 20X1

Benefit obligations, beginning of year	$1,095,620
Benefits earned	1,390,330
Interest	77,287
Claims paid	(1,455,460)
Benefit obligations, end of year	$1,107,777

Plan Expenses. ABC bears all administrative costs, except trustee fees, that are paid by the Plan.

NOTE 4: TAX STATUS

The Plan obtained its latest determination letter in 1990, in which the Internal Revenue Service stated that the Plan, as then designed, was in compliance with the applicable requirements of the Internal Revenue Code (IRC). The Plan has been amended since receiving the determination letter. Plan management and Plan's tax counsel believe that the Plan is currently designed and being operated in compliance with the applicable requirements of the IRC. Therefore, no provision for income taxes has been included in the Plan's financial statements.

NOTE 5: TRANSACTIONS WITH PARTIES IN INTEREST

ABC provides to the Plan certain accounting and administrative services for which no fees are charged.

NOTE 6: TERMINATION OF THE PLAN

Under certain conditions, the Plan may be terminated. Upon termination, the assets then remaining shall be subject to the applicable provisions of the Plan then in effect and shall be used until exhausted to pay benefits to employees in the order of their entitlement.

[Paragraph renumbered by the issuance of Statement of Position 94-4, September 1994. Paragraph subsequently renumbered and amended, effective for financial statements for plan years beginning after December 15, 2000, by Statement of Position 01-2.]

Section 10,540

Statement of Position 93-1 Financial Accounting and Reporting for High-Yield Debt Securities by Investment Companies

January 28, 1993

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 High-yield debt securities consist of high-yielding corporate and municipal debt obligations. These securities are frequently referred to as *junk bonds*. The issuance of high-yield debt securities has increased significantly over the past decade. They have supplied significant capital for business expansion and corporate restructuring. These securities are inherently different from investment-grade issues. They present additional credit, liquidity, and market risks for all participants in this marketplace: holders, issuers, underwriters, and broker-dealers.

.02 Recent estimates place the U.S. high-yield debt securities market at between $180 and $250 billion, with over 3300 individual security issues outstanding. Mutual funds and insurance companies each hold approximately 30 percent of such securities, and pension funds hold about 15 percent.

.03 High-yield debt securities are corporate and municipal debt securities having a lower-than-investment-grade credit rating (BB+ or lower by Standard & Poor's, or Ba or lower by Moody's). Because high-yield debt securities typically are used when lower-cost capital is not available, they have interest rates several percentage points higher than investment-grade debt and often have shorter maturities.

.04 High-yield debt securities typically are unsecured and subordinate to other debt outstanding. Many issuers of high-yield debt securities are highly leveraged, with limited equity capital. That, plus a market for such securities that may not always be liquid, may increase the market risk, liquidity risk, and credit risk of those securities.

.05 High-yield debt securities may be issued or traded at significant discounts from their face amounts (principal).

.06 Interest for some high-yield debt securities is not paid currently. Instead, interest may be deferred and paid at maturity (zero-coupon bonds) or in periodic interest payments that do not commence until a specific date in the securities' life cycle (step bonds), or interest may be paid in the form of additional debt securities of the issuer bearing similar terms (payment-in-kind bonds, or PIKs).

Market Risk

.07 In contrast to investment-grade bonds (the market prices of which change primarily as a reaction to changes in interest rates), the market prices of high-yield bonds (which are also affected by changes in interest rates) are influenced much more by credit factors and financial results of the issuer and by general economic factors that influence the financial markets as a whole.

.08 Such factors often make it difficult to substantiate the market valuation of high-yield bonds.

Liquidity Risk

.09 The market risk is often heightened by the absence of centralized high-yield bond exchanges and relatively thin trading markets, which make it more difficult to liquidate holdings quickly and increase the volatility of the market price. There is generally no centralized or regulated procedure for pricing high-yield debt issues.

Credit Risk

.10 Issues of high-yield debt securities are more likely to default on interest or principal than are issues of investment-grade securities. Most high-yield debt securities currently outstanding have been issued since 1985. Accordingly, there is little long-term record on how they perform over all parts of the business cycle.

.11 Adverse economic developments in 1990 and 1991 contributed to defaults on principal and interest payments by many issuers of high-yield debt securities. Those developments emphasized the need for taking great care in valuation, income recognition, and financial statement disclosure by holders of these securities.

Current Literature

.12 Although none of the current financial reporting or auditing literature specifically addresses the issues discussed in this statement of position (SOP), various sources in that literature provide indirect guidance, including the following:

- Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies*

- FASB Statement No. 95, *Statement of Cash Flows*
- FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*
- Accounting Principles Board (APB) Opinion No. 22, *Disclosure of Accounting Policies*
- APB Opinion No. 29, *Accounting for Nonmonetary Transactions*
- FASB Emerging Issues Task Force (EITF) Issue No. 86-15, *Interest-Rate Debt*
- EITF Issue No. 89-4, *Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate*
- AICPA Statement on Auditing Standards (SAS) No. 73, *Using the Work of a Specialist*
- AICPA Audit and Accounting Guide *Audits of Investment Companies*

Scope

.13 This SOP amends the Audit and Accounting Guide *Audits of Investment Companies* and is applicable to entities to which that guide applies.

.14 This SOP addresses the following reporting and accounting issues encountered by investment companies holding high-yield debt securities in their portfolios. Securities that have no credit rating should be classified as high-yield debt securities if they otherwise have the characteristics of such securities.

a. How should interest income from step bonds and payment-in-kind bonds be measured and reported in investment company financial statements?

b. How should previously recorded income and purchased interest be treated when recoverability becomes doubtful in connection with defaults or potential defaults by issuers?

c. How should additional expenditures made by investment companies in support of high-yield debt securities be accounted for?

d. What audit procedures to determine the reasonableness of valuations of high-yield debt securities should be considered?

Accounting for Income on Step-Interest and PIK Debt Securities

Discussion

.15 High-yield debt securities (junk bonds) take various forms. The most common forms may include zero-coupon bonds, PIK bonds, and deep-discount step bonds.

PIK Bonds

.16 Issuers of PIK bonds typically have the option at each interest payment date of making interest payments in cash or in additional debt securities. Those additional debt securities are referred to as *baby* or *bunny bonds.* Baby bonds generally have the same terms, including maturity dates and interest rates, as the original bonds (parent PIK bonds). Interest on baby bonds may also be paid in cash or in additional like-kind debt securities at the option of the issuer.

Step Bonds

.17 Step bonds generally are characterized by a combination of deferred-interest payment dates and increasing interest payment amounts over the bond lives. Thus, they bear some similarity to zero-coupon bonds and to traditional debentures.

Current Practices: Income Recognition

.18 Present income-recognition practices for high-yield debt securities vary.

PIK Bonds

.19 The most common methods currently used for revenue recognition on PIK bonds are the effective-interest method and the market-value method.

.20 *Effective-interest method.* Under the effective-interest method, also referred to in accounting literature as the interest method. PIK bonds and the additional debt securities issued in connection with interest payments on them are treated as a combined instrument, based on the assumption that all principal amounts will be paid at maturity. Interest income is recorded by the effective interest method, so that at final maturity the bonds' carrying amount will be equal to the aggregate principal amount of the original bonds and all baby bonds received. The realizable value of the bonds' interest previously accrued and recorded is evaluated periodically. Any adjustments are recorded as charges to interest income and reserves against interest receivable.

.21 *Market-value method.* Under the market-value method, interest income is accrued daily on the basis of the face value and the stated interest rate of the PIK bond. Each day, the related interest receivable is marked to market, thereby reflecting the current economic value of interest income recognized. The market price of the parent PIK bond generally includes accrued interest. To the extent that any accrued interest is determined to have been included in the quoted market price of the parent PIK bond, it is eliminated each day to avoid double counting of interest income.

.22 Further, the interest ex-date represents the first date that a PIK bond's market value does not include an interest component and interest income is fully accrued. From that date through the payment date, generally a period of one to two weeks, the bond theoretically trades without interest. (This is similar in concept to the ex-date for traditional equity securities paying periodic dividends.) Accordingly, from the interest ex-date through the interest payment date, no adjustment is necessary to reduce the bond market value for interest.

.23 At the payment date, the basis of the baby bonds actually received is compared with the amount accrued at the interest ex-date based on the current market value of the parent bond. Because interest receivable is being marked to market daily, no further adjustment to interest receivable generally is necessary. However, if the basis (that is, the current market value) of the baby bonds received and the accrued interest on the parent bond are different, the resulting adjustment is charged or credited to interest income.

.24 Should the reporting entity sell a PIK bond between interest payment dates, the proceeds received are allocated to interest accrued and bond basis in a manner that is consistent with the market valuation as of the trade date. The same is true for any purchases made between interest payment dates.

.25 One variation of the market-value method is to adjust the amount of interest income accrued by the interest method to the value of the bonds at the interest ex-date.

.26 A second variation is to accrue interest income daily on the basis of the coupon rate and adjust the interest income for the market value of the bonds received at the payment date only.

Step Bonds

.27 Currently, two methods are most commonly followed for revenue recognition on step bonds.

.28 *Effective-interest method.* Under the effective-interest method, also referred to in accounting literature as the interest method, total expected interest—the combination of the aggregate coupon-interest payments and the original issue discount—to be earned over the life of the bond is determined and the effective-interest rate is applied to recognize interest income daily for the bond. This method ignores any adjustment of interest rates and treats the bond as a zero-coupon instrument.

.29 *Bifurcation method.* The bifurcation method assumes that the bond is a discount bond only for the portion of its life during which payment of interest is deferred. During that period, an effective-interest rate is used. For the remainder of the bond's life for which a stated coupon rate exists, the stated interest rate is used to record interest income.

Views on the Issues

PIK Bonds

.30 Some believe that accounting for PIK bonds should follow the guidance for monetary assets that do not pay interest periodically, such as zero-coupon bonds, and that their interest should be accounted for by accretion by the effective-interest method. That is generally considered to be the method to use in recognizing income for tax purposes. It would allow consistency between tax and financial reporting treatments.

.31 Others contend that, because of the significant uncertainties concerning the realizability of income from PIK bonds, income should reflect the current values of the underlying investments regardless of stated coupon rates. They believe that the use of current value presents a more accurate picture of the current value of income received from PIK bonds.

Step Bonds

.32 Some believe that because there are differing interest payments throughout the lives of step bonds, including periods of no interest payments, step bonds have the same characteristics as zero-coupon bonds. They would therefore account for interest income by the effective-interest method.

.33 Others believe that the contractual nature of the interest payment schedules connected with these bonds should govern the accounting treatment. Thus, for periods of no interest payments, the effective-interest method should be used; when interest payments are being made, they should be used to account for income.

Conclusions

PIK Bonds

.34 Because PIK bonds generally possess many of the characteristics of zero-coupon bonds and because the effective-interest method provides the most analogous accounting treatment, it should be used to determine interest income. PIK bonds typically trade flat (that is, interest receivable is included in the market value quote obtained each day). Accordingly, that portion of the quote representing interest income needs to be identified. The sum of the acquisition amount of the bond and the discount to be amortized should not exceed the undiscounted future cash collections that are both reasonably estimable and probable. To the extent that interest income to be received in the form of baby bonds is not expected to be realized, a reserve against income should be established (that is, it should be determined periodically that the total amount of interest income recorded as receivable, plus the initial cost of the underlying PIK bond, does not exceed the current market value of those assets).

Step Bonds

.35 Income on step bonds should be recognized using the effective-interest method, which is a systematic and rational method for accruing income throughout a bond's life and is not affected by the timing of cash payments. Additionally, to the extent that interest income is not expected to be realized, a reserve against income should be established. The sum of the acquisition amount of the bond and the discount to be amortized should not exceed the undiscounted future cash collections that are both reasonably estimable and probable.

Securities and Exchange Commission (SEC) Yield Calculations

.36 SEC yield-formula calculations are required to be made using the specific guidelines presented in SEC Release No. 33-6753. Yields calculated that way may not be the same as the effective interest reported in the financial statements. The ultimate realizable value and the potential for early retirement of securities should be considered when computing SEC yields. Management's best estimates of ultimate realizable value must be reasonable. Because current values of many high-yield debt securities have declined significantly, computed yields for many of them may be higher than rates expected to be ultimately realized. To avoid unsound yield information, consideration should be given to capping yields of individual securities at some reasonable level and examining the underlying economic viability of the issuers.

.37 An investment company's portfolio should indicate all high-yield and restricted debt securities whose values have been estimated by its directors.

Accounting for Accrued Income and Purchased Interest in Connection With Defaulted Debt Securities

Discussion

.38 Interest receivable from debt securities generally comprises two distinct components: interest purchased from the previous bondholder and interest accrued by the investment company during the holding period. If market prices fluctuate significantly or issues of debt securities have defaulted, a judgment to write off interest receivable may be required. Both components of interest receivable must be evaluated.

.39 Writeoffs of interest receivable differ from traditional writeoffs of trade accounts receivable. They can significantly affect an investment company's statement of operations, the performance measurement ratios of expenses to average net assets, and net investment income to average net assets.

Current Practices

.40 Current practice for the writeoff of interest receivable is diverse. Most investment companies record the writeoff of accrued interest as a reduction of interest income. Many investment companies record the writeoff of purchased interest as an increase to the cost basis of securities, whereas others record such writeoffs as a reduction of interest income.

Views on the Issues

.41 Many believe that, to the extent that a writeoff is related to interest recognized by the investment company, it should be treated as a reduction of interest income. They further believe that treatment of interest writeoffs as expenses would present misleading expense ratios to users of financial statements of investment companies and cause difficulties in comparisons of performance information from different investment companies. They also believe that a writeoff of purchased interest is better presented as an adjustment to the cost basis of the security, because it was incurred simultaneously and integrally with the original purchase of the investment. Additionally, because purchased interest is not recorded as income, they believe it should not be treated as an offset to revenue.

Conclusion

.42 The portion of interest receivable on defaulted debt securities written off that was recognized as interest income should be treated as a reduction of interest income. Writeoffs of purchased interest should be reported as increases to the cost basis of the security and treated as unrealized losses until the security is sold.

.43 Those reserves should be recorded when they become probable and estimable in accordance with the guidance provided by FASB Statement No. 5, *Accounting for Contingencies*.

Accounting for Expenditures in Support of Defaulted Debt Securities

Discussion

.44 The market for many high-yield debt securities is relatively thin. When issuers of such securities default, the bondholders often become active in any negotiations and in the workout process. This process often results in new terms that restructure the high-yield obligations to allow the issuer to continue to meet its ongoing interest obligations and maintain some, if not all, of the principal value to the holders of the obligations.

.45 Adverse economic developments often lead to increases in the default rates of high-yield debt securities. In addition to occasional capital infusions, professional fees to legally restructure the investments are frequently incurred by the bondholders.

Current Practices

.46 Current accounting and disclosure practices concerning additional capital infusions to specific projects underlying a bond issue and professional fees incurred in connection with the restructuring of debt securities held as investments are diverse. Some record expenditures for both capital infusions and professional fees as additions to the original investment cost basis; others record expenditures for professional fees as operating expenses.

Views on the Issues

.47 Some believe that expenditures incurred to support the operations of a project or operator underlying a bond issue, either in the form of capital infusions or professional fees, should be charged to operations because such expenditures have no certain future economic benefit and do not increase the bond issuer's obligation payable to the bondholder. Others believe that such expenditures should be recorded as additions to the cost basis of the investment because they are made solely to enhance or protect the realizable value of the high-yield security.

Capital Infusions

.48 Capital infusions are expenditures made directly to the issuer to ensure that operations are completed, thereby allowing the issuer to generate cash flows to service the debt. Such expenditures are generally nonrecurring. In certain cases, bondholders may receive additional promissory notes, or the original bond instrument may be amended to provide for repayment of the capital infusions. However, regardless of whether or not additional promissory notes are received, some believe capital infusions generate a future economic benefit. They believe that such capital infusions should in all cases be considered additions to the cost of the investment. Further, they note that, because investment companies report their investment portfolios at market values, those additional capital infusions, if treated as additions to the cost of the investment and if unaccompanied by a corresponding increase in market value, will be reflected in net assets through an increase in unrealized losses. Thus, the issue is a matter of classification between gain or loss and net investment income in the statement of operations, and such expenditures generally are viewed as a part of the cost of the investment rather than as a cost of operations.

Workout Expenditures

.49 Workout expenditures under this SOP consist of professional fees (legal, accounting, appraisal) paid to entities unaffiliated with the investment company's advisor or sponsor, which generally are incurred in connection with (*a*) capital infusions, (*b*) restructurings or plans of reorganization, (*c*) ongoing efforts to protect or enhance an investment, or (*d*) the pursuit of other claims or legal actions. Some believe that such expenditures incurred to maintain an investment company's position in high-yield debt securities among other bondholders or with the issuer should be reported as operating expenses by the investment company. Others believe that such costs are also incurred principally to maintain or prevent substantial diminution in future realizable value and therefore should be reported as additions to the cost basis.

Conclusion

.50 All capital infusions, as defined in paragraph .48, should be recorded as additions to the cost bases of related securities because the nature of capital infusions is to enhance or prevent substantial diminution in the value of the investment.

.51 Workout expenditures that are incurred as part of negotiations of the terms and requirements of capital infusions, or that are expected to result in the restructuring of or a plan of reorganization for an investment should be recorded as realized losses. Ongoing expenditures to protect or enhance an investment, or expenditures incurred to pursue other claims or legal actions, should be treated as operating expenses.

Audit Procedures to Be Considered in Evaluating Valuations of High-Yield Debt Securities

Discussion

.52 Market-value risk for holders of high-yield debt securities is compounded by the relatively thin trading market in such securities, which increases price volatility and makes it difficult to liquidate holdings efficiently at any specific time. Determination of market prices is difficult given the illiquid or sometimes nonexistent trading market. Furthermore, there are no standardized procedures or central markets for pricing most high-yield debt securities. In addition, few third-party pricing services currently exist, except for those used by investment companies; these could be used by auditors to obtain market prices of issues in support of investment companies' valuations.

Current Practices

.53 Auditors generally corroborate market values of investment companies' high-yield debt securities with independent pricing services. Some auditors use one pricing service; others obtain at least two prices for each security by using two or more services. Some auditors perform extensive procedures to determine the reasonableness of valuations obtained from pricing services; others rely on the expertise of the independent pricing services and perform only exception reviews.

.54 Based on pricing, high-yield debt securities can be viewed as being one of three types:

a. Securities for which there is an active market and for which independent prices are readily available

b. Securities for which the market is less active and for which limited price information is available

c. Securities for which there is no market or a thin market and that are priced by the investment company

Views on the Issues

.55 Some believe that the current practice of monitoring prices on an exception basis in connection with obtaining prices from independent pricing services is adequate. They believe it is common knowledge that exact measures of individual high-yield bond values do not exist because there is no central exchange. They further believe that review procedures focused on significant changes in prices would identify unsound price valuations and that, for securities whose values are estimated by the investment company's directors, the combination of reviews of an investment company's portfolio by accounting managers acts as an adequate check to ensure that pricing practices are reasonable.

.56 Others believe that more specific guidance on reviewing the reasonableness of prices used is required for auditors. They also believe there is significant diversity in the extent and frequency of reviews of the methods applied by pricing services.

Conclusion

.57 Given the complexities of pricing high-yield debt securities, as well as the potentially volatile market conditions surrounding those securities, certain additional pricing valuation audit procedures should be considered by auditors when reviewing the valuations of high-yield debt securities. The auditor may conclude that additional procedures are not warranted based on an assessment of control procedures applied by the investment company.

.58 Pricing services may be evaluated in accordance with SAS No. 73, *Using the Work of a Specialist*. Such procedures may include the following:

- Review of the methods used for determining daily prices and the consistency of those methods from period to period
- Consideration of the experience of the individuals involved in determining prices and of the quality control procedures in place
- Review of recent trading volumes and comparison of prices to those obtained from market makers

.59 The SEC's Financial Reporting Release (FRR) 404.03(b) discusses directors' valuation of securities for which readily available market prices do not exist. FRR 404.03(c) suggests certain procedures that the auditor should consider when reviewing securities valued in good faith by directors. In addition to those procedures the auditor may also wish to consider the following:

- Review of the methods used by management to determine and update daily prices and of the consistency of this methodology from period to period and across similar securities
- Review of recent trading transactions subsequent to the reporting date to determine whether significant price changes have occurred
- Consideration of the experience of individuals involved in determining prices
- Review of procedures used to assess the credit risk of issuers

SAS No. 57, *Auditing Accounting Estimates*, provides guidance to auditors on obtaining sufficient competent evidential matter to support significant accounting estimates in audits of financial statements conducted in accordance with generally accepted auditing standards.

.60 Furthermore, good-faith security value estimates may present the auditor with unique reporting problems. The board of directors' fair valuation procedures are designed to approximate the values that would have been established by market forces and are therefore subject to uncertainties.

.61 The auditor should not modify the auditor's opinion if he or she concludes, based on an examination of the available evidence, that the process used to estimate value is reasonable, the documentation supportive, and the range of possible values not significant. The auditor may, however, choose to emphasize the existence of the matter by inserting an explanatory paragraph in the audit report.

Effective Date and Transition

.62 This SOP is effective for financial statements and for audits of such financial statements for fiscal years ending after December 15, 1993, and for interim periods within such years. This SOP need not be applied to financial statements for fiscal years ending before its effective date that, for comparative purposes, are provided with financial statements for fiscal years ending after its effective date. The effect of this SOP should be disclosed in the period in which it is first applied. Early application of this SOP is encouraged.

Section 10,560

Statement of Position 93-3
Rescission of Accounting Principles Board Statements

March 19, 1993

> **NOTE**
>
> Statements of Position of the Accounting Standards Division present the conclusions of at least two thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 The Accounting Principles Board (APB) of the American Institute of Certified Public Accountants (AICPA) issued thirty-one Opinions. The APB also issued four Statements:

a. APB Statement No. 1, *Statement by the Accounting Principles Board*, April 1962

b. APB Statement No. 2, *Disclosure of Supplemental Financial Information by Diversified Companies*, September 1967

c. APB Statement No. 3, *Financial Statements Restated for General Price-Level Changes*, June 1969

d. APB Statement No. 4, *Basic Concepts and Accounting Principles Underlying Financial Statements of Business Enterprises*, October 1970

Conclusions

.02 In order to make clear that APB Statement Nos. 1, 2, 3, and 4 do not, and never did, have standing as rules or standards under the AICPA's Rules of Conduct or Code of Professional Conduct and to eliminate misunderstanding and attendant confusion, and because those Statements[1] effectively have been superseded by pronouncements of the Financial Accounting Standards Board

---

[1] APB Statements have not been included in the FASB's *Original Pronouncements*, paperback edition, for the past several years. However, they are included in the FASB's *Original Pronouncements* loose-leaf service.

(FASB), the Accounting Standards Executive Committee (AcSEC) of the AICPA hereby formally rescinds APB Statement Nos. 1, 2, 3, and 4 enumerated in paragraph .01 hereof.

Current Literature

.03 Opinions of the APB, to the extent that they have not been superseded by pronouncements of the FASB, are part of the literature encompassed by the AICPA's Code of Professional Conduct, specifically rule 203 thereof, and, as such, must be followed by an AICPA member's client in the preparation of its financial statements in order for the member to issue an unmodified report about whether the client's financial statements have been prepared in conformity with generally accepted accounting principles (GAAP). Thus, APB Opinions, to the extent that they have not been superseded by pronouncements of the FASB, are rules or standards that must be observed in the practice of public accountancy by members of the AICPA. The various APB Opinions contained legends explaining their authority. These are cited in appendix A [paragraph .12].

.04 In Statement on Auditing Standards (SAS) No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, APB Statements are not included in categories (*a*) through (*d*), which constitute pronouncements covered by rule 203 or by another source of established accounting principles. However, APB Statements are referred to as "other accounting literature" that may be considered in the absence of a pronouncement covered by Rule 203 or another source of established accounting principles. Other accounting literature includes, for example, FASB and Governmental Accounting Standards Board (GASB) Concepts Statements; APB Statements; AICPA Issues Papers; AICPA Technical Practice Aids; accounting textbooks; and articles. Paragraph 11 of SAS No. 69 states that FASB Statements of Financial Accounting Concepts would normally be more influential than other sources in the other accounting literature category.

.05 APB Statement Nos. 2, 3, and 4 carried the following legends:[2]

Statement 2

This Statement is not an "Opinion of the Accounting Principles Board" as contemplated in the Special Bulletin, *Disclosure of Departures from Opinions of the Accounting Principles Board*, October 1964. It is being issued as a special report for the information and assistance of members of the Institute and others interested in the subject. The Board may issue similar Statements in the future when it appears that preliminary analyses or observations on accounting matters should be issued in advance of research and study by the Board.

Statements 3 and 4

Statements of the Accounting Principles Board present the conclusions of at least two-thirds of the members of the Board, which is the senior technical body of the Institute authorized to issue pronouncements on accounting principles. This Statement is not an "Opinion of the Accounting Principles Board" covered by action of the Council of the Institute in the Special Bulletin, *Disclosures of Departures from Opinions of the Accounting Principles Board*, October, 1964.

---

[2] APB Statement No. 1 was the APB's commentary on the AICPA's Accounting Research Studies 1 and 3 and, as such, neither required nor carried a legend.

.06 Statements issued by the APB were never rules or standards that had to be observed by members of the AICPA in the practice of public accountancy. APB Statements are not comprehended by rule 203 of the Code of Professional Conduct. Nonetheless, some who are not familiar with the distinction between Opinions and Statements issued by the APB have cited, and continue to cite, APB Statements as being rules or standards that must be observed by members of the AICPA in the practice of public accountancy.

.07 The FASB effectively superseded APB Statement No. 2 with Statement of Financial Accounting Standards No. 14, *Financial Reporting for Segments of a Business Enterprise*. FASB Statement No. 89, *Financial Reporting and Changing Prices*, effectively superseded APB Statement No. 3. The FASB's various Statements of Financial Accounting Concepts effectively superseded APB Statement No. 4.

.08 Although APB Statement No. 3 is being rescinded because of subsequent FASB action with regard to inflation accounting, it is recognized that the FASB addressed only the presentation of partial price-level data. Since APB Statement No. 3 provided guidance for a comprehensive application of price-level adjusted financial statements, this SOP is not precluding such a presentation (to the extent it is not inconsistent with guidance in FASB Statement No. 89 regarding historical cost/constant purchasing power accounting, such as the classification of assets and liabilities as monetary or nonmonetary) should a company wish to do so.[3]

.09 Various APB Opinions, FASB Statements, and AICPA publications refer to APB Statements. The FASB Concepts Statements subsequently issued discuss essentially the same matters, and, therefore, this SOP has no impact on those pronouncements. In a few instances, the matter in the APB Statement is not included elsewhere in FASB pronouncements, and as indicated in appendix B [paragraph .13], AcSEC agrees with the relevant comments from those APB Statements and this rescission is not expected to affect practice. Further, various FASB Concepts Statements also refer to APB Statements. The references are listed in appendix B [paragraph .13].

.10 AcSEC believes the rescission of the APB Statements should have no effect on financial reporting and should eliminate any confusion over the status of the pronouncements.

Effective Date and Transition

.11 This SOP is effective upon issuance.

---

[3] AcSEC agrees with the conclusions of the APB, expressed in paragraph 26 of APB Statement No. 3, regarding general price-level financial statements of companies operating in hyperinflationary economies. Paragraph 26 states:

> The Board recognizes that the degree of inflation or deflation in an economy may become so great that conventional statements lose much of their significance and general price-level statements clearly become more meaningful, and that some countries have experienced this degree of inflation in recent years.[5] The Board concludes that general price-level statements reported in the local currency of those countries are in that respect in conformity with accounting principles generally accepted in the United States, and that they preferably should be presented as the basic foreign currency financial statements of companies operating in those countries when the statements are intended for readers in the United States.[6]
>
> ---
>
> [5] Although the Board believes that this conclusion is obvious with respect to some countries, it has not determined the degree of inflation or deflation at which general price level statements clearly become more meaningful.
>
> [6] This paragraph applies only to statements prepared in the currency of the country in which the operations reported on are conducted. Only conventional statements of foreign subsidiaries should be used to prepare historical-dollar consolidated statements.

.12

Appendix A

Legends Included in APB Opinions 1 Through 31

A-1. APB Opinions 1 through 5, issued between 1962 and 1964, carried the following legend:

> Opinions present the considered opinion of at least two-thirds of the members of the Accounting Principles Board, reached on a formal vote after examination of the subject matter. Except where formal adoption by the Council or the membership of the Institute has been asked and secured, the authority of the Opinions rests upon their general acceptability. While it is recognized that general rules may be subject to exception, the burden of justifying departures from the Board's recommendations must be assumed by those who adopt other practices. Recommendations of the Board are not intended to be retroactive, nor applicable to immaterial items.

A-2. APB Opinions 6 through 15, issued between 1965 and 1969, carried the following legend:

> Opinions present the considered opinion of at least two-thirds of the members of the Accounting Principles Board, reached on a formal vote after examination of the subject matter.
>
> Except as indicated in the succeeding paragraph, the authority of the Opinions rests upon their general acceptability. While it is recognized that general rules may be subject to exception, the burden of justifying departures from Board Opinions must be assumed by those who adopt other practices.
>
> Action of Council of the Institute (Special Bulletin, *Disclosure of Departures from Opinions of the Accounting Principles Board*, October 1964) provides that:
>
> *a.* "Generally accepted accounting principles" are those principles which have substantial authoritative support.
>
> *b.* Opinions of the Accounting Principles Board constitute "substantial authoritative support."
>
> *c.* "Substantial authoritative support" can exist for accounting principles that differ from Opinions of the Accounting Principles Board.
>
> The Council action also requires that departures from Board Opinions be disclosed in footnotes to the financial statements or in independent auditors' reports when the effect of the departure on the financial statements is material.
>
> Unless otherwise stated, Opinions of the Board are not intended to be retroactive. They are not intended to be applicable to immaterial items.

A-3. APB Opinions 16 through 27, issued between 1970 and 1972, carried the following legend:

> Opinions of the Accounting Principles Board present the conclusions of at least two-thirds of the members of the Board, which is the senior technical body of the Institute authorized to issue pronouncements on accounting principles.

Board Opinions are considered appropriate in all circumstances covered but need not be applied to immaterial items.

Covering all possible conditions and circumstances in an Opinion of the Accounting Principles Board is usually impracticable. The substance of transactions and the principles, guides, rules, and criteria described in Opinions should control the accounting for transactions not expressly covered. Unless otherwise stated, Opinions of the Board are not intended to be retroactive. Council of the Institute has resolved that Institute members should disclose departures from Board Opinions in their reports as independent auditors when the effect of the departures on the financial statements is material or see to it that such departures are disclosed in notes to the financial statements and, where practicable, should disclose their effects on the financial statements (Special Bulletin, *Disclosure of Departures from Opinions of the Accounting Principles Board*, October 1964). Members of the Institute must assume the burden of justifying any such departures.

A-4. APB Opinions 28 through 31, issued in 1973, carried the following legend:

Opinions of the Accounting Principles Board present the conclusions of at least two-thirds of the members of the Board.

Board Opinions need not be applied to immaterial items.

Covering all possible conditions and circumstances in an Opinion of the Accounting Principles Board is usually impracticable. The substance of transactions and the principles, guides, rules, and criteria described in Opinions should control the accounting for transactions not expressly covered.

Unless otherwise stated, Opinions of the Board are not intended to be retroactive.

Rule 203 of the Institute's Rules of Conduct prohibits a member from expressing his opinion that financial statements are presented in conformity with generally accepted accounting principles if the statements depart in a material respect from such principles unless he can demonstrate that due to unusual circumstances application of the principles would result in misleading statements—in which case his report must describe the departure, its approximate effects, if practicable, and the reasons why compliance with the established principles would result in misleading statements.

Pursuant to resolution of Council, this Opinion of the APB establishes, until such time as they are expressly superseded by action of FASB, accounting principles which fall within the provisions of Rule 203 of the Rules of Conduct.

.13

Appendix B

References in APB Opinions, FASB Statements, and AICPA Publications to APB Statements

Introduction

B-1. Various APB Opinions, FASB Statements, and AICPA publications refer to APB Statements. Those are listed below along with references to FASB Concepts Statements discussing essentially the same matters that were subsequently issued.

B-2. To use the reference to revenue recognition as an illustration, APB Statement No. 4, paragraph 150, stated:

> Realization principle—revenue is generally recognized when both of the following conditions are met: (1) the earning process is complete or virtually complete, and (2) an exchange has taken place . . . .

B-3. Paragraph 83 of the more recently issued FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, discusses revenues and gains. The FASB states that recognition involves consideration of two factors—(*a*) being realized or realizable and (*b*) being earned:

> (*a*) Revenues and gains generally are not recognized until realized or realizable.
>
> (*b*) Revenues are not recognized until earned . . . revenues are considered to have been earned when an entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues.

B-4. Another illustration is paragraph 35 of APB Statement No. 4, which lists "present characteristics and limitations of financial accounting and financial statements" and includes:

> *Substance Over Form*. Although financial accounting is concerned with both the legal and economic effects of transactions and other events and many of its conventions are based on legal rules, the economic substance of transactions and other events are usually emphasized when economic substance differs from legal form.

B-5. Subsequently issued FASB Concepts Statement No. 2, *Qualitative Characteristics of Accounting Information*, has several paragraphs on point.

> Paragraph 59—The reliability of a measure rests on the faithfulness with which it represents what it purports to represent . . . .
>
> Paragraph 63—Representational faithfulness is correspondence or agreement between a measure or description and the phenomenon it purports to represent.

Paragraph 160 (appendix C)—Substance over form is an idea that also has its proponents, but it is not included [in the FASB Concepts Statement] because it would be redundant. The quality of reliability and, in particular, of representational faithfulness leaves no room for accounting representations that subordinate substance to form. Substance over form is, in any case, a rather vague idea that defies precise definition.

B-6. AcSEC believes the FASB Concepts Statements have effectively superseded the discussion of these matters in APB Statement No. 4 as well as substantially all of those listed on the following pages of this appendix.

B-7. In addition, the only reference to APB Statements in GASB rules appears in the *Codification of Governmental Accounting and Financial Reporting Standards* as a footnote to paragraph 1600.125, where, in a discussion of recognition of revenues and expenses in proprietary funds, a general reference is made to the more detailed discussion in APB Statement No. 4, paragraphs 147–163. Again, the rescission should have no impact.

FASB Concepts Statements

B-8. Various Concepts Statements refer to APB Statement No. 4, as listed below. However, since the Concepts Statements stand on their own, superseding APB Statement No. 4 has no impact on financial reporting.

Concepts Statement	*Topic*
No. 1, paragraph 3	Objectives—financial reporting
No. 1, paragraph 57	Background information
No. 2, paragraph 91	Conservatism
No. 2, paragraphs 82–83	Verifiability
No. 2, paragraph 145	Background information
No. 4, footnote 2	Nonreciprocal transfers
No. 5, footnote 1	Financial statements
No. 5, footnote 4	Financial disclosure
No. 5, footnote 50	Revenue recognition
No. 5, footnote 51	Revenue recognition
No. 5, footnote 52	Revenue recognition
No. 6, footnote 52	Transactions, events, circumstances
No. 6, footnote 53	Nonmonetary transactions
No. 6, footnote 57	Expense recognition
No. 6, paragraph 153	Background information

B-9. A footnote to Concepts Statement No. 5 indicates that pronouncements such as APB Statement No. 4 will continue to serve their intended purpose: “They describe objectives and concepts underlying standards and practices existing at the time of their issuance.” Since the issuance of APB Statement No. 4 in 1970, it has not been updated for any subsequently issued APB or FASB pronouncement.

Statement of Position 93-4 Foreign Currency Accounting and Financial Statement Presentation for Investment Companies

April 22, 1993

> **NOTE**
>
> Statements of Position of the Accounting Standards Division present the conclusions of at least two thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 The purpose of this statement of position (SOP) is to provide guidance on computing and reporting foreign currency (FC) transaction gains or losses under U.S. generally accepted accounting principles for investment companies that invest in (*a*) securities denominated or expected to settle in currencies other than the U.S. dollar or (*b*) currencies other than the U.S. dollar, and for companies that have FC transactions. For illustrative purposes, this SOP assumes that the U.S. dollar is the functional currency of the reporting investment company. This guidance on accounting and financial statement presentation applies to all investment companies covered by the AICPA Audit and Accounting Guide *Audits of Investment Companies* that follow U.S. generally accepted accounting principles.

.02 Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 52, *Foreign Currency Translation*, requires that all assets, liabilities, and operations of a foreign entity be measured using the functional currency of that entity. *Functional currency* is defined as the currency of the primary economic environment in which the entity operates—that is, the currency in which the entity primarily generates and expends cash. Paragraphs 79 through 81 of FASB Statement No. 52 provide for two broad classes of foreign operations. The first class includes foreign operations that are relatively self-contained and integrated within a particular country or economic environment. For this class, the FC is the functional currency. In the second class, the day-to-day operations of the foreign entity are dependent on the economic environment of the parent's currency, and changes in the foreign entity's individual assets and liabilities directly affect the cash flows of the parent company. For this class, the functional currency of the foreign operation is the parent company's currency. Generally, the second class of foreign operations more closely resembles that of U.S. investment companies investing primarily in foreign securities than the first class does. For instance, U.S. closed-end single-foreign-country funds generate and expend cash primarily in their local currency, yet such funds have adopted the U.S. dollar as the functional currency for financial reporting purposes because, among other reasons, cash flows related to the funds' individual assets and liabilities directly affect the U.S. dollar cash flows to shareholders (sales of fund shares are to U.S. shareholders in U.S. dollars, and dividends and distributions are paid to shareholders in U.S. dollars).

.03 Inconsistent application of the functional currency concepts of FASB Statement No. 52 by funds investing in foreign securities has contributed to a diversity of accounting practices for FC transactions. However, because these funds follow value accounting, the net increase or decrease in net assets from operations is the same under each variation although the financial statement presentations of the FC transactions differ. For instance, some funds treat the FC rate variance between the trade and settlement dates as an adjustment to cost and proceeds, whereas other funds treat it as a component of net investment income or realized FC gain or loss. Similarly, some funds include the FC gain or loss resulting from income receivable or expense payable with the related income or expense, whereas others treat it as a separate component of net investment income or realized FC gain or loss. Because the U.S. dollar is generally the reporting currency of these funds, they typically adopt the U.S. dollar as their functional currency. If the facts and circumstances warrant otherwise, a fund may conclude that a currency other than the U.S. dollar should be its functional currency. However, in the value accounting environment, that distinction does not affect the reported amounts of U.S.-dollar-denominated net assets or net changes in net assets.

.04 FC transactions are denominated in a currency other than the fund's functional currency. These transactions may produce payables and receivables that are fixed in terms of the amount of FC that will be paid or received. A change in the exchange rate between the functional currency and the FC increases or decreases the expected functional currency value upon settlement of the transaction or disposition of the security.

.05 The ongoing revaluation of investments and receivables or payables representing unsettled FC transactions is classified as unrealized FC gain or loss. On settlement (when there is actual cash flow), a realized FC gain or loss is recorded. An FC gain or loss (whether realized or unrealized) results from one or more of the following sources:

- The cost of securities held versus their carrying value based on current exchange rates
- Payables or receivables for securities bought or sold at the transaction date versus actual amounts at settlement date or payable or receivable based on current exchange rates
- Interest, dividends, and withholding taxes accrued versus the amount received or receivable based on current exchange rates
- Expenses accrued versus the amount paid or payable in FC, based on current exchange rates

- Marking to market of forward exchange contracts or foreign exchange futures contracts

.06 Each of the sources of FC gain or loss identified in paragraph .05 is discussed later in this SOP.

Current Literature

.07 With the exception of the investment companies audit guide, FASB Statement No. 52 is the only current pronouncement available on the subject of this SOP. Paragraph 2.100 of the audit guide suggests that "foreign currency transaction gains and losses may be accounted for separately or may be combined for reporting purposes with the type of transaction that gave rise to the gain or loss." It also states, in paragraph 2.96, that the approach of not requiring separate disclosure of the portion of the changes in market value that results from FC rate changes continues to be followed in practice.

Scope

.08 This SOP provides guidance on measurement and financial statement presentation and disclosure for foreign currency transactions by investment companies. It amends the AICPA Audit and Accounting Guide *Audits of Investment Companies*.

.09 Some funds invest in countries that are highly inflationary, as that term is defined in FASB Statement No. 52, paragraph 11. Accordingly, the separate measurement and disclosure of the FC element may not be meaningful and the disclosures recommended by this SOP may not be appropriate for such situations.

Conclusions

.10 Each transaction denominated in an FC can initially be measured only in that currency. Any differences between originally recorded amounts and currently consummated or measured amounts in the reporting currency are a function of two factors—(*a*) foreign exchange rate changes and (*b*) changes in market prices. Those effects should be identified, computed, and reported other than for gains and losses on investments. The current guidance in paragraphs 2.96 and 2.100, which allows the practice of not separately disclosing the portion of the changes in market values of investments and realized gains and losses thereon that result from FC rate changes, continues to be permitted. However, separate reporting of such gains and losses is allowable and, if adopted by the reporting entity, should conform to the guidance presented herein.

Securities

Purchased Interest

.11 Purchased interest represents the interest accrued between the last coupon date and the settlement date of the purchase. It should be recorded in the functional currency as interest receivable at the spot rate on the purchase trade date, and marked to market using each valuation date's spot rate. After the settlement date, daily interest income should be accrued at the daily spot rate. It may be impractical to prepare the foregoing calculations daily, and, therefore, the use of a weekly or monthly average rate may be appropriate in many cases, especially if the exchange rate does not fluctuate significantly. However, if the exchange rate fluctuation is significant, the calculation should be made daily.

Marking to Market

.12 A fund investing in foreign securities generally invests in such securities to reap the potential benefits offered by the local capital market. It may also invest in such securities as a means of investing in the FC market or of benefiting from the FC rate fluctuation. The extent to which separate information regarding FC gains or losses will be meaningful will vary depending on the circumstances, and separate information may not measure with precision foreign exchange gains/losses associated with the economic risks of foreign currency exposures. An FC rate fluctuation, however, may be an important consideration in the case of foreign investments, and a reporting entity may choose to identify and separately report any resulting FC gains or losses as a component of unrealized market gain or loss on investments.

.13 The market value of securities should initially be determined in the FC and translated at the spot rate on the purchase trade date. The unrealized gain or loss between the original cost (translated on the trade date) and the market value (translated on the valuation date) comprises the following elements:

a. Movement in market price

b. Movement in FC rate

.14 Such movements may be combined as permitted by current guidance. If separate disclosure of the FC gains and losses is chosen, the movement in market prices should be measured as the difference between the market value in FC and the original cost in FC translated at the spot rate on the valuation date. The effect of the movement in the foreign exchange rate should be measured as the difference between the original cost in FC translated at the current spot rate and the historical functional currency cost. These values can be computed as follows:

a. (Market value in foreign currency minus original cost in foreign currency) times valuation date spot rate equals unrealized market value appreciation or depreciation.

b. (Cost in foreign currency times valuation date spot rate) minus cost in functional currency equals the unrealized foreign currency gain or loss.

It is recognized that the preceding formulas could be refined to isolate and report the rate change element in the changes in the gains or losses on investments between valuation dates. However, the cost of doing so would not be justified for the relatively minor improvement thereof. Furthermore, such refinement would (*a*) be a departure from the method required for federal income tax reporting for realized FC gains/losses on debt securities and (*b*) represent a departure from the practice of those investment companies that presently separately report in their financial statements the effects of foreign exchange on securities gains or losses.

.15 For short-term securities held by a fund that follows the amortized cost method of valuation, the amortized cost value should be substituted for market value in the formulas given in paragraph .14 if separate reporting is chosen by the reporting entity.

Sale of Securities

.16 If separate reporting of FC gains and losses on sales of securities is chosen by the reporting entity, the computation of the effects of market change and the FC rate change is similar to that described in paragraph .14 above. *Market value* in the formula given in paragraph .14 should be replaced with *sale proceeds* and *valuation date* should be replaced with *sale trade date*. Accordingly—

a. (Sale proceeds in foreign currency minus original cost in foreign currency) times sale trade date spot rate equals realized market gain or loss on sale of security.

b. (Cost in foreign currency times sale trade date spot rate) minus cost in functional currency equals realized foreign currency gain or loss.

.17 The sale of a security results in a receivable for the security sold. The related receivable should be recorded on the trade date at the spot rate. On the settlement date, the difference between the recorded receivable amount and the actual FC received converted into the functional currency at the spot rate is recognized as a realized FC gain or loss.

Sale of Interest

.18 Interest sold represents the accrued interest receivable between the last coupon date and the settlement date of sale of the security. The difference between the recorded interest receivable amount and the actual FC received (converted into the functional currency at the spot rate) should be recognized as a realized FC gain or loss.

Income

Interest

.19 Interest on securities denominated in an FC is calculated at the stated rate of interest in the FC. The interest should be accrued daily in the FC at the stated interest rate and translated into the functional currency at the daily spot rate. It may be impractical to prepare such a calculation daily, and, therefore, the use of a weekly or monthly average rate may be appropriate in many cases, especially if the exchange rate does not fluctuate significantly. However, if the exchange rate fluctuation is significant, the calculation should be made daily.

.20 The related receivable balance along with purchased interest, if any, should be accumulated in the FC and translated into the functional currency daily using the spot rate for that date. The difference between the income accrued in the functional currency and the FC receivable at the valuation date spot rate is unrealized FC gain or loss.

.21 When the interest is received and recorded in the functional currency at the spot rate on that date, the unrealized FC gain or loss should be reclassified as realized FC gain or loss.

Accretion and Amortization

.22 Accretion of discounts and amortization of premiums on bonds should be calculated daily in the FC. The resulting amount of income or offset to income should be translated into the functional currency using that day's spot rate. The same FC amount should be recorded as an addition to cost for accretion of discounts and a reduction to cost for amortization of premiums. Accordingly, cost consists of the original cost, translated at the spot rate in effect on the trade date the bond was bought and adjusted for discount accretion or premium amortization at the spot rate on the date of adjustment. As stated in paragraph .19 of this SOP, use of a weekly or monthly average rate may be appropriate in certain circumstances.

.23 On maturity, the carrying cost (including accretion or amortization) of the security in the FC equals the proceeds. However, this will not be the case in the functional currency. The original cost is translated into the functional currency at the spot rate on the trade purchase date and the accretion or amortization is translated at periodic spot rates. The proceeds are translated into the functional currency at the spot rate on the maturity date. The difference between the proceeds and the accumulated cost in the functional currency is realized FC gain or loss.

Dividends

.24 Dividend income on securities denominated in FC should be recorded on the ex-date, at the spot exchange rate of the FC to the reporting currency on that date. The related dividend receivable should be translated into the functional currency daily at the spot rate, and the difference between the dividend accrued in the functional currency and the FC receivable at the valuation date spot rate is unrealized FC gain or loss. When the dividend is received, the unrealized FC gain or loss should be reclassified as realized FC gain or loss.

.25 The preceding approach to measuring investment income ensures that investment income accrued on foreign securities reflects the investment transaction without regard to the FC gain or loss created in the time between the accrual and collection of the income.

Withholding Tax

.26 Whenever tax is withheld from investment income at the source, the amounts withheld that are not reclaimable should be accrued along with the related income on each income recognition date if the tax rate is fixed and known. If the tax withheld is reclaimable from the local tax authorities, it should be recorded as a receivable and not as an expense. When the investment income is received net of the tax withheld, a separate realized FC gain or loss should be computed on the gross income receivable and the accrued tax expense. If the tax rate is not known or estimable, such expense or receivable should be recorded on the date the net amount is received; accordingly, there would be no FC gain or loss. However, if a receivable is recorded, there may be an FC gain or loss through the date such receivable is collected.

Expenses

.27 The accounting for expenses payable in an FC is identical to that for investment income receivable in an FC. An expense should be accrued as incurred and translated into the functional currency at the spot rate each day. The use of an average weekly or monthly FC rate would be acceptable if the FC rate does not fluctuate significantly. The related accrued expense balance should be accumulated in the FC and translated into the functional currency daily, using the spot rate for that date. The difference between the expense accrued in the functional currency and the related FC accrued expense balance translated into the functional currency at the valuation date spot rate is unrealized FC gain or loss. When the expense is paid, the unrealized FC gain or loss should be reclassified as realized FC gain or loss.

Receivables and Payables

.28 All receivables and payables that are denominated in an FC and that may relate to income or expense, or to securities sold or purchased, should be translated into the functional currency each valuation date at the spot rate on that date. The difference between that amount and the functional currency amount that was recorded at various spot rates for income and expense items, and at the trade date spot rate in the case of sales and purchases of securities, is unrealized FC gain or loss. Upon liquidation of the receivable or payable balance in an FC, the difference should be reclassified as realized FC gain or loss.

Cash

.29 FC cash balances and movements should be accounted for in the same way that FC-denominated securities are. Every receipt of an FC should be treated as a purchase of a security and recorded in the functional currency at the spot rate on the cash receipt date. Similarly, every disbursement of an FC should be treated as a sale of a security and the appropriate functional currency cost should be released, depending on whether a specific identified cost, the first-in, first-out (FIFO) method, or an average cost is used.

.30 The acquisition of an FC does not result in any FC gain or loss. However, the disbursement of an FC results in a realized FC gain or loss that is the difference between the functional currency equivalent of the FC when it was acquired and the FC disbursement translated at the spot rate on the disbursement date. Also, as is the case with all other assets and liabilities denominated in an FC, FC cash balances should be translated on each valuation date at the spot rate on that date, resulting in unrealized FC gain or loss.

Forward Exchange Contracts

.31 A forward exchange contract is an agreement between two parties to exchange different currencies at a specified exchange rate at an agreed-upon future date. A forward exchange contract can be for either hedging or speculation purposes. Funds usually enter into such contracts for hedging purposes only.

.32 If a fund enters into a forward exchange contract, the forward contract should be recorded on the inception date at the forward rate and marked to market daily.

.33 The unrealized FC gain or loss on such a contract is the difference between the FC amount valued at the forward rate (on the valuation date) and the original contracted value of the forward contract (the amount to be received or paid at expiration or settlement date). On the expiration or settlement date, the unrealized FC gain or loss should be reclassified as realized FC gain or loss. If the forward contract is meant to hedge the payable for the purchase of a security denominated in an FC, the cost of the investment purchased and the related payable that has been hedged by the forward contract should still be recorded at the spot rate on the trade date, and the payable should be translated into the functional currency daily.

Financial Statement Presentation

.34 The current practice of not separately disclosing that portion of unrealized and realized gains and losses on investments that results from FC changes continues to be permitted. All other FC gains or losses should be reported under the realized and unrealized gain or loss on investments and foreign currency section in the statement of operations. For example, realized FC gain or loss on interest and dividends should be included in the realized FC gain or loss component of net realized gain or loss. All unrealized FC gain or loss, other than those on investments, should be reported as unrealized appreciation or depreciation on translation of assets and liabilities in foreign currencies. The statement of changes in net assets and the statement of assets and liabilities should reflect the same realized and unrealized gain and loss components. However, it is permissible (*a*) to combine the net realized gains or losses from investments with net realized gains or losses from foreign currency transactions and (*b*) to combine the net unrealized appreciation (depreciation) on investments with the net unrealized appreciation (depreciation) on translation of assets and liabilities in foreign currencies and to report them as single components in those statements.

.35 If separate reporting of the unrealized and realized FC gains or losses on investments is chosen, such gains and losses should be aggregated with all other FC gains and losses and reported as described above. Notes to the financial statements should state an entity's practice of either including or excluding that portion of realized and unrealized gains and losses on investments that results from foreign currency changes with or from other foreign currency gains and losses.

.36 Taxes withheld that are not reclaimable, if any, on foreign source income should be deducted from the relevant income item and be shown either parenthetically or as a separate contra item in the income section of the statement of operations. Taxes levied on the aggregate income or capital gains of the investment company itself should be presented in a manner that is similar to that used for income taxes. The normal withholding taxes should be presented as follows:

Interest or dividend income (net of withholding taxes of $ X)	$XXX
or	
Interest or dividend income	$XXX
Less withholding tax	(XXX)

Other Matters

.37 In addition to the FC risk associated with investing in foreign securities, such investments present additional risks that need to be assessed continuously by management and considered for financial statement disclosure:

- *Liquidity.* Since certain foreign markets are illiquid, market prices may not necessarily represent realizable value.
- *Size.* When market capitalization is low, a fund's share in the entire market (particularly when single-country funds are involved) or in specific securities may be proportionately very large, and the market price would not necessarily reflect the realizable value.

- *Valuation.* Because of liquidity and size problems as well as other factors, such as securities that are unlisted or securities that are thinly traded, funds would have to adopt specific fair valuation procedures for determining the values of such securities. Doing so may be difficult in a foreign environment; while others may perform the research and provide supporting documentation for fair values, the ultimate responsibility for determining the fair values of securities rests with the directors.

The disclosures suggested above are no different from those that might be required for domestic securities with the same attributes.

.38 The preceding risks may need to be disclosed in the notes to the financial statements if such factors exist in the markets in which the fund has material investments. It would also be incumbent on management to make sure that the prices provided by local sources (such as the last sale price, bid or ask, mean of bid and ask, closing price, and so on) do represent the market value of the securities. This is especially important for open-end funds or closed-end funds that allow limited redemption.

Effective Date and Transition

.39 This SOP is effective for financial statements for fiscal years beginning after December 15, 1993, and interim periods within such years. This SOP may, but need not be, applied to financial statements for fiscal years ending before its effective date that, for comparative purposes, are provided with financial statements for fiscal years ending after its effective date. Earlier application of this SOP is encouraged.

.40

Appendix A

Illustrations for Separately Calculating and Disclosing the Foreign Currency Element of Realized and Unrealized Gains and Losses

Illustrations A and B apply if separate disclosures of the FC elements of unrealized and realized gains and losses on investments are chosen by the reporting entity.

A. Purchases and Sales

ABC Fund uses US$ as its functional currency.

ABC buys 1,000 shares of XYZ £15.00 with a spot exchange rate of $1.75 = £1.00.

Foreign currency (FC) cost basis = £15.00 × 1,000 = £15,000

Functional currency cost basis = £15,000 × 1.75 = $26,250

Market gain/loss = (FC sale proceeds – FC cost) × foreign exchange (FX) rate on day of sale

Currency gain/loss = FC cost × (FX rate day of sale – FX rate day of purchase)

Assume a sale of 1,000 XYZ £12.00 and $1.50 = £1.00:

FC proceeds	= £12.00 × 1,000	=	£12,000
Functional currency proceeds	= £12,000 × 1.50	=	$18,000
Market loss	= (£12,000 – £15,000) × 1.50	=	($ 4,500)
Currency loss	= (£15,000 × 1.50 – 1.75)	=	($ 3,750)
Total loss			($ 8,250)

Proof

Functional currency proceeds	$18,000
Functional currency cost	($26,250)
	($ 8,250)

B. Securities—Mark to Market

DAY 1: 1,000 XYZ marked to market £16.00; spot rate: $1.85 = £1.00.

Market gain/loss = (FC current market value – FC cost) × current FX rate

Currency gain/loss = FC cost × (current FX rate – FX rate on day of purchase)

Market gain = (£16,000 – £15,000) × 1.85	=	$1,850
Currency gain = £15,000 × (1.85 – 1.75)	=	$1,500
Total gain in functional currency	=	$3,350

Total gain – (£16,000 × 1.85) – (£15,000 × 1.75) = $29,600 – $26,250 = $3,350

Mark-to-Market Journal Entries

[*Average rates may be used if fluctuations in exchange rates aren't significant*]

DAY 2: 1,000 XYZ marked to market £17.00; spot rate: $1.80 = £1.00.			
Market gain	= (£17,000 – £15,000) × 1.80	=	$3,600
Currency gain	= £15,000 × (1.80 – 1.75)	=	$ 750
Total functional currency gain			$4,350

Daily Journal Entries

Market gain/loss	= $3,600 – $1,850	=	$1,750
Currency gain/loss	= $750 – $1,500	=	($ 750)
Day 2 gain ($4,350 – $3,350)		=	$1,000

C. Other Assets/Liabilities—FX Mark to Market

Sale of 1,000 XYZ £12.00 = £12,000 receivable $1.50 = £1.00 =			$18,000
DAY 1: Spot rate moves to $1.55 = £1.00.			
Currency gain	= £12,000 × (1.55 – 1.50) .05	=	$ 600
DAY 2: Spot rate moves to $1.58 = £1.00.			
Currency gain	= £12,000 × (1.58 – 1.50) .08	=	$ 960
Currency gain	*Day 1*		*Day 2*
Daily Journal Entry	$600		$360

D. Changes Between Trade and Settlement Dates

Trade Date

Purchase 1,000 XYZ £15.00; exchange rate: $1.75 = .00.

Cost basis: $26,250 or £15,000

DR: sterling securities at cost	$26,250	
CR: payables for securities purchased		$26,250

Settlement Date

Spot rate: $1.80 = £1.00; £15,000 is purchased at the spot rate for $27,000.

DR: payables for securities purchased	$26,250	
DR: realized currency gain/loss	$ 750	
CR: cash		$27,000

E. Settlement Against Foreign Currency Cash Balances

£20,000 balance is available in London.

Lot a: £10,000 purchased $1.65 per £1.00
$US cost basis: $16,500

Lot b: £10,000 purchased $1.85 per £1.00
$US cost basis: $18,500

Assume lot b will be liquidated first at $1.80 per £1.00.

Lot b

DR: cash	$18,000	
DR: realized currency gain/loss	$ 500	
CR: sterling cash at cost		$18,500

Assume one half of lot a will be liquidated at $1.80 per £1.00.

Lot a

DR: cash	$ 9,000	
CR: sterling cash at cost		$ 8,250
CR: realized currency gain/loss		$ 750

Realized FX gain on payable remains the same.

Between Purchase Settlement and Sale Trade Dates

Mark the holding to market, based on both local market price and daily spot rate.

F. Sale of XYZ—Trade Date

Sell 1,000 XYZ £18.00; exchange rate: $1.90 = £1.00

Total proceeds: $34,200 or £18,000

FX gain is recognized on the sale trade date based on the holding period. Receivable is booked at the spot rate on sale trade date.

DR: receivable for securities sold	$34,200	
CR: sterling securities at cost (£15,000 × 1.75)		= $26,250
CR: realized market gain/loss (£18,000 – £15,000) × 1.90		= $ 5,700*
CR: realized currency gain/loss (£15,000 × 1.90) – 26,250		= $ 2,250*

Maintain local currency basis (£18,000) on the receivable record.

Between Sale Trade Date and Settlement Date

Mark the receivable to market based on the prevailing spot rate.

Sale Settlement Date

Spot rate: $1.85 = £1.00

£18,000 is converted at the spot rate to $33,300.

FX loss is recognized upon the receipt (settlement) of the receivable.

DR: cash	$33,300	
DR: realized currency gain/loss	$ 900	
CR: receivables from securities sold		$34,200

If foreign currency cash received is to be kept as local currency:

Purchase: £18,000 $1.85 = £1.00

Cost basis: $33,300

DR: sterling cash at cost	$33,300	
CR: cash		$33,300

* If separate disclosures of the FC elements of unrealized and realized gains and losses on investments are chosen by the entity.

The ABC Fund
(A Single Country Fund)
Selected Notes to Financial Statements

1. *Foreign Currency*. Amounts denominated in or expected to settle in foreign currencies (FC) are translated into United States dollars (US$) at rates reported by a major New York City bank on the following basis:

a. Market value of investment securities, other assets and liabilities—at the closing rate of exchange at the balance sheet date.

b. Purchases and sales of investment securities, income and expenses—at the rate of exchange prevailing on the respective dates of such transactions (or at an average rate if significant rate fluctuations have not occurred).

[*The following paragraphs illustrate disclosures depending upon whether the fund chooses (i) to report or (ii) not to report the FC elements of realized and unrealized gains and losses on investments.*]

c(i). The Fund isolates that portion of the results of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in market prices of securities held.

Reported net realized foreign exchange gains or losses arise from sales of portfolio securities, sales and maturities of short-term securities, sales of FCs, currency gains or losses realized between the trade and settlement dates on securities transactions, the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Fund's books, and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in the value of assets and liabilities including investments in securities at fiscal year end, resulting from changes in the exchange rate.

c(ii). The Fund does not isolate that portion of the results of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in market prices of securities held. Such fluctuations are included with the net realized and unrealized gain or loss from investments.

Reported net realized foreign exchange gains or losses arise from sales and maturities of short-term securities, sales of FCs, currency gains or losses realized between the trade and settlement dates on securities transactions, the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Fund's books, and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in the value of assets and liabilities other than investments in securities at fiscal year end, resulting from changes in the exchange rate.

2.[##] The Fund has obtained the approval of the Central Bank for the registration and conversion into FC of all proceeds of the offering to be invested in the ABC country securities markets, which by its terms ensures repatriation of such investment and the remittance of profits and dividends accruing on the investment. Notwithstanding the foregoing, the right of the Fund to repatriate its investments in ABC country securities and to receive profits, capital gains, and dividends in foreign exchange is subject to the power of the Central Bank,

---

[##] Should be considered, if applicable to the respective fund.

with the approval of the President of the ABC country, to restrict the availability of foreign exchange in the imminence of, or during, an exchange crisis or in times of national emergency.

There are nationality restrictions on the ownership of certain equity securities of the ABC country companies. Based on confirmations that the Fund received from the ABC country's governmental authorities, the Fund believes that it is permitted to make certain investments through the ABC country's Trust that are otherwise available only to the ABC country.

The Fund has significant investments in the equity securities of companies located in the ABC country. Future economic and political developments in the country could adversely affect the liquidity or value, or both, of the ABC country securities in which the Fund is invested.

.42

Appendix C

Bifurcation of Changes in Value of Foreign Securities

FASB Statement No. 8, *Accounting for the Translation of Foreign Currency Transactions and Foreign Currency Financial Statements*, appendix D, paragraphs 219 and 220, specifically states that the FASB did not intend to require investment companies to disclose separately the portion of the change in market value that results from foreign currency rate changes. Even though that exception is not specifically mentioned in FASB Statement No. 52, *Foreign Currency Translation*, practice has continued to follow this approach. This practice continues to be allowed by this SOP for the foreign exchange components of realized and unrealized gains or losses on securities.

On June 5, 1992, the AICPA issued a proposed SOP for comment that required, among other things, that investment companies report foreign exchange effects on realized and unrealized gains and losses separately from changes in market prices. Most commentators objected to that requirement and, accordingly, the Investment Companies Committee and AcSEC decided to make the practice voluntary and study the matter further.

The Investment Companies Committee intends to form a task force to solicit comments from preparers, auditors, regulators, and users of investment companies financial statements to address concerns of the costs to implement bifurcation of changes in value of foreign securities, to evaluate the relevance of the information provided by bifurcation, and to explore other approaches to reporting information if deemed necessary to help users assess foreign currency effects. After the task force submits its recommendations to the committee, the committee may decide to do one of the following:

- Draft an SOP to make bifurcation described in the current SOP mandatory
- Draft an SOP to modify the reporting in the current SOP and make it mandatory
- Not change the current guidance

Section 10,580

Statement of Position 93-6 Employers' Accounting for Employee Stock Ownership Plans

November 22, 1993

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Scope

.01 This statement of position (SOP) provides guidance on employers' accounting for employee stock ownership plans (ESOPs). It applies to all employers with ESOPs, both leveraged and nonleveraged. It does not address financial reporting by ESOPs.[1]

.02 An ESOP is an employee benefit plan that is described by the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code (IRC) of 1986 as a stock bonus plan, or combination stock bonus and money purchase pension plan, designed to invest primarily in employer stock.

.03 This SOP supersedes American Institute of Certified Public Accountants (AICPA) SOP 76-3, *Accounting Practices for Certain Employee Stock Ownership Plans* [section 10,130], and affects certain Emerging Issues Task Force (EITF) consensuses. A list of the documents affected is provided in appendix D [paragraph .102] of this SOP.

Background

.04 SOP 76-3 [section 10,130] was issued in December 1976, primarily to deal with accounting and reporting issues relevant to employers with leveraged ESOPs, and it has been the primary source of guidance on the subject.

.05 Since the issuance of SOP 76-3 [section 10,130], Congress has revised laws concerning ESOPs several times and the Internal Revenue Service (IRS) and the U.S. Department of Labor have issued many regulations covering the

---

[1] Financial reporting by ESOPs is discussed in the AICPA Audit and Accounting Guide *Audits of Employee Benefit Plans*.

operation of plans, which actions have resulted in changes in the way ESOPs may operate and the reasons they are established by companies. Those changes, the most significant of which are described in appendix C [paragraph .101], were factors in the growth in the number of plans from fewer than 2,500 plans in 1976 to nearly 10,000 at the end of 1990.[2]

.06 The increase in the number of ESOPs since the issuance of SOP 76-3 [section 10,130] was matched by an increase in their complexity. It is no longer possible to describe a typical ESOP. ESOPs are used for many purposes in addition to furthering employee ownership, some of which were not contemplated when SOP 76-3 [section 10,130] was issued. These include the following:

- To fund a matching program for a sponsor's 401(k) saving plan, formula-based profit-sharing plan, and other employee benefits
- To raise new capital or to create a marketplace for the existing stock
- To replace lost benefits from the termination of other retirement plans or provide benefits under postretirement benefit plans, particularly medical benefits
- To be part of the financing package in leveraged buy-outs
- To provide a tax-advantaged means for owners to terminate their ownership
- To be part of a long-term program to restructure the equity section of a plan sponsor's balance sheet
- To defend the company against hostile takeovers

.07 The borrowing arrangements used by leveraged ESOPs have also become more diverse. When SOP 76-3 [section 10,130] was issued, most leveraged ESOPs borrowed from outside lenders, and the loan terms were relatively simple. Since then, internally leveraged ESOPs (ESOPs that borrow from the sponsor) have become more common. Furthermore, some ESOP loans are now structured so that a large portion of the debt service will be paid with dividends on shares held by the ESOP rather than with employer contributions.

.08 Employers' accounting for ESOP transactions, particularly the measurement of compensation cost and the treatment of dividends on shares held by an ESOP, has been a source of accounting controversy for many years. Even when SOP 76-3 [section 10,130] was issued, there was disagreement about some ESOP issues.[3] Changes in laws and regulations that apply to ESOPs and the increased diversity in the structure and purpose of ESOPs have called new attention to the limitations of SOP 76-3 [section 10,130]. Furthermore, SOP 76-3 [section 10,130] does not address some of the accounting issues presented by the new ESOPs. Although the EITF has addressed a number of ESOP issues, it has done so on an ad hoc basis.

.09 Therefore, the Accounting Standards Executive Committee (AcSEC) undertook this project to reconsider SOP 76-3 [section 10,130] and to consider current ESOP issues that are not specifically addressed in the accounting liter-

---

[2] Statistics from an unpublished study completed in 1991 by the National Center for Employee Ownership, Oakland, Calif.

[3] Paragraph 13 of SOP 76-3 [section 10,130.13] presents a minority view that disagrees with that SOP's recommendations on reporting dividends paid and earnings per share.

ature. AcSEC's objective in issuing this SOP is to enhance the relevance and representational faithfulness of financial statements of employers that sponsor ESOPs.

.10 There are two basic forms of ESOP: nonleveraged and leveraged. This SOP addresses the financial reporting for each separately.

Conclusions

.11 The following conclusions should be read in conjunction with the "Discussion of Conclusions" beginning with paragraph .59 of this SOP. That section explains considerations that were deemed significant by members of AcSEC in reaching the conclusions.

Leveraged ESOPs

.12 Unlike other kinds of employee benefit plans, an ESOP is permitted by ERISA to borrow from a related party or with the assistance of a related party. A leveraged ESOP borrows money to acquire shares of the employer company. The debt usually is collateralized by the employer's shares. The shares initially held by the ESOP in a suspense account are called *suspense shares.*[4] The debt is generally repaid by the ESOP from employer contributions and dividends on the employer's stock. As the debt is repaid, suspense shares are released from the suspense account, and the released shares must be allocated to individual accounts as of the end of the ESOP's fiscal year. The money can be borrowed by the ESOP from the sponsor, with or without a related outside loan, or directly from an outside lender. Outside loans to the ESOP are generally guaranteed by the sponsor.

Reporting the Purchase of Shares by ESOPs

.13 An employer should report the issuance of shares or the sale of treasury shares to an ESOP when they occur and should report a corresponding charge to unearned ESOP shares, a contra-equity account. That account should be presented as a separate item in the balance sheet. Furthermore, even if a leveraged ESOP buys outstanding shares of employer stock on the market rather than from the employer, the employer should charge unearned ESOP shares and credit either cash or debt, depending on whether the ESOP is internally or externally leveraged (see paragraph .24).

Reporting the Release of ESOP Shares

.14 ESOP shares are released for different purposes: to compensate employees directly, to settle employer liabilities for other employee benefits, and to replace dividends on *allocated shares* that are used for debt service. As ESOP shares are committed to be released, unearned ESOP shares should be credited and, depending on the purpose for which the shares are released, either (*a*) compensation cost, (*b*) dividends payable, or (*c*) compensation liabilities should be charged. Regardless of the account charged, the amount of the charge should be based on fair values[5] of *committed-to-be-released shares.*

---

[4] Terms defined in the glossary [paragraph .103] are in italicized type the first time they appear in this SOP.

[5] Paragraph .20 of this SOP contains guidance on fair value.

.15 Under this SOP, when shares are committed to be released, rather than when shares are legally released, is significant for accounting purposes. That refinement was made in recognition of the fact that ESOP shares are legally released from an ESOP's suspense account (and from serving as collateral for ESOP debt) when debt payments are made, but the employee service to which the shares released relates is continuous. Accordingly, for purposes of reporting compensation cost and satisfaction of liabilities under this SOP, accounting recognition should occur when shares are committed to be released, which may occur before the shares are legally released. Shares that have not been legally released, but that relate to employee services rendered during an accounting period (interim or annual) ending before the related debt service payment is made, should be considered committed to be released. The periods of employee service to which shares relate is generally specified in the ESOP documents.

.16 Some employers establish ESOPs that are not linked to any other employee benefit or compensation promise; therefore, the ESOP shares directly compensate the employees. For ESOP shares committed to be released to compensate employees directly, the employer should recognize compensation cost equal to the fair value of the shares committed to be released. The shares generally should be deemed to be committed to be released ratably during an accounting period as the employees perform services, and, accordingly, average fair values should be used to determine the amount of compensation cost to recognize each reporting period (interim or annual). The amount of compensation cost recognized in previous interim periods should not be adjusted for subsequent changes in the fair value of shares.

.17 Some employers agree to provide a specified or determinable benefit, such as a contribution to a 401(k) plan or to a formula profit-sharing plan, to employees and use the ESOP to partially or fully fund the benefit. Employers should recognize compensation cost and liabilities associated with providing such benefits to employees in the same manner they would had an ESOP not been used to fund the benefit. For ESOP shares committed to be released to settle liabilities for such benefits, employers should report satisfaction of the liabilities when the shares are committed to be released to settle the liability. The number of shares released to settle the liability is based on the fair value of shares as of dates specified by the employers, which are usually specified in the ESOP documents.

.18 The IRC allows employers to use dividends on ESOP shares that have been allocated to participants for debt service if participants are allocated shares of employer stock with a fair value no less than the amount of the dividends used for debt service. If shares released will include shares designated to replace *dividends on previously allocated shares used for debt service*, employers should report the settlement of the dividend payable when the shares are committed to be released to replace the dividends on shares used for debt service. (See paragraphs .21 and .22; only dividends on allocated shares should be charged to retained earnings.) The number of shares committed to be released to replace the dividends on allocated shares used for debt service is based on the fair value of shares as of dates specified by the employer, which are usually specified in the ESOP documents based on the employer's interpretation of current IRS regulations.

.19 Unearned ESOP shares should be credited as shares are committed to be released based on the cost of the shares to the ESOP. Employers should charge or credit the difference between the fair value of shares committed to be released and the cost of those shares to the ESOP to shareholders' equity in the same manner as gains and losses on sales of treasury stock (generally to additional paid-in capital).

Fair Value

.20 The fair value of ESOP shares is needed to apply certain provisions of this SOP. The fair value of an ESOP share is the amount the seller could reasonably expect to receive for it in a current sale between a willing buyer and a willing seller, that is, other than a forced or liquidation sale. For shares that are traded, the price in the most active market should be used to measure fair value. If there is no market price, the employer's best estimate of fair value should be used. The use of independent experts may be necessary to estimate fair value. For example, the amount determined in a recent (within twelve months of the employer's year-end) independent stock valuation report may aid in determining the best estimate of fair value.

Reporting Dividends on ESOP Shares

.21 Because employers control the use of dividends on unallocated shares, dividends on unallocated shares are not considered dividends for financial reporting purposes. Dividends on unallocated shares used to pay debt service should be reported as a reduction of debt or of accrued interest payable. Dividends on unallocated shares paid to participants or added to participant accounts should be reported as compensation cost.

.22 Dividends on allocated shares should be charged to retained earnings. The dividends payable may be satisfied either by contributing cash to the participant accounts, by contributing additional shares to participant accounts, or by releasing shares from the ESOP's suspense account to participant accounts (see paragraph .18).

Reporting Redemptions of ESOP Shares

.23 Regardless of whether an ESOP is leveraged or nonleveraged, employers are required to give a put option to participants holding ESOP shares that are not readily tradable, which on exercise requires employers to repurchase the shares at fair value. Furthermore, public company sponsors sometimes offer cash redemption options to participants who are eligible to withdraw traded shares from their accounts. Employers should report the satisfaction of such option exercises as purchases of treasury stock.

Reporting of Debt and of Interest

.24 For purposes of applying this SOP, ESOP debt is characterized as follows:

- *Direct loan*—A loan made by a lender other than the employer to the ESOP. Such loans often include some formal guarantee or commitment by the employer.
- *Indirect loan*—A loan made by the employer to the ESOP, with a related outside loan to the employer.
- *Employer loan*—A loan made by the employer to the ESOP, with no related outside loan.

ESOPs with indirect loans and employer loans are often referred to as internally leveraged.

.25 Employers that sponsor an ESOP with a direct loan should report the obligations of the ESOP to the outside lender as liabilities. Furthermore, employers should accrue interest cost on the debt and should report cash payments to the ESOP that are used by the ESOP to service debt, regardless of whether the source of cash is employer contributions or dividends, as reductions of the debt and accrued interest payable when the ESOP makes the payments to the outside lender.

.26 Employers that sponsor an ESOP with an indirect loan should report outside loans as liabilities. Employers should not report a loan receivable from the ESOP as an asset and should, therefore, not recognize interest income on such receivable. Employers should accrue interest cost on the outside loan and should report loan payments as reductions of the principal and accrued interest payable. Contributions to the ESOP and the concurrent payments from the ESOP to the employer for debt service would not be recognized in the employer's financial statements.

.27 Employers that sponsor an ESOP with an employer loan should not report the ESOP's note payable and the employer's note receivable in the employer's balance sheet. Accordingly, employers should not recognize interest cost or interest income on an employer loan.

Earnings per Share

.28 For purposes of computing basic and diluted earnings per share (EPS), ESOP shares that have been committed to be released should be considered outstanding. ESOP shares that have not been committed to be released should not be considered outstanding. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.29 Employers with ESOPs that hold convertible preferred stock may encounter unique EPS issues for diluted EPS calculations. The remainder of this section provides guidance on how to deal with some of those issues, particularly the following:

- How to determine the number of shares assumed to be outstanding in the if-converted EPS computations
- How earnings applicable to common stock in if-converted EPS computations should be adjusted for dividends on allocated shares used for debt service
- Whether prior periods' EPS should be restated for changes in conversion rates

This SOP does not provide a step-by-step discussion of how to apply the if-converted method to compute diluted EPS and does not address all possible EPS questions that may arise. FASB Statement No. 128, *Earnings per Share*, and illustrations 4 and 5 in appendix A [paragraph .99] of this SOP provide additional guidance. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

[.30] [Paragraph deleted, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.31 *Number of Shares Outstanding.* Under this SOP, ESOP shares are not considered outstanding until they are committed to be released. The number of common shares that would be issued on conversion of the convertible shares held by an ESOP that have been committed to be released should be deemed outstanding in the if-converted EPS computations for diluted EPS if the effect is dilutive. Convertible preferred shares held by the ESOP that have not been committed to be released should not be considered outstanding and, accordingly, would be excluded from the if-converted computations for diluted EPS. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.32 When participants withdraw account balances containing convertible preferred shares from an ESOP, they may be entitled to receive common shares or cash with a value equal to either the fair value of the convertible preferred shares or a stated minimum value per share. Accordingly, if the value of the common stock issuable is less than the stated minimum value or the fair value of the preferred, participants may receive common shares or cash with a value greater than the value of the common shares issuable at the stated conversion rate. In determining EPS, the employer should presume that such a shortfall will be made up with shares of common stock. However, that presumption may be overcome if past experience or a stated policy provides a reasonable basis to believe that the shortfall will be paid in cash.[6] In applying the if-converted method, the number of common shares issuable on assumed conversion, which should be included in the denominator of the EPS calculation, should be the greater of (*a*) the shares issuable at the stated conversion rate and (*b*) the shares issuable if the participants were to withdraw the shares from their accounts. Shares issuable on assumed withdrawal should be computed based on the ratio of (*a*) the average fair value of the convertible stock or, if greater, its stated minimum value, to (*b*) the average fair value of the common stock. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.33 *Adjustments to Earnings.* Employers that use dividends on allocated ESOP shares to pay debt service should adjust earnings applicable to common shares in the if-converted computation for the difference (net of income taxes) between the amount of compensation cost reported and the amount of compensation cost that would have been reported if the allocated shares had been converted to common stock at the beginning of the period.

.34 *Changes in Conversion Rates.* Prior period EPS should not be restated for changes in the conversion rates. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

Accounting for Terminations

.35 Upon termination of a leveraged ESOP, either in whole or in part, all outstanding debt related to the shares being terminated must be repaid or refinanced. An ESOP may repay the debt using an employer contribution to the plan, dividends on ESOP shares, the proceeds from selling suspense shares to the employer or to another party, or some combination of these. The law limits the shares employers may reacquire to the number of shares with a fair value equal to the applicable unpaid debt and requires that the remaining shares, if any, be allocated to participants.

.36 If the employer makes a contribution to the ESOP or pays dividends on unallocated shares that are used by the ESOP to repay the debt, the employer should charge the debt and accrued interest payable when the ESOP

[6] [Footnote deleted, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

makes the payment to the outside lender. Similarly, an employer sponsoring an ESOP with an indirect loan should report loan repayments as reductions of the debt and accrued interest payable.

.37 If the ESOP sells the suspense shares and uses the proceeds to repay the debt, the employer should report the release of the suspense shares as a credit to unearned ESOP shares based on the cost of the shares to the ESOP, charge debt, and accrued interest payable, and recognize the difference in paid-in capital. However, if there is a difference between the amount paid to an outside lender and the net carrying amount of the debt, paragraph 20 of APB Opinion No. 26, *Early Extinguishment of Debt*, as amended by FASB Statement of Financial Accounting Standards No. 4, *Reporting Gains and Losses from Extinguishment of Debt*,* requires that difference to be included in the employer's income when the debt is extinguished.

.38 If an employer reacquires the suspense shares from the ESOP, the purchase of the shares should be accounted for as a treasury stock transaction. The treasury stock should be reported at the fair value of the shares at the reacquisition date. Unearned ESOP shares should be credited for the cost of the shares, and the difference should be recognized in additional paid-in capital.

.39 If the fair value of the suspense shares on the termination date is more than the unpaid debt balance, the release of the remaining suspense shares to participants should be charged to compensation in accordance with paragraphs .14 to .18 of this SOP. That is, compensation cost should equal the fair value of the shares at the date the ESOP debt is extinguished, because that is when the shares are committed to be released.

Nonleveraged ESOPs

.40 An employer with a nonleveraged ESOP periodically contributes its shares or cash to its ESOP on behalf of employees. The shares contributed or acquired with the cash contributed, which may be outstanding shares, treasury shares, or newly issued shares, are allocated to participant accounts and held by the ESOP until distributed to the employees at a future date, such as on the date of termination or retirement. The shares of employer stock obtained by the nonleveraged ESOP must be allocated to individual participant accounts as of the end of the ESOP's fiscal year.

Reporting Purchase of Shares by ESOPs

.41 Employers with nonleveraged ESOPs should report compensation cost equal to the contribution called for in the period under the plan. Compensation cost should be measured as the fair value of the shares contributed to or committed to be contributed to the ESOP or as the cash contributed to or committed to be contributed to the ESOP, as appropriate under the terms of the plan.

Reporting Dividends on ESOP Shares

.42 Employers with nonleveraged ESOPs should charge dividends on shares held by the ESOPs to retained earnings, except that dividends on suspense account shares of a pension reversion ESOP should be accounted for the same way as dividends on suspense account shares of leveraged ESOPs.

---

* FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*, supersedes FASB Statement No. 4, *Reporting Gains and Losses from Extinguishment of Debt*. As noted in paragraph A5 of FASB Statement No. 145, the rescission of FASB Statement No. 4 does not affect paragraph 20 of APB Opinion No. 26, *Early Extinguishment of Debt*. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145.]

Reporting Redemptions of ESOP Shares

.43 Regardless of whether an ESOP is leveraged or nonleveraged, employers are required to give a put option to participants holding ESOP shares that are not readily tradable, which on exercise requires the employer to repurchase the shares at fair value. Furthermore, public company sponsors sometimes offer cash redemption options to participants who are eligible to withdraw traded shares from their accounts, which on exercise requires the employer to repurchase the shares at fair value. Employers should report the satisfaction of such option exercises as purchases of treasury stock.

Earnings per Share

.44 All shares held by a nonleveraged ESOP should be treated as outstanding in computing the employer's EPS, except the suspense account shares of a pension reversion ESOP, which should not be treated as outstanding until they are committed to be released for allocation to participant accounts. If a nonleveraged ESOP holds convertible preferred stock, the guidance in paragraphs .29 to .34 of this SOP for leveraged ESOPs should be considered.

Pension Reversion ESOPs

.45 An employer that terminates a defined benefit pension plan may avoid part of the excise tax on an asset reversion by transferring the assets to an existing or newly created ESOP, which could be either leveraged or nonleveraged. The reverted assets may be used either to purchase shares of the employer stock or to retire existing ESOP debt.

.46 If the assets from the pension plan are used by the ESOP to purchase employer shares, the employer should report the share issuance the same way as other share issuances to an ESOP. The issuance of shares or the sale of treasury shares to the ESOP should be recognized when it occurs, and a corresponding charge to unearned ESOP shares, a contra-equity account, should be reported. If the shares are purchased on the market, the employer should similarly charge unearned ESOP shares. (The credit would be to cash.)

.47 Because the number of shares the ESOP acquires in a pension plan reversion is usually more than the IRS permits to be allocated to participant accounts in a single year, some of the shares are held in a suspense account until they are committed to be released in future years for allocation to participant accounts. The guidance in this SOP, for shares held by leveraged ESOPs, should be applied to suspense account shares.

.48 If the assets from the pension plan reversion are used to repay the debt of an existing ESOP, ESOP shares are committed to be released from suspense. In such situations, the guidance for leveraged ESOPs in this SOP should be followed. The employer should reduce the debt as it is repaid and reduce unearned ESOP shares as shares are committed to be released. How the committed-to-be-released shares are used determines what accounts are charged upon release of shares (see paragraphs .14 to .18).

Issues Related to Accounting for Income Taxes

Leveraged ESOPs

.49 For employers with leveraged ESOPs, the amount of ESOP-related expense reported under this SOP for a period may differ from the amount of the ESOP-related income tax deduction (prescribed by income tax rules and regulations) for that period. Differences result if (*a*) the fair value of shares committed to be released differs from the cost of those shares to the ESOP and (*b*) the timing of expense recognition is different for income tax and financial reporting purposes. Such differences should be reported in accordance with FASB Statement No. 109, *Accounting for Income Taxes.* Similar differences arise from employee stock options. Paragraph 36e of Statement No. 109 requires that the tax effects of expenses for employee stock options recognized differently for financial reporting and tax purposes be recognized in the related component of shareholders' equity.

.50 In accordance with paragraph 36e of Statement No. 109, if the cost of shares committed to be released is greater than their fair value, the employer should credit the tax effect of the amount by which the deductible expense exceeds the book expense to shareholders' equity. Conversely, if the cost of shares committed to be released is less than their fair value, the employer should charge the tax effect of the amount by which the book expense exceeds the deductible expense to shareholders' equity to the extent of previous credits to shareholders' equity related to cost exceeding fair value of ESOP shares committed to be released in previous periods.

.51 Furthermore, the tax benefit of tax-deductible dividends on allocated ESOP shares should be recorded as a reduction of income tax expense allocated to continuing operations. Under paragraph 36f of FASB Statement No. 109, the tax benefit of tax-deductible dividends on unallocated ESOP shares that are charged to retained earnings should be credited to shareholders' equity. However, because dividends on unallocated shares would not be charged to retained earnings under this SOP, paragraph 36f of Statement No. 109 would not apply to ESOP shares accounted for under this SOP.

Nonleveraged ESOPs

.52 Employers with nonleveraged ESOPs may accrue compensation cost for financial reporting purposes earlier than the cost is deductible for income tax purposes. Accruing the compensation cost earlier for financial reporting purposes creates a temporary difference under Statement No. 109.

Disclosures

.53 An employer sponsoring an ESOP should disclose the following information about the plan, if applicable:

a. A description of the plan, the basis for determining contributions, including the employee groups covered, and the nature and effect of significant matters affecting comparability of information for all periods presented. For leveraged ESOPs and pension reversion ESOPs, the description should include the basis for releasing shares and how dividends on allocated and unallocated shares are used.

b. A description of the accounting policies followed for ESOP transactions, including the method of measuring compensation, the classification of dividends on ESOP shares, and the treatment of ESOP shares for EPS computations. If the employer has both old ESOP shares for which it does not adopt the guidance in this SOP and new ESOP shares for which the guidance in this SOP is required (see paragraphs .54 and .55), the accounting policies for both blocks of shares shall be described.

c. The amount of compensation cost recognized during the period.

d. The number of allocated shares, committed-to-be-released shares, and suspense shares held by the ESOP at the balance-sheet date. This disclosure should be made separately for shares accounted for under this SOP and for grandfathered ESOP shares (see paragraphs .54 and .55).

e. The fair value of unearned ESOP shares at the balance-sheet date for shares accounted for under this SOP. (Future tax deductions will be allowed only for the ESOP's cost of unearned ESOP shares.) This disclosure need not be made for old ESOP shares for which the employer does not apply the guidance in this SOP (see paragraphs .55 and .56).

f. The existence and nature of any repurchase obligation, including disclosure of the fair value[7] of the shares allocated as of the balance-sheet date, which are subject to a repurchase obligation.

Effective Date and Transition

.54 This SOP is effective for fiscal years beginning after December 15, 1993. The SOP should be adopted in the first interim period of an employer's fiscal year. Early application is permitted. Prospective application of the guidance in the SOP is required for shares acquired by ESOPs after December 31, 1992 (new ESOP shares) but not yet committed to be released as of the beginning of the year in which the SOP is adopted. No cumulative effect adjustment should be reported under this approach. Restatement of previously issued annual financial statements is not permitted.

.55 Application of all of the guidance in this SOP may be elected, and is encouraged, for shares acquired by ESOPs on or before December 31, 1992 (old ESOP shares). (Selective adoption of the guidance in this SOP is not permitted.) However, employers with ESOPs that do not adopt this SOP for shares held by ESOPs on December 31, 1992, should make all of the applicable disclosures required by paragraph .53. Employers electing to adopt this SOP for old ESOP shares in the first fiscal year beginning after December 15, 1993, or in the preceding year should apply the SOP prospectively to the old ESOP shares that have not yet been committed to be released as follows:

- Employers that applied the shares allocated method described in EITF Issue No. 89-8[8] should apply this SOP prospectively to those shares that have not yet been committed to be released as of the beginning of the year in which the SOP is adopted. No cumulative effect adjustment should be reported under this approach.
- Employers that did not apply the shares allocated method described in EITF Issue No. 89-8 should recognize as an expense in the period of adoption the difference between (*a*) the cumulative ESOP expense

[7] See paragraph .20 for guidance on fair value.

[8] In EITF Issue No. 89-8, *Expense Recognition for Employee Stock Ownership Plans*, the EITF reached a consensus that ESOP shares purchased after December 15, 1989, should be accounted for under the shares allocated method, which is described in that consensus. However, the consensus allows employers with shares purchased before December 15, 1989, to account for such shares under their current methods in certain circumstances.

recognized prior to the period of adoption of this SOP and (*b*) the cumulative expense that would have been recognized prior to the period of adoption of this SOP under the shares allocated method ([total shares committed to be released multiplied by cost of the shares to the ESOP] less cumulative dividends on ESOP shares). That difference should be reported as the cumulative effect of a change in accounting principle in accordance with APB Opinion No. 20, *Accounting Changes*, by including the cumulative effect of the change in income and crediting unearned ESOP shares in the period the SOP is first applied. However, pro forma disclosures are not required.

Restatement of previously issued annual financial statements is not permitted.

.56 Employers electing to adopt this SOP for old ESOP shares in a fiscal year later than the first fiscal year beginning after December 15, 1993, should apply the SOP retroactively through restatement of previously issued financial statements for all years beginning after December 15, 1993. The restatement of the financial statements for the first year beginning after December 15, 1993 (the earliest year restated) should be performed in accordance with paragraph .55. If the earliest year restated is not presented in the financial statements, the beginning balance of retained earnings (and, if necessary, additional paid-in capital) for the earliest year presented should be adjusted for the effect of the restatement as of that date.

.57 For employers that adopt this SOP in a period other than the period the ESOP shares were purchased, certain shares considered outstanding for EPS computations in prior years will no longer be considered outstanding for EPS purposes in the year of adoption. As noted above, restatement is not permitted, however, such employers should disclose the number of shares considered outstanding for EPS purposes in prior periods that are no longer considered outstanding in the current period.

.58 An employer may have both (1) old ESOP shares for which it does not adopt the guidance in this SOP and (2) new ESOP shares for which the guidance in this SOP is required. The measure of compensation cost for the old and new shares in this circumstance will differ. The identification of the shares released each year for financial reporting purposes should be the same as the identification of the shares released for ERISA purposes.

Discussion of Conclusions

.59 This section discusses considerations that were deemed significant by members of AcSEC in reaching the conclusions in this SOP. It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

Leveraged ESOPs

.60 AcSEC believes that all of the specific conclusions about employers' accounting for leveraged ESOP transactions follow from AcSEC's fundamental conclusion that the accounting for an ESOP's debt (financing element) should be separate from the accounting for an ESOP's shares (defined contribution element). Although the financing and defined contribution elements of leveraged ESOPs are related, each should be analyzed and reported separately, and the principles for reporting one element should not affect the principles for reporting the other. Under this SOP, each element is reported in accordance with its substance as it would be reported if it occurred as a separate transaction.

Accounting for Debt and Shares at the Inception of the ESOP

.61 When a leveraged ESOP is established, it borrows money and buys employer shares for cash. However, because the employer is the ultimate source of the cash to repay the debt and is the beneficiary of the financing, AcSEC believes that the substance of the transaction is that the cash is not a consideration to the employer for the shares but rather proceeds from a borrowing. The consideration to be received by the employer for placing the shares in the ESOP trust is future employee services. In fact, the ESOP acquires the shares before the employees have performed the services for which the shares are to compensate them.

.62 AcSEC believes that because the shares transferred from the employer to the ESOP when the ESOP is established are not exchanged for a receipt of assets or services, or for a reduction of liabilities, total shareholders' equity should remain unchanged. The transaction should be reported only as a change within equity until the shares are committed to be released for allocation to participant accounts for services provided. Furthermore, AcSEC believes that even if a leveraged ESOP buys shares on the market rather than from the employer and, therefore, the employer has no direct capital stock transaction and no direct cash inflow when establishing a leveraged ESOP, the employer should treat it as a leveraged ESOP. Such a situation is analogous to an employer selling newly acquired treasury stock to its ESOP. Therefore, shareholders' equity should be reduced by reporting the amount of the stock the ESOP acquires as unearned ESOP shares. Either cash or debt would be credited, depending on whether the ESOP is internally or externally leveraged.

.63 For employers with internally leveraged ESOPs (indirect and employer loans), AcSEC notes that the ESOP's note payable does not represent an obligation of the employer to transfer resources to the ESOP and that the employer's note receivable does not represent a claim by the employer on the ESOP's resources. Therefore, AcSEC concluded they should not be reported by the employer as a liability and as an asset, respectively.

Recognition and Measurement of Release of Shares

.64 AcSEC believes its conclusions on recognition and measurement follow from its conclusions that the debt and shares related to ESOP transactions should be accounted for separately. The substance of an employer's cash contribution to an ESOP is that the cash contribution is used for the payment of debt service on the employer's debt. It is the release of shares, not the employer's cash contribution, that represents the compensation of participants in connection with the defined contribution plan. AcSEC's objective is that the accounting reflect the terms of the exchange transactions that take place between an employer that provides compensation and the employees who render services in exchange for that compensation. To do that, AcSEC considered how the ESOP shares are used.

.65 A key concept introduced in this SOP is that employers may use ESOP shares for different purposes: to compensate employees directly, which was the primary use when SOP 76-3 [section 10,130] was issued; to settle liabilities for employee benefits, such as an employer's match under a 401(k) plan, that arise outside of the ESOP; or to replace dividends on allocated ESOP shares that are used for debt service. The accounting in each of those situations is discussed below.

.66 *Shares Used to Directly Compensate Employees.* For ESOP shares used to compensate employees directly, AcSEC addressed two issues: (*a*) when to record compensation and (*b*) when to measure compensation. AcSEC concluded that employers should record compensation when the shares are committed to be released, because AcSEC believes that is when the exchange between the employer and the employees of employer stock for services rendered occurs. Furthermore, AcSEC believes that the release of shares in a leveraged ESOP is analogous to the employer's contribution to a nonleveraged ESOP.

.67 In reaching its conclusion on when to record compensation, AcSEC also considered whether either the point at which ESOP shares are allocated or at which employees become vested in ESOP shares is significant for accounting purposes, but rejected both of those recognition dates.

.68 AcSEC notes that allocation is merely a mechanical process of assigning the released shares to individual participant accounts within the ESOP trust based on a known formula involving compensation, seniority, or both. AcSEC, therefore, believes that the allocation of shares is not significant for accounting purposes in recognizing compensation cost.

.69 Furthermore, AcSEC believes that vesting provisions, which determine *vested shares,* are not the most meaningful way for employers with ESOPs to relate compensation cost to services performed. ESOPs are defined contribution plans in which participants receive regular periodic awards subject to vesting provisions. AcSEC believes that, in plans such as ESOPs in which employees receive regular, periodic awards, the shares released each period are earned by providing that period's service even though the shares may not vest until later.[9] Furthermore, FASB Statement No. 87, *Employers' Accounting for Pensions*, states that for defined contribution plans, the pension cost should equal the contribution called for in the period. Vesting is not a factor in recognizing compensation costs for defined contribution pension plans.

.70 One of the most significant issues addressed in this SOP is the date on which compensation cost should be measured. Under current practice, compensation cost is measured at the date the ESOP purchases the shares, based on the ESOP's purchase price. AcSEC believes that compensation cost should be measured at the dates shares are committed to be released based on their current fair value, for the following reasons:

- APB Opinion 25, *Accounting for Stock Issued to Employees*, states that the measurement date for compensation is the first date on which the number of shares that an individual employee is entitled to receive is

---

[9] Allocated shares that have not vested may be forfeited by certain participants and reallocated to others. Under this SOP, the reallocation of forfeited shares does not result in a cost in the period the shares are reallocated. In fact, the increase or decrease in the fair value of such shares between the date the shares were originally released and the date they are reallocated may affect the number of shares needed to satisfy the employer's obligation to employees. Nevertheless, AcSEC believes that the costs associated with maintaining the records necessary to determine the effects of forfeitures on the employer's obligations and costs would exceed the benefits derived.

known. For ESOPs, the number of shares individual employees will receive is not determinable until the shares are committed to be released. Furthermore, paragraph 11e specifically notes that transferring shares to a trustee does not establish a measurement date for measuring compensation, even if the transfer is irrevocable, unless the identity of the recipient is known. (The general definition of measurement date in APB Opinion 25 supports the allocation date as the measurement date for a leveraged ESOP. However, AcSEC believes the special situations described in paragraphs 11a and 11c of APB Opinion 25 support measurement of compensation at the date shares are committed to be released. The total number of shares committed to be released for the current year's employee service is known prior to allocation and the shares must be allocated to individual employees' accounts as of the end of the ESOP's fiscal year.) Although APB Opinion 25 was issued before SOP 76-3 [section 10,130], AcSEC believes that, because of the significant changes in ESOPs since SOP 76-3 [section 10,130] was issued, the accounting in that SOP contrary to APB Opinion 25 is no longer appropriate.

- Using the fair value of the shares when the shares are committed to be released more accurately reflects the value of the services received by the employer. AcSEC believes an employer that sponsors a leveraged ESOP has entered into a transaction similar to an employer that borrows funds to buy treasury stock and later exchanges those shares with employees for services. Neither transaction should fix the employer's cost of providing employee benefits in the future.
- The risks and rewards of ownership of the shares rests with the employer until the shares are committed to be released, because of the large degree of control employers have (*a*) over how the ESOP debt will be repaid (for example, in some situations, an employer may prepay or refinance debt to achieve certain compensation goals) and (*b*) over an employee's compensation (for example, in some situations, an employer has the ability to change other parts of an employee's compensation package in reaction to changes in the value of the shares being released to maintain an overall competitive level of compensation).
- Measuring compensation based on current fair value conforms the accounting for leveraged and nonleveraged ESOPs. Instead of forming a leveraged ESOP, an employer could borrow and use the funds to buy treasury stock. Then, as the debt is repaid, the employer could contribute the treasury shares to a nonleveraged ESOP. Compensation cost would be measured and recognized based on the fair value of the shares when they are contributed or committed to be contributed to the nonleveraged ESOP. AcSEC believes that a leveraged ESOP and the transaction described in this paragraph have more similarities than differences, and that compensation should be measured in the same way for both.

.71 *Shares Used to Fund Liabilities for Other Employee Benefits.* AcSEC believes the employer's cost and liabilities for employee benefits that are funded with ESOP shares should be measured and recognized in the same way as if some other means of funding were used. The shares committed to be released represent funding or settlement of the employer's obligation for the benefits. To illustrate, assume the following facts about an employer with a leveraged ESOP:

- The ESOP shares are used to fund an employer match under its 401(k) savings plan equal to 50 percent of employee contributions.
- The market value of ESOP shares on the release date is used to determine (*a*) how many shares are allocated to particular participants and (*b*) whether the employer must provide cash or additional shares to fund the difference between the market value of the shares committed to be released and the employer's obligation under the savings plan.
- In period 1, employees contribute $1,000 to their 401(k) accounts and, accordingly, the employer must match $500.
- The market value of shares committed to be released to those employee accounts is $450; the cost of the shares committed to be released is $425.
- The employer issues additional shares with a fair value of $50 to the ESOP (*top-up shares*).

Under current practice for ESOPs, the employer would report compensation cost of $475 ($425 cost of shares plus $50 top-up), although its obligation to employees is $500 (50 percent of the employee contribution). Under this SOP, the employer would report compensation cost of $500, which is the amount AcSEC believes more accurately reflects the substance of the transaction.

.72 *Shares Used to Replace Dividends.* Similarly, AcSEC believes that for ESOP shares used to replace dividends on allocated shares that were used for debt service, the dividend payable is measured and recognized in the same way as if it were paid in cash. The shares committed to be released represent funding or settlement of the dividend payable.

Dividends

.73 Legally, dividends on allocated shares belong to ESOP participants and are not controlled by employers. Although employers may use those dividends to pay debt service, they must allocate shares to participant accounts to replace such dividends. AcSEC believes that dividends on allocated shares have the attributes of dividends, because employers have a liability to pay such dividends to an identifiable outside party in proportion to shares of ownership. Therefore, AcSEC believes that dividends on allocated shares should be charged to retained earnings.

.74 Although legally the dividends on unallocated ESOP shares belong to the ESOP, employers control the use of such dividends, the shares have not been exchanged for employee services, and are not considered outstanding for EPS purposes. The use of dividends on unallocated shares is usually determined by the employer when the ESOP is established. The employer may decide to use such dividends to compensate participants by adding the value of the dividends to participant accounts. Or, more commonly, the employer decides to use such dividends to pay debt service on the ESOP's debt, which the employer has reported as a liability. In all those situations, the employer controls, and benefits from, the use of the dividends on unallocated shares.

.75 If the employer decides to pay the dividends to participants or add the value of the dividends to participant accounts, no linkage exists within the ESOP trust between the ownership of the shares and the amount of dividends paid to participants.[10] AcSEC concluded that such dividends lack the normal attributes of dividends and that the employers are providing additional compensation to participants. Accordingly, such dividends should be charged to compensation cost.

.76 If the employer decides to use the dividends to pay debt service, there is no requirement that the employer replace those dividends or allocate additional shares to participants. Therefore, from the employer's perspective, the only economic event that has occurred when the employer uses dividends on ESOP suspense shares to pay debt service is that cash is transferred to a creditor of the employer (indirect or direct loans) for debt service or is retained by the employer (employer loans); no distribution to shareholders has occurred. AcSEC concluded that such dividends lack the normal attributes of dividends and should be reported as reductions of debt and interest payable.

.77 Under this SOP, dividends on committed-to-be-released-but-unallocated shares are not charged to retained earnings although, for financial reporting purposes, such shares have been exchanged for employee service and are considered outstanding for EPS computations. However, because employers do not relinquish control over the use of the dividends on ESOP shares until the shares are allocated, AcSEC believes that dividends on committed-to-be-released-but-unallocated shares should be treated the same way as dividends on other unallocated shares. AcSEC also notes that the treatment of dividends in other situations does not necessarily correspond with whether the shares are outstanding for EPS purposes. For example, in practice, dividends on restricted shares issued in conjunction with a restricted stock compensation plan are charged to retained earnings although the shares may be only partially outstanding for EPS purposes under the treasury stock method.

Unearned ESOP Shares

.78 AcSEC considered whether the contra-equity account representing unearned ESOP shares should be adjusted to fair value at each reporting date with a corresponding entry to paid-in-capital. However, because the fair value of unearned ESOP shares must be disclosed and there would be no effect on equity, AcSEC decided against such a requirement.

Redemption of Shares

.79 AcSEC believes that employer redemptions of ESOP shares from participants are purchases of treasury stock, even if there is a put option on the shares, and therefore believes that compensation cost should not be adjusted as the value of allocated shares changes. Employers whose shares are not readily tradable are required to give participants a put option, often called a liquidity put. AcSEC notes that such put options are given and shares are purchased from participants to comply with legal requirements and to make a market for the employer's shares. For employers whose shares are readily tradable, AcSEC views the cash redemption options primarily as a convenience to participants, to save them the brokerage commissions involved in the sale of what often may be small holdings and odd lots. Furthermore, ESOPs are nondiscriminatory benefit plans for substantially all employees, and participants may

[10] Under the IRC, if employers choose to pay dividends on suspense account shares to participants or to add those dividends to participant accounts, the allocation of the dividends must be nondiscriminatory among plan participants.

redeem their shares only at times permitted by law, typically on termination, hardship, or retirement. Accordingly, AcSEC believes that the existence of such options does not change the nature of an ESOP to that of a cash plan as described in paragraph 11g of APB Opinion 25.

Earnings per Share

.80 AcSEC believes that ESOP shares committed to be released and, accordingly, exchanged for employee services, are the same as other outstanding shares and should be treated as outstanding for EPS purposes. By contrast, AcSEC believes that ESOP shares that have not been committed to be released and, accordingly, not exchanged for employee services, should not be treated as outstanding for EPS purposes. AcSEC believes that this conclusion is consistent with its conclusion on reporting the release of shares in that the shares are not treated as issued until they are committed to be released.

.81 AcSEC believes that ESOP shares that have not been committed to be released are analogous to unpaid stock subscriptions, and the related consideration the employer will receive is future employee services rather than cash proceeds. Accordingly, AcSEC also considered whether the treasury stock method should be used to determine EPS similar to the way it is applied to unpaid stock subscriptions. However, AcSEC rejected the treasury stock method in favor of the released shares outstanding method, because the number of shares outstanding would be the same under either method and the released shares outstanding method is simpler to understand and apply.

ESOPs That Hold Convertible Preferred Stock

[.82] [Paragraph deleted, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.83 *Computation of Shares Issuable on Assumed Conversion.* If participants withdrawing shares from their accounts are entitled to additional common shares because the fair value or the stated minimum value of the convertible preferred shares exceeds the fair value of the common shares issuable upon conversion, AcSEC believes that the additional shares should be assumed issued in the if-converted EPS computations. Some believe that because employers may have the ability to pay cash to the ESOP trustee (who would then buy employer common stock on the market for those participants who choose common stock) instead of issuing common stock to participants directly, the additional shares should be excluded from the EPS computations. However, AcSEC believes that any issuer of convertible securities has the ability to buy shares on the market to satisfy conversion requirements and that such ability does not change the requirement to reflect the potential dilution from the convertible securities in EPS computations.

.84 ESOP convertible preferred stock has unique attributes, which AcSEC believes make it similar to convertible securities with variable conversion rates. AcSEC's recommendations in this section are based on that analogy. Because the varying conversion rates are purely a function of changes in fair values, which are unknown before they occur, AcSEC concluded that the additional shares issuable should be computed based on current period fair values for diluted EPS computations. [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.85 *Adjustment of Earnings Applicable to Common Stock.* When dividends on allocated ESOP shares are used to pay debt service, participants receive their dividends in shares rather than in cash. In the normal situation, if the preferred stock were converted to common stock, the common stock dividend would be less than the preferred stock dividend, the proportion of committed-to-be-released shares needed to replace dividends on allocated shares would be smaller after the assumed conversion, and the proportion of committed-to-be-released shares used to compensate participants for services would be greater after the assumed conversion. AcSEC believes the availability of a greater proportion of released shares to compensate participants is a nondiscretionary adjustment, as described in paragraph 26 of FASB Statement No. 128. Accordingly, earnings applicable to common stock in the if-converted computations should reflect the additional compensation cost that would arise from the assumed conversion. (Illustrations 4 and 5 of appendix A [paragraph .99] include this calculation.) [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

.86 AcSEC believes that cash dividends on allocated ESOP shares paid to participants or added to participant accounts should be treated the same way as dividends on non-ESOP convertible preferred stock, and, accordingly, concluded that adjustment of compensation cost for EPS computation purposes is unnecessary.

.87 Dividends on unallocated ESOP shares used to pay debt service are not treated as dividends for accounting purposes and, therefore, do not affect the if-converted EPS computations.

.88 Dividends on unallocated ESOP shares paid to participants or added to participant accounts are treated as compensation cost. That use of dividends and, consequently, the compensation provided to participants, is discretionary when the ESOP is established. Accordingly, AcSEC believes that the compensation cost arising from those dividends should not be adjusted in the if-converted EPS computations.

Terminations

.89 Although IRS and ERISA rules make it difficult, and often uneconomical, to terminate leveraged ESOPs and generally require a valid business reason—such as significant shrinkage in the work force or bankruptcy—for doing so, terminations and curtailments of ESOP plans occasionally occur. AcSEC believes that the conclusion that terminations or curtailments involving an ESOP's suspense shares should be accounted for as treasury stock transactions is consistent with the basic premise of this SOP—that the shares and debt should be accounted for separately. Another important consideration was that suspense shares are not considered outstanding for EPS computations.

.90 The accounting for terminations recommended in this SOP would result in a debit to paid-in capital when the fair value of the shares at the termination date is less than the cost of the shares to the ESOP and a credit to paid-in capital when the fair value of the shares at the termination date is more than the cost of the shares to the ESOP. AcSEC believes those debits or credits to equity are analogous to losses and gains on the employer's own stock, which should be excluded from income. Under this SOP, differences between the fair value and cost of ESOP shares used to settle employer liabilities are debited and credited to shareholders' equity. An ESOP termination is effectively the use of ESOP shares to settle the employer's liability for ESOP debt. Even if an employer has an internally leveraged ESOP with no related outside debt, AcSEC believes the reacquisition of the ESOP shares should be treated as a purchase of treasury stock because, under this SOP, the employer does not report the ESOP's note payable and does not report a note receivable from the ESOP, and the suspense shares have neither been considered outstanding for EPS nor exchanged for employee services.

.91 AcSEC provides the following example to illustrate the point. An ESOP borrows $1,000 and acquires 100 shares of employer stock for $10 per share (market price on the date acquired). The market price subsequently drops to $6 per share, and the employer decides to terminate its ESOP when there are 80 shares in suspense and an $800 debt balance. Accordingly, the employer would have to contribute an additional $320 ($800 less $6 multiplied by 80 shares) to retire the ESOP debt. AcSEC believes that the additional contribution is a result of a change in the value of the employer's shares, not of a change in the debt obligation. Therefore, the $320 should be charged to paid-in capital, not to income as an extinguishment loss or compensation expense. AcSEC believes the accounting treatment recommended for terminations is analogous to any company borrowing cash to buy shares of its own stock and later selling those shares to obtain cash to repay the debt. If the proceeds from the sale of the shares is insufficient to repay the debt because the fair value of the shares declined between the purchase and sale dates, the company will have to use additional cash to repay the debt. Such a transaction would have no impact on the company's income.

Nonleveraged ESOPs

.92 Although this SOP would not change how employers with nonleveraged ESOPs account for ESOP transactions, AcSEC believes it is helpful to include a discussion of nonleveraged ESOPs. The accounting described in this SOP for employers with nonleveraged ESOPs is based on the fact that nonleveraged ESOPs are defined contribution pension plans covered by FASB Statement No. 87. Therefore, the compensation cost for the period should generally equal the contribution called for in the period. The shares or cash that an employer contributes or commits to contribute to a nonleveraged ESOP for a period is consideration for employee services rendered during that period.

Pension Reversion ESOPs

.93 If the excess assets from a pension reversion are used to purchase ESOP shares, the shares in excess of the amount that may be allocated to participants in the year of the reversion are held in a suspense account and allocated in future years. The suspense account shares arising from a pension reversion do not collateralize a borrowing, and the release of such shares is not based on debt service payments. However, in most other respects, such suspense account shares are the same as the suspense account shares in a leveraged ESOP, and, accordingly, AcSEC concluded that they should be accounted for in the same way as suspense account shares of leveraged ESOPs.

Income Taxes

.94 Although FASB Statement No. 109, *Accounting for Income Taxes*, does not explicitly address how to treat differences between the fair value and the cost of ESOP shares committed to be released, it does address expenses for employee stock options recognized differently for financial reporting and tax purposes, which AcSEC believes is analogous to ESOPs. The FASB decided to make no changes to paragraph 17 of APB Opinion 25, which prohibits reporting the related tax effect of such differences as a part of income and requires that they be reported as charges or credits directly to related components of shareholders' equity.

Disclosures

.95 AcSEC notes that the disclosures in paragraph .53f related to repurchase obligations are a minimum requirement. AcSEC recognizes that employers may wish to disclose additional information about the obligation, particularly information about the timing of payments.

Transition

.96 AcSEC believes that transition, to a significant extent, is a practical matter. A major objective of transition is to minimize implementation costs and to mitigate disruption to the extent possible without unduly compromising the objectives of the accounting guidance in this SOP and consistency among reporting entities.

.97 In deciding to grandfather shares held by ESOPs as of December 31, 1992, AcSEC was most influenced by its perception that it would be unfair to employers with existing ESOPs to change their accounting for ESOPs currently in place. The decision to establish an ESOP is complex and involves the consideration of many factors, such as IRS and ERISA regulations, employee compensation matters, and possible other uses of debt proceeds, as well as how the ESOP will affect earnings during its term. ESOPs are long-term undertakings, they are costly to establish, and they cannot be undone easily. For many employers, the accounting treatment, which was covered in SOP 76-3 [section 10,130], was an important consideration in establishing their ESOPs.

Minority View

.98 Four AcSEC members dissent to the issuance of this SOP, because they believe that fair value of shares released should not be used to measure compensation cost of certain ESOPs. The dissenters believe there are two types of ESOPs, as follows:

- *Type I*—Shares are released to compensate employees directly. Such ESOPs are not used to fund other employee benefits and the fair value of the shares released is not a factor in determining the number of shares to be allocated to employees. These ESOPs are typical of the ESOPs that commonly existed at the time SOP 76-3 [section 10,130] was issued.

- *Type II*—Shares are released to settle or fund liabilities for other specified or determinable employee benefits, such as an employer's match of a 401(k) plan. The fair value of shares released is used to determine how many shares are needed to satisfy an obligation that arose outside the ESOP.

The dissenters believe that Type I ESOPs should be excluded from the scope of the SOP because the current accounting guidance for Type I ESOPs continues to be relevant and the costs of applying the SOP to Type I ESOPs are not justified. They believe this SOP on employers' accounting for ESOP transactions should cover only the ESOPs for which there is concern that the current accounting is inappropriate. The dissenters believe that the measurement date to recognize compensation expense for Type I ESOPs should continue to be the date the shares are purchased by the ESOP, because that is when the risks and rewards associated with the value of the ESOP shares are transferred from the employer to employees. In contrast, the dissenters agree with the accounting in this SOP for Type II ESOPs.

.99

Appendix A

Illustrations

This appendix contains illustrations of the requirements of this SOP for employers with the following kinds of ESOPs:

- *Illustration 1*—A common-stock leveraged ESOP with a direct loan
- *Illustration 2*—A common-stock leveraged ESOP used to fund the employer's match of a 401(k) savings plan with an indirect loan
- *Illustration 3*—A common-stock nonleveraged ESOP
- *Illustration 4*—A convertible-preferred-stock leveraged ESOP with a direct loan [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]
- *Illustration 5*—A convertible, preferred-stock, leveraged ESOP used to fund a 401(k) savings plan with an employer loan [Revised, November 1998, to reflect conforming changes necessary due to the issuance of FASB Statement No. 128.]

The illustrations do not address all possible circumstances that may arise in applying the SOP. The illustrations are for annual reporting periods and, accordingly, do not demonstrate the application of the SOP to interim financial statements. However, depending on the circumstances, many of the journal entries illustrated would be made for interim financial statements.

Illustration 1

Common Stock Leveraged ESOP With a Direct Loan

Assumptions

On January 1, Year 1, Company A establishes a leveraged ESOP as follows:

- The ESOP borrows $1,000,000 from an outside lender at 10 percent for five years and uses the proceeds to buy 100,000 shares of newly issued common stock of the sponsor for $10 per share, which is the market price of those shares on the date of issuance.
- Debt service is funded by cash contributions and dividends on employer stock held by the ESOP.
- Dividends on all shares held by the ESOP are used for debt service.
- Cash contributions are made at the end of each year.
- The year-end and average market values of a share of common stock follow:

Table 1-a

Year	*Year-end*	*Average*
1	$11.50	$10.75
2	9.00	10.25
3	10.00	9.50
4	12.00	11.00
5	14.40	13.20

- The common stock pays normal dividends at the end of each quarter of 12.5 cents per share ($50,000 for the ESOP's shares each year). Accordingly, in this illustration, the average fair value of shares is used to determine the number of shares used to satisfy the employers' obligation to replace dividends on allocated shares used for debt service.
- Principal and interest are payable in equal annual installments at the end of each year. Debt service is as follows:

Table 1-b

Year	*Principal*	*Interest*	*Total Debt Service*
1	$ 163,800	$100,000	$ 263,800
2	180,200	83,600	263,800
3	198,200	65,600	263,800
4	218,000	45,800	263,800
5	239,800	24,000	263,800
	$1,000,000	$319,000	$1,319,000

- The number of shares released each year is as follows:

Table 1-c

Year	*Dividends*	*Compensation*	*Total*
1	0	20,000	20,000
2	976	19,024	20,000
3	2,105	17,895	20,000
4	2,727	17,273	20,000
5	3,030	16,970	20,000

The number of shares released for dividends is determined by dividing the amount of dividends on allocated shares by the average fair value of a share of common stock (for year 2: $10,000 divided by $10.25 equals 976 shares). In this illustration, the remaining shares are released for compensation (for year 2: 20,000 less 976 equals 19,024 shares).

- Shares are released from the suspense account for allocation to participants' accounts based on a principal-plus-interest formula. The released shares are allocated to participant accounts the following year. Shares released and allocated follow:

Table 1-d

	Cumulative Number of Shares		*Average Shares*	*Year-End Suspense*
Year	*Released*	*Allocated*	*Released*	*Shares*
1	20,000	0	10,000	80,000
2	40,000	20,000	30,000	60,000
3	60,000	40,000	50,000	40,000
4	80,000	60,000	70,000	20,000
5	100,000	80,000	90,000	0

- Income before ESOP-related charges is as follows:

Table 1-e

Year	*Income*
1	$1,800,000
2	1,900,000
3	2,000,000
4	2,100,000
5	2,200,000

- All interest cost and compensation cost are charged to expense each year.
- Excluding ESOP shares, 1,000,000 shares are outstanding on average each year.
- Company A follows FASB Statement No. 109.
- Company A's combined statutory tax rate is 40 percent each year.
- Company A's only book/tax differences are those associated with its ESOP.

- No valuation allowance is necessary for deferred tax assets.

Results of Applying SOP

The following table sets forth Company A's ESOP-related information. All amounts represent changes (credits in parentheses) in account balances.

Year	*Principal*	*Unearned ESOP Shares*	*Paid-In Capital*	*Dividends*	*Interest Expense*	*Compensation Expense*	*Cash*
Notes	*(1)*	*(2)*	*(3)*	*(4)*	*(1)*	*(5)*	*(6)*
1	$ 163,800	$ (200,000)	$(15,000)	$ 0	$100,000	$215,000	$ (263,800)
2	180,200	(200,000)	(5,000)	10,000	83,600	195,000	(263,800)
3	198,200	(200,000)	10,000	20,000	65,600	170,000	(263,800)
4	218,000	(200,000)	(20,000)	30,000	45,800	190,000	(263,800)
5	239,800	(200,000)	(64,000)	40,000	24,000	224,000	(263,800)
Total	$1,000,000	$(1,000,000)	$(94,000)	$100,000	$319,000	$994,000	$(1,319,000)

Notes:

(1) See table 1-b.

(2) Total number of shares released for year (20,000) multiplied by the cost per share to ESOP ($10).

(3) Total number of shares released for year (20,000) multiplied by the difference between average fair value per share (see table 1-a) and cost per share to ESOP ($10). [Year 1: 20,000 shares multiplied by ($10.75-$10.00)]

(4) Cumulative number of allocated shares (see table 1-d) multiplied by the dividend per share. [Year 2: 20,000 shares multiplied by $.50]

(5) Number of shares released for compensation (see table 1-c) multiplied by the average fair value per share for the period (see table 1-a). The amounts in this column have been rounded.

(6) The cash disbursed each year is comprised of $213,800 contribution and $50,000 in dividends.

Journal Entries

Company A would record journal entries from inception through year 5 as follows:

January 1, Year 1 (inception)

Cash	1,000,000	
Debt		1,000,000
[To record the ESOP's loan]		
Unearned ESOP shares (equity)	1,000,000	
Common stock and paid-in capital		1,000,000
[To record the issuance of 100,000 shares to the ESOP at $10 per share]		
Year 1		
Interest expense	100,000	
Accrued interest payable		100,000
[To record interest expense]		

Accrued interest payable	100,000	
Debt	163,800	
Cash		263,800

[To record debt payment (The cash disbursement of $263,800 consists of $50,000 in dividends, none of which is charged to retained earnings in year 1, and $213,800 supplemental cash contribution to the ESOP)]

Compensation expense	215,000	
Paid-in capital		15,000
Unearned ESOP shares		200,000

[To record release of 20,000 shares at an average fair value of $10.75 per share (shares cost ESOP $10)]

Deferred tax asset	14,480	
Provision for income taxes	600,000	
Income taxes payable		614,480

[To record income taxes for year 1 (See tax computations following journal entries)]

Year 2

Interest expense	83,600	
Accrued interest payable		83,600

[To record interest expense]

Accrued interest payable	83,600	
Debt	180,200	
Cash		263,800

[To record debt payment (The cash disbursement of $263,800 consists of $50,000 in dividends, $10,000 of which is charged to retained earnings in year 2, and $213,800 supplemental cash contribution to the ESOP)]

Retained earnings	10,000	
Dividends payable		10,000

[To record declaration of $.50 per share dividend on the 20,000 allocated shares]

Compensation expense	195,000	
Dividends payable	10,000	
Paid-in capital		5,000
Unearned ESOP shares		200,000

[To record release of 20,000 shares (19,024 for compensation and 976 for dividends) at an average fair value of $10.25 per share (shares cost ESOP $10 per share)]

Deferred tax asset	7,920	
Provision for income taxes	646,560	
Income taxes payable		654,480

[To record income taxes for year 2 (See tax computations following journal entries)]

Year 3

Interest expense	65,600	
Accrued interest payable		65,600

[To record interest expense]

Accrued interest payable	65,600	
Debt	198,200	
Cash		263,800
[To record debt payment]		
Retained earnings	20,000	
Dividends payable		20,000
[To record declaration of $.50 per share dividend on the 40,000 allocated shares]		
Compensation expense	170,000	
Dividends payable	20,000	
Paid-in capital	10,000	
Unearned ESOP shares		200,000
[To record release of 20,000 shares (17,895 for compensation and 2,105 for dividends) at an average fair value of $9.50 per share (shares cost ESOP $10 per share)]		
Deferred tax asset	720	
Provision for income taxes	697,760	
Paid-in capital		4,000
Income taxes payable		694,480
[To record income taxes for year 3 (See tax computations following journal entries)]		

Year 4

Interest expense	45,800	
Accrued interest payable		45,800
[To record interest expense]		
Accrued interest payable	45,800	
Debt	218,000	
Cash		263,800
[To record debt payment]		
Retained earnings	30,000	
Dividends payable		30,000
[To record declaration of $.50 per share dividend on the 60,000 allocated shares]		
Compensation expense	190,000	
Dividends payable	30,000	
Paid-in capital		20,000
Unearned ESOP shares		200,000
[To record release of 20,000 shares (17,273 for compensation and 2,727 for dividends) at an average fair value of $11.00 per share (shares cost ESOP $10 per share)]		
Provision for income taxes	737,680	
Paid-in capital	4,000	
Deferred tax asset		7,200
Income taxes payable		734,480
[To record income taxes for year 4, see tax computations following journal entries]		

Year 5

Interest expense	24,000	
Accrued interest payable		24,000
[To record interest expense]		
Accrued interest payable	24,000	
Debt	239,800	
Cash		263,800
[To record debt payment]		
Retained earnings	40,000	
Dividends payable		40,000
[To record declaration of $.50 per share dividend on the 80,000 allocated shares]		
Compensation expense	224,000	
Dividends payable	40,000	
Paid-in capital		64,000
Unearned ESOP shares		200,000
[To record release of 20,000 shares (16,970 for compensation and 3,030 for dividends) at an average fair value of $13.20 per share (shares cost ESOP $10 per share)]		
Provision for income taxes	790,400	
Deferred tax asset		15,920
Income taxes payable		774,480
[To record income taxes for year 5, see tax computations following journal entries]		

Illustration of Termination

Assuming Company A terminates its ESOP at the end of year 2 (when the fair value of the suspense shares is $540,000 [60,000 shares multiplied by $9 per share], the unearned compensation balance is $600,000, and the unpaid debt balance is $656,000), and assuming the suspense shares are sold to pay down the debt, Company A would make the following journal entry:

Debt	656,000	
Additional paid-in capital	60,000	
Unearned ESOP shares		600,000
Cash		116,000
[To record repayment of the ESOP's loan and termination of the plan]		

Tax and EPS Computations

The following tables set forth Company A's tax (assuming no termination) and EPS computations:

	Year				
	1	*2*	*3*	*4*	*5*
Income before ESOP	$1,800,000	$1,900,000	$2,000,000	$2,100,000	$2,200,000
Interest expense	(100,000)	(83,600)	(65,600)	(45,800)	(24,000)
Compensation expense	(215,000)	(195,000)	(170,000)	(190,000)	(224,000)
Pretax income	1,485,000	1,621,400	1,764,400	1,864,200	1,952,000
Provision for income tax					
Currently payable	614,480	654,480	694,480	734,480	774,480
Deferred	(14,480)	(7,920)	(720)	7,200	15,920
Shareholders' equity	-0-	-0-	4,000†	(4000)†	-0-
Total	600,000	646,560	697,760	737,680	790,400
Net income	$ 885,000	$ 974,840	$1,066,640	$1,126,520	$1,161,600
Average shares outstanding	1,010,000	1,030,000	1,050,000	1,070,000	1,090,000
Earnings per share	$ .88	$ .95	$ 1.02	$ 1.05	$ 1.07

Tax Computations

	Year

ESOP dividends	(50,000)	(50,000)	(50,000)	(50,000)	(50,000)
Taxable income	1,536,200	1,636,200	1,736,200	1,836,200	1,936,200
Multiplied by 40 percent	$ 614,480	$ 654,480	$ 694,480	$ 734,480	$ 774,480
Deferred provision:					
Reduction in unearned ESOP shares for financial reporting	$ 200,000	$ 200,000	$ 200,000	$ 200,000	$ 200,000
Related tax deduction‡	163,800	180,200	198,200	218,800	239,800
Difference	(36,200)	(19,800)	(1,800)	18,000	39,800
Tax rate	40%	40%	40%	40%	40%
Deferred tax expense/ (benefit)	$ (14,480)	$ (7,920)	$ (720)	7,200	15,920

† See paragraph .50. In year 3, the amount is calculated as follows: 20,000 shares released multiplied by $.50 excess cost over average fair value per share multiplied by 40 percent tax rate.

‡ This amount is the principal repayment.

Reconciliation of Effective Tax Rate to Provision for Income Taxes

	Year				
	1	*2*	*3*	*4*	*5*
Pretax income	$1,485,000	$1,621,400	$1,764,400	$1,864,200	$1,952,000
Tax at 40 percent (statutory rate)	594,000	648,560	705,760	745,680	780,800
Benefit of ESOP dividends	-0-	(4,000)	(8,000)	(12,000)	(16,000)
Effect of difference between average fair value and cost of released shares	6,000	2,000	-0-	4,000	25,600
Provision as reported	$ 600,000	$ 646,560	$ 697,760	$ 737,680	$ 790,400

Illustrative Disclosure for End of Year 3

The company sponsors a leveraged employee stock ownership plan (ESOP) that covers all U.S. employees who work twenty or more hours per week. The company makes annual contributions to the ESOP equal to the ESOP's debt service less dividends received by the ESOP. All dividends received by the ESOP are used to pay debt service. The ESOP shares initially were pledged as collateral for its debt. As the debt is repaid, shares are released from collateral and allocated to active employees, based on the proportion of debt service paid in the year. The company accounts for its ESOP in accordance with Statement of Position 93-6. Accordingly, the debt of the ESOP is recorded as debt and the shares pledged as collateral are reported as unearned ESOP shares in the statement of financial position. As shares are released from collateral, the company reports compensation expense equal to the current market price of the shares, and the shares become outstanding for earnings-per-share (EPS) computations. Dividends on allocated ESOP shares are recorded as a reduction of retained earnings; dividends on unallocated ESOP shares are recorded as a reduction of debt and accrued interest. ESOP compensation expense was $170,000, $195,000, and $215,000 for years 3, 2, and 1, respectively. The ESOP shares as of December 31 were as follows:

	Year 3	*Year 2*
Allocated shares	40,000	20,000
Shares released for allocation	20,000	20,000
Unreleased shares	40,000	60,000
Total ESOP shares	100,000	100,000
Fair value of unreleased shares at December 31	$400,000	540,000

Illustration 2

Common Stock Leveraged ESOP Used to Fund the Employer's Match of a 401(k) Savings Plan With an Indirect Loan

Assumptions

On January 1, Year 1, Company B established an ESOP to fund the employer's match of its savings plan as follows:

- All of the assumptions are the same as those for Company A, except as follows.
- Company B loaned its ESOP $1,000,000 and concurrently obtained a related loan. The terms of both lending arrangements are the same as for Company A's outside loan.
- Company B uses shares released by the ESOP to satisfy its matching obligation of 50 percent of voluntary employee contributions to the savings plan. The average fair value of the shares for each year is used to determine the number of shares necessary to satisfy the matching obligation.
- If the fair value of the shares released is less than Company B's matching obligation, Company B contributes additional newly issued shares to the ESOP to satisfy the remaining obligation.
- Shares used to replace dividends on allocated shares used to service debt do not count toward the employer's match.
- The employee contributions, required employer match, and the number of shares needed to fund the employee match follow:

Table 2-a

Year	*Employee Contributions*	*Employer Match*	*Number of Shares*
1	$400,000	$200,000	18,605
2	410,000	205,000	20,000
3	420,000	210,000	22,105
4	430,000	215,000	19,545
5	440,000	220,000	16,667

Note: The number of shares needed to satisfy the employer's matching obligation is determined by dividing the matching obligation by the average fair value of a share of common stock [for year 1: $200,000 divided by $10.75 (See table 1-a for average fair values) equals 18,605 shares].

- The 20,000 shares released each year based on debt service payments follow:

Table 2-b

Year	*Number of Shares Needed to Settle 401(k) Liability*	*Total ESOP Shares Released*	*ESOP Shares Used for Dividends*	*ESOP Shares Available to Settle 401(k) Liability*	*Compensation (Additional Shares)*	*Top-Up (Additional Shares)*
Notes	*(1)*	*(2)*	*(3)*	*(4)*	*(5)*	*(6)*
1	18,605	20,000	-0-	20,000	1,395	-0-
2	20,000	20,000	976	19,024	-0-	976
3	22,105	20,000	2,105	17,895	-0-	4,210
4	19,545	20,000	2,727	17,273	-0-	2,272
5	16,667	20,000	3,030	16,970	303	0

Notes:

(1) See table 2-a.

(2) See assumptions.

(3) See table 1-c.

(4) Total ESOP shares released minus ESOP shares used for dividends.

(5) If the ESOP shares needed to settle the 401(k) liability (column 1) are less than the ESOP shares available to settle the liability (column 4), then the remaining shares are considered compensation (this is the case in years 1 and 5).

(6) If the ESOP shares needed to settle the 401(k) liability (column 1) are greater than the ESOP shares available to settle the liability (column 4), then the shortfall must be made up by the employer in the form of top-up shares (this is the case in years 2, 3, and 4).

- Cumulative share amounts follow:

Table 2-c

	Cumulative Number of Shares		*Total Suspense*
Year	*Released*	*Allocated*	*Shares*
1	20,000	-0-	80,000
2	40,976	20,000	60,000
3	65,186	40,976	40,000
4	87,458	65,186	20,000
5	107,458	87,458	-0-

Note: Dividends on top-up shares are paid in cash. Cumulative shares released include top-up shares.

Results of Applying SOP

The following table sets forth Company B's ESOP-related information. All amounts represent changes (credits in parentheses) in account balances.

Year	Principal	Unearned ESOP Shares	Paid-In Capital	Dividends	Interest Expense	Compensation Expense ESOP	Compensation Expense Top-Up	Cash
Notes	(1)	(2)	(3)	(4)	(1)	(5)	(6)	(7)
1	$ 163,800	$ (200,000)	$ (15,000)	$ -0-	$100,000	$215,000	$ -0-	$ (263,800)
2	180,200	(200,000)	(15,000)	10,000	83,600	195,000	10,000	(263,800)
3	198,200	(200,000)	(30,000)	20,500	65,600	170,000	40,000	(264,300)
4	218,000	(200,000)	(45,000)	32,600	45,800	190,000	25,000	(266,400)
5	239,800	(200,000)	(64,000)	43,700	24,000	224,000	-0-	(267,500)
Total	$1,000,000	$(1,000,000)	$(169,000)	$106,800	$319,000	$994,000	$75,000	$(1,325,800)

Notes:

(1) See table 1-b.

(2) Number of shares released during the year (20,000) multiplied by the cost per share to ESOP ($10).

(3) Number of shares released during the year (20,000) multiplied by the difference between average fair value per share (see table 1-a) and cost per share to the ESOP ($10) plus the additional paid-in capital that arises from the top-up shares contributed, which equals the compensation expense related to the top-up.

(4) Cumulative shares allocated (see table 2-c) multiplied by the dividend per share ($.50).

(5) Number of ESOP shares released for direct compensation plus number of shares released related to employer's match of 401(k) (see table 2-b) multiplied by the average fair value per share (see table 1-a).

(6) Additional shares contributed (top-up) to satisfy the 401(k) obligation (see table 2-b) multiplied by the fair value of shares contributed.

(7) The cash disbursed to the ESOP each year is composed of $213,800 contribution; $50,000 in dividends on original ESOP shares; and dividends on top-up shares of $500 in year 3, $2,600 in year 4, and $3,700 in year 5.

Journal Entries

Company B would record journal entries from inception through year 2 as follows:

January 1, Year 1 (inception)

Cash	1,000,000	
Debt		1,000,000
[To record loan]		
Unearned ESOP shares (equity)	1,000,000	
Common stock and additional paid-in capital		1,000,000
[To record the issuance of 100,000 shares to the ESOP at $10 per share]		
Year 1		
Interest expense	100,000	
Accrued interest payable		100,000
[To record interest expense]		

Accrued interest payable	100,000	
Debt	163,800	
Cash		263,800

[To record debt payment (The cash disbursement of $263,800 consists of $50,000 in dividends, none of which was charged to retained earnings in year 1, and $213,800 supplemental cash contribution to the ESOP)]

Compensation expense	200,000	
401(k) liability		200,000

[To record cost and liability related to employer's 401(k) match, which represents 50 percent of employee contributions]

401(k) liability	200,000	
Compensation expense	15,000	
Unearned ESOP shares		200,000
Paid-in capital		15,000

[To record release of 20,000 shares at an average fair value of $10.75 per share, 18,605 shares are used to satisfy 401(k) liability and the remaining 1,395 are used to compensate participants directly (shares cost ESOP $10 per share)]

Deferred tax asset	14,480	
Provision for income taxes	600,000	
Income taxes payable		614,480

[To record income taxes for year 1 (See illustration 1 for detailed tax computation)]

Year 2

Interest expense	83,600	
Accrued interest payable		83,600

[To record interest expense]

Accrued interest payable	83,600	
Debt	180,200	
Cash		263,800

[To record debt payment (The cash disbursement of $263,800 consists of $50,000 in dividends, $10,000 of which was charged to retained earnings in year 2, and $213,800 supplemental cash contribution to the ESOP)]

Compensation expense	205,000	
401(k) liability		205,000

[To record cost and liability related to employer's 401(k) match, which represents 50 percent of employee contributions]

Retained earnings	10,000	
Dividends payable		10,000

[To record declaration of $.50 per share dividend on the 20,000 allocated shares]

401(k) liability	205,000	
Dividends payable	10,000	
Unearned ESOP shares		200,000
Common stock/paid-in capital		15,000

[To record release of 20,000 shares plus contribution of an additional 976 shares to the ESOP at an average fair value of $10.25 per share, 20,000 shares are used to satisfy 401(k) liability and the remaining 976 shares are used to replace dividends on allocated shares used for debt service (shares cost ESOP $10 per share)]

Deferred tax asset	7,920	
Provision for income taxes	642,560	
Income taxes payable		650,480

[To record income taxes for year 2 (See illustration 1 for detailed tax computation)]

Note: Journal entry differs from Illustration 1 because Company B receives an additional $10,000 deduction ($4,000 tax benefit) for the 976 top-up shares.

Illustration of Termination

Assuming Company B terminated its ESOP at the end of year 4 (when the fair value of the suspense shares is $240,000, the unearned ESOP shares balance is $200,000, and the unpaid debt balance is $239,800), and assuming the employer buys back the suspense shares in an amount equal to the debt balance, there will be seventeen suspense shares left, which must be allocated to participants. (In this illustration the shares are used to partially satisfy the employer's 401(k) matching obligation.) Company B would make the following journal entry:

Treasury stock	39,800	
401(k) liability	204	
Additional paid-in-capital		40,004
Unearned ESOP shares		200,000

[To record repurchase of ESOP suspense shares and termination of the plan]

Debt	239,800	
Cash		239,800

[To record repayment of the ESOP's loan]

Tax and EPS Computations

Company B's taxes would be computed the same way as Company A's. For Company B the average number of ESOP shares outstanding would be as follows:

Year	*ESOP Shares Outstanding*
1	10,000
2	30,488
3	53,081
4	76,322
5	97,458

This represents the cumulative numbers of shares released at the beginning of the year plus the end of the year (see table 2-c) divided by 2.

Illustrative Disclosure for End of Year 3

The company sponsors a 401(k) savings plan under which eligible U.S. employees may choose to save up to 6 percent of salary income on a pre-tax basis, subject to certain IRS limits. The company matches 50 percent of employee contributions with company common stock. The shares for this purpose are provided principally by the company's employee stock ownership plan (ESOP), supplemented as needed by newly issued shares. The company makes annual contributions to the ESOP equal to the ESOP's debt service less dividends received by the ESOP. All dividends received by the ESOP are used to pay debt service. The ESOP shares initially were pledged as collateral for its debt. As the debt is repaid, shares are released from collateral and allocated to employees who made 401(k) contributions that year, based on the proportion of debt service paid in the year. The company accounts for its ESOP in accordance with Statement of Position 93-6. Accordingly, the shares pledged as collateral are reported as unearned ESOP shares in the statement of financial position. As shares are released from collateral, the company reports compensation expense equal to the current market price of the shares, and the shares become outstanding for EPS computations. Dividends on allocated ESOP shares are recorded as a reduction of retained earnings; dividends on unallocated ESOP shares are recorded as a reduction of debt and accrued interest.

Compensation expense for the 401(k) match and the ESOP was $210,000, $205,000, and $215,000 for years 3, 2, and 1, respectively. The ESOP shares as of December 31 were as follows:

	Year 3	*Year 2*
Allocated shares	40,976	20,000
Shares released for allocation	24,210	20,976
Unreleased shares	40,000	60,000
Total ESOP shares	105,186	100,976
Fair value of unreleased shares at December 31	$400,000	$540,000

Illustration 3

Common Stock Nonleveraged ESOP

Assumptions

On January 1, Year 1, Company C established a nonleveraged ESOP as follows:

- Company C contributed 10 percent of pretax profit before ESOP-related charges to the ESOP at the end of each of years 1 through 5; the ESOP bought newly issued employer stock with the contribution.
- The number of shares, earnings, tax, and other relevant assumptions are the same as those for Company A.

Results of Applying SOP

The following chart sets forth Company C's ESOP-related information:

Year	*Compensation Expense*	*Dividends*	*Number of ESOP Shares Purchased*	*Cumulative ESOP Shares*
1	$180,000	$ -0-	15,652	15,652
2	190,000	7,830	21,111	36,763
3	200,000	18,380	20,000	56,763
4	210,000	28,380	17,500	74,263
5	220,000	37,130	15,278	89,541

The year-end market value is used in this illustration to determine the number of ESOP shares purchased. [Year 1: $180,000 divided by $11.50 (See table 1-a) equals 15,652]

Journal Entries

Company C would record journal entries for years 1 and 2 as follows:

Year 1

Compensation expense	180,000	
Common stock/paid-in capital		180,000

[To record contribution, sale of shares, and compensation expense]

Provision for income taxes	648,000	
Income taxes payable		648,000

[To record income taxes at 40 percent for year 1 on earnings of $1,620,000 ($1,800,000 pre-ESOP income less ESOP compensation of $180,000)]

Year 2

Compensation expense	190,000	
Retained earnings	7,830	
Common stock/paid-in capital		190,000
Dividends payable		7,830

[To record contribution, sale of shares, declaration of dividends, and compensation expense]

Dividends payable	7,830	
Cash		7,830
[To record payment of dividends]		
Provision for income taxes	684,000	
Income taxes payable		684,000

[To record income taxes at 40 percent for year 2 on earnings of $1,710,000 ($1,900,000 pre-ESOP income less ESOP compensation of $190,000)]

Illustration 4

Convertible Preferred Stock Leveraged ESOP With a Direct Loan

Assumptions

On January 1, Year 1, Company D established an ESOP with convertible preferred stock as follows:

- The borrowing, debt service, earnings, and tax assumptions are the same as those for Company A.
- On January 1, Year 1, the ESOP used the proceeds of the debt to buy 80,000 shares of newly issued convertible preferred stock of Company D for $12.50 per share.
- The preferred stock pays dividends quarterly at an annual rate of $1.25 per share ($100,000 each year for the ESOP's shares). Accordingly, in this illustration the average fair value of the shares is used to determine the number of shares used to satisfy the employer's obligation to replace dividends on allocated shares used for debt service.
- All dividends on ESOP shares are used for debt service.
- The preferred stock is convertible into common stock at 1:1 ratio.
- Participants may not withdraw the convertible preferred stock from the ESOP. When participants become eligible to withdraw shares from their account, they must either convert to common stock or redeem the preferred shares.
- The preferred stock has a guaranteed minimum redemption value of $12.50 per share, to be paid in shares of common stock.
- The preferred stock is callable at $13.00 per share.
- There is one vote per preferred share.
- The year-end and average fair values of a share of preferred stock (fair value is assumed to be greater than or equal to minimum value) follow:

Table 4-a

Year	*Year-end*	*Average*
1	$12.50	$12.50
2	12.50	12.50
3	12.50	12.50
4	12.50	12.50
5	14.40	13.20

- The shares released each year follow:

Table 4-b

Year	*Dividends*	*Compensation*	*Total Released*	*Total Allocated*
1	0	16,000	16,000	-0-
2	1,600	14,400	16,000	16,000
3	3,200	12,800	16,000	16,000
4	4,800	11,200	16,000	16,000
5	6,061	9,939	16,000	16,000

Note: The number of shares released for dividends is determined by dividing the amount of dividends on allocated shares (16,000 multiplied by $1.25 in year 2; 32,000 multiplied by $1.25 in year 3; etc.) by the average fair value of a share of preferred stock ($12.50 in years 2 and 3). In this illustration the remaining shares are released for compensation (16,000 less 1,600 in year 2, 16,000 less 3,200 in year 3, etc.).

- Additional share information follows:

Table 4-c

Year	*Cumulative Number of Shares*		*Year-End Suspense Shares*
	Released	*Allocated*	
1	16,000	-0-	64,000
2	32,000	16,000	48,000
3	48,000	32,000	32,000
4	64,000	48,000	16,000
5	80,000	64,000	-0-

Results of Applying SOP

The following chart sets forth Company D's ESOP-related information. All amounts represent changes (credits in parentheses) in account balances.

Year	*Principal*	*Unearned ESOP Shares*	*Paid-In Capital*	*Dividends*	*Interest Expense*	*Compensation Expense*	*Cash*
Notes	*(1)*	*(2)*	*(3)*	*(4)*	*(1)*	*(5)*	*(6)*
1	$ 163,800	$ (200,000)	$ -0-	$ -0-	$100,000	$200,000	$ (263,800)
2	180,200	(200,000)	-0-	20,000	83,600	180,000	(263,800)
3	198,200	(200,000)	-0-	40,000	65,600	160,000	(263,800)
4	218,000	(200,000)	-0-	60,000	45,800	140,000	(263,800)
5	239,800	(200,000)	(11,200)	80,000	24,000	131,200	(263,800)
Total	$1,000,000	$(1,000,000)	$(11,200)	$200,000	$319,000	$881,200	$(1,319,000)

Notes:

(1) See table 1-b.

(2) Total number of shares released during the year (16,000) multiplied by the cost per share to ESOP ($12.50).

(3) Total number of shares released during the year (16,000) multiplied by the difference between average fair value per share at the release date (see table 4-a) and cost-per-share to the ESOP ($12.50).

(4) Cumulative shares allocated (see table 4-c) multiplied by the dividend per share ($1.25).

(5) Total number of ESOP shares released for compensation (see table 4-b) multiplied by the average fair value per share to ESOP (see table 4-a).

(6) The cash disbursed each year is composed of $163,800 in contributions and $100,000 in dividends.

Journal Entries

The journal entries to reflect the accounting for Company D's ESOP from inception through year 2 are as follows:

January 1, Year 1 (inception)

Cash	1,000,000	
Debt		1,000,000
[To record the ESOP's loan]		
Unearned ESOP shares (equity)	1,000,000	
Preferred stock		1,000,000
[To record the issuance of shares to the ESOP]		
Year 1		
Interest expense	100,000	
Accrued interest payable		100,000
[To record interest expense]		
Accrued interest payable	100,000	
Debt	163,800	
Cash		263,800
[To record debt payment (The cash disbursement of $263,800 consists of $100,000 in dividends, none of which was charged to retained earnings in year 1, and $163,800 supplemental cash contribution to the ESOP)]		
Compensation expense	200,000	
Unearned ESOP shares		200,000
[To record release of 16,000 shares at an average fair value of $12.50 per share (shares cost ESOP $12.50 per share)]		
Deferred tax asset	14,480	
Provision for income taxes	600,000	
Income taxes payable		614,480
[To record income taxes for year (See tax computations following journal entries)]		

Year 2

Interest expense	83,600	
Accrued interest payable		83,600

[To record interest expense]

Accrued interest payable	83,600	
Debt	180,200	
Cash		263,800

[To record debt payment (The cash disbursement of $263,800 is made up of $100,000 in dividends, $20,000 of which was charged to retained earnings in year 2, and $163,800 supplemental cash contribution to the ESOP)]

Retained earnings	20,000	
Dividends payable		20,000

[To record declaration of $1.25 per share dividend on the 16,000 allocated shares]

Compensation expense	180,000	
Dividends payable	20,000	
Unearned ESOP shares		200,000

[To record release of 16,000 shares at an average fair value of 12.50 per share (shares cost ESOP $12.50 per share)]

Deferred tax asset	7,920	
Provision for income taxes	646,560	
Income taxes payable		654,480

[To record income taxes for year (See tax computations following journal entries)]

Tax and EPS Computations

The tax and EPS calculations for Company D follow:

	Year				
	1	*2*	*3*	*4*	*5*
Income before ESOP	$1,800,000	$1,900,000	$2,000,000	$2,100,000	$2,200,000
Interest expense	(100,000)	(83,600)	(65,600)	(45,800)	(24,000)
Compensation expense	(200,000)	(180,000)	(160,000)	(140,000)	(131,200)
Pretax income	1,500,000	1,636,400	1,774,400	1,914,200	2,044,800
Provision for income tax					
Currently payable	614,480	654,480	694,480	734,480	774,480
Deferred	(14,480)	(7,920)	(720)	7,200	15,920
Total	$ 600,000	$ 646,560	$ 693,760	$ 741,680	$ 790,400
Net income	$ 900,000	$ 989,840	$1,080,640	$1,172,520	$1,254,400
Preferred stock dividends	-0-	$ 20,000	40,000	60,000	80,000
Earnings applicable to common stock	$ 900,000	$ 969,840	$1,040,640	$1,112,520	$1,174,400
Common shares outstanding	1,000,000	1,000,000	1,000,000	1,000,000	1,000,000
Basic EPS without conversion	$ .90	$ .97	$ 1.04	$ 1.11	$ 1.17
Diluted EPS if converted	$ .89	$ .95	$ 1.01	$ 1.07	$ 1.13

If-converted computation:

	Year 1	2	3	4	5
Earnings applicable to common stock	$ 900,000	$ 969,840	$1,040,640	$1,112,520	$1,174,400
Add—					
Preferred dividends net of tax	-0-	12,000	24,000	36,000	48,000
Tax benefit on "as if" converted common dividend (1)	-0-	3,902	8,421	10,909	12,800
Less—					
Additional compensation (2)	-0-	(6,146)	(11,368)	(19,636)	(28,800)
Adjusted earnings	$ 900,000	$ 979,596	$1,061,693	$1,139,793	$1,206,400
Shares outstanding					
Non-ESOP	1,000,000	1,000,000	1,000,000	1,000,000	1,000,000
ESOP as if converted (3)	9,302	29,268	52,632	63,636	72,000
Total	1,009,302	1,029,268	1,052,632	1,063,636	1,072,000
If-converted diluted EPS	$ .89	$ .95	$ 1.01	$ 1.07	$ 1.13

Computations for (1), (2), and (3) follow:

	Year 1	2	3	4	5
(1) Allocated preferred shares	-0-	16,000	32,000	48,000	64,000
Conversion ratio	1:1	1:1	1:1	1:1	1:1
Redemption ratio	12.50/10.75	12.50/10.25	12.50/9.50	12.50/11.00	1:1
If converted allocated common shares	-0-	19,512	42,105	54,545	64,000
Dividends at $.50 per common share	$ -0-	$ 9,756	$21,053	$27,273	$ 32,000
Tax benefit on common dividends	$ -0-	$ 3,902	$ 8,421	$10,909	$ 12,800
(2) Preferred dividends at $1.25 per share	$ -0-	$20,000	$40,000	$60,000	$ 80,000
Dividends at $.50 per common share	$ -0-	(9,756)	(21,053)	(27,273)	(32,000)

Illustration 5

Convertible Preferred Stock Leveraged ESOP Used to Fund a 401(k) Savings Plan With an Employer Loan

Assumptions

On January 1, Year 1, Company E established a leveraged ESOP with convertible preferred stock as follows:

- The ESOP borrowed $1,000,000 from the employer at 10 percent for five years and used the proceeds to buy 80,000 shares of newly issued convertible preferred stock of Company E for $12.50 per share.
- Debt service is funded by cash contributions and dividends on employer stock held by the ESOP.
- Dividends on all of the original 80,000 shares held by the ESOP are used for debt service.
- Cash contributions are made at the end of each year.
- The preferred stock pays dividends quarterly at an annual rate of $1.25 per share ($100,000 each year for the ESOP's shares). Accordingly, in this illustration, the average fair value of the shares is used to determine the number of shares used to satisfy the employer's obligation to replace dividends on allocated shares used for debt service.
- The preferred stock is convertible at a 1:1 ratio into common stock.
- Participants may not withdraw the convertible preferred stock from the ESOP. When participants become eligible to withdraw shares from their account, they must either convert to common stock or redeem the preferred shares.
- The preferred stock has a guaranteed minimum redemption value of $12.50 per share, to be paid in shares of common stock.
- The preferred stock is callable at $13.00 per share.
- There is one vote per preferred share.
- The year-end and average fair values of a share of preferred stock (fair value is assumed to be greater than or equal to minimum value) follow:

Table 5-a

Year	*Year-end*	*Average*
1	$12.50	$12.50
2	12.50	12.50
3	12.50	12.50
4	12.50	12.50
5	14.40	13.20

- Company E uses shares released by the ESOP to satisfy its matching obligation of 50 percent of voluntary employee contributions to the savings plan. The fair value of the shares at the end of each month is used to determine the number of shares necessary to satisfy the matching obligation. (Accordingly, in this illustration, average fair values are used to determine the number of shares needed to satisfy the employer's liabilities.)

- If the fair value of the shares released is less than Company E's matching obligation, Company E contributes additional newly issued shares (top-up shares) to the ESOP to satisfy the remaining obligation. The top-up shares are issued at the end of the year. Dividends on the top-up shares are paid in cash.
- Shares that replace dividends on allocated shares used to service debt do not count toward the employer's match.
- The employee contributions, required employer match, and the number of shares needed to fund the employee match follow:

Table 5-b

Year	*Employee Contributions*	*Employer Match*	*Number of Shares*
1	$400,000	$200,000	16,000
2	410,000	205,000	16,400
3	420,000	210,000	16,800
4	430,000	215,000	17,200
5	440,000	220,000	16,667

Note: The number of shares needed to satisfy the employer's matching obligation is determined by dividing the matching obligation by the average fair value of a share of common stock (for year 1: $200,000 divided by $12.50 equals 16,000 shares).

- Principal and interest are payable in annual installments at the end of each year. Debt service is as follows:

Table 5-c

Year	*Principal*	*Interest*	*Total Debt Service*
1	$ 110,000	$100,000	$ 210,000
2	150,000	89,000	239,000
3	200,000	74,000	274,000
4	250,000	54,000	304,000
5	290,000	29,000	319,000
Total	$1,000,000	$346,000	$1,346,000

- Shares are released from the suspense account for allocation to participants' accounts based on a principal-plus-interest formula. The released shares are allocated to participants' accounts at the beginning of the following year. Shares are assumed to be released ratably throughout the year.
- The shares released each year follow:

Table 5-d

Year	*Number of Shares Needed to Satisfy 401(k) Liability*	*Total Released*	*Shares Released for Dividends*	*ESOP Shares Available to Satisfy 401(k) Liability*	*Additional Shares (Top-Up)*
1	16,000	12,481	-0-	12,481	3,519
2	16,400	14,205	1,248	12,957	3,443
3	16,800	16,286	2,669	13,617	3,183
4	17,200	18,068	4,297	13,771	3,429
5	16,667	18,960	5,780	13,180	3,487

Note: The number of shares released for dividends is determined by dividing the amount of dividends on allocated shares (12,481 multiplied by $1.25 in year 2; 26,686 multiplied by $1.25 in year 3, etc.) by the average fair value of a share of preferred stock ($12.50 in years 2 and 3). In this illustration, the remaining shares are released for compensation (14,205 less 1,248 in year 2; 16,286 less 2,669 in year 3, etc.).

- Additional share information follows:

Table 5-e

	Initial ESOP Shares Cumulative Shares		*Top-Up Shares Cumulative Shares*				
Year	*Released*	*Allocated*	*Issuable*	*Issued*	*Average Shares Released/ Issuable*	*Total Shares Allocated*	*Year-End Suspense Shares*
1	12,481	0	3,519	0	8,000	0	67,519
2	26,686	12,481	6,962	3,519	24,824	16,000	53,314
3	42,972	26,686	10,145	6,962	43,383	33,648	37,028
4	61,040	42,972	13,574	10,145	63,866	53,117	18,960
5	80,000	61,040	17,061	13,574	85,838	74,614	0

- The pre-ESOP income, shares outstanding, and income tax assumptions are the same as for illustrations 1 through 4.

Results of Applying SOP

The following chart sets forth Company E's ESOP-related information. All amounts represent changes (credits are in parentheses) in account balances.

Year	*Unearned ESOP Shares*	*Paid-In Capital*	*Dividends—Original Shares*	*Dividends Top-Up Shares*	*Compensation Expense ESOP*	*Compensation Expense Top-Up*
Notes	*(1)*	*(2)*	*(3)*	*(4)*	*(5)*	*(6)*
1	$ (156,000)	$ (44,000)	$ -0-	$ -0-	$156,000	$ 44,000
2	(177,600)	(43,000)	15,600	4,400	162,000	43,000
3	(203,600)	(39,800)	33,400	8,700	170,200	39,800
4	(225,800)	(42,900)	53,700	12,700	172,100	42,900
5	(237,000)	(59,300)	76,300	17,000	174,000	46,000
Total	$(1,000,000)	$(229,000)	$179,000	$42,800	$834,300	$215,700

Notes:

(1) Total number of shares released during the year multiplied by the cost per share to ESOP ($12.50).

(2) Total number of shares released during the year multiplied by the difference between average fair value per share at the release date (see table 5-a) and cost per share to the ESOP ($12.50) plus the additional paid-in capital that arises from the top-up shares contributed, which equals the compensation expense related to the ESOP.

(3) Cumulative shares allocated from original 80,000 shares (see table 5-e) multiplied by the dividend per share ($1.25).

(4) Cumulative top-up shares issued (see table 5-e) multiplied by the dividend per share ($1.25).

(5) Total number of ESOP shares released for compensation (see table 5-d) multiplied by the average fair value per share (see table 5-a).

(6) Top-up shares (see table 5-d) multiplied by the average fair value per share (see table 5-a).

Journal Entries

The journal entries to reflect the accounting for Company E's ESOP from inception through year 2 are as follows:

January 1, Year 1 (inception)

Unearned ESOP shares (equity)	1,000,000	
Preferred stock		1,000,000

[To record the issuance of shares to the ESOP]

Year 1

Compensation expense	200,000	
401(k) liability		200,000

[To record cost and liability related to 401(k) match]

401(k) liability	200,000	
Preferred stock		44,000
Unearned ESOP shares		156,000

[To record release of 12,481 shares at an average fair value of $12.50 per share (shares cost ESOP $12.50 per share) and issuance of 3,519 additional shares at $12.50 per share for top-up]

Deferred tax asset	18,400	
Provision for income taxes	600,000	
Income tax payable		618,400

[To record income taxes for year 1 (See tax computations following journal entries)]

Year 2

Retained earnings	15,600	
Dividends payable		15,600

[To record declaration of $1.25 per share dividend on the 12,481 allocated shares]

Retained earnings	4,400	
Cash		4,400

[To record declaration and payment of $1.25 per share dividend on the 3,519 issued top-up shares]

Compensation expense	205,000	
401(k) liability		205,000

[To record cost and liability related to 401(k) match]

401(k) liability	205,000	
Dividends payable	15,600	
Unearned ESOP shares		177,600
Preferred stock		43,000

[To record release of 14,205 shares at an average fair value of $12.50 per share (shares cost ESOP $12.50 per share) and issuance of 3,443 additional shares at $12.50 per share for top-up]

Deferred tax asset	11,040	
Provision for income taxes	636,160	
Income tax payable		647,200

[To record income taxes for year 2 (See tax computations following journal entries)]

Tax and EPS Computations

The tax and EPS computations for Company E follow:

	Year				
	1	*2*	*3*	*4*	*5*
Income before ESOP	$1,800,000	$1,900,000	$2,000,000	$2,100,000	$2,200,000
Interest expense	100,000	89,000	74,000	54,000	29,000
Compensation—ESOP	156,000	162,000	170,200	172,100	174,000
Compensation—top-up	44,000	43,000	39,800	42,900	46,000

Discussion of Comments Received on Exposure Draft

An exposure draft of a proposed statement of position, "Employers' Accounting for Employee Stock Ownership Plans," was issued for public comment in December 1992 and distributed to a variety of interested parties to encourage comment by those that would be affected by the proposal. Sixty-five comment letters were received on the exposure draft.

The most significant and pervasive comments received were in three areas: (*a*) measurement of compensation cost, (*b*) pro forma disclosures, and (*c*) effective date.

Measurement of Compensation Cost

A majority of respondents asked AcSEC to reconsider, for some or all ESOPs, the requirement in the SOP that the fair value of shares committed to be released be used to measure compensation cost. Many of them supported the minority view in this SOP. Three primary objections were raised in the comment letters.

The most frequent reason stated in comment letters for objecting to the proposed measurement of compensation was that debt payments or contributions, that is the cash payments, are a better measure of the value of employees' services than the fair value of shares released.

The second most frequent reason for objecting was disagreement with the argument in the proposed SOP that the risks and rewards of ownership of the shares rest with the employer, not the employees, until the shares are committed to be released. Some respondents disagreed with that statement in general. Other respondents disagreed with a related notion that employers have control over the employees' total compensation package and can make changes in other parts of compensation in response to unanticipated changes in the value of the unreleased shares. Most of those making those arguments support the minority view—that is, they believe that the risks and rewards remain with the employer for type II ESOPs, but believe that is not the case for type I ESOPs.

AcSEC had considered such arguments during the process leading up to the exposure draft, and continues to believe that the reasons for measuring compensation cost based on the fair value of the shares when committed to be released as stated in paragraph .70 of the SOP support its conclusion. Furthermore, AcSEC notes that the conclusion on measurement of compensation cost is consistent with AcSEC's fundamental conclusion that the debt and shares related to ESOP transactions should be accounted for separately. AcSEC believes that the fact that employers may, and often do, establish internally leveraged ESOPs that involve no net cash flows by the employer to the ESOP (the financing element is eliminated), supports its view that the fair value of shares when released is a more relevant measure of the employee's services than the value of the shares when they are placed in an ESOP trust. From the employer's perspective, the economic substance of such transactions is that shares are placed in a trust and released to employees over time; no net cash is ever disbursed or received.

AcSEC continues to believe that the risks and rewards of ownership of the unreleased shares remain with the employer, even when there is no explicit use of the fair value of the shares in determining whether the employer has satisfied an obligation. Though many commentators said that employers do not adjust other compensation to reflect unanticipated changes in the fair value of employer shares, AcSEC has seen ESOP transactions in which the employer effectively controls compensation through its ability to control the debt terms and the rate at which shares are released. Further, AcSEC notes that many employers maintain control over the number of ESOP shares released through the ESOP loans with flexible terms, which allow for no or minimal principal payments before maturity and no prepayment penalties.

The third most frequent reason for objecting was that using the fair value of shares released penalizes companies whose share values increase and rewards companies whose share values decrease. AcSEC believes that the important issue is whether the measure of compensation cost is appropriate, not whether the amount is more or less than it would be under a different method.

Pro Forma Disclosures

The proposed SOP would have required public companies that under the grandfathering provisions elected not to adopt the provisions of the SOP to disclose pro forma income before extraordinary items, net income, and EPS as if the employer had adopted the provisions of the SOP. Many respondents objected to those pro forma disclosures. The reasons most often cited for not requiring such disclosures follow:

- Such disclosures would add unnecessary complexity to the financial statements and would confuse rather than inform users.
- Such disclosures generally have not been required in the past for other accounting pronouncements with grandfathering provisions and would set a precedent for such disclosures in the future.
- Such disclosures are inconsistent with the grandfathering provisions and would discredit the amounts reported in the financial statements.
- The costs of making such disclosures would outweigh the benefits.
- It is unfair to require such disclosures only for public companies.

AcSEC found those arguments persuasive and deleted the disclosure requirement.

Effective Date

In the exposure draft the grandfathering cutoff date was September 23, 1992, the date the FASB cleared the proposed SOP for exposure. Many respondents noted that a later date connected with a year end would be more appropriate. In response to those comments the cutoff date was changed to December 31, 1992.

Many respondents considered the effective date for years ending on or before December 15, 1993, in the exposure draft unreasonable. AcSEC agreed and extended the effective date by one year.

Appendix C

Law Changes

The following is a list of the most significant revisions to laws concerning ESOPs since 1976.

- The tax deduction limits were expanded from 15 percent of pay to 25 percent of pay, plus interest in certain cases.[1] This change prompted more small companies to use ESOPs and larger companies to increase the portion of employee benefits covered by ESOPs.
- ESOP sponsors were permitted to deduct dividends paid on ESOP shares from taxable income if the dividends were applied to debt service or distributed to plan participants.[2] This change increased the economic appeal of leveraged ESOPs. For example, it increased the amount of debt that could be covered for employers whose compensation base was too low to amortize the ESOP debt under the contribution limits of the Internal Revenue Code (IRC).
- Under certain circumstances, a person who sold stock to an ESOP was permitted to defer income tax on any resulting gain by reinvesting the sales proceeds in other corporate securities.[3] This change contributed to the substantial increase in the number of ESOPs sponsored by nontraded companies.
- Commercial lenders were permitted to exclude from taxable income 50 percent of the interest they earned on certain ESOP securities acquisition loans.[4] This change resulted in a reduced financing rate on such loans, as lenders frequently passed a portion of the savings on to their customers. Many new ESOP loans were made as a result of this change. (Although 1989 legislation significantly limited this benefit, all of the prior loans were allowed to retain their tax advantages.)
- The regulatory requirement that if ESOPs buy outstanding shares, the purchase must be tested under the corporate redemption rules was eliminated.[5] The significance of this development was that the IRC recognized the independence of ESOPs from their sponsors if certain controls are in place. Thus, it increased the usefulness of ESOPs in transfers of ownership of closely held companies.

Appendix D

Impact of SOP on Current ESOP Guidance

Current Guidance	*Impact of SOP*
FASB Statement No. 87, *Employers' Accounting for Pensions*	The SOP includes accounting guidance on nonleveraged ESOPs that is consistent with the guidance for defined contribution plans in Statement No. 87.
AICPA SOP 76-3, *Accounting Practices for Certain Employee Stock Ownership Plans* [section 10,130]	The SOP supersedes SOP 76-3 [section 10,130]. However, under the transition provisions in the proposed SOP, employers may continue their current accounting practices for ESOP shares purchased before December 31, 1992.
EITF Issue No. 85-11, *Use of an Employee Stock Ownership Plan in a Leveraged Buyout*	No consensus was reached on this issue by the EITF. However, for ESOP shares accounted for under the SOP, the issue is moot, because compensation cost is measured based on the fair value of shares when committed to be released.
EITF Issue No. 86-4, *Income Statement Treatment of Income Tax Benefit for Employee Stock Ownership Plan Dividends*	FASB Statement No. 109, *Accounting for Income Statement Income Taxes* nullified this consensus. The SOP deals with issues related to accounting for income taxes.
EITF Issue No. 86-27, *Measurement of Excess Contributions to a Defined Contribution Plan or Employee Stock Ownership Plan*	The SOP supersedes this consensus. However, under the transition provisions in the SOP, employers may continue their current accounting for shares purchased in a pension reversion occurring before December 31, 1992.
EITF Issue No. 87-23, *Book Value Stock Purchase Plans*	This EITF topic includes three issues; only the third one relates to ESOPs. The SOP, which is consistent with the consensus, supersedes this consensus on the third issue. However, under the transition provisions in the SOP, employers may continue their current accounting for shares purchased before December 31, 1992. This consensus applies to employers making that election.

Current Guidance	*Impact of SOP*
EITF Issue No. 88-27, *Effect of Unallocated Shares in an Employee Stock Ownership Plan on Accounting for Business Combinations*	The SOP does not deal with this issue and accordingly does not supersede the consensus. The consensus is reprinted in this appendix.
EITF Issue No. 89-8, *Expense Recognition for Employee Stock Ownership Plans*	The SOP supersedes this consensus. However, under the transition provisions in the SOP, employers may continue their current accounting for shares purchased before December 31, 1992. This consensus applies to employers making that election.
EITF Issue No. 89-10, *Sponsor's Recognition of Employee Stock Ownership Plan Debt*	The SOP, which is consistent with this consensus, supersedes the consensus.
EITF Issue No. 89-11, *Sponsor's Balance Sheet Classification of Capital Stock with a Put Option Held by an Employee Stock Ownership Plan*	The SOP does not deal with this issue and accordingly does not supersede the consensus. The consensus is reprinted in this appendix.
EITF Issue No. 89-12, *Earnings-per-Share Issues Related to Convertible Preferred Stock Held by an Employee Stock Ownership Plan*	The SOP supersedes these consensuses. However, under the transition provisions in the SOP, employers may continue their current accounting for shares purchased before December 31, 1992. This consensus applies to employers making that election.
EITF Issue No. 90-4, *Earnings-per-Share Treatment of Tax Benefits for Dividends of Stock Held by an Employee Stock Ownership Plan*	FASB Statement No. 109, *Accounting for Income Taxes*, nullified this consensus.
EITF Issue No. 92-3, *Earnings-per-Share Treatment of Tax Benefits for Dividends on Unallocated Stock Held by an Employee Stock Ownership Plan*	Under this SOP, dividends paid on unallocated shares are not charged to retained earnings. However, under the transition provisions in the SOP, employers may continue their current accounting for shares purchased before December 31, 1992. This consensus would apply to employers making that election.
EITF Issue No. 93-2, *Effect of Acquisition of Employer Shares for/by an Employee Benefit Trust on Accounting for Business Combinations*	The SOP does not deal with this issue and accordingly does not supersede this consensus. The consensus is reproduced in this appendix.

EITF Abstracts

Issue No. 88-27

Title: Effect of Unallocated Shares in an Employee Stock Ownership Plan on Accounting for Business Combinations

Date Discussed: January 12-13, 1989

References: APB Opinion No. 16, *Business Combinations*
AICPA Accounting Interpretation 20, *Treasury Stock Allowed with Pooling,* of APB Opinion No. 16
AICPA Statement of Position 76-3, *Accounting Practices for Certain Employee Stock Ownership Plans*
SEC Accounting Series Release No. 146, *Effect of Treasury Stock Transactions on Accounting for Business Combinations*
SEC Accounting Series Release No. 146A, *Statement of Policy and Interpretations in Regard to Accounting Series Release No. 146*

ISSUE

Employee stock ownership plans (ESOPs) may hold shares of the sponsoring entity that are not allocated to the participants in the plan. Those unallocated shares may be allocated later or, under certain limited circumstances, may be sold or disposed of otherwise by the ESOP. Unlike allocated shares that must be reallocated to remaining plan participants if a participant leaves the plan before the shares become vested, the unallocated sponsoring entity shares held by the ESOP are not required to remain within the ESOP or with its participants. Further, to the extent the ESOP acquires unallocated shares as a result of a pension plan termination, Issue No. 86-27, "Measurement of Excess Contributions to a Defined Contribution Plan or Employee Stock Ownership Plan," requires unallocated shares held by the ESOP to be reported as treasury shares by the sponsoring entity.

The issue is under what circumstances, if any, unallocated sponsoring entity shares held by an ESOP should be considered tainted treasury shares for purposes of determining whether the pooling-of-interests method of accounting is appropriate for a business combination.

EITF DISCUSSION

The Task Force reached a consensus that unallocated shares held by an ESOP should not be considered tainted for purposes of determining whether the pooling-of-interests method of accounting is appropriate unless (1) there is more than a remote possibility that such shares could revert to the sponsoring entity, (2) there exists an agreement or intent, either written or implicit, whereby the sponsoring entity will repurchase or reacquire shares from the ESOP or from an employee that receives shares in a distribution (except if required by law to provide liquidity to the plan participant), or (3) the shares were acquired to circumvent the requirements of Opinion 16.

The Task Force considered comments by a tax partner of an accounting firm that generally, for unallocated shares in an ESOP, the possibility of those shares reverting to the sponsoring entity is remote. Some Task Force members noted that the relevant attributes of unallocated shares differ for purposes of determining whether the shares are treasury shares, as addressed in Issue 86-27, compared with whether those treasury shares are tainted, as addressed in this Issue.

STATUS

No further EITF discussion is planned.

EITF Abstracts

Issue No. 89-11

Title: Sponsor's Balance Sheet Classification of Capital Stock with a Put Option Held by an Employee Stock Ownership Plan

Dates Discussed: September 21, 1989; December 14, 1989

References: APB Opinion No. 25, *Accounting for Stock Issued to Employees*
SEC Accounting Series Release No. 268, *Presentation in Financial Statements of "Redeemable Preferred Stocks"*

ISSUE

Under federal income tax regulations, employer securities (such as convertible preferred stock) that are held by participants in an employee stock ownership plan (ESOP) and that are not readily tradeable on an established market must include a put option. The put option is a right to demand that the sponsor redeem shares of employer stock held by the participant for which there is no market for an established cash price. The employer may have the option to issue marketable securities for all or a portion of that option rather than to pay cash. The provisions of the ESOP may permit the ESOP to substitute for the sponsor as buyer of the employer stock; however, in no case can the sponsor require the ESOP to assume the obligation for the put option.

The issue is, in a leveraged ESOP, if securities subject to a put option are classified outside of permanent equity, whether any of the debit in the equity section of the sponsor's balance sheet (sometimes described as *loan to ESOP* or *deferred compensation*) should be similarly classified.

EITF DISCUSSION

The Task Force reached a consensus that when ASR 268 (as presented in Section 211 of the "Codification of Financial Reporting Policies") requires some or all of the value of the securities to be classified outside of permanent equity, a proportional amount of the debit in the equity section of the sponsor's balance sheet (sometimes described as *loan to ESOP* or *deferred compensation*), if any, should be similarly classified.

The SEC Observer indicated that ASR 268 requires that to the extent that there are conditions (regardless of their probability of occurrence) whereby holders of equity securities may demand cash in exchange for their securities, the sponsor must reflect the maximum possible cash obligation related to those securities outside of permanent equity. Thus, securities held by an ESOP (whether or not allocated) must be reported outside of permanent equity if by their terms they can be put to the sponsor for cash. With respect to ESOP securities where the cash obligation relates only to market value guarantee features, the SEC staff would not object to registrants only classifying outside of permanent equity an amount that represents the maximum cash obligation of the sponsor based on market prices of the underlying security as of the reporting date; accordingly, reclassifications of equity amounts would be required based on the market values of the underlying security. Alternatively, the SEC staff would not object to classifying the entire guaranteed value amount outside of permanent equity due to the uncertainty of the ultimate cash obligation because of a possible market value decline in the underlying security.

STATUS

No further EITF discussion is planned.

Issue No. 93-2

Title: Effect of Acquisition of Employer Shares for/by an Employee Benefit Trust on Accounting for Business Combinations

Date Discussed: January 21, 1993

References: APB Opinion No. 16, *Business Combinations*
AICPA Accounting Interpretation 20*, Treasury Stock Allowed with Pooling,* of APB Opinion No. 16
AICPA Statement of Position 76-3*, Accounting Practices for Certain Employee Stock Ownership Plans*
AICPA Proposed Statement of Position*, Employers' Accounting for Employee Stock Ownership Plans,* dated December 21, 1992
SEC Accounting Series Release No. 146, *Effect of Treasury Stock Transactions on Accounting for Business Combinations*
SEC Accounting Series Release No. 146A, *Statement of Policy and Interpretations in Regard to Accounting Series Release No. 146*

ISSUE

An employer (Company) establishes an irrevocable grantor trust (Trust) to prefund certain employee benefits. The Company sells shares of its stock to the Trust in return for a note payable and, at or about the same time, reacquires treasury shares. Alternatively, the Trust may acquire Company shares in the marketplace using funds borrowed from the Company. The shares will be released from the Trust in future periods as debt is repaid or forgiven and will be used to meet obligations of the Company to various employee benefit plans.

The issue is whether Company shares reacquired coincident with the establishment of the Trust, either by the Company or by the Trust, should be considered tainted shares for purposes of pooling-of-interests accounting under Opinion 16.

EITF DISCUSSION

The SEC Observer stated that it is the SEC staff's position that Issue No. 88-27, "Effect of Unallocated Shares in an Employee Stock Ownership Plan on Accounting for Business Combinations," and Topic No. D-19, "Impact on Pooling-of-Interests Accounting of Treasury Shares Acquired to Satisfy Conversions in a Leveraged Preferred Stock ESOP," in *EITF Abstracts* Appendix D, addressed ESOPs that are defined contribution employee benefit plans, as contemplated by SOP 76-3.[1] An ESOP that funds other employee benefit plans was not contemplated by either Issue 88-27 or Topic D-19.[2]

---

[1] This type of ESOP arrangement has been characterized as a Type I ESOP in the proposed Statement of Position on employers' accounting for employee stock ownership plans:

Type I—shares are released to compensate employees directly. Such ESOPs are not used to fund other employee benefits and the fair value of the shares at the time of release is not a factor at the time of release. These ESOPs are the typical ESOPs that existed at the time SOP 76-3 was issued.

[2] This type of ESOP arrangement has been characterized as a Type II ESOP in the proposed Statement of Position:

Type II—shares are released to settle or fund liabilities for other specified or determinable employee benefits, such as an employer's match of a 401(k) plan. The fair value of shares released is used to determine how many shares are needed to satisfy an obligation that arose outside the ESOP.

The SEC staff believes that the application of the consensus in Issue 88-27 and the statements made in Topic D-19 should be limited to "Type I" ESOPs. However, the SEC staff will not object to the application of the consensus in Issue 88-27 and Topic D-19 for shares held by a "Type II" ESOP as of January 21, 1993, provided the respective criteria are satisfied. Shares purchased by a Type II ESOP subsequent to January 21, 1993 would be considered treasury stock directly acquired by the employer and presumed to be tainted shares for the purpose of applying the provisions of paragraph 47(d) of Opinion 16.

The SEC Observer also stated that the trust arrangement described in this Issue is neither a Type I nor a Type II ESOP. Therefore, the SEC staff's position is that shares acquired in the past or in the future and placed in trust to fund future corporate obligations, such as the trust vehicle described in this Issue, are treasury stock directly acquired by the employer and presumed to be tainted shares for the purpose of applying the provisions of paragraph 47(d) of Opinion 16.

Because of the SEC staff's position, the Task Force did not discuss this Issue.

STATUS

No further EITF discussion is planned.

.103

Glossary

This glossary contains definitions of certain terms used in employers' accounting for ESOP transactions.

Allocated shares. The shares in an ESOP trust that have been assigned to individual participant accounts based on a known formula. IRS rules require allocations to be nondiscriminatory generally based on compensation, length of service, or a combination of both. For any particular participant such shares may be vested, unvested, or partially vested.

Committed-to-be-released shares. The shares that, although not legally released, will be released by a future scheduled and committed debt service payment and will be allocated to employees for service rendered in the current accounting period. The period of employee service to which shares relate is generally defined in the ESOP documents. Shares are legally released from suspense and from serving as collateral for ESOP debt as a result of payment of debt service. Those shares are required to be allocated to participant accounts as of the end of the ESOP's fiscal year. Formulas used to determine the number of shares released can be based on either (*a*) the ratio of the current principal amount to the total original principal amount (in which case unearned ESOP shares and debt balance will move in tandem) or (*b*) the ratio of the current principal plus interest amount to the total original principal plus interest to be paid. Shares are released more rapidly under the second method than under the first. Tax law permits the first method only if the ESOP debt meets certain criteria.

Dividends on previously allocated shares used for debt service. The allocation of shares to participant accounts that replaces the cash dividends on allocated shares that were or will be used for debt service. Under the IRC, dividends on shares held by an ESOP that have been allocated to participant accounts cannot be used for debt service unless the employers allocate shares to those participants whose dollar value is no less than the dollar value of the dividends that were used for debt service. (The IRS has not issued guidance on what employers would be required to do to make up the difference between the value of any dividends withdrawn and the shares allocated. In practice, plan sponsors apply a wide variety of techniques to satisfy the Code requirements.)

Suspense shares. Shares that have not been released, committed to be released, or allocated to participant accounts. Suspense shares generally collateralize ESOP debt.

Top-up shares. The shares or cash that an employer contributes to an ESOP because the fair value of the shares released is less than the employer's liability for a particular benefit, such as a savings plan match.

Vested shares. Allocated shares for which a participant's right to receive the shares or redeem the shares for cash is no longer contingent on remaining in the service of the employer. Allocated shares that have not been vested may be forfeited if a participant terminates his or her employment and reallocated to other participants. Whether the shares in a participant's ESOP account are vested depends on the length of that employee's service and the vesting provisions of the ESOP. The Code specifies minimum vesting requirements for benefits attributable to employer contributions. Currently, the Code permits two minimum vesting approaches:

a. Graded vesting, under which employees vest 20 percent after three years of service and 20 percent for each additional year of service until they become 100 percent vested.

b. Cliff vesting, under which employees vest 100 percent after five years of service.

Accordingly, the shares allocated to participants at any date will include shares that are fully vested, shares that are not vested, and (if graded vesting is used) shares that are partially vested.

Accounting Standards Executive Committee (1992-1993)

Section 10,590

Statement of Position 93-7
Reporting on Advertising Costs

December 29, 1993

NOTE

Statements of Position (SOPs) of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this SOP should be used or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SOP 93-7 is amended by SOP 00-2, *Accounting by Producers or Distributors of Films*. SOP 00-2 is effective for financial statements for fiscal years beginning after December 15, 2000. Earlier application is encouraged. The cumulative effect of changes in accounting principles caused by adapting the provisions of this SOP should be included in the determination of net income in conformity with paragraph 20 of APB Opinion 20. Disclosure of pro forma effects of retroactive application (APB Opinion 20, paragraph 21) is not required. An entity should not restate previously issued annual financial statements.

Introduction

.01 The Accounting Standards Executive Committee (AcSEC) has on its agenda a project on reporting the costs of activities—such as advertising, preopening, start-up, training, customer acquisition, and similar activities—that are undertaken to create future economic benefits through the development of intangible assets. The project was undertaken to provide guidance that would aid in resolving issues concerning financial reporting for the costs of such activities.

.02 Because of the difficulty of developing sound financial reporting guidance that could be applied broadly to the costs of all activities, AcSEC decided that this statement of position (SOP) should be issued as a first step and be used to develop guidance for reporting costs of other kinds of activities undertaken to create such benefits although AcSEC has not begun deliberations to develop such guidance. The guidance in this SOP therefore is not intended to be used to account for the costs of other kinds of activities undertaken to create future economic benefits through the development of intangible assets.

.03 Some entities report the costs of all advertising as expenses when the costs are incurred. However, other entities report the costs of future economic benefits that they expect will result from some or all advertising as assets when the costs are incurred and amortize the costs to expense in the current and subsequent periods.

.04 The authoritative financial reporting literature provides no broad guidance on reporting the costs of advertising, although it does provide guidance for certain specific transactions and industries and on reporting the costs of activities similar to advertising. The lack of broad guidance and the inconsistency of existing guidance has led to diversity in practice.

.05 This SOP provides guidance for annual financial statements on the following:

- Reporting the costs of advertising, which should be expensed either as incurred or the first time the advertising takes place, except for direct-response advertising (*a*) whose primary purpose is to elicit sales to customers who could be shown to have responded specifically to the advertising and (*b*) that results in probable future economic benefits
- For direct-response advertising that may result in reported assets—
  - — How such assets should be measured initially
  - — How the amounts ascribed to such assets should be amortized
  - — How the realizability of such assets should be assessed
- The financial statement disclosures that should be made about advertising
- Amendments to other accounting literature affected by this SOP
- Transition rules for applying this SOP

Scope

.06 This SOP provides financial reporting guidance for the annual financial statements of all entities and all advertising other than that for which pronouncements included in category (a) in paragraph 10 of Statement on Auditing Standards (SAS) No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, provide such guidance.[1] This SOP does not apply to financial statements for interim periods. Paragraphs 15 and 16 of Accounting Principles Board (APB) Opinion No. 28, *Interim Financial Reporting*, which are discussed in the appendix of this SOP [paragraph .81], provide guidance for accounting for advertising in interim periods. This SOP amends the following AICPA SOPs[2]:

a. SOP 88-1, *Accounting for Developmental and Preoperating Costs, Purchases and Exchanges of Take-off and Landing Slots, and Airframe Modifications*, paragraph 22 [section 10,430.22]

b. SOP 89-5, *Financial Accounting and Reporting by Providers of Prepaid Health Care Services*, paragraph 54

c. SOP 90-8, *Financial Accounting and Reporting by Continuing Care Retirement Communities*, paragraph 15

.07 This SOP does not amend FASB Technical Bulletin 90-1, *Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts*.

---

[1] Category (a) in paragraph 10 of SAS No. 69 consists of Financial Accounting Standards Board (FASB) Statements of Financial Accounting Standards and Interpretations, Accounting Principles Board (APB) Opinions, and AICPA Accounting Research Bulletins. Advertising that is covered by pronouncements in category (a) of paragraph 10 of SAS No. 69 should be accounted for in conformity with that guidance regardless of the guidance in this SOP.

[2] The appendix [paragraph .81] discusses the guidance concerning advertising in these SOPs. Paragraphs .51 to .53 of this SOP discuss the amendments to these SOPs.

.08 This SOP applies to not-for-profit organizations.

.09 Reporting on the costs of advertising conducted for others under contractual arrangements is part of reporting on contracts in general and is not covered by this SOP. Indirect costs that are specifically reimbursable under the terms of a contract also are excluded from this SOP.

Background

.10 FASB Statement No. 2, *Accounting for Research and Development Costs*, issued in 1974, requires all research and development costs to be reported as expenses when incurred. Therefore, FASB Statement No. 2 in effect prohibits reporting the research and development costs incurred in anticipation of probable future benefits as assets. Although activities similar to research and development were included in the discussion memorandum that initiated the FASB's project, paragraph 22 of appendix A of Statement No. 2 states that the FASB concluded, following the public hearing on the Discussion Memorandum, that the "initial Statement of Financial Accounting Standards resulting from the project should address solely accounting for research and development costs."

.11 Since issuing the discussion memorandum, the FASB has developed its conceptual framework, which provides conceptual criteria for asset recognition, and there has been periodic interest in how the costs of activities similar to research and development are reported on. The Securities and Exchange Commission (SEC) has issued some accounting and auditing enforcement releases on activities similar to research and development, and the SEC staff has expressed concern about the accounting for these activities.

.12 Costs incurred in anticipation of the probable future economic benefits of advertising generally have been expensed for the following reasons:

- Financial statement preparers generally presumed that the benefit period is short.
- The periods during which the future economic benefits probably would be received and the amounts of such benefits could not be measured and determined easily and objectively.
- The advertising costs for some entities were not material.

.13 Advertising is undertaken to provide or increase future economic benefits. FASB Statement on Financial Accounting Concepts (Concepts Statement) No. 6, *Elements of Financial Statements*, paragraph 178, states, "An entity commonly incurs costs to obtain future economic benefits, either to acquire assets from other entities in exchange transactions or to add value through operations to assets it already has . . . ." New technology, sources of information, and measurement techniques have given some entities the ability to better estimate the future economic benefits that could result from certain kinds of advertising.

.14 If future economic benefits do result from advertising, they generally would be in the form of revenue.

Authoritative Pronouncements

.15 FASB Concepts Statement No. 6, paragraph 25, defines assets as "probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events."[3] Footnote 18 to Concepts Statement No. 6 states that "*probable* is used with its usual general meaning, rather than in a specific accounting or technical sense, . . . and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved . . . ." Paragraph 26 states:

> An asset has three essential characteristics: (*a*) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (*b*) a particular entity can obtain the benefit and control others' access to it, and (*c*) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.

.16 Appendix B of Concepts Statement No. 6 discusses in paragraphs 175 and 176 the characteristics of assets and the concept of probable future economic benefits, including those that may arise from activities such as advertising:

> Uncertainty about business and economic outcomes often clouds whether . . . particular items that might be assets have the capacity to provide future economic benefits to the entity, . . . sometimes precluding their recognition as assets. The kinds of items that may be recognized as expenses or losses rather than as assets because of uncertainty are some in which management's intent in taking certain steps or initiating certain transactions is clearly to acquire or enhance future economic benefits available to the entity. For example, business enterprises . . . advertise, develop markets . . . and spend significant funds to do so. The uncertainty is not about the intent to increase future economic benefits but about whether and, if so, to what extent they succeeded in doing so. Certain expenditures for . . . advertising . . . are examples of the kinds of items for which assessments of future economic benefits may be especially uncertain . . . .
>
> If . . . advertising results in an entity's acquiring or increasing future economic benefit, that future economic benefit qualifies as an asset as much as do the future benefits from prepaid insurance or prepaid rent. The practical problem is whether future economic benefit is actually present and, if so, how much—an assessment that is greatly complicated by the feature that the benefits may be realized far in the future, if at all.

.17 Paragraphs 247 to 250 discuss deferred costs and acknowledge that advertising may provide future economic benefits, but they note that such benefits may not be reported as assets for practical reasons stemming from considerations of uncertainty or measurement. Paragraph 248 states, in part:

> The question that needs to be answered to apply the definition of assets is whether the economic benefit received by incurring those costs was used up at the time the costs were incurred or shortly thereafter or future economic benefit remains at the time the definition is applied. Costs such as . . . advertising services do not *by themselves* qualify as assets under the definition in paragraph 25 any more than do spoiled units, dry holes, or legal costs. The reason for considering the possibility that they might be accounted for as if they were assets stems from their possible relationship to future economic benefits.

.18 FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises,* paragraph 63, sets forth the following criteria that should be met to report an item in the financial statements:

---

[3] Because assets should be understood to represent current conditions, the term *probable future economic benefits* in this SOP means that current prospects indicate that the reporting entity probably will receive economic benefits in the future.

Definitions—The item meets the definition of an element of financial statements.

Measurability—It has a relevant attribute measurable with sufficient reliability.

Relevance—The information about it is capable of making a difference in user decisions.

Reliability—The information is representationally faithful, verifiable, and neutral.

.19 No authoritative pronouncement provides broad guidance on financial reporting on advertising. However, aspects of the following documents, discussed in the appendix [paragraph .81], provide guidance on reporting on advertising in connection with specific items or industries.

a. FASB Statement No. 13, *Accounting for Leases*, as amended by FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*

b. FASB Statement No. 51, *Financial Reporting By Cable Television Companies*

c. FASB Statement No. 53, *Financial Reporting by Producers and Distributors of Motion Picture Films*[*]

d. FASB Statement No. 67, *Accounting for Costs and Initial Rental Operations of Real Estate Projects*

e. FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*

f. The AICPA Industry Audit Guide *Audits of Airlines*, as amended by SOP 88-1, *Accounting for Developmental and Preoperating Costs, Purchases and Exchanges of Take-off and Landing Slots, and Airframe Modifications* [section 10,430]

g. The AICPA Industry Audit Guide *Audits of Stock Life Insurance Companies*

h. SOP 89-5, *Financial Accounting and Reporting by Providers of Prepaid Health Care Services*

i. FASB Technical Bulletin No. 90-1, *Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts*

.20 Aspects of the following documents, also discussed in the appendix [paragraph .81], provide further guidance on reporting on activities similar to research and development:

a. APB Opinion 17, *Intangible Assets*[**]

b. APB Opinion 28, *Interim Financial Reporting*

c. FASB Statement No. 2, *Accounting for Research and Development Costs*

---

[*] In 2000, the FASB rescinded FASB Statement No. 53, *Financial Reporting by Producers and Distributors of Motion Picture Films*, and AcSEC issued SOP 00-2, *Accounting by Producers or Distributors of Films* [section 10,800]. The provisions of this SOP apply to entities within the scope of SOP 00-2 [section 10,800]. [Footnote added, June 2004, to reflect conforming changes necessary due to the rescission of FASB Statement No. 53 and the issuance of SOP 00-2.]

[**] FASB Statement No. 142, *Goodwill and Other Intangible Assets,* supersedes APB Opinion No. 17, *Intangible Assets*. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 142.]

d. FASB Statement No. 19, *Financial Accounting and Reporting by Oil and Gas Producing Companies*

e. FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*

f. FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*

g. The AICPA Audit and Accounting Guide *Audits of Property and Liability Insurance Companies*

h. SOP 90-8, *Financial Accounting and Reporting by Continuing Care Retirement Communities*

.21 The guidance in the pronouncements listed in the two preceding paragraphs is not consistent. Some believe that pronouncements permitting capitalization of advertising do so because a clearly demonstrable cause-and-effect relationship exists between the assets acquired and costs incurred. Also, some believe that pronouncements prohibiting capitalization of advertising do so because (*a*) no such demonstrable causal relationship exists, (*b*) the amounts capitalized would be immaterial, or (*c*) the costs of obtaining the information would not be justified by the benefits of reporting it. The conclusions reached in this SOP are based on the guidance in the FASB Concepts Statements.

Description of Advertising

.22 Advertising is the promotion of an industry, an entity, a brand, a product name, or specific products or services so as to create or stimulate a positive entity image or to create or stimulate a desire to buy the entity's products or services.[4]

.23 Advertising is one kind of customer acquisition activity. Financial reporting of other kinds of customer acquisition activities is outside the scope of this SOP.[5]

.24 Advertising generally uses a form of media—such as mail, television, radio, telephone, facsimile machine, newspaper, magazine, coupon, or billboard—to communicate with potential customers. Examples of kinds of advertising include the following:

- Directory and buyer's guide advertising
- Business and industrial publications
- Reprints of advertisements
- Television advertising
- Direct-mail advertising
- Consumer publications
- Radio advertisements
- Billboard advertisements
- Company and product catalogues
- Cooperative advertising

[4] Fund-raising by not-for-profit organizations is not considered advertising and is not within the scope of this SOP. However, this SOP does apply to advertising activities of not-for-profit organizations.

[5] The costs of premiums, contest prizes, gifts, and similar promotions, as well as discounts or rebates, including those resulting from the redemption of coupons, are not considered advertising costs for purposes of applying the guidance in this SOP. (Other costs of coupons and similar items, such as costs of newspaper advertising space, are considered advertising costs.)

- Booklets for sales promotion
- Newspaper advertising
- Point-of-sale material
- Sponsorship of public events

Conclusions

.25 The following conclusions should be read in conjunction with "Discussion of Conclusions and Implementation Guidance," beginning with paragraph .55 of this SOP, which explains the basis for the conclusions and provides guidance for implementing them.

Expensing or Capitalizing Advertising Costs

.26 The costs of advertising should be expensed either as incurred or the first time the advertising takes place (paragraphs .42 to .44 elaborate on component costs of advertising),[6] except for—

a. Direct-response advertising (1) whose primary purpose is to elicit sales to customers who could be shown to have responded specifically to the advertising and (2) that results in probable future economic benefits (future benefits). (Paragraph .37 discusses the conditions that must be met in order to conclude that direct-response advertising results in probable future benefits.) Examples of the first time advertising takes place include the first public showing of a television commercial for its intended purpose and the first appearance of a magazine advertisement for its intended purpose.

b. Expenditures for advertising costs that are made subsequent to recognizing revenues related to those costs, as discussed in paragraph .27.

.27 Expenditures for some advertising costs are made subsequent to recognizing revenues related to those costs. For example, some entities assume an obligation to reimburse their customers for some or all of the customers' advertising costs (cooperative advertising). Generally, revenues related to the transactions creating those obligations are earned and recognized before the expenditures are made. For purposes of applying this SOP, those obligations should be accrued and the advertising costs expensed when the related revenues are recognized.

.28 The costs of direct-response advertising (*a*) whose primary purpose is to elicit sales to customers who could be shown to have responded specifically to the advertising and (*b*) that results in probable future benefits should be reported as assets net of accumulated amortization. For purposes of calculating amortization and assessing realizability, which are discussed in paragraphs .46 to .48, each significant advertising effort establishes a separate stand-alone cost pool.

---

[6] Deferring the costs of advertising until the advertising takes place assumes that the costs have been incurred for advertising that will occur. Such costs should be expensed immediately if such advertising is not expected to occur.

.29 The accounting policy selected from the two alternatives in the beginning of paragraph .26 (whether advertising costs are expensed as incurred or the first time the advertising takes place), should be applied consistently to similar kinds of advertising activities.

Tangible Assets

.30 Tangible assets, such as blimps or billboards, may be used for several advertising campaigns. The costs of such assets should be capitalized and depreciated or amortized using a systematic and rational method over their expected useful lives. That depreciation or amortization may be a cost of advertising if the tangible asset is used for advertising.

.31 For purposes of applying this SOP, costs incurred to produce film or audio and video tape to be used to communicate advertising do not create tangible assets.

.32 Sales materials, such as brochures and catalogues, may be accounted for as prepaid supplies until they no longer are owned or expected to be used, in which case their cost would be a cost of advertising and should be accounted for in conformity with the guidance in this SOP.

Direct-Response Advertising

.33 The costs of direct-response advertising should be capitalized if both of the following conditions are met:

a. The primary purpose of the advertising is to elicit sales to customers who could be shown to have responded specifically to the advertising. (Paragraph .34 discusses the conditions that must exist in order to conclude that the advertising's purpose is to elicit sales to customers who could be shown to have responded specifically to the advertising.)

b. The direct-response advertising results in probable future benefits. (Paragraph .37 discusses the conditions that must exist in order to conclude that direct-response advertising results in probable future benefits.)

.34 In order to conclude that advertising elicits sales to customers who could be shown to have responded specifically to the advertising, there must be a means of documenting that response, including a record that can identify the name of the customer and the advertising that elicited the direct response. Examples of such documentation include the following:

- Files indicating the customer names and the related direct-response advertisement
- A coded order form, coupon, or response card, included with an advertisement, indicating the customer name
- A log of customers who have made phone calls to a number appearing in an advertisement, linking those calls to the advertisement

.35 Direct-response advertising activities exclude advertising that, though related to the direct-response advertising, is directed to an audience that could not be shown to have responded specifically to the direct-response advertising. For example, a television commercial announcing that order forms (that are direct-response advertising) soon will be distributed directly to some people in the viewing area would not be a direct-response advertising activity because the television commercial is directed to a broad audience, not all of which could be shown to have responded specifically to the direct-response advertising.

Probable Future Benefits of Direct-Response Advertising

.36 The probable future benefits of direct-response advertising activities are probable future revenues arising from that advertising in excess of future costs to be incurred in realizing those revenues.

.37 Demonstrating that direct-response advertising will result in future benefits requires persuasive evidence that its effects will be similar to the effects of responses to past direct-response advertising activities of the entity that resulted in future benefits. Such evidence should include verifiable historical patterns of results for the entity. Attributes to consider in determining whether the responses will be similar include (*a*) the demographics of the audience, (*b*) the method of advertising, (*c*) the product, and (*d*) economic conditions.

.38 Industry statistics would not be considered objective evidence that direct-response advertising will result in future benefits in the absence of the specific entity's operating history. If the entity does not have an operating history for a particular product or service but does have operating histories for other new products or services, statistics for the other products or services may be used if it can be demonstrated that the statistics for the other products or services are likely to be highly correlated to the statistics of the particular product or service being evaluated. For example, test market results for a new product or service may be used to support the view that the results of advertising for current new products or services are likely to be highly correlated with the results of advertising for new products or services previously sold by the entity. In the absence of the expectation of a high degree of correlation, a success rate based on historical ratios of successful products or services to total products or services introduced to the marketplace would not be a sufficient basis for reporting a portion of the costs of current-period advertising as resulting in assets.

.39 Direct-response advertising costs that are not capitalized because it cannot be demonstrated that the direct-response advertising will result in future benefits should not be retroactively capitalized in subsequent periods if historical evidence in those subsequent periods indicates that the advertising did in fact result in future benefits.

Basis of Measurement

.40 Based on the potential customers and the probable customer response rates, direct-response advertising that is expected to produce future revenues generally is undertaken before the customers' identity is known. Such advertising is undertaken with the expectation that not all targets of the direct-response advertising will provide benefits but that the benefits created by the customers who do respond to the advertising will justify the total advertising costs. Accordingly, the cost of the direct-response advertising directed to all prospective customers, not only the cost related to the portion of the potential customers that are expected to respond to the advertising, should be used to measure the amounts of such reported assets.

Costs of Direct-Response Advertising

.41 Costs of direct-response advertising that should be included in amounts reported as assets include only the following:

a. *Incremental direct costs of direct-response advertising incurred in transactions with independent third parties*—Examples of those costs may include, but are not limited to, costs of idea development, writing advertising copy, artwork, printing, magazine space, and mailing.

b. *Payroll and payroll-related costs for the direct-response advertising activities of employees who are directly associated with and devote time to the advertising reported as assets*—Examples of those activities may include, but are not limited to, idea development, writing advertising copy, artwork, printing, and mailing. The costs directly related to those advertising activities should include only that portion of employees' total compensation and payroll-related fringe benefits directly related to time spent performing such activities.

For purposes of this SOP, administrative costs, rent, depreciation other than depreciation of assets used directly for advertising activities (as discussed in paragraph .30), and other occupancy costs are not costs of direct-response advertising activities.

Components of Advertising Activities

.42 Advertising activities may have several component costs. Two primary components, which are made up of other components, are the costs of (*a*) producing advertisements, such as the costs of idea development, writing advertising copy, artwork, printing, audio and video crews, actors, and other costs, and (*b*) communicating advertisements that have been produced, such as the costs of magazine space, television airtime, billboard space, and distribution (postage stamps, for example).

Producing Advertising

.43 Costs of producing advertising are incurred during production rather than when the advertising takes place.

Communicating Advertising

.44 Costs of communicating advertising are not incurred until the item or service has been received and should not be reported as expenses before the item or service has been received, except as discussed in paragraph .27. For example—

- The costs of television airtime should not be reported as advertising expense before the airtime is used. Once it is used, the costs should be expensed, unless the airtime was used for direct-response advertising activities that meet the criteria for capitalization under this SOP.
- The costs of magazine, directory, or other print media advertising space should not be reported as advertising expense before the space is used. Once it is used, the costs should be expensed, unless the space was used for direct-response advertising activities that meet the criteria for capitalization under this SOP.

Executory Contracts

.45 Some activities, such as product endorsements and sponsorships of events, may be performed pursuant to executory contracts. Costs incurred under executory contracts generally are recognized as performance under the contract is received. Executory contracts should be evaluated to determine whether the costs recognized under such contracts are advertising costs. To the extent that those costs are advertising costs, such costs should be accounted for in conformity with the guidance in this SOP.

Amortization of Capitalized Advertising Costs

.46 The amounts at which direct-response advertising is reported as assets should be amortized on a cost-pool-by-cost-pool basis over the period during which the future benefits are expected to be received using the method described in paragraph .47.

.47 The amortization should be the amount computed using the ratio that current period revenues for the direct-response advertising cost pool bear to the total of current and estimated future period revenues for that direct-response-advertising cost pool. The amounts in this calculation should not be discounted to net present value. The estimated amounts of future revenues for that cost pool may increase or decrease over time, and the ratio should be recalculated at each reporting date.[7]

Assessment of Realizability and Subsequent Measurement

.48 The realizability of the amounts of direct-response advertising reported as assets should be evaluated at each balance-sheet date by comparing the carrying amounts of such assets on a cost-pool-by-cost-pool basis to the probable remaining future net revenues expected to result directly from such advertising. (For this evaluation, future net revenues are gross revenues less the probable future costs of all goods and activities necessary to earn those revenues, except amortization of direct-response advertising. Examples of such future costs are the costs of goods sold, sales commissions, and payroll and payroll-related costs associated with the future revenues.) If the carrying amounts of such advertising exceed the remaining future net revenues that probably will be realized from such advertising, the excess should be reported as advertising expense of the current period. The reduced carrying amounts should not be adjusted upward if estimates of future net revenues are subsequently increased.[8]

Disclosures

.49 The notes to the financial statements should disclose the following:

a. The accounting policy selected from the two alternatives in the beginning of paragraph .26 for reporting advertising, indicating whether such costs are expensed as incurred or the first time the advertising takes place

b. A description of the direct-response advertising reported as assets (if any), the accounting policy for it, and the amortization period

c. The total amount charged to advertising expense for each income statement presented, with separate disclosure of amounts, if any, representing a write-down to net realizable value

---

[7] Changes in estimated future revenues for a direct-response-advertising cost pool should be reflected in the amortization calculation for current and future periods. Therefore, such changes in estimates would not result in reporting amounts expensed in prior periods as assets in the current or subsequent periods.

[8] [Footnote deleted.]

d. The total amount of advertising reported as assets in each balance sheet presented

.50 The following illustrates the disclosures discussed in paragraph .49:

Note X. Advertising

The Company expenses the production costs of advertising the first time the advertising takes place, except for direct-response advertising, which is capitalized and amortized over its expected period of future benefits.

Direct-response advertising consists primarily of magazine advertisements that include order coupons for the Company's products. The capitalized costs of the advertising are amortized over the three-month period following the publication of the magazine in which it appears.

At December 31, 19XX, $1,000,000 of advertising was reported as assets. Advertising expense was $10,000,000 in 19XX, including $500,000 for amounts written down to net realizable value.

Amendments to Other Guidance

.51 This SOP amends SOP 88-1 [section 10,430] by requiring advertising costs incurred in connection with route developmental costs related to the preparation of new route operations to be accounted for in conformity with the guidance in this SOP, rather than expensed as incurred. Paragraph 22 of SOP 88-1 [section 10,430.22] is amended as follows:

> Because of the current deregulated environment and the uncertainty regarding the recoverability of route developmental costs, the majority of the Accounting Standards Executive Committee (AcSEC) believes that developmental costs, other than advertising costs, related to preparation of operations of new routes should not be capitalized, as previously permitted under the guide. (Advertising costs should be accounted for in conformity with the guidance in SOP 93-7, *Reporting on Advertising Costs.*) Route expansion or alteration has become a recurring activity among the airlines, and any related cost is considered a normal and recurring cost of conducting business.

.52 This SOP amends SOP 89-5 by requiring advertising costs incurred as contract acquisition costs to be accounted for in conformity with the guidance in this SOP, rather than expensed as incurred. Paragraph 54 of SOP 89-5 is amended as follows:

> Although there is theoretical support for deferring certain acquisition costs, acquisition costs of providers of prepaid health care services, other than costs of advertising, should be expensed as incurred. (Advertising costs should be accounted for in conformity with the guidance in SOP 93-7, *Reporting on Advertising Costs*.)

.53 This SOP amends SOP 90-8 by clarifying that advertising costs incurred in connection with acquiring initial continuing care contracts should be accounted for in conformity with the guidance in this SOP. SOP 90-8 is amended by adding the following as a footnote after the word "advertising" in the second bullet in paragraph 15:

> Accounting for costs of advertising is not covered by this SOP. (Advertising costs should be accounted for in conformity with the guidance in SOP 93-7, *Reporting on Advertising Costs*.)

Effective Date and Transition

.54 This SOP is effective for financial statements for years beginning after June 15, 1994. Earlier application is encouraged in fiscal years for which financial statements previously have not been issued. Costs incurred, regardless of whether or not they are reported as assets, before the initial application of this SOP should not be adjusted to the amounts that would have been reported as assets had this SOP been in effect when those costs were incurred. However, the concepts included in the provisions of paragraphs .46 and .47 (amortization), paragraph .48 (assessment of realizability), and paragraph .49 (disclosures) of this SOP should be applied to any unamortized costs reported as assets before the initial application of this SOP that continue to be reported as assets after the effective date. In the year this SOP is first applied, the financial statements should disclose the nature of the accounting changes adopted to conform to the provisions of this SOP and their effect on income before extraordinary items, net income, and related per share amounts.

Discussion of Conclusions and Implementation Guidance

Expensing the Costs of Advertising Either as Incurred or the First Time the Advertising Takes Place, Unless the Advertising Is Direct-Response Advertising That Is Capitalized Under the SOP

.55 Practice for reporting the costs of advertising is diverse and includes the following:

- Some entities expense all such costs as the component services or items are performed or received. For example, the costs of hiring an actor to film a television commercial, which is one kind of component cost of television advertising, may be expensed when the actor has completed his or her acting assignment.
- Some entities expense such costs the first time the advertising takes place.
- Some entities expense such costs over the estimated life of the advertising.
- Some entities view the practices described in the three previous bulleted items as points on a continuum, and they expense those costs at some point on that continuum.
- Some entities expense such costs over the period that revenues are expected to result from the advertising.

.56 Some believe that all costs of advertising activities, other than direct-response advertising that results in probable future benefits and is capitalized in conformity with the guidance in paragraph .26, should be expensed as the component activities occur. They believe that if the costs of the component activities are not capitalized under the SOP because it cannot be demonstrated that there is an asset after the advertising occurs, it follows that there is no basis for concluding that there is an asset before the advertising occurs.

.57 FASB Concepts Statement No. 5, paragraph 86, states that—

> Consumption of economic benefits during a period may be recognized either directly or by relating it to revenues recognized during the period:
>
> . . . b. Many expenses, such as selling and administrative salaries, are recognized during the period in which cash is spent or liabilities are incurred for goods and services that are used up either simultaneously with acquisition or soon after. [*Footnote reference omitted.*]

Some believe that the component costs of advertising activities, other than direct-response advertising that results in probable future benefits and is capitalized in conformity with the guidance in paragraph .26, result in assets until at least the first time the advertising occurs. They believe that such costs are not capitalized under this SOP after the advertising occurs because they do not result in *demonstrable* probable future economic benefits, not because they do not result in any probable future economic benefits. However, they believe that the component costs of advertising have, at a minimum, benefits that are received simultaneously with the advertising. They note that there must be some economic benefit to advertising activities because entities continue to undertake them. They also note that there is no opportunity for an entity to benefit from advertising until it occurs. Therefore, they conclude that it is reasonable to defer such costs until the first time the advertising takes place.

.58 Some believe the component costs of advertising activities, other than direct-response advertising that results in probable future benefits and is capitalized in conformity with the guidance in paragraph .26, result in assets and should be amortized over the life of the advertising. They believe that the component costs of advertising have benefits that are received over the period the advertising is used. They note that there must be some economic benefit to advertising activities over the period they are used, because entities incur incremental costs to undertake them. Some believe that advertising should be expensed over the period in which revenues are expected to result from the advertising.

.59 AcSEC believes that the views discussed in paragraphs .55 through .58 have merit and acknowledges that choosing from among the accounting methods resulting from them is based to some extent on arbitrary judgments. AcSEC believes that the views discussed in paragraph .58 should not be adopted for advertising other than direct-response advertising, because probable future benefits beyond the first time the advertising takes place are too uncertain and are not demonstrable or measurable with the degree of reliability required to recognize an asset. Further, AcSEC believes the diversity in practice should be limited. AcSEC believes that the costs of advertising that otherwise would not be capitalized under the SOP should be expensed no later than the first time the advertising takes place. However, AcSEC is unable to reach a consensus on whether the costs of advertising that would otherwise not be capitalized under this SOP should be expensed (*a*) as incurred or (*b*) the first time the advertising takes place. Therefore, for practical reasons (including the likelihood that, for most entities, the financial statement effect of choosing the accounting described by (*a*) to the exclusion of (*b*), or vice versa, would be immaterial), AcSEC has concluded that entities should expense the costs of advertising that otherwise would not be capitalized under this SOP either as incurred or the first time the advertising takes place.

Capitalization of Direct-Response Advertising Costs Based on FASB Concepts Statements

.60 AcSEC based its conclusions for capitalizing direct-response advertising on FASB Concepts Statement Nos. 5 and 6. AcSEC also considered other authoritative financial reporting literature that could be relevant to financial reporting for advertising. Such other literature is excerpted in the appendix [paragraph .81].

.61 AcSEC believes that advertising that results in an entity's acquiring or increasing probable future economic benefits meets the definition of an asset. However, for most advertising, those benefits cannot be measured with the degree of reliability required to report an asset in the financial statements. AcSEC believes that direct-response advertising that meets certain criteria is the only advertising that may result in benefits that can be measured with the degree of reliability required to report an asset in the financial statements after the first time the advertising takes place.

Recognition Criteria

.62 FASB Concepts Statement No. 5, paragraph 63, sets forth the criteria of definition, measurability, relevance, and reliability that should be met to report an item in the financial statements.

Definition of an Asset

.63 Paragraph 25 of Concepts Statement No. 6 states that "assets are probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events." Advertising can create assets according to that definition, and the costs of such advertising may qualify to be capitalized.

.64 The probable future benefits are probable future revenues arising from direct-response advertising in excess of the future costs to be incurred in realizing those revenues. Those assets are deferrals, within the meaning of paragraph 141 of Concepts Statement No. 6, resulting from current cash payments or their equivalent. Recognition in income of the costs of such assets is deferred until the future economic benefits underlying the assets are partly or wholly realized or lost.

.65 Historical patterns of responses to the direct-response advertising or contracts that are enforced generally are evidence that the reporting entity obtains the benefits and can control others' access to them.

Measurability

.66 The probable future revenues that will result from direct-response advertising that meets the conditions for capitalization under this SOP can be measured with the degree of reliability necessary to report the costs to obtain them as an asset in financial statements. The list of attributes in paragraph 67 of Concepts Statement No. 5 includes historical cost, net realizable value, and present value of future cash flows.

Relevance

.67 FASB Concepts Statement No. 1, *Objectives of Financial Reporting by Business Enterprises*, paragraphs 34 to 40, states that financial reporting should provide information that is useful in making rational economic decisions. That includes information helpful to users in assessing the amounts, timing, and uncertainties of prospective net cash inflows, information about the economic resources of an enterprise, and information about the effects of transactions and circumstances that change resources. Information about the future revenues that will result from direct-response advertising and the costs incurred are relevant because they provide such information.

Reliability

.68 Paragraph 75 of Concepts Statement No. 5 states that to be reliable, information must be "representationally faithful, verifiable, and neutral." Paragraph 77 amplifies that statement:

> Unavailability or unreliability of information may delay recognition of an item, but waiting for virtually complete reliability or minimum cost may make the

> information so untimely that it loses its relevance. At some intermediate point, uncertainty may be reduced at a justifiable cost to a level tolerable in view of the perceived relevance of the information. If other criteria are also met, that is the appropriate point for recognition. Thus, recognition may sometimes involve a trade-off between relevance and reliability.

.69 There is a broad spectrum of advertising activities and circumstances in which they are undertaken. AcSEC believes that many kinds of advertising activities may result in assets that meet the recognition criteria of definition, measurability, and relevance. However, AcSEC believes that only certain direct-response advertising can meet the recognition criteria of reliability after the first time the advertising takes place. AcSEC believes advertising other than direct-response advertising would not result in assets that are measurable with the degree of reliability required to report an asset in the financial statements after the first time the advertising takes place.

Specificity of Conditions That Must Be Met in Order to Report the Probable Future Benefits of Direct-Response Advertising as Assets

.70 The conditions in this SOP that must be met in order to report the costs of direct-response advertising as assets beyond the first time the advertising takes place require reliable information. Those conditions are narrow because it is generally difficult to determine the probable future benefits of advertising with the degree of reliability sufficient to report the results of the advertising as assets.

.71 AcSEC considered providing guidance that would require or prohibit capitalization based on the use of econometric models, scanner studies, or other forms of data gathering as evidence that advertising leads to a response resulting in future benefits. Such forms of data gathering generally are designed to isolate the effects of all factors affecting revenue, such as advertising, price, and season, to estimate the effects of advertising on sales. AcSEC concluded that the SOP should prohibit capitalization of advertising based on the use of such information as evidence, because the effects of factors other than advertising on the production of revenue probably would not be measurable with the degree of reliability required to rely on such models.

Period and Extent of Expected Future Benefits

.72 The response to advertising usually occurs shortly after the advertising takes place, but in mail-order catalogue advertising, for example, it can take place over a longer period.

.73 AcSEC considered providing guidance that would either permit or prohibit reporting the costs of direct-response advertising as assets based on the inclusion of future revenues from renewals or repeat sales. Reporting entities with an established operating history, such as certain entities in subscription businesses, may be able to measure such amounts with the required degree of reliability and, if so, should report assets based on renewal amounts. The reporting entity must exercise judgment about (*a*) the existence of the degree of reliability required to determine the probability of renewals and (*b*) whether those renewals result from the direct-response advertising being accounted for. In order to conclude that the renewals result from the direct-response advertising being accounted for, the renewals must not result from significant direct-response advertising that took place subsequent to the direct-response advertising being accounted for. (As discussed in paragraph .28, each significant advertising effort establishes a separate stand-alone cost pool.) Examples of situations in which that required degree of reliability may exist, without significant direct-response advertising subsequent to the direct-response advertising being accounted for, include the following:

- The sale of subscriptions may be offered only through direct-response advertising. The entity may have objective evidence that, historically, a quantifiable percentage of subscriptions is renewed at the end of each subscription period without a significant advertising effort. After the subscription is purchased, in what is deemed to be an insignificant advertising effort, renewal subscriptions are offered for sale by mailing a renewal card to those who have subscriptions that will lapse soon. The amount of direct-response advertising reported as assets and amortized in future periods ordinarily would be based on the expected total revenue to be realized over both the initial and the renewal subscription periods.
- A series of products, such as pieces in a chess set, may be offered for sale only through direct-response advertising. After the first piece is purchased, the remaining pieces are offered for sale by mailing a response card to those who purchased the first piece in what is deemed to be an insignificant advertising effort. The entity may have objective evidence that, historically, each customer who buys the first piece will buy a quantifiable percentage of the remaining pieces. If each of the pieces is bought separately, the amount of direct-response advertising reported as assets and amortized in future periods ordinarily would be based on total revenue from all sales, including estimated future sales.

If significant marketing efforts are required to generate subsequent revenues through renewal or repeat sales, those subsequent revenues would not qualify as revenues resulting from the direct-response advertising that resulted in the initial sale and initial stand-alone cost pool. For example, in the previous bulleted item, if a pamphlet describing the chess set, its monetary and aesthetic value, and the history of the game of chess is sent to those who purchased the first piece, the amount of direct-response advertising reported as assets and amortized in future periods would be based on sales of the first piece rather than on the total of all sales including estimated future sales. However, subsequent direct-response advertising may result in the capitalization of the costs of that subsequent advertising, with its costs accumulated in a stand-alone cost pool, if the conditions for capitalization in this SOP are met.

.74 AcSEC concluded that it should not arbitrarily limit the period over which the direct-response advertising should be amortized. However, AcSEC believes that the reliability of accounting estimates decreases as the length of the period for which such estimates are made increases. Therefore, the period over which the benefits of direct-response advertising are amortized often is no longer than the greater of one year or one operating cycle. However, under certain circumstances, such as those discussed in paragraph .72, an entity may be able to demonstrate that the duration of the probable future benefits is greater than the longer of one year or one operating cycle.

Assets Should Be Reported Based on the Costs of the Advertising Directed to All Prospective Customers

.75 Paragraph .40 of this SOP states, in part, that the ". . . cost of the direct-response advertising directed to all prospective customers, not only the cost related to the portion of the potential customers that is expected to respond to the advertising, should be used to measure the amounts of such reported assets." Some believe that guidance to be inconsistent with guidance in other pronouncements issued by the FASB (such as FASB Statement Nos. 19 and 91) that require costs to be capitalized based on the portion of the costs expected to result in successful efforts. Other FASB pronouncements, such as FASB Statement No. 53, permit capitalization of advertising based on the cost of advertising directed to all potential customers.

.76 AcSEC compared and contrasted the guidance in this SOP with the guidance in FASB Statement Nos. 19 and 91. AcSEC concluded that, in general, any comparison of the guidance in Statement Nos. 19 and 91 should consider the differences in the kinds of activities addressed by those Statements and this SOP. In the extractive industries, drilling an oil well in a location without proven reserves can be viewed as a discrete effort; in financial industries, making or acquiring a loan can be viewed as a discrete effort. However, few would view an individual unit of advertising, such as one piece of advertising mailed as part of a direct-response advertising campaign, as a discrete effort. The entire mailing, not merely an individual piece of mail, constitutes the effort, and the advertiser evaluates the success of the advertising based on the response to the entire advertising effort, not on the response to one component of that effort.

.77 AcSEC believes the arguments supporting successful-effort accounting for exploration activities in the oil and gas industry are based on the inability to demonstrate, on an individual company basis, a direct cause-and-effect relationship between unsuccessful acquisition and exploration costs and revenues derived from successful activities in unrelated geological areas. For the kinds of activities capitalized under the guidance in this SOP, there is a reliable and demonstrated relationship between total costs and future benefits that is a direct result of incurring those costs. For example, reporting entities capitalizing advertising in conformity with this SOP would have reliable evidence that they must, for example, send out 1 million pieces of direct-mail advertising in order to get 10 thousand responses. The cost of obtaining those 10 thousand responses is the cost of sending out the million pieces of mail. The effort is the million pieces mailed, and documented operating history enables those reporting entities to make reliable predictions about the relationship between the total number of pieces of advertising mailed and the total future revenues obtained.

Acquisition Cost of the Assets

.78 AcSEC used FASB Statement Nos. 19 and 91 as a basis for determining the kinds of costs of direct-response advertising that result in assets that should be included in the acquisition cost of the assets. AcSEC believes that some activities, such as allocated overhead, may result in assets, but it excluded such costs because measurements of the amounts that should be allocated to advertising are too imprecise. The costs of materials bought from a supplier in the production of advertising materials should be reported as costs of assets from direct-response advertising if those materials can be directly attributed to specific direct-response advertising. An example of such costs and activities is the cost of paper bought from a third party used to produce catalogues.

Amortization

.79 APB Opinion 17, paragraph 32, states that intangible assets should be amortized using the straight-line method, unless a company demonstrates that another systematic method is more appropriate. AcSEC used FASB Statement No. 86 as a basis for determining the amortization method because it believes the method used in that Statement generally is more appropriate. AcSEC does not require straight-line amortization, because the benefits of advertising sometimes are greater or less in future periods than in current periods. AcSEC believes amortization should match the costs of obtaining the future benefits with those benefits.

.80 In calculating the amortization of the amounts reported as assets resulting from direct-response advertising, the amounts in the calculation should not be discounted to net present value. The FASB currently is studying discounting. Under current generally accepted accounting principles (GAAP), assets resulting from direct-response advertising are nonmonetary assets, and nonmonetary assets generally are not discounted. Further, the effect of discounting generally would not be material, because the amortization period usually would be short.

.81

Appendix

Other Financial Reporting Literature

The following sets forth relevant portions of authoritative and other financial reporting literature that was considered by AcSEC in its deliberation of financial reporting on advertising activities.

As discussed in paragraph .06 of this SOP, the guidance in this SOP does not apply to transactions for which pronouncements in category (a) in paragraph 10 of SAS No. 69 provide guidance.

Guidance Included in Category (a) in Paragraph 10 of SAS No. 69

APB Opinion 17

APB Opinion 17, *Intangible Assets*, paragraph 24, states the following:

> . . . [A] company should record as assets the costs of intangible assets acquired from other enterprises or individuals. Costs of developing, maintaining, or restoring intangible assets which are not specifically identifiable, have indeterminate lives, or are inherent in a continuing business and related to an enterprise as a whole—such as goodwill—should be deducted from income when incurred.

However, paragraph 28 states that "a reasonable estimate of the useful life may often be based on upper and lower limits even though a fixed existence is not determinable."

APB Opinion 28

APB Opinion 28, *Interim Financial Reporting*, paragraph 15(a), states the following:

> Costs and expenses other than product costs should be charged to income in interim periods as incurred, or be allocated among interim periods based on an estimate of time expired, benefit received or activity associated with the periods. Procedures adopted for assigning specific cost and expense items to an interim period should be consistent with the bases followed by the company in reporting results of operations at annual reporting dates. However, when a specific cost or expense item charged to expense for annual reporting purposes benefits more than one interim period, the cost or expense item may be allocated to those interim periods.

Paragraph 16(d) states the following:

> Advertising costs may be deferred within a fiscal year if the benefits of an expenditure made clearly extend beyond the interim period in which the expenditure is made. Advertising costs may be accrued and assigned to interim periods in relation to sales prior to the time the service is received if the advertising program is clearly implicit in the sales arrangement.

FASB Statement No. 2

FASB Statement No. 2, *Accounting for Research and Development Costs*, provides no specific guidance on the financial reporting treatment of advertising but does include a discussion from which parallels can be drawn. Appendix B, "Basis for Conclusions," includes uncertainty of probable future benefits, lack of causal relationship between expenditures and benefits, and measurability of probable future economic benefits as bases for the FASB's conclusion that the costs of research and development should be reported as expenses when incurred and, in effect, that the benefits of that activity should not be reported as assets. The FASB considered the concept of selective reporting of assets for those activities, which would involve establishing conditions that would have to be met before the benefits of research and development could be reported as assets. However, because the factors on which such conditions might be based could not be objectively and comparably applied by all enterprises, the FASB rejected this concept for research and development activities.

The Statement, in paragraph 11, includes both internal and external costs among the costs to be identified with research and development activities.

FASB Statement No. 13

FASB Statement No. 13, *Accounting for Leases*, as amended by FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, paragraph 24, states that "*initial direct costs* shall not include costs related to activities performed by the lessor for advertising [and] soliciting potential lessees . . ." and therefore requires that the costs of advertising, as they pertain to leases, be reported as expenses when incurred.

FASB Statement No. 19

FASB Statement No. 19, *Financial Accounting and Reporting by Oil and Gas Producing Companies*, is discussed in the "Discussion of Conclusions and Implementation Guidance" section of this SOP.

FASB Statement No. 51

FASB Statement No. 51, *Financial Reporting by Cable Television Companies*, appendix A, paragraph 17, states that "direct selling costs include . . . local advertising targeted for acquisition of new subscribers . . ." and requires that they be reported as expenses when incurred, but initial hookup revenue may be recognized to the extent such costs are incurred.

FASB Statement No. 53[9]

FASB Statement No. 53, *Financial Reporting by Producers and Distributors of Motion Picture Films*, requires in paragraph 15 that the probable future economic benefits of exploitation activities, including prerelease and early-release advertising of films in both primary and secondary markets that probably will benefit the film in future markets, be reported as film inventory at cost and amortized based on the ratio that gross revenues from the film for the current period bear to total anticipated gross revenues from the film during its useful life. The costs of local advertising that is "not clearly expected to benefit the film in future markets . . . shall be charged to expense in the period incurred."

FASB Statement No. 60

FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*, requires in paragraph 29 that the probable future economic benefits of policy acquisition activities be reported as assets at cost and amortized in proportion to premium revenue reported. Appendix A, paragraph 66, defines acquisition costs as—

---

[9] In 2000, the FASB rescinded FASB Statement No. 53 and AcSEC issued SOP 00-2, *Accounting by Producers or Distributors of Films* [section 10,800]. The provisions of this SOP apply to entities within the scope of SOP 00-2 [section 10,800]. [Footnote added, effective for financial statements for fiscal years beginning after December 15, 2000, by Statement of Position 00-2.]

> Costs incurred in the acquisition of new and renewal insurance contracts. Acquisition costs include those costs that vary with and are primarily related to the acquisition of insurance contracts (for example, agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees).

The Statement does not discuss whether acquisition activities include advertising activities.

FASB Statement No. 67

FASB Statement No. 67, *Accounting for Costs and Initial Rental Operations of Real Estate Projects*, appendix A, paragraph 28, defines the following terms:

> *Costs Incurred to Rent Real Estate Projects*
>
> Examples of such costs include costs of model units and their furnishings, rental facilities, semipermanent signs, rental brochures, advertising, "grand openings," and rental overhead including rental salaries.
>
> *Costs Incurred to Sell Real Estate Projects*
>
> Examples of such costs include costs of model units and their furnishings, sales facilities, sales brochures, legal fees for preparation of prospectuses, semipermanent signs, advertising, "grand openings," and sales overhead including sales salaries.

The probable future economic benefits of activities undertaken to sell real estate projects are reported as assets at cost if their costs are realizable from the sale of the project and are incurred for tangible assets that are used throughout the selling period to help sell the project. Paragraph 19 states that "capitalized selling costs shall be charged to expense in the period in which the related revenue is recognized as earned."

Paragraphs 20 and 21 state:

> If costs incurred to rent real estate projects, other than initial direct costs, under operating leases are related to and their recovery is reasonably expected from future rental operations, they shall be capitalized. Examples of such costs are costs of model units and their furnishings, rental facilities, semipermanent signs, "grand openings," and unused rental brochures. Costs that do not meet the criteria for capitalization shall be expensed as incurred, for example, rental overhead.
>
> Capitalized rental costs directly related to revenue from a specific operating lease shall be amortized over the lease term. Capitalized rental costs not directly related to revenue from a specific operating lease shall be amortized over the period of expected benefit. The amortization period shall begin when the project is substantially completed and held available for occupancy. Estimated unrecoverable amounts of unamortized capitalized rental costs associated with a lease or group of leases shall be charged to expense when it becomes probable that the lease(s) will be terminated. [*Footnote reference omitted.*]

FASB Statement No. 86

FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*, provides no specific guidance on reporting on advertising, but it does provide guidance from which parallels can be drawn. Under the Statement, all costs incurred internally to create computer software products are reported as expenses when incurred until technological feasibility has been established for the products. For certain production costs of specific activities whose probable future benefits are reported as assets, paragraph 8 states:

> The annual amortization shall be the greater of the amount computed using (*a*) the ratio that current gross revenues for a product bear to the total of current

> and anticipated future gross revenues for that product or (*b*) the straight-line method over the remaining estimated economic life of the product including the period being reported on.

The unamortized amount of assets reported is compared to their net realizable value at the reporting date and is written down to the extent that it exceeds the net realizable value.

FASB Statement No. 91

FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, requires the probable future economic benefits of direct loan origination activities to be reported as assets at cost, which should be amortized over the lives of the loans with the amortization reported as yield adjustments. Paragraph 6 states that "direct loan origination costs of a completed loan shall include only (*a*) incremental direct costs of loan origination incurred in transactions with independent third parties for that loan and (*b*) certain costs directly related to specified activities performed by the lender for that loan." Those specified activities do not include advertising or marketing. Paragraph 7 states that "all other lending-related costs, including costs related to activities performed by the lender for advertising [and] soliciting potential borrowers . . . shall be charged to expense as incurred."

Guidance That Is Not Included in Category (a) of Paragraph 10 of SAS No. 69 but That Is Not Affected by This SOP

Industry Audit Guide *Audits of Stock Life Insurance Companies*

Paragraphs 8.27 to 8.30 of the AICPA Industry Audit Guide *Audits of Stock Life Insurance Companies* state that acquisition expenses should be deferred only if the expense both varies with and is primarily related to the production of new business. Paragraph 8.30 of the guide states that advertising activities are acquisition activities.

Advertising activities that are policy acquisition activities should continue to be accounted for in conformity with the guidance in FASB Statement No. 60 and *Audits of Stock Life Insurance Companies.*

Audit and Accounting Guide *Audits of Property and Liability Insurance Companies*

Paragraphs 3.34 and 8.13 of the AICPA Audit and Accounting Guide *Audits of Property and Liability Insurance Companies* state that acquisition costs that vary with and are primarily related to the acquisition of new and renewal business should be capitalized as deferred acquisition costs. The guide does not state whether advertising activities are acquisition activities.

Advertising activities that are policy acquisition activities should continue to be accounted for in conformity with the guidance in FASB Statement No. 60 and *Audits of Property and Liability Insurance Companies*.

FASB Technical Bulletin No. 90-1

FASB Technical Bulletin No. 90-1, *Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts*, discusses advertising costs incurred in connection with acquiring extended warranty and product maintenance contracts. Paragraph 4 states the following:

> Costs that are directly related to the acquisition of a contract and that would have not been incurred but for the acquisition of that contract (incremental di-

> rect acquisition costs) should be deferred and charged to expense in proportion to the revenue recognized. All other costs, such as . . . advertising expenses . . . should be charged to expense as incurred.

Guidance That Is Not Included in Category (a) of Paragraph 10 of SAS No. 69 That Is Amended by This SOP

SOP 88-1

AICPA SOP 88-1, *Accounting for Developmental and Preoperating Costs, Purchases and Exchanges of Take-off and Landing Slots, and Airframe Modifications*, paragraphs 19 to 24 [section 10,430.19–.24], amends *Audits of Airlines* by recommending that the probable future economic benefits of developmental activities not be reported as assets, "because of the current deregulated environment and the uncertainty regarding the recoverability" of the costs of such activities. The SOP states that the basis for the conclusion in the guide was that the airline industry operated in a regulated environment and "the expected future benefit and recoverability of such costs was generally not in doubt . . . . Route expansion or alteration has become a recurring activity among the airlines, and any related cost is considered a normal and recurring cost of conducting business."

Paragraph 51 of this SOP discusses amendments to SOP 88-1 [section 10,430.51].

SOP 89-5

Paragraphs 50 to 54 of SOP 89-5, *Financial Accounting and Reporting by Providers of Prepaid Health Care Services*, discuss accounting for contract acquisition costs. Paragraph 51 lists advertising as one kind of contract acquisition cost. Paragraph 54 states that ". . . acquisition costs of providers of prepaid health care services should be expensed as incurred."

Paragraph 52 of this SOP discusses amendments to SOP 89-5.

SOP 90-8

Paragraph 65 of SOP 90-8, *Financial Accounting and Reporting by Continuing Care Retirement Communities*, states the following:

> Costs of acquiring initial continuing-care contracts that are expected to be recovered from future contract revenues should be capitalized. These costs should be amortized to expense on a straight-line basis over the average expected remaining lives of the residents under contract or the contract term, if shorter. Costs of acquiring continuing-care contracts after a CCRC [continuing-care retirement community] is substantially occupied or one year following completion should be expensed when incurred.

Paragraph 15 states that advertising is not a cost of acquiring an initial continuing-care contract.

Some believe that SOP 90-8 includes no guidance for reporting the costs of advertising activities. Others believe that the exclusion of advertising activities from the definition of the costs of acquiring an initial continuing-care contract is a prohibition against capitalizing advertising under the guidance in paragraph 63.

Paragraph 53 of this SOP discusses amendments to SOP 90-8.

Accounting Standards Executive Committee (1992-1993)

Task Force on Reporting on Advertising Activities and Certain Other Activities Undertaken to Create Intangible Assets

AICPA Staff

Section 10,610

Statement of Position 94-3 Reporting of Related Entities by Not-for-Profit Organizations

September 2, 1994

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SIGNIFICANT MATTERS SINCE THE ISSUANCE OF THIS SOP

In August 1996, the AICPA issued an Audit and Accounting Guide *Not-for-Profit Organizations* (the New Guide) which superseded the following AICPA Audit and Accounting Guides:

- Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations*
- Industry Audit Guide *Audits of Colleges and Universities*
- Audit and Accounting Guide *Audits of Certain Nonprofit Organizations*

It also superseded the following AICPA Statements of Position (SOPs):

- SOP 74-8, *Financial Accounting and Reporting by Colleges and Universities*
- SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*
- SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*
- SOP 94-2, *The Application of the Requirements of Accounting Research Bulletins, Opinions of the Accounting Principles Board, and Statements and Interpretations of the Financial Accounting Standards Board to Not-for-Profit Organizations*

The New Guide is effective for financial statements for fiscal years ending on or after December 31, 1996. Earlier application is permitted.

This SOP applies to entities following the New Guide.

Readers should note the following matters:

- In July 1996, the AICPA issued an Audit and Accounting Guide *Health Care Organizations* that superseded the Audit and Accounting Guide *Audits of Providers of Health Care Services*. This SOP does not apply to entities following *Health Care Organizations*, just as it did not apply to entities following *Audits of Providers of Health Care Services*.
- References to pronouncements and guidance that are superseded have been shaded.
- In applying the guidance in paragraph .07, readers should refer to Chapter 8, "Investments," of the New Guide. Not-for-profit organizations that choose to report investments at market value in conformity with the New Guide may do so instead of reporting those investments by the equity method, which otherwise would be required by this SOP.
  - Although the New Guide superseded SOP 78-10, it did not supersede the guidance in paragraph .13 of this SOP that "[e]ntities that otherwise would be prohibited from presenting consolidated financial statements under the provisions of this SOP, but that currently present consolidated financial statements in conformity with the guidance in SOP 78-10, may continue to do so." Organizations that presented consolidated financial statements in conformity with the guidance in SOP 78-10 may continue to do so.
- In applying the definition of "economic interest" in the Glossary, readers should refer also to paragraph 3.22 of the New Guide.
- Paragraph C2 of FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, amends the last sentence of paragraph 2 of ARB No. 51, *Consolidated Financial Statements*, by deleting the phrase "is likely to be temporary or if it" from that sentence. The amended sentence in paragraph 2 therefore reads as follows:

  "A majority-owned subsidiary shall not be consolidated if control ~~is likely to be temporary or if it~~ does not rest with the majority owner…"

This SOP has been conformed to FASB Statement No. 144 to eliminate the exception to consolidation for a temporarily controlled subsidiary in circumstances in which this SOP requires consolidation based on a controlling financial interest through direct or indirect ownership of a majority voting interest (paragraphs .05 and .10 of this SOP). No such conforming change to this SOP is appropriate in circumstances in which consolidation is required or permitted based on control through other than a controlling financial interest through direct or indirect ownership of a majority voting interest (Paragraphs .11 and .12 of this SOP). Accordingly, this SOP retains the exception to consolidation for a temporarily controlled subsidiary in circumstances in which consolidation is required or permitted based on control through other than a controlling financial interest through direct or indirect ownership of a majority voting interest.

- In July 2004, the FASB ratified conclusions reached by the Emerging Issues Task Force in EITF Issue No. 02-14, *Whether an Investor Should Apply the Equity Method of Accounting to Investments Other Than Common Stock*. Accordingly, this SOP has been conformed to include the guidance in EITF Issue No. 02-14. The consensus opinion reached in EITF Issue No. 02-14 expands the use of the equity method of accounting described in APB Opinion No. 18 to certain investments that are deemed "in-substance common stock" (as defined in the consensus opinion).[†] It requires an investor that has the ability to exercise significant influence over the operating and financial policies of an investee to apply the equity method of accounting only when it has an investment(s) in common stock and/or an investment that is in-substance common stock. The consensus opinion does not apply to investments accounted for under FASB Statement No. 133, non-corporate entities accounted for under AICPA Statement of Position No. 78-9, *Accounting for Investments in Real Estate Ventures*, or to LLCs accounted for under EITF Issue No. 03-16.

Also, in accordance with paragraph .07 of this SOP, EITF Issue No. 02-14 does not apply to investments that are reported at current market value or fair value. (Paragraphs A.10–A.13 of Appendix A of Chapter 8 of this Guide discuss the circumstances in which an investment may be reported at current market value or fair value.) When applied by a not-for-profit organization, EITF Issue No. 02-14 requires that an organization with the ability to exercise significant influence over the operating and financial policies of a for-profit entity apply APB Opinion No. 18 if that investment is common stock or "in-substance common stock." [Revised, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]

In-substance common stock is an investment in a for-profit investee that has risk and reward characteristics that are substantially similar to that entity's common stock. It might be an investment in a different class of stock or in an in-the-money warrant or option. An organization should consider three characteristics when determining whether an investment in a for-profit entity is substantially similar to an investment in that entity's common stock: subordination, risks and rewards of ownership, and obligation to transfer value. All three of the characteristics must be substantially similar to an investment in the entity's common stock for the organization to conclude that the investment is in-substance common stock. EITF Issue No. 02-14 provides numerous factors that should be considered when determining whether the three characteristics are substantially similar. It also provides examples that illustrate the application of the characteristics to various investments. The initial determination of whether an investment is substantially similar to common stock should be made on the date on which the investor obtains the investment if the investor has the ability to exercise significant influence over the operating and financial policies of the investee. That determination should be reconsidered upon the occurrence of one or more of the triggers described in the consensus opinion.

The use of the equity method of accounting is effectively limited to investment(s) in common stock, in-substance common stock, non-corporate entities accounted for under AICPA Statement of Position 78-9, *Accounting for Investments in Real Estate Ventures*, limited liability companies that maintain "specific ownership accounts" for each investor as discussed in EITF Issue No. 03-16, *Accounting for Investments in Limited Liability Companies* and investments by a general partner in a limited partnership or similar entity when the general partner(s) do not control the partnership, as discussed in EITF Issue No. 04-5, *Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights*. If a not-for-profit organization uses the equity method of accounting to account

† [Footnote deleted, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

for investments in for-profit entities that are not included in that list, the equity method of accounting should be discontinued.[‡] The organization should evaluate whether the investment should be prospectively accounted for under FASB Statement 124 or accounted for as described in Appendix A. The accounting for beneficial interests in trusts as required by FASB Statement No. 136, *Transfers of Assets to a Not-for-Profit Organization or Charitable Trust That Raises or Holds Contributions for Others*, does not change as a result of EITF Issue No. 02-14. [Revised, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

- In June 2005, the FASB ratified conclusions reached by the Emerging Issues Task Force in EITF Issue No. 04-5, *Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights.* Accordingly, this SOP has been conformed to include the guidance in EITF Issue No. 04-5. The consensus opinion reached in EITF Issue No. 04-5 provides a framework to determine if a general partner, or the general partners as a group, controls a limited partnership or similar entity when the limited partners have certain rights. For not-for-profit organizations, the consensus opinion applies to limited partnerships or similar entities (such as limited liability companies that have governing provisions that are the functional equivalent of a limited partnership) unless, in conformity with GAAP, the interests in those entities are reported at fair value with changes in fair value reported in a statement of operations or financial performance. That is, if an organization is required to apply the consolidation guidance included in ARB 51 and FASB Statement No. 94 to its to its investment in a limited partnership, it is within the scope of EITF Issue No. 04-5. The consensus opinion need not be applied in circumstances in which no single general partner in a group of general partners controls the limited partnership. Guidance on determining which general partner in a group of general partners should consolidate the partnership is beyond the scope of this EITF Issue. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5. Revised, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]

The general partners in a limited partnership are presumed to control that limited partnership regardless of the extent of the general partners' ownership interest in the limited partnership. The assessment of whether the rights of the limited partners should overcome the presumption of control by the general partners is a matter of judgment that depends on facts and circumstances. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

The general partners do not control the limited partnership if the limited partners have either (*a*) the substantive ability to dissolve (liquidate) the limited partnership or otherwise remove the general partners without cause (referred to as kick-out rights) or (*b*) substantive participating rights. Substantive participating rights provide the limited partners with the ability to effectively participate in significant decisions that would be expected to be made in the ordinary course of the limited partnership's business. Limited partners' rights that are only protective in nature (referred to as "protective rights") do not overcome the presumption that

[‡] Previously recognized equity method earnings and losses should not be reversed when the equity method of accounting is discontinued. [Footnote revised, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

the general partners control the limited partnership. Guidance on how to determine if the limited partners have these characteristics is provided by paragraphs 7 to 19 of EITF Issue No. 04-5 and examples in Exhibit 04-5A of the Issue abstract. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

If the limited partners possess substantive kick-out rights or if the limited partners have substantive participating rights, presumption of control by the general partners would be overcome, and each of the general partners should account for its investment in the limited partnership using the equity method of accounting. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

The assessment of limited partners' rights and their impact on the presumption of control of the limited partnership by the general partners should be made when an investor(s) first becomes a general partner(s) and should be reassessed at each reporting period thereafter for which financial statements of the general partner(s) are prepared. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

- In February 2007, the FASB issued FASB Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities*, which creates an option under which an organization may irrevocably elect fair value as the initial and subsequent measure for many financial instruments and certain other items, with changes in fair value recognized in the statement of activities as those changes occur.[||] An election is made on a instrument-by-instrument basis (with certain exceptions), generally when an instrument is initially recognized in the financial statements. Not-for-profit organizations that choose to report investments at fair value in conformity with this Statement may do so instead of reporting those investments by the equity method, even if that method otherwise would be required by this SOP. [Added, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]
- In June 2007, the AICPA issued Statement of Position No. 07-1, *Clarification of the Scope of the Audit and Accounting Guide*, Audits of Investment Companies, *and Accounting by Parent Companies and Equity Method Investors for Investments in Investment Companies*. SOP 07-1 amended paragraph .07 of SOP 94-3 and added to it footnotes 6 and 8. Subsequently, the FASB issued FSP SOP 07-1-1, *Effective Date of AICPA Statement of Position 07-1*, to delay indefinitely the effective date of the SOP and to prohibit adoption of the SOP by an entity that has not early adopted the SOP before issuance of the FSP. Therefore, the changes made by SOP 07-1 are not reflected in this Appendix. A not-for-profit organization that early adopts SOP 07-1 before issuance of the final FSP would be permitted but not required to continue to apply the provisions of the SOP; those organizations should refer to SOP 07-1 for the amendments. [Revised, March 2008, to reflect the issuance of SOP 07-1.]
- On September 27, 2007, the FASB issued an exposure draft, *Proposed FSP SOP 94-3-a and AAG-HCO-a, Omnibus Changes to Consolidation*

[||] FASB Statement No. 159 is effective as of the beginning of the first fiscal year that begins after November 15, 2007. Earlier adoption is permitted if certain conditions described in paragraph 30 of the Statement are met. [Footnote added, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]

and Equity Method Guidance for Not-for-Profit Organizations, which would make several changes to the guidance on consolidation and the equity method of accounting in SOP 94-3. It would amend paragraphs 3, 7, 10, 11, 12, and 20 and footnotes 4, 10, 11, and 13. It also would add a new paragraph (6A) about investments in for-profit partnerships, limited liability companies, and similar entities in which the not-for-profit organization has more than a minor interest. Readers should be alert to the issuance of a final standard. [Added, March 2008, to reflect the issuance of proposed exposure draft, *Proposed FSP SOP 94-3-a and AAG-HCO-a*.]

SUMMARY

This statement of position (SOP) amends and makes uniform the guidance concerning reporting related entities in the following AICPA publications:

- Industry Audit Guides *Audits of Voluntary Health and Welfare Organizations*[#] and *Audits of Colleges and Universities*[#]
- Audit and Accounting Guide *Audits of Certain Nonprofit Organizations*[#]
- SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*[#]

The conclusions in this SOP are based on the premise that (1) whether the financial statements of a reporting not-for-profit organization and those of one or more other not-for-profit or for-profit entities should be consolidated and (2) the extent of disclosure that should be required, if any, if consolidated financial statements are not presented should be based on the nature of the relationship between the entities.

The guidance in this SOP focuses on (1) investments in for-profit entities and (2) financially interrelated not-for-profit organizations. That guidance includes the following:

Investments in For-Profit Entities

- A reporting not-for-profit organization should consolidate a for-profit entity in which it has a controlling financial interest through direct or indirect ownership of a majority voting interest if the guidance in Accounting Research Bulletin (ARB) No. 51, *Consolidated Financial Statements*, as amended by Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards Nos. 94, *Consolidation of All Majority-Owned Subsidiaries* and 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, requires consolidation. The manner in which the for-profit entity's financial position, results of operations, and cash flows are presented in the reporting organization's financial statements depends on the nature of the activities of the for-profit entity.
- A reporting not-for-profit organization should use the equity method in conformity with Accounting Principles Board (APB) Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock*, to report investments in common stock or "in substance common stock" of a for-profit entity if the guidance in that Opinion requires the use of the equity method.

[#] This publication has been superseded by the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Footnote renumbered, June 2007.]

- Not-for-profit organizations that choose to report at fair value their portfolio of other investments in conformity with paragraphs A.10–A.13 of Appendix A of Chapter 8 of the New Guide or that report investments in common stock or "in substance common stock" at fair value pursuant to FASB Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities*,[**] may do so instead of reporting those investments by the equity method, which otherwise would be required by this SOP. [Revised, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]

Financially Interrelated Not-for-Profit Organizations

- A not-for-profit organization should consolidate another not-for-profit organization in which it has a controlling financial interest through direct or indirect ownership of a majority voting interest, unless control does not rest with the majority owner, in which case consolidation is prohibited, as discussed in ARB No. 51, as amended by FASB Statement Nos. 94 and 144.
- A not-for-profit organization should consolidate another not-for-profit organization if the reporting not-for-profit organization has both control of the other not-for-profit organization, as evidenced by either majority ownership or a majority voting interest in the board of the other not-for-profit organization, and an economic interest in the other not-for-profit organization, unless control is likely to be temporary or does not rest with the majority owner, in which case consolidation is prohibited.
- A not-for-profit organization may exercise control of another not-for-profit organization in which it has an economic interest by means other than majority ownership or a majority voting interest in the board of the other not-for-profit organization. In such circumstances, the not-for-profit organization is permitted, but not required, to consolidate the other not-for-profit organization, unless control is likely to be temporary, in which case consolidation is prohibited. If a not-for-profit organization controls another organization in which it has an economic interest by means other than majority ownership or a majority voting interest in the board of the other not-for-profit organization and consolidated financial statements are not presented, the not-for-profit organization should make the financial statement disclosures specified in paragraph .12.
- If either (but not both) control or an economic interest exists, the financial statement disclosures required by FASB Statement No. 57, *Related Party Disclosures*, should be made.

The conclusions in this SOP will be reconsidered when the FASB completes its project on consolidations and related matters, which may affect the definition of control and other related matters. In January 2004, after the issuance of FASB Interpretation No. 46, Consolidation of Variable Interest Entities, the FASB moved its consolidations and related matters project from its technical agenda to its research project agenda. To date, no changes to the guidance in

---

[**] FASB Statement No. 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. Early adoption is permitted as of the beginning of a fiscal year that begins on or before November 15, 2007, provided the entity also elects to apply the provisions of FASB Statement No. 157, *Fair Value Measurement*. [Footnote added, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159; Footnote renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

this SOP have resulted from the FASB's consolidations and related matters project.

This SOP is effective for financial statements issued for fiscal years beginning after December 15, 1994, except for not-for-profit organizations that have less than $5 million in total assets and less than $1 million in annual expenses. For those organizations, the effective date shall be for fiscal years beginning after December 15, 1995. Earlier application is permitted. For organizations that adopt FASB Statement No. 117, Financial Statements of Not-for-Profit Organizations, before its effective date, earlier application of this SOP is encouraged. Comparative financial statements for earlier periods included with those for the period in which this SOP is adopted should be restated.

Changes Made to Reflect the Issuance of FASB Statement No. 144

There have been conforming changes made to this SOP due to the issuance of FASB Statement No. 144. Paragraph C2 of FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, amends the last sentence of paragraph 2 of ARB No. 51, *Consolidated Financial Statements*, by deleting the phrase "is likely to be temporary or if it" from that sentence. The following paragraphs of this SOP have changed and footnotes added: paragraph .05, footnote 4, paragraph .10, footnote 8, paragraph .11, footnote 11, and paragraph .12, footnote 12. Readers should be aware of the changes. [Revised, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

Changes Made to Reflect the Issuance of EITF Issue No. 02-14

There have been conforming changes made to this SOP due to the issuance of EITF Issue No. 02-14, *Whether an Investor Should Apply the Equity Method of Accounting to Investments Other Than Common Stock*. Paragraph .06, footnote 5 was added. Readers should be aware of the change.

Changes Made to Reflect the Issuance of EITF Issue No. 04-5

There have been conforming changes made to this SOP due to the issuance of EITF Issue No. 04-5, *Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights*. Paragraph 5, footnote 5 was added and subsequent footnotes were renumbered. Readers should be aware of the change. [Added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5].

Changes Made to Reflect the Issuance of FASB Statement No. 159

There have been conforming changes made to this SOP due to the issuance of FASB Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities*. Paragraph 7 has been changed by removing reference to the superseded AICPA audit guides and replacing it with references to paragraphs A.10–A.13 of Chapter 8 of the AICPA Audit and Accounting Guide, *Not-for-Profit Organizations* and FASB Statement No. 159. Readers should be aware of the change. [Added, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159.]

Introduction

.01 The purpose of this statement of position (SOP) is to provide guidance to users and preparers of not-for-profit organizations' financial statements that will produce greater uniformity and comparability in the reporting of investments in majority-owned for-profit subsidiaries, investments in less than 50-percent-owned for-profit entities, and related but separate not-for-profit organizations. This SOP does not address how to prepare consolidated financial statements,[1] nor does it address all the conceptual issues underlying the reporting of relationships not evidenced by ownership.[2]

Scope

.02 This SOP—

- Amends and makes uniform the guidance concerning the reporting of related entities in the following AICPA publications:
  - Industry Audit Guides *Audits of Voluntary Health and Welfare Organizations*[#] and *Audits of Colleges and Universities* and *Audits of Colleges and Universities*[#]
  - Audit and Accounting Guide *Audits of Certain Nonprofit Organizations*[#]
  - SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*[3]
- Does not apply to entities or activities that are covered by the AICPA Audit and Accounting Guide *Audits of Providers of Health Care Services*

Conclusions

.03 This SOP provides guidance for reporting (*a*) investments in for-profit majority-owned subsidiaries, (*b*) investments in common stock of for-profit entities wherein the not-for-profit organization has a 50 percent or less voting interest, and (*c*) financially interrelated not-for-profit organizations.

.04 Whether the financial statements of a reporting not-for-profit organization and those of one or more other entities should be consolidated, whether those other entities should be reported using the equity method, and the extent of the disclosure that should be required, if any, should be based on the nature of the relationships between the entities.

Investments in For-Profit Majority-Owned Subsidiaries

.05 Not-for-profit organizations with a controlling financial interest in a for-profit entity through direct or indirect ownership of a majority voting interest in that entity should follow the guidance in ARB No. 51, as amended by FASB Statement Nos. 94, *Consolidation of All Majority-Owned Subsidiaries*,

---

[1] *Consolidation* of a parent and subsidiary organizations requires the presentation of a single set of amounts for the entire reporting entity. *Combination*, as discussed in paragraphs 22 and 23 of Accounting Research Bulletin (ARB) No. 51, *Consolidated Financial Statements*, refers to financial statements prepared for organizations among which common control exists but for which the parent-subsidiary relationship does not exist. Both consolidation and combination require elimination of interorganization transactions and balances. This SOP provides no guidance concerning commonly controlled not-for-profit organizations.

[2] As discussed in Appendix C [paragraph .18], the Financial Accounting Standards Board (FASB) has on its agenda a project on consolidations and related matters.

[#] This publication has been superseded by the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Footnote renumbered, June 2007.]

[3] SOP 78-10 has no effective date. This SOP amends, but does not affect the status of, SOP 78-10.

and 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*,[4],[5] in determining whether the financial position, results of operations, and cash flows of the for-profit entity should be included in the not-for-profit organization's financial statements.[6]

Investments in Common Stock of For-Profit Entities Wherein the Not-for-Profit Organization Has a 50 Percent or Less Voting Interest

.06 Investments in common stock of for-profit entities wherein the not-for-profit organization has 50 percent or less of the voting stock in the investee should be reported under the equity method in conformity with Accounting Principles Board (APB) Opinion No. 18, *The Equity Method of Accounting for*

---

[4] Paragraph C2 of FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, amends the last sentence of paragraph 2 of ARB No. 51, *Consolidated Financial Statements*, by deleting the phrase "is likely to be temporary or if it" from that sentence. The amended sentence in paragraph 2 therefore reads as follows:

> "A majority-owned subsidiary shall not be consolidated if control ~~is likely to be temporary or if it~~ does not rest with the majority owner..."

This SOP has been conformed to FASB Statement No. 144 to eliminate the exception to consolidation for a temporarily controlled subsidiary in circumstances in which this SOP requires consolidation based on a controlling financial interest (paragraphs .05 and .10 of this SOP). No such conforming change to this SOP is appropriate in circumstances in which consolidation is required or permitted based on control through other than a controlling financial interest (paragraphs .11 and .12 of this SOP). Accordingly, this SOP retains the exception to consolidation for a temporarily controlled subsidiary in circumstances in which consolidation is required or permitted based on control through other than a controlling financial interest.

[5] EITF Issue No. 04-5 requires consolidation by a general partner of limited partnerships or similar entities (such as limited liability companies that have governing provisions that are the functional equivalent of a limited partnership) unless the rights of the limited partners overcome a presumption that the general partner controls a limited partnership. Paragraphs 6–19 and the examples in Exhibit 04-5A of EITF Issue No. 04-5 provide a framework to determine if a general partner, or the general partners as a group, controls a limited partnership or similar entity when the limited partners have certain rights. If the presumption of control by the general partners is overcome, each of the general partners should account for its investment in the limited partnership using the equity method of accounting. The consensus does not apply to partnerships that are reported at fair value in conformity with paragraphs A.10–A.13 of this Guide. That is, if an organization is required to apply the consolidation guidance included in ARB No. 51 and FASB Statement No. 94 to its investment in a limited partnership, it is within the scope of EITF Issue No. 04-5. It also need not be applied in circumstances in which no single general partner in a group of general partners controls the limited partnership. The consensus opinion in this EITF Issue has been ratified by the FASB. EITF Consensus Opinions are category (c) GAAP as described in SAS No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles. The accounting conclusions in this SOP are category (b) GAAP as described in SAS No. 69. Including the EITF Consensus Opinions within this SOP does not change their position in the GAAP hierarchy. However, the guidance in this consensus opinion may be relevant in applying the guidance in this SOP and should be considered in conjunction with it. A more detailed summary of this consensus opinion is provided in the "Summary" of "Significant Matters Since the Issuance of this SOP." [Footnote added, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5.]

[6] [Footnote removed, March 2008, due to indefinite deferral of effective date of SOP 07-1 by FSP SOP 07-1-1, *Effective Date of AICPA Statement of Position 07-1*.]

Investments in Common Stock, if the guidance in that Opinion requires use of the equity method, subject to the exception in paragraph .07 of this SOP.[7] ,[[8]] Also, not-for-profit organizations should make the financial statement disclosures required by APB Opinion No. 18 if the guidance in that Opinion requires them.

.07 Some AICPA audit guides applicable to some not-for-profit organizations (as discussed in paragraphs A.10–A.13 of the appendix A of chapter 8 of the AICPA Audit and Accounting Guide *Not-for-Profit Organizations* permit investment portfolios to be reported at market value in certain circumstances. FASB Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities*,[**] permits common stock and "in-substance common stock" to be reported at fair value. Not-for-profit organizations that choose to report investment portfolios at market value in conformity with the AICPA audit guides or that make an election to report investments in common stock or "in-substance common stock" at fair value pursuant to FASB Statement No. 159 may do so instead of applying the equity method of accounting to investments covered by paragraph .06 of this SOP. [Revised, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159; Revised, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1; Revised, March 2008, to remove conforming changes made to reflect SOP 07-1 due to indefinite deferral of effective date of SOP 07-1 by FSP SOP 07-1-1, *Effective Date of AICPA Statement of Position 07-1*.]

Financially Interrelated Not-for-Profit Organizations

.08 Not-for-profit organizations may be related to one or more other not-for-profit organizations in numerous ways, including ownership, *control*,[9] and *economic interest*.

.09 As discussed in paragraphs .10–.13, the various kinds and combinations of control and economic interest result in various financial reporting. Certain kinds of control result in consolidation (paragraph .10). Other kinds of

---

[7] EITF Issue No. 02-14, *Whether an Investor Should Apply the Equity Method of Accounting to Investments Other Than Common Stock*, requires use of the equity method for investments that are deemed "in-substance common stock" (as defined in the consensus opinion). The consensus opinion in this EITF Issue has been ratified by the FASB. EITF Consensus Opinions are category (c) GAAP as described in AU section 411, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles. The accounting conclusions in this SOP are category (b) GAAP as described in AU section 411. Including the EITF Consensus Opinions within this SOP does not change their position in the GAAP hierarchy. However, the guidance in this consensus opinion may be relevant in applying the guidance in this SOP and should be considered in conjunction with it. A summary of this consensus opinion is provided in the "Summary" of "Significant Matters Since the Issuance of this SOP." [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

[[8]] [Footnote removed, March 2008, due to indefinite deferral of effective date of SOP 07-1 by FSP SOP 07-1-1, *Effective Date of AICPA Statement of Position 07-1*.]

[**] FASB Statement No. 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. Early adoption is permitted as of the beginning of a fiscal year that begins on or before November 15, 2007, provided the entity also elects to apply the provisions of FASB Statement No. 157, *Fair Value Measurement*. [Footnote added, May 2007, to reflect conforming changes necessary due to the issuance of FASB Statement No. 159; Footnote renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

[9] Words or terms defined in the Glossary [paragraph .20] are in italicized type the first time they appear in this SOP. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

control result in consolidation only if coupled with an economic interest (paragraph .11). Still other kinds of control result in consolidation being permitted but not required if coupled with an economic interest (paragraph .12). The existence of control or an economic interest, but not both, is discussed in paragraph .13.

.10 Not-for-profit organizations with a controlling financial interest in another not-for-profit organization through direct or indirect ownership of a majority voting interest in that other not-for-profit organization should consolidate that other organization, unless control does not rest with the majority owner, in which case consolidation is prohibited, as discussed in ARB No. 51, as amended by FASB Statement Nos. 94 and 144.[10]

.11 In the case of (*a*) control through a majority ownership interest[11] by other than ownership of a majority voting interest, as discussed in paragraph .10, or control through a *majority voting interest in the board of the other entity* and (*b*) an economic interest in other such organizations, consolidation is required, unless control is likely to be temporary or does not rest with the majority owner, in which case consolidation is prohibited.[12, 13]

.12 [10] Control of a separate not-for-profit organization in which the reporting organization has an economic interest may take forms other than majority ownership or voting interest; for example, control may be through contract or affiliation agreement. In circumstances such as these, consolidation is permitted but not required, unless control is likely to be temporary, in which case consolidation is prohibited. If the reporting organization controls a separate not-for-profit organization through a form other than majority ownership or voting interest and has an economic interest in that other organization, and consolidated financial statements are not presented, the notes to the financial statements should include the following disclosures:

- Identification of the other organization and the nature of its relationship with the reporting organization that results in control

---

[10] Footnote 4 to paragraph .05 of this SOP discusses the effect of FASB Statement No. 144 on the guidance in this SOP. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

[11] Ownership of not-for-profit organizations may be evidenced in various ways because not-for-profit organizations may exist in various legal forms, such as corporations issuing stock, corporations issuing ownership certificates, membership corporations issuing membership certificates, joint ventures, and partnerships, among other forms. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

[12] Interests by not-for-profit organizations in other not-for-profit organizations may be less than complete interests. For example, a not-for-profit organization may appoint 80 percent of the board of the other not-for-profit organization. If the conditions for consolidation in this SOP are met, the basis of that consolidation would not reflect a minority interest for the portion of the board that the reporting not-for-profit organization does not control, because there is no ownership interest other than the interest of the reporting not-for-profit organization. However, some not-for-profit organizations may enter into agreements with other entities, such as sharing revenue from fund-raising campaigns, resulting in liabilities to those other entities. In such circumstances, those liabilities should be reported. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

[13] Footnote 4 to paragraph .05 of this SOP discusses the effect of FASB Statement No. 144 on the guidance in this SOP. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

- Summarized financial data of the other organization including—
  - Total assets, liabilities, net assets, revenue, and expenses
  - Resources that are held for the benefit of the reporting organization or that are under its control
- The disclosures set forth in FASB Statement No. 57, *Related Party Disclosures*

.13 In the case of control and an economic interest, the presentation of consolidated financial statements, as discussed in paragraph .11, or the disclosures, as discussed in paragraph .12, are required. The existence of control or an economic interest, but not both, precludes consolidation, except as stated in the next sentence, but requires the disclosures set forth in FASB Statement No. 57.[14] Entities that otherwise would be prohibited from presenting consolidated financial statements under the provisions of this SOP, but that currently present consolidated financial statements in conformity with the guidance in SOP 78-10, may continue to do so.

.14 If consolidated financial statements are presented, they should disclose any restrictions made by entities outside of the reporting entity on distributions from the controlled not-for-profit organization to the reporting organization and any resulting unavailability of the net assets of the controlled not-for-profit organization for use by the reporting organization.

Effective Date and Transition

.15 This SOP is effective for financial statements issued for fiscal years beginning after December 15, 1994, except for not-for-profit organizations that have less than $5 million in total assets and less than $1 million in annual expenses. For those organizations, the effective date shall be for fiscal years beginning after December 15, 1995. Earlier application is permitted. For organizations that adopt FASB Statement No. 117, *Financial Statements of Not-for-Profit Organizations*, prior to its effective date, earlier application of this SOP is encouraged. Comparative financial statements for earlier periods included with those for the period in which this SOP is adopted should be restated.

---

[14] The existence of an economic interest does not necessarily cause the entities to be related parties, as defined in FASB Statement No. 57. However, the disclosures required by that Statement also are required under this SOP if an economic interest exists. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

.16

Appendix A

Background Information and Discussion of Conclusions

A-1. This Appendix discusses considerations that were deemed significant by members of AcSEC in reaching the conclusions in this SOP. It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

Background

Characteristics and Objectives of Financial Reporting

A-2. FASB Statement of Financial Accounting Concepts No. 4, *Objectives of Financial Reporting by Nonbusiness Organizations*, states, among other things, that financial reporting by not-for-profit organizations should provide information—

> . . . that is useful to . . . resource providers . . . in making rational decisions about the allocation of resources to those organizations. (paragraph 35)

and that is

> . . . about the economic resources, obligations, and net resources of an organization and the effects of transactions . . . that change resources and interests in those resources. (paragraph 43)

A-3. FFASB Concepts Statement No. 2, *Qualitative Characteristics of Accounting Information*, as amended by FASB Concepts Statement No. 6, *Elements of Financial Statements*, examines the characteristics that make accounting information useful. The Statement sets forth a hierarchy of qualities, with usefulness for decision making being most important. The two primary characteristics that make accounting information useful are relevance and reliability. Comparability, which includes consistency, interacts with relevance and reliability to increase the usefulness of information.

A-4. Information about the nature of relationships and forms of control among not-for-profit organizations and between not-for-profit organizations and for-profit entities should contribute to the objectives set forth in FASB Concepts Statement No. 4, as well as meet the criteria for accounting information set forth in Concepts Statement No. 2. As indicated in paragraphs A-11 and A-12 of this SOP, the information currently presented in not-for-profit organizations' financial statements may not meet the objectives set forth in Concepts Statement No. 4.

A-5. Related but separate not-for-profit organizations and for-profit entities result from the following:

a. The decision of not-for-profit organizations to structure their operations in a manner that helps them achieve their mission

b. Investments by not-for-profit organizations in for-profit entities

Structure of Not-for-Profit Organizations

A-6. Not-for-profit organizations conduct their operations through a variety of organizational structures. *The Not-For-Profit Organization Reporting Entity* (the Holder Report), a 1986 research report by William W. Holder, identifies three basic kinds of organizational structure:

a. *Simple structures*, consisting of a single entity that conducts all operations and activities of the organization

b. *Separate entities*, conducting individual program activities

c. *Single entity and separate entities*, conducting, respectively, program activities and support and other noncentral activities, such as fund-raising

Relationship of Separate Entities to Each Other

A-7. The Holder Report, as well as other studies, identified a variety of relationships that could indicate that the resources and activities of an entity are controlled by another entity. Among the most widespread are the following:

- *Ownership*—One entity is the legal owner of another entity, either through stock ownership or some other means, such as membership in a membership corporation.
- *Board membership*—(*a*) One entity has the ability to appoint or elect a voting majority of the board of directors of another entity or (*b*) a voting majority of one entity's board, as a result of its charter or bylaws, is also a voting majority of the board of another entity.
- *Charter or bylaws*—The corporate charter or bylaws of an entity limits its activities to those that are beneficial to another entity.
- *Oversight relationship*—A national charter establishes conditions, such as financial relationships or an accreditation process, for a separate entity's use of a national name or participation in the activities of a national organization.
- *Contract*—The relationship between separate entities is spelled out in a written contract.

Factors Influencing Relationships of Separate Entities to Each Other

A-8. According to the Holder Report, the most common reasons for establishing separate entities are the following:

- *Taxes*—To ensure the income tax deductibility of contributions by donors and to avoid problems of unrelated business income for taxation purposes
- *Legal*—To limit legal liability; protect funding sources; and avoid laws, rules, and regulations perceived to be overly restrictive
- *Organization*—To establish clear-cut organizational limits of authority and autonomy for various activities
- *Public identity*—To create a separate, distinct public identity for the specific activity in question

Generally, entities that are established for these reasons are not-for-profit organizations; however, they also may be for-profit entities, principally for tax reasons.

Not-for-Profit Organization Investment Portfolio Relationships

A-9. Not-for-profit organizations' investment portfolios may include ownership interests in for-profit entities. Such investments generally are made to earn returns on assets rather than to conduct operating activities and frequently are held for long-term investment purposes. Some not-for-profit organizations holding such investments own more than 20 percent interests in these for-profit organizations; for example—

- A federated fund-raising organization may hold a majority interest in an oil company.
- A not-for-profit organization's endowment fund may include controlling interests in shopping malls, commercial buildings, and venture capital funds.

Current practice for reporting such investments is diverse, including cost, lower of cost or market, fair market value, and the equity method. Such investments generally are not reported by consolidating their financial statements with the financial statements of the reporting not-for-profit organizations.

Current Authoritative Literature

A-10. Current authoritative literature on reporting the resources and activities of related entities of which one or more is a not-for-profit organization is inconsistent. Two noteworthy instances are the following:

- Appendix B [paragraph .17] discusses the inconsistencies in the AICPA audit and accounting guides and the SOP listed in paragraph .02 of this SOP. Efforts to correct or address these inconsistencies will take a long time, and no immediate guidance is anticipated other than this SOP.
- There has been uncertainty in practice over whether and to what extent certain pronouncements of the FASB—for example, FASB Statement No. 94—apply to not-for-profit organizations. In September 1994, the AICPA Accounting Standards Executive Committee (AcSEC) issued SOP 94-2, *The Application of the Requirements of Accounting Research Bulletins, Opinions of the Accounting Principles Board, and Statements and Interpretations of the Financial Accounting Standards Board to Not-for-Profit Organizations*, which provides that not-for-profit organizations should follow the guidance in effective provisions or ARBs, APB Opinions, and FASB Statements and Interpretations except for specific pronouncements that explicitly exempt not-for-profit organizations.

Appendix C [paragraph .18] summarizes other projects related to this SOP and their current status.

Needs of Financial Statement Users

A-11. Because of the variety of organizational structures, the nature of the relationships among separate entities, and the inconsistency of the guidance in the current authoritative accounting literature, the needs of users of not-for-profit organizations' financial reports described in FASB Concepts Statement Nos. 2 and 4 may not be met.

A-12. Among the deficiencies noted by creditors, identified in the Holder Report, are the following:

- Relationships with and among affiliated entities and other related parties are not always clear and readily understandable in an organization's financial reports.
- Creditors sometimes are unable to understand the scope of activities and range of entities that make up the reporting entity simply by reading the financial reports.
- Substantially different reporting practices exist for similar economic circumstances.

Among the deficiencies noted by grantors and contributors, also identified in the Holder Report, are the following:

- Reporting for fund-raising and administrative activities sometimes is fragmented into more than one set of financial statements.
- The level of disclosure in financial statements about the kinds of activities conducted and the existence and inclusion of related entities is inadequate. Of specific concern is whether all the resources controlled and all the activities conducted by a not-for-profit organization are included in its financial statements.

Reporting and Disclosures

A-13. Relationships between not-for-profit organizations and other entities range from complete control of the other entities by a central organization to a loose association. These relationships have resulted in the following eight financial reporting alternatives:

a. Consolidation or combination under the guidelines in ARB 51, FASB Statement No. 94, and SOP 78-10[#]

b. Reporting the investment under the equity method of accounting for investments

c. Reporting the investment at cost

d. Reporting the investment at market

e. Reporting the investment at the lower of cost or market

f. Disclosures similar to those under the AICPA Audit and Accounting Guide *Audits of Providers of Health Care Services*

g. Related-party disclosures under the guidelines of FASB Statement No. 57

h. No reporting or disclosures

Consolidation and Combination

A-14. Drawing on ARB 51, FASB Statement No. 94, paragraph 1, states:

> The purpose of consolidated statements is to present, primarily for the benefit of the shareholders and creditors of the parent company, the results of operations and the financial position of a parent company and its subsidiaries essentially as if the group were a single company with one or more branches or divisions.

A-15. SOP 78-10,[#] which is included in the AICPA Audit and Accounting Guide *Audits of Certain Nonprofit Organizations*[#] and which predates FASB Statement No. 94, states in paragraphs 42 and 43:

> For a reporting organization that controls another organization having a compatible purpose, it is presumed that combined or combining financial statements are more meaningful than separate statements and are usually necessary for a fair presentation in conformity with generally accepted accounting principles. *Control* means the direct or indirect ability to determine the direction of the management and policies through ownership, by contract, or otherwise.
>
> The accounting standards division has considered the foregoing definition in relation to the nonprofit organizations covered by this statement of

[#] This publication has been superseded by the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Footnote renumbered, June 2007.]

> position and has concluded that it may be construed by some to be so broad, considering the structure of some nonprofit organizations, that presentation of combined financial statements might have relatively little value to users of such combined statements, particularly in relation to the cost of their preparation.

SOP 78-10, paragraph 44, states, in part:

> . . . combined financial statements should be presented if (1) control exists as defined in paragraph 42 and (2) any of the following circumstances exists:
>
> *a.* Separate entities solicit funds in the name of and with the expressed or implied approval of the reporting organization, and substantially all of the funds solicited are intended by the contributor or are otherwise required to be transferred to the reporting organization or used at its discretion or direction.
>
> *b.* A reporting organization transfers some of its resources to another separate entity whose resources are held for the benefit of the reporting organization.
>
> *c.* A reporting organization assigns functions to a controlled entity whose funding is primarily derived from sources other than public contributions.

Equity Method

A-16. APB Opinion 18 states in paragraph 17:

> . . . the equity method of accounting for an investment in common stock should . . . be followed by an investor whose investment in voting stock gives it the ability to exercise significant influence over operating and financial policies of an investee even though the investor holds 50% or less of the voting stock. Ability to exercise that influence may be indicated in several ways, such as representation on the board of directors, participation in policy making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

Disclosures

A-17. Paragraph 13.04 of *Audits of Providers of Health Care Services* suggests presenting "summarized information about the assets, liabilities, results of operations, and changes in fund balances of related organizations" that "describe the nature of the relationships between . . . the related organizations."

A-18. FASB Statement No. 57 requires the following disclosures for material related-party transactions:

- The existence and nature of the relationship
- A description of the transactions between the entities, summarized if appropriate, for the period reported on, including amounts, if any, and any other information deemed necessary to an understanding of the effects of those transactions on the reporting organization's financial statements
- The dollar volume of transactions between the entities and the effects of any changes in the method of establishing their terms from the preceding period
- Amounts due from or to the related entities, and, if not otherwise apparent, the terms and manner of settlement

Discussion of Conclusions

Scope

A-19. Consistent with the May 19, 1993, exposure draft of this SOP, this SOP does not apply to entities that are included in the scope of *Audits of Providers of Health Care Services*. AcSEC considered including those entities in the scope of this SOP but exempted them for practical purposes. The ways those entities are related to each other are evolving and may not be contemplated by this SOP. For example, many of those entities are affiliated based on participation in networks of health care providers, with complex contractual agreements that make it difficult to determine whether control and economic interest exist based on the definitions in this SOP. While AcSEC believes the basic principles in this SOP also may apply to those entities, further study and deliberation are necessary to determine whether this SOP would require clarification for it to be made operational for those entities. Further, AcSEC believes (*a*) there is a need for guidance now for entities included in the scope of this SOP and (*b*) including entities covered by *Audits of Providers of Health Care Services* in the scope of this SOP likely would delay its issuance. Accordingly, AcSEC concluded it should exclude entities that are required to follow *Audits of Providers of Health Care Services* from the scope of this SOP. Guidance for reporting related entities for entities covered by *Audits of Providers of Health Care Services* is expected to be included as part of the current project to revise that guide.

Underlying Principles

A-20. The conclusions in this SOP are based on the premise that (*a*) whether the financial statements of a reporting not-for-profit organization and those of one or more other entities (either a not-for-profit organization or a for-profit entity) should be consolidated and (*b*) the extent of disclosure that should be required, if any, if consolidated financial statements are not presented should be based on the nature of the relationship between the entities.

Control

A-21. This SOP does not develop new concepts concerning the definition of control. Because the FASB currently has on its agenda a project on consolidations and related matters that may result in a definition of control different from that contained in SOP 78-10, AcSEC concluded that it should not revise the definition of control at this time.[15]

Relation to Other Guidance

A-22. This SOP makes uniform the application of APB Opinion No. 18 and FASB Statement No. 94 for not-for-profit organizations with the following exception: This SOP permits not-for-profit organizations that otherwise would report their investment portfolios at market value in conformity with guidance in the not-for-profit audit guides to do so instead of adopting the equity method for unconsolidated subsidiaries and 50 percent or less owned entities. AcSEC permitted this exception because it believes uniform guidance will be issued by the FASB on reporting the overall investment activities of not-for-profit organizations as part of the FASB's project on not-for-profit organizations.

---

[15] In January 2004, after the issuance of FASB Interpretation No. 46, *Consolidation of Variable Interest Entities*, the FASB moved its consolidations and related matters project from its technical agenda to its research project agenda. To date, no changes to the guidance in this SOP have resulted from the FASB's consolidations and related matters project. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

A-23. The conclusions in this SOP evolve from and consider the conclusions of SOP 78-10 and *Audits of Providers of Health Care Services* to provide uniform criteria for consolidation. They provide for financial statement disclosures that can be applied objectively and that can curb potential abuses in not reporting (*a*) the results of separate but related entities established by a not-for-profit organization to raise funds on its own behalf and (*b*) assets controlled by another not-for-profit organization. (This SOP does not revise *Audits of Providers of Health Care Services*.)

A-24. This SOP requires consolidation if there is an economic interest and control by either a majority voting interest in the board of the other entity or the ability to appoint a majority of its board members. Some not-for-profit organizations are related to each other in ways that would meet the definition of control under this SOP. However, in the case of some of the organizations, no such economic interest exists. In circumstances of control other than a controlling financial interest in another not-for-profit organization through direct or indirect ownership of a majority voting interest, this SOP requires the existence of an economic interest for consolidation to be required or permitted. That provision is included in order to preclude the reporting of misleading information about the assets, liabilities, results of operations, and cash flows of the reporting organization.

Economic Interest

A-25. The Glossary [paragraph .20] of this SOP states that "[a]n *economic interest* in another entity exists if (*a*) the other entity holds or utilizes significant resources that must be used for the unrestricted or restricted purposes of the not-for-profit organization, either directly or indirectly by producing income or providing services, or (*b*) the reporting organization is responsible for the liabilities of the other organization." The Glossary [paragraph .20] includes examples of circumstances that result in economic interests, including a reporting organization assigning certain of its functions to another entity. For example, an educational institution assigning its research functions to a research corporation that holds significant resources that must be used for the unrestricted or restricted purposes of the reporting organization, either directly or indirectly, results in an economic interest in that research corporation. Also, an organization may have an economic interest in a lobbying organization if that lobbying organization conducts any of the organization's lobbying functions and uses significant resources that must be used for the unrestricted or restricted purposes of the reporting organization, either directly or indirectly.

Circumstances Permitting but Not Requiring Consolidation

A-26. Paragraph .12 of this SOP permits but does not require consolidation if the reporting not-for-profit organization controls a separate not-for-profit organization in which it has an economic interest and that control is achieved other than control through—

a. A controlling financial interest in the other not-for-profit organization through direct or indirect ownership of a majority voting interest or

b. A majority voting interest in the board of the other entity.

AcSEC considered requiring consolidation in all circumstances in which the reporting not-for-profit organization controls and has an economic interest in another not-for-profit organization. However, AcSEC believes consolidation may not be meaningful in all situations in which there is control and an economic interest. For example, some national organizations may control local chapters through affiliation agreements and receive funds from those local chapters. In such circumstances, both control and an economic interest exist. However, consolidation may not be meaningful. AcSEC encourages consolidation if—

a. The reporting not-for-profit organization controls a separate not-for-profit organization in which it has an economic interest and that control is other than control through—

   i. A controlling financial interest in the other not-for-profit organization through direct or indirect ownership of a majority voting interest or

   ii. A majority voting interest in the board of the other entity and

b. Consolidation would be meaningful.

Disclosures

A-27. AcSEC believes the disclosures required by this SOP in circumstances in which control exists by contract, agreement, or otherwise provide financial statement users with information that is more meaningful than the information they now receive under the existing not-for-profit audit guides. The disclosure requirements in this SOP are an interim step until the FASB completes its consolidations and related matters project.[16]

Combined Financial Statements

A-28. This SOP provides guidance concerning consolidated financial statements. As discussed in footnote 1, ARB 51 provides guidance concerning combined financial statements. Paragraph 22 of ARB 51 states that "there are circumstances, however, where combined financial statements (as distinguished from consolidated statements) of commonly controlled companies are likely to be more meaningful than their separate statements." This SOP prohibits consolidated financial statements in certain circumstances. However, it provides no guidance concerning combined financial statements of commonly controlled not-for-profit organizations, which may be presented, in certain circumstances, in conformity with the guidance in ARB 51.

Parent or Subsidiary-Only Financial Statements

A-29. This SOP provides no guidance concerning parent-entity-only or subsidiary-entity-only financial statements. Paragraph 15 of FASB Statement No. 94 precludes the use of parent-company financial statements for use as the general-purpose financial statements of the primary reporting entity. However, that Statement is silent concerning parent-company financial statements as other than general-purpose financial statements for the primary reporting entity. Generally accepted accounting principles do not preclude the issuance of subsidiary-only financial statements. However, care should be taken to include all disclosures required by FASB Statement No. 57 and other relevant pronouncements.

---

[16] See footnote 15. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote revised and further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

.17

Appendix B

Other Financial Reporting Literature

B-1. The following discusses the authoritative and other financial reporting literature that is relevant to AcSEC's consideration of consolidated financial statements involving not-for-profit organizations. All references and discussion pertain to literature as it exists prior to being revised by this SOP. As discussed in paragraph .02, this SOP revises certain AICPA literature.

SOP 78-10

B-2. SOP 78-10,[#] *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*, is discussed in paragraph A-15 of this SOP. (As discussed in paragraph .02 of this SOP, this SOP amends SOP 78-10.)

Audits of Providers of Health Care Services

B-3. The AICPA Audit and Accounting Guide *Audits of Providers of Health Care Services*, paragraph 13.02, recommends consolidation or combination of organizations related to health care entities by direct or common ownership in accordance with the provisions of ARB 51. In cases in which related organizations are controlled through means other than direct or common ownership and ARB 51 does not require consolidation, *Audits of Providers of Health Care Services* does not recommend consolidation or combination.

B-4. In circumstances in which *Audits of Providers of Health Care Services* does not recommend consolidation or combination, paragraph 13.04 of that guide requires disclosure of certain summarized information concerning the related organizations if control and at least one of the following circumstances exist:

a. The organization has solicited funds in the name of the health care entity and with the expressed or implied approval of the health care entity, and substantially all the funds solicited by the organization were intended by the contributor, or were otherwise required, to be transferred to the health care entity or used at its discretion or direction.

b. The health care entity has transferred some of its resources to the organization, and substantially all of the organization's resources are held for the benefit of the health care entity.

c. The health care entity has assigned certain of its functions (such as the operation of a dormitory) to the organization, which is acting primarily for the benefit of the health care entity.

(As discussed in paragraph .02 of this SOP, this SOP does not amend *Audits of Providers of Health Care Services*.)

Audits of Colleges and Universities

B-5. *The AICPA Industry Audit Guide Audits of Colleges and Universities*,[#] paragraph 11.09, states:

[#] This publication has been superseded by the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Footnote renumbered, June 2007.]

> For adequate disclosure, all separately incorporated but related units for which the reporting institution is fiscally responsible, such as university presses, intercollegiate athletics, and research foundations, should be (1) included in the financial statements, (2) adequately disclosed by notes, or (3) presented in separate financial statements accompanied by and cross-referenced in the basic financial statements of the institution.

(As discussed in paragraph .02 of this SOP, this SOP amends *Audits of Colleges and Universities*.)[#]

Audits of Voluntary Health and Welfare Organizations

B-6. The AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* provides no guidance on whether consolidated financial statements should be presented. However, paragraphs 7.08 and 7.09 provide guidance for determining whether auditors should audit the financial statements of organizations associated with the reporting not-for-profit organization. (As discussed in paragraph .02 of this SOP, this SOP amends *Audits of Voluntary Health and Welfare Organizations.*)

[#] This publication has been superseded by the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Footnote renumbered, June 2007.]

.18

Appendix C
Other Projects Related to This SOP

FASB Project on Consolidations and Related Matters

C-1. This project is addressing various issues concerning the reporting entity, including those relating specifically to not-for-profit organizations. The FASB issued its September 10, 1991, Discussion Memorandum, *Consolidation Policies and Procedures*. The conclusions in this SOP will be reconsidered when the FASB completes its project on consolidations and related matters, which may affect the definition of control and other related matters. In January 2004, after the issuance of FASB Interpretation No. 46, *Consolidation of Variable Interest Entities*, the FASB moved its consolidations and related matters project from its technical agenda to its research project agenda. To date, no changes to the guidance in this SOP have resulted from the FASB's consolidations and related matters project.

FASB Project on Investments

C-2. This project is addressing various issues concerning investments held by not-for-profit organizations. The project is in the preliminary stages. The conclusions in this SOP will be reconsidered when the FASB completes its project on investments, which may affect the conclusions concerning investments in common stock of for-profit entities wherein the not-for-profit organization has a 50 percent or less voting interest and other related matters. [*In November 1995, the FASB issued FASB Statement No. 124,* Accounting for Certain Investments Held by Not-for-Profit Organizations, *which does not effect the conclusions of this SOP*.]

AICPA Project on the Application of the Requirements of Accounting Research Bulletins, Opinions of the Accounting Principles Board, and Statements and Interpretations of the Financial Accounting Standards Board to Not-for-Profit Organizations

C-3. In September 1994, AcSEC issued SOP 94-2, *The Application of the Requirements of Accounting Research Bulletins, Opinions of the Accounting Principles Board, and Statements and Interpretations of the Financial Accounting Standards Board to Not-for-Profit Organizations* [section 10,600], which provides that not-for-profit organizations should follow the guidance in effective provisions of ARBs, APB Opinions, and FASB Statements and Interpretations except for specific pronouncements that explicitly exempt not-for-profit organizations.

AICPA Accounting and Audit Guide Revisions

C-4. The AICPA will revise the existing audit and accounting guides for not-for-profit organizations and colleges and universities to reflect the accounting and reporting requirements of FASB Statement Nos. 116, *Accounting for Contributions Received and Contributions Made*, and 117, *Financial Statements of Not-for-Profit Organizations*, among other things.[17]

---

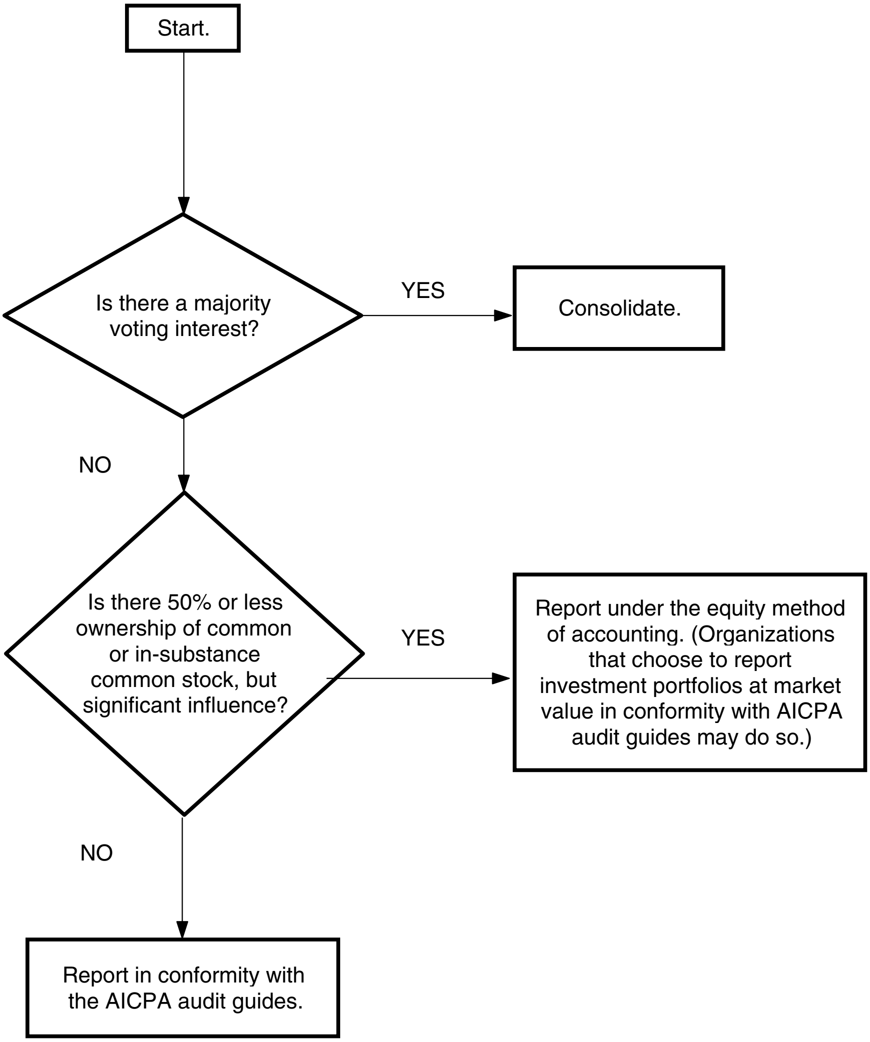
[17] In 1996, the AICPA issued the Audit and Accounting Guide *Not-for-Profit Organizations*, to reflect the accounting and reporting requirements of FASB Statement Nos. 116 and 117, among other things. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

.19

Appendix D

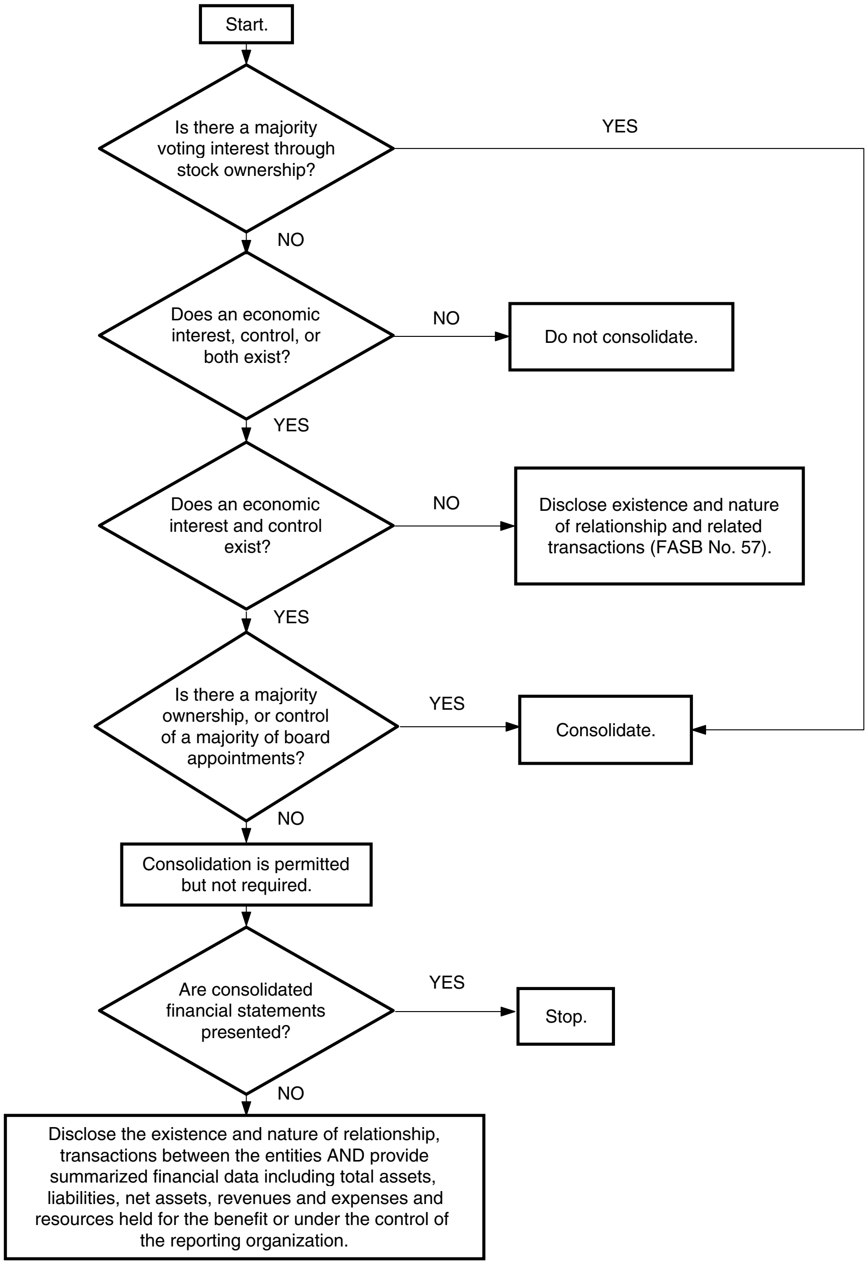
Flowcharts and Decision Trees[18]

Ownership of a For-Profit Entity



[18] The flowcharts and decision trees summarize certain guidance in this SOP and are not intended as substitutes for the SOP. [Footnote renumbered, May 2006, to reflect conforming changes necessary due to the issuance of EITF Issue No. 04-5; Footnote further renumbered, June 2007, to reflect conforming changes necessary due to the issuance of SOP 07-1.]

Relationship With Another Not-for-Profit Organization



.20

Glossary

Control. The direct or indirect ability to determine the direction of management and policies through ownership, contract, or otherwise.

Economic interest. An interest in another entity that exists if (*a*) the other entity holds or utilizes significant resources that must be used for the unrestricted or restricted purposes of the not-for-profit organization, either directly or indirectly by producing income or providing services, or (*b*) the reporting organization is responsible for the liabilities of the other entity. The following are examples of economic interests:

- Other entities solicit funds in the name of and with the expressed or implied approval of the reporting organization, and substantially all of the funds solicited are intended by the contributor or are otherwise required to be transferred to the reporting organization or used at its discretion or direction.
- A reporting organization transfers significant resources to another entity whose resources are held for the benefit of the reporting organization.
- A reporting organization assigns certain significant functions to another entity.
- A reporting organization provides or is committed to provide funds for another entity or guarantees significant debt of another entity.

Majority voting interest in the board of another entity. For purposes of this SOP, a majority voting interest in the board of another entity is illustrated by the following example. Entity B has a five-member board, and a simple voting majority is required to approve board actions. Entity A will have a majority voting interest in the board of entity B if three or more entity A board members, officers, or employees serve on or may be appointed at entity A's discretion to the board of entity B. However, if three of entity A's board members serve on the board of entity B but entity A does not have the ability to require that those members serve on the entity B board, entity A does not have a majority voting interest in the board of entity B.

Section 10,620

Statement of Position 94-4
Reporting of Investment Contracts Held by Health and Welfare Benefit Plans and Defined-Contribution Pension Plans

September 23, 1994

NOTE

Statements of Position (SOPs) of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this SOP should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SOP 94-4 is amended by SOP 99-3, *Accounting for and Reporting of Certain Defined Contribution Plan Investments and Other Disclosure Matters*. SOP 99-3 is effective for financial statements for plan years ending after December 15, 1999. Earlier application is encouraged for fiscal years for which annual financial statements have not been issued. If the previously required "by fund" disclosures are eliminated, the reclassification of comparative amounts in financial statements for earlier periods is required.

SOP 94-4 is also amended by FASB Staff Position (FSP) AAG INV-1 and SOP 94-4-1, *Reporting of Fully Benefit-Responsive Investment Contracts Held by Certain Investment Companies Subject to the AICPA Investment Company Guide and Defined-Contribution Health and Welfare and Pension Plans*. The financial statement presentation and disclosure guidance in paragraphs 8–11 of FSP AAG INV-1 and SOP 94-4-1 is effective for financial statements for plan years ending after December 15, 2006. The revised definition of fully benefit-responsive in paragraph 7 of the FSP shall be effective for all investment contracts as of the last day of the annual period ending after December 15, 2006. Earlier application is permitted for fiscal years in which annual financial statements have not been issued. If comparative financial statements are presented, the guidance in that FSP shall be applied retroactively to all prior periods presented. If an investment contract is considered fully benefit-responsive under the revised definition as of the last day of the annual period ending after December 15, 2006, that contract shall be considered fully benefit-responsive for all periods presented, provided that contract would have been considered fully benefit-responsive in accordance with the then existing provisions of this SOP.

Introduction

.01 The American Institute of Certified Public Accountants (AICPA) Audit and Accounting Guide *Audits of Employee Benefit Plans* (the Guide) includes standards of financial accounting and reporting for the financial statements

statements of health and welfare benefit plans and defined-contribution pension plans. The Guide states that plan investments are generally to be presented at their fair value at the reporting date. Paragraph 3.15 of the Guide states that "contracts with insurance companies are to be included as plan assets in the manner required by [the Employee Retirement Income Security Act of 1974] ERISA annual reporting requirements and are to be reported in a manner consistent with the requirements of [Department of Labor] DOL Form 5500 or 5500-C/R." Paragraph 4.10 of the Guide and paragraph 26 of AICPA Statement of Position (SOP) 92-6, *Accounting and Reporting by Health and Welfare Benefit Plans* [section 10,530.26], contain similar language. The instructions to DOL Forms 5500 and 5500-C/R permit unallocated insurance contracts to be reported at either fair value or amounts determined by the insurance company, that is, contract value. Currently, "contracts with insurance companies" include investment contracts that do not incorporate mortality or morbidity risk. The Guide specifically excludes contract value reporting for investments in similar contracts issued by banks, savings institutions, or other financial institutions. Contract value generally equals the principal balance plus accrued interest.

.02 The Financial Accounting Standards Board (FASB) has issued Statement of Financial Accounting Standards Statement No. 110, *Reporting by Defined Benefit Pension Plans of Investment Contracts,* which requires defined-benefit pension plans to report investment contracts issued by either an insurance enterprise or other entity at fair value. It amends FASB Statement No. 35, *Accounting and Reporting by Defined Benefit Pension Plans,* to permit defined-benefit pension plans to report only contracts that incorporate mortality or morbidity risk at contract value. The FASB decided not to address the measurement of plan assets held by health and welfare benefit plans or defined-contribution pension plans. Instead, the FASB asked the AICPA, in view of its experience with those plans, to address further the appropriate reporting of investments held by those plans.

Scope

.03 This SOP provides guidance on the reporting of investment and insurance contracts held by health and welfare benefit plans and defined-contribution pension plans. It applies to all health and welfare benefit plans and defined-contribution pension plans. The Appendix [paragraph .20] provides guidance for determining whether contract value accounting is appropriate for investment contracts held by defined-contribution plans, including both health and welfare, and pension plans. Certain examples may also be useful in determining the fair value of investment contracts held by other types of plans. [As amended, effective for financial statements for plan years ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

Conclusions

Reporting of Contracts

.04 Defined-benefit health and welfare benefit plans should report investment contracts at fair value. Defined-contribution plans, including both health and welfare and pension plans, should report all investments (including derivative contracts) at fair value. However, contract value is the relevant measurement attribute for that portion of the net assets available for benefits of a defined-contribution plan attributable to fully benefit-responsive investment contracts. [As amended, effective for financial statements for plan years ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

.05 Health and welfare benefit plans and defined-contribution pension plans should report insurance contracts in the same manner required by ERISA annual reporting requirements of DOL Form 5500 or 5500-C/R. For purposes of this SOP, the terms *insurance contract* and *investment contract* are used as those terms are described for accounting purposes in FASB Statements No. 60, *Accounting and Reporting by Insurance Enterprises,* and No. 97, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments* (see paragraphs .13 and .14).

Background

.06 Defined-benefit plans provide participants with a determinable benefit based on a formula provided for in the plans, whereas defined-contribution plans provide benefits based on amounts contributed to an employee's individual account plus or minus forfeitures, investment experience, and administrative expenses. The Internal Revenue Code (IRC) generally requires that all investment experience under defined-contribution plans be allocated to individual account balances.

.07 Consequently, information relevant to the primary users of defined-contribution plan financial statements—plan participants—is different from that which is relevant to users of defined-benefit plan financial statements. In defined-contribution plans, plan participants have a greater vested interest in monitoring the financial condition and operations of the plan since they bear investment risk under these plans and plan transactions can directly affect their benefits.

.08 The primary objective of a defined-contribution plan's financial statements is to provide information that is useful in assessing the plan's present and future ability to pay benefits when they are due. In a defined-contribution plan, the plan's net assets available to pay benefits equal the sum of participants' individual account balances. Accordingly, benefits that can be paid by the plan when they are due relate to the value of the assets that may currently be made available to the individual participants.

.09 Consistent with the objective of a defined-contribution plan's financial statements, net assets available for benefits of defined-contribution plans should be measured and reported at values that are meaningful to financial statement users. Information that is useful to plan participants includes the amount they would receive currently if they were to withdraw or borrow funds from or transfer funds within the plan. [As amended, effective for financial statements for plan years ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

[.10] [Paragraph deleted by the issuance of FASB Staff Position AAG INV-1 and SOP 94-4-1, December 2005.]

.11 An investment contract is considered fully benefit-responsive for purposes of this SOP, if *all* of the following criteria are met for that contract, analyzed on an individual basis:

a. The investment contract is effected directly between the plan and the issuer and prohibits the plan from assigning or selling the contract or its proceeds to another party without the consent of the issuer.

b. Either (1) the repayment of principal and interest credited to participants in the plan is a financial obligation of the issuer of the investment contract or (2) prospective interest crediting rate adjustments are provided to participants in the plan on a designated pool of investments held by the plan or the contract issuer, whereby a financially responsible third party, through a contract generally referred to as a wrapper, must provide assurance that the adjustments to the interest crediting rate will not result in a future interest crediting rate that is less than zero. If an event has occurred such that realization of full contract value for a particular investment contract is no longer probable (for example, a significant decline in credit-worthiness of the contract issuer or wrapper provider), the investment contract shall no longer be considered fully benefit-responsive.

c. The terms of the investment contract require all permitted participant-initiated transactions with the plan to occur at contract value with no conditions, limits, or restrictions. Permitted participant-initiated transactions are those transactions allowed by the plan, such as withdrawals for benefits, loans, or transfers to other funds within the plan.

d. An event that limits the ability of the plan to transact at contract value with the issuer (for example, premature termination of the contracts by the plan, plant closings, layoffs, plan termination, bankruptcy, mergers, and early retirement incentives) and that also limits the ability of the plan to transact at contract value with the participants in the plan must be probable of not occurring.

e. The plan itself must allow participants reasonable access to their funds.

If access to funds is substantially restricted by plan provisions, investment contracts held by those plans may not be considered to be fully benefit-responsive. For example, if plan participants are allowed access at contract value to all or a portion of their account balances only upon termination of their participation in the plan, it would not be considered reasonable access and, therefore, investment contracts held by that plan would generally not be deemed to be fully benefit-responsive. However, in plans with a single investment fund that allow reasonable access to assets by inactive participants, restrictions on access to assets by active participants consistent with the objective of the plan (for example, retirement or health and welfare benefits) will not affect the benefit responsiveness of the investment contracts held by those single-fund plans. Also, if a plan limits participants' access to their account balances to certain specified times during the plan year (for example, semiannually or quarterly) to control the administrative costs of the plan, that limitation generally would not affect the benefit responsiveness of the investment contracts held by that plan. In addition, administrative provisions that place short-term restrictions (for example, three or six months) on transfers to competing fixed-rate investment options to limit arbitrage among those investment options (*equity wash* provisions) would not affect a contract's benefit responsiveness. [As amended, effective for all investment contracts as of the last day of the annual period ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

.12 If a plan holds multiple contracts, each contract should be evaluated individually for benefit responsiveness. If a plan invests in pooled funds that hold investment contracts, each contract in the pooled fund should be evaluated individually for benefit responsiveness. However, if the pooled fund places any restrictions on access to funds for the payment of benefits, the underlying investment contracts would not be considered fully benefit-responsive. Contracts that provide for prospective interest adjustments may still be fully benefit-responsive provided that the terms of the contracts specify that the crediting interest rate cannot be less than zero. The Appendix [paragraph .20] to this SOP includes examples of the application of the definition of fully benefit-responsive for defined-contribution plan investments. [As amended, effective for financial statements for plan years ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

.13 As discussed in paragraph .05, for purposes of this SOP, the terms *insurance contract* and *investment contract* are described for accounting purposes in FASB Statements No. 60 and No. 97. Paragraph 1 of FASB Statement No. 60 describes insurance contracts:

> The primary purpose of insurance is to provide economic protection from identified risks occurring or discovered within a specified period. Some types of risks insured include death, disability, property damage, injury to others, and business interruptions. Insurance transactions may be characterized generally by the following:
>
> *a.* The purchaser of an insurance contract makes an initial payment or deposit to the insurance enterprise in advance of the possible occurrence or discovery of an insured event.
>
> *b.* When the insurance contract is made, the insurance enterprise ordinarily does not know if, how much, or when amounts will be paid under the contract.

.14 Paragraphs 7 and 8 of FASB Statement No. 97 describe insurance and investment contracts:

> Long-duration contracts that do not subject the insurance enterprise to risks arising from policyholder mortality or morbidity are referred to in this Statement as investment contracts. A mortality or morbidity risk is present if, under the terms of the contract, the enterprise is required to make payments or forego required premiums contingent upon the death or disability (in the case of life insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals. A contract provision that allows the holder of a long-duration contract to purchase an annuity at a guaranteed price on settlement of the contract does not entail a mortality risk until the right to purchase is executed. If purchased, the annuity is a new contract to be evaluated on its own terms.
>
> Annuity contracts may require the insurance enterprise to make a number of payments that are not contingent upon the survival of the beneficiary, followed by payments that are made if the beneficiary is alive when the payments are due (often referred to as life-contingent payments). Such contracts are considered insurance contracts under this Statement and Statement 60 unless (*a*) the probability that life-contingent payments will be made is remote or (*b*) the present value of the expected life-contingent payments relative to the present value of all expected payments under the contract is insignificant. [Footnote references omitted.]

Financial Statement Presentation and Disclosure Requirements

.15 The statement of net assets available for benefits of the plan shall present amounts for (1) total assets, (2) total liabilities, (3) net assets reflecting all investments at fair value, and (4) net assets available for benefits. The amount representing the difference between (3) and (4) shall be presented on the face of the statement of net assets available for benefits as a single amount, calculated as the sum of the amounts necessary to adjust the portion of net assets attributable to each fully benefit-responsive investment contract from fair value to contract value. The statement of changes in net assets available for benefits shall be prepared on a basis that reflects income credited to participants in the plan and net appreciation or depreciation in the fair value of only those investment contracts that are not deemed to be fully benefit responsive.

Defined-contribution plans, including both health and welfare, and pension plans, shall disclose the following in connection with fully benefit-responsive investment contracts, in the aggregate:

a. A description of the nature of those investment contracts, how they operate, and the methodology for calculating the interest crediting rate, including the key factors that could influence future average interest crediting rates, the basis for and frequency of determining interest crediting rate resets, and any minimum interest crediting rate under the terms of the contracts. This disclosure should explain the relationship between future interest crediting rates and the amount reported on the statement of net assets available for benefits representing the adjustment for the portion of net assets attributable to fully benefit-responsive investment contracts from fair value to contract value.

b. The average yield earned by the plan for all fully benefit-responsive investment contracts (which may differ from the interest rate credited to participants in the plan) for each period for which a statement of net assets available for benefits is presented. This average yield shall be calculated by dividing the annualized earnings of all fully benefit-responsive investment contracts in the plan (irrespective of the interest rate credited to participants in the plan) by the fair value of all fully benefit-responsive investment contracts in the plan.

c. The average yield earned by the plan for all fully benefit-responsive investment contracts with an adjustment to reflect the actual interest rate credited to participants in the plan for each period for which a statement of net assets available for benefits is presented. This average yield shall be calculated by dividing the annualized earnings credited to participants in the plan for all fully benefit-responsive investment contracts in the plan (irrespective of the actual earnings of those investments) by the fair value of all fully benefit-responsive investment contracts in the plan.

d. A description of the events that limit the ability of the plan to transact at contract value with the issuer (for example, premature termination of the contracts by the plan, plant closings, layoffs, plan termination, bankruptcy, mergers, and early retirement incentives), including a statement as to whether the occurrence of those events that would limit the plan's ability to transact at contract value with participants in the plan is probable or not probable. [The term *probable* is used in this Statement consistent with its use in FASB Statement No. 5, *Accounting for Contingencies*.]

e. A description of the events and circumstances that would allow issuers to terminate fully benefit-responsive investment contracts with the plan and settle at an amount different from contract value.

[As amended, effective for financial statements for plan years ending after December 15, 1999, by Statement of Position 99-3. As amended, effective for financial statements for plan years ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

.16 For ERISA-covered plans, if a fully benefit-responsive investment contract does not qualify for contract-value reporting in the DOL Form 5500 but is reported in the financial statements at contract value, and the contract value does not approximate fair value, the DOL's rules and regulations require that a statement explaining the differences between amounts reported in the financial statements and DOL Form 5500 be added to the financial statements.

Amendments to the Guide

[.17] [Paragraph deleted, June 2006, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Amendment to SOP 92-6 [section 10,530]

[.18] [Paragraph deleted, June 2006, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Effective Date and Transition

.19 This SOP is effective for financial statements for plan years beginning after December 15, 1994, except that the application of this SOP to investment contracts entered into before December 31, 1993, is delayed to plan years beginning after December 15, 1995. Earlier application is encouraged. Accounting changes adopted to conform to the provisions of this SOP should be made as of the beginning of the year in which the change is adopted. The effect of initially applying this SOP should be reported in a manner similar to the cumulative effect of a change in accounting principle (Accounting Principles Board [APB] Opinion No. 20, *Accounting Changes,* paragraph 20). Pro forma effects of retroactive application (APB Opinion 20, paragraph 21) are not required. Restatement of financial statements of prior years is not permitted.

.20

Appendix

Application of Fair Value and Contract Value Reporting for Defined-Contribution Plan Investments

A.1 Defined-contribution plans, including both health and welfare, and pension plans, shall report all investments (including derivative contracts) at fair value. However, contract value is the relevant measurement attribute for that portion of the net assets available for benefits of a defined-contribution plan attributable to fully benefit-responsive investment contracts. If access to funds is substantially restricted by plan provisions, investment contracts held by those plans may not be considered to be fully benefit-responsive.

A.2 Investment contracts may be valued by discounting the related cash flows based on current yields of similar investments with comparable durations. In determining the similarity of investments, appropriate consideration should be given to the credit quality of the contract issuer. Generally, contract termination (penalty) clauses need not be considered unless it is probable that the plan intends to terminate the contract.

A.3 In the following examples, value is determined within the context of the objectives of financial statements for a defined-contribution plan. The valuation must reflect the ability of the plan to pay benefits from the perspective of the participants. This value is then reflected on participants' statements to disclose the amount they can expect to receive when they exercise their rights to withdraw, borrow, or transfer funds under the terms of the plan.

EXAMPLE 1

A Five-Year Public Bond (or Portfolio of Bonds) Which Is Guaranteed by a Third Party to Have a Fixed Value at the End of Three Years

A.4 The guarantee applies only to the extent that the bond (or portfolio) is not liquidated prior to the end of three years. Liquidation within three years is at market value.

A.5 Because guaranteed proceeds from the bond are not available for benefit withdrawals or transfers prior to maturity, the contract is not fully benefit-responsive and, therefore, net assets available for benefits shall reflect the fair value for this investment contract. Fair value may be determined as the amount at which the bond could be exchanged in a current transaction between parties, other than in a forced or liquidation sale, considering the guaranteed fixed value of the bond at the end of three years.

EXAMPLE 2

A Benefit-Responsive Investment Contract

A.6 This contract provides a fixed crediting interest rate, and a financially responsible entity guarantees liquidity at contract value prior to maturity for any and all participant-initiated benefit withdrawals, loans, or transfers arising under the terms of the plan, which allows access for all participants on a quarterly basis.

A.7 The net assets available for benefits shall reflect the contract value for this investment contract, because the plan will receive such value and only such value if the contract is accessed to pay participant benefits or transfers.

A.8 The contract described in the preceding paragraph would be viewed as fully benefit-responsive. Examples of some variations on this contract, and their impact on the valuation, follow.

a. *Liquidity at contract value is not guaranteed for benefits that are attributable to termination of the plan, a plan spin-off to a new employer plan, or amendments to plan provisions.* Net assets available for benefits shall reflect the contract value for this investment contract, unless it is probable that the plan will be terminated, spun off, or amended.

b. *Liquidity at contract value is not guaranteed for benefits that are attributable to the layoff of a large group of workers or an early retirement program.* Net assets available for benefits should reflect the contract value for this investment contract, unless it is probable that termination of the employment of a significant number of employees will occur.

c. *The contract will pay for benefits of up to 30 percent of the contract at contract value, and any excess benefits will be at some adjusted value.* Net assets available for benefits shall reflect the fair value for this investment contract because they are not fully benefit-responsive. Fair value may be determined as the guaranteed amount plus the estimated discounted cash flows related to the amount in excess of 30 percent of the contract value.

d. *The contract will pay benefits at contract value, but only if the issuer of the contract determines that there is sufficient liquidity in the portfolio of assets that backs the contract.* Because the third party has not guaranteed liquidity for participant-initiated withdrawals, net assets available for benefits shall reflect the fair value for this investment contract because they are not fully benefit-responsive.

e. *The contract will not pay benefits at contract value if benefits are due to participant transfers to another fixed income investment option, unless the funds are invested in an equity option for at least three months (*equity wash *provisions).* Net assets available for benefits shall reflect the contract value for this investment contract because the contract would be considered fully benefit-responsive.

EXAMPLE 3

A Five-Year, Nonbenefit-Responsive Investment Contract That Has No Liquid Market for Trading

A.9 Net assets available for benefits shall reflect the fair value for this investment contract because there is no guarantee of liquidity at contract value. Fair value would be determined in the same manner as for an illiquid bond. Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 107, *Disclosures about Fair Value of Financial Instruments,* includes a discussion of methods used to determine the fair values of illiquid instruments.

EXAMPLE 4

A Benefit-Responsive, Participating, Separate Account Investment Contract

A.10 A financially responsible issuer pays contract value for participant withdrawals, regardless of the value of the assets in the separate account. The credited interest rate is a function of the relationship between the contract value and the value of the assets in the separate account. The rate is reset periodically, daily, monthly, quarterly, and so on, by the issuer and cannot be less than zero. There may or may not be a specified maturity date on the contract. The contractholder may terminate the contract at any time, and receive the value of the assets in the separate account.

A.11 Net assets available for benefits shall reflect the contract value for this investment contract because participants are guaranteed return of principal and accrued interest.

EXAMPLE 5

A Synthetic Investment Contract—"Managed" Type

A.12 This contract operates similarly to a separate account guaranteed investment contract (GIC), except that the assets are placed in a trust (with ownership by the plan) rather than a separate account of the issuer and a financially responsible third party issues a *wrapper* contract that provides that participants can, and must, execute plan transactions at contract value.

A.13 Net assets available for benefits shall reflect the contract value for this investment contract because participants are guaranteed return of principal and accrued interest.

EXAMPLE 6

A Synthetic Investment Contract—"Repurchase" Type

A.14 Under this contract, the plan purchases a bond and places it in trust. The plan then contracts with a financially responsible third party to provide benefit responsiveness. Under the contract, should the bond need to be sold to meet a participant-initiated withdrawal benefit, loan, or transfer, the plan is obligated to sell the bond to the contract issuer, and the issuer is obligated to buy the bond. The transaction price is defined under the contract (for example, amortized cost).

A.15 Net assets available for benefits shall reflect the contract value for this investment contract because return of principal and accrued interest has been guaranteed to participants.

A.16 If the contract provided only an *option* for the sponsor to sell the bond to the issuer, rather than an obligation to do so, reflecting net assets available for benefits at contract value for this investment contract would also apply.

[As amended, effective for financial statements for plan years ending after December 15, 2006; the revised definition of fully benefit-responsive is effective for all investment contracts as of the last day of the annual period ending after December 15, 2006, by FASB Staff Position AAG INV-1 and SOP 94-4-1.]

Section 10,630

Statement of Position 94-5 Disclosures of Certain Matters in the Financial Statements of Insurance Enterprises

December 15, 1994

NOTE

Statements of Position (SOPs) of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this SOP should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SOP 94-5 is amended by SOP 01-5, *Amendments to Specific AICPA Pronouncements for Changes Related to the NAIC Codification*. SOP 01-5 is effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date.

Introduction

[.01] [Paragraph deleted by the issuance of Statement of Position 01-5, December 2001.]

Scope

.02 This Statement of Position (SOP) applies to annual and complete sets of interim financial statements prepared in conformity with generally accepted accounting principles (GAAP) of life and health insurance enterprises (including mutual life insurance enterprises), property and casualty insurance enterprises, reinsurance enterprises, title insurance enterprises, mortgage guaranty insurance enterprises, financial guaranty insurance enterprises, assessment enterprises, fraternal benefit societies, reciprocal or interinsurance exchanges, pools other than public-entity risk pools, syndicates, and captive insurance companies. [As amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

Applicability to Statutory Financial Statements

.03 AICPA Auditing Interpretation No. 12, "Evaluation of the Appropriateness of Informative Disclosures in Insurance Enterprises' Financial Statements Prepared on a Statutory Basis," of Statement on Auditing Standards No. 62, *Special Reports* (AICPA, *Professional Standards*, vol. 1, AU sec. 9623.60–.81), requires auditors to apply the same disclosure evaluation criteria for statutory financial statements and for financial statements prepared in conformity with GAAP. [Paragraph added, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

Relationship to Other Pronouncements

.04 In some circumstances, the disclosure requirements in this SOP may be similar to, or overlap, the disclosure requirements in certain other authoritative accounting pronouncements issued by the Financial Accounting Standards Board (FASB), the American Institute of Certified Public Accountants (AICPA), or the Securities and Exchange Commission (SEC). For example—

- FASB Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies*, requires certain disclosures related to loss contingencies, including catastrophe losses of property and casualty insurance companies.
- FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*, requires certain disclosures about liabilities for unpaid claims and claim adjustment expenses and statutory capital.
- FASB Statement No. 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*, requires certain disclosures about reinsurance transactions.
- AICPA Statement of Position 94-6, *Disclosure of Certain Significant Risks and Uncertainties* [section 10,640], requires disclosures about certain significant estimates.
- The SEC Securities Act Guide 6, *Disclosures Concerning Unpaid Claims and Claim Adjustment Expenses of Property-Casualty Insurance Underwriters*, requires disclosures of information about liabilities for unpaid claims and claim adjustment expenses.

The disclosure requirements in this SOP supplement the disclosure requirements in other authoritative pronouncements. This SOP does not alter the requirements of any FASB or SEC pronouncement. [Paragraph renumbered by the issuance of Statement of Position 01-5, December 2001.]

Conclusions

.05 The disclosure requirements in this section should be read in conjunction with appendix A, "Illustrative Disclosures" item A-2 [paragraph .15], and appendix B, "Discussion of Conclusions" item B-1 [paragraph .16]. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

Statutory Accounting Practices

.06 The insurance laws and regulations of most states require insurance enterprises domiciled in those states to comply with the guidance provided in the National Association of Insurance Commissioners (NAIC) *Accounting Practices and Procedures Manual*, except as prescribed or permitted by state law. In 1999, the NAIC completed a process to codify statutory accounting practices for certain insurance enterprises, resulting in a revised *Accounting Practices and Procedures Manual* (the revised Manual), effective January 1, 2001. It is expected that all states will require insurers to comply with most, if not all, provisions of the revised Manual. Auditors of insurance enterprises should monitor the status of the adoption of the revised Manual by the various state regulatory authorities. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.07 Prescribed statutory accounting practices are those practices that are incorporated directly or by reference in state laws, regulations, and general administrative rules applicable to all insurance enterprises domiciled in a particular state. A state may adopt the revised Manual in whole, or in part, as an element of prescribed statutory accounting practices. If, however, the requirements of state laws, regulations, and administrative rules differ from the guidance provided in the revised Manual or subsequent revisions, those state laws, regulations, and administrative rules will take precedence. Auditors of insurance enterprises should review state laws, regulations, and administrative rules to determine the specific prescribed statutory accounting practices applicable in each state. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.08 Permitted statutory accounting practices include practices not prescribed by the domiciliary state as described in paragraph .07 above, but allowed by the domiciliary state regulatory authority. An insurance enterprise may request permission from the domiciliary state regulatory authority to use a specific accounting practice in the preparation of the enterprise's statutory financial statements (*a*) if it wishes to depart from the prescribed statutory accounting practices, or (*b*) if prescribed statutory accounting practices do not address the accounting for the transaction. Accordingly, permitted accounting practices differ from state to state, may differ from company to company within a state, and may change in the future. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.09 The disclosures in this paragraph should be made if (*a*) state prescribed statutory accounting practices differ from NAIC statutory accounting practices or (*b*) permitted state statutory accounting practices differ from either state prescribed statutory accounting practices or NAIC statutory accounting practices. The disclosures should be made if the use of prescribed or permitted statutory accounting practices (individually or in the aggregate) results in reported statutory surplus or risk-based capital that is significantly different from the statutory surplus or risk-based capital that would have been reported had NAIC statutory accounting practices been followed. If an insurance enterprise's risk-based capital would have triggered a regulatory event had it not used a permitted practice, that fact should be disclosed in the financial statements. Insurance enterprises should disclose, at the date each financial statement is presented, a description of the prescribed or permitted statutory accounting practice and the related monetary effect on statutory surplus of using an accounting practice that differs from either state prescribed statutory accounting practices or NAIC statutory accounting practices.[1] [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

Liability for Unpaid Claims and Claim Adjustment Expenses

.10 The liability for unpaid claims and claim adjustment expenses represents the amounts needed to provide for the estimated ultimate cost of settling claims relating to insured events that have occurred on or before a particular date (ordinarily, the statement of financial position date). The estimated liability includes the amount of money that will be required for future payments of (*a*) claims that have been reported to the insurer, (*b*) claims related to insured events that have occurred but that have not been reported to the insurer as of the date the liability is estimated, and (*c*) claim adjustment expenses. Claim adjustment expenses include costs incurred in the claim settlement process such as legal fees; outside adjuster fees; and costs to record, process, and adjust claims. [Paragraph renumbered by the issuance of Statement of Position 01-5, December 2001.]

.11 Financial statements should disclose for each fiscal year for which an income statement is presented the following information about the liability for unpaid claims and claim adjustment expenses:

a. The balance in the liability for unpaid claims and claim adjustment expenses at the beginning and end of each fiscal year presented, and the related amount of reinsurance recoverable

b. Incurred claims and claim adjustment expenses with separate disclosure of the provision for insured events of the current fiscal year and of increases or decreases in the provision for insured events of prior fiscal years

c. Payments of claims and claim adjustment expenses with separate disclosure of payments of claims and claim adjustment expenses attributable to insured events of the current fiscal year and to insured events of prior fiscal years

Also, insurance enterprises should discuss the reasons for the change in incurred claims and claim adjustment expenses recognized in the income statement attributable to insured events of prior fiscal years and should indicate whether additional premiums or return premiums have been accrued

---

[1] Disclosures in this paragraph should be applied by a U.S. insurance enterprise, a U.S. enterprise with a U.S. insurance subsidiary, or a foreign enterprise with a U.S. insurance subsidiary, if the enterprise prepares U.S. generally accepted accounting principles (GAAP) financial statements. If a foreign insurance enterprise that does not have a U.S. insurance subsidiary prepares U.S. GAAP financial statements or is included in its parent's consolidated U.S. GAAP financial statements, the notes to the financial statements should disclose permitted regulatory accounting practices that significantly differ from the prescribed regulatory accounting practices of its respective regulatory authority and their monetary effects. [Footnote added, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

as a result of the prior-year effects. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.12 In addition to the disclosures required by FASB Statement No. 5 and other accounting pronouncements, insurance enterprises should disclose management's policies and methodologies for estimating the liability for unpaid claims and claim adjustment expenses for difficult-to-estimate liabilities, such as for claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures. [Paragraph renumbered by the issuance of Statement of Position 01-5, December 2001.]

Effective Dates and Transition

.13 The provisions of this SOP as originally issued in 1994 are effective for annual and complete sets of interim financial statements for periods ending after December 15, 1994. Disclosures of information required by paragraph .11 should be included for each fiscal year for which an income statement is presented. [Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.14 The provisions of this SOP as amended by AICPA SOP 01-5, *Amendments to Specific AICPA Pronouncements for Changes Related to the NAIC Codification* [section 10,840], are effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date. Disclosures of information required by amended paragraph .09 and item A-2 in appendix A [paragraph .15] should be included for each fiscal year for which a balance sheet is presented. In the initial year of implementation of those disclosures, prior year amounts for the effect of permitted practices and prescribed practices should be disclosed as required by the SOP prior to those amendments. Retroactive application of the amendments is not permitted. [Paragraph added, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.15

Appendix A

Illustrative Disclosures

A-1. The illustrations included in this appendix are guides to implementation of the disclosures required by this SOP. Insurance enterprises are not required to display the information contained herein in the specific manner or in the degree of detail illustrated. Alternative disclosure presentations are permissible if they satisfy the disclosure requirements of this Statement of Position (SOP).

Prescribed or Permitted Statutory Accounting Practices

A-2. Following are two examples of illustrative disclosures that an insurance enterprise could make to meet the requirements of paragraph .09, item 8, of this SOP.

Note X. Statutory Accounting Practices

The Company's statutory financial statements are presented on the basis of accounting practices prescribed or permitted by the [*state of domicile*] Insurance Department. [*State of domicile*] has adopted the National Association of Insurance Commissioners' statutory accounting practices (NAIC SAP) as the basis of its statutory accounting practices, except that it has retained the prescribed practice of writing off goodwill immediately to statutory surplus in the year of acquisition.

In addition, the commissioner of [*state of domicile*] Insurance Department has the right to permit other specific practices that may deviate from prescribed practices. The commissioner has permitted the Company to record its home office property at estimated fair value instead of at depreciated cost, as required by NAIC SAP. This accounting practice increased statutory capital and surplus by $2.5 million and $2.3 million at December 31, 20X2 and 20X1, respectively, over what it would have been had the permitted practice not been allowed. The Company's statutory capital and surplus, including the effects of the permitted practice, was $30.0 million and $27.9 million at December 31, 20X2 and 20X1, respectively.

Had the Company amortized its goodwill over ten years and recorded its home office property at depreciated cost, in accordance with NAIC SAP, the Company's capital and surplus would have been $29.9 million and $27.7 million at December 31, 20X2 and 20X1, respectively.[1]

Note X. Statutory Accounting Practices

The Company's statutory financial statements are presented on the basis of accounting practices prescribed or permitted by the [*state of domicile*] Insurance Department. [*State of domicile*] has adopted the National Association of Insurance Commissioners' statutory accounting practices (NAIC SAP) as the basis of its statutory accounting practices, except that it has retained the prescribed practice of writing off goodwill immediately to statutory surplus in the year of acquisition.

In addition, the commissioner of the [*state of domicile*] Insurance Department has the right to permit other specific practices that may deviate from prescribed practices. The commissioner has permitted the Company to record its home office property at estimated fair value instead of at depreciated cost, as required by NAIC SAP.

[1] [Footnote deleted by the issuance of Statement of Position 01-5, December 2001.]

The monetary effect on statutory capital and surplus of using accounting practices prescribed or permitted by the [*state of domicile*] Insurance Department is as follows:

	December 31	
	20X2	*20X1*
	$m	$m
Statutory capital and surplus per statutory financial statements	$30.0	$27.9
Effect of permitted practice of recording home office property at estimated fair value	(2.5)	(2.3)
Effect of [state of domicile's] prescribed practice of immediate write-off of goodwill[2]	2.4	2.1
Statutory capital and surplus in accordance with the NAIC statutory accounting practices[3]	$29.9	$27.7

Liability for Unpaid Claims and Claim Adjustment Expenses

A-3. The following is an illustration of information an insurance enterprise would disclose to meet the requirements of paragraph .11 of this SOP. (This illustration presents amounts incurred and paid net of reinsurance. The information may also be presented before the effects of reinsurance with separate analysis of reinsurance recoveries and recoverables related to the incurred and paid amounts.)

Note X. Liability for Unpaid Claims and Claim Adjustment Expenses

Activity in the liability for unpaid claims and claim adjustment expenses is summarized as follows.

	20X2	*20X1*
Balance at January 1	$7,030	$6,687
Less reinsurance recoverables	1,234	987
Net Balance at January 1	5,796	5,700
Incurred related to:		
Current year	2,700	2,600
Prior years	(171)	96
Total incurred	2,529	2,696
Paid related to:		
Current year	781	800
Prior years	2,000	1,800
Total paid	2,781	2,600
Net Balance at December 31	5,544	5,796
Plus reinsurance recoverables	1,255	1,234
Balance at December 31	$6,799	$7,030

[2] This amount compared to the prior year reflects the net impact of an additional year's amortization and the fact that admitted goodwill is based on the level of statutory capital and surplus and thus can fluctuate. [Footnote added, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

[3] In the initial year of implementation of this disclosure, prior year amounts for the effect of permitted practices and prescribed practices should be disclosed as required under the original SOP. [Footnote added, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

As a result of changes in estimates of insured events in prior years, the claims and claim adjustment expenses (net of reinsurance recoveries of $X and $X in 20X2 and 20X1, respectively) decreased by $171 million in 20X2 reflecting lower-than-anticipated losses on Hurricane Howard, and increased by $96 million in 20X1 reflecting higher-than-anticipated losses and related expenses for claims for asbestos-related illnesses, toxic waste cleanup, and workers' compensation.

A-4. The following is an illustration of an insurance enterprise disclosure designed to meet the requirements of paragraph .12 of this SOP. (Additional disclosures about the liabilities for unpaid claims and claim adjustment expenses may be required under FASB Statement No. 5, FASB Interpretation 14, *Reasonable Estimation of the Amount of a Loss*, AICPA SOP 94-6 [section 10,640], and SEC requirements.)

Note X. Environmental-Related Claims

In establishing the liability for unpaid claims and claim adjustment expenses related to asbestos-related illnesses and toxic waste cleanup, management considers facts currently known and the current state of the law and coverage litigation. Liabilities are recognized for known claims (including the cost of related litigation) when sufficient information has been developed to indicate the involvement of a specific insurance policy, and management can reasonably estimate its liability. In addition, liabilities have been established to cover additional exposures on both known and unasserted claims. Estimates of the liabilities are reviewed and updated continually. Developed case law and adequate claim history do not exist for such claims, especially because significant uncertainty exists about the outcome of coverage litigation and whether past claim experience will be representative of future claim experience.

[Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

.16

Appendix B

Discussion of Conclusions

B-1. In 1999, the National Association of Insurance Commissioners (NAIC) completed a process to codify statutory accounting practices for certain insurance enterprises, resulting in a revised *Accounting Practices and Procedures Manual* (the revised Manual), effective January 1, 2001. This SOP was updated in 2001 to conform to the revised Manual. This section discusses factors that were deemed significant by members of the Accounting Standards Executive Committee (AcSEC) in reaching the conclusions in this SOP when it was originally issued in 1994. It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

B-2. The business and regulatory environment of insurance enterprises has become more complex and volatile, and therefore riskier. Accordingly, AcSEC believed the need existed to reconsider the disclosures made in the financial statements of insurance enterprises.

B-3. Financial Accounting Standards Board (FASB) Statement of Financial Accounting Concepts No. 1, *Objectives of Financial Reporting by Business Enterprises*, states financial reporting should "provide information that is useful to present and potential investors and creditors and other users in making rational investment, credit, and similar decisions" (paragraph 34). Further, the Concepts Statement says that to support that decision-making process, financial reports should help such users "assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprises" (paragraph 37) by providing "information about the economic resources of an enterprise, the claims to those resources . . . and the effects of transactions, events, and circumstances that change resources and claims to those resources" (paragraph 40).

B-4. AcSEC considered a wide variety of potential disclosures, and tried to identify the areas of importance to insurance enterprises for which the current disclosures were lacking. AcSEC concluded that additional disclosures in the financial statements of insurance enterprises about regulatory risk-based capital, the liability for unpaid claims, and certain accounting methods permitted by state regulatory authorities would help insurance enterprises better meet the objectives of financial reporting in their financial statements. After the completion of the NAIC codification, AcSEC concluded that additional disclosures reconciling statutory surplus between statutory financial statements (including permitted practices), state prescribed basis, and in accordance with NAIC statutory accounting practices would be useful to the reader of generally accepted accounting principles (GAAP) financial statements. AcSEC is aware that certain insurance enterprises domiciled in Bermuda, the Cayman Islands, and other foreign jurisdictions may prepare financial statements in accordance with accounting principles generally accepted in the United States even though such enterprises do not conduct business in the United States. Additionally, a U.S.-based enterprise may have a foreign-domiciled insurance subsidiary and a foreign-based enterprise may have a U.S.-domiciled insurance subsidiary. Because the foreign insurance operations of such enterprises (whether they are in a foreign subsidiary of a U.S.-based enterprise, the foreign insurance operations of a foreign-based enterprise that has U.S.-domiciled operations or the foreign insurance operations of a foreign-based enterprise that does not have U.S.-domiciled insurance operations) are not subject to the United States regulatory framework, AcSEC does not believe it is appropriate for those enterprises to determine how the NAIC codification would affect foreign insurance operations. With respect to their foreign insurance operations, those enterprises should disclose a description of and related monetary effect of any permitted regulatory accounting practices granted by their respective regulatory authority. The disclosure requirements need not apply to a foreign parent that files financial statements in accordance with home country GAAP that are reconciled to accounting principles generally accepted in the United States.

Risk-Based Capital

B-5. Insurance enterprises operate in a highly regulated environment directed primarily toward safeguarding policyholders' interests and maintaining public confidence in the safety and soundness of the insurance system. Historically, regulation of insurance enterprises has monitored solvency by focusing on their capital. One of the primary tools used by state regulatory authorities for ensuring that their objectives are being met is risk-based capital (RBC).

B-6. The NAIC has developed an RBC program that is used by state regulatory authorities to enable them to take appropriate and timely regulatory actions relating to insurers that show signs of weak or deteriorating financial conditions. This program is encompassed in the RBC Model Acts for life and property and casualty insurers, which have been or are intended to be adopted by most of the states. RBC is a series of dynamic surplus-related formulas set forth in the NAIC's RBC instructions for life and health and for property and casualty insurance enterprises. The formulas contain a variety of weighing factors that are applied to financial balances or to levels of activity based on the perceived degree of certain risks, such as asset risk, credit risk, interest rate risk (life insurance enterprises only), underwriting risk, and other business risks, such as risks related to management, regulatory action, and contingencies. The amount determined under such formulas, the authorized control level risk-based capital, is required to be disclosed in life insurance enterprises' statutory filings starting for the year ended December 31, 1993, and in property and casualty insurance enterprises' statutory filings starting for the year ended December 31, 1994.

B-7. The exposure draft of the SOP that was originally issued in 1994 contained a requirement that insurance enterprises that are required to calculate RBC should disclose in their financial statements the ratio of total adjusted capital to authorized control level RBC and the amount of total adjusted capital for each fiscal year for which a statement of financial position is presented.

B-8. However, the NAIC's RBC Model Acts for both life and property and casualty insurers have a confidentiality provision, which states:

> [E]xcept as otherwise required under the provisions of this Act [that is, in the annual financial reports filed with state insurance departments], the making, publishing, disseminating, circulation, or placing before the public, or causing, directly or indirectly to be made, placed before the public, in a newspaper, magazine or other publication . . . with regard to the RBC levels of any insurer . . . would be misleading and is therefore prohibited.

B-9. Prior to issuing the exposure draft, based on discussions with the drafters of the RBC Model Acts and some state insurance regulators, and based on the fact that the information is already in the public domain, AcSEC believed that the confidentiality provisions were not intended to apply to disclosures in financial statements. However, a number of respondents to the exposure draft stated that they believe disclosing RBC levels in financial statements would be illegal in states that have enacted the RBC Model Acts. They point out that words in the RBC Model Acts appear to be intended to restrict *all* other disclosure of RBC levels, including in insurers' financial statements.

B-10. AcSEC continues to believe, because of the importance of RBC in the regulatory oversight of insurance enterprises, that its disclosure would improve the relevance and usefulness of insurance enterprises' financial statements, and, therefore, it should be disclosed in the financial statements. Nevertheless, AcSEC concluded the legal issues require further consideration.

B-11. AcSEC decided that this SOP should not be delayed while the legal issues regarding RBC disclosures are considered. A separate SOP on RBC disclosures will be considered at a later date.

B-12. Nevertheless, AcSEC encourages insurance enterprises to disclose RBC levels if they are domiciled in states that have not adopted the RBC Model Acts, or if they have otherwise determined that it is legal to make such disclosures in their financial statements.

B-13. The exposure draft also required insurance enterprises whose level of RBC has triggered a regulatory event[1] to disclose certain information in their financial statements. Delaying the issuance of the RBC guidance does not change the fact that under Statement on Auditing Standards (SAS) No. 59, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*, auditors must consider the need for disclosures about the principal conditions and events that triggered the regulatory event and the possible effects of such conditions and events, as well as management's plans.

Permitted Statutory Accounting Practices

B-14. Permitted statutory accounting practices historically have not been disclosed in the notes to the financial statements, except to the extent that they have been disclosed in the accounting practices and procedures note to the statutory financial statements. With increasing frequency, insurance enterprises have transactions that are not explicitly addressed by prescribed accounting practices, or for which no analogous prescribed accounting practices exist. Furthermore, insurance enterprises often request exceptions from certain prescribed accounting practices. Permitted statutory accounting practices may differ from state to state, and from company to company within a state, and may change in the future. Moreover, permitted statutory accounting practices have been used to enhance insurance enterprises' surplus positions. For example, some state regulatory authorities have permitted certain insurance enterprises to adjust home office facilities to appraised values even though the states' prescribed statutory accounting practices require that such assets be carried at depreciated historical cost.

---

[1] Under the NAIC's RBC Model Acts, when the ratio of total adjusted capital to authorized control level RBC is less than or equal to 2 or less than or equal to 2.5 with negative trends for life insurance enterprises, a regulatory event exists—that is, the insurance enterprise would fail to meet the minimum RBC requirements. There are four types of regulatory events, ranging from least to most serious: company action level event, regulatory action level event, authorized control level event, and mandatory control level event. [Footnote renumbered by the issuance of Statement of Position 01-5, December 2001.]

B-15. AcSEC believes the required disclosure of permitted statutory accounting practices will enhance the relevance of the financial statements and fulfill the financial reporting objective of providing current and potential investors, creditors, policyholders, and other users of an insurance enterprise's financial statements with useful information. Not only will such disclosures identify situations in which permitted statutory accounting practices enhance an insurance enterprise's statutory capital and RBC position, but they also will improve the comparability of insurance enterprises' financial statements.

Liability for Unpaid Claims and Claim Adjustment Expenses

B-16. Insurance enterprises estimate their liability for unpaid claims and claim adjustment expenses for reported and unreported claims incurred as of the end of the accounting period in accordance with FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*. The liability is estimated based on past loss experience, adjusted for current trends and other factors that will modify past experience. The liability may be calculated using a variety of mathematical approaches ranging from simple arithmetic projections using loss development factors to complex statistical models.

B-17. FASB Concepts Statement No. 1, paragraph 21, states:

> The information provided by financial reporting largely reflects the financial effects of transactions and events that have already happened. Management may communicate information about its plans or projections, but financial statements and most other financial reporting are historical . . . . Estimates resting on expectations of the future are often needed in financial reporting, but their major use, especially of those formally incorporated in financial statements, is to measure financial effects of past transactions or events or the present status of an asset or liability . . . . To provide information about the past past as an aid in assessing the future is not to imply that the future can be predicted merely by extrapolating past trends or relationships. Users of the information need to assess the possible or probable impact of factors that may cause change and form their own expectations about the future and its relation to the past.

B-18. AcSEC believes that disclosures about an insurance enterprise's liabilities for unpaid claims and claim adjustment expenses development are useful in understanding insurance enterprises' liabilities and results of operations. Furthermore, AcSEC notes the disclosures are the same as some of the loss reserve development disclosures that the SEC requires registrants to file with the commission under Securities Act Guide 6.

B-19. Paragraph 60(a) of FASB Statement No. 60, requires all insurance enterprises to disclose the basis for estimating the liabilities for unpaid claims and claim adjustment expenses. Furthermore, FASB Statement No. 5, *Accounting for Contingencies*, requires disclosure of loss contingencies not accrued, for which it is at least reasonably possible that a loss has been incurred. Because of the relatively high degree of coverage litigation and the lack of historical information regarding the amount and nature of both known and unasserted claims relating to difficult-to-estimate liabilities (such as those related to environmental related illness claims and toxic-waste cleanup claims), traditional loss reserving techniques may not be used in estimating such liabilities. Therefore, a high degree of judgment is needed in estimating the amount of losses, and practice is developing in the area. Accordingly, AcSEC believes financial statement users will benefit from disclosure of the policies and methods management has used for estimating these amounts.

Discussion of Comments Received on Exposure Draft

B-20. An exposure draft of a Statement of Position (SOP), *Disclosure of Certain Matters in the Financial Statements of Insurance Enterprises*, was issued on April 20, 1994, and distributed to a variety of interested parties to encourage comment by those that would be affected by the proposal. Forty comment letters were received on the exposure draft.

Risk-Based Capital

B-21. A number of comments were received on the risk-based capital disclosures. As discussed in paragraphs B-5 through B-13, AcSEC decided to consider a separate SOP at a later date on risk-based capital disclosures. The comments will be addressed at that time.

Permitted Statutory Accounting Practices

B-22. A number of respondents to the exposure draft of the SOP requested that the disclosure requirements for permitted statutory accounting practices be postponed until after the codification is complete. AcSEC believes that the disclosures are especially important before codification to improve understanding of the factors that affect comparability among the statutory capital of insurance enterprises.

B-23. Respondents asked for clarification of how disclosure of the monetary effect of statutory surplus would be calculated, particularly when there is no prescribed accounting practice to compare with the permitted practice. AcSEC agreed and revised the exposure draft to state that for permitted statutory accounting practices used when prescribed accounting practice is silent, a description of the transaction is sufficient. Respondents also asked for clarification about whether there should be disclosure of GAAP-permitted practices when there is no prescribed statutory accounting. If an insurance company uses a GAAP practice in its statutory financial statements when there is no prescribed practice, that is still considered a permitted statutory accounting practice. However, AcSEC agreed that no disclosures should be made for GAAP practices that are used when prescribed statutory practices do not specify the accounting for the transaction.

B-24. Respondents suggested that the requirement in the exposure draft to make a statement about the codification be eliminated. AcSEC agreed the disclosure might be confusing to users of financial statements, and eliminated the requirement.

Liability for Unpaid Claims and Claim Adjustment Expenses

B-25. The exposure draft would have required disclosure of information about actuarial adjustments made for nonrecurring or abnormal experience. A number of respondents suggested that that disclosure requirement be eliminated. AcSEC was persuaded that such actuarial adjustments are a normal part of making estimates that should not be disclosed in the financial statements, and eliminated the requirement.

[Paragraph renumbered and amended, effective for annual financial statements for fiscal years ending on or after December 15, 2001, and complete sets of interim financial statements for periods beginning on or after that date, by Statement of Position 01-5.]

Statement of Position 94-6 Disclosure of Certain Significant Risks and Uncertainties

December 30, 1994

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 The volatile business and economic environment underscores a need for improved disclosure about the significant risks and uncertainties that face reporting entities. In 1987, the AICPA issued the *Report of the Task Force on Risks and Uncertainties* (the Report), which was intended to help standards-setting bodies and others identify practical methods of improving the information communicated to users of financial statements to help them assess those risks and uncertainties. This statement of position (SOP) is largely based on the Report. The central feature of this SOP's disclosure requirements is selectivity: specified criteria serve to screen the host of risks and uncertainties that affect every entity so that required disclosures are limited to matters significant to a particular entity.

.02 The disclosures focus primarily on risks and uncertainties that could significantly affect the amounts reported in the financial statements in the near term or the near-term functioning of the reporting entity. The risks and uncertainties this SOP deals with can stem from the nature of the entity's operations, from the necessary use of estimates in the preparation of the entity's financial statements, and from significant concentrations in certain aspects of the entity's operations.

Scope

.03 This SOP applies to financial statements prepared in conformity with generally accepted accounting principles (GAAP) applicable to nongovernmental entities. It applies to all entities that issue such statements. While this SOP applies to complete interim financial statements, it does not apply to condensed or summarized interim financial statements.[1] If comparative financial statements are presented, the disclosure requirements apply only to the financial statements for the most recent fiscal period presented.

.04 The disclosure requirements do not encompass risks and uncertainties that might be associated with management or key personnel, proposed changes in government regulations, proposed changes in accounting principles,[2] or deficiencies in the internal control structure. Nor do they encompass the possible effects of acts of God, war, or sudden catastrophes.

Relationship to Other Pronouncements

.05 The disclosure requirements of this SOP in many circumstances are similar to or overlap the disclosure requirements in certain pronouncements of the Financial Accounting Standards Board (FASB), such as FASB Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies*, and, for public business enterprises, FASB Statement No. 14, *Financial Reporting for Segments of a Business Enterprise*.[*] The disclosure requirements of this SOP in many circumstances also are similar to or overlap the disclosure requirements in certain pronouncements of the Securities and Exchange Commission (SEC). This SOP does not alter the requirements of any FASB or SEC pronouncement.

.06 Certain disclosure requirements in this SOP supplement the requirements of other authoritative pronouncements. In many cases, however, the disclosure requirements in this SOP, particularly those relating to certain significant estimates, will be met or partly met by compliance with such other pronouncements.

Definitions

.07 This SOP uses the following terms with the definitions indicated:

Near term. A period of time not to exceed one year from the date of the financial statements.

Severe impact. (Used in reference to current vulnerability due to certain concentrations. See paragraph .21.) A significant financially disruptive effect on the normal functioning of the entity. Severe impact is a higher threshold than material. Matters that are important enough to influence a user's decisions are deemed to be material,[3] yet they may not be so significant as to dis-

---

[1] However, see Accounting Principles Board (APB) Opinion No. 28, *Interim Financial Reporting*, paragraph 30, for guidance on disclosure of contingencies in summarized interim financial information of publicly traded companies.

[2] SEC Staff Accounting Bulletin No. 74 requires disclosure, both in Management's Discussion and Analysis (MD&A) and in the notes to the financial statements, concerning accounting standards that have been issued but that have not yet been adopted. Also, Auditing Interpretation No. 3 of SAS No. 1, section 410, "The Impact on an Auditor's Report of an FASB Statement Prior to the Statement Effective Date" (AICPA, *Professional Standards*, vol. 1, AU sec. 9410.13–.18), addresses reporting considerations when financial statements will have to be restated in the future because an authoritative accounting pronouncement that is not yet effective will require retroactive application of its provisions by prior-period adjustment.

[*] FASB Statement No. 131, *Disclosures About Segments of an Enterprise and Related Information*, supersedes FASB Statement No. 14, *Financial Reporting for Segments of a Business Enterprise*. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 131.]

[3] FASB Concepts Statement No. 2, *Qualitative Characteristics of Accounting Information*, defines *materiality* as "the magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement."

rupt the normal functioning of the entity. Some events are material to an investor because they might affect the price of an entity's capital stock or its debt securities, but they would not necessarily have a severe impact on (disrupt) the enterprise itself. The concept of severe impact, however, includes matters that are less than catastrophic.[4]

Conclusions

.08 The Accounting Standards Executive Committee (AcSEC) of the AICPA has concluded that reporting entities should make disclosures in their financial statements beyond those now required or generally made in financial statements about the risks and uncertainties existing as of the date of those statements in the following areas:

a. Nature of operations

b. Use of estimates in the preparation of financial statements

c. Certain significant estimates

d. Current vulnerability due to certain concentrations

These four areas of disclosure are not mutually exclusive. The information required by some may overlap. Accordingly, the disclosures required by this SOP may be combined in various ways, grouped together, or placed in diverse parts of the financial statements, or included as part of the disclosures made pursuant to the requirements of other authoritative pronouncements.

.09 The following detailed discussion of the four areas of disclosure enumerated in paragraph .08 should be read in conjunction with the "Illustrative Disclosures" in appendix A [paragraph .27] of this SOP, which provide guidance for implementing them.

Nature of Operations

.10 Financial statements should include a description of the major products or services the reporting entity sells or provides and its principal markets, including the locations of those markets. If the entity operates in more than one business, the disclosure should also indicate the relative importance of its operations in each business and the basis for the determination—for example, assets, revenues, or earnings. Not-for-profit organizations' disclosures should briefly describe the principal services performed by the entity and the revenue sources for the entity's services. Disclosures about the nature of operations need not be quantified; relative importance could be conveyed by use of terms such as *predominately*, *about equally*, or *major and other*.[5]

Use of Estimates in the Preparation of Financial Statements

.11 Financial statements should include an explanation that the preparation of financial statements in conformity with GAAP requires the use of management's estimates.

Certain Significant Estimates

.12 Various accounting pronouncements require disclosures about uncertainties addressed by those pronouncements. In particular, paragraphs 9 through

---

[4] Matters that are catastrophic include, for example, those that would result in bankruptcy.

[5] See paragraph B-17 in appendix B [paragraph .28] for a comparison of this SOP's disclosure requirements concerning nature of operations with the disclosure requirements for public companies in FASB Statement No. 14, *Financial Reporting for Segments of a Business Enterprise*.[†]

† FASB Statement No. 131, *Disclosures About Segments of an Enterprise and Related Information*, supersedes FASB Statement No. 14, *Financial Reporting for Segments of a Business Enterprise*. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 131.]

12, and 17b, and footnote 6 of FASB Statement No. 5 specify disclosures to be made about contingencies[6] that exist at the date of the financial statements. The disclosure requirements of paragraphs 9 through 12 of Statement No. 5 are further clarified in FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss.* In addition to disclosures required by FASB Statement No. 5 and other accounting pronouncements, this SOP requires disclosures regarding estimates used in the determination of the carrying amounts of assets or liabilities or in disclosure of gain or loss contingencies, as described below.

.13 Disclosure regarding an estimate should be made when known information available prior to issuance of the financial statements indicates that *both* of the following criteria are met:

a. It is at least reasonably possible[7] that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events.

b. The effect of the change would be material to the financial statements.

.14 The disclosure should indicate the nature of the uncertainty and include an indication that it is at least reasonably possible[8] that a change in the estimate will occur in the near term.[9] If the estimate involves a loss contingency covered by FASB Statement No. 5, the disclosure also should include an estimate of the possible loss or range of loss, or state that such an estimate cannot be made. Disclosure of the factors that cause the estimate to be sensitive to change is encouraged but not required.

.15 Many entities use risk-reduction techniques to mitigate losses or the uncertainty that may result from future events. If the entity determines that the criteria in paragraph .13 are not met as a result of risk-reduction techniques, the disclosures described in paragraph .14 and disclosure of the risk-reduction techniques are encouraged but not required.

.16 This SOP's disclosure requirements are separate from and do not change in any way the disclosure requirements or criteria of FASB Statement No. 5; rather, the disclosures required under this SOP supplement the disclosures required under Statement No. 5 as follows:

- If an estimate (including estimates that involve contingencies covered by FASB Statement No. 5) meets the criteria for disclosure under paragraph .13 of this SOP, this SOP requires disclosure of an indication that it is at least reasonably possible that a change in the estimate will occur in the near term; FASB Statement No. 5 does not distinguish between near-term and long-term contingencies.
- An estimate that does not involve a contingency covered by Statement No. 5, such as estimates associated with long-term operating assets

---

[6] FASB Statement No. 5 defines a *contingency* as "an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (hereinafter a 'gain contingency') or loss (hereinafter a 'loss contingency') to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability."

[7] The term *reasonably possible* is used in this SOP consistent with its use in FASB Statement No. 5 to mean that the chance of a future transaction or event occurring is more than remote but less than likely.

[8] The words *reasonably possible* need not be used in the disclosures required by this SOP.

[9] FASB Statement No. 5 states in paragraph 17b that "adequate disclosure shall be made of contingencies that might result in gains, but care shall be exercised to avoid misleading implications as to the likelihood of realization."

and amounts reported under profitable long-term contracts, may meet the criteria in paragraph .13. This SOP requires disclosure of the nature of the estimate and an indication that it is at least reasonably possible that a change in the estimate will occur in the near term.

.17 Whether an estimate meets the criteria for disclosure under this SOP does not depend on the amount that has been reported in the financial statements, but rather on the materiality of the effect that using a different estimate would have had on the financial statements. Simply because an estimate resulted in the recognition of a small financial statement amount, or no amount, does not mean that disclosure is not required under this SOP.

.18 The following are examples of assets and liabilities and related revenues and expenses, and of disclosure of gain or loss contingencies included in financial statements that, based on facts and circumstances existing at the date of the financial statements, may be based on estimates that are particularly sensitive to change in the near term:

- Inventory subject to rapid technological obsolescence
- Specialized equipment subject to technological obsolescence
- Valuation allowances for deferred tax assets based on future taxable income
- Capitalized motion picture film production costs
- Capitalized computer software costs
- Deferred policy acquisition costs of insurance enterprises
- Valuation allowances for commercial and real estate loans
- Environmental remediation-related obligations
- Litigation-related obligations
- Contingent liabilities for obligations of other entities
- Amounts reported for long-term obligations, such as amounts reported for pensions and postemployment benefits
- Estimated net proceeds recoverable, the provisions for expected loss to be incurred, or both, on disposition of a business or assets
- Amounts reported for long-term contracts

The above list is not intended to be all-inclusive.

.19 Paragraph 5 of FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*,[‡] provides examples of events or changes in circumstances that indicate that the recoverability of the carrying amount of an asset should be assessed.[10] [Revised, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Current Vulnerability Due to Certain Concentrations

.20 Vulnerability from concentrations arises because an entity is exposed to risk of loss greater than it would have had it mitigated its risk through

[‡] FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, supersedes FASB Statement No. 121. [Footnote added, October 2002, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144.]

[10] [Footnote deleted, April 1996, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

diversification. Such risks of loss manifest themselves differently, depending on the nature of the concentration, and vary in significance.

.21 Financial statements should disclose the concentrations described in paragraph .22 if, based on information known to management prior to issuance of the financial statements, *all* of the following criteria are met:

a. The concentration exists at the date of the financial statements.

b. The concentration makes the enterprise vulnerable to the risk of a near-term severe impact.

c. It is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

.22 Concentrations, including known group concentrations, described below require disclosure if they meet the criteria of paragraph .21. (Group concentrations exist if a number of counterparties or items that have similar economic characteristics collectively expose the reporting entity to a particular kind of risk.) Some concentrations may fall into more than one category.

a. *Concentrations in the volume of business transacted with a particular customer, supplier, lender, grantor, or contributor*. The potential for the severe impact can result, for example, from total or partial loss of the business relationship. For purposes of this SOP, it is always considered at least reasonably possible that any customer, grantor, or contributor will be lost in the near term.

b. *Concentrations in revenue from particular products, services, or fund-raising events*. The potential for the severe impact can result, for example, from volume or price changes or the loss of patent protection for the particular source of revenue.

c. *Concentrations in the available sources of supply of materials, labor, or services, or of licenses or other rights used in the entity's operations*. The potential for the severe impact can result, for example, from changes in the availability to the entity of a resource or a right.

d. *Concentrations in the market or geographic area*[11] *in which an entity conducts its operations*. The potential for the severe impact can result, for example, from negative effects of the economic and political forces within the market or geographic area. For purposes of this SOP, it is always considered at least reasonably possible that operations located outside an entity's home country will be disrupted in the near term.

.23 Concentrations of financial instruments, and other concentrations not described in paragraph .22, are not addressed in this SOP. However, these other concentrations may be required to be disclosed pursuant to other authoritative pronouncements, such as FASB Statement No. 107, *Disclosures About Fair Value of Financial Instruments*,[||] as amended by FASB Statement No. 126,

---

[11] [Footnote deleted, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 131.]

[||] FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended by FASB Statements No. 137, *Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133*, No. 138, *Accounting for Certain Derivative Instruments and Certain Hedging Activities,* and No. 149, *Amendment of Statement 133 on Derivative Instruments and Hedging Activities,* supersedes FASB Statement No. 105, *Disclosure of Information About Financial Instruments With Off-Balance-Sheet Risk and Financial Instruments With Concentrations of Credit Risk*. FASB Statement No. 133 amends FASB Statement No. 107, *Disclosures About Fair Value of Financial Instruments*, to include in FASB Statement No. 107 the disclosure provisions about concentrations of credit risk from FASB Statement No. 105, with modifications. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 133, as amended by FASB Statements No. 137, No. 138, and No. 149.]

Exemption From Certain Required Disclosures About Financial Instruments for Certain Nonpublic Entities. [Revised, June 2004, to reflect conforming changes necessary to reflect the issuance of FASB Statement No.133, as amended by FASB Statements No. 137, No. 138, and No. 149.]

.24 Disclosure of concentrations meeting the criteria of paragraph .21 should include information that is adequate to inform users of the general nature of the risk associated with the concentration. For those concentrations of labor (paragraph .22*c*) subject to collective bargaining agreements and concentrations of operations located outside of the entity's home country (paragraph .22*d*) that meet the criteria of paragraph .21, the following specific disclosures are required:

- For labor subject to collective bargaining agreements, disclosure should include both the percentage of the labor force covered by a collective bargaining agreement and the percentage of the labor force covered by a collective bargaining agreement that will expire within one year.
- For operations located outside the entity's home country, disclosure should include the carrying amounts of net assets and the geographic areas in which they are located.

Adequate information about some concentrations may already be presented in diverse parts of the financial statements. For example, adequate information about assets or operations located outside the entity's home country may be included in disclosures made to comply with FASB Statement No. 131. In accordance with paragraph .08 of this SOP, such information need not be repeated. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 131.[#]]

Application of Disclosure Criteria

.25 An assessment of whether a disclosure is required should not be found to be in error simply as a result of future events. For example, reporting a concentration not followed by a severe impact does not imply that the disclosure should not have been made, because something that has only a reasonably possible chance of occurring obviously might not occur. Similarly, the occurrence of a severe impact related to a concentration not disclosed in the prior-year financial statements would not suggest noncompliance with this SOP's requirements if an appropriate judgment had been made that a near-term severe impact was not at least reasonably possible at the prior reporting date. In addition, a severe impact may arise from a concentration of which management did not have knowledge at the time the financial statements were issued.

Effective Date

.26 This SOP is effective for financial statements issued for fiscal years ending after December 15, 1995, and for financial statements for interim periods in fiscal years subsequent to the year for which this SOP is to be first applied. Early application is encouraged but not required.

[#] FASB Statement No. 131, *Disclosures About Segments of an Enterprise and Related Information*, supersedes FASB Statement No. 14.

.27

Appendix A

Illustrative Disclosures

Contents	Paragraph Numbers

A-1. The kinds of disclosures required by this SOP are illustrated below. Each illustrative disclosure is accompanied by a scenario in which the disclosure would likely be made or not made and by a discussion of how and why the illustrative disclosure complies with the requirements of this SOP or why no disclosure is required by this SOP.

Nature of Operations

Illustrative Disclosure A—Nature of Operations

A-2. *Scenario*. Conglomerate, Inc. is a United States-based multinational corporation. Conglomerate's principal lines of business are automotive products, aerospace products and technologies, textiles, and nonprescription health-care products. The principal markets for the company's automotive and aerospace products and technologies are European- and Far East-based industrial concerns. Textiles are sold primarily to U.S. clothing manufacturers, while nonprescription health-care products are sold to wholesale and retail distributors worldwide. The operations of the company in any one country are not significant in relation to the company's overall operations. The following illustrates disclosure of the nature of operations required by this SOP.

A-3. *Disclosure*. **Conglomerate, Inc. is a multinational manufacturer and engineering concern. The company's principal lines of business are automotive products, aerospace products and technologies, textiles, and nonprescription health-care products, all of which are about equal in size based on sales. The principal markets for the automotive and aerospace products and technologies are European- and Far East—based industrial concerns. Textiles are sold primarily to domestic clothing manufacturers, while nonprescription health-care products are sold primarily to wholesale and retail distributors worldwide.**

A-4. *Discussion*. This disclosure provides—

a. Information necessary for users not familiar with the operations of the company to identify and consider the broad risks and uncertainties associated with the businesses and markets in which the company operates and competes. From the disclosures provided, financial statement users having a general knowledge of business matters should be able to assess that the company's product lines are subject to different and varied risks. Those financial statement users familiar with the businesses recognize the general risks associated with each of these businesses and their related markets.

b. Information that facilitates the overall understanding of the financial information presented. This kind of disclosure could provide users with a basis for comparing an enterprise's financial information with that of competitors or with applicable industry statistics.

c. Insight into the location of the company's principal markets, although on a broad scale. Because the company's markets are so diverse, it likely would not be useful to enumerate the specific locations of the company's markets. For this reason, the manner in which the information is disclosed in the illustrative disclosure is sufficient to meet the broad objectives of paragraph .10 of this SOP.

Illustrative Disclosure B—Combined Disclosure: Nature of Operations and Customer Concentration

A-5. *Scenario.* Smith Corporation, formerly Smith Munitions Corporation, was founded in 1940. At that time, Smith's principal business was the design and manufacture of artillery ammunition and other explosives. In 1959, commensurate with the evolution of its principal business to the design, engineering, and manufacture of military aircraft for sale to the U.S. government, Smith changed its name to Smith Corporation. Smith has one factory, located in New York. The following illustrates disclosure of the nature of operations required by this SOP.

A-6. *Disclosure.* **Smith Corporation is engaged principally in the design, engineering, and manufacturing of military aircraft and related peripheral equipment for sale primarily to the U.S. government.**

A-7. *Discussion.* This disclosure provides—

a. Information needed by users who are not familiar with the operations of the enterprise to identify and consider the broad risks and uncertainties faced by all or most enterprises operating in a specific business or market, which in this case is the defense contracting business. From this disclosure, financial statement users having a general knowledge of business matters should know that the enterprise's business may be heavily affected by future changes in U.S. defense and foreign policies.

b. Information that aids in the overall understanding of the other financial information presented. Certain accounting procedures involving estimation may apply only to particular industries or may be relevant in comparing a business enterprise's financial reports with those of business enterprises in other industries.

c. Insight into the location of the company's principal product markets and information about its current vulnerability due to concentrations. In the illustration, users would be able to recognize and assess the company's dependency on sales to the U.S. government (assuming the loss of the government as a customer would result in a near-term severe impact to the company).

Use of Estimates in the Preparation of Financial Statements

Illustrative Disclosure—Pervasiveness of Estimates

A-8. *Scenario.* The following illustrates disclosure of the pervasiveness of estimates in the financial statements of all reporting entities.

A-9. *Disclosure.* **The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.**

A-10. *Discussion.* This disclosure is intended to inform users of the inherent uncertainties in measuring assets and liabilities and related revenues and expenses and contingent assets and liabilities, and that subsequent resolution of some matters could differ significantly from the resolution that is currently expected. Such disclosure alerts users that uncertainties are present in the financial statements of all reporting entities.

Certain Significant Estimates

Note: Some of the following disclosures contain certain information that is already required to be disclosed under FASB Statement No. 5; in those cases, the FASB Statement No. 5 requirements are supplemented by an indication that it is at least reasonably possible that a change in an estimate will occur in the near term. Others may not be covered by FASB Statement No. 5.

Illustrative Disclosure A—Inventories

A-11. *Scenario*. XYZ Corporation manufactures high technology stereo equipment. In June 19X7, one of XYZ's competitors introduced a new model stereo system with the same features as XYZ's Model A. The competitor's version sells for significantly less than XYZ's suggested retail price for Model A. The introduction of this product resulted in a sharp decrease in the sales volume of Model A. At December 31, 19X7, XYZ has accumulated significant inventory quantities beyond its normal short-term needs of its Model A system. Inventory for Model A ($6 million) represents approximately 20 percent of XYZ's inventory at that date. The remaining 80 percent of XYZ's inventory consists of products experiencing only normal competitive pressures. XYZ has established provisions for obsolescence for this latter group of products in the normal course of business.

A-12. Management has developed a program to provide substantial dealer incentives on purchases of the Model A, which it expects will result in the sale of this inventory in the near term. Because of the existing high profit margin on its stereo systems, XYZ would continue to earn a marginal profit on sales of the Model A under the new program. It is also reasonably possible, however, that the program will not be wholly successful, and, accordingly, a material loss could ultimately result on the disposal of the inventory.

A-13. *Disclosure*. **At December 31, 19X7, some portion of $6 million of inventory of one of the company's products is in excess of XYZ's current requirements based on the recent level of sales. Management has developed a program to reduce this inventory to desired levels over the near term and believes no loss will be incurred on its disposition. No estimate can be made of a range of amounts of loss that are reasonably possible should the program not be successful.**

A-14. *Discussion*. This situation meets the criteria for disclosure under paragraph .13 of this SOP because circumstances that existed at the date of the financial statements, including the decreasing sales volume and excessive quantities of inventory of Model A, make it at least reasonably possible that management's plan to liquidate its excess inventory without a loss will be less than fully successful and that such an outcome would have a near-term material effect on the enterprise's financial statements.

A-15. In this illustration, XYZ discloses the existence of potentially excess quantities of inventory at the date of the financial statements and indicates that the uncertainty is expected to be resolved in the near term. The disclosure is intended to provide users with insight into management's assessment of recoverability of the cost of inventories existing at the date of the financial statements. Although disclosure of the $6 million carrying amount of the inventory of Model A is not required because, based on the facts presented, $6 million does not constitute a reasonable estimate of loss on the disposal of the inventory or the maximum amount in an estimated range of loss, disclosure of this amount is not misleading and may provide useful information.

A-16. Discussion of XYZ's provision for obsolescence for the remaining 80 percent of its inventory is not required because it is not considered reasonably possible that additional material losses on this inventory will occur.

Illustrative Disclosure B—Discontinued Operations: Assets Held for Sale

A-17. *Scenario*. Axel Industries, a manufacturer of automotive parts and heavy trucks, currently has facilities in Michigan, Tennessee, and Ontario, Canada. Axel's automotive parts segment constitutes a component of the entity because the operations of and cash flows of the automotive parts segment can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. As a result of weak demand in the automobile industry, Axel's management decided during the current year to exit the automotive parts segment, which is located entirely at the company's Michigan facility, and commits to a plan to sell the automotive parts segment. Axel's automotive parts segment is classified as held for sale at that date and measured at the lower of its carrying amount or fair value less cost to sell. The operations and cash flows of the automotive parts segment will be eliminated from ongoing operations as a result of the sale transaction, and Axel will have no continuing involvement in the operations of the product group after it is sold. The scenario meets the requirements of FASB Statement No. 144. Therefore Axel will report the results of operations of the component, including any gain or loss, in discontinued operations. The following illustrates disclosure of significant estimates and would likely appear as part of the disclosure of the disposition of a component of an entity made pursuant to APB Opinion No. 30, *Reporting the Results of Operations-Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*, as amended by FASB Statements No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment to FASB Statement No. 13, and Technical Corrections*. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

A-18. *Disclosure*. Included in discontinued operations was a write down associated with our automotive components parts business. The write down was based on management's best estimates of the fair value of the assets less costs to sell. The amount included in discontinued operations could be adjusted in the near term if experience differs from current estimates.[12] [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

A-19. *Discussion*. Determining a provision for discontinued operations required the use of assumptions and estimates. In this case, the disclosure is required because circumstances that existed at the date of the financial statements indicated it was at least reasonably possible that estimates of the loss on the disposal of discontinued operations could differ in the near term from the current estimates used as a basis for recognizing the charge to income by an amount that would be material to the entity's financial statements. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

---

[12] [Footnote deleted, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

Illustrative Disclosure C—Specialized Manufacturing Equipment

A-20. *Scenario*. Offshore Industries is a manufacturer of offshore drilling rigs and platforms. The company's manufacturing process requires significant specialized equipment, which it currently owns. As a result of a decline in the price of oil, the demand for its products and services has fallen dramatically in the past two years, resulting in a significant underutilization of its manufacturing capacity.

A-21. The company depreciates its investments in specialized equipment based on its original estimate of the remaining useful lives of the equipment using the units-of-production method, since it believes that the exhaustion of usefulness of these specialized assets relates more to their use than to the passage of time. The company reevaluates these estimates in light of current conditions in accordance with generally accepted accounting principles. The company also monitors the policies of its major competitors and is aware that several have reported large write-downs of similar assets. Nevertheless, while the company believes that it is at least reasonably possible that its estimate that it will recover the carrying amount of those assets from future operations will change during the next year, it believes it is more likely that conditions in the industry will improve and that no write-down for impairment will be necessary.

A-22. *Disclosure*. **Offshore's policy is to depreciate specialized manufacturing equipment (with a net book value of $25 million at December 31, 19X7) over its remaining useful life using the units-of-production method and to evaluate the remaining life and recoverability of such equipment in light of current conditions.[13] [Given the excess capacity in the industry,[14]] it is reasonably possible that the company's estimate that it will recover the carrying amount of this equipment from future operations will change in the near term.**

A-23. *Discussion*. In this illustration, the company acknowledges that the carrying amount of the specialized assets is subject to significant uncertainty based on current conditions. The uncertainty relates to the measurement of the specialized assets at the date of the financial statements, and the company's disclosure makes clear that it is at least reasonably possible that the carrying amount will change in the near term.

Illustrative Disclosure D—Capitalized Software Costs

A-24. *Scenario*. Software, Inc. develops and markets computer programs. In 20X3, it acquired a software company. A significant portion of the purchase price was allocated to (capitalized) Product A (present net book value of $5 million), the most significant and profitable software program currently being marketed by the acquired company. Only nominal amounts of other software costs have been capitalized. Software, Inc. expects Product A and its derivatives to be among its most significant products over the next several years. However, a competitor has recently released a new product designed to compete directly with Product A. Software, Inc. amortizes the capitalized software costs of Product A by the greater of (*a*) the ratio that current gross revenues for a product bear to the total of current and anticipated future gross revenues for that product or (*b*) the straight-line method over the remaining estimated economic life of the product including the period being reported on, pursuant to FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*. The amount of the amortization computed for year 20X4

---

[13] If this information is already disclosed elsewhere in the notes, it need not be repeated.

[14] This is an example of voluntary disclosure that is encouraged by paragraph .14

was equal to 20 percent of the beginning-of-the-year capitalized amount and was a significant component of cost of sales. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 141.]

A-25. The segment of the computer software industry in which Software, Inc. operates is characterized by sales of products occurring primarily on the basis of customers' perceptions of the relative technical merits of competing products. Those perceptions are greatly influenced by product reviews in technical journals and advertising, and they can change rapidly. Innovative products have been introduced in recent years that have reduced quickly and significantly the volume of sales of pre-existing products in the same market niche. While management of Software, Inc. believes its estimates of future gross revenues and the estimated economic life of Product A used in the determination of the amortization of capitalized software costs are reasonable, new products introduced by its competitors, such as the one discussed in paragraph A-24, could have a significant near-term negative effect on such estimates. As a result, the amount of periodic amortization could increase in the near term in amounts that could be material to the enterprise's financial statements.

A-26. *Disclosure*. **Software, Inc.'s policy is to amortize capitalized software costs by the greater of (*a*) the ratio that current gross revenues for a product bear to the total of current and anticipated future gross revenues for that product or (*b*) the straight-line method over the remaining estimated economic life of the product including the period being reported on.[15] It is reasonably possible that those estimates of anticipated future gross revenues, the remaining estimated economic life of the product, or both will be reduced significantly in the near term [due to competitive pressures].[16] As a result, the carrying amount of the capitalized software costs for Product A ($5 million) may be reduced materially in the near term.**

A-27. *Discussion*. In this illustration, the company acknowledges that the carrying amount of its capitalized software costs is subject to significant uncertainty. The uncertainty relates to estimates of future years' revenues and useful lives that are made at the date of the financial statements, and the company is aware that circumstances exist that could cause such estimates to change in the near term. The company's disclosure makes clear that it is at least reasonably possible that the carrying amount could be reduced in the near term.

Illustrative Disclosure E—Environmental Remediation Liability

A-28. *Scenario*. Ace Oil Company is a distributor of heating oil with four storage and distribution facilities located in Anystate. Federal, state, and local laws and regulations govern the operation of the company's facilities. The company has determined that, beginning in the coming year, a significant number of its storage tanks and a significant amount of its other equipment will need to be removed, replaced, or modified to satisfy regulations that go into effect in varying stages over the next seven years. In addition, the company has a present obligation to decontaminate the soil in the near term at its largest facility.

A-29. The company hired a consultant to evaluate the technological, regulatory, and legal factors involved. Based on the consultant's findings, the company estimated that total environmental expenditures over the next seven years related to the tanks and equipment will aggregate approximately $5 million. Of this amount, approximately $4.75 million represents capital

---

[15] If this information is already disclosed elsewhere in the notes, it need not be repeated.

[16] This is an example of voluntary disclosure that is encouraged by paragraph .14

expenditures, which are expected to be recoverable through operations. The existing tanks have a net book value of $500,000, and the equipment has a net bookvalue of $475,000. The cost of soil decontamination is estimated to be at least $1 million, which is material to the company's operations, and may be as high as $3 million. Exposure to legal liability to third parties is considered remote.

A-30. The consultant has demonstrated substantial experience with similar sites, and the technical aspects of upgrading storage facilities and decontaminating soil appear to be fairly straightforward.

A-31. *Disclosure*. **The company will begin a project to decontaminate the soil at its Anytown, Anystate facility in the coming year. The company estimates the cost of decontamination to total at least $1 million and has accrued that amount as an operating expense in the current year.[17] The ultimate cost [, however, will depend on the extent of contamination found as the project progresses and[18]] may be as much as $3 million. The company expects decontamination to be substantially completed within one year.**

A-32. *Discussion*. This disclosure informs financial statement users of the existence of the soil contamination problem at the financial statement date and indicates that the liability is susceptible to change in the near term. This SOP does not require disclosure of the capital commitment because it is not a present obligation for which an estimate is reflected in the company's financial statements.

A-33. Although, in this case, the near-term nature of the possible change is indicated by a statement that the company expects decontamination to be substantially completed within one year, an expectation that decontamination will take more than one year to complete would not preclude the estimate from being susceptible to near-term change. In such cases, the disclosure could be worded to specifically refer to the near term.

Illustrative Disclosure F—Guarantee of Debt

A-34. *Scenario*. Shipping Company operates a shipping center in Local City. In 19X0, Shipping decided to raise money for modernization of facilities through a debt offering. In order for the offering to take place, Smokestack Company, a local manufacturer, agreed to guarantee the bonds if Shipping's revenues were insufficient to pay debt service. In May 19X4 (four years later when the bonds had an outstanding balance of $55 million), Shipping lost two of its major shipping customers, constituting 35 percent of its prior-year revenues, to a company in a neighboring port. At Smokestack's June 30, 19X4, year end, Shipping was directing substantial efforts toward finding new customers. It is reasonably possible, however, that Shipping will not replace the lost revenue in time to pay debt service installments at December 30, 19X4, and June 30, 19X5, totaling $6 million.

A-35. *Disclosure*. **In 19X0, Smokestack guaranteed the Series AA debt of Shipping Company, which operates a shipping center within Local City. Smokestack continues as guarantor of such debt totaling $55 million. In May 19X4, Shipping Company lost two of its major customers. Although Shipping Company is directing substantial efforts toward obtaining new customers, it is at least reasonably possible that**

---

[17] FASB Statement No. 5 states that "disclosure of the nature of an accrual [footnote omitted] made pursuant to the provisions of paragraph 8, and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading."

[18] This is an example of voluntary disclosure that is encouraged by paragraph .14.

Shipping Company will not replace lost revenues sufficient to make its December 19X4 and June 19X5 debt service payments totaling $6 million. If so, the company will become responsible for repayment of at least a portion of that amount and possibly additional amounts over the debt term. No amount has been reported in the company's financial statements pending the outcome of Shipping Company's efforts during the next fiscal year.

A-36. *Discussion*. This example illustrates the potential near-term effect of a change in estimate of a contingent liability resulting from the guarantee of the debt of another entity. Shipping's loss of customers causes the potential for a near-term material change in that estimate within the next fiscal year. Although disclosure of Shipping's ongoing efforts to replace those customers is not required, this additional information may be presented.

Illustrative Disclosure G—Long-Term Construction Contract

A-37. *Scenario*. Rivet Construction Company is a nonpublic general contractor specializing in the construction of commercial buildings. Rivet has three long-term projects underway that are in various stages of completion. Rivet has a substantial history of making reasonably dependable estimates of the extent of progress towards completion, contract revenues, and contract costs, and it uses the percentage-of-completion method of accounting for all of its long-term contracts.

A-38. Shortly after December 31, 19X2, but before the 19X2 financial statements were issued, subsoil conditions were discovered at the site of Project A that will require Rivet to incur substantial additional, unbudgeted costs in completing the project. The nature of the subsoil problem is unusual in the region in which Rivet operates. The additional estimated costs are not considered to be a normal, recurring contract-accounting adjustment. Engineers have estimated the additional construction cost to be 10 to 40 percent of the original estimated construction cost, with 15 percent ($1.5 million) being their best estimate, and delays in construction are expected to add an additional 3 to 7 percent to the cost of construction, depending on the time involved, with 5 percent ($500,000) being the best estimate. Accordingly, Rivet has revised upward its estimate of costs to complete the project by $2 million. Project A, which was begun in 19X1 under a fixed-price contract, is still expected to be completed in the coming year (19X3), and it is still expected to be profitable.

A-39. The following is a summary of financial data at December 31, 19X2, for Project A.

	Before Discovery of Condition	*After Discovery of Condition*
Contract price	$15,000,000	$15,000,000
Estimated total cost	10,000,000	12,000,000
Estimated gross profit	5,000,000	3,000,000
Costs incurred to date	6,400,000	6,400,000
Percentage of completion	64%	53%

Rivet's other two projects are proceeding as planned.

A-40. *Disclosure*. **As a result of the discovery of unusual subsoil conditions at the site of Project A, estimated contract completion costs have been revised upward by $2 million. [Due to uncertainties inherent**

in the estimation process,[19]] it is at least reasonably possible that completion costs for Project A will be further revised in the near-term [by up to an additional $2.7 million].[20]

A-41. *Discussion*. In addition to any disclosures regarding the change in estimates that might be required by APB Opinion 20,[21] the disclosure requirements of this SOP focus on the effects of possible near-term changes in estimates. Disclosure is required under this SOP because it is at least reasonably possible that the estimated cost of completing Project A will change in the near term and that the change will be material to the financial statements.

A-42. Disclosure of the potential for changes in other estimates used in determining amounts reported for Rivet's long-term contracts is not required because, given Rivet's history of making similar estimates, it is not considered at least reasonably possible that they will change in the near term by amounts that would be material to the financial statements.

Illustrative Disclosure H—Realizability of a Deferred Tax Asset

A-43. *Scenario*. XYZ Corporation develops, manufactures, and markets limited-use vaccines. The company has a dominant share of the narrow market it serves. As of December 31, 19X4, the company has no temporary differences and has aggregate loss carryforwards of $12 million that originated in prior years and that expire in varying amounts between 19X5 and 19X7. As of December 31, 19X4, the company has a deferred tax asset of $4.8 million that represents the benefit of the remaining $12 million in loss carryforwards, and it has concluded at that date that a valuation allowance is unnecessary. The loss carryforwards arose during the company's development stage when it incurred high levels of research and development expenses prior to commencing sales. While the company has earned, on average, $6 million income before tax (taxable income before carryforwards) in each of the last five years, future profitability in this competitive industry depends on continually developing new products. The company has a number of promising new vaccines under development, but it is aware that other companies recently began testing vaccines that would compete with the vaccines being developed by the company as well as products that will compete with the vaccines that are currently generating the company's profits. Rapid introduction of competing products or failure of the company's development efforts could reduce estimates of future profitability in the near term, which could affect the company's ability to fully utilize its loss carryforward.

A-44. *Disclosure*.[22] **The company has recorded a deferred tax asset of $4.8 million reflecting the benefit of $12 million in loss carryforwards, which expire in varying amounts between 19X5 and 19X7. Realization is dependent on generating sufficient taxable income prior to expiration of the loss carryforwards. Although realization is not assured, management believes it is more likely than not that all of**

---

[19] This is an example of voluntary disclosure that is encouraged by paragraph .14.

[20] As this contract is still expected to be profitable, the estimate does not involve a loss contingency covered by FASB Statement No. 5. Accordingly, disclosure of an estimate of the range of the possible change in estimate is not required.

[21] APB Opinion 20, *Accounting Changes*, paragraph 33, requires or recommends, depending on the estimates involved, disclosure of the effect of significant revisions of estimates if the effect is material.

[22] In addition to other disclosures, information as to the amount of loss carryforwards and their expiration dates and the amount of any valuation allowance with respect to the recorded deferred tax asset is required under FASB Statement No. 109, *Accounting for Income Taxes*.

the deferred tax asset will be realized. The amount of the deferred tax asset considered realizable, however, could be reduced in the near term if estimates of future taxable income during the carryforward period are reduced.

A-45. *Discussion.* This disclosure informs users that (*a*) realization of the deferred tax asset depends on achieving a certain minimum level of future taxable income within the next three years and (*b*) although management currently believes that achievement of the required future taxable income is more likely than not, it is at least reasonably possible that this belief could change in the near term, resulting in establishment of a valuation allowance.

Illustrative Disclosure I—Litigation

A-46. *Scenario.* ABC Company is the defendant in litigation involving a major competitor claiming patent infringement. The suit claims damages of $200 million. Discovery has been completed, and ABC is engaged in settlement discussions with the plaintiff. ABC has made an offer of $5 million to settle the case, which offer was rejected by the plaintiff; the plaintiff has made an offer of $35 million to settle the case, which offer was rejected by ABC. Based on the expressed willingness of the plaintiff to settle the case along with information revealed during discovery and the likely cost and risk to both sides of litigating, the company believes that it is probable the case will not come to trial. Accordingly, the company has determined that it is probable that it has some liability. The company's reasonable estimate of this liability is a range between $10 million and $35 million, with no amount within that range a better estimate than any other amount; accordingly, $10 million was accrued.

A-47. *Disclosure.* **On March 15, 19X1, the DEF Company filed a suit against the company claiming patent infringement. While the company believes it has meritorious defenses against the suit, the ultimate resolution of the matter, which is expected to occur within one year, could result in a loss of up to $25 million in excess of the amount accrued.**[23]

A-48. *Discussion.* FASB Statement No. 5 requires accrual of a loss contingency and disclosure of the nature of the contingency, the exposure to loss in excess of the amount accrued, and, depending on the circumstances, the amount accrued. This SOP requires disclosure of an indication that it is at least reasonably possible that a change in the company's estimate of its probable liability could occur in the near term.

Current Vulnerability Due to Certain Concentrations

Note: The following are illustrations of the disclosures required by paragraph .21 of this SOP. Some of the concentrations described may fall into more than one of the categories of concentrations given in paragraph .22, a *through* d.

Illustrative Disclosure A—Supplier/Sources of Supply

A-49. *Scenario.* Hi-Tech Corp. is a manufacturer of electronic equipment in which integrated circuits are an important component. Substantially all of Hi-Tech's customers require that only those vendors that meet quality criteria be used as sources for integrated circuits. Hi-Tech currently buys all of its integrated circuits from one manufacturer in the Far East, and no long-term sup-

[23] See footnote 17 of this Appendix.

ply contract exists. There are only a limited number of manufacturers of these particular integrated circuits, and a change of supplier could significantly disrupt the business due to the time it would take to locate and qualify a new vendor.

A-50. *Disclosure*. **The company currently buys all of its integrated circuits, an important component of its products, from one supplier. Although there are a limited number of manufacturers of the particular integrated circuits, management believes that other suppliers could provide similar integrated circuits on comparable terms. A change in suppliers, however, could cause a delay in manufacturing and a possible loss of sales, which would affect operating results adversely.**

A-51. *Discussion*. Although other sources of supply of this particular kind of integrated circuit are currently available, the limited number of such sources and the time it takes to qualify new vendors makes Hi-Tech currently vulnerable to the risk of a near-term severe impact.

A-52. Disclosure is required because it is considered at least reasonably possible, based on information known to management prior to issuance of the financial statements, that the events that could cause the severe impact will occur.

Illustrative Disclosure B—Supplier/Sources of Supply

A-53. *Scenario*. Minnesota Company manufactures various products in which wheat is an important raw material. It currently buys 80 percent of its wheat from one supplier, but numerous alternate sources of supply are readily available on comparable terms.

A-54. *Disclosure*. **(No disclosure is required.)**

A-55. *Discussion*. The concentration exists at the date of the financial statements, and an inability to obtain wheat could result in a near-term severe impact. No disclosure is required, however, because numerous alternative suppliers are available and, therefore, it is not considered at least reasonably possible that events that could cause a near-term severe impact will occur.

Illustrative Disclosure C—Patent

A-56. *Scenario*. Felt Pharmaceutical Company is a national pharmaceutical manufacturer headquartered in Atlanta, Georgia. The company markets a wide range of pharmaceutical products. One of its better-known name-brand products, a significant source of profits and cash flow, is an antibiotic on which there is a patent that will expire in six months. Competitors are preparing to enter the market with generic alternatives when Felt's patent expires, and the concentration therefore has the potential for a severe impact.

A-57. *Disclosure*. **Felt Pharmaceutical Company is a national pharmaceutical manufacturer with sales throughout the United States. The patent on one of its major products expires next year. This product accounts for approximately one-third [or "a significant portion"] of the company's revenues and a higher percentage of its gross profit.**

A-58. *Discussion*. The disclosure focuses on the nature of the business and on Felt's current vulnerability due to a concentration of its patented products. Disclosure is required because the concentration exists at the date of the financial statements, because the effect on the company's cash flows and profitability of competitors entering the market when the patent expires could be a severe impact, and because it is considered at least reasonably possible that the events that could cause the severe impact will occur in the near term.

A-59. Because the risk is evident from the description of the concentration, no further explanation of the risk is necessary.

Illustrative Disclosure D—Source of Supply of Labor

A-60. *Scenario*. Team Company is a manufacturer of industrial hardware. The contract with the union representing Team's labor force is due to expire in the coming year. Over the past thirty years, Team has, in rare instances, been affected by work stoppages in the course of contract negotiations; they have always been of short duration, and none has had a significant effect on Team's financial statements. Although management expects that there will initially be some differences between its offer to the union and union demands, based on preliminary discussions with union leaders, management believes it is very unlikely that those differences will result in a protracted conflict.

A-61. *Disclosure*. **(No disclosure is required.)**

A-62. *Discussion*. Although the concentration of labor exists at the date of the financial statements and it could result in a severe impact in the near term due to the potential of a protracted work stoppage, no disclosure is required because it is not considered at least reasonably possible in the light of past experience and current conditions that a protracted work stoppage will take place.

Illustrative Disclosure E—Contributor

A-63. *Scenario*. Zebra Zoo, a not-for-profit organization, is supported by contributions from the public. In the current year, two contributors provided 35 percent of the organization's combined revenues.

A-64. *Disclosure*. **Approximately 35 percent of the organization's combined revenues were provided by two contributors.**

A-65. *Discussion*. Disclosure is required because the two contributors provided a significant portion of the organization's revenues. As noted in paragraph .22, it is always considered reasonably possible that a customer, grantor, or contributor will be lost in the near term.

Illustrative Disclosure F—Geographic Area of Operations

A-66. *Scenario*. Offshore Productions, Inc. (Offshore), a Delaware corporation, designs and manufactures optical lenses, which it markets throughout the United States. Substantially all of its manufacturing operations are carried out in a single facility, which is located in Switzerland and which is owned by Offshore's subsidiary. Offshore does not carry insurance for risks of loss. Offshore's consolidated balance sheet includes $20 million representing the net assets of those operations.

A-67. *Disclosure*. **Included in the company's consolidated balance sheet at December 31, 19X4, are the net assets of the company's manufacturing operations, all of which are located in a single facility in Switzerland and which total approximately $20 million.**[24]

---

[24] [Footnote deleted, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 131.]

A-68. *Discussion*. All of Offshore's specialized manufacturing capacity is concentrated in a single facility. As noted in paragraph .22, it is always considered at least reasonably possible that the use of a facility located outside of an entity's home country could be disrupted in the near term. Due to the specialized nature of the assets, it would not be possible to find replacement capacity quickly. Accordingly, loss of the facility could produce a near-term severe impact to Offshore. This disclosure informs financial statement users of that concentration of operations in a particular geographic area and informs them of the risks and uncertainties associated with the concentration. Because the concentration is one of operations located outside of Offshore's home country, the disclosure also sets forth the carrying amount of the net assets, as required by paragraph .24 of this SOP.

.28

Appendix B

Background Information and Basis for Conclusions

B-1. FASB Statement of Financial Accounting Concepts No. 1, *Objectives of Financial Reporting by Business Enterprises*, states that financial reporting should "provide information that is useful to present and potential investors and creditors and other users in making rational investment, credit, and similar decisions" (paragraph 34). To support that decision-making process, financial reports should help such users "assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise" (paragraph 37) by providing "information about the economic resources of an enterprise, the claims to those resources...and the effects of transactions, events, and circumstances that change resources and claims to those resources" (paragraph 40). Without additional disclosure in financial reports about significant risks and uncertainties, these objectives may not be fully met in today's environment.

B-2. Recognizing that a riskier business and economic climate equates to a riskier investment and lending climate, users increasingly are asking that financial statements include more information to help them assess the risks and uncertainties concerning a reporting entity's future cash flows and results of operations. These requests are underscored in calls for an "early warning system" expressed in the financial press and in congressional hearings.

B-3. No system of reporting can provide early warnings of all future detrimental events. Indeed, management may be unaware, and reasonably so, of some significant risks and uncertainties. And, clearly, financial statements should not be burdened in an attempt to describe every possible risk and uncertainty facing the reporting entity.

B-4. But such limitations should not prevent users from receiving improved disclosures concerning significant risks and uncertainties. Their existence merely means that any new disclosure requirements must focus on what is important. New disclosure requirements should effectively separate the significant matters that warrant reporting from the host of lesser risks and uncertainties that do not.[25] AcSEC believes that the requirements in this SOP meet those objectives.

B-5. In reaching the conclusions in this SOP, AcSEC considered and evaluated users' reliance on financial information, sources of financial information, current accounting and disclosure requirements, current SEC requirements, and users' perceptions of the kinds of information that should be presented in financial statements.

Users' Reliance on Financial Information

B-6. Information in financial statements, shaped by generally accepted accounting principles (GAAP) and, for SEC registrants, by the additional regulatory requirements of the Commission, is considered important to users in making investment and lending decisions. Financial statements provide information about certain current conditions and trends that help users in pre-

[25] This SOP does not prohibit disclosure of matters it does not require to be disclosed either because they do not meet the specified screening criteria or because they relate to risks and uncertainties that are outside the scope of this SOP.

dicting reporting entities' future cash flows and results of operations. The quality of users' predictions depends to a significant degree on their assessment of the risks and uncertainties inherent in entities' operations and of the information about those operations that financial reporting provides.

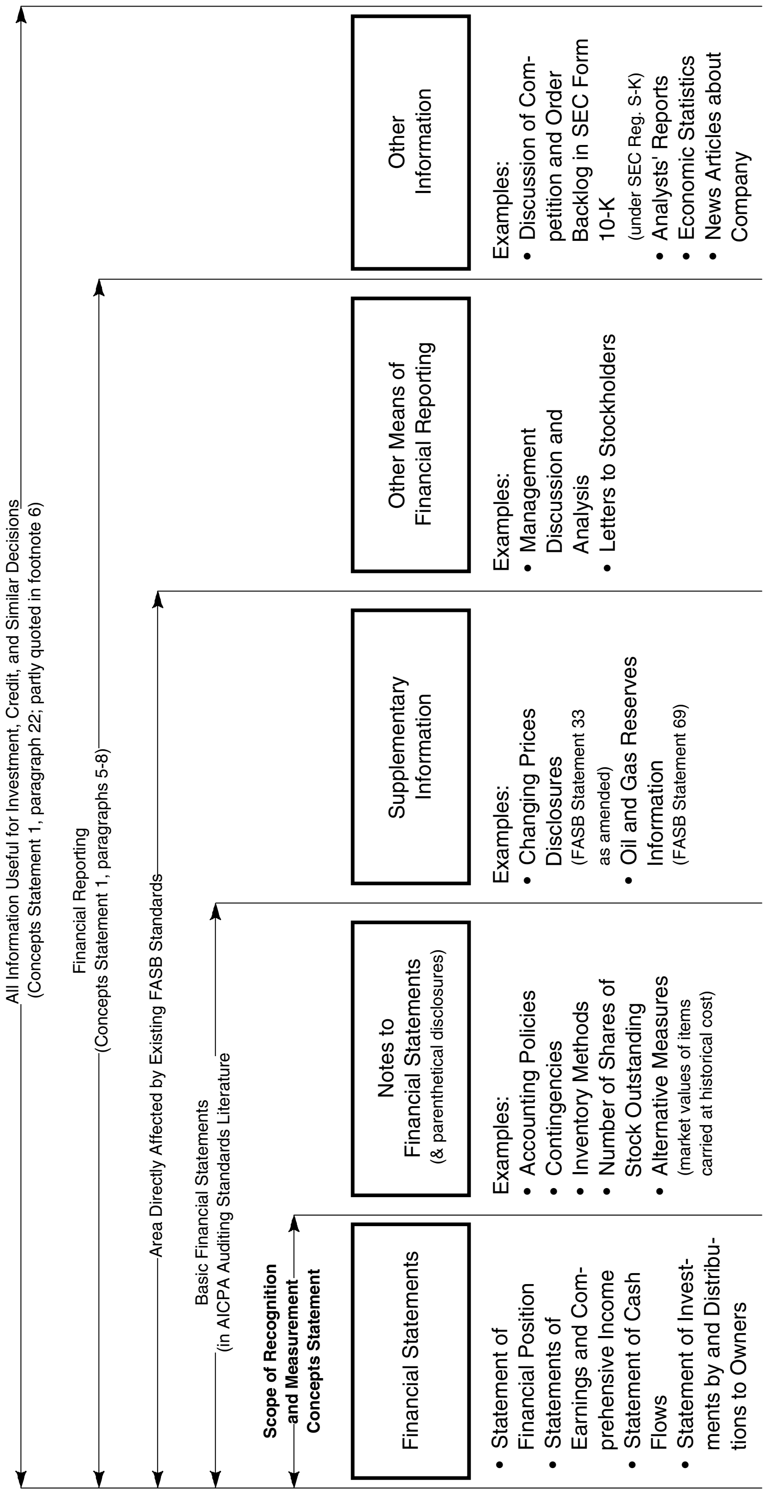
B-7. Financial reporting largely reflects the effects of past transactions and other events that have already affected a reporting entity. Such information can help users in assessing the future. But that does not mean the future can be predicted merely by extrapolating past trends or relationships. Indeed, volatility in the economic environment almost always means that simply extrapolating past trends and relationships will lead to inaccurate predictions. Users need to assess all currently available information to form their own expectations about the future and its relation to the past. Forming expectations—making predictions—is a vital part of the decision process. But it is a function of financial analysis, not of financial reporting. Furthermore, financial reporting is only one source of information required for making investment and credit decisions.

B-8. Reporting entities and those who have economic interests in them are affected by many factors that interact in complex ways. Those who use financial information for business and economic decisions need to combine information provided by financial reports with pertinent information from other sources, including additional information provided by issuers, financial analysts' reports, business and trade publications, and reports of macroeconomic and other local, national, and international events.

Sources of Financial Information

B-9. Financial reporting encompasses the financial statements and notes, required information supplementary to the financial statements, and other information, such as that included in Management's Discussion and Analysis (MD&A), which the SEC requires publicly held business enterprises to provide in their annual and quarterly reports. Additional sources of information include company releases, current information filings of publicly held business enterprises, investment advisory services, analysts' reports, the financial press, general economic statistics, and general news reports.

B-10. The major sources of financial information and their relationships for business and not-for-profit entities are illustrated in the following diagram, taken from FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*.



[Source: FASB Concepts Statement No. 5, p. 5]

Current Accounting Requirements

B-11. Disclosing information to help users assess major risks and uncertainties is consistent with the established objectives of financial reporting, and some such information is already presented in financial statements. Such information includes, for example, information about financial instruments with off-balance-sheet risk and financial instruments with concentrations of credit risk, related party disclosures and information about receivables, leases, pensions, postretirement benefits, and commitments and contingencies. In addition, publicly held business enterprises are required to disclose in their financial statements segment information and information about foreign operations, export sales, and major customers, which, among other things, helps users to assess risks and uncertainties. This SOP, however, is intended to extend disclosures beyond those currently required and to help users discern those risks that are of particular importance.

Nature of Operations

B-12. Current GAAP (FASB Statement No. 14, *Financial Reporting for Segments of a Business Enterprise*) requires a public business enterprise to disclose the major types of products and services that generate revenues, that is, the nature of its businesses, as part of segment information in its financial statements, even if the business enterprise operates in only one industry.[26] Information presented includes a description of the types of goods or services provided, operating revenues, operating income or loss, net income or loss, net working capital, and total assets for each segment. But other reporting entities are not required to disclose such information.[27] Thus, financial statement users now sometimes cannot discern the nature of the operations of such other entities from information presented in their financial statements.

B-13. Information about the nature of operations is helpful because the various kinds of businesses in which reporting entities operate have diverse degrees and kinds of risks. Certain of these risks are inherent to the business in which an entity is engaged. Simply by knowing the nature of an entity's business and the principal markets for its products or services, a financial statement user is alerted, indirectly, about the risks common to that business.

B-14. Some have expressed concerns about whether this SOP conflicts with FASB Statement No. 21, *Suspension of the Reporting of Earnings per Share and Segment Information by Nonpublic Enterprises*. AcSEC believes that, while the information that this SOP requires to be disclosed concerning the nature of a reporting entity's operations overlaps in certain respects the information public business enterprises are required to report under FASB Statement No. 14, it is significantly different in other respects. Accordingly, AcSEC does not believe this SOP conflicts with Statement No. 21.

B-15. Further, AcSEC notes that, for public business enterprises that already disclose information about the nature of their operations pursuant to FASB Statement No. 14, this SOP requires disclosure of additional information about the nature of their operations.

---

[26] The FASB currently has on its agenda a project on disaggregated disclosures, which is reconsidering issues related to FASB Statement No. 14.

[27] FASB Statement No. 21, *Suspension of the Reporting of Earnings per Share and Segment Information by Nonpublic Enterprises*, suspended the segment information reporting requirements of FASB Statement No. 14 for nonpublic enterprises.

B-16. The disclosure required by paragraph .10 of this SOP focuses on the entity's principal markets, including their locations. Current segment information for business enterprises, in contrast, focuses on the nature of the segments' operations and their identifiable assets and the geographic location of assets outside the enterprise's home location. Disclosure of the locations of a business or not-for-profit entity's principal markets provides information useful in assessing risks and uncertainties related to the environments in which the entity operates. The risks and the uncertainties associated with selling products and services in various regions in the United States may differ significantly. And they do differ significantly from the risks and the uncertainties in selling products and services outside the United States. Knowing those environments in which an entity sells its products or provides services helps users of financial reports to assess certain risks based on day-to-day national and world events.

B-17. The following table compares and contrasts the information required of public companies by FASB Statement No. 14 with paragraph .10.

Comparison of Disclosure Requirements:
FASB Statement No. 14 (Segment Reporting) Versus
Paragraph .10 of this SOP

Disclosure	*FASB Statement No. 14*	*Paragraph .10*
Description of the types of products or services sold	X	X
Revenue, profitability, identifiable assets, and other related disclosures for each reportable segment	X	**
Revenue, profitability, identifiable assets for foreign operations, by geographic area	X	††
Export sales by domestic operations, by geographic area	X	
Significant sales to single customer, foreign government, or domestic governmental agency	X	‡‡
Identification of principal markets		X
Description of location of principal markets		X

** Paragraph .10 requires an indication of the relative importance of operations in each business.

†† This SOP requires disclosure of current vulnerability due to concentrations in the market or geographic area in which an entity conducts its operations if the criteria in paragraph .21 are met.

‡‡ This SOP requires disclosure of current vulnerability due to concentrations of customers if the criteria in paragraph .21 are met.

B-18. AcSEC considered whether disclosure of an entity's principal operating locations would be informative to financial statement users and should, therefore, be included in paragraph .10. AcSEC concluded that, although in certain circumstances such information would be relevant, generally it would not be. In addition, disclosure of an entity's principal operating locations would be required under paragraph .21 (current vulnerability due to certain concentrations) in circumstances where operating in that particular environment created substantive near-term risk to the entity. Knowing, however, that a manufacturing plant is located in Dallas, Texas, for example, was not considered particularly relevant information. In contrast, knowing where a residential housing construction contractor's principal market is located was considered to be highly relevant. As a result, disclosure of the location of principal markets was chosen by AcSEC for inclusion in paragraph .10, while disclosure of the location of principal operating units was considered unnecessary.

Use of Estimates in the Preparation of Financial Statements

B-19. Auditors are required under generally accepted auditing standards (GAAS)[28] to acknowledge in their standard reports the use of estimates in the preparation of financial statements. AcSEC has concluded, however, that an explanation that the preparation of financial information requires the use of estimates and assumptions should be included in the financial statements by the reporting entity to inform users of the nature and limitations of those financial statements. AcSEC acknowledges that the disclosure would usually be standardized. AcSEC nevertheless believes it would help users make sounder use of financial statements.

B-20. There is a need to communicate explicitly to users of financial reports that the inescapable use of estimates in the preparation of financial information, including the estimation of fair and, in some cases, market values for assets carried at such bases, results in the presentation of a number of approximate rather than exact amounts. If users understand better the inherent limitations on precision in financial statements, they will be better able to make decisions.

B-21. Estimates inherent in the current financial reporting process inevitably involve assumptions about future events. For example, accruing income for the current period under a long-term contract requires an estimate of the total profit to be earned on the contract. For another example, carrying inventories at the lower of cost or market is based on an assumption that there will be sufficient demand for that product in the future to be able to sell the quantity on hand without incurring losses on the sales or, if market is used, that it can be estimated. Making reliable estimates for such matters is often difficult even in periods of economic stability; it is more so in periods of economic volatility. Although many users of financial reports are aware of that aspect of financial reporting, others often assume an unwarranted degree of reliability in financial statements. The disclosure required by this SOP should help dispel any such erroneous assumptions.

B-22. A number of publicly held business enterprises now include management reports in annual reports to stockholders. Many such reports and letters state that estimates and assumptions are required to prepare financial statements in conformity with GAAP. AcSEC acknowledges that development, but it believes the disclosure should be mandated and included in the notes to financial statements.

Certain Significant Estimates

B-23. FASB Statement No. 5 requires reporting entities to disclose certain loss contingencies, as follows:

---

[28] SAS No. 58, *Reports on Audited Financial Statements*, requires auditors to include in their standard reports a statement that an audit includes "assessing . . . significant estimates made by management."

> If no accrual is made for a loss contingency because one or both of the conditions in paragraph 8 are not met, or *if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph 8, disclosure of the contingency shall be made when there is at least a reasonable possibility that a loss or an additional loss may have been incurred.*[6] The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. [Emphasis added.] [FASB Statement No. 5, paragraph 10]

Footnote 6 to Statement No. 5 states:

> For example, disclosure shall be made of any loss contingency that meets the condition in paragraph 8(a) but that is not accrued because the amount of loss cannot be reasonably estimated (paragraph 8(b)). Disclosure is also required of some loss contingencies that do not meet the condition in paragraph 8(a)—namely, those contingencies for which there is a *reasonable possibility* that a loss may have been incurred even though information may not indicate that it is *probable* that an asset has been impaired or a liability had been incurred at the date of the financial statements. [Emphasis in original.]

FASB Statement No. 5 defines loss contingencies as:

> an existing condition, situation, or set of circumstances involving uncertainty as to possible . . . loss . . . to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur. Resolution of the uncertainty may confirm the acquisition of an asset or the reduction of a liability or the loss or impairment of an asset or the incurrence of a liability. [paragraph 1]

The recognition and disclosure requirements of Statement No. 5 are further clarified in FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss*. This SOP does not change the requirements of FASB Statement No. 5 or FASB Interpretation No. 14; the requirements of this SOP supplement those requirements. For example, if a loss contingency meets the criteria for disclosure under both Statement No. 5 and paragraph .13 of this SOP, this SOP requires disclosure that it is at least reasonably possible that future events confirming the fact of the loss or the change in the estimated amount of the loss will occur in the near term.

B-24. This SOP also requires disclosure of matters that may not be deemed to be contingencies requiring disclosure under current GAAP. FASB Statement No. 5 distinguishes loss contingencies from other uncertainties inherent in making accounting estimates, as follows:

> Not all uncertainties inherent in the accounting process give rise to contingencies as that term is used in this Statement. Estimates are required in financial statements for many on-going and recurring activities of an enterprise. The mere fact that an estimate is involved does not of itself constitute the type of uncertainty referred to in the definition [of a contingency] in paragraph 1. For example, the fact that estimates are used to allocate the known cost of a depreciable asset over the period of use by an enterprise does not make depreciation a contingency; the eventual expiration of the utility of the asset is not uncertain. Thus, depreciation of assets is not a contingency as defined in paragraph 1, nor are such matters as recurring repairs, maintenance, and overhauls, which interrelate with depreciation. Also, amounts owed for services received, such as advertising and utilities, are not contingencies even though the accrued amounts may have been estimated; there is nothing uncertain about the fact that those obligations have been incurred. [paragraph 2]

FASB Statement No. 5 acknowledges, however, that the distinction between uncertainties inherent in making accounting estimates and uncertainties that give rise to a contingency is not always clear:

> A question has been raised whether uncollectibility of receivables and product warranties constitute contingencies within the scope of this Statement. The Board recognizes that uncertainties associated with uncollectibility of some receivables and some product warranties are likely to be, in part, inherent in making accounting estimates (described in paragraph 2) as well as, in part, the type of uncertainties that give rise to a contingency (described in paragraph 1). The Board believes that no useful purpose would be served by attempting to distinguish between those two types of uncertainties for purposes of establishing conditions for accrual of uncollectible receivables and product warranties. Consequently, those matters are deemed to be contingencies within the definition of paragraph 1 and should be accounted for pursuant to the provisions of this Statement. [paragraph 58]

B-25. AcSEC believes that requiring disclosure of certain estimates not deemed to be covered by current GAAP, for example, some amounts reported for long-term contracts, would enhance the usefulness of financial statements in assessing risks and uncertainties.

B-26. Among the matters specifically excluded from the scope of FASB Statement No. 5 is the write-down of operating assets. Paragraph 31 of Statement No. 5 states:

> In some cases, the carrying amount of an operating asset not intended for disposal may exceed the amount expected to be recoverable through future use of that asset even though there has been no physical loss or damage of the asset or threat of such loss or damage. For example, changed economic conditions may have made recovery of the carrying amount of a productive facility doubtful. The question of whether, in those cases, it is appropriate to write down the carrying amount of the asset to an amount expected to be recoverable through future operations is not covered by this Statement.

The requirements of paragraph .13 of this SOP are applicable to long-lived assets whose value may become impaired in the near term.

B-27. On November 29, 1993, the FASB issued an exposure draft of a Proposed Statement of Financial Accounting Standards, *Accounting for the Impairment of Long-Lived Assets*. That exposure draft is expected to result ultimately in the promulgation of authoritative guidance on recognition, measurement, and disclosure requirements for long-lived assets whose carrying amounts may not be recoverable. Paragraphs 102 and 103 of the exposure draft state:

> In 1985, the AICPA established a task force to consider the need for improved disclosures about risks and uncertainties that affect companies and the manner in which they do business. In July 1987, the task force published *Report of the Task Force on Risks and Uncertainties*, which concluded that companies should be making early warning disclosures as part of their financial statements. In March 1993, AcSEC issued an exposure draft of a proposed Statement of Position, *Disclosure of Certain Significant Risks and Uncertainties and Financial Flexibility*. That proposed SOP would require entities to include in their financial statements disclosures about (*a*) the nature of their operations, (*b*) the use of estimates in the preparation of their financial statements, (*c*) certain significant estimates, (*d*) current vulnerability due to concentrations, and (*e*) financial flexibility.

> Board members observed that for some impairments early warning disclosures would be useful. However, they were in general agreement, based on comment letters and testimony, that it would not be possible to adequately describe those situations and develop adequate disclosure requirements. Some Board members also believed that the proposed SOP is a much broader disclosure requirement that could have implications in several other Board projects. Board members therefore concluded not to require early warning disclosures in this Statement.

AcSEC notes that, while the exposure draft would not require early warning disclosures concerning impairment of long-lived assets, it acknowledges the usefulness of such disclosures and recognizes that the disclosure requirement of this SOP is a much broader requirement than the FASB considered.

Current Vulnerability Due to Certain Concentrations

B-28. Current GAAP requires disclosure of certain concentrations (for example, credit concentrations under FASB Statement No. 105, *Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk*, and information about major customers under FASB Statement No. 14 for public enterprises) but does not specifically address disclosures of concentrations on a comprehensive basis. This SOP addresses known concentrations more comprehensively but stops short of requiring disclosure of all concentrations.

B-29. Some believe that disclosure of economic dependency is required under current literature. A requirement to disclose economic dependency was included in SAS No. 6, *Related Party Transactions*. But, partly in response to the issuance of FASB Statement No. 57, *Related Party Transactions*, the AICPA superseded SAS No. 6 in August 1983 with the issuance of SAS No. 43, *Omnibus Statement on Auditing Standards—1983*, which, among other things, "remov[ed] guidance on accounting considerations and disclosure standards . . . provided in FASB Statement of Financial Accounting Standards No. 57, *Related Party Disclosures*." Statement No. 57 states, in turn, that it "does not address the issues pertaining to economic dependency."

B-30. The FASB observed in Statement No. 21, *Suspension of the Reporting of Earnings per Share and Segment Information by Nonpublic Enterprises*, which was issued in April 1978 and which eliminated the requirement for nonpublic enterprises to disclose information about major customers, that FASB Statement No. 21 "does not affect the disclosure of information about economic dependency when such disclosure may be necessary for a fair presentation." That observation, however, refers to the now-superseded SAS No. 6.

B-31. AcSEC believes that disclosure in the notes to financial statements about current vulnerability due to concentrations of customers, grantors, and contributors is necessary for a fair presentation when the criteria in paragraph .21 of this SOP are met. Assessing the likelihood of loss of relationships with these parties would often present difficulties, however. Accordingly, for purposes of this SOP, it is always considered at least reasonably possible that any of these relationships will be lost in the near term. Similarly, because of the difficulty in assessing the political and economic risks associated with operations located outside an entity's home country, for purposes of this SOP, it is always considered at least reasonably possible that those operations might be disrupted in the near term. This SOP does not, however, prohibit entities from also stating in disclosures of concentrations related to customers, grantors, or contributors or operations located outside the entity's home country that the entity does not expect that the business relationship will be lost or does not expect that the foreign operations will be disrupted if such is the case.

B-32. AcSEC considered whether it would be useful to establish quantitative criteria for disclosure of concentrations, either in place of or in addition to the qualitative criteria provided. AcSEC believes that a quantitative approach might not provide meaningful information about an enterprise (for example, a critical supplier is not necessarily a major supplier). Any potential simplification in implementing the disclosure requirements that might result from a quantitative approach would be outweighed by deterioration in the quality of information provided.

Current SEC Requirements

B-33. The SEC requirement for information to be included in MD&A expands the information that financial reporting otherwise provides to include certain specific kinds of information related to liquidity, capital resources, and results of operations. It further expands the information to include management analysis of trends and other factors. Thus, management's subjective analysis is a significant part of the information users obtain from financial reporting of publicly held business enterprises as the data for their decisions.

B-34. The FASB's Concepts Statements present the view that such analysis is helpful to users. For example, in Concepts Statement No. 1, the FASB observes that financial reporting should include explanations and interpretations and cites as an example management's explanation of the information as a significant aid to users.

B-35. Under SEC requirements relating to MD&A, publicly held business enterprises are required to describe, among other things, "any known trends or uncertainties that have had or that the registrant reasonably expects will have a material favorable or unfavorable impact on net sales or revenues or income from continuing operations" (Regulation S-K, Item 303(a)(3)(ii)). SEC Financial Reporting Release (FRR) No. 36 clarifies that disclosure is required unless management determines that the trend or uncertainty is not reasonably likely to occur or that a material effect on the registrant's financial condition or results of operations is not reasonably likely to occur. Publicly held business enterprises are encouraged but not required to include forward-looking information relevant to a full understanding of their past and anticipated operations.

B-36. The disclosure of current vulnerability due to certain concentrations required by paragraph .21 of this SOP differs from the MD&A requirement in two important respects. First, the MD&A rules apply broadly to "any known trends or uncertainties," whereas paragraph .21 applies only to certain known concentrations. Second, this SOP requires disclosure only if the effect would cause a severe impact in the near term—a higher threshold than "material" used for MD&A purposes. AcSEC believes a higher threshold is needed for these disclosures to avoid required disclosure of lengthy lists of risks related to concentrations that are reasonably possible in today's environment and at the same time still meet the objective of providing an early warning of the potential for a disruptive set of events occurring in the near term.

B-37. The SEC also requires registrants, "where appropriate," to include in prospectuses offering securities to the public "a discussion of the principal factors that make the offering speculative or one of high risk." Among the factors cited are "the financial position of the registrant" and "the nature of the business in which the registrant is engaged or proposes to engage" (Regulation S-K, Item 503(c)).

B-38. This information required by the SEC is not now required for entities not subject to SEC regulation. However, expanding the scope of financial statements to include some of such information is compatible with the objectives of financial reporting. This SOP requires disclosure in the notes to financial statements of some of the information now reported in MD&A or as risk factors but might also require disclosure of certain information not currently required in either place.

Comments Received on Exposure Draft

B-39. An exposure draft of a proposed Statement of Position, *Disclosure of Certain Significant Risks and Uncertainties and Financial Flexibility*, was issued for public comment on March 31, 1993, and distributed to approximately 20,000 interested parties to encourage comment by those who would be affected by the proposal. Over 300 comment letters were received in response to the exposure draft. Substantially all of the responses expressed reservations regarding the exposure draft's required disclosures of certain significant estimates, current vulnerability due to concentrations, and financial flexibility, while relatively few respondents expressed concerns regarding the disclosure of the nature of the reporting entity's operations or the use of estimates in the preparation of financial statements.

B-40. The most significant and pervasive concerns can be summarized in three areas:

a. The cost of determining the necessity of the disclosures will exceed the benefit received from providing them, particularly for small, privately owned entities, and particularly with respect to the requirements for disclosure of financial flexibility.

b. Requiring disclosures based on information "of which management is reasonably expected to have knowledge" is too subjective and unnecessarily expands costs and liability as well as the "expectation gap."

c. "Reasonably possible" is too low a threshold and is an insufficiently objective criterion for disclosure of a broad range of possible future events.

B-41. AcSEC considered the comments received on the exposure draft and took the following actions in response to them.

a. The requirement for disclosure of financial flexibility has been eliminated from this SOP. Financial flexibility was the exposure draft's most controversial requirement, with deep concerns expressed about the cost of compliance. Other concerns were expressed regarding the overlap between the exposure draft's requirements and the requirements of SAS No. 59, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*, and the ability of the exposure draft's criteria to highlight meaningful information and to differentiate among entities that have different risks.

AcSEC does, however, continue to consider financial flexibility disclosures to be relevant early warnings for financial statement users. AcSEC also believes that disclosure requirements such as those included in SAS No. 59 should be included in accounting rather than auditing standards. Therefore, AcSEC and the AICPA's Auditing

Standards Board are considering forming an interdivisional task force to develop accounting standards to provide the appropriate early warnings of possible financial difficulties and to replace disclosure requirements currently included only in auditing standards.

b. This SOP requires disclosure of certain defined concentrations known to management rather than a wider range of concentrations based on information of which management "is reasonably expected to have knowledge." Further, because of the continuing activity of the FASB in establishing disclosure requirements related to financial instruments, none of the defined concentrations relate specifically to financial instruments. The disclosures are to be made when (*a*) the concentrations are known to exist at the date of the financial statements, (*b*) they make the enterprise vulnerable to the risk of a near-term severe impact, and (*c*) it is at least reasonably possible that the events that could cause the severe impact will occur in the near term.

AcSEC considered eliminating the reasonably possible and severe-impact disclosure criteria, but decided that retention of these criteria should promote disclosures that are more significant and useful than standardized listings that might otherwise result.

c. The requirements to disclose certain significant estimates have been clarified to make them more consistent with the requirements of FASB Statement No. 5. This SOP requires discussion of estimates when, based on known information available prior to the issuance of the financial statements, it is reasonably possible that the estimate will change in the near term and the effect of the change will be material. AcSEC responded to concerns regarding the predictive nature of this disclosure requirement by stipulating that it is the estimate of the effect of a change in a condition, situation, or set of circumstances that existed at the date of the financial statements that must be disclosed and that the evaluation should be based on known information available prior to issuance of the financial statements.

AcSEC also revised the disclosure requirements included in the exposure draft applicable to estimates not involving loss contingencies covered by FASB Statement No. 5. With respect to such estimates, this SOP does not require the disclosure of the possible loss or range of loss or the statement that such an estimate cannot be made.

Placement of Disclosures

B-42. A significant number of commentators recommended that, because of the subjectivity associated with some of the disclosures required by this SOP, they should be presented outside the basic financial statements, either as supplemental information or in MD&A.

B-43. FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, distinguishes between information that should be part of the basic financial statements and that which should be provided as supplementary information. Paragraph 7 of Concepts Statement No. 5 emphasizes that information disclosed as part of the basic financial statements amplifies or explains information recognized in financial statements and is essential to understanding that information. FASB Statement No. 107, however, points out in paragraph 75 a need for disclosure about "many important items . . . not recognized as assets and liabilities in financial statements, and many transactions and other events . . . not recognized when they occur but only later when uncertainty about them is reduced sufficiently so that their effects are clear."

B-44. The disclosures required by this SOP build on disclosures already included in the basic financial statements and, like them, serve one of the major purposes of disclosure summarized in Appendix D of FASB Statement No. 105, that is, to help in assessing risks and potentials. AcSEC also believes that the changes made in response to the comments received on the exposure draft have significantly reduced the subjectivity of the disclosures. Accordingly, AcSEC concluded that all of the disclosures now required by this SOP should be included in the basic financial statements.

Scope

B-45. The exposure draft of this SOP would have applied to state and local governmental units. However, concern was expressed that inclusion of such entities unduly complicated the SOP. Further, resolving financial reporting issues unique to state and local governments that were brought up by commentators on the exposure draft—especially in the light of the other substantive changes made to the exposure draft—would have unduly delayed the issuance of this SOP. AcSEC believes the understandability of this SOP is improved by not including state and local governmental units in its scope.[29]

B-46. Many commentators on the exposure draft recommended that other reporting entities, especially smaller nonpublic reporting entities, be exempted from this SOP's disclosure requirements. AcSEC considered those recommendations and concluded that the disclosures required by this SOP are no less relevant for such entities and that the changes made to the exposure draft sufficiently mitigate the concerns expressed by commentators.

B-47. Some commentators requested that AcSEC clarify the applicability of the SOP's requirements to financial statements prepared using an Other Comprehensive Basis of Accounting (OCBOA). AcSEC concluded that the applicability of disclosures required by GAAP to OCBOA financial statements is a pervasive issue that is beyond the scope of this SOP.

Field Tests

B-48. The March 31, 1993 exposure draft *Disclosure of Certain Significant Risks and Uncertainties and Financial Flexibility* was subjected to limited field testing in which the exposure draft was applied to small and medium-size busi-

[29] Under the provisions of Governmental Accounting Standards Board (GASB) Statement No. 20, *Accounting and Financial Reporting for Proprietary Funds and Other Governmental Entities That Use Proprietary Fund Accounting*, paragraph 7, proprietary activities may apply *all* FASB Statements and Interpretations issued after November 30, 1989, *except for* those that conflict with or contradict GASB pronouncements. Paragraph 33 of the "Basis for Conclusions" of that Statement explains that, for proprietary activities that apply paragraph 7, an AICPA SOP that does not include governmental entities in its scope but that has been cleared by the Financial Accounting Standards Board (FASB) would be considered category (b) guidance under Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, issued by the Auditing Standards Board of the AICPA.

nesses, a not-for-profit organization, and case studies. The issues highlighted by the results of those tests were similar to the issues raised in the comment letters on the exposure draft. The results of the field tests were considered by AcSEC in its deliberations of this SOP.

Cost/Benefit

B-49. AcSEC believes the disclosures required by this SOP will improve financial reporting by providing, in a number of situations, information that will assist financial statement users in assessing certain risks and uncertainties inherent in financial reporting. AcSEC also believes the changes made to the exposure draft, which are discussed in paragraph B-41, are reasonably responsive to concerns expressed by commentators about the cost of determining the need for and making those disclosures.

B-50. FASB Concepts Statement No. 2, *Qualitative Characteristics of Accounting Information*, states in paragraph 142 that:

> The costs and benefits of a standard are both direct and indirect, immediate and deferred. They may be affected by a change in circumstances not foreseen when the standard was promulgated. There are wide variations in the estimates that different people make about the dollar values involved and the rate of discount to be used in reducing them to a present value . . . [It has been observed that] "the merits of any Standard, or of the Standards as a whole, can be decided finally only by judgments that are largely subjective. They cannot be decided by scientific test."

B-51. While a reliable evaluation of costs versus benefits is not possible, AcSEC believes that the benefits of the disclosures required by this SOP will outweigh their costs.

AICPA Special Committee on Financial Reporting

B-52. In the Spring of 1991, the AICPA's Board of Directors formed a Special Committee on Financial Reporting to address increasing concerns about the relevance and usefulness of financial reporting. The committee's charge is to recommend to standards setters and regulators (1) the nature and extent of information that should be made available to others by management and (2) the extent to which auditors should report on the various elements of that information. The focus of the Special Committee's work is on the information needs of investors and creditors, and its recommendations will be responsive to those needs.

B-53. In its November 1993 report on the information needs of today's users of financial reporting, *The Information Needs of Investors and Creditors*, the Special Committee stated:

> Users want operating opportunities and risks identified based on the company and its segments rather than on an industry-wide basis. They also want information about opportunities and risks resulting from concentrations in assets, customers and suppliers.

B-54. AcSEC considered the Special Committee's preliminary findings in developing this SOP, and AcSEC may reconsider the guidance in this SOP in the light of the Special Committee's recommendations, if and when the conclusions are implemented by standards-setting bodies.

Statement of Position 95-1 Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises

January 18, 1995

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction and Background

.01 Most mutual life insurance enterprises, assessment enterprises, and fraternal benefit societies (hereafter collectively referred to as *mutual life insurance enterprises*) issue financial statements prepared in conformity with statutory accounting practices. Practice, however, has been to consider statutory accounting practices as generally accepted accounting principles (GAAP), and mutual life insurance enterprises' statutory financial statements have been described as being in accordance with GAAP.

.02 In April 1993, the FASB issued Interpretation No. 40, *Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises*, which concludes that financial statements based on statutory accounting practices can no longer be described as prepared in conformity with GAAP. FASB Interpretation No. 40, as amended by FASB Statement of Financial Accounting Standards No. 120, *Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, is effective for financial statements issued for fiscal years beginning after December 15, 1995. (FASB Statement No. 120 does not change the disclosure and other transition provisions of Interpretation No. 40.) Accordingly, mutual life insurance enterprises that wish to prepare GAAP financial statements in 1996 and beyond will have to apply pertinent authoritative accounting pronouncements, such as FASB Statements and Interpretations, Accounting Principles Board Opinions, and AICPA Statements of Position, that do not explicitly exempt mutual life insurance companies.

.03 When FASB Interpretation No. 40 was issued, FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*, No. 97, *Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and No. 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts*, exempted mutual life insurance companies from their provisions. Furthermore, the AICPA Industry Audit Guide *Audits of Stock Life Insurance Companies* does not apply to mutual life insurance companies.[1] Accordingly, there was no authoritative guidance that explicitly addressed how to account for certain insurance activities of mutual life insurance enterprises. Recognizing the lack of authoritative guidance, the FASB urged the AICPA to take on a project to address accounting and reporting by mutual life insurance enterprises for their insurance activities. This SOP was prepared in response to that request. Furthermore, concurrent with the issuance of this SOP, the FASB has issued Statement No. 120, which removes the exemption for mutual life insurance enterprises from FASB Statement Nos. 60, 97, and 113 and recognizes that participating life insurance contracts that meet the conditions in paragraph .05 of this SOP should be accounted for under this SOP.

Applicability and Scope

.04 This SOP applies to all mutual life insurance enterprises, assessment enterprises, and fraternal benefit societies. This SOP also applies to stock life insurance subsidiaries of mutual life insurance enterprises.

.05 This SOP applies to life insurance contracts that have both of the following characteristics:

a. They are long-duration participating contracts that are expected to pay **dividends to policyholders**[2] based on actual experience of the insurance enterprise.

b. **Annual policyholder dividends** are paid in a manner that identifies divisible surplus and distributes that surplus in approximately the same proportion as the contracts are considered to have contributed to divisible surplus (commonly referred to in actuarial literature as the *contribution principle*).

.06 FASB Statement No. 97 should be applied to investment contracts, limited-payment contracts that do not have the characteristics described in paragraph .05, and universal life-type contracts as defined in FASB Statement No. 97. FASB Statement No. 60 should be applied to short-duration contracts with fixed and variable terms and to long-duration contracts that do not have the characteristics described in paragraph .05 and are not covered by FASB Statement No. 97. FASB Statement No. 113 should be applied to reinsurance contracts.

Accounting and Reporting Models

.07 The accounting and reporting model for long-duration insurance contracts issued by insurance enterprises other than mutual life insurance enter-

---

[1] The AICPA plans to issue an exposure draft of a revised life and health insurance enterprises audit guide, which will apply to mutual life insurance enterprises. This SOP will be incorporated into the revised guide.

[2] Terms defined in the Glossary [paragraph .65] are in **boldface type** the first time they appear in this SOP.

prises was established in FASB Statement Nos. 60 and 97. FASB Statement No. 60 addresses long-duration contracts, such as whole-life, guaranteed-renewable term-life, and annuity contracts that are expected to remain in force for an extended period and that are characterized by fixed and guaranteed terms. FASB Statement No. 97 addresses other long-duration contracts such as universal life-type insurance contracts—that are characterized by flexibility and discretion granted to one or both parties to the contract, limited payment contracts, and investment contracts.

FASB Statement No. 60

.08 Under FASB Statement No. 60, premiums for long-duration insurance contracts are recognized as revenue when due from policyholders. A liability for future policy benefits is accrued when premium revenue is recognized. The liability—which represents both the present value of estimated future policy benefits to be paid to or on behalf of policyholders, and related expenses less the present value of estimated future net premiums[3] to be collected from policyholders is based on a uniform percentage of anticipated premiums and on estimates of expected **investment yields**, mortality, morbidity, terminations, and expenses applicable at the time the insurance contracts are made. FASB Statement No. 60 also requires a provision for the risk of adverse deviation. Original assumptions ordinarily continue to be used in subsequent accounting periods to determine changes in the liability for future policy benefits (referred to as *lock-in*), unless a premium deficiency exists. Costs that vary with, and are primarily related to, the acquisition of new and renewal insurance contracts (**acquisition costs**) are capitalized and charged to expense in proportion to premium revenue recognized.

FASB Statement No. 97

.09 FASB Statement No. 97 requires that a retrospective deposit method be used to account for universal life-type insurance contracts. That accounting method establishes a liability for policy benefits at an amount determined by the account or contract balance that accrues to the benefit of the policyholder. Premiums are not reported as revenues: Rather, revenues from those contracts represent amounts assessed against policyholders and are reported in the period that the amounts are assessed, unless evidence indicates that the amounts are designed to compensate the insurer for services to be provided over more than one period. FASB Statement No. 97 also requires that capitalized acquisition costs associated with universal life-type contracts be amortized, based on a constant percentage of the present value of estimated gross profit amounts. Estimates of gross profits should be evaluated regularly, and the total amortization recorded to date is adjusted if actual experience or other evidence suggests earlier estimates should be revised.

Participating Contracts

.10 FASB Statement No. 60 addresses accounting for traditional forms of participating contracts issued, but does not address the participating contracts issued by mutual life insurance enterprises, which are covered by this SOP.

---

[3] FASB Statement No. 60 defines *gross premium* as "the premium charged to a policyholder for an insurance contract." That Statement defines *net premium* as "the portion of the gross premium required to provide for all benefits and expenses."

Furthermore, FASB Statement No. 97 addresses those participating contracts with contract terms that suggest that they are, in substance, universal life-type contracts.

Conclusions on Financial Reporting

.11 The following conclusions should be applied to insurance contracts described in paragraph .05 of this SOP and should be read in conjunction with "Background Information and Basis for Conclusions," beginning in paragraph .26 of this SOP. Furthermore, AICPA Practice Bulletin 8, *Application of FASB Statement No. 97*, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, *to Insurance Enterprises* [section 12,080], provides interpretative guidance that, if applicable, should be followed for the contracts covered by this SOP.

Revenue Recognition

.12 Premiums from participating insurance contracts should be reported as revenue in the statement of earnings when due from policyholders.

Benefits Recognition

.13 Death and surrender benefits incurred should be reported as expenses in the statement of earnings.

Dividends

.14 Annual policyholder dividends should be reported separately as an expense in the statement of earnings, and should be based on estimates of amounts incurred for the policies in effect during the period. For example, if a policy has an anniversary date of June 30, at which time annual dividends are paid, at December 31, 19X1, dividends should be accrued for the period July 1, 19X1, through December 31, 19X1, and should be reported separately on the balance sheet. (See paragraph .17 for information on accounting for terminal dividends as part of the liability for future policyholder benefits.)

Liability for Future Policy Benefits

.15 A liability for future policy benefits relating to participating life insurance contracts should be equal to the sum of—

a. The **net level premium reserve** for death and endowment policy benefits.

b. The liability for **terminal dividends.**

c. Any probable loss (premium deficiency) as described in paragraphs 35 to 37 of FASB Statement No. 60.

.16 The net level premium reserve should be calculated based on the **dividend fund interest rate**, if determinable, and mortality rates guaranteed in calculating the cash surrender values described in the contract. If the dividend fund interest rate is not determinable, the **guaranteed interest rate** used in calculating cash surrender values described in the contract should be used. If the dividend fund interest rate is not determinable and there is no guaranteed interest rate, the interest rate used in determining guaranteed nonforfeiture values should be used. Finally, if none of the above rates exists, then the interest rate used to determine minimum cash surrender values—as set by the National Association of Insurance Commissioners' (NAIC) model standard nonforfeiture law—for the year of issue of the contract should be used. Regardless of the rate used, net premiums should be calculated as a constant percentage of the gross premiums.

.17 **Terminal dividends** should be accrued in the liability for future policy benefits if the following conditions are both met:[4]

a. Payment of the dividend is probable.

b. The amount can be reasonably estimated.

If the two conditions are met (and they ordinarily will be), the terminal dividends should be recognized as an expense over the life of a book of participating life insurance contracts, at a constant rate based on the present value of the estimated gross margin amounts expected to be realized over the life of the book of contracts. The present value of estimated gross margins should be computed using the expected investment yield (net of related investment expenses). If significant negative gross margins are expected in any period, then the present value of gross margins before annual dividends, estimated gross premiums, or the balance of insurance in force should be substituted as the base for computing the expense amount to be recognized. (The base substituted in this calculation should be the same one substituted in the amortization of deferred acquisition costs discussed in paragraph .20.)

.18 Increases in the liability for future policy benefits should be reported as an expense in the statement of earnings.

Acquisition Costs

.19 This SOP uses the definition of *acquisition costs* contained in FASB Statement No. 60,[5] and in the following sentence describes those that are ineligible for capitalization under this SOP. Acquisition costs (such as premium taxes) that vary in a constant relationship to premiums or insurance in force, that are recurring in nature, or that tend to be incurred in a level amount from period to period, should be charged to expense in the period incurred.

.20 Capitalized acquisition costs should be amortized over the life of a book of participating life insurance contracts at a constant rate, based on the present value of the estimated gross margin amounts expected to be realized over the life of the book of contracts. The present value of estimated gross margins should be computed using the expected investment yield. If significant negative gross margins are expected in any period, then the present value of gross margins before annual dividends, estimated gross premiums, or the balance of insurance in force should be substituted as the base for computing amortization.

.21 In computing amortization, interest should accrue to the unamortized balance of capitalized acquisition costs at the rate used to discount expected gross margins. Estimates of expected gross margins used as a basis for amortization should be evaluated regularly, and the total amortization recorded to date should be adjusted by a charge or credit to the statement of earnings if actual experience or other evidence suggests that earlier estimates should be

---

[4] These conditions should be used in the same sense that they are used in FASB Statement No. 5, *Accounting for Contingencies*.

[5] Acquisition costs are addressed in paragraphs 28 to 31 of FASB Statement No. 60.

revised. The interest rate used to compute the present value of revised estimates of expected gross margins should be either the rate in effect at the inception of the book of contracts or the latest revised rate applied to the remaining benefit period. The approach selected to compute the present value of revised estimates should be applied consistently in subsequent revisions to computations of expected gross margins.

Estimated Gross Margins

.22 *Estimated gross margin*, as the term is used in this SOP, should include estimates of the following:

a. Amounts expected to be received from premiums, plus

b. Amounts expected to be earned from investment of policyholder balances (that is, the net level premium reserve described in paragraph .15*a*), less

c. All benefit claims expected to be paid, less

d. Costs expected to be incurred for contract administration (including acquisition costs not included in capitalized acquisition costs), less

e. Expected change in the net level premium reserve for death and endowment benefits, less

f. Expected annual policyholder dividends, plus or less

g. Other expected assessments and credits, however characterized

Estimated gross margins should be determined on a best estimate basis, without provision for adverse deviation.

.23 Several dividend options may be available to the policyholder, in which instances the options generally can be changed during the life of the contract. In estimating gross margins, insurance enterprises should use the best estimate of the dividend options that policyholders will elect.

Disclosures

.24 The following should be disclosed in the financial statements with respect to participating contracts:

a. The methods and assumptions used in estimating the liability for future policy benefits

b. The average rate of assumed investment yields used in estimating expected gross margins

c. The nature of acquisition costs capitalized, the method of amortizing those costs, and the amount of those costs amortized for the period

Effective Date and Transition

.25 This SOP is effective for financial statements for fiscal years beginning after December 15, 1995. Earlier application is encouraged. The effect of initially applying this SOP should be reported retroactively through restatement of all previously issued annual financial statements presented for comparative purposes for fiscal years beginning after December 15, 1992. Previously issued financial statements for any number of consecutive periods preceding that date may be restated to conform to the provisions of this SOP. The cumulative effect of adopting this SOP should be included in the earliest year restated.

Background Information and Basis for Conclusions

.26 The AICPA Accounting Standards Executive Committee's (AcSEC's) conclusions about accounting and reporting for participating life insurance contracts covered by this SOP are based on how the economic substance of those contracts differs fundamentally from nonparticipating contracts (traditional and universal life-type contracts) and from participating contracts that do not have the characteristics described in paragraph .05 of this SOP. The following sections (*a*) describe the factors differentiating the contracts covered by this SOP from those other contracts, (*b*) discuss AcSEC's reasons for concluding that neither FASB Statement No. 60 nor FASB Statement No. 97 in its entirety is appropriate for the contracts covered by this SOP, and (*c*) discuss other considerations deemed significant by AcSEC in reaching its conclusions.

Participating Contracts

.27 Participating life insurance contracts are issued for a gross premium that provides policyholders with certain guaranteed benefits as well as with dividends. Generally, the gross premium is calculated with sufficient margin so that each class of contracts is self-supporting. Annual policyholder dividends paid generally reflect the company's experience and performance in investment activity, mortality experience, and contract administration for each class of contracts. It is the dividend determination and distribution that distinguishes participating life insurance from nonparticipating life insurance.

.28 The nature of the annual dividend determination varies from company to company but is generally a two-step process. The first step is to determine divisible surplus, which is a determination each company makes based on its financial results. The second step is to distribute divisible surplus to policyholders in an equitable manner. Actuarial standards require divisible surplus to be distributed among contracts in the same proportion as the contracts contributed to divisible surplus.

Applicability and Scope

.29 AcSEC's charge was to address, as much as possible, the accounting and reporting of mutual life insurance enterprises' insurance activities within the framework established in FASB Statement Nos. 60 and 97. In reaching the conclusions in this SOP, AcSEC believes the contracts covered by this SOP are transactions between mutual life insurance enterprises and their customers. After reviewing the nature of a variety of mutual life insurance enterprise contracts, AcSEC concluded that this SOP should address the accounting only for life insurance contracts with the characteristics described in paragraph .05 of this SOP. The dividend scales on such contracts are often referred to as *actively managed*, because dividends paid are based on actual experience; that is, dividend scales are adjusted to reflect significant changes on a reasonably timely basis. FASB Statement No. 120 requires that other insurance contracts of mutual life insurance enterprises, such as annuity contracts, group insurance contracts, disability contracts, universal life-type contracts, and pension guaranteed contracts, should be accounted for under FASB Statement Nos. 60 and 97.

.30 AcSEC concluded that separate consideration of the participating life insurance contracts covered by this SOP is justified by the differences between those contracts and both traditional nonparticipating life insurance contracts, covered by FASB Statement No. 60, and universal life-type contracts, covered by FASB Statement No. 97. Participating life insurance contracts covered under this SOP have attributes of the contracts covered by FASB Statement Nos. 60 and 97. AcSEC concluded, therefore, that contracts covered by this SOP were not sufficiently similar to those covered by either FASB Statement to warrant applying either of them in its entirety.

.31 Participating life insurance contracts covered by this SOP are similar to the conventional life contracts contemplated by FASB Statement No. 60 in the following respects:

a. Permanent participating life insurance is based on the traditional concept of level premiums over the life of the contract.

b. The individual contract functions related to interest, mortality, and expenses are not separately displayed to policyholders and are not explicitly stated in the policy.

c. The pattern of premium payments is specified in the contract and cannot normally be varied after issue.

d. There is no explicit account balance for each policyholder.

.32 Despite those similarities in form to FASB Statement No. 60 contracts, the dividend feature introduces a variable that affects the substance of the earnings flow to the company. The dividend feature causes the contracts covered by this SOP to more closely resemble contracts in which the earnings emerge in relation to margins rather than contracts in which earnings emerge proportional to the level of premiums received in that year. Participating policies covered by this SOP share in the results of investment activity, mortality experience, and contract administration costs through dividends, which are not fixed or guaranteed by contract terms. As a result, earnings on these products, after annual policyholder dividends, tend to emerge as the margin recognized on investments, mortality, and expenses.

.33 AcSEC concluded that because the earnings after annual policyholder dividends from the contracts covered by this SOP tend to evolve in a manner similar to universal life-type contracts, most of the provisions of FASB Statement No. 97 should be applied to the contracts covered by this SOP. Nevertheless, AcSEC concluded that because the contracts covered by this SOP have terms similar to the terms of conventional life products, it was not feasible or appropriate to apply FASB Statement No. 97 in its entirety.

.34 The recommendations in this SOP differ from the accounting in FASB Statement No. 97 for universal life-type contracts in two significant respects:

a. Whereas under FASB Statement No. 97 premiums are not reported as revenue and benefit payments representing a return of policyholder balances are not reported as expenses in the statement of earnings, under this SOP premiums should be recognized as revenue and benefit payments charged to expense.

b. Whereas FASB Statement No. 97 does not address dividends, under this SOP dividends should be charged to expense.

.35 AcSEC recognizes that the FASB chose to exclude traditional participating life insurance contracts issued by stock life insurance companies from the scope of FASB Statement No. 97. However, AcSEC notes that in making that decision, the FASB did not consider participating policies of mutual life insurance enterprises, which AcSEC believes differ substantively from many of the participating policies issued by stock life insurance companies. Furthermore, the FASB's consideration of participating policies may have been influenced by the fact that participating policies are generally a less significant portion of stock life insurance companies' business than of mutual life insurance enterprises' business.

Revenue Recognition

.36 AcSEC recognizes that reporting premiums as revenues may appear inconsistent with the accounting model set forth in this SOP. AcSEC believes, however, that recognizing premiums as revenue for the contracts covered by this SOP is justified for two reasons, both of which are based on the economic substance of the relationship between the issuer and the policyholder.

.37 First, premiums received under participating contracts fit the definition of *revenues* in FASB Statement of Financial Accounting Concepts No. 6, *Elements of Financial Statements*. AcSEC believes the fact that premiums generally are level, fixed, and payable at predetermined points in return for a guaranteed death benefit and cash surrender value is significant. Furthermore, unlike the purchaser of a universal life-type insurance contract, the purchaser of a participating life insurance contract generally cannot vary the amount and timing of premium payments, and no account balance information is communicated to the policyholder. In addition, premiums are not credited to a policyholder account balance. Accordingly, AcSEC believes reporting premiums as revenues is consistent with the FASB Concepts Statement No. 6 definition of *revenues* as inflows from delivering services that constitute an entity's ongoing major or central operations.

.38 Second, for many mutual life insurance enterprises it would not be practicable or meaningful to report premiums received as deposits. AcSEC considered how mutual life insurance companies would report premiums as such and concluded that mortality, expense, and surrender charges would be reported as revenues. For those amounts to be relevant, the elements of dividends related to each would have to be determined. AcSEC believes that making such allocations would be arbitrary. AcSEC further believes the costs of making such allocations would far exceed the benefits derived from reporting the amounts separately. Furthermore, the lack of an explicit policyholder balance or separate assessments or charges for contract services and credits for interest—which exist for universal life-type contracts—makes separate measurement of the advance funding and contract service functions impractical.

Benefit Recognition

.39 AcSEC concluded that to be consistent with the reporting of premiums as revenues when due from the policyholder, actual death and surrender benefits incurred during the accounting period should be reported as expenses.

Dividends

.40 FASB Statement No. 97 does not explicitly address the treatment of dividends for participating contracts accounted for as universal life-type contracts. Some may believe that under that model, annual policyholder dividends would be allocated among interest credited, death benefits or mortality charges, and expenses, rather than reported as an expense. Others may believe that the entire annual policyholder dividend is one of the "other assessments and credits" described in paragraph 23 of FASB Statement No. 97. AcSEC concluded that, especially because this SOP recommends premiums should be reported as revenues when due from the policyholder, actual dividends incurred during the accounting period should always be reported as an expense; dividends should not be charged directly to equity in any circumstance.

.41 Furthermore, FASB Statement No. 60 defines two alternative accounting treatments for policyholder dividends based on whether the contracts included restrictions on the net income amount that may be distributed to stockholders. For participating contracts that have no net income restrictions, and that use life insurance dividend scales unrelated to actual net income, policyholder dividend liabilities should be accrued over the premium-paying period of the contracts (1) based on dividends anticipated in determining gross premiums, or (2) as shown in published dividend illustrations at the date insurance contracts are made. For contracts limiting the amount of net income that may be distributed to stockholders, the net income amount that cannot be distributed to shareholders is excluded from stockholders' equity by a charge to operations and a credit to a liability, a method similar to the accounting for net income applicable to minority interests. However, for either type of participating contract, dividends are reported as expenses in the statement of earnings as "dividends to policyholders" or "provision for policyholders' share of earnings on participating business."

.42 Annual policyholder dividends of participating contracts covered by this SOP are based on actual company performance. Accordingly, AcSEC believes dividends on participating contracts covered by this SOP are not similar to either of the types of dividends discussed in FASB Statement No. 60. While AcSEC acknowledges that segregating undistributed accumulated earnings on participating contracts in a manner similar to minority interests may be meaningful in a stock life insurance company, it is not meaningful for a mutual life insurance enterprise, because the objective of such presentation is to identify amounts that are not distributable to stockholders.

Capital Gains and Losses

.43 The guidance in FASB Statement No. 97, as amended by FASB Statement No. 115, *Accounting for Certain Investments in Debt and Equity Securities*, on capital gains and losses, which also is incorporated in FASB Statement No. 60, applies to the contracts covered in this SOP. Paragraph 28 of FASB Statement No. 97, as amended, states:

> Realized gains and losses on all investments (except investments that are classified as trading securities and those that are accounted for as hedges as described in FASB Statements No. 52, *Foreign Currency Translation*, and No. 80, *Accounting for Futures Contracts*) shall be reported in the statement of earnings as a component of other income, on a pretax basis. Realized gains and losses shall be presented as a separate item in the statement of earnings or disclosed in the notes to the financial statements. Realized gains and losses shall not be deferred, either directly or indirectly.

Furthermore, in paragraph 77 in appendix A of FASB Statement No. 97, the FASB addressed the issue of whether certain realized gains and losses should be deferred and recognized over the remaining life of the insurance contracts with the following:

> The Board notes that generally accepted accounting principles require that realized investment gains and losses be reflected in the period in which they

occur. The Board acknowledges that some contracts with policyholders may entitle policyholders to an amount equal to a portion of specific investment performance. The recording of liabilities to reflect amounts to which those policyholders are entitled is appropriate, but the deferral of realized gains and losses is not justified.

Liability for Future Policy Benefits

Proxy for Account Balance

.44 Under FASB Statement No. 97, the liability for future policy benefits includes the policyholder's account balance as of the balance sheet date. However, because participating contracts usually lack a stated account balance, a proxy for account balance had to be determined. AcSEC considered six possible proxies:

a. **Dividend fund**

b. Net level premium reserve, using statutory valuation mortality and interest

c. Commissioners reserve valuation method (CRVM) reserves

d. Cash surrender value

e. Net level premium reserve, using guaranteed mortality and interest

f. Net level premium reserve, using the guaranteed mortality and dividend fund interest

.45 After considering all the above possible account balances, AcSEC concluded that the net level premium reserve using the guaranteed mortality and dividend fund interest generally should be used as the proxy for account balance. Furthermore, AcSEC notes that there may be policies that do not meet normal underwriting standards for which additional amounts may be included in the net level premium reserve.

.46 If experience is more favorable than what was anticipated in determining the dividends guaranteed in the policy, a mutual life insurance enterprise's objective is to distribute the favorable experience as dividends. If experience is less favorable than what was anticipated in determining the dividends guaranteed, the company must at least provide the guaranteed values. Therefore, if there is an unfavorable experience, a premium deficiency may result, which would be recognized under paragraph .15*c* of this SOP. Accordingly, the liability determined, based on guaranteed benefits, provides an appropriate measure of the liability to policyholders because, to the extent experience is more favorable than the guarantees, the company pays the difference to policyholders in dividends. This estimate of the liability is consistent with the view that the mutual life insurance enterprise is liable for the guaranteed provisions of the policies it sells and for paying dividends related to favorable experience. AcSEC believes that for many participating policies the net level premium reserve for guaranteed benefits will best reflect the amount that has accrued to the benefit of policyholders for participating contracts. AcSEC therefore concluded that the net level premium reserve is consistent with FASB Statement No. 97's description of the liability as "the balance that accrues to the benefit of individual policyholders [that] represents the minimum measure of an insurance enterprise's liability . . . ."

.47 Nevertheless, this SOP recommends that a mutual life insurance enterprise with a determinable dividend fund interest rate should calculate the net level premium reserve for guaranteed benefits based on the dividend fund interest rate rather than on the rate used in determining guaranteed cash surrender values. AcSEC believes that in practice the dividend fund interest rate and the interest rate guaranteed in computing cash surrender values often will be the same. If those interest rates differ, the calculation based on the dividend fund interest rate usually reflects the pattern of anticipated annual policyholder dividends more accurately.

.48 Some mutual life insurance enterprises have a dividend fund for participating policies. Though that dividend fund generally is not disclosed to the policyholder, it is the amount specified by management at contract inception to which interest is credited and from which mortality and expense charges are assessed in the dividend determination mechanism. Accordingly, many believe the dividend fund is the economic equivalent of the account balance of universal life-type contracts. Though most companies with dividend funds define the dividend fund account balance in their dividend resolutions, there are a variety of ways in which a dividend fund is defined but no consistent practices for company management to apply in defining the amount. Furthermore, not all mutual life insurance enterprises have a dividend fund. Accordingly, AcSEC concluded that the dividend fund lacked the objectivity and comparability necessary to be an appropriate proxy for the account balance.

.49 AcSEC also rejected the statutory net level premium reserve and the statutory CRVM as proxies for account balance, because the assumptions used in determining such amounts are based on statutory requirements, which are not necessarily related to either policy nonforfeiture guarantees or the dividend calculation.

.50 AcSEC also rejected the cash surrender values as the proxy for account balance, because AcSEC believes the amount does not reflect the amount that accrues to a continuing policyholder's benefit. AcSEC believes the decision not to use cash surrender values as the proxy for account balance is consistent with FASB Statement No. 97, which requires the use of an account balance instead of the cash surrender value when both exist. Though participating policies lack an explicit account balance, AcSEC believes the net level premium reserve determined under this SOP is an appropriate proxy for the account balance. AcSEC notes that cash surrender values generally will be less than the liability for future policy benefits calculated under this SOP. Cash surrender values are frequently developed using methods similar to those used to compute the liability for future policy benefits calculated under this SOP, but are net of an implicit surrender charge.

Terminal Dividends

.51 AcSEC believes the rights to terminal dividends accumulate to policyholders over a policy's life. Accordingly, the event that creates the liability is the continuance of the contract by the policyholder, not the termination of the policy. If the payment of terminal dividends is probable and the amount can be reasonably estimated, the liability should be recognized. Furthermore, AcSEC believes terminal dividends are similar to amounts previously assessed against policyholders that are refundable on the contract's termination under paragraph 17*c* of FASB Statement No. 97.

Adverse Deviation

.52 FASB Statement No. 60 requires that assumptions used in calculating the liability for future policy benefits include a provision for the risk of adverse deviation. The notion of adverse deviation is (1) to include in benefit reserves the risk assumed by the insurer that actual experience will be more adverse than the basic assumptions underlying premium rates, and (2) to include the gradual release from this risk in periodic net income as actual experience emerges. However, under FASB Statement No. 97, a provision for adverse deviation is not permitted. Because the liability for future policy benefits defined in this SOP generally follows the FASB Statement No. 97 model, AcSEC concluded that provision for adverse deviation should not be made. AcSEC agrees with the FASB's reasons for rejecting adverse deviation in FASB Statement No. 97. Furthermore, for participating contracts covered by this SOP, most adverse experience could be recovered from policyholders, as it emerges, through lower future dividends.

Acquisition Costs

.53 FASB Statement No. 97 requires that gross profit estimates used as a basis for amortizing capitalized acquisition costs be evaluated regularly, and that total amortization recorded to date be adjusted by a charge or credit to the statement of earnings if actual earnings or other evidence suggests revision of earlier estimates of expected gross profits. AcSEC concluded that the expected gross margins resulting from participating life contracts issued by mutual life insurance companies are economically similar to the expected gross profits of universal life-type contracts. Accordingly, because the conclusions in this SOP are primarily based on the conclusions in FASB Statement No. 97, AcSEC decided to retain the retrospective adjustment of deferred acquisition costs in this SOP.

Estimated Gross Margins

.54 Under FASB Statement No. 97, the emergence of earnings for universal life-type contracts is based on gross profits. Similarly, under this SOP profits would emerge based on gross margins. However, due to the different way in which values are communicated to the policyholder and maintained by a mutual life insurance company, gross margins need to be determined differently from universal life-type contracts.

.55 Paragraph 23 of FASB Statement No. 97 defines the terms to be considered in calculating the estimated gross profits for universal life-type contracts, as follows:

a. Amounts expected to be assessed for mortality (sometimes referred to as the *cost of insurance*) less benefit claims in excess of related policyholder balances

b. Amounts expected to be assessed for contract administration less costs incurred for contract administration (including acquisition costs not included in capitalized acquisition costs)

c. Amounts expected to be earned from investment of policyholder balances less interest credited to policyholder balances

d. Amounts expected to be assessed against policyholder balances upon termination of a contract (sometimes referred to as *surrender charges*)

e. Other assessments and credits, however characterized

.56 Those terms are presented in the form of specific margins. Participating life contracts have similar margins but the charges and credits are not structured in the same way as in universal life-type contracts. Because of this difference, certain items used in determining gross profits for universal life-type contracts are not readily available for participating contracts. AcSEC resolved this problem by using a list of elements, which AcSEC believes develops gross margins consistent with the FASB Statement No. 97 definition of *gross profit*.

.57 The gross margin elements used in this SOP are not identical to the elements used in FASB Statement No. 97. Specifically, the following elements are included in FASB Statement No. 97 but not in this SOP:

a. Amounts expected to be assessed for mortality

b. Amounts expected to be assessed for contract administration

c. Interest credited to policyholder balances

The following are elements in this SOP that are not in FASB Statement No. 97:

a. Amounts expected to be received from premiums

b. The expected change in the net level premium reserve for death and endowment policy benefits

c. Expected annual policyholder dividends

.58 Those lists differ because, for participating contracts covered under this SOP, dividends, premiums, and the liability for policy benefits are not separated into the various charges, credits, and deposits. This different view of gross margins is consistent with the proposed presentation of earnings for participating contracts under this SOP.

Interest Rates

.59 Under FASB Statement No. 97, the rate that accrues to policyholder balances (the *contract rate*) is used to accrue interest to policyholder balances, to compute the present value of estimated gross profits, and to accrue interest to the unamortized balance of capitalized acquisition costs. AcSEC believes the dividend interest rate is the rate most comparable to the contract rate. However, AcSEC has concluded that using the dividend fund interest rate to determine the net level premium reserve is preferable to using the dividend interest rate, because the dividend fund interest rate is more objectively determinable. AcSEC concluded that using the investment yield to calculate the present value of estimated gross margins, and to accrete interest on the unamortized balance of capitalized acquisition costs, is preferable to using the dividend interest rate because the investment yield is more objectively determinable and would result in approximately the same income pattern as if the dividend fund interest rate were used.

Other Methods Considered

.60 AcSEC considered, and rejected, a modified FASB Statement No. 60 approach whereby the earnings from mutual life participating insurance contracts would emerge in relation to premiums and not in relation to expected gross margins. This consideration was prompted by a concern that reporting premiums as revenues, but having profits emerge based upon gross margins, may produce incongruous results. In addition, the lack of an explicit policyholder's account balance, and the lack of a predominant function or service representative of the pooling of the aggregation of services, are characteristics of insurance contracts as defined under FASB Statement No. 60. FASB Statement No. 60 requires that expenses should be recorded (and therefore earnings would emerge) in relation to premiums.

.61 A modification to FASB Statement No. 60 was discussed, however, to provide for mutual life insurance contracts in which dividend scales are actively managed. Each change in the dividend scale represents, in essence, a repricing and the establishment of new expectations. Therefore, the emergence of earnings based upon the original pricing assumptions no longer would be relevant to financial measurements.

.62 In applying FASB Statement No. 60 to mutual life insurance contracts in which the dividend scales are actively managed, each change in the dividend scale would result in an unlocking of the previously used assumptions. The new assumptions would be used in subsequent accounting periods, until the dividend scales are changed again. The unlocking of assumptions would be prospective in nature and would provide stability to the matching of benefits and expenses with revenue.

.63

Appendix A

Illustration of Computation of Gross Margins

Schedule 1—Computation of Estimated Gross Margins

Year	*Premium*	*Interest on NLPR*	*Interest on Current Activity*	*Death Benefits Incurred*	*Surrender Benefits Incurred*
	(*a*)	(*b*)	(*c*)	(*d*)	(*e*)
1	$ 210,000	$ 0	$ 16,244	$ (9,000)	$ 0
2	184,611	10,719	14,280	(10,549)	0
3	169,621	19,994	13,120	(13,731)	(7,148)
4	155,763	27,955	12,048	(14,835)	(14,984)
5	142,990	34,735	11,060	(15,661)	(21,760)
6	131,222	40,440	10,150	(15,622)	(17,237)
7	124,333	46,665	9,617	(16,578)	(20,989)
8	117,768	52,317	9,109	(16,824)	(24,427)
9	111,526	57,417	8,627	(17,526)	(27,566)
10	105,582	61,982	8,167	(18,603)	(30,406)
11–20	779,517	760,283	60,296	(311,112)	(398,831)
21–55	589,392	1,222,685	45,589	(1,187,632)	(686,079)
Total	$2,822,325	$2,335,192	$218,307	$(1,647,673)	$(1,249,427)

Present values at earned rate of 8.5%:

(*continued*)

(*a*) Gross premiums.

(*b*) Interest, at the 8.5% earned rate, on net level premium reserve (NLPR) at the end of the previous year. The NLPR is based on guaranteed mortality and the dividend fund interest rate.

(*c*) Interest, at the 8.5% earned rate, on current-year cash flow. This illustration assumes premiums are received, and all expenses incurred, at the start of the year. This illustration assumes death benefits, surrender benefits, and dividends are all at the end of the year.

(*d*) Death benefits, not reduced by related NLPR.

(*e*) Surrender benefits, not reduced by related NLPR.

(*f*) Recurring expenses not included in capitalized acquisition costs.

(*g*) Net decrease (increase) in aggregate NLPR in the year.

(*h*) Policyholder dividends for the year.

(*i*) Sum of (*a*) through (*h*) inclusive.

Recurring Expenses Incurred	*(Increase) Decrease in NLPR*	*Dividends Incurred*	*Post-dividend Gross Margins*	*Revised Gross Margins at Year 2*
(*f*)	(*g*)	(*h*)	(*i*)	
$ (18,900)	$(126,103)	$ (18,857)	$ 53,384	$ 53,384

Appendix B

Discussion of Comments Received on Exposure Draft

An exposure draft of a proposed statement of position, *Accounting for Certain Insurance Activities of Mutual Life Insurance Enterprises*, was issued on March 24, 1994, and distributed to a variety of interested parties to encourage comment by those who would be affected by the proposal. Thirty-five comment letters were received on the exposure draft. The most significant and pervasive comments received were in the following five areas: (*a*) the FASB Statement No. 60 approach, (*b*) limited-payment contracts, (*c*) dividend utilization in estimated gross margin calculations, (*d*) retrospective adjustment of deferred acquisition costs balances, and (*e*) effective date.

FASB Statement No. 60 Approach

Several respondents preferred a modified FASB Statement No. 60 approach whereby the earnings from mutual life participating insurance contracts would emerge in relation to premiums and not in relation to expected gross margins. AcSEC considered most of the arguments in favor of the modified FASB Statement No. 60 approach in the comment letters during the process leading up to the exposure draft, and continues to support the approach recommended in this SOP.

Limited-Payment Contracts

The exposure draft would have required revenue recognition for limited-payment contracts to be in a constant relationship to insurance in force to the extent that gross premiums exceed net premiums. Many respondents asked AcSEC to reconsider that accounting, because it is inconsistent with the fundamental premise of the SOP that income should be recognized in relation to gross margins. AcSEC believes that for limited-payment contracts with actively managed dividend scales those arguments are persuasive. Accordingly, AcSEC was convinced that the accounting model in the SOP would preclude inappropriate front-end recognition of income on most limited-payment contracts, and eliminated the special accounting requirement for limited-payment contracts.

Dividend Utilization in Estimated Gross Margin Calculations

A variety of dividend options are available to policyholders, including receiving the dividends in cash and purchasing additional paid-up insurance. The exposure draft would have required, in many instances, mutual life insurance enterprises to assume that annual policyholder dividends are paid in cash in estimating gross margins, regardless of the options actually used. Many respondents noted that, for many mutual life insurance enterprises, dividends are more often used to purchase additional paid-up insurance, and that reliable estimates of the effects of dividend options can be made. In response to that information, AcSEC changed paragraph .23 of this SOP to require mutual life insurance enterprises to make the best estimate of the dividend options that policyholders will elect.

Retrospective Adjustment of Deferred Acquisition Costs Balances

Many respondents from the mutual life insurance industry objected to the retrospective adjustment of deferred acquisition costs. They believe that because dividends are actively managed and will be used to prospectively recover or pay out differences that result from changes in expectations, the accounting for such changes should also be prospective. Furthermore, they note that retrospective calculations are much more complicated and difficult to understand than prospective calculations. However, AcSEC continues to believe that retrospective adjustment of deferred acquisition costs, consistent with the provisions of FASB Statement No. 97, is appropriate for policies covered by this SOP for the reasons discussed in paragraph .53.

Effective Date

In the exposure draft the effective date was for financial statements issued for fiscal years beginning after December 15, 1994, consistent with the effective date of FASB Interpretation No. 40. A majority of respondents considered that effective date unreasonable, given the magnitude and significance of the changes that mutual life insurance enterprises will have to make to prepare financial statements in accordance with GAAP. AcSEC agreed and extended the effective date by one year, and urged the FASB to extend the effective date of Interpretation No. 40 similarly. The FASB subsequently issued FASB Statement No. 120, which amends FASB Interpretation No. 40, to be effective for financial statements issued for fiscal years beginning after December 15, 1995.

.65

Glossary

Acquisition costs. Costs incurred in the acquisition of new and renewal insurance contracts. Acquisition costs include costs that vary with, and are primarily related to, the acquisition of insurance contracts (for example, agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees).

Annual policyholder dividends. Amount of dividends to policyholders calculated and paid each year, representing the policyholders' share of divisible surplus.

Dividend fund. The amount specified by management at contract inception to which interest is credited and from which mortality and expense charges are assessed in the dividend determination mechanism.

Dividend fund interest rate. The interest rate determined at policy issuance used to determine the amount of the dividend fund. It is the rate used to credit interest to the dividend fund, and against which experience is measured to determine the amount of the interest portion of dividends paid to individual policyholders.

Dividend interest rate. The total interest rate the company pays on its dividend fund.

Dividends to policyholders. Nonguaranteed amounts distributable to policyholders of participating insurance contracts and based on actual performance of the insurance enterprise. Under various state insurance laws, dividends are apportioned to policyholders on an equitable basis. Dividends to policyholders include annual policyholder dividends and terminal dividends.

Guaranteed interest rate. The interest rate guaranteed in a policy's cash surrender value or nonforfeiture value calculation.

Investment yield. The interest rate the company expects to earn on the assets supporting the policies, net of investment expense.

Net level premium reserve. The excess, if any, of the present value of future guaranteed death and endowment benefits over the present value of future **net premiums.**

Net premiums. A constant ratio of guaranteed maximum gross premiums. The ratio is calculated at issue, so that the present value of all guaranteed death and endowment benefits is equal to the present value of all net premiums.

Terminal dividends. Dividends to policyholders calculated and paid upon termination of a contract, such as on death, surrender, or maturity.

Statement of Position 95-2 Financial Reporting by Nonpublic Investment Partnerships

May 19, 1995

NOTE

Statements of Position (SOPs) of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this SOP should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

SOP 95-2 is amended by SOP 01-1, *Amendment to Scope of Statement of Position 95-2*, Financial Reporting by Nonpublic Investment Partnerships, *to Include Commodity Pools*. SOP 01-1 is effective for financial statements issued for periods ending after December 15, 2001. Earlier application is encouraged.

SOP 95-2 is amended by SOP 03-4, *Reporting Financial Highlights and Schedule of Investments by Nonregistered Investment Partnerships: An Amendment to the Audit and Accounting Guide* Audits of Investment Companies *and AICPA Statement of Position 95-2*, Financial Reporting by Nonpublic Investment Partnerships. SOP 03-4 is effective for annual financial statements issued for fiscal years ending after December 15, 2003, and for interim financial statements issued after initial application, except for the provisions to require certain nonregistered investment partnerships to compute and disclose internal rate of return from inception.

Introduction

.01 Investment partnerships are identified as a type of investment company in the AICPA's Audit and Accounting Guide *Audits of Investment Companies* (the Guide). The Guide uses the term *investment company* to mean "*generally* . . . an entity that pools shareholders' funds to provide the shareholders with professional investment management (paragraph 1.01)" [*emphasis added*]. The Guide states that it uses the term to refer to an entity with the attributes described in chapter 1 rather than to conform with the legal definition of an investment company in the federal securities laws.

.02 The Guide refers to investment partnerships in chapter 1 (paragraph 1.03):

> Several types of investment companies exist: management investment companies, unit investment trusts, . . . investment partnerships . . . .

.03 The Guide also states:

> The accounting principles and auditing procedures discussed in this guide *generally* apply to all investment companies, though the guide has been written

> *primarily* for auditors of mutual funds and closed-end companies registered with the Securities and Exchange Commission (SEC) under the 1940 Act (paragraph 1.04) [*emphasis added*].
>
> To comply with SEC rules and regulations, registered investment companies must make certain disclosures in addition to those required by generally accepted accounting principles. Those additional requirements are not presented in illustrative financial statements because they are not otherwise required by generally accepted accounting principles (paragraph 5.46).

.04 The illustrative financial statements of management investment companies in the Guide contain a detailed schedule of investments.

Scope

.05 This SOP applies to investment partnerships that are exempt from SEC registration under the Investment Company Act of 1940 and defined as investment companies in the Guide, with one exception.[1] This SOP does not apply to investment partnerships that are brokers and dealers in securities subject to regulation under the Securities Exchange Act of 1934 (registered broker-dealers) and that manage funds only for those who are officers, directors, or employees of the general partner. Investment partnerships identified in the previous sentence as being exempt from the scope of this SOP should comply with the financial reporting requirements in the AICPA Audit and Accounting Guide *Brokers and Dealers in Securities*. [As amended, effective for financial statements issued for periods ending after December 15, 2001, by Statement of Position 01-1.]

.06 Investment partnerships that are SEC registrants must comply with the financial statement reporting requirements as set forth in the Guide and as required by Articles 6 and 12 of the SEC's Regulation S-X. [Paragraph added, effective for financial statements issued for periods ending after December 15, 2001, by Statement of Position 01-1.]

Background

.07 There has been diversity in practice in the application of certain provisions of the Guide—specifically, the requirement for a schedule of investments, the format of the statement of operations, and the reporting of management fees. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.08 *Schedule of Investments.* The Guide requires investment companies to list all of their individual securities in the statement of net assets or in an accompanying schedule of investments. Many nonpublic investment partnerships do not present such a list in their financial statements. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.09 *Statement of Operations.* Investment companies present their results of operations in a statement of operations as specified in the Guide. The Guide requires separate disclosure of dividends and interest income and of realized and unrealized gains (losses) on securities. Some investment partnerships combine these items and present them as one income-statement caption with no separate disclosure. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

---

[1] Investment partnerships that are commodity pools subject to regulation by the Commodity Futures Trading Commission (CFTC) should also comply with the financial statement reporting requirements of Part 4 of the CFTC Regulations. [As amended, effective for financial statements issued for periods ending after December 15, 2001, by Statement of Position 01-1.]

.10 *Management Fees and Allocations.* Investment companies normally enter into an investment advisory agreement under which they receive investment management. The fee for that service is usually based on a specified percentage of average assets being managed. Some agreements may provide for a performance fee or allocation, which includes the normal fee plus a bonus (or less a penalty) if the company's performance exceeds (or fails to exceed) a preestablished benchmark. Many investment companies reflect such fees, including the bonus portion, as an expense in the statement of operations. If an investment company is organized as a limited partnership, however, the payment may take the form of an allocation of earnings based on a predetermined formula specified in the partnership agreement. In such cases, some investment partnerships reflect this allocation of partnership income through a reallocation of partners' net income from the limited partners to the general partner within the equity section of the statement of assets and liabilities rather than as an expense. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

Conclusions

.11 *Schedule of Investments.* The financial statements of an investment partnership, when prepared in conformity with GAAP, should, at a minimum, include a condensed schedule of investments in securities owned by the partnership at the close of the most recent period. Such a schedule should do the following.

a. Categorize investments by the following:

   (1) Type (such as common stocks, preferred stocks, convertible securities, fixed-income securities, government securities, options purchased, options written, warrants, futures, loan participations, short sales, other investment companies, and so forth).

   (2) Country or geographic region.

   (3) Industry.

   Report the percent of net assets that each such category represents and the total value and cost for each category in *a*(1) and *a*(2). Derivatives for which the underlying is not a security should be categorized by broad category of underlying (for example, grains and feeds, fibers and textiles, foreign currency, or equity indices) in place of categories *a*(2) and *a*(3).

b. Disclose the name, shares or principal amount, value, and type of the following:

   (1) Each investment (including short sales) constituting more than 5 percent of net assets, except for derivative instruments as discussed in items *d* and *e* below.

   (2) All investments in any one issuer aggregating more than 5 percent of net assets, except for derivative instruments as discussed in items *d* and *e* below.

   In applying the 5-percent test, total long and total short positions in any one issuer should be considered separately.

c. Aggregate other investments (each of which is 5 percent or less of net assets) without specifically identifying the issuers of such investments, and categorize them as required by *a* above.

d. Disclose the number of contracts, range of expiration dates, and cumulative appreciation (depreciation) for open futures contracts of a particular underlying (such as wheat, cotton, specified equity index, or U.S. Treasury Bonds), regardless of exchange, delivery location, or delivery date, if cumulative appreciation (depreciation) on the open contracts exceeds 5 percent of net assets.

In applying the 5-percent test, total long and total short positions in any one issuer should be considered separately.

e. Disclose the range of expiration dates and fair value for all other derivatives (such as forwards, swaps [such as interest rate and currency swaps], and options) of a particular underlying (such as foreign currency, wheat, specified equity index, or U.S. Treasury Bonds) regardless of counterparty, exchange, or delivery date, if fair value exceeds 5 percent of net assets.

In applying the 5-percent test, total long and total short positions in any one issuer should be considered separately.

f. Provide the following additional qualitative description for each investment in another nonregistered investment partnership whose fair value constitutes more than 5 percent of net assets:

- The investment objective
- Restrictions on redemption (that is, liquidity provisions)

[Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001. As amended, effective for annual financial statements issued for fiscal years ending after December 15, 2003, by Statement of Position 03-4.]

.12 Investments in other investment companies (investees), such as investment partnerships and limited liability investment companies, should be considered investments in securities for the purpose of applying paragraphs .11*a* and .11*b*, above. If the reporting partnership's proportional share of any security owned by any individual investee exceeds 5 percent of the reporting partnership's net assets at the reporting date, each such security should be named as required in paragraph .11*b* above, and categorized as required in paragraph .11*a* above. If information about the investee's portfolio is not available, that fact shall be disclosed. These investee disclosures should be made either in the condensed schedule of investments (as components of the investment in the investee) or in a note to that schedule. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.13 *Statement of Operations.* Investment partnerships should present their statements of operations in conformity with the requirements for statements of operations of management investment companies in paragraphs 5.24 through 5.35 of the Guide, which include, among other things, separate disclosure of dividend income and interest income and realized and unrealized gains (losses) on securities for the period. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.14 *Management Fees and Allocations.* Investment companies organized as limited partnerships typically receive advisory services from the general partner. For such services, a number of partnerships pay fees chargeable as expenses to the partnership, whereas others allocate net income from the limited partners' capital accounts to the general partner's capital account, and still others employ a combination of the two methods. The amounts of any such payments or allocations should be presented in either the statement of operations or the statement of changes in partners' capital, and the method of computing such payments or allocations should be described in the notes to the financial statements. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

Effective Date

.15 This SOP is effective for financial statements issued for fiscal years beginning after December 15, 1994. Earlier application is encouraged but not required. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

Basis for Conclusions

.16 This section discusses considerations that were deemed significant by members of the Accounting Standards Executive Committee (AcSEC) in reaching the conclusions in this SOP. It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.17 Practice is diverse in applying the Guide's requirements to investment partnerships. Nevertheless, AcSEC believes that the Guide should apply, except for the requirement to present a detailed schedule of investments, to investment partnerships of all kinds, including hedge funds, limited liability companies, and limited duration companies. The Guide includes investment partnerships in its definition of investment companies. Paragraph 1.04 indicates that its principles and procedures ". . . *generally* apply to all investment companies, though the guide has been written *primarily* for auditors of mutual funds . . . under the 1940 Act" [*emphasis added*]. AcSEC agrees that some of the SEC Regulation S-X and 1940 Act requirements may not apply to nonpublic investment partnerships. AcSEC believes that the disclosure of material information, such as condensed information about the investment portfolio, dividend income, interest income, realized and unrealized gains or losses, and activities in partners' capital accounts, should be required for a fair presentation of financial statements of investment partnerships. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.18 *Schedule of Investments.* Disclosure should provide financial statement users with information that aids decision making. FASB Statement of Financial Accounting Concepts No. 2, *Qualitative Characteristics of Accounting Information*, states in paragraph 40 that, "the benefits of information may be increased by making it more understandable and, hence, useful to a wider circle of users." The Guide requires a complete listing of investments consistent with the SEC's disclosure requirements. This SOP requires nonpublic investment partnerships to present at least a condensed schedule of investments in which investments are organized by type, focusing on geographic and industry concentrations, and requires that material investments (more than 5 percent of net assets) in any one investee be disclosed separately.[2] AcSEC concluded that a complete list of all investments that individually represents an immaterial portion of the investment portfolio would present little additional information that is of value to users of nonpublic investment partnerships' financial statements. The condensed disclosures required by this SOP of the types of investments, the geographical and industry concentrations, and the significant investees are informative to users without burdening them with unnecessary details. AcSEC believes this presentation will enable users to make their decisions

[2] AcSEC has not reconsidered the Guide's disclosure requirements for public investment partnerships. Further, AcSEC does not have the authority to amend SEC requirements concerning disclosures in filings with the SEC.

focusing on the risk and opportunities associated with the type of investment, a geographical area, and industry by investee. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.19 The Investment Company Act of 1940 and the Internal Revenue Code define investment portfolio diversification to exclude, for certain purposes, securities whose values represent more than 5 percent of the total value of an investment company's assets. The implication of those definitions is that investment concentrations above 5 percent impose a level of risk that requires special consideration. After reviewing the comments to the exposure draft, AcSEC concluded that a 5 percent of net assets criterion should be included as a requirement of this SOP. Net assets (instead of total assets) was chosen because net asset value is the focus of investment company financial reporting. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.20 AcSEC recognizes that the 5 percent of net assets criterion for reporting separate investments is arbitrary. Accounting, however, contains many arbitrary disclosure criteria. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.21 *Statement of Operations.* Because the operations of public (SEC registered) investment companies and nonpublic investment partnerships are similar (they both invest in securities to generate dividend income, interest income, and realized or unrealized gains), AcSEC concluded that investment partnerships' statements of operations should be presented in conformity with the Guide as required by paragraph .13 above. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

.22 *Management Fees and Allocations.* A number of partnerships record an expense for fees due the general partner, a number allocate net income from the limited partners' capital accounts to the general partner's capital account, and others combine the two methods. Typically, accounting for such arrangements is based on the partnership agreement that specifies the fee or allocation arrangement. In a typical limited investment partnership agreement, the general partner is entitled to a fixed advisory or management fee (such as one percent of net assets), plus an allocation of profits (such as 20 percent of net realized and unrealized gains). Public investment companies or public partnerships normally do not have incentive arrangements, but if they do, they are generally limited to an amount that does not exceed one percent of net assets. The relatively material allocation of profits provided for in nonpublic partnership agreements may be considered either a disproportionate partnership income allocation, based on the fact that the general partner has incurred material cost and effort in organizing the partnership, managing the partnership, and incurred disproportionate risk as the general partner (that is, unlimited personal liability), or a compensation arrangement. Although AcSEC recognizes that issuing definitive standards is desirable, it believes that this SOP cannot provide definitive guidance on accounting for payments to general partners because such guidance would have to result from deliberation of broader partnership issues. AcSEC therefore concluded that the accounting should conform to the structure of the partnership agreement, with the financial statement disclosures set forth in paragraph .14 of this SOP. [Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

	(XYZ Hedge Fund L.P. owns 6,000 shares, valued at $9,000,000 of Leisure Cruises, Inc., which is a United States company in the leisure time industry.)	
	TOTAL INVESTMENTS (112.1%) (cost $59,125,068)	$56,069,354
	SECURITIES SOLD SHORT (5.7%)	
106,607	Andrews Midlands Co. (Proceeds $2,715,000)	($ 2,825,078)

The accompanying notes are an integral part of these financial statements.

[Paragraph renumbered by the issuance of Statement of Position 01-1, March 2001.]

‡ Securities of Flight Airlines, Inc., aggregate 5.6 percent of net assets of ABC Associates, Ltd.

‖ Leisure Cruises, Inc., is named because the proportionate share of ABC Associates, Ltd., equity in it is greater than 5 percent of ABC's net assets. If information about the investments of XYZ was not available, that would have been stated either parenthetically or in a note to this schedule.

.24

Appendix B

Discussion of Comments Received on the Exposure Draft

B-1. An exposure draft of a proposed statement of position, *Financial Reporting for Investment Partnerships*, was issued for public comment in September 1993 and distributed to a variety of interested parties to encourage comments by those that would be affected by the proposal. It proposed that investment partnerships—

- Include a detailed schedule of investments in securities, as illustrated in the Guide for management investment companies, with GAAP financial statements.
- Present a statement of operations in the format illustrated in the Guide.
- Account for performance fees in accordance with partnership agreements and disclose the amounts of and how such fees are computed.

B-2. The exposure draft included the minority view of AcSEC that a condensed schedule of investments, which was illustrated, be required instead of a detailed schedule of investments, as required by the Guide.

B-3. Sixty-nine comment letters on the exposure draft were received. The most significant and pervasive comments received related to the proposed requirement that investment partnerships include a detailed schedule of investments with their financial statements. For the reasons stated in paragraphs .18 through .20 of this SOP, AcSEC agreed that the condensed schedule of investments provided more meaningful information.

Schedule of Investments

B-4. Most respondents to the exposure draft stated that detailed disclosures about the investment portfolio would reveal information, such as trading strategies, that is considered to be confidential. They believe that reporting either detailed or condensed information publicly could be detrimental economically to partnership investors. AcSEC noted that in the absence of any portfolio information, financial statements might merely present a single asset line item titled "investments" that would approximate total assets. Such limited disclosure would undermine the meaningfulness of financial statements.

B-5. Others expressed the view that basic financial statements should provide meaningful summarized information rather than a complete listing of all items included in a particular financial statement caption, such as investments in securities. They pointed out that other financial enterprises, such as banks, property and liability insurance companies, stock life insurance companies, and broker-dealers do not disclose their investments in a similar level of detail. AcSEC concluded that a condensed schedule of investments, that includes disclosures of material investments, would provide sufficient information about the composition of partnerships' portfolios.

B-6. Many respondents stated that investment strategies must be kept confidential to achieve the best results for investors. They expressed concern about disclosing information that they deem to be confidential trade secrets, which might lead other investment firms to "piggyback" the reporting partnership's positions.

B-7. Although AcSEC recognizes the need to balance a fair presentation with protection of proprietary information, complete confidentiality of investments is not a compelling reason for excluding information on material items from financial statements. AcSEC acknowledges that disclosure can produce certain detriments, but AcSEC believes that the need for adequate disclosure outweighs the possibility of negative results. Furthermore, as noted by several respondents, although the disclosure of investment positions may be detrimental to some funds that have material short positions outstanding at a reporting date, many such positions will have expired or will have been covered before the availability of the financial statements.

B-8. *Investor Expectations and Needs.* Respondents noted that investors in investment partnerships frequently are sophisticated investors with a high net worth who neither need nor expect the type of reporting required of mutual funds. Additionally, a number noted that partnership agreements provide for partner access to records, thus enabling a partner to obtain additional information if necessary, whereas others noted that partners sometimes agree not to seek such information.

B-9. AcSEC acknowledges that many, but not necessarily all, investment partners are sophisticated investors, but believes their need for financial information is difficult to differentiate from that of less sophisticated investors. How to assess financial statement users' needs is a pervasive issue in formulating accounting standards and is considered in AcSEC and FASB deliberations. Further, it is questionable whether investment partnerships can be distinguished from other investment companies based on the sophistication of their investors because some public investment companies registered under the 1940 Act—

a. Can engage in similar trading strategies, such as hedging and investing in derivatives.

b. Have sophisticated investors.

c. Have minimum investment levels equal to or in excess of those called for by some nonpublic investment partnerships.

B-10. An investor's willingness to take increased risk in return for an expected higher return does not necessarily equate to a lack of desire for information about an investment company's investments. In the absence of any portfolio information, financial statements might merely present a single asset line item titled "investments" that would approximate total assets. Such limited disclosure would undermine the meaningfulness of financial statements.

B-11. *Cost.* A number of respondents addressed the issue of cost benefit in terms of their belief that including either a detailed or condensed schedule of investments with financial statements would jeopardize the confidentiality required to protect their trading strategies and the gains that they engender. They mentioned, as consequences, that others could mimic their strategies or even devise strategies to profit at the expense of an investment partnership, such as in a short squeeze. AcSEC acknowledges that disclosure of condensed schedules of investments may be detrimental in certain cases. Nevertheless, AcSEC believes that reporting basic information about investments is vital for a fair presentation of investment partnerships' financial statements.

B-12. Other respondents expressed a belief that the incremental cost to assemble, present, and audit the investment information would not be outweighed by the benefits of the disclosures. AcSEC believes that such costs should not be material because much of the information required appears to be readily available.

Statement of Operations and Partners' Fees and Allocations

B-13. Most respondents directed their comments to the proposed requirement for investment partnerships to present a schedule of investments, as discussed above. Comments on the proposed statement of operations and partners' fees and allocations were as follows:

- Most respondents who expressed opinions on the proposed statement of operations supported it, but a number objected to it because they believe that the format is appropriate for public mutual funds, but not for nonpublic investment partnerships. One commentator suggested imposing a uniform requirement for both broker-dealers and investment companies, and another suggested a different format altogether.
- A number of respondents who expressed opinions on reporting partners' fees and allocations supported the proposed reporting, and most of the remainder recommended that one or the other accounting method be required, although most did not state a preference for one method or another.

B-14. AcSEC has decided not to make any significant changes to those requirements proposed in the exposure draft. AcSEC believes that because both public (SEC registered) investment companies and nonpublic investment partnerships have similar operations, their statements of operations should also be similar. Although AcSEC recognizes that issuing definitive standards is desirable, it continues to believe that this SOP cannot provide definitive guidance on accounting for payments to general partners because such guidance would have to result from deliberations of broader partnership accounting issues.

Regulatory Considerations

B-15. *Broker-Dealer Requirements*. The financial statements of broker-dealers need not include a detailed or condensed schedule of investments or a separate disclosure of realized and unrealized gains (losses). In the AICPA's Audit and Accounting Guide *Audits of Brokers and Dealers in Securities*, securities brokers and dealers are described as follows (paragraph 1.01):

> Brokers, acting in an agency capacity, buy and sell securities and commodities for their customers and charge a commission. Dealers or traders, acting in a principal capacity, buy and sell for their own account and trade with customers and other dealers.

B-16. Representatives of the broker-dealer industry have expressed the view that investment partnerships that are registered as broker-dealers and that manage funds only for directors, officers, or employees of the partnership's general partner, should be permitted to follow broker-dealer accounting, which does not require the presentation of a schedule of investments. They point out that such investment partnerships are registered as broker-dealers to more readily obtain credit to invest on behalf of the broker-dealers' owners or employees, who are defined as "affiliated persons" by the Securities Exchange

Act of 1934. Because those investment partnerships are registered broker-dealers, they are required to prepare financial statements filed with the SEC the way that broker-dealers are. Such financial statements comply with the format for broker-dealers specified in the Audit and Accounting Guide *Audits of Brokers and Dealers in Securities*. Were such entities required to apply the requirements in this SOP, they would have to prepare financial statements using two different formats: those in the broker-dealer Guide and those specified by this SOP.

B-17. AcSEC believes that investment partnerships that are registered broker-dealers and that invest funds only for directors, officers, or employees of a partnership's general partner should be exempt from the requirements of this SOP. GAAP for broker-dealers is set forth in the broker-dealer Guide, and such partners can readily obtain the information that a condensed schedule of investments and a statement of operations in the format of an investment company would afford them.

B-18. *Commodity Pool Requirements*. Some investment partnerships are registered with the Commodity Futures Trading Commission (CFTC) as commodity pool operators and, as such, are required by the CFTC to file financial statements that are prepared in conformity with GAAP. Commentators recommend that such entities be exempt from the scope of the SOP because—

a. A detailed or condensed schedule of investments may not be meaningful and may even be misleading because of the volatility of most commodity portfolios.

b. The format of the statement of operations currently in use for commodity pools is more meaningful than that proposed in the SOP.

c. The Chief Accountant of the CFTC Division of Trading and Markets has issued an interpretation on how to report allocations of investment partnership equity or other interests to general partners in financial statements filed with the CFTC. That interpretation requires that such allocations be reported in the statement of operations immediately after net income and, as such, is consistent with the conclusions in this SOP.

B-19. In addition to the foregoing, AcSEC notes that an AICPA task force is drafting an audit and accounting guide that will apply to commodity pools, including investment partnerships that are commodity pools. Accordingly, AcSEC has exempted from the scope of this SOP investment partnerships that are commodity pools subject to regulation under the Commodity Exchange Act of 1974.

Section 10,670

Statement of Position 95-3 Accounting for Certain Distribution Costs of Investment Companies

July 28, 1995

NOTE

Statements of Position of the Accounting Standards Division present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position as sources of established accounting principles that an AICPA member should consider if the accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction and Background

.01 The Audit and Accounting Guide *Audits of Investment Companies* (the Guide) describes how to account for distribution costs of open-end investment companies that are registered under the Investment Company Act of 1940 (1940 Act), as amended, and that have adopted plans of distribution pursuant to rule 270.12b-1 of the 1940 Act. Paragraph 8.35 of the Guide states the following:

> Rule 270.12b-1 of the 1940 Act permits an investment company, in compliance with specified conditions, to pay for costs incurred to distribute its shares. Payments are made pursuant to a plan, commonly known as a "12b-1 plan," adopted by the board of directors. There are many forms of such plans, and the auditor should review their provisions. Distribution expenses paid with an investment company's assets are accounted for as operating expenses. [Rule 6-07.2(f) of Regulation S-X]

.02 Open-end investment companies, referred to in this SOP as funds, are permitted to finance the distribution of their shares under a plan pursuant to rule 270.12b-1 of the 1940 Act.

Under rule 270.12b-1, a fund's board of directors is required to perform an annual review of the plan and determine whether to continue or terminate it.

Under a **traditional 12b-1 plan,**[1] fund's **distributor** may be compensated or reimbursed for its distribution efforts or costs through one or more of the following methods:

- A 12b-1 fee, payable by the fund, based on an annual percentage of the fund's average net assets (a **compensation plan**) or based on an annual percentage of the fund's average net assets limited to actual costs incurred, after deducting **contingent-deferred sales loads (CDSLs)** received by the distributor (a **reimbursement plan**). Therefore, a compensation plan differs from a reimbursement plan only in that the latter provides for annual or cumulative limits, or both, on fees paid. Fees for both kinds of plans are treated as expenses in a fund's statement of operations.
- A front-end load, which is assessed on purchasing shareholders at the time fund shares are sold.
- A CDSL imposed directly on redeeming shareholders. The CDSL usually is expressed as a percentage, which declines with the passage of time, of the lesser of redemption proceeds or original cost. The CDSL normally ranges from 4 percent to 6 percent and typically is reduced by 1 percent (for example, from 6 percent to 5 percent) a year until the sales charge reaches zero percent.

.03 Rule 12b-1 plans historically have provided that a fund's board of directors may terminate the plan with no penalty to the fund. (Termination of the plan does not necessitate termination of the fund.) Redeeming shareholders still would be subject to the CDSL, which would be paid to the distributor that sold the shares to those shareholders. However, with a traditional 12b-1 plan, the 12b-1 fees normally would be discontinued on plan termination. Some traditional reimbursement 12b-1 plans provide that, when the plan is terminated, the fund's board of directors has the option, but not the requirement, to pay the distributor for any costs incurred by the distributor in excess of the cumulative CDSL and 12b-1 fees the distributor has received. Such a plan is referred to in this SOP as a **board-contingent plan**. Under traditional reimbursement 12b-1 plans, including board-contingent plans, CDSL payments by shareholders continue to be remitted to the distributor until excess costs are fully recovered, after which the CDSL payments usually are remitted to the fund instead of the distributor.

.04 With an **enhanced 12b-1 plan**, the fund is required to continue paying the 12b-1 fee after termination of the plan to the extent the distributor has **excess costs**. CDSL payments by shareholders would continue to be remitted to the distributor to further offset excess costs. Thus, the major distinction between traditional and enhanced 12b-1 plans is the requirement for the fund to continue such payments upon plan termination.

.05 The following table summarizes the 12b-1 plan attributes enumerated above.

---

[1] Words that are defined in the accompanying glossary [paragraph .23] are set in boldface the first time they appear.

	Traditional			Enhanced
	Compensation	Reimbursement		
		Nonboard Contingent	Board Contingent	
Annual review and approval of plan by board, with ability to terminate plan	X	X	X	X
Fund Payment Terms[*]				
Payment based on average net assets	X	X	X	X
Annual or cumulative limitation, or both, based on actual distribution costs		X	X	X
Upon termination of 12b-1 plan, board has option, but not obligation, to pay excess costs			X	
Upon termination of 12b-1 plan, fund is required to continue paying 12b-1 fee to the extent the distributor has excess costs				X

Scope

.06 This Statement of Position (SOP) applies to annual and interim financial statements of investment companies that adopt plans that comply with rule 270.12b-1 of the Investment Company Act of 1940.

Conclusions

.07 A liability, with a corresponding charge to expense, should be recognized by a fund with an enhanced 12b-1 plan for excess costs. The amount of the liability should be equal to the cumulative **distribution costs** incurred by the distributor less the sum of (*a*) cumulative 12b-1 fees paid, (*b*) cumulative CDSL payments, and (*c*) future cumulative CDSL payments by **current shareholders**, if reasonably estimable. Any future cumulative CDSL payments should be based on (*a*) current net asset value per share, (*b*) the number of shares currently outstanding and the number of years that they have been outstanding, and (*c*) estimated shareholder **persistency** based on historical fund data or, if historical fund data are not available, group or industry data for a similar class of shares. Changes in the liability should be recognized in the statement of operations as an expense or reduction in expense.

.08 The liability should be reported at its present value, calculated using an appropriate current interest rate, if (*a*) the amount and timing of cash flows are reliably determinable and (*b*) the distribution costs are not subject to a reasonable interest charge. If these conditions are not met, the liability should be calculated without discounting to present value.

[*] Excludes front-end and CDSL payments, which are made by shareholders and not the fund.

.09 A liability for excess costs, computed in the same way as for an enhanced 12b-1 plan, should be recorded by a fund with a board-contingent plan when the fund's board commits to pay such costs.

.10 For both traditional and enhanced plans, funds should disclose in their financial statements the principal terms of such plans and any plan provisions permitting or requiring payments of excess costs after plan termination. For board-contingent and enhanced plans, the aggregate amount of distribution costs subject to recovery through future payments by the fund pursuant to the plan and through future CDSL payments by current shareholders should be disclosed. For enhanced plans, funds should disclose the methodology used to estimate future CDSL payments by current shareholders.

.11 An excess of cumulative 12b-1 fees and CDSL payments to date and future CDSL payments by current shareholders over the cumulative costs incurred by the distributor should not be reported as an asset.

Effective Date and Transition

.12 This SOP is effective for annual financial statements for fiscal years beginning after December 15, 1995, and for interim financial statements for periods in such years. The cumulative effect of changes caused by adopting this SOP should be reflected in the calculation of net asset value on the first day of the fiscal year of adoption.[2] Restatement of financial statements presented for comparative purposes, including financial highlights, is not permitted. Pro forma financial information is not required. Early application is encouraged.

Basis for Conclusions

.13 This section discusses factors that were deemed significant by members of the Accounting Standards Executive Committee (AcSEC) in reaching the conclusions in this SOP. It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

.14 For enhanced 12b-1 plans, AcSEC considered three alternatives with respect to accounting for excess costs: (1) immediate recognition of a liability when the distributor incurs excess costs; (2) recognition of a liability upon termination of the plan; and (3) no recognition of a liability.

.15 AcSEC believes that a fund is unconditionally committed to pay excess costs at the formation of an enhanced 12b-1 plan and that a liability for such costs should be reported by the fund when the costs are incurred by the distributor. Although an enhanced 12b-1 plan requires annual board approval for its continuance, the payment for excess costs is not contingent on such approval. Termination of the plan by the fund's board would not change the obligations under the plan. Any operational difficulties, such as the daily calculation of the share net asset values, does not change the fact that the fund is liable for excess costs.

---

[2] Securities and Exchange Commission (SEC) Staff Accounting Bulletin (SAB) No. 74, *Disclosures Regarding Accounting Standards Issued But Not Yet Adopted*, expresses the SEC staff's views concerning disclosures of the impact that recently issued accounting standards will have on the financial statements when adopted in a future period. The impact of this standard should be disclosed for all investment companies, including those not subject to SAB No. 74.

.16 The amount of the liability, as calculated pursuant to paragraph .07 of this SOP, includes a reduction for the future cumulative CDSL payments by current shareholders, if reasonably estimable. That is analogous to accounting for the disposal of a segment of a business when the anticipated future cash flows that will result from an original lease and a sublease are taken into account in determining the overall gain or loss on the disposal.[3] In the case of a terminated 12b-1 plan, future CDSL payments on redemption by shareholders pursuant to the prospectus terms reduce the fund's obligation to the distributor, although the amount of those payments is subject to estimation.

.17 Funds account for 12b-1 fees as expenses, in accordance with Regulation S-X and the Guide. AcSEC observes that accounting for excess costs as expenses is consistent with that and the way that funds account for other costs of raising capital (such as state registration fees and legal fees). That accounting is based on the principle that raising capital is an integral part of a fund's business. Such costs are analogous to ordinary and necessary period costs in nonfinancial businesses.

.18 AcSEC believes that the liability for excess costs should be accounted for at its present value, if (*a*) the amount and timing of cash flows are reliably determinable and (*b*) the distribution costs are not subject to a reasonable interest charge. That is consistent with the consensus in Emerging Issues Task Force (EITF) Issue 93-5, *Accounting for Environmental Liabilities*.

.19 Board-contingent plans provide that on a plan's termination, the fund's board of directors has the option, but not the obligation, to pay the distributor for any excess costs incurred. AcSEC believes that a liability for excess costs, computed in the same way as for an enhanced 12b-1 plan, should be recorded for a board-contingent plan only when the fund's board commits to pay such costs and communicates its intent to do so. A commitment by the board, in effect, converts a board-contingent plan into an enhanced plan. That is, the fund is then obligated to continue to pay the 12b-1 fee after termination of the plan to the extent that the distributor has excess costs.

.20 AcSEC believes that the disclosures required for traditional and enhanced plans are necessary to provide users with adequate information regarding the assumptions used to compute the liabilities for certain distributions costs of enhanced 12b-1 plans and contingent excess costs for traditional 12b-1 plans.

---

[3] FASB Interpretation No. 27, *Accounting for a Loss on a Sublease*, paragraph 3.

.21

Appendix A

Illustration

To illustrate application of this SOP, the following assumptions are made for a fund with an enhanced 12b-1 plan:

Total distribution costs incurred	$5,000,000
12b-1 payments	(750,000)
CDSL payments received by distributor	(250,000)
	4,000,000
Estimated future CDSL payments to be received by distributor from current shareholders at current asset levels†	(1,000,000)
	$3,000,000

Assuming that the 12b-1 fee is paid at the end of the year, the following calculation would be made:

Current fund net assets (10 million shares at $10.00 per share)	$100,000,000
12b-1 fee as a percentage of net assets	.0075
Annual 12b-1 fee payments (75 basis points)	$ 750,000
Estimated number of years to pay excess costs ($3,000,000 ÷ $750,000/year)	4
Present value of 12b-1 payments of $750,000 for 4 years, discounted at an assumed rate of 8 percent (assuming discounting is appropriate)	$ 2,484,000

Accordingly, upon adoption of the SOP on January 1, 19X1, the fund would recognize a liability of $2,484,000 and a corresponding expense, which would be reported as the cumulative effect of a change in accounting principle pursuant to Accounting Principles Board (APB) Opinion No. 20, *Accounting Changes*.

The following illustrates the impact of adopting this SOP in the 19X1 Financial Statements after making the following additional assumptions:

There are no further distribution costs incurred or capital share activity during 19X1.

CDSLs received during 19X1 are $250,000, and anticipated CDSLs with respect to current shareholders expected to be received after 19X1 are $750,000 (that is, the assumption at the beginning of 19X1 that $1,000,000 of CDSLs would be received still is considered valid).

† Assuming amounts are reasonably estimable.

Statement of Operations

Investment income	$X,XXX,XXX
Expenses	
Distribution fees	—
Interest	199,000[‡]
Other	X,XXX,XXX
Realized and unrealized gains	X,XXX,XXX
Net increase in net assets resulting from operations before cumulative effect of change in accounting principle	X,XXX,XXX
Cumulative effect of change in accounting principle (Note)	(2,484,000)
Net increase in net assets resulting from operations	X,XXX,XXX

The statement of changes in net assets should separately reflect the inclusion of the cumulative effect of the accounting change in a similar manner.

The liability at the end of 19X1 would be $1,933,000 ($2,484,000 + $199,000 of interest amortization - $750,000 of annual 12b-1 fees paid) and would be reflected on the statement of assets and liabilities as accrued distribution expenses payable. That amount can be proved as the present value of three consecutive payments of $750,000, which represents the fund's undiscounted liability of $2,250,000.

Financial Highlights

Net asset value—beginning of year	$ .XX
Net investment income	.XX
Realized and unrealized gains	X.XX
	X.XX
Cumulative effect of adoption of accounting standard (Note)	(.25)
Net increase in net assets resulting from operations	$X.XX

Note

Effective January 19X1, the fund adopted AICPA Statement of Position No. 95-3, which requires that a fund record a liability and expense for excess costs, as defined, for enhanced 12b-1 plans. Prior thereto the fund recognized an expense under its 12b-1 plan based on a percentage of the fund's net assets. Under an enhanced 12b-1 plan, the fund is obligated to reimburse the distributor for any costs it has incurred in excess of cumulative 12b-1 and CDSL payments it has received. As of January 1, 19X1, the fund has recorded a liability of $2,484,000 for such costs, representing the cumulative effect of the change in accounting. It is equal to the $4,000,000 of aggregate costs incurred by the distributor in excess of cumulative 12b-1 and CDSL payments through that date, less future estimated CDSL payments of $1,000,000, discounted at 8 percent. At December 31, 19X1, the liability of $1,933,000 represents the aggregate excess costs of $3,000,000 less estimated future CDSL payments of $750,000, discounted at 8 percent. Future CDSL payments were estimated based on the net asset value per share of the fund as of December 31, 19X1, the

‡ $2,484,000 at 8 percent.

number of shares currently outstanding and the number of years that they have been outstanding, and estimated shareholder persistency based on historical fund data.

Change in Estimate

Assume that at the end of 19X1, actual CDSLs received in year one exceed those anticipated by $250,000 and the distributor's estimate of future CDSLs after 19X1 is increased by a further $500,000. The undiscounted liability would be reduced from $2,250,000 to $1,500,000; the discounted liability would be $1,337,000. In this situation, the distribution fees included in the 19X1 statement of operations would be a contra expense of $596,000 (interest expense would be unchanged) and not an adjustment of the cumulative effect of adoption.

If it is assumed instead that year-end CDSLs fell short by $250,000 and the estimate of future CDSLs from current shareholders fell by another $500,000, the undiscounted liability would increase to $3,000,000. The discounted liability would increase to $2,484,000, and the 19X1 statement of operations would include distribution fees of $551,000.

In practice, the periodic remeasurement of the liability also will have to incorporate new fund share sales, additional costs incurred during the period, and the effect of changes in net asset value on the discounting process. In addition, such calculations would have to be made at each net asset value determination date.

.22

Appendix B

Discussion of Comments Received on the Exposure Draft

B-1. An exposure draft of a proposed statement of position, *Accounting for Certain Distribution Costs for Investment Companies*, was issued for public comment in April 1994 and distributed to a variety of interested parties to encourage comments by those that would be affected by the proposal. The conclusions proposed in the exposure draft on how to account for such costs have been adopted in this SOP. A majority of commentators supported or did not object to the conclusions proposed.

B-2. A minority of commentators objected to the conclusion that investment companies should account for excess costs under enhanced 12b-1 plans as liabilities and expenses. One objection acknowledged that the SOP may be based on existing accounting theory, but objected to it on the grounds that it will not afford equal and fair treatment to fund shareholders. Another commentator objected because of the belief that the likelihood of the termination of a 12b-1 plan is "highly unlikely, remote," as defined in FASB Statement No. 5, *Accounting for Contingencies*.

B-3. As to the first objection, AcSEC observes that Statement of Financial Accounting Concepts No. 2, *Qualitative Characteristics of Accounting Information*, in discussing the concept of neutrality, states: "Neutrality means that either in formulating or implementing standards, the primary concern should be the relevance and reliability of the information that results, not the effect that the new rule may have on a particular interest."

B-4. The second objection fails to recognize that the promise made at the inception of an enhanced 12b-1 plan to pay unconditionally any distribution costs creates a liability. That liability is measured by the amount of excess costs. Terminating an enhanced 12b-1 plan only determines when the existing liability is to be paid.

B-5. A further objection to reporting enhanced 12b-1 excess costs as expenses is that doing so may cause a violation of regulatory limitations on 12b-1 fees. This objector argues that, if excess costs are accounted for as liabilities, a portion of those costs should be recorded as an asset to recognize the future economic benefits of increased fund assets. In considering this objection, AcSEC relied on the concept of neutrality cited above and notes that items are frequently treated differently for GAAP and regulatory purposes. Further, AcSEC believes that the benefits cited—lower expenses (on a pro rata per share basis) and increased cash flows that enhance investment strategy—do not meet the essential characteristic of an asset in paragraph 26 of FASB Concepts Statement No. 6, *Elements of Financial Statements*, that, "(a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows."

.23

Glossary

Board-contingent plan. A reimbursement 12b-1 plan that provides that, on the plan's termination, a fund's board of directors has the option, but not the requirement, to pay the distributor for any excess costs incurred by the distributor.

Compensation plan. A plan that provides for a 12b-1 fee, payable by the fund, based on a percentage of the fund's average net assets. The 12b-1 fee may be more or less than the costs incurred by the distributor.

Contingent-deferred sales load (CDSL or back-end load). A sales charge imposed directly on redeeming shareholders based on a percentage of the lesser of the redemption proceeds or original cost. The percentage may decrease or be eliminated based on the duration of share ownership (frequently decreases by one percent a year).

Current shareholders. Shareholders of a fund, or a class of shares of a fund, at an evaluation or measurement date. Amounts attributable to current shareholders are based on shares outstanding at that date and do not include estimates of future reinvestments or other share purchases.

Distribution costs. Costs, as defined in a distribution agreement between a distributor and a fund, incurred by a distributor in distributing a fund's shares. Such costs may include commission payments to sales representatives, promotional materials, overhead allocations, and interest.

Distributor. Usually the principal underwriter that sells the fund's capital shares by acting as an agent (intermediary between the fund and an independent dealer or the public) or as a principal, buying capital shares from the fund at net asset value and selling shares through dealers or to the public (see definition of *underwriter* in section 2(a)(40) of the Investment Company Act of 1940).

Enhanced 12b-1 plan. A reimbursement 12b-1 plan that provides that, on termination of the plan, the fund is required to continue paying the 12b-1 fee to the extent the distributor has excess costs.

Excess costs. The cumulative distribution costs incurred by the distributor less the sum of (*a*) cumulative 12b-1 fees paid, (*b*) cumulative CDSL payments, and (*c*) future cumulative CDSL payments by current shareholders, if reasonably estimable.

Persistency. The length of time a shareholder owns shares of a particular fund or class of shares of a fund before redemption.

Reimbursement plan. A plan that provides for a 12b-1 fee, payable by the fund, that may not exceed the lesser of an annual percentage of the fund's average net assets or actual costs incurred by the distributor net of CDSL received by the distributor.

Traditional 12b-1 plan. A compensation or reimbursement plan pursuant to rule 270.12b-1 of the Investment Company Act of 1940 that permits the use of a fund's assets to pay distribution-related expenses under certain conditions. The 12b-1 fees under traditional 12b-1 plans are normally discontinued upon plan termination, but may continue to be paid after plan termination under a board-contingent plan (see above).

Statement of Position 96-1
Environmental Remediation Liabilities

October 10, 1996

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position that have been cleared by the Financial Accounting Standards Board as sources of established accounting principles in category *b* of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Part 1

Overview of Environmental Laws and Regulations

.01 The objective of this part is to provide accountants with an overview of key environmental laws and regulations. It is intended to be a separate, nonauthoritative component of this Statement of Position (SOP).

.02 Although the remainder of this SOP focuses on environmental remediation liability issues, this part includes brief discussions of key pollution control and other environmental laws as well as a more extensive discussion of environmental remediation liability laws.

Chapter 1
INTRODUCTION

.03 Beginning in the early 1970s, Congress and state governments began paying increased attention to legislation designed to protect the environment. In just twenty years, these efforts have changed dramatically the manner in which business is carried out in the United States.

.04 For instance, today, new loan agreements only rarely do not contain extensive environmental representations, warranties, and indemnities. Real estate development is likewise affected by environmental considerations, such as whether the project area contains wetlands or whether past activities could have adversely affected the soil or groundwater. The possibility of becoming subject to liability for environmental **remediation**[1] costs associated with past waste **disposal** practices based on strict liability can affect transactions involving the acquisition or merger of enterprises or the purchase of land. In sum, the explosion of federal and state environmental laws and regulations has affected all manner of business transactions.

.05 Although this SOP focuses on both state and federal United States laws and regulations, environmental considerations are also important for foreign operations. Environmental laws and regulations in many countries are similar to United States laws. The legal and regulatory climates in other countries are evolving. Regardless of whether the host countries' environmental laws are as stringent as those in the United States, entities can often be held liable for environmental damages under a variety of nonenvironmental statutes and broad legal theories.

.06 Environmental laws may be thought of as being of two kinds. First, there are laws that impose liability for remediation of environmental pollution arising from some past act. Second, there are pollution control and pollution prevention laws. Some environmental laws cover both categories. This SOP focuses principally on federal laws, but many states have enacted analogous statutes.

.07 The first kind of environmental law, environmental remediation liability laws, includes individual statutes as well as response provisions in other statutes. The most important of these are the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), which together are referred to as Superfund, and the **corrective action** provisions of the Resource Conservation and Recovery Act of 1976 (RCRA). Under Superfund's current broad liability provisions, the U.S. Environmental Protection Agency (EPA) may order liable parties to remediate sites or use Superfund money to remediate them and then seek to recover its costs and additional damages. Similarly, under the corrective action provisions of RCRA, the EPA may order "facilities that treat, store, or dispose of **hazardous waste**" to clean up **releases** of **hazardous waste constituents** associated with past or ongoing practices.

.08 Environmental laws of the second kind, laws intended to control or prevent pollution, are directed at identifying or regulating pollution sources or

---

[1] Terms defined in the glossary [paragraph .178] are in **boldface** type the first time they appear in this SOP.

reducing emissions or discharges of pollutants. Myriad statutes regulate sources of pollution, including the pollution control provisions of RCRA (solid and hazardous wastes), the Clean Water Act (discharge of pollutants into the waters of the United States and to publicly owned treatment works, or POTWs), and the Clean Air Act (emission of pollutants into the atmosphere). Other examples are the Emergency Planning and Community-Right-to-Know Act (EPCRA) and the Pollution Prevention Act of 1990. Pursuant to EPCRA, facilities that store chemicals over threshold amounts must submit certain information to local, state, and federal environmental and emergency response authorities. EPCRA also includes requirements for reporting of episodic releases of toxic chemicals, as well as annual reporting of toxic chemical releases that occur as a result of normal business operations for specified manufacturing and other activities. The Pollution Prevention Act, among other things, requires facilities subject to EPCRA's reporting requirements to also report pollution source reduction and recycling activities.

.09 Before discussing key statutes in more detail, it is worth mentioning two legal concepts that are expressly or implicitly incorporated into Superfund: strict liability, and joint and several liability. Strict liability statutes, such as CERCLA, impose liability without regard to the liable party's fault. Thus, a waste generator that disposed of its waste at approved facilities, in accordance with all then-current requirements, having exercised "due care," would nevertheless be liable. Where liability is joint and several, any party deemed liable is potentially responsible for all of the associated costs. Under CERCLA, for instance, a waste generator that is responsible for a small percentage of the total amount of waste at a site may be held liable for the entire cost of remediating the site.

.10 Also noteworthy is that wastes need not be hazardous wastes for there to be environmental remediation liability. If the waste generator "arranged for disposal" of wastes containing **hazardous substances** (at any concentration level and regardless of whether the substances were defined as, or known to be, hazardous at the time of disposal), and a "release" of hazardous substances has or could occur, the waste generator could be subject to environmental remediation liability.

Chapter 2

ENVIRONMENTAL REMEDIATION LAWS

.11 The vast majority of federal environmental remediation provisions are contained in the Superfund laws, the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Superfund Amendments and Reauthorization Act (SARA), and in the corrective action provisions of the Resource Conservation and Recovery Act of 1976 (RCRA). Typically, the United States Environmental Protection Agency (EPA) utilizes Superfund to clean up facilities that are abandoned or inactive or whose owners are insolvent; however, Superfund can be and is also applied to sites still in operation. RCRA provisions apply to hazardous waste treatment, storage, and disposal facilities that are still in operation or have closed recently.

Superfund

.12 Congress enacted CERCLA in 1980 to facilitate the remediation of abandoned waste sites. CERCLA established a program to identify sites where hazardous substances have been or might be released into the environment; to ensure that they are remediated by responsible parties or the government; to compensate the United States, states, municipalities, and tribes for damages to natural resources; and to create a procedure for claims against responsible parties by parties who have cleaned up sites or spent money to restore natural resources. The act also created a $1.6 billion trust fund to cover the costs associated with **orphan sites** and costs incurred while the EPA seeks reimbursement from **potentially responsible parties (PRPs)**. In 1986, SARA increased the amount of the trust fund to $8.5 billion, broadened the provisions of Superfund, provided more detailed standards for remediation and settlement provisions, and broadened criminal sanctions. The increase in the trust fund is supported by increased taxes on the petroleum industry and a tax on corporate alternative minimum taxable income. At the time of this writing, Superfund is again in the process of reauthorization, and there is a potential for further changes to the law as part of this process.

.13 Superfund places liability on the following four distinct classes of responsible parties:

a. Current owners or operators of sites at which hazardous substances have been disposed of or abandoned

b. Previous owners or operators of sites at the time of disposal of hazardous substances

c. Parties that "arranged for disposal" of hazardous substances found at the sites

d. Parties that transported hazardous substances to a site, having selected the site for treatment or disposal

This liability is imposed regardless of whether a party was negligent, whether the site was in compliance with environmental laws at the time of the disposal, or whether the party participated in or benefitted from the deposit of the hazardous substance. Parties that disposed of hazardous substances many years ago—including the years preceding CERCLA's enactment—at sites where there is, was, or may be a release into the environment, may be liable for remediation costs.

.14 *Hazardous substance* is a much broader term than *hazardous waste*. It includes any substance identified by the EPA by regulation, pursuant to a number of federal statutes. Covered, for example, are substances considered to be *toxic pollutants* under the Clean Water Act or *hazardous air pollutants* under the Clean Air Act. The various lists of hazardous substances identified by the EPA contain more than one thousand chemicals and chemical compounds.

.15 Petroleum and any derivative or fraction that is not specifically listed or designated as a hazardous substance are specifically excluded from the federal definition of a hazardous substance contained in Superfund. Also excluded are natural gas, natural gas liquids, liquefied natural gas, and synthetic gas of pipeline quality. (Discharges of petroleum into the surface waters or shorelines of the United States are covered under several other federal laws.) The protection afforded by this petroleum exclusion is narrow, however. For example, lead (a hazardous substance) that is added to gasoline would not be covered by the petroleum exclusion because it is not an indigenous constituent of petroleum. Further, many state laws that are analogous to Superfund do not provide for a petroleum exclusion.

.16 Hazardous substances are often integral components of materials that are not hazardous wastes. And, although a threshold quantity of a hazardous substance must be released in order to create a reporting obligation, there is no threshold quantity that gives rise to liability. Thus, discarding industrial equipment on which there is leaded paint may not trigger a reporting obligation, but if that equipment is discovered at a Superfund site, it may be sufficient to identify the disposer as a PRP.

.17 The courts have interpreted CERCLA to impose strict liability. In other words, responsible parties are liable regardless of fault. Moreover, through EPA-initiated legal action, liability under CERCLA may be joint and several. If a PRP can prove, however, that the harm is divisible and there is a reasonable basis for apportionment of costs, the PRP may ultimately be responsible only for its portion of the costs. This scheme of liability means that any responsible party can potentially be liable for the entire cost of remediating a site, notwithstanding that the party is responsible for only a small amount of the total hazardous substances or waste at the site and did nothing improper.

.18 Statutory defenses to CERCLA liability are limited. Essentially, they are an act of God; an act of war (but not a response to an act of war, such as the manufacturing of munitions); and, in limited circumstances, an act or omission of a third party. There is an additional defense available to owners of property affected by hazardous substances known as the *innocent landowner* defense, which applies to landowners that acquired properties after hazardous substances were disposed of on them and that did not know or have reason to know about the existence of the hazardous substances. In order to use this defense, however, a landowner must establish that it made "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." What constitutes "all appropriate inquiry" has been the subject of substantial litigation. It can be said, however, that a landowner that gains such actual knowledge and subsequently transfers the property without disclosure forfeits this defense.

.19 In order to mitigate the potentially harsh effects of the strict, joint and several, and retroactive liability scheme, however, Superfund does permit responsible parties to sue other responsible parties to make them contribute to the cost of the remediation or to recover money spent on remediation.

.20 The EPA has several potent enforcement tools available to it under Superfund. Most significant is the EPA's power to issue a **unilateral administrative order** to responsible parties requiring them to take a **response action** at a site where there is "an imminent and substantial endangerment to the public health or welfare or the environment because of an actual or threatened release [of a hazardous substance] from a facility." A respondent who fails to perform the response action or fails to report as required under CERCLA is potentially subject to $25,000 per day in penalties. In addition, if the EPA performs the action, it may recover up to four times its costs in damages and penalties (that is, actual costs plus treble damages). Judicial review of an EPA administrative order is not available until after the remedy is implemented, money is spent, and the EPA commences an enforcement action for cost recovery. Thus, even a party with a reasonably good defense to liability takes great risk in not complying with an EPA order.

.21 Costs to a PRP may include cleanup costs (**containment, removal, remedial action**), enforcement costs (for example, legal), government oversight costs, and natural resource damages (see the section herein entitled "Natural Resource Damages Under Superfund" in paragraphs .48 through .50). Though CERCLA does not provide for personal injury or property damage suits, suits for injury to health or property (referred to as toxic torts) may also be brought by third parties under various legal theories.

Stages of the Superfund Remediation Process

.22 The following is a discussion of the Superfund remediation process. The stages of this process are also depicted in figure 1, "Sequence of a Typical Superfund Remediation Process," in paragraph .39. The subsequent section, "Potentially Responsible Parties Identification and Allocation" [paragraphs .40 through .47], discusses stages of PRP involvement in the remediation process.

Site Identification and Screening

.23 Beginning in 1981, the EPA identified more than thirty thousand sites for scrutiny based on reports filed by companies pursuant to section 103(c) of CERCLA in which they disclosed locations where they had disposed of hazardous substances. This information formed the basis for a database called the **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS or CERCLA Information System).**

.24 Each site in the CERCLIS database has undergone or will undergo a preliminary assessment of available information as a first step in determining what, if any, action is needed at the site. Based on this information, a site may be dropped from further consideration, or a site investigation or inspection may be performed. This involves a visit to the site by EPA representatives and, usually, limited sampling, which provides the information necessary to rank the site according to the Hazard Ranking System, a mathematical rating scheme that combines the potential of a release to cause harm to people or the environment with the severity or magnitude of these potential situations and the number of people that could be affected. Using the numerical scores from this scheme, the EPA and the states prioritize sites and allocate resources for further investigation, enforcement of remediation, and remediation. Sites receiving high scores (28.5 or above) are proposed for inclusion on the **National Priorities List (NPL)** for remedial action, which generally is a long-term operation involving permanent solutions to the extent practicable.

Removal Action

.25 Some sites may be determined to require a **removal action**, which is a relatively short-term or emergency response taken where there is an imminent and substantial endangerment to the public health or welfare or the environment. In such cases, the EPA may undertake or order PRPs to undertake any appropriate removal action to prevent, abate, stabilize, minimize, mitigate, or eliminate a release or threatened release. A removal action may occur at any stage of the remediation process. Moreover, sites need not be on the NPL for the EPA to undertake or order removal actions.

Remedial Investigation

.26 The remedial investigation is a comprehensive study, usually performed by environmental engineers, that seeks to delineate the nature and extent of hazardous substances at a site, assess potential risks posed by the site, and define potential pathways for exposure. The remedial investigation usually involves extensive sampling of soil and groundwater in and around the vicinity of the site.

Risk Assessment

.27 A site-specific **baseline risk assessment** identifies hazards, assesses exposure to the hazardous substances and their toxicity, and characterizes and quantifies the potential risks posed by the site. A baseline risk assessment often is performed during the feasibility study phase.

Feasibility Study

.28 Following the remedial investigation, a feasibility study is performed. The feasibility study uses the information generated by the remedial investigation to evaluate alternative remedial actions and recommend one. The feasibility study—

- Identifies a list of potential remedial alternatives.
- Estimates the cost of each remedial alternative.
- Screens the alternatives for their ability to meet technical, public health, and environmental requirements and, if other considerations are equal, their cost-effectiveness; evaluates their ability to be implemented in a reasonable time frame given available technologies; and eliminates inferior alternatives from further evaluation.
- Completes a detailed analysis of the screened alternatives with respect to the criteria established by the EPA.

.29 The **remedial investigation and the feasibility study (RI/FS)** together generally take a minimum of two years to complete and, depending on factors such as the types of hazardous substances, soil formations, and number of parties involved, may take more than five years, and they can cost well in excess of $1 million. The EPA oversees the progress of the RI/FS, and completion is sometimes performed in stages.

Remedial Action Plan

.30 Once the RI/FS is complete, a program must be decided on for remediation of the site.

.31 In selecting a remediation program, the EPA first decides what cleanup standards are to be applied to the site. (The remedy selected must achieve cleanup standards, standards of control, and other environmental protection requirements, criteria, or limitations, known as **applicable or relevant and appropriate requirements (ARARs).**) It then identifies which remediation methods can achieve the standards. Finally, it is specified which of the alternative remediation methods is most cost-effective. Thus, the cleanup standards to be applied are not weighed against the cost of achieving those standards in the decision process.

Public Comment and Record of Decision

.32 The program is contained in a proposed remedial action plan (PRAP), which is made available to interested parties for public comment. After reviewing any public comments received, the EPA modifies the remedial plan, if necessary, and issues a record of decision (ROD), which specifies the remedy, as well as the time frame in which the remedy is to be implemented. The final ROD is part of a written **administrative record** documenting the basis of the EPA's remedy selection.

.33 The EPA reviews the effectiveness of the remedial action periodically and can require changes to the plan or additional measures. EPA reviews typically occur every five years (often more frequently in the early stages of the remediation) and may continue well beyond delisting of the site from the NPL.

Remedial Design

.34 Following issuance of the ROD, the site enters into the remedial design phase. This phase includes development of a complete site remediation plan, including engineering drawings and specifications for the site remediation.

Remedial Action

.35 This phase includes actual construction and implementation of the remedial design that results in site remediation as specified in the ROD.

.36 There is a general presumption that the technology specified in the ROD must be used at the site. But the EPA sometimes agrees to innovative approaches using alternative, unproven technologies because one of the objectives embodied in Superfund is the promotion of improvements in remediation technology.

Operation and Maintenance (Including Postremediation Monitoring)

.37 After Superfund site remedial action is completed, activities must be conducted at the site to ensure that the remedy is effective and operating properly. For example, after a system to pump and treat groundwater is constructed (remedial action), the system must be operated and maintained. In addition, the EPA may require postremediation monitoring. These operation and maintenance activities may continue for thirty years or longer.

Government Oversight

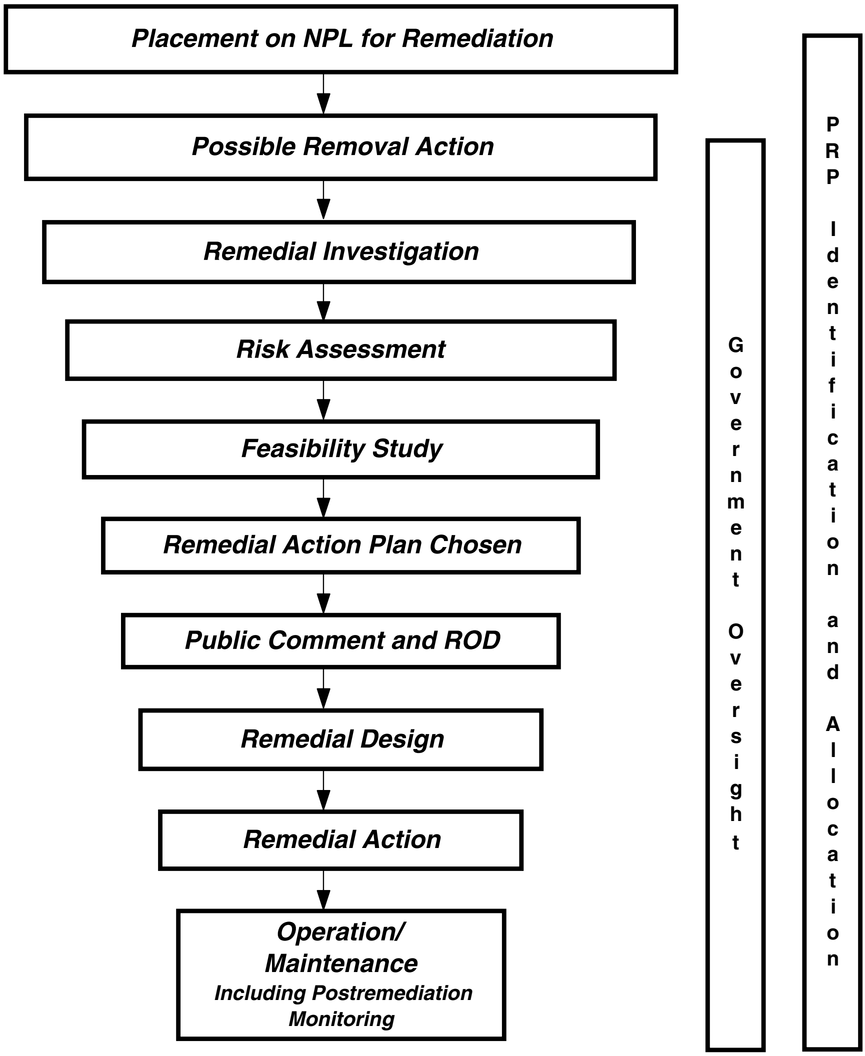
.38 Under Superfund, the President of the United States has broad freedom to respond to actual or threatened releases of hazardous substances;

threatened, not actual, releases are enough to give rise to authority to act. Authority to abate the risk of harm from even threatened releases lies at the heart of the statute. The President has delegated this authority principally to the EPA for land, groundwater, and surface water. Thus, the Superfund program is controlled by the EPA throughout each step of the remediation process. This is reflected in continued agency oversight as the Superfund project unfolds.

.39

Figure 1

Sequence of a Typical Superfund Remediation Process



Potentially Responsible Parties Identification and Allocation

.40 The following is a discussion of the stages of PRP involvement in the Superfund remediation process. As depicted in figure 1 [paragraph .39], PRP identification and the allocation of costs among the PRPs is an ongoing process over the course of the remediation process; specific stages of PRP involvement do not necessarily correspond to specific stages of the remediation process.

Notification of Involvement

.41 A company may first learn of potential involvement in a Superfund site through the appearance of the site on a government list such as the NPL, in the CERCLIS database, or on a state priorities list. More often, an entity learns of involvement by receiving an information request [Section 104(e) Request] from the EPA regarding the wastes it may have sent to a designated site. But full-scale Superfund involvement usually begins when a company is notified by the EPA that it may be a PRP. The EPA may do this in several ways. It may—

- Issue a Notice Letter to all PRPs. A Notice Letter is the EPA's formal notice that Superfund-related action is to be undertaken at a site for which the PRP is considered potentially responsible.
- Issue a Special Notice Letter to PRPs stating that the government intends to initiate work at the site or issue an administrative order to force the PRPs to take response actions at the site unless the PRPs commit within a specified period (typically sixty to one-hundred twenty days) to take response actions.

  The Special Notice Letter provides the names and addresses of other targeted PRPs (to facilitate negotiations among the parties), and it may include a draft of a **consent decree** for each party to share in the costs or assume the responsibility for performing the RI/FS. The EPA also normally includes information about the nature of the material at the waste site and any knowledge it has obtained about the amount of waste contributed by each party.
- Summon all targeted PRPs to a meeting to discuss possible actions at a given site.

.42 Theoretically, the EPA should identify all of the PRPs and send each one of them a notice or summon them to a meeting. However, depending on the evidence it has collected to that point, the EPA may not be aware of all PRPs, leaving it up to the identified PRPs to perform an investigation to find others who may be liable and then file suits for cost recovery or contribution.

.43 PRPs are generally prohibited under Superfund from obtaining immediate judicial review of EPA decisions identifying them as liable or requiring them to take response actions; such review generally is available only after the EPA decides to bring an enforcement action for cost recovery, long after the remedy has been implemented.

Negotiations

.44 Once notified, the PRPs face the difficult task of organizing to negotiate with the government and perhaps assuming responsibility for carrying out the investigation or remedial work.[2, 3] Many PRPs consider it in their best in-

---

[2] The negotiations do not require participation by all PRPs.

[3] A useful source of information is the *PRP Organization Handbook*, published by the Information Network for Superfund Settlements c/o Morgan, Lewis & Bockius, 1800 M Street, NW, Washington, DC 20036.

terests to assume such responsibility; if the PRPs are unable to reach an agreement among themselves, however, the EPA has the power to clean up the site and sue for full reimbursement of the costs. The sixty- to one-hundred-twenty-day period given with the Special Notice Letter is intended to give multiple PRPs sufficient time to organize and to make a good faith offer to the government to perform a specified activity.

.45 Negotiations often take place in stages. For example, PRPs may organize and agree to perform the RI/FS and to divide the costs among themselves in a particular way while continuing to negotiate how and whether to address the remediation itself.[4] Such preliminary cost-sharing agreements are often based on the volume of waste contributed to a site by each party (without regard to its relative toxicity), with an understanding that the allocation may be subsequently revised as additional information about the site becomes available.

.46 The process ultimately results in one of three outcomes:

a. *Negotiated settlement among the parties.* The parties and the EPA agree on who will clean up the site and how the cost sharing will take place. The EPA sometimes provides some assistance in this area through a *nonbinding allocation of responsibility*—a nonbinding judgment by the EPA as to who should be responsible for what share of the cost.

One or more minor participants may negotiate a de minimis settlement with the EPA in which they agree to pay their shares, usually with an agreement from the EPA that their liability is completed at the time of settlement. Such shares typically include some kind of premium over the contributors' "fair share." De minimis settlement nevertheless saves the contributor from incurring further legal fees, and it is the closest thing a PRP can get to a final cash settlement.

For the EPA to be receptive to a de minimis settlement, one of the following conditions must be met: (*a*) both the amount and the toxicity or hazardous properties of substances the PRP contributed are minimal in comparison to other hazardous substances at the site or (*b*) the PRP is a current or past owner of the site, did not allow generation, transportation, storage, treatment, or disposal of any hazardous substance at the site, did not contribute to the release or threat of release at the site, and did not purchase the property knowing that it was used for generation, transportation, storage, treatment, or disposal of any hazardous substances. Further, de minimis settlements typically occur only when a participant's "share" of the liability is less than one percent. Moreover, the EPA typically is unwilling to commit time and resources to negotiate with de minimis contributors individually. The de minimis settlement must take place as part of negotiations with the larger PRP group or with a separate group of de minimis contributors.

PRPs usually establish and contribute to a trust fund, from which an independent contractor is paid to do the RI/FS and remedial work. The contractor's work typically is overseen by a technical committee

---

[4] Some states, however, will not enter into agreements with PRPs concerning only stages of the remediation, such as the RI/FS; they require any agreement to cover the entire remediation effort.

of the contributing PRPs and either by a finance committee of those PRPs or by a management firm hired by the trust. PRPs seldom perform the RI/FS or remedial work themselves.

b. *Unilateral administrative order.* The EPA issues a unilateral administrative order under section 106 of CERCLA to compel a potentially responsible party (or parties) to clean up a site where there may be an "imminent and substantial endangerment" to human health or to the environment because of an actual or threatened release of a hazardous substance.

c. *Section 107.* The EPA remediates the site and seeks recovery of its costs from PRPs under section 107. To obtain reimbursement, the EPA issues letters to PRPs demanding payment for its response costs (costs of removal, remediation, and enforcement action). If these letters do not result in settlement, the EPA can seek reimbursement in the courts by referring the case to the Department of Justice.

Litigation

.47 PRPs that participate in the remediation can, and generally do, sue PRPs that did not participate in the remediation to recover costs, assuming those parties can be found and are solvent. Superfund expressly provides that any responsible party who pays Superfund response costs may sue other responsible parties to recover at least a part of such costs. In resolving such suits, courts are authorized by Superfund to apportion liability for response costs among responsible parties using "such equitable factors as the court determines are appropriate."

Natural Resource Damages Under Superfund

.48 There is a growing specter of liability for natural resource damages under the Superfund laws. CERCLA authorizes the recovery of damages for injury to, destruction of, or loss of natural resources, including reasonable costs for assessing such injury resulting from a release of a hazardous substance.

.49 Under CERCLA, natural resources are defined as land, fish, wildlife, biota, air, water, groundwater, drinking water supplies, and other such resources belonging to, managed or held in trust, or otherwise controlled by the United States, state or local governments, foreign governments, or Indian tribes.

.50 Natural resource damage claims include actual restoration costs and lost use values and may in the future include nonuse values, such as the intrinsic public value of protecting or restoring resources that may not be used but are valuable for their mere existence.

Reporting Releases Under Superfund Provisions

.51 Persons in charge of facilities must report releases of hazardous substances (spills) to the environment that exceed specified *reportable quantities.*

Remediation Provisions of the Resource Conservation and Recovery Act

.52 The RCRA of 1976, the pollution control provisions of which are discussed in chapter 3, provides for "cradle-to-grave" management standards for hazardous wastes. Section 7003 of RCRA also authorizes the EPA to conduct removal actions, seek affirmative injunctive relief, and maintain cost-recovery actions where an imminent and substantial endangerment to the public health or welfare or to the environment is determined to exist. Much like under Superfund, one who has "contributed to" the disposal of waste that is causing an imminent and substantial endangerment can be required to perform or pay for associated remediation under section 7003.

.53 The 1984 Hazardous and Solid Waste Amendments to RCRA expanded owner-operator responsibility for environmental remediation liability associated with releases of hazardous wastes or hazardous waste constituents at hazardous waste **treatment, storage, or disposal facilities (TSDFs).** As amended, RCRA requires facilities—whether they continue operating or intend to close—to remedy any such releases. These corrective action provisions of RCRA, which are separate from Superfund, apply only to facilities that are operating under RCRA permits (see chapter 3) or that have applied for such permits.[5] However, because the EPA generally takes the position that the facility includes all the property that is adjacent or contiguous to the TSDF, permitting of a very small TSDF can subject a much larger, unrelated part of a property to RCRA's corrective action provisions, which apply "fencepost-to-fencepost."

.54 RCRA corrective action may be initiated either as part of the RCRA permitting process or through an interim status corrective action order. Corrective action for releases of hazardous waste or its constituents from **solid waste management units (SWMUs)**, whether they are on- or off-site, is a condition for obtaining any operating or postclosure RCRA permit. The EPA may also order corrective action while a TSDF is in interim status (before it receives its permit) based on information that there is or has been a release to the environment from the TSDF. The EPA does not need to demonstrate imminent and substantial endangerment to human health or the environment from a real or threatened release to issue an interim status corrective action order.

.55 The RCRA corrective action process, which is depicted in figure 2 in paragraph .59, is divided into the following five stages.

.56 *RCRA Facility Assessment.* The RCRA facility assessment (RFA) identifies areas and units at the facility from which hazardous waste or hazardous waste constituents may have been released and collects all existing information regarding the releases. The RFA may be conducted by the EPA or the EPA's contractors, or by the facility owner. There is no analogous stage in the Superfund remediation process.

.57 *RCRA Facility Investigation.* The RCRA facility investigation (RFI) is a detailed investigation to characterize releases to the environment by identifying the environmental setting, characterizing the sources of hazardous substances releases, identifying potential receptors, determining if remediation is necessary, and, if so, collecting data to support the evaluation of remediation alternatives. This stage is analogous to the Superfund remedial investigation stage.

---

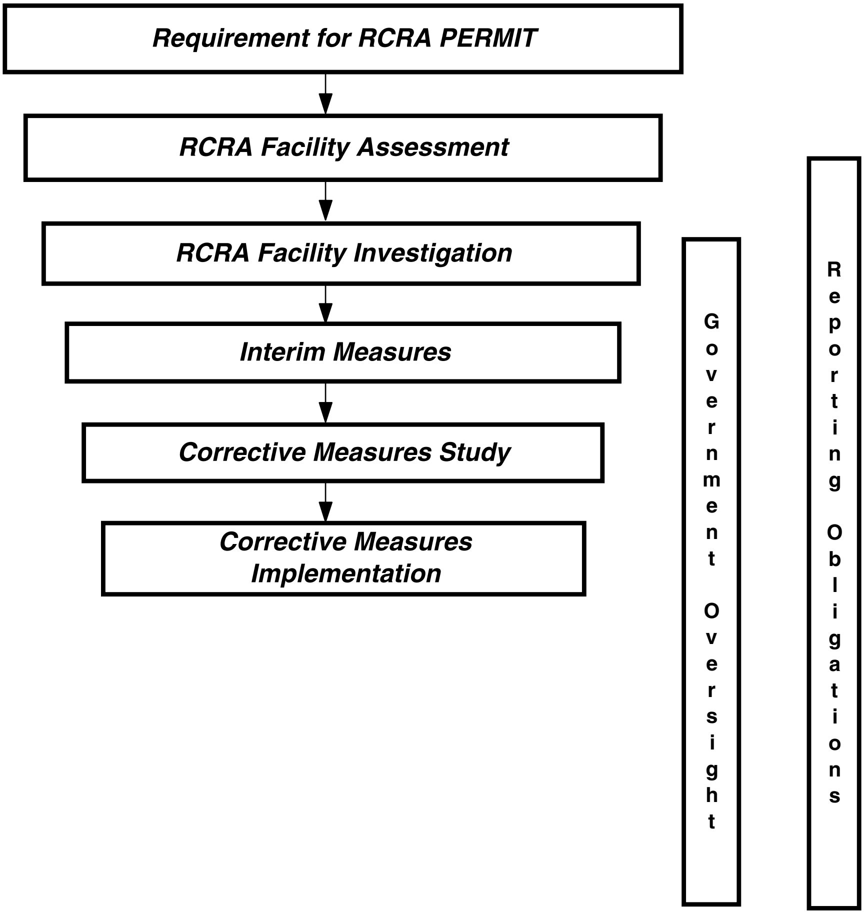
[5] Facilities that have not actively applied for a permit may be deemed to have a "permit by rule" if the owner/operator (1) holds a permit under another qualifying program and (2) complies with certain RCRA requirements specified for the owner/operator's situation. In addition, operating a facility in a manner that was subject to permit requirements, even if an application was not submitted, triggers RCRA permit obligations, including corrective action.

.58 *Interim Corrective Measures.* Interim corrective measures (ICM) are measures (typically containment) conducted at any time before selection of the final remedy by the environmental agency. This stage is analogous to a removal action under Superfund.

.59

Figure 2

Sequence of RCRA Corrective Action Process



.60 *Corrective Measures Study.* If the RFI reveals a potential need for corrective measures, the agency requires the owner to perform a corrective measures study (CMS) to identify and recommend specific measures to correct the releases. The CMS assesses possible corrective measures in terms of technical feasibility, ability to protect public health and the environment, and possible adverse environmental effects of the corrective measures. Although analogous to the Superfund feasibility-study stage, this study is usually less complicated.

.61 *Corrective Measures Implementation.* This stage, corrective measures implementation (CMI), includes designing, constructing, operating, maintaining, and monitoring selected corrective measures that have been approved by the regulatory agency. This stage combines activities that are often segregated under Superfund as remedial design, remedial action, and operation and maintenance.

.62 *Owner/Operator Reporting and Government Oversight.* Beginning with the application for a RCRA permit, owner-operators are required to report to the EPA throughout the RCRA corrective action process, and the EPA oversees and controls each stage of the process.

.63 The 1984 amendments also created the Underground Storage Tank (UST) Program, which requires, among other things, that owners or operators of existing tank systems used for storage of petroleum and petroleum-based substances and certain other designated hazardous substances upgrade in accordance with standards specified by the EPA if those tank systems do not meet new tank standards. In addition, the 1984 amendments create an environmental remediation liability for known releases from USTs.

.64 RCRA regulations require financial assurance for closure and postclosure remediation of TSDFs and USTs.

State and Foreign Laws

.65 Many states have also enacted laws that are similar to the federal statutes. Furthermore, under certain federal statutes, such as RCRA, states are allowed to promulgate regulations to implement federal programs as long as the state law is at least as stringent as the federal law. In most such cases, states are free to enact more stringent provisions. Preparers and auditors of financial statements should also be aware that most developed countries and many other countries have enacted environmental laws, some of which may be similar to or more stringent than United States laws.

Chapter 3

POLLUTION CONTROL AND PREVENTION LAWS

The Resource Conservation and Recovery Act

.66 The Resource Conservation and Recovery Act (RCRA) provides comprehensive federal regulation of hazardous wastes from point of generation to final disposal. All generators of hazardous waste, transporters of hazardous waste, and owners and operators of hazardous waste treatment, storage, or disposal facilities (TSDFs) must comply with the applicable requirements of the statute.

.67 For generators of hazardous waste, those requirements include the following:

a. Hazardous waste determination

b. Manifest requirements

c. Packaging and labeling

d. Record keeping and annual reporting

e. Management standards

.68 Less stringent requirements under RCRA are imposed on certain small quantity generators (up to 1,000 kg of a waste per month).

.69 The key to RCRA compliance is the hazardous waste determination, in which the facility determines whether the material it handles is a hazardous waste. A step-by-step identification procedure is prescribed. Initially, one must determine whether the material is a "solid waste."[6] If so, one must determine whether that solid waste is hazardous. Some wastes that are specified by regulation are automatically deemed hazardous. These are the so-called "listed wastes." Other wastes must be evaluated to determine whether they exhibit any of four characteristics: toxicity, corrosivity, reactivity, or ignitability. If so, they, too, are deemed hazardous. Exclusions are provided for wastewaters regulated under the Clean Water Act and for certain types of reuse, recycling, and reclamation.

.70 With some exceptions, a waste generator that accumulates hazardous waste in excess of ninety days or treats the hazardous waste will be deemed the operator of a TSDF and be subject to the comprehensive TSDF regulations. These regulations require owners–operators to, among other things, obtain a permit.

.71 Each TSDF is also subject to specific requirements designed to prevent any release of hazardous waste into the environment and also may be required to perform groundwater monitoring to ensure proper compliance with TSDF regulations. These regulations require containers and tanks to be of sufficient integrity to contain hazardous wastes properly, and they require that, in certain cases, containers be separated or protected by dikes, berms, or walls. Surface impoundments, waste piles, and landfills must be equipped with liners to prevent any migration of wastes into soil, groundwater, or surface wa-

---

[6] Under RCRA, a "solid waste" may be either a solid, a liquid, or a gas.

ter during the active life of the facility and must be constructed to prevent runoff or breaks. Land treatment units that treat hazardous wastes biologically must ensure that hazardous wastes are degraded, transformed, or immobilized within the treatment zone and do not reach the underlying water table.

.72 RCRA also contains provisions for **closure** of TSDFs and financial assurance requirements for closure and postclosure obligations.

.73 RCRA also requires the United States Environmental Protection Agency (EPA) to regulate underground storage tanks (USTs). Most states have enacted their own UST regulations as well. A brief summary of the federal program is presented below.

.74 The UST regulations apply only to underground tank systems containing the following regulated substances:

a. Petroleum and petroleum-based substances[7]

b. Hazardous substances designated pursuant to section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)

.75 The EPA's general performance standards rely heavily on detailed technical standards set forth in industry performance codes established by nationally recognized associations or independent testing laboratories.

.76 As a general rule, each new tank (or each existing tank upgraded to new tank standards) must be designed and constructed according to the standards of a nationally recognized organization or an independent testing laboratory. Like the tanks, the piping associated with a new UST system must be designed and constructed in accordance with industry codes. All tanks must also be equipped with spill and overfill prevention equipment. If existing tank systems do not currently meet the new tank standards, the owner or operator must upgrade them by December 22, 1998.

.77 As an alternative to installing new tanks or upgrading existing tanks, an owner or operator may choose to close some or all of its UST systems. The closure, however, must meet standards specified by the EPA. The regulations require that a closed tank be emptied and cleaned by removing all liquids and accumulated sludges. The tank must then be either removed from the ground or filled with an inert solid material.[8]

.78 The UST regulations also impose general operation and maintenance requirements on owners and operators of underground storage tank systems in the following five main areas: (*a*) spill and overfill control, (*b*) corrosion protection, (*c*) tank repair, (*d*) leak detection, and (*e*) record keeping. These regulations are designed to ensure that releases due to spilling, overfilling, corrosion, or poor maintenance do not occur. Record-keeping regulations require that records evidencing repairs, release detection systems, monitoring results, and corrosion and inspection reports be maintained at the plant or at a readily available alternative site.

.79 In addition, owners and operators must establish financial responsibility. The regulations specify several different methods of demonstrating fi-

---

[7] Certain types of UST systems used for storing heating oil for consumptive use on the premises where stored are exempted.

[8] The regulations further require that the EPA or state agency be notified of the intent to close a tank system permanently at least thirty days before beginning the closure process.

nancial responsibility: self-insurance; guarantee; insurance or risk retention group; surety bond; letter of credit; trust funds; or state-provided financial assurance.

The Clean Air Act

.80 The Clean Air Act provides comprehensive federal regulation of all "sources" of air pollution. Under the Clean Air Act, every area of the United States is evaluated for its compliance with the National Primary and Secondary Ambient Air Quality Standards (NAAQS). In areas where the NAAQS have not been attained, new and significantly modified sources must use the most effective pollution control equipment available that results in the lowest achievable emissions rate (LAER). This determination is made without regard to cost. The permittee must also provide emissions offsets, or greater than one-to-one reduction, for any nonattainment pollutant that the source would emit in significant amounts. These offsets must be sufficient to provide a net air quality benefit in the affected area.

.81 In areas that have attained the NAAQS for particular pollutants, new or modified stationary sources that would emit these pollutants in significant amounts must obtain permits under the Prevention of Significant Deterioration (PSD) Program. Under the PSD program, a facility emitting air pollutants must apply the best available control technology (BACT). BACT is determined on a case-by-case basis, taking into account energy, environmental, and economic factors, and other costs and benefits of reduced air pollution.

.82 The Clean Air Act also contains new source performance standards (NSPS), which are applicable to stationary sources that are modified or built after the NSPS are proposed. The NSPS program is designed to ensure that new sources are built with state-of-the-art controls and that when existing sources are modified, new controls are installed. Each NSPS establishes design or performance criteria for a specific source. There are numerous specific industrial facilities and operations for which NSPS have been developed.

.83 Section 107(a) of the Clean Air Act directs that each state "shall have the primary responsibility for assuring air quality within the entire geographic area of such state." Toward that end, the EPA has developed regulations governing state implementation plans pursuant to which states assume Clean Air Act regulation of all facilities within their borders. The act also contains citizen suit provisions that augment government enforcement with citizen enforcement.

.84 Amendments to the Clean Air Act in the 1990s are designed to address issues such as acid rain, urban air pollution, toxic air pollutants, and ozone-depleting chemicals. The major provisions of the Clean Air Act amendments require emissions reduction in the electric utility industry, operating permits for existing facilities, an expansion of the air toxics program to regulate a large number of toxic air pollutants, and new source categories (including smaller sources, such as dry cleaners).

The Clean Water Act

.85 The Clean Water Act provides comprehensive federal regulation of all sources of water pollution. The primary means of obtaining national water quality is through the imposition of National Pollutant Discharge Elimination System (NPDES) permits on all facilities that discharge pollutants into the waters of the United States. The Clean Water Act also utilizes ambient water quality standards to set individual permit limitations and technology-based limitations that, in varying degrees, impose the most cost-effective pollution control technology on dischargers. These include effluent limitations utilizing specified technology, compliance with performance standards, use of specified practices for facility design and operation requirements, use of specified treatment or pretreatment methods, and detailed assessments and evaluations of the impact of proposed discharges. Although technology-based effluent limitations provide minimum discharge standards, the act also requires more stringent water-quality-based limitations to maintain or protect water quality in specific bodies of water.

.86 The Clean Water Act imposes standards on dischargers of conventional (less harmful), toxic (more harmful), and nonconventional pollutants requiring varying degrees of technology. As with the Clean Air Act, the Clean Water Act imposes more stringent standards on facilities whose construction or modification commenced after publication of applicable NSPS. In the promulgation of these standards, the EPA may consider incorporating alternative production processes, operating methods, and in-plant control procedures and other factors. Industrial facilities that discharge into publicly owned treatment works (POTWs) must also meet discharge standards, called pretreatment standards, designed to prevent pollutants from passing through treatment works without adequate treatment. The Clean Water Act also prohibits the discharge of pollutants from nonpermitted point sources. In addition, the EPA has issued regulations requiring permits for storm water discharges from industrial and municipal sources.

.87 The act authorizes cleanup, injunctive, and cost-recovery actions where an imminent hazard is caused by pollution. It also prohibits the discharge of oil and other hazardous substances to the navigable waters of the United States, imposes a criminal penalty for failure to notify the appropriate entity of such discharges, and provides for citizen suits.

.88 If a facility discharges pollutants into navigable waters pursuant to a Clean Water Act permit, it must file a discharge monitoring report (DMR) with the EPA or the appropriate state agency. The DMR gives notice to the authorities of any violations of the permit.

.89 The citizen suit provision of the Clean Water Act permits any citizen to, "commence a civil action . . . against any person . . . alleged to be in violation of an effluent standard or limitation under the Act." Numerous citizen groups have used the citizen suit provision to bring suits against companies based on violations reported in their DMRs.

.90 Most states have assumed enforcement of the act within their borders through state regulations that correspond to the federal regulations discussed above.

Chapter 4

OTHER ENVIRONMENTAL LAWS

.91 There are a variety of other statutes that relate to environmental matters. Two of the more significant ones, the Emergency Planning and Community Right-to-Know Act (EPCRA) and the Toxic Substances Control Act (TSCA), are discussed in this chapter.

The Emergency Planning and Community Right-to-Know Act

.92 EPCRA requires facilities that have certain quantities of *extremely hazardous substances* to notify their state emergency response commission that they are subject to the emergency planning requirements of the Superfund Amendments and Reauthorization Act of 1986 (SARA). They must also report releases to the local emergency planning committee.

.93 In addition, facilities that store chemicals over specified threshold amounts must submit material safety data sheets (MSDSs), or their equivalent, to the appropriate local emergency planning committee, the state emergency response commission, and the fire department with jurisdiction over the facility.

.94 Each facility subject to EPCRA reporting requirements must report the maximum amount of the hazardous chemical present at the facility and provide a description of the storage or use of the chemical and its location at the facility. This inventory report must be submitted to local and state emergency response officials annually.

.95 Section 313 of EPCRA also includes requirements for the annual reporting of releases of certain toxic chemicals that occur as a result of normal business operations (as distinguished from abnormal, emergency releases). Facilities subject to this reporting requirement are required to complete a Toxic Chemical Release Inventory Form (Form R) for specified chemicals. This form also includes source reduction and recycling information required under the Pollution Prevention Act of 1990. All the information described above is made available to the general public.

The Toxic Substances Control Act

.96 The TSCA regulates the manufacture, processing, and distribution in commerce of chemical substances and mixtures capable of adversely affecting health or the environment. The TSCA may require testing and may impose use restrictions, along with requirements for the reporting and retention of information on the risks of TSCA-regulated substances.

.97 The act requires that any person who manufactures, processes, or distributes in commerce a chemical substance or mixture and who obtains information that reasonably supports the conclusion that such substance or mixture presents a substantial risk of injury to health or the environment shall immediately inform the United States Environmental Protection Agency (EPA). The only excuse for not meeting this duty is actual knowledge that the EPA already has been adequately informed. The act also provides that any person who manufactures, processes, or distributes in commerce any chemical substance or mixture shall maintain records of significant adverse reactions to health or the environment alleged to have been caused by the substance or mixture. Records of any adverse health reactions of employees must also be kept. In addition, records of other problems, including those stemming from consumer complaints and reports of occupational diseases or injuries to nonemployees or harm to the environment, must be maintained. Any person who manufactures, processes, or distributes in commerce a listed chemical under this section must submit to the EPA lists of health and safety studies conducted by the person, known to the person, or reasonably ascertainable. TSCA also requires notification of substantial risk to human health or the environment.

.98 Regulations promulgated under the TSCA also govern the manufacturing, processing, and distribution in commerce of polychlorinated biphenyls (PCBs) and asbestos. The PCB regulations contain stringent requirements for the labeling, disposal, storage, and incineration of PCBs and should be reviewed carefully if PCB transformers or other PCB articles are present at a facility. Under the asbestos rules, all persons who manufacture, import, or process asbestos must report quantity, use, and exposure information to the EPA.

Part 2

Accounting Guidance

.99 The objective of Part 2 is to provide accounting guidance with respect to environmental remediation liabilities that relate to pollution arising from some past act, generally as a result of the provisions of Superfund, the corrective-action provisions of the Resource Conservation and Recovery Act, or analogous state and non-United States laws and regulations. The recognition and measurement guidance in this Part should be applied on a site-by-site basis.

Scope

.100 The provisions of this SOP apply to all entities that prepare financial statements in conformity with generally accepted accounting principles applicable to nongovernmental entities.

.101 This SOP provides guidance on accounting for environmental remediation liabilities and is written in the context of operations taking place in the United States; however, the accounting guidance in this SOP is applicable to all the operations of the reporting entity. This SOP does not provide guidance on accounting for pollution control costs with respect to current operations or on accounting for costs of future site restoration or closure that are required upon the cessation of operations or sale of facilities, as such current and future costs and obligations represent a class of accounting issues different from environmental remediation liabilities.[9] This SOP also does not provide guidance on accounting for environmental remediation actions that are undertaken at the sole discretion of management and that are not induced by the threat, by governments or other parties, of litigation or of assertion of a claim or an assessment. Furthermore, this SOP does not provide guidance on recognizing liabilities of insurance companies for unpaid claims or address asset impairment issues.

Effective Date and Transition

.102 The provisions of this SOP are effective for fiscal years beginning after December 15, 1996. Earlier application is encouraged. Although the effect of initially applying the provisions of this SOP will, in individual cases, have elements of a change in accounting principle and of a change in accounting estimate, those elements often will be inseparable. Consequently, the entire effect of initially applying the provisions of this SOP shall be reported as a change in accounting estimate [Accounting Principles Board (APB) Opinion No. 20, *Accounting Changes,* paragraphs 31 through 33]. Restatement of previously issued financial statements is not permitted.

.103 The provisions of this SOP need not be applied to immaterial items.

---

[9] On February 7, 1996, the Financial Accounting Standards Board (FASB) issued an exposure draft of a proposed Statement of Financial Accounting Standards, *Accounting for Certain Liabilities Related to Closure or Removal of Long-Lived Assets.* In June 2001, the FASB issued FASB Statement No. 143, *Accounting for Asset Retirement Obligations*. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 143.]

Chapter 5

RECOGNITION OF ENVIRONMENTAL REMEDIATION LIABILITIES

.104 Recognition has to do with when amounts should be reported in financial statements. This chapter addresses that issue. Measurement, which has to do with the amounts to be reported in financial statements, is addressed in chapter 6. Issues with respect to both recognition and measurement of potential recoveries are addressed in chapter 6.

Overall Approach

.105 FASB Statement No. 5, *Accounting for Contingencies,* requires the accrual of a liability if (*a*) information available prior to issuance of the financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the financial statements and (*b*) the amount of the loss can be reasonably estimated.

.106 An entity's environmental remediation obligation that results in a liability generally does not become determinable as a distinct event, nor is the amount of the liability generally fixed and determinable at a specific point in time. Rather, the existence of a liability for environmental remediation costs becomes determinable and the amount of the liability becomes estimable over a continuum of events and activities that help to frame, define, and verify the liability.

.107 The underlying cause of an environmental remediation liability is the past or present ownership or operation of a site, or the contribution or transportation of waste to a site, at which remedial actions (at a minimum, investigation) must take place. For a liability to be recognized in the financial statements, this underlying cause must have occurred on or before the date of the financial statements.

Probability That a Liability Has Been Incurred

.108 In the context of environmental remediation liabilities, FASB Statement No. 5's probability criterion consists of two elements; the criterion is met if both of the following elements are met on or before the date the financial statements are issued:

- Litigation has commenced or a claim or an assessment has been asserted, or, based on available information, commencement of litigation or assertion of a claim or an assessment is probable. In other words, it has been asserted (or it is probable that it will be asserted) that the entity is responsible for participating in a remediation process because of a past event.
- Based on available information, it is probable that the outcome of such litigation, claim, or assessment will be unfavorable. In other words, an entity will be held responsible for participating in a remediation process because of the past event.

What constitutes commencement or probable commencement of litigation or assertion or probable assertion of a claim or an assessment in relation to particular environmental laws and regulations may require legal determination.

.109 Given the legal framework within which most environmental remediation liabilities arise,[10] AcSEC concluded that there is a presumption that, (*a*) if litigation has commenced or a claim or an assessment has been asserted or if commencement of litigation or assertion of a claim or assessment is probable and (*b*) if the reporting entity is associated with the site—that is, if it in fact arranged for the disposal of hazardous substances found at a site or transported hazardous substances to the site or is the current or previous owner or operator of the site—the outcome of such litigation, claim, or assessment will be unfavorable.

Ability to Reasonably Estimate the Liability

.110 Estimating environmental remediation liabilities involves an array of issues at any point in time. In the early stages of the process, cost estimates can be difficult to derive because of uncertainties about a variety of factors. For this reason, estimates developed in the early stages of remediation can vary significantly; in many cases, early estimates later require significant revision. The following are some of the factors that are integral to developing cost estimates:

- The extent and types of hazardous substances at a site
- The range of technologies that can be used for remediation
- Evolving standards of what constitutes acceptable remediation
- The number and financial condition of other potentially responsible parties (PRPs) and the extent of their responsibility for the remediation (that is, the extent and types of hazardous substances they contributed to the site)

.111 FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss,* concludes that the criterion for recognition of a loss contingency in paragraph 8(b) of FASB Statement No. 5—that "the amount of loss can be reasonably estimated"—is met when a range of loss can be reasonably estimated.

.112 At the early stages of the remediation process, environmental remediation liabilities are not easily quantified, due in part to the uncertainties noted previously. As a practical matter, the range of an estimated remediation liability will be defined and refined as events in the remediation process occur.

.113 An estimate of the range of an environmental remediation liability typically is derived by combining estimates of various components of the liability (such as the costs of performing particular tasks, or amounts allocable to other PRPs but that will not be paid by those other PRPs), which are themselves likely to be ranges. For some of those component ranges, there may be amounts that appear to be better estimates than any other amount within the range; for other component ranges, there may be no such best estimates.

---

[10] See the discussion of strict liability in the "Introduction" in paragraphs .03 through .10.

Accordingly, the overall liability that is recorded may be based on amounts representing the lower end of a range of costs for some components of the liability and best estimates within ranges of costs of other components of the liability.

.114 At the early stages of the remediation process, particular components of the overall liability may not be reasonably estimable. This fact should not preclude the recognition of a liability. Rather, the components of the liability that can be reasonably estimated should be viewed as a surrogate for the minimum in the range of the overall liability. For example, a sole PRP that has confirmed that it sent waste to a Superfund site and agrees to perform a remedial investigation and feasibility study (RI/FS) may know that it will incur costs related to the RI/FS. The PRP, although aware that the total costs associated with the site will be greater than the cost of the RI/FS, may be unable to reasonably estimate the overall liability because of existing uncertainties, for example, regarding the kinds and quantities of hazardous substances present at the site and the technologies available to remediate the site. This lack of ability to quantify the total costs of the remediation effort, however, should not preclude recognition of the estimated cost of the RI/FS. In this circumstance, a liability for the best estimate (or, if no best estimate is available, the minimum amount in the range) of the cost of the RI/FS and for any other component remediation costs that can be reasonably estimated, should be recognized in the entity's financial statements.

.115 Additional complexities arise if other PRPs are involved in an identified site. The costs associated with remediation of a site ultimately will be assigned and allocated among the various PRPs. The final allocation of costs may not be known, however, until the remediation effort is substantially complete, and it may or may not be based on an entity's relative direct responsibility at a site. An entity's final obligation depends, among other things, on the willingness of the entity and other PRPs to negotiate a cost allocation, the results of the entity's negotiation efforts, and the ability of other PRPs associated with the particular site to fund the remediation effort.

.116 Uncertainties relating to the entity's *share* of an environmental remediation liability should not preclude the entity from recognizing its best estimate of its share of the liability or, if no best estimate can be made, the minimum estimate of its share of the liability, if the liability is probable and the total remediation liability associated with the site is reasonably estimable within a range. (See the section entitled "Allocation of Liability Among Potentially Responsible Parties" in paragraphs .133 through .139.)

.117 Changes in estimates of the entity's remediation liability, including revisions to the entity's estimate of its share of the liability due to negotiation or identification of other PRPs, should be accounted for as changes in estimates, in consonance with APB Opinion No. 20, *Accounting Changes.*

Benchmarks

.118 Certain stages of a remediation effort or process and of PRP involvement (see chapter 2 for a discussion of these stages) provide benchmarks that should be considered when evaluating the probability that a loss has been incurred and the extent to which any loss is reasonably estimable. Benchmarks should not, however, be applied in a manner that would delay recognition beyond the point at which FASB Statement No. 5's recognition criteria are met.

.119 The following are recognition benchmarks for a Superfund remediation liability; analogous stages of the RCRA corrective-action process are also indicated. At a minimum, the estimate of a Superfund (or RCRA) remediation liability should be evaluated as each of these benchmarks occurs.

- *Identification and verification of an entity as a PRP.* The RCRA analogue is subjection to RCRA facility permit requirements. Receipt of notification or otherwise becoming aware that an entity may be a PRP compels the entity to action. The entity must examine its records to determine whether it is associated with the site.

  If, based on a review and evaluation of its records and all other available information, the entity determines that it is associated with the site, it is probable that a liability has been incurred. If all or a portion of the liability is reasonably estimable, the liability should be recognized.

  In some cases, an entity will be able to reasonably estimate a range of its liability very early in the process because the site situation is common or similar to situations at other sites with which the entity has been associated (for example, the remediation involves only the removal of underground storage tanks [USTs] in accordance with the UST program). In such cases, the criteria for recognition would be met and the liability should be recognized. In other cases, however, the entity may have insufficient information to reasonably estimate the minimum amount in the range of its liability. In these cases, the criteria for recognition would not be met at this time.

- *Receipt of unilateral administrative order.* The RCRA analogue is, generally, interim corrective measures. An entity may receive a unilateral administrative order compelling it to take a response action at a site or risk penalties of up to four times the cost of the response action. Such response actions may be relatively limited actions, such as the performance of a remedial investigation and feasibility study or performance of a removal action, or they may be broad actions such as remediating a site. Under section 106 of Superfund, the EPA must find that an "imminent and substantial endangerment" exists at the site before such an order may be issued. No preenforcement review by a court is authorized under Superfund if an entity elects to challenge a unilateral administrative order.

  The ability to estimate costs resulting from unilateral administrative orders varies with factors such as site complexity and the nature and extent of the work to be performed. The benchmarks that follow should be considered in evaluating the ability to estimate such costs insofar as the actions required by the unilateral administrative order involve these benchmarks. The cost of performing the requisite work generally is estimable within a range, and recognition of an environmental remediation liability for costs of removal actions generally should not be delayed beyond this point.

- *Participation, as a PRP, in the RI/FS.* The RCRA analogue is RCRA facility investigation. At this stage, the entity and possibly others have been identified as PRPs and have agreed to pay the costs of a study that will investigate the extent of the environmental impact of the release or threatened release of hazardous substances and identify site-remediation alternatives. Further, the total cost of the RI/FS generally is estimable within a reasonable range. In addition, the identification of other PRPs and their agreement to participate in funding the RI/FS typically provides a reasonable basis for determining the entity's allocable share of the cost of the RI/FS. At this stage, additional information may be available regarding the extent of environmental impact and possible remediation alternatives. This additional information, however, may or may not be sufficient to provide a basis for reasonable estimation of the total remediation liability. At a minimum, the entity should recognize its share of the estimated total cost of the RI/FS.

As the RI/FS proceeds, the entity's estimate of its share of the total cost of the RI/FS can be refined. Further, additional information may become available based on which the entity can refine its estimates of other components of the liability or begin to estimate other components. For example, an entity may be able to estimate the extent of environmental impact at a site and to identify existing alternative remediation technologies. An entity may also be able to identify better the extent of its involvement at the site relative to other PRPs; the universe of PRPs may be identified; negotiations among PRPs and with federal and state EPA representatives may occur; and information may be obtained that materially affects the agreed-upon method of remediation.

- *Completion of feasibility study.* The RCRA analogue is corrective measures study. At substantial completion of the feasibility study, both a minimum remediation liability and the entity's allocated share generally will be reasonably estimable.

  The feasibility study should be considered substantially complete no later than the point at which the PRPs recommend a proposed course of action to the EPA. If the entity had not previously concluded that it could reasonably estimate the remediation liability (the best estimate or, if no amount within an estimated range of loss was a better estimate than any other amount in the range, the minimum amount in the range), recognition should not be delayed beyond this point, even if uncertainties, for example, about allocations to individual PRPs and potential recoveries from third parties, remain.

- *Issuance of record of decision (ROD).* The RCRA analogue is approval of corrective measures study. At this point, the EPA has issued its determination specifying a preferred remedy. Normally, the entity and other PRPs have begun, or perhaps completed, negotiations, litigation (see the section, "Impact of Potential Recoveries" in paragraphs .140 and .141), or both for their allocated share of the remediation liability. Accordingly, the entity's estimate normally can be refined based on the specified preferred remedy and a preliminary allocation of the total remediation costs.

- *Remedial Design Through Operation and Maintenance, Including Postremediation Monitoring.* The RCRA analogue is corrective measures implementation. During the design phase of the remediation, engineers develop a better sense of the work to be done and are able to provide more precise estimates of the total remediation cost. Further information likely will become available at various points until the site is delisted, subject only to postremediation monitoring. The entity should continue to refine and recognize its best estimate of its final obligation as this additional information becomes available.

Chapter 6

MEASUREMENT OF ENVIRONMENTAL REMEDIATION LIABILITIES

.120 Measurement has to do with the amounts to be reported in financial statements. This chapter addresses that issue. Recognition, which has to do with when amounts should be reported in financial statements, is addressed in chapter 5.

Overall Approach

.121 Once an entity has determined that it is probable that an environmental remediation liability has been incurred, the entity should estimate that liability based on available information. (Also see the section entitled "Ability to Reasonably Estimate the Liability" in paragraphs .110 through .117.) The estimate of the liability includes the entity's—

a. Allocable share of the liability for a specific site.

b. Share of amounts related to the site that will not be paid by other potentially responsible parties (PRPs) or the government.

.122 Making the appropriate measurement of an entity's remediation liability involves the following issues:

- Costs that should be included in the measurement
- Whether the measurement should consider the effects of expected future events or developments, including discounting considerations
- How the measurement should be affected by the existence of other PRPs
- How the measurement should be affected by potential recoveries

.123 Two kinds of costs that may be involved in environmental remediation situations are not discussed in this chapter. These costs—natural resource damages and toxic torts—are identified in paragraphs .21 and .48 through .50 in chapter 2 of this SOP. Concepts and practices with respect to natural resource damages are still evolving, and third-party suits are too case-specific for general guidance. The accounting guidance with respect to litigation [FASB Statement No. 5, especially paragraphs 33 through 39] should be considered in accounting for and the disclosure of such costs.

Costs to Be Included

.124 The Accounting Standards Executive Committee (AcSEC) concluded that the costs to be included in the measurement are the following:

a. Incremental direct costs of the remediation effort

b. Costs of compensation and benefits for those employees who are expected to devote a significant amount of time directly to the remediation effort, to the extent of the time expected to be spent directly on the remediation effort

The remediation effort is considered on a site-by-site basis; it includes the following:

- Precleanup activities, such as the performance of a remedial investigation, risk assessment, or feasibility study and the preparation of a remedial action plan and remedial designs for a Superfund site, or the performance of a Resource Conservation and Recovery Act of 1976 (RCRA) facility assessment, RCRA facility investigation, or RCRA corrective measures studies
- Performance of remedial actions under Superfund, corrective actions under RCRA, and analogous actions under state and non-United States laws
- Government oversight and enforcement-related activities
- Operation and maintenance of the remedy, including required postremediation monitoring

.125 Examples of incremental direct costs of the remediation effort include the following:

- Fees to outside law firms for work related to determining the extent of remedial actions that are required, the type of remedial actions to be used, or the allocation of costs among PRPs
- Costs related to completing the remedial investigation/feasibility study (RI/FS)
- Fees to outside engineering and consulting firms for site investigations and the development of remedial action plans and remedial designs
- Costs of contractors performing remedial actions
- Government oversight costs and past costs; usually this is based on the cost incurred by the United States Environmental Protection Agency (EPA) or other governmental authority dealing with the site
- The cost of machinery and equipment that is dedicated to the remedial actions and that does not have an alternative use
- Assessments by a PRP group covering costs incurred by the group in dealing with a site
- Costs of operation and maintenance of the remedial action, including the costs of postremediation monitoring required by the remedial action plan

.126 Determining (*a*) the extent of remedial actions that are required, (*b*) the type of remedial actions to be used, and (*c*) the allocation of costs among PRPs is part of the remediation effort, and the costs of making such determinations, including legal costs, are to be included in the measurement of the remediation liability. The costs of services related to routine environmental compliance matters and litigation costs involved with potential recoveries are not part of the remediation effort. Litigation costs involved with potential recoveries should be charged to expense as incurred until realization of the claim for recovery is considered probable and an asset relating to the recovery is recognized, at which time any remaining such legal costs should be considered in the measurement of the recovery. The determination of what legal costs are for potential recoveries rather than for determining the allocation of costs among PRPs will depend on the specific facts and circumstances of each situation.

.127 Examples of employees who may devote a significant amount of time directly to the remediation effort include the following:

- The internal legal staff that is involved with the determination of the extent of remedial actions that are required, the type of remedial action to be used, and the allocation of costs among PRPs
- Technical employees who are involved with the remediation effort

Estimates of the compensation and benefits costs to be incurred for a specific site should be made in connection with the initial recording of the remediation liability and subsequently adjusted at each reporting date to reflect the current estimate of such costs to be incurred in the future.

Effect of Expected Future Events or Developments

.128 The time period necessary to remediate a particular site may extend several years, and the laws governing the remediation process and the technology available to complete the remedial action may change before the remedial action is complete. Additionally, the impact of inflation and productivity improvements can change the estimates of costs to be incurred.

.129 Existing authoritative accounting literature is inconsistent in the treatment of expected future events and developments in currently measuring assets and liabilities. AcSEC concluded that for purposes of measuring environmental remediation liabilities, the measurement should be based on enacted laws and adopted regulations and policies. No changes therein should be anticipated. The impact of changes in laws, regulations, and policies should be recognized when such changes are enacted or adopted.

.130 Remediation technology is changing constantly, and, in many cases, new technologies have resulted in modified costs for environmental remediation. The remedial action plan that is used to develop the estimate of the liability should be based on the methodology that is expected to be approved to complete the remediation effort. Once a methodology has been approved, that methodology and the technology available therefor should be the basis for estimating the liability until it is probable that there will be formal acceptance of a revised methodology.

.131 The measurement of environmental remediation liabilities should be based on the reporting entity's estimate of what it will cost to perform each of the elements of the remediation effort (determined in accordance with paragraphs .124, .126, .129, and .130) when those elements are expected to be performed. Although this approach is sometimes referred to in shorthand fashion as "considering inflation," it does not simply rely on an inflation index[11] and should take into account factors such as productivity improvements due to learning from experience with similar sites and similar remedial action plans. In situations in which it is not practicable to estimate inflation and such other factors because of uncertainty about the timing of expenditures, a current-cost estimate would be the minimum in the range of the liability to be recorded until such time as these cost effects can be reasonably estimated.

.132 The measurement of the liability, or of a component of the liability, may be discounted to reflect the time value of money if the aggregate amount of the liability or component and the amount and timing of cash payments for

---

[11] Cost estimates submitted to the EPA usually include a prescribed inflation factor.

the liability or component are fixed or reliably determinable. (Note that these criteria would not be met in situations in which paragraph .131 permits use of a current-cost estimate.) For this purpose, the amount of the liability or component is the reporting entity's allocable share of the undiscounted joint and several liability for the remediation effort or of a component of that liability. This conclusion is consistent with the guidance in the FASB Emerging Issues Task Force (EITF) Issue 93-5.[12] For entities that file with the Securities and Exchange Commission (SEC), the guidance in Staff Accounting Bulletin (SAB) No. 92 with respect to the discount rate to be used—a rate that will produce an amount at which the environmental liability theoretically could be settled in an arm's-length transaction with a third party and that should not exceed the interest rate on monetary assets that are essentially risk-free and have maturities comparable to that of the environmental liability—should be followed.

Allocation of Liability Among Potentially Responsible Parties

.133 The environmental remediation liability recorded by an entity should be based on that entity's estimate of its allocable share of the joint and several remediation liability. The estimation of an entity's allocable share of the joint and several remediation liability for a site requires an entity to (*a*) identify the PRPs for the site, (*b*) assess the likelihood that other PRPs will pay their full allocable share of the joint and several remediation liability, and (*c*) determine the percentage of the liability that will be allocated to the entity.

Identification of PRPs for a Site

.134 For purposes of estimating an entity's allocable share of the joint and several remediation liability for a site, those parties that are potentially responsible for paying the remediation liability belong to one of the following five PRP categories:

a. *Participating PRPs.* **Participating PRPs** acknowledge their potential involvement with respect to a site. Some may participate in the various administrative, negotiation, monitoring, and remediation activities related to the site. Others may adopt a passive stance and simply monitor the activities and decisions of the more involved PRPs. This passive stance could result from a variety of factors such as the entity's lack of experience, limited internal resources, or relative involvement at a site. This category of PRPs (both active and passive) is also referred to as *players*.

b. *Recalcitrant PRPs.* **Recalcitrant PRPs** adopt a recalcitrant attitude toward the entire remediation effort even though evidence exists

[12] In developing this and certain other guidance in this SOP, AcSEC considered the guidance in EITF Issue 93-5, *Accounting for Environmental Liabilities.* By incorporating the guidance in EITF Issue 93-5 into this SOP and subjecting that guidance to the due process afforded SOPs, including public comment, the conclusions in that EITF consensus are effectively superseded. That guidance, now incorporated in this SOP, occupies a higher position in the hierarchy of sources of generally accepted accounting principles (GAAP) set forth in Statement on Auditing Standards (SAS) No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, than essentially the same guidance as it is presented in EITF Issue 93-5.

that points to their involvement at a site. Some may adopt this attitude out of ignorance of the law; others may do so in the hope that they will be considered a nuisance and therefore ignored. Typically, parties in this category must be sued in order to collect their allocable share of the remediation liability; however, it may be that it is not economical to bring such suits because the parties' assets are limited. This category of PRPs is also referred to as nonparticipating PRPs.

c. *Unproven PRPs.* **Unproven PRPs** have been identified as PRPs by the EPA but do not acknowledge their potential involvement because there is currently no substantive evidence to link them to the site. Some ultimately may be dropped from the PRP list because no substantive evidence is found to link them to the site. For others, substantive evidence eventually may be found that points to their liability. The presentation of that evidence to the entity would result in a reclassification of the party from this category of PRPs (sometimes referred to as "hiding in the weeds") to either the participating PRP or recalcitrant PRP category.

d. *Parties that have not yet been identified as PRPs.* At early stages of the remediation process, the list of PRPs may be limited to a handful of entities that either were significant contributors of waste to the site or were easy to identify, for example, because of their proximity to the site or because of labeled material found at the site. As further investigation of the site occurs and as remediation activities take place, additional PRPs may be identified. Once identified, the additional PRPs would be reclassified from this category to either the participating PRP or recalcitrant PRP category. The total number of parties in this category and their aggregate allocable share of the remediation liability varies by site and cannot be reliably determined prior to the specific identification of individual PRPs. This category of PRPs is sometimes referred to as **unknown PRPs.**

e. *Parties that are PRPs but cannot be located or have no assets.* Some of these parties may be identified by the EPA; others may be identified as the site is investigated or as the remediation is performed. However, no contributions will ever be made by these parties. This category of PRPs is sometimes referred to as the **orphan share.**

Over the duration of a remediation project, individual entities may move from one PRP category to another.

Allocation Process

.135 In estimating its allocable share of the joint and several remediation liability for a site, there is a rebuttable presumption that costs will be allocated only among participating PRPs, as that category exists at the date of issuance of the financial statements.

.136 There are numerous ways to allocate liabilities among PRPs. The four principal factors considered in a typical allocation process are the following:

a. *Elements of fair share.* Examples are the amount of waste based on volume; the amount of waste based on mass, type of waste, toxicity of waste; the length of time the site was used.

b. *Classification of PRP.* Examples are site owner, site operator, transporter of waste, generator of waste.

c. *Limitations on payments.* This characteristic includes any statutory or regulatory limitations on contributions that may be applicable to a PRP. For example, in the reauthorization of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), it has been proposed that the statute limit the contribution of a municipality to 10 percent of the total remediation liability, irrespective of the municipality's allocable share.

d. *Degree of care.* This refers to the degree of care exercised in selecting the site or in selecting a transporter.

.137 PRPs may reach an agreement among themselves as to the allocation method and percentages to be used, they may hire an allocation consultant whose conclusions may or may not be binding, or they may request a nonbinding allocation of responsibility from the EPA. The allocation method or percentages used may change as the remediation project moves forward. An agreement to reallocate the preliminarily allocated liability at the end of the remediation project may exist, or the allocation percentages may be adjusted during the project to reflect prior allocations that subsequently are agreed to have been inequitable.

.138 An entity should determine its allocable share of the joint and several remediation liability for a site based on its estimate of the allocation method and percentage that ultimately will be used for the entire remediation effort. The primary sources for this estimate should be the allocation method and percentages that (*a*) the PRPs have agreed to (whether that agreement applies to the entire remediation effort or to the costs incurred in the current phase of the remediation process), (*b*) has been assigned by a consultant, or (*c*) has been determined by the EPA. If the entity's estimate of the ultimate allocation method and percentage differs significantly from the method or percentage from these primary sources, the entity's estimate should be based on objective, verifiable information. Examples of objective, verifiable information include existing data about the kinds and quantities of waste at the site, experience with allocation approaches in comparable situations, reports of environmental specialists (internal or external), and internal data refuting EPA allegations about the entity's contribution of waste (kind, volume, and so forth) to the site.

.139 An entity should assess the likelihood that each PRP will pay its allocable share of the joint and several remediation liability. That assessment should be based primarily on the financial condition of the participating PRP. This assessment requires the entity to gain an understanding of the financial condition of the other participating PRPs and to update and monitor this information as the remediation progresses. The entity should include in its liability its share of amounts related to the site that will not be paid by other PRPs or the government.

Impact of Potential Recoveries

.140 Potential recoveries of amounts expended for environmental remediation are distinguishable from the allocation of costs subject to joint and several liability, which is discussed in the preceding section, "Allocation of Liability Among Potentially Responsible Parties," in paragraphs .133 through .139. Potential recoveries may be claimed from a number of different parties or sources, including insurers, PRPs other than participating PRPs (see the section entitled "Identification of PRPs for a Site" in paragraph .134), and governmental or third-party funds. The amount of an environmental remediation liability should be determined independently from any potential claim for recovery, and an asset relating to the recovery should be recognized only when realization of the claim for recovery is deemed probable.[13] If the claim is the subject of litigation, a rebuttable presumption exists that realization of the claim is not probable.

.141 Fair value should be used to measure the amount of a potential recovery. The concept of fair value requires consideration of both transaction costs related to the receipt of the recovery (see paragraph .126) and the time value of money. However, the time value of money should not be considered in the determination of the recorded amount of a potential recovery if (*a*) the liability is not discounted and (*b*) the timing of the recovery is dependent on the timing of the payment of the liability. In most circumstances, the point in time at which a liability for environmental remediation is both probable and reasonably estimable will precede the point in time at which any related recovery is probable of realization.

---

[13] The term *probable* is used in this SOP with the specific technical meaning in FASB Statement No. 5, paragraph 3.

Chapter 7
DISPLAY AND DISCLOSURE

.142 This chapter addresses display and disclosure of environmental remediation-related matters in the context of financial statements prepared in conformity with GAAP. Entities subject to the rules and regulations of the SEC must also adhere to various SEC guidance that applies to environmental matters, particularly SAB No. 92; Regulation S-K Rules 101, 103, and 303; and Financial Reporting Release No. 36.

.143 Display issues are discussed in the context of: (*a*) the balance sheet and (*b*) the income statement. Disclosure issues are discussed in the context of: (*a*) accounting principles, (*b*) environmental remediation loss contingencies, (*c*) environmental remediation costs recognized currently, and (*d*) conclusions on loss contingencies and other matters. The disclosures discussed in these contexts are two-tiered: (*a*) disclosures that are required and (*b*) disclosures that are encouraged, but not required. This SOP does not discourage entities from disclosing additional information that they believe will further users' understanding of the entity's financial statements.

Balance Sheet Display

.144 An entity's balance sheet may include several assets that relate to an environmental remediation obligation. Among them are the following:

- Receivables from other PRPs that are not providing initial funding
- Anticipated recoveries from insurers
- Anticipated recoveries from prior owners as a result of indemnification agreements

.145 Chapter 6 addresses an entity's recognition and measurement of potential recoveries related to its environmental remediation liabilities (see the section entitled "Impact of Potential Recoveries" in paragraphs .140 through .141). FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts,* addresses the issue of offsetting environmental liabilities and related recoveries in the balance sheet. FASB Interpretation No. 39 states that a right of setoff exists only when all of the following conditions are met.

- Each of *two* parties owes the other determinable amounts.
- The reporting party has the right to set off the amounts owed with the amount owed the other party.
- The reporting party intends to set off.
- The right of setoff is enforceable at law.

.146 A debtor that has a right of setoff that meets all of these conditions may offset the related asset and liability and report the net amount. It would be rare, if ever, that the facts and circumstances surrounding environmental remediation liabilities and related receivables and potential recoveries would meet all of these conditions.

Income Statement Display

.147 Recording an environmental remediation liability usually results in a corresponding charge to income, and the guidance herein with respect to the income statement refers to such charges. In certain situations, such as those described in FASB EITF Issues 90-8 and 89-13 (see reprints of these EITF Issues in appendix A [paragraph .173]), it may be appropriate to capitalize environmental remediation costs. Also, in conjunction with the initial recording of a purchase business combination or the final estimate of a preacquisition contingency at the end of the allocation period following the guidance in FASB Statement No. 141, *Business Combinations*, the environmental remediation liability is considered in the determination and allocation of the purchase price.* By analogy to the accounting for a purchase business combination, the recording of an environmental remediation liability in conjunction with the acquisition of property would affect the amount recorded as an asset. Finally, the recording of the receipt of property as a contribution received following the guidance in FASB Statement No. 116, *Accounting for Contributions Received and Contributions Made,* should include the effect of any environmental remediation liability that is recorded in conjunction with the contribution. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 141.†]

.148 APB Opinion No. 30, *Reporting the Results of Operations*, as amended by FASB Statements No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*, sets forth the criteria for reporting extraordinary items. The incurrence of environmental remediation obligations is not an event that is unusual in nature. As such, the related costs and recoveries do not meet the criteria for classification as extraordinary. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

.149 Furthermore, it is particularly difficult to substantiate the classification of environmental remediation costs as a component of nonoperating expenses. Because the events underlying the incurrence of the obligation relate to an entity's operations, remediation costs should be charged against operations. Although charging the costs of remediating past environmental impacts against current operations may appear debatable because of the time between the contribution or transportation of waste materials containing hazardous substances to a site and the subsequent incurrence of remediation costs, environmental remediation-related expenses have become a regular cost of conducting economic activity. Accordingly, environmental remediation-related expenses should be reported as a component of operating income in income statements that classify items as operating or nonoperating. Credits arising from recoveries of environmental losses from other parties should be reflected in the same income statement line. Any earnings on assets that are reflected on the entity's financial statements and are earmarked for funding its environmental liabilities should be reported as investment income.

.150 Environmental remediation-related expenses and related recoveries attributable to discontinued operations that were accounted for as such in accordance with APB Opinion No. 30, as amended by FASB Statements No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, and No. 145,

---

* Effective for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 31, 2008, the guidance in FASB Statement No. 141 (revised 2007), *Business Combinations*, should be applied. [Footnote added, May 2008, due to the issuance of FASB Statement No. 141(R).]

† FASB Statement No. 141, *Business Combinations*, supersedes APB Opinion No. 16, *Business Combinations*. [Footnote renumbered due to the issuance of FASB Statement No. 141(R), May 2008.]

Rescission of FASB Statements No. 4, 44, and 64, Amendment to FASB Statement No. 13, and Technical Corrections, should be classified as discontinued operations. [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statements No. 144 and No. 145.]

Disclosure of Accounting Principles

.151 APB Opinion No. 22, *Disclosure of Accounting Policies,* provides guidance regarding accounting principles that should be described in the accounting policies note to the financial statements. APB Opinion 22, paragraph 12, indicates that entities should disclose those accounting principles that "materially affect the determination of financial position or results of operations." Particularly, entities should disclose accounting principles and the methods of applying those principles where alternatives exist.

.152 With respect to environmental remediation obligations, financial statements should disclose whether the accrual for environmental remediation liabilities is measured on a discounted basis. If an entity utilizes present-value measurement techniques, additional disclosures are appropriate, and are discussed further in the section entitled "Recognized Losses and Recoveries of Losses, and Reasonably Possible Loss Exposures" in paragraphs .160 through .164.

.153 Because environmental remediation costs have become increasingly significant, and because the accounting for many environmental loss contingencies often involves subjective judgments, disclosure of accrual benchmarks for remediation obligations is useful to further users' understanding of the entity's financial statements. Accordingly, entities are encouraged, but not required, to disclose the event, situation, or set of circumstances that generally triggers recognition of loss contingencies that arise out of the entity's environmental remediation-related obligations (for example, during or upon completion of the feasibility study).[14] Also, entities are encouraged to disclose their policy concerning the timing of recognition of recoveries.

.154 An illustration of an accounting policies note disclosure for environmental remediation-related costs follows (information that is italicized and enclosed in brackets is not required):

> *Environmental Remediation Costs—[Enterprise A accrues for losses associated with environmental remediation obligations when such losses are probable and reasonably estimable. Accruals for estimated losses from environmental remediation obligations generally are recognized no later than completion of the remedial feasibility study.*
>
> *Such accruals are adjusted as further information develops or circumstances change.]* Costs of future expenditures for environmental remediation obligations are not discounted to their present value. *[Recoveries of environmental remediation costs from other parties are recorded as assets when their receipt is deemed probable.]*

Disclosures for Environmental Remediation Loss Contingencies

.155 FASB Statement No. 5 provides the primary guidance applicable to disclosures of environmental remediation loss contingencies. Paragraphs 9 and 10 of FASB Statement No. 5 state:

---

[14] An accrual benchmark cannot operate in a manner that would delay the accrual of a loss contingency beyond the point required by the provisions of FASB Statement No. 5, *Accounting for Contingencies.*

9. Disclosure of the nature of an accrual made pursuant to the provisions of paragraph 8 [of Statement No. 5], and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading.

10. If no accrual is made for a loss contingency because one or both of the conditions in paragraph 8 are not met, or if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph 8, disclosure of the contingency shall be made when there is at least a reasonable possibility that a loss or an additional loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable. [*footnotes omitted*]

.156 The disclosure requirements of SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties* [section 10,640], also apply to environmental remediation liabilities. SOP 94-6, paragraphs 12 through 14 [section 10,640.12 through .14] state in part:

12. In addition to disclosures required by FASB Statement No. 5 and other accounting pronouncements, this SOP requires disclosures regarding estimates used in the determination of the carrying amounts of assets or liabilities or disclosure of gain or loss contingencies, as described below.

13. Disclosure regarding an estimate should be made when known information available prior to issuance of the financial statements indicates that *both* of the following criteria are met:

- It is at least reasonably possible that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events.
- The effect of the change would be material to the financial statements.

14. The disclosure should indicate the nature of the uncertainty and include an indication that it is at least reasonably possible that a change in the estimate will occur in the near term. If the estimate involves a loss contingency covered by FASB Statement No. 5, the disclosure should also include an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure of the factors that cause the estimate to be sensitive to change is encouraged but not required.

.157 This SOP incorporates the disclosure requirements set forth in EITF Issue 93-5 concerning discounting of environmental remediation liabilities and of assets that are recognized relating to recovery of a portion or all of such a liability.

.158 Uncertainties associated with environmental remediation loss contingencies are pervasive, and they often result in wide ranges of reasonably possible losses with respect to such contingencies. Further, resolution of the uncertainties and the cash-flow effects of the loss contingencies often occur over a span of many years. Accordingly, this SOP encourages, but does not require, additional specific disclosures[15] with respect to environmental remediation loss contingencies that would be useful to further users' understanding of the entity's financial statements.

---

[15] Nothing in this SOP eliminates disclosures that are required by FASB Statement No. 5 or SOP 94-6 [section 10,640].

.159 Paragraphs 9 and 10 of FASB Statement No. 5 provide for disclosures related to three different aspects of loss contingencies: (*a*) recognized losses and reasonably possible (additional) loss exposures, (*b*) probable but not reasonably estimable losses, and (*c*) unasserted claims. Following are the disclosures that are required or encouraged by Statement No. 5, SOP 94-6 [section 10,640], and this SOP for each aspect.

Recognized Losses and Recoveries of Losses, and Reasonably Possible Loss Exposures

.160 If the FASB Statement No. 5 criteria of remote, reasonably possible, and probable were mapped onto a range of likelihood of the existence of a loss spanning from zero to 100 percent, the reasonably possible portion would span a significant breadth of the range starting from remote and ending with probable. The potential outcomes of environmental remediation loss contingencies often span a range of possibilities. If a loss is deemed probable and it is reasonably estimable, it is recognized; however, beyond the recognized losses, there may be additional exposure to loss that is reasonably possible. This often happens in situations in which a range of possible outcomes is identified and, in accordance with FASB Interpretation No. 14, the entity records either a best estimate within the range or the minimum amount in the range, thus leaving unrecorded amounts of additional possible loss for the higher cost outcomes.[16] In other situations, no loss may be probable, but a loss is reasonably possible. There may also be situations where a loss is probable, but no amount that would be material to the entity is reasonably estimable (see the subsequent section entitled "Probable But Not Reasonably Estimable Losses" in paragraphs .165 through .167).

.161 With respect to recorded accruals for environmental remediation loss contingencies and assets for third-party recoveries related to environmental remediation obligations, financial statements should disclose the following:

a. The nature of the accruals, if such disclosure is necessary for the financial statements not to be misleading, and, in situations where disclosure of the nature of the accruals is necessary, the total amount accrued for the remediation obligation, if such disclosure is also necessary for the financial statements not to be misleading

b. If any portion of the accrued obligation is discounted, the undiscounted amount of the obligation and the discount rate used in the present-value determinations

c. If the criteria of SOP 94-6 [section 10,640] are met with respect to the accrued obligation or to any recognized asset for third-party recoveries, an indication that it is at least reasonably possible that a change in the estimate of the obligation or of the asset will occur in the near term

.162 With respect to reasonably possible loss contingencies, including reasonably possible loss exposures in excess of the amount accrued, financial statements should disclose the following:

a. The nature of the reasonably possible loss contingency, that is, a description of the reasonably possible remediation obligation, and an estimate of the possible loss exposure or the fact that such an estimate cannot be made

---

[16] When an overall liability is estimated by combining estimates of various components of the liability, additional possible losses present in the component estimates must be considered in determining an overall additional possible loss.

b. If the criteria of SOP 94-6 [section 10,640] are met with respect to estimated loss (or gain) contingencies, an indication that it is at least reasonably possible that a change in the estimate will occur in the near term

.163 Entities also are encouraged, but not required, to disclose the following:

a. The estimated time frame of disbursements for recorded amounts if expenditures are expected to continue over the long term

b. The estimated time frame for realization of recognized probable recoveries, if realization is not expected in the near term

c. If the criteria of SOP 94-6 [section 10,640] are met with respect to the accrued obligation, to any recognized asset for third-party recoveries, or to reasonably possible loss exposures or disclosed gain contingencies, the factors that cause the estimate to be sensitive to change

d. If an estimate of the probable or reasonably possible loss or range of loss cannot be made, the reasons why it cannot be made

e. If information about the reasonably possible loss or the recognized and additional reasonably possible loss for an environmental remediation obligation related to an individual site is relevant to an understanding of the financial position, cash flows, or results of operations of the entity, the following with respect to the site:

- The total amount accrued for the site
- The nature of any reasonably possible loss contingency or additional loss, and an estimate of the possible loss or the fact that an estimate cannot be made and the reasons why it cannot be made
- Whether other PRPs are involved and the entity's estimated share of the obligation
- The status of regulatory proceedings
- The estimated time frame for resolution of the contingency

.164 The following is an illustration of disclosure for a situation in which—

a. An entity is involved in a single environmental site at which a number of potential outcomes may occur.

b. There is a probable, reasonably estimable recovery from a third party.

c. The entity has accrued for the most likely outcome within a range of possible outcomes for each component.

d. The nature of the amounts accrued for remediation and the related probable recovery are necessary to be disclosed in order for the financial statements not to be misleading.

e. There is a reasonably possible loss exposure in excess of the amount accrued that is material and it is reasonably possible that a change in estimate that would be material to the financial statements will occur in the near term.

Information that is not required is italicized and enclosed in brackets.

Enterprise A has been notified by the United States Environmental Protection Agency (EPA) that it is a potentially responsible party (PRP) under Superfund legislation [*with respect to XYZ site in Sometown, USA, a disposal site previously used in its chemical-fertilizer business. The EPA has also identified ten other PRPs for XYZ. A remedial investigation and feasibility study has been completed, and the results of that study have been forwarded to the EPA. The study indicates a range of viable remedial approaches, but agreement has not yet been reached with the EPA on the final remediation approach. The PRP group has preliminarily agreed to an allocation that sets Enterprise A's share of the cost of remediating XYZ site at 6 percent.*] Enterprise A has accrued its best estimate of its obligation with respect to the site at December 31, 199X, [*which is $10 million and which is included in long-term liabilities and is expected to be disbursed over the next ten years. If certain of the PRPs are ultimately not able to fund their allocated shares or the EPA insists on a more expensive remediation approach,*] Enterprise A could incur additional obligations of up to $7 million. It is reasonably possible that Enterprise A's recorded estimate of its obligation may change in the near term.

With respect to the environmental obligation discussed above, the site was acquired in 1982, and, in connection with that acquisition, the former owner partially indemnified Enterprise A for environmental impacts occurring prior to the acquisition. [*Based on existing documentation indicating the years in which the business shipped wastes to XYZ and the terms of the indemnification in the acquisition agreement,*] Enterprise A [*believes it is probable that it will recover from the prior owners 50 percent of its allocated remediation costs for XYZ and, accordingly,*] has recorded a receivable of $5 million at December 31, 199X.

Probable But Not Reasonably Estimable Losses

.165 An entity often is able to determine early in the remediation process that it is probable it has an obligation, even though the determination of a reasonable estimate of the total cost of that obligation may take additional time (for example, due to the necessity of organizing a PRP group, studying and evaluating the site, or negotiating the scope of the remediation required with the regulatory authorities and other constituencies). In situations in which a probable obligation exists, FASB Statement No. 5 and Interpretation No. 14 require that the best estimate of the loss be recorded or, if the reasonable estimate of the loss is a range and there is no best estimate within the range, that the minimum amount in the range be recorded. However, it may be that there is no best estimate and the minimum amount in the range of the overall liability is not a material amount.

.166 Even though an entity may not be able to establish a reasonable estimate of a material loss or a range of reasonably estimable material loss exposure that must be recorded, in many cases it can determine early in the investigation whether the costs of environmental remediation, in fact, may be material (that is, the upper end of the range of the reasonable estimate of the loss is material). If an entity's probable but not reasonably estimable environmental remediation obligations may be material, the financial statements should disclose the nature of the probable contingency, that is, a description of the remediation obligation, and the fact that a reasonable estimate cannot currently be made. Entities also are encouraged, but not required, to disclose the estimated time frame for resolution of the uncertainty as to the amount of the loss.

.167 An illustration of disclosure of a probable but not yet reasonably estimable environmental remediation loss contingency follows (information that is italicized and enclosed in brackets is not required):

Enterprise A has been notified by the U.S. Environmental Protection Agency (EPA) that it is a potentially responsible party (PRP) with respect to environmental impacts [*identified at the XYZ site in Sometown, USA. Several meetings have been held with the EPA and the other identified PRPs, and a remedial investigation has recently commenced.*] Although a loss is probable, it is not possible at this time to reasonably estimate the amount of any obligation for remediation [*of XYZ site*] that would be material to Enterprise A's financial statements [*because the extent of environmental impact, allocation among the PRPs, remediation alternatives (which could involve no or minimal efforts), and concurrence of the regulatory authorities have not yet advanced to the stage where a reasonable estimate of any loss that would be material to the enterprise can be made*]. [*A reasonable estimate of a material obligation, if any, is expected to be possible in 199X.*]

Unasserted Claims

.168 Whether notification by regulatory authorities in relation to particular environmental laws and regulations constitutes the assertion of a claim is a matter of legal determination. If an entity concludes that it has no current legal obligation to remediate a situation of probable or possible environmental impact, then in accordance with paragraph 10 of FASB Statement No. 5, no disclosure is required. Similarly, future actions of an entity, when they occur, may create a legal obligation to perform environmental remediation; however, no obligation exists currently (for example, if the obligation arises only when and if an entity ceases to operate a facility).[17] However, if an entity is required by existing laws and regulations to report the release of hazardous substances and to begin a remediation study or if assertion of a claim is deemed probable, the matter would represent a loss contingency subject to the disclosure provisions of Statement No. 5, paragraph 10, regardless of a lack of involvement by a regulatory agency.

Other Considerations

.169 For SEC registrants, other financial statement disclosure considerations related to environmental loss exposures are set forth in the SEC's SAB No. 92, Topic 5-Y, Question 5 (see reprint of SAB No. 92 in appendix A [paragraph .173]). Also, Question 7 of the SAB discusses disclosures for site-restoration costs or other environmental exit costs.

Environmental Remediation Costs Recognized Currently

.170 Entities are encouraged but not required to disclose the amount of environmental remediation costs recognized in the income statement in the following detail:

- The amount recognized for environmental remediation loss contingencies in each period
- The amount of any recovery from third parties that is credited to environmental remediation costs in each period

[17] This SOP does not provide guidance on accounting for pollution control costs with respect to current operations or on accounting for costs of future site restoration or closure that are required upon the cessation of operations or sale of facilities.

- The income statement caption in which environmental remediation costs and credits are included

Conclusions on Loss Contingencies and Other Matters

.171 Financial statements may include a *contingency conclusion* that addresses the estimated total unrecognized exposure to environmental remediation and other loss contingencies. Such contingency conclusions may state, for example, that "management believes that the outcome of these uncertainties should not have (or "may have") a material adverse effect on the financial condition, cash flows, or operating results of the enterprise." Alternatively, the disclosure may indicate that the adverse effect could be material to a particular financial statement or to results and cash flows of a quarterly or annual reporting period. Although potentially useful information, these conclusions are not a substitute for the required disclosures of this SOP and of FASB Statement No. 5, such as their requirement to disclose the amounts of material reasonably possible additional losses or to state that such an estimate cannot be made. Also, the assertion that the outcome should not have a material adverse effect must be supportable. If the entity is unable to estimate the maximum end of the range of possible outcomes, it may be difficult to support an assertion that the outcome should not have a material adverse effect.

.172 Entities may wish to provide a description of the general applicability and impact of environmental laws and regulations upon their business and how the existence of such laws and regulations may give rise to loss contingencies for future environmental remediation. Such disclosures often acknowledge the uncertainty of the effect of possible future changes to environmental laws and their application, and they are frequently made on an aggregated basis, considering the entity's total exposures for all its environmental sites.

.173

Appendix A

Current Authoritative Literature

FASB Statement No. 5, *Accounting for Contingencies,* and FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss—An Interpretation of FASB Statement No. 5*

A-1. FASB Statement No. 5, *Accounting for Contingencies,* states in paragraph 8 that—

> An estimated loss from a loss contingency [*paragraph reference omitted*] shall be accrued by a charge to income [*footnote omitted*] if both of the following conditions are met:
>
> *a.* Information available prior to issuance of the financial statements indicates that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. It is implicit in this condition that it must be probable that one or more future events will occur confirming the fact of the loss.
>
> *b.* The amount of loss can be reasonably estimated.

A-2. Although environmental remediation liabilities is not one of the examples discussed in FASB Statement No. 5, environmental remediation liabilities are loss contingencies, and the discussion in paragraphs 33 through 39 of "litigation, claims, and assessments" can be useful in understanding the requirements of FASB Statement No. 5 as they relate to environmental remediation liabilities.

A-3. FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss,* points out in paragraph 2 that the condition in FASB Statement No. 5 that "the amount of loss can be reasonably estimated" does not delay accrual of a loss until only a single amount can be reasonably estimated.

A-4. Paragraph 3 of the Interpretation provides the following guidance concerning accrual of loss contingencies when the reasonable estimate of the loss is a range of amounts.

- When some amount within the range appears at the time to be a better estimate than any other amount within the range, that amount (the best estimate) shall be accrued.
- When no amount within the range is a better estimate than any other amount (within the range), however, the minimum amount in the range shall be accrued.

A-5. Paragraphs 9 and 10 of FASB Statement No. 5 state the following.

> 9. Disclosure of the nature of an accrual [*footnote omitted*] made pursuant to the provisions of paragraph 8, and in some circumstances the amount accrued, may be necessary for the financial statements not to be misleading.
>
> 10. If no accrual is made for a loss contingency because one or both of the conditions in paragraph 8 are not met, or if an exposure to loss exists in excess of the amount accrued pursuant to the provisions of paragraph 8, disclosure of the contingency shall be made when there is at least a reasonable possibility

that a loss or an additional loss may have been incurred.[6] The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

[6] For example, disclosure shall be made of any loss contingency that meets the condition in paragraph 8(a) but that is not accrued because the amount of the loss can not be reasonably estimated (paragraph 8(b)). Disclosure is also required of some loss contingencies that do not meet the condition in paragraph 8(a)—namely, those contingencies for which there is a *reasonable possibility* that a loss may have been incurred even though information may not indicate that it is *probable* that an asset has been impaired or a liability has been incurred at the date of the financial statements.

The disclosure requirements of FASB Statement No. 5 are emphasized in FASB Interpretation No. 14.

FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts*

A-6. FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts,* defines a *right of setoff* as

> a debtor's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying against the debt an amount that the other party owes to the debtor. [*footnote omitted*] A right of setoff exists when all of the following conditions are met:
>
> *a.* Each of *two* parties owes the other determinable amounts.
>
> *b.* The reporting party has the right to set off the amount owed with the amount owed by the other party.
>
> *c.* The reporting party intends to set off.
>
> *d.* The right of setoff is enforceable at law.
>
> A debtor having a valid right of setoff may offset the related asset and liability and report the net amount. [*footnote omitted*]

APB Opinion 20, *Accounting Changes*

A-7. APB Opinion No. 20, *Accounting Changes,* states in paragraph 31 that

> the effect of a change in accounting estimate should be accounted for in (*a*) the period of change if the change affects that period only or (*b*) the period of change and future periods if the change affects both. A change in an estimate should not be accounted for by restating amounts reported in financial statements of prior periods or by reporting pro forma amounts for prior periods.

A-8. APB Opinion No. 20, paragraph 32, states in part:

> A change in accounting estimate that is recognized in whole or in part by a change in accounting principle should be reported as a change in an estimate because the cumulative effect attributable to the change in accounting principle cannot be separated from the current or future effects of the change in estimate . . . .

A-9. APB Opinion No. 20, paragraph 33, also requires or recommends, depending on the estimates involved, disclosure of the effect of significant revisions of estimates if the effect is material.

AICPA SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties*

A-10. SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties* [section 10,640], requires disclosure regarding an estimate when known information available prior to issuance of the financial statements indicates that *both* of the following criteria are met:

- It is at least reasonably possible that the estimate of the effect on the financial statements of a condition, situation, or set of circumstances that existed at the date of the financial statements will change in the near term due to one or more future confirming events.
- The effect of the change would be material to the financial statements.

A-11. The disclosure should indicate the nature of the uncertainty and include an indication that it is at least reasonably possible that a material change in the estimate will occur in the near term. If the estimate involves a loss contingency covered by FASB Statement No. 5, the disclosure should also include an estimate of the possible loss or range of loss or state that such an estimate cannot be made. Disclosure of the factors that cause the estimate to be sensitive to material change is encouraged but not required.

EITF Issue 93-5, *Accounting for Environmental Liabilities*

A-12. The guidance in FASB EITF Issue 93-5, *Accounting for Environmental Liabilities,* has been incorporated into this SOP. Therefore, EITF Issue 93-5 is not reproduced herein.

EITF Issue 90-8, *Capitalization of Costs to Treat Environmental Contamination*

A-13. EITF Issue 90-8, *Capitalization of Costs to Treat Environmental Contamination,* addresses whether "environmental contamination treatment costs" should be capitalized or charged to expense. Issue 90-8 is reprinted below in its entirety.

Dates Discussed: May 31, 1990; July 12, 1990

Reference: FASB Concepts Statement No. 6, *Elements of Financial Statements*

ISSUE

A company incurs costs to remove, contain, neutralize, or prevent existing or future environmental contamination (environmental contamination treatment costs). These costs may be incurred voluntarily or as required by law. They may include a wide range of expenditures, including costs of removal of contamination, such as that caused by leakage from underground storage tanks, costs to acquire tangible property, such as air pollution control equipment, costs of environmental studies, and costs of fines levied under environmental laws.

This Issue does not address (1) when to recognize liabilities related to environmental contamination treatment costs, (2) the measurement of those liabilities, or (3) whether environmental contamination treatment costs that are charged to expense should be reported as an unusual or extraordinary item.

The issue is whether environmental contamination treatment costs should be capitalized or charged to expense.

EITF DISCUSSION

The Task Force reached a consensus that, in general, environmental contamination treatment costs should be charged to expense. Those costs may be capitalized if recoverable but only if any one of the following criteria is met:

1. The costs extend the life, increase the capacity, or improve the safety or efficiency of property owned by the company. For purposes of this criterion, the condition of that property after the costs are incurred must be improved as compared with the condition of that property when originally constructed or acquired, if later.

2. The costs mitigate or prevent environmental contamination that has yet to occur and that otherwise may result from future operations or activities. In addition, the costs improve the property compared with its condition when constructed or acquired, if later.

3. The costs are incurred in preparing for sale that property currently held for sale.

The Task Force also discussed the implication of that consensus on the consensus previously reached on Issue No. 89-13, "Accounting for the Cost of Asbestos Removal." The Task Force affirmed its earlier consensus, noting that capitalization of asbestos treatment costs could be justified under the first criterion.

Exhibit 90-8A provides examples of the application of this consensus.

STATUS

No further EITF discussion is planned.

Capitalization of Costs to Treat Environmental Contamination

Exhibit 90-8A

EXAMPLES OF THE APPLICATION OF THE CONSENSUS ON EITF ISSUE 90-8

Environmental Contamination, Treatments	*Evaluation of Criteria*
1. Tanker Oil Spill:	
A. Clean up waterway and beachfront	1. Costs to clean up the waterway and beachfront are not eligible for consideration under the first criterion because the oil company does not own the property. 2. The cleanup of the waterway and beachfront does not mitigate or prevent a future oil spill from future operations. 3. The waterway and beachfront are not owned assets and, therefore, the third criterion does not apply. *Conclusion:* Costs incurred for cleanup and restoration in connection with the oil spill should be charged to expense.[1]
B. Reinforce tanker's hull to reduce risk of future spill	1. Reinforcing the hull improves the tanker's safety compared to when the tanker was originally constructed or acquired. 2. Reinforcing the hull mitigates the risk that the tanker will experience a similar oil spill during future operations and improves the tanker's safety compared to when the tanker was originally constructed or acquired. *Conclusion:* The costs incurred in connection with reinforcing the tanker's hull may be capitalized under either the first or second criterion.
2. Rusty Chemical Storage Tank:	
A. Remove rust that developed during ownership	1. Removing the rust has not improved the tank compared with its condition when built or acquired. 2. Removing the rust has mitigated the possibility of future leaks. However, removing the rust has not improved the tank compared with its condition when built or acquired.

[1] This consensus does not require that tangible assets acquired to clean a particular spill be charged to expense immediately. Rather, to the extent that those tangible assets have future uses, they may be capitalized and depreciated over their remaining useful lives.

Environmental Contamination, Treatments	*Evaluation of Criteria*
	Conclusion: Rust removal costs should be expensed unless the tank is currently held for sale and the costs were incurred to prepare the tank for sale.
B. Apply rust prevention chemicals	1. The application of rust prevention chemicals has improved the tank's condition compared with its condition when built or acquired. 2. Rust prevention chemicals mitigate the possibility that future rust will cause leaks and also improve the tank's condition compared with its condition when built or acquired. *Conclusion:* The costs of applying the rust prevention chemicals may be capitalized under either the first or second criterion.
3. Air Pollution Caused by Manufacturing Activities:	
A. Acquire and install pollution control equipment	1. The pollution control equipment improves the safety of the plant compared with its condition when built or acquired. 2. The pollution control equipment mitigates or prevents air pollution that has yet to occur but that may otherwise result from future operation of the plant and improves the safety of the plant compared with its condition when built or acquired. *Conclusion:* Costs associated with acquisition and installation of the pollution control equipment may be capitalized under either the first or second criterion.
B. Pay fines for violations of the Clean Air Act	1. Payment of fines does not extend the plant's life, increase its capacity, or improve its efficiency or safety. 2. Payment of fines does not mitigate or prevent pollution that has yet to occur but that may otherwise result from future operation of the plant. *Conclusion:* Fines paid in connection with violations of the Clean Air Act should be charged to expense. Even if the plant is currently held for sale, the fines should be charged to expense because the costs would not have been incurred to prepare the plant for sale.
4. Lead Pipes in Office Building Contaminate Drinking Water:	
A. Remove lead pipes and replace with copper pipes	1. Removing the lead pipes has improved the safety of the

Environmental Contamination, Treatments	*Evaluation of Criteria*
	building's water system compared with its condition when the water system was built or acquired. 2. By removing the lead pipes, the building's owner eliminated an existing environmental problem and prevented any further contamination from that lead. However, by removing the existing pipes, the building's owner has not mitigated or prevented environmental problems yet to occur, if any, from future operation of the building. *Conclusion:* Costs to remove the lead pipes and install copper pipes may be capitalized under the first criterion. The book value of the lead pipes should be charged to expense when removed.
5. Soil Contamination Caused by an Operating Garbage Dump:	
A. Refine soil on dump property	1. The life of a garbage dump is not extended by refining its soil. Further, the condition of the soil after refining will not be improved over its condition when the garbage dump was constructed or acquired. Removal of the toxic waste restores the soil to its original uncontaminated condition. 2. Removal of toxic waste from the soil addresses an existing environmental concern. It also prevents that waste from leaching in the future. However, removing the waste does not mitigate or prevent future operations from creating future toxic waste. The risk will continue regardless of how much of the existing soil is refined. *Conclusion:* Soil refinement costs should be charged to expense unless the garbage dump is currently held for sale and the costs were incurred to prepare the garbage dump for sale.
B. Install liner	1. The liner does not extend the useful life or improve the efficiency or capacity of the garbage dump. However, the liner has improved the garbage dump's safety compared to when the dump was constructed or acquired. 2. The liner addresses an existing and potential future problem. In this example, the garbage dump contains toxic waste from past operations and will likely generate

Environmental Contamination, Treatments	*Evaluation of Criteria*
	toxic waste during future operations. The liner partly addresses the existing environmental problem by preventing future leaching of existing toxic waste into the soil. The liner also mitigates or prevents leaching of toxic waste that may result from garbage dumping in a future period and has improved the garbage dump's safety compared to when the dump was constructed or acquired. *Conclusion:* The liner may be capitalized under either the first or second criterion.
6. Water Well Contamination Caused by Chemicals That Leaked into Wells Containing Water That Will Be Used in Future Beer Production:	
A. Neutralize water in wells	1. The treatment does not extend the life of the wells, increase their capacity, or improve efficiency. The condition of the water is not safer after the treatment compared to when the wells were initially acquired. 2. By neutralizing the water, the possibility of future contamination of the wells from future operations has not been mitigated or prevented. *Conclusion:* Costs incurred to neutralize well water should be charged to expense unless the wells were held for sale and the costs were incurred to prepare the wells for sale.
B. Install water filters	1. The water filters improve the safety of the wells compared with their uncontaminated state when built or acquired. 2. The water filters address future problems that may result from future operations. Since the water filters are effective in filtering environmental contamination, they mitigate the effect of spilling new contaminants into the wells during future operations. In addition, the water filters represent an improvement compared with the wells' original condition without water filters. *Conclusion:* The water filtering system may be capitalized under either the first or the second criterion.
7. Underground Gasoline Storage Tanks Leak and Contaminate the Company's Property:	

Environmental Contamination, Treatments	*Evaluation of Criteria*
A. Refine soil	1. Soil refinement does not extend the useful life, increase the capacity, or improve the efficiency or safety of the land relative to its unpolluted state when acquired. 2. By refining the contaminated soil, the oil company has addressed an existing problem. However, the company has not mitigated or prevented future leaks during future operations. *Conclusion:* Soil refining costs should be charged to expense unless the property is currently held for sale and the costs were incurred to prepare the property for sale.
B. Encase tanks so as to prevent future leaks from contaminating surrounding soil	1. In some cases, encasement may increase the life of the tanks because of their increased resistance to corrosion, leaking, etc. In other situations, the treatment does not increase the life of the tanks. However, the encasement has improved the tanks' safety compared with their condition when built or acquired. 2. Encasement has mitigated or prevented future leakage and soil contamination that might otherwise result from future operations. In addition, the encasement has improved the tanks' safety compared with their condition when built or acquired. *Conclusion:* The cost of encasement may be capitalized under either the first or the second criterion.
8. Air in Office Building Contaminated with Asbestos Fibers:	
A. Remove asbestos	1. Removal of the asbestos improves the building's safety over its original condition since the environmental contamination (asbestos) existed when the building was constructed or acquired. 2. By removing the asbestos, the building's owner has eliminated an existing environmental problem and has prevented any further contamination from that asbestos. However, by removing the existing asbestos, the building's owner has not mitigated or prevented new environmental problems, if any, that might result from future operation of the building. *Conclusion:* Asbestos removal costs may be capitalized as a betterment under the first criterion.

EITF Issue 89-13, *Accounting for the Cost of Asbestos Removal*

A-14. EITF Issue 89-13, *Accounting for the Cost of Asbestos Removal,* is reprinted below in its entirety.

Date Discussed: October 26, 1989

APB Opinion No. 30, *Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*

AICPA Accounting Interpretation 1, *Illustration of the Application of APB Opinion No. 30*

ISSUE

Various federal, state, and local laws require removal or containment of "dangerous asbestos" in buildings and regulate the manner in which the asbestos is removed or contained. A property owner incurs costs to remove or contain ("treat") asbestos in compliance with those laws.

The issues are:

1. Whether the costs incurred to treat asbestos when a property with a *known* asbestos problem is acquired should be capitalized or charged to expense
2. Whether the costs incurred to treat asbestos in an existing property should be capitalized or charged to expense
3. If it is deemed appropriate to charge asbestos treatment costs to expense, whether they should be reported as an extraordinary item

EITF DISCUSSION

The Task Force reached a consensus on the first issue that costs incurred to treat asbestos within a reasonable time period after a property with a known asbestos problem is acquired should be capitalized as part of the cost of the acquired property subject to an impairment test for that property.

The Task Force reached a consensus on the second issue that costs incurred to treat asbestos may be capitalized as a betterment subject to an impairment test for that property. When costs are incurred in anticipation of a sale of property, they should be deferred and recognized in the period of the sale to the extent that those costs can be recovered from the estimated sales price.

The Task Force reached a consensus on the third issue that asbestos treatment costs that are charged to expense are not extraordinary items under Opinion 30.

The SEC Observer noted that regardless of whether asbestos treatment costs are capitalized or charged to expense, SEC registrants should disclose significant exposure for asbestos treatment costs in "Management's Discussion and Analysis."

STATUS

No further EITF discussion is planned. A related issue was discussed in Issue No. 90-8, "Capitalization of Costs to Treat Environmental Contamination." The Task Force affirmed the consensus above, noting that capitalization of asbestos treatment costs could be justified under the consensus in Issue 90-8.

SEC Staff Accounting Bulletin No. 92, *Accounting and Disclosures Relating to Loss Contingencies*

A-15. For SEC registrants, SAB No. 92, *Accounting and Disclosures Relating to Loss Contingencies,* provides additional accounting, display, and disclosure guidance. SAB No. 92 is reproduced below.

STAFF ACCOUNTING BULLETIN NO. 92

The staff hereby adds Section Y to Topic 5 of the Staff Accounting Bulletin Series. Topic 5-Y provides guidance regarding the accounting and disclosures relating to loss contingencies. In addition, the staff hereby adds Question 7 to Topic 2-A and adds Section F to Topic 10. Question 7 of Topic 2-A discusses loss contingencies assumed in a business combination accounted for as a purchase. Topic 10-F discusses the presentation by utility companies of liabilities for environmental costs.

TOPIC 5: MISCELLANEOUS ACCOUNTING

* * * * *

Y. Accounting and disclosures relating to loss contingencies.

Facts: A registrant believes it may be obligated to pay material amounts as a result of product or environmental liability. These amounts may relate to, for example, damages attributed to the registrant's products or processes, clean-up of hazardous wastes, reclamation costs, fines, and litigation costs. The registrant may seek to recover a portion or all of these amounts by filing a claim against an insurance carrier or other third parties.

Paragraph 8 of *Statement of Financial Accounting Standards No. 5,* "Accounting for Contingencies," ("SFAS 5") states that an estimated loss from a loss contingency shall be accrued by a charge to income if it is probable that a liability has been incurred and the amount of the loss can be reasonably estimated. The Emerging Issues Task Force ("EITF") of the Financial Accounting Standards Board reached a consensus on EITF Issue 93-5, "Accounting for Environmental Liabilities," that an environmental liability should be evaluated independently from any potential claim for recovery. Under that consensus, any loss arising from the recognition of an environmental liability should be reduced by a potential claim for recovery only when that claim is probable[1] of realization. The EITF also reached a consensus that discounting an environmental liability for a specific clean-up site to reflect the time value of money is appropriate only if the aggregate amount of the obligation and the amount and timing of the cash payments are fixed or reliably determinable for that site. Further, any asset that is recognized relating to a claim for recovery of a liability that is recognized on a discounted basis also should be discounted to reflect the time value of money.

Because uncertainty regarding the alternative methods of presenting in the balance sheet the amounts recognized as contingent liabilities and claims for recovery from third parties was not resolved by the EITF and current disclosure practices remain diverse, the staff is publishing its interpretation of the current accounting literature and disclosure requirements to serve as guidance for public companies. The AICPA's Accounting Standards Executive Committee has appointed a task force to address environmental concerns. The staff encourages efforts by the profession to develop comprehensive guidance applicable to the accounting and financial statement disclosures relating to environmental matters.

Question 1: Does the staff believe that it is appropriate to offset in the balance sheet a claim for recovery that is probable of realization against a probable contingent liability, that is, report the two as a single net amount on the face of the balance sheet?

Interpretive Response: Not ordinarily. The staff believes that separate presentation of the gross liability and related claim for recovery in the balance sheet most fairly presents the potential consequences of the contingent claim on the company's resources and is the preferable method of display. Recent reports of litigation over insurance policies' coverage of product and environmental liabilities and financial failures in the insurance industry indicate that there are significant uncertainties regarding both the timing and the ultimate realization of claims made to recover amounts from insurance carriers and other third parties. The risks and uncertainties associated with a registrant's contingent liability are separate and distinct from those associated with its claim for recovery from third parties.

Separate presentation of the gross liability and the claim for recovery is consistent with the recent consensus of the EITF, which concluded that the amounts of the contingent liability and any claim for recovery should be estimated and evaluated independently. Furthermore, accounting guidance generally proscribes the offsetting of assets and liabilities except where a right of setoff exists.[2] This general proscription was strengthened by the recent issuance of *Financial Accounting Standards Board Interpretation No. 39,* "Offsetting of Amounts Relating to Certain Contracts," ("FIN 39"), which is effective for financial statements issued for periods beginning after December 15, 1993. The guidance in that interpretation indicates that the prohibition on setoff in the balance sheet should be applied more comprehensively than previously may have been the practice.

It is the staff's view that presentation of liabilities net of claims for recovery will not be appropriate after the provisions of FIN 39 are required to be applied in financial statements. In the interim, registrants should ensure that notes to the financial statements include information necessary to an understanding of the material uncertainties affecting both the measurement of the liability and the realization of recoveries. The staff believes these disclosures should include the gross amount of any claims for recovery that are netted against the liability.

Question 2: If a registrant is jointly and severally liable with respect to a contaminated site but there is a reasonable basis for apportionment of costs among responsible parties, must the registrant recognize a liability with respect to costs apportioned to other responsible parties?

Interpretive Response: No. However, if it is probable that other responsible parties will not fully pay costs apportioned to them, the liability that is recognized by the registrant should include the registrant's best estimate, before consideration of potential recoveries from other parties, of the additional costs that the registrant expects to pay. Discussion of uncertainties affecting the registrant's ultimate obligation may be necessary if, for example, the solvency of one or more parties is in doubt or responsibility for the site is disputed by a party. A note to the financial statements should describe any additional loss that is reasonably possible.

Question 3: Estimates and assumptions regarding the extent of environmental or product liability, methods of remedy, and amounts of related costs frequently prove to be different from the ultimate outcome. How do these uncertainties affect the recognition and measurement of the liability?

Interpretive Response: The measurement of the liability should be based on currently available facts, existing technology, and presently enacted laws and regulations, and should take into consideration the likely effects of inflation and other societal and economic factors. Notwithstanding significant uncertainties, management may not delay recognition of a contingent liability until only a single amount can be reasonably estimated. If management is able to determine that the amount of the liability is likely to fall within a range and no amount within that range can be determined to be the better estimate, the registrant should recognize the minimum amount of the range pursuant to *Financial Accounting Standards Board Interpretation No. 14,* "Reasonable Estimation of the Amount of a Loss" ("FIN 14"). The staff believes that recognition of a loss equal to the lower limit of the range is necessary even if the upper limit of the range is uncertain.

In measuring its environmental liability, a registrant should consider available evidence including the registrant's prior experience in remediation of contaminated sites, other companies' clean-up experience, and data released by the Environmental Protection Agency or other organizations. Information necessary to support a reasonable estimate or range of loss may be available prior to the performance of any detailed remediation study. Even in situations in which the registrant has not determined the specific strategy for remediation, estimates of the costs associated with the various alternative remediation strategies considered for a site may be available or reasonably estimable. While the range of costs associated with the alternatives may be broad, the minimum clean-up cost is unlikely to be zero. As additional information becomes available, changes in estimates of the liability should be reported in the period that those changes occur in accordance with paragraphs 31–33 of *Accounting Principles Board Opinion No. 20,* "Accounting Changes."

Question 4: Assuming that the registrant's estimate of an environmental or product liability meets the conditions set forth in the consensus on EITF Issue 93-5 for recognition on a discounted basis, what discount rate should be applied?

Interpretive Response: The staff believes that the rate used to discount the cash payments should be the rate that will produce an amount at which the environmental or product liability could be settled in an arm's-length transaction with a third party. If that rate is not readily determinable, the discount rate used to discount the cash payments should not exceed the interest rate on monetary assets that are essentially risk free[3] and have maturities comparable to that of the environmental or product liability.

If the liability is recognized on a discounted basis to reflect the time value of money, the notes to the financial statements should, at a minimum, include disclosures of the discount rate used, the expected aggregate undiscounted amount, expected payments for each of the five succeeding years and the aggregate amount thereafter, and a reconciliation of the expected aggregate undiscounted amount to amounts recognized in the statements of financial position. Material changes in the expected aggregate amount since the prior balance sheet date, other than those resulting from pay-down of the obligation, should be explained.

Question 5: What financial statement disclosures should be furnished with respect to recorded and unrecorded product or environmental liabilities?

Interpretive Response: Paragraphs 9 and 10 of SFAS 5 identify disclosures regarding loss contingencies that generally are furnished in notes to financial statements. The staff believes that product and environmental liabilities typically are of such significance that detailed disclosures regarding the judgments and assumptions underlying the recognition and measurements of the liabilities are necessary to prevent the financial statements from being misleading and to inform readers fully regarding the range of reasonably possible outcomes that could have a material effect on the registrant's financial condition, results of operations, or liquidity. Examples of disclosures that may be necessary include:

- Circumstances affecting the reliability and precision of loss estimates.
- The extent to which unasserted claims are reflected in any accrual or may affect the magnitude of the contingency.
- Uncertainties with respect to joint and several liability that may affect the magnitude of the contingency, including disclosure of the aggregate expected cost to remediate particular sites that are individually material if the likelihood of contribution by the other significant parties has not been established.
- Disclosure of the nature and terms of cost-sharing arrangements with other potentially responsible parties.
- The extent to which disclosed but unrecognized contingent losses are expected to be recoverable through insurance, indemnification arrangements, or other sources, with disclosure of any material limitations of that recovery.
- Uncertainties regarding the legal sufficiency of insurance claims or solvency of insurance carriers.[4]
- The time frame over which the accrued or presently unrecognized amounts may be paid out.
- Material components of the accruals and significant assumptions underlying estimates.

Registrants are cautioned that a statement that the contingency is not expected to be material does not satisfy the requirements of SFAS 5 if there is at least a reasonable possibility that a loss exceeding amounts already recognized may have been incurred and the amount of that additional loss would be material to a decision to buy or sell the registrant's securities. In that case, the registrant must either (*a*) disclose the estimated additional loss, or range of loss, that is reasonably possible, or (*b*) state that such an estimate cannot be made.

Question 6: What disclosures regarding loss contingencies may be necessary outside the financial statements?

Interpretive Response: Registrants should consider the requirements of Items 101 (Description of Business), 103 (Legal Proceedings), and 303 (Management's Discussion and Analysis) of Regulations S-K and S-B. The Commission has issued two interpretive releases that provide additional guidance with respect to these items.[5] In a 1989 interpretive release, the Commission noted that the availability of insurance, indemnification, or contribution may be relevant in determining whether the criteria for disclosure have been met with respect to a contingency.[6] The registrant's assessment in this regard should include consideration of facts such as the periods in which claims for recovery may be realized, the likelihood that the claims may be contested, and the financial condition of third parties from which recovery is expected.

Disclosures made pursuant to the guidance identified in the preceding paragraph should be sufficiently specific to enable a reader to understand the scope of the contingencies affecting the registrant. For example, a registrant's discussion of historical and anticipated environmental expenditures should, to the extent material, describe separately (*a*) recurring costs associated with managing hazardous substances and pollution in on-going operations, (*b*) capital expenditures to limit or monitor hazardous substances or pollutants, (*c*) mandated expenditures to remediate previously contaminated sites, and (*d*) other infrequent or nonrecurring clean-up expenditures that can be anticipated but which are not required in the present circumstances. Disaggregated disclosure that describes accrued and reasonably likely losses with respect to particular environmental sites that are individually material may be necessary for a full understanding of these contingencies. Also, if management's investigation of potential liability and remediation cost is at different stages with respect to individual sites, the consequences of this with respect to amounts accrued and disclosed should be discussed.

Examples of specific disclosures typically relevant to an understanding of historical and anticipated product liability costs include the nature of personal injury or property damages alleged by claimants, aggregate settlement costs by type of claim, and related costs of administering and litigating claims. Disaggregated disclosure that describes accrued and reasonably likely losses with respect to particular claims may be necessary if they are individually material. If the contingency involves a large number of relatively small individual claims of a similar type, such as personal injury from exposure to asbestos, disclosure of the number of claims filed for each period presented, the number of claims dismissed, settled, or otherwise resolved for each period, and the average settlement amount per claim may be necessary. Disclosures should address historical and expected trends in these amounts and their reasonably likely effects on operating results and liquidity.

Question 7: What disclosures should be furnished with respect to site restoration costs or other environmental exit costs?

Interpretive Response: The staff believes that material liabilities for site restoration, post-closure, and monitoring commitments, or other exit costs that may occur on the sale, disposal, or abandonment of a property should be disclosed in the notes to the financial statements. Appropriate disclosures generally would include the nature of the costs involved, the total anticipated cost, the total costs accrued to date, the balance sheet classification of accrued amounts, and the range or amount of reasonably possible additional losses.

If an asset held for sale or development will require remediation to be performed by the registrant prior to development, sale, or as a condition of sale, a note to the financial statements should describe how the necessary expenditures are considered in the assessment of the asset's net realizable value. Additionally, if the registrant may be liable for remediation of environmental damage relating to assets or businesses previously disposed, disclosure should be made in the financial statements unless the likelihood of a material unfavorable outcome of that contingency is remote. The registrant's accounting policy with respect to such costs should be disclosed in accordance with *Accounting Principle Board Opinion No. 22,* "Disclosure of Accounting Policies."

Question 8: A registrant expects to incur site restoration costs, post-closure and monitoring costs, or other environmental exit costs at the end of the useful life of the asset. Would the staff object to the registrant's proposal to accrue the exit costs over the useful life of the asset?

Interpretive Response: No. This is an established accounting practice in some industries. In other industries, the staff will raise no objection to that accounting provided that the criteria in paragraph 8 of SFAS 5 are met. The staff acknowledges that in some circumstances the use of the asset in operations gives rise to growing exit costs that represent a probable liability. The accrual of the liability should be recognized as an expense in accordance with the consensus on EITF Issue 90-8, "Capitalization of Costs to Treat Environmental Contamination." See interpretive responses to questions 7 and 8 for guidance on appropriate disclosures.

TOPIC 2: BUSINESS COMBINATIONS

* * * * *

A: Purchase Method

7. Loss contingencies assumed in a business combination.

Facts: A registrant acquires a business enterprise in a transaction accounted for by the purchase method. In connection with the acquisition, the acquiring company assumes certain contingent liabilities of the acquired company.

Question: How should the acquiring company account for and disclose contingent liabilities that have been assumed in a business combination?

Interpretive Response: In accordance with *Accounting Principles Board Opinion No. 16,* "Business Combinations," the acquiring company should allocate the cost of an acquired company to the assets acquired and liabilities assumed based on their fair values at the date of acquisition. With respect to contingencies for which a fair value is not determinable at the date of acquisition, the guidance of *Statement of Financial Accounting Standards No. 5,* "Accounting for Contingencies" and *Financial Accounting Standards Board Interpretation No. 14,* "Reasonable Estimation of the Amount of a Loss" should be applied. If the registrant is awaiting additional information that it has arranged to obtain for the measurement of a contingency during the allocation period specified by *Statement of Financial Accounting Standards No. 38,* "Accounting for Preacquisition Contingencies of Purchased Enterprises," the staff believes that the registrant should disclose that the purchase price allocation is preliminary. In that circumstance, the registrant should describe the nature of the contingency and furnish other available information that will enable a reader to understand its potential effects on the final allocation and on post-acquisition operating results. Management's Discussion and Analysis should include appropriate disclosure regarding any unrecognized preacquisition contingency and its reasonably likely effects on operating results, liquidity, and financial condition.

The staff believes that the allocation period should not extend beyond the minimum reasonable period necessary to gather the information that the registrant has arranged to obtain for purposes of the estimate. Since an allocation period usually should not exceed one year, registrants believing that they will require a longer period are encouraged to discuss their circumstances with the staff. If it is unlikely that the liability can be estimated on the basis of information known to be obtainable at the time of the initial purchase price allocation, the allocation period should not be extended with respect to that liability. An adjustment to the contingent liability after the expiration of the allocation period would be recognized as an element of net income.

TOPIC 10: UTILITY COMPANIES

* * * * *

F. Presentation of Liabilities for Environmental Costs

Facts: A public utility company determines that it is obligated to pay material amounts as a result of an environmental liability. These amounts may relate to, for example, damages attributed to clean-up of hazardous wastes, reclamation costs, fines, and litigation costs.

Question 1: May a rate-regulated enterprise present on its balance sheet the amount of its estimated liability for environmental costs net of probable future revenue resulting from the inclusion of such costs in allowable costs for rate-making purposes?

Interpretive Response: No. *Statement of Financial Accounting Standards No. 71,* "Accounting for the Effects of Certain Types of Regulation," ("SFAS 71") specifies the conditions under which rate actions of a regulator can provide reasonable assurance of the existence of an asset. The staff believes that environmental costs meeting the criteria of paragraph 9[7] of SFAS 71 should be presented on the balance sheet as an asset and should not be offset against the liability. Contingent recoveries through rates that do not meet the criteria of paragraph 9 should not be recognized either as an asset or as a reduction of the probable liability.

Question 2: May a rate-regulated enterprise delay recognition of a probable and estimable liability for environmental costs which it has incurred at the date of the latest balance sheet until the regulator's deliberations have proceeded to a point enabling management to determine whether this cost is likely to be included in allowable costs for rate-making purposes?

Interpretive Response: No. *Statement of Financial Accounting Standards No. 5,* "Accounting for Contingencies," states that an estimated loss from a loss contingency shall be accrued by a charge to income if it is probable that a liability has been incurred and the amount of the loss can be reasonably estimated. The staff believes that actions of a regulator can affect whether an incurred cost is capitalized or expensed pursuant to SFAS 71, but the regulator's actions cannot affect the timing of the recognition of the liability.

---

[1] Paragraph 3 of SFAS 5 defines probable as "likely to occur."

[2] Paragraph 7 of Accounting Principles Board Opinion No. 10, "Omnibus Opinion." Also, FASB Technical Bulletin 88-2, "Definition of a Right of Setoff."

[3] As described in paragraph 4(a) of *Statement of Financial Accounting Standards No. 76*, "Extinguishment of Debt."

[4] The staff believes there is a rebuttable presumption that no asset should be recognized for a claim for recovery from a party that is asserting that it is not liable to indemnify the registrant. Registrants that overcome that presumption should disclose the amount of recorded recoveries that are being contested and discuss the reasons for concluding that the amount is probable of recovery.

[5] See Securities Act Release No. 6130 (September 27, 1979) and Financial Reporting Release No. 36 (May 18, 1989).

[6] See, for example, footnote 30 of Financial Reporting Release No. 36 (footnote 17 of Section 501.02 of the Codification of Financial Reporting Policies).

[7] Paragraph 9 of SFAS 71 requires a rate-regulated enterprise to capitalize all or part of an incurred cost that would otherwise be charged to expense if it is probable that future revenue will be provided to recover the previously incurred cost from inclusion of the costs in allowable costs for rate-making purposes.

GASB Literature

A-16. Although this SOP does not include state and local governmental entities in its scope,[18] guidance issued by the GASB may be relevant to some reporting entities applying this SOP.

---

[18] Under the provisions of Governmental Accounting Standards Board (GASB) Statement No. 20, *Accounting and Financial Reporting for Proprietary Funds and Other Governmental Entities That Use Proprietary Fund Accounting,* paragraph 7, proprietary activities may apply *all* FASB Statements and Interpretations issued after November 30, 1989, *except for* those that conflict with or contradict GASB pronouncements. Paragraph 33 of the Basis For Conclusions of that Statement explains that, for proprietary activities that apply paragraph 7, an AICPA SOP or Industry Audit and Accounting Guide that does not include governmental entities in its scope but that has been cleared by the FASB would be considered category (b) guidance under SAS No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, issued by the Auditing Standards Board (ASB) of the AICPA.

A-17. GASB Statement No. 18, *Accounting for Municipal Solid Waste Landfill Closure and Postclosure Care Costs*, which is effective for financial statements for periods beginning after June 15, 1993, applies to state and local governmental entities that are required by federal, state, or local laws or regulations to incur closure and postclosure care costs on landfills.

A-18. Under GASB Statement No. 18, the estimated total current cost of a landfill closure and postclosure care includes the following (measured in terms of current dollars):

- Cost of equipment expected to be installed and facilities expected to be constructed near or after the date the landfill stops accepting solid waste and during the postclosure period.
- Cost of the final cover (capping) expected to be applied near or after the date the landfill stops accepting solid waste.
- Cost of monitoring and maintaining the expected usable landfill area during the postclosure period.

A-19. A portion of the estimated total current cost of a landfill closure and postclosure care is required to be recognized as an expense and as a liability in each period the landfill accepts solid waste, and recognition is to be completed by the time the landfill stops accepting waste. The cumulative effect of changes in the estimate of the current cost of landfill closure and postclosure care (including the impact of inflation) is recognized in the period of the change.

Appendix B

Remediation Liability Case Study

B-1. *The following case study illustrates the application of the recognition and measurement guidance provided in this SOP; it does not illustrate all disclosure requirements set forth in this SOP. The case study is not intended to be used to evaluate financial statements issued prior to the effective date of this SOP.*

Typical Superfund Off-Site Scenario

Prior to 1980, the XYZ Manufacturing Company contracted with a state-licensed waste hauling contractor to remove specified, nonhazardous solid and liquid industrial waste from one of its plants for disposal off-site at a state-licensed disposal facility. A purchase order was let, and the work was performed. The contractor complied with all applicable laws and regulations, and monthly reports were filed with appropriate state environmental agencies.

1986

In 1986, the company received an information request from the United States Environmental Protection Agency (EPA) pursuant to section 104 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). The information request stated that the EPA believed that hazardous substances at a site, now listed by the EPA on its National Priorities List (NPL), were generated at XYZ's plant. XYZ was named as a potentially responsible party (PRP) and was directed by the EPA, under penalty of law, to search its records exhaustively and answer a series of questions possibly implicating it directly to the site, or indirectly by its having used one or more transporters the EPA said it was also investigating.

XYZ searched its records as directed and determined late in 1986 that it had, in fact, contributed hazardous substances to the site. XYZ could not, however, determine how significant the hazardous substances it had sent to the site were in relation to the total population of hazardous substances at the site. The minimum remediation cost, including a minimum amount of legal fees, that XYZ was able to estimate was not material to its financial statements. XYZ was able, however, to determine that it was reasonably possible that its ultimate liability could be material.

1987

The EPA identified a number of waste generators, transporters, and site owner/operators as likely PRPs. The identified PRPs were invited to a meeting at which government lawyers requested that one or more of the PRPs voluntarily perform a remedial investigation/feasibility study (RI/FS) to evaluate existing site conditions (including a public health and ecological risk assessment) and to develop a proposed array of remedial alternatives from which the EPA would select a remedy and demand that it be implemented. Standardized EPA terms and conditions, stipulated penalty provisions, and indeterminate scope of work elements inhibited voluntary agreement among the PRPs, and so a consent decree was not achieved.

1988

The EPA asserted the existence of "imminent and substantial endangerment" at the site early in 1988 under section 106 of CERCLA, and it issued a unilateral administrative order to the PRP with the deepest pockets—XYZ—to undertake the RI/FS.

Because treble damages are authorized under section 106 of CERCLA, XYZ agreed to conduct the RI/FS specified in the order and demanded that other identified PRPs participate in the effort. XYZ initially estimated the cost that would be incurred to perform the RI/FS to be between $1 million and $2 million. Based on the limited information that was available about the site, information that XYZ had about its contribution to the site, and the number and financial condition of other PRPs, XYZ initially estimated that its ultimate share of this cost would prove to be in the range of 20 percent to 50 percent. XYZ also estimated that it would incur legal costs related to the remediation effort of $200,000 to $2 million in addition to any legal costs that might be incurred by any PRP group that might be formed. No amounts within any of these ranges were considered to be better estimates than any other amounts within any of these ranges. Because of a lack of information about the type and extent of the remediation effort that could be required, no range of cost of the overall remediation effort could be developed at this time.

Under threat of a contribution lawsuit by XYZ, a PRP group was formed late in 1988. The PRP group had three objectives: (1) to implement the requirements of the unilateral administrative order in the most cost-effective and scientifically valid way, (2) to raise money and allocate costs among the PRPs willing to perform the work based on the types and relative quantities of wastes shipped to the site or another agreed-upon formula, and (3) to recover costs from nonparticipating PRPs, if possible.

1989

Because of the lack of a good data base of factual information upon which to make sound allocation decisions agreeable to all, outside arbitration was utilized in 1989 to allocate "fair share" costs among participating PRPs. The arbitrator preliminarily apportioned 65 percent of the costs for the site to the four participating PRPs, as follows:

XYZ	20%
PRP No. 2	20
PRP No. 3	15
PRP No. 4	10
	65%
Orphan share	25
Recalcitrant share	10
	100%

Twenty-five percent of the site was determined to be the "orphan share," for which no PRP could be identified. Ten percent was attributed to two recalcitrant (nonparticipating) PRPs, and there was insufficient information to overcome the presumption that costs will be allocated only among the participating PRPs.

XYZ gained some understanding of the other participating PRPs' financial condition and believed each of them was able and likely to pay its full share of the costs of the RI/FS. XYZ was concerned, however, about the ability of PRP No. 3 to pay its full share of the cost of the overall remediation effort.

Based on the amount already spent on legal costs and the results of PRP organization efforts, XYZ determined that $350,000 was the best estimate of its separate legal costs. The estimate of the costs that will be incurred to perform the RI/FS, which now included group administration costs, now stood at $1.2 million to $2.2 million.

1991

The RI/FS was substantially completed in 1991. No changes were made to the PRP allocation percentages as a result of the RI/FS completion. The PRP group's initial estimate of the cost of implementing the remedy expected to be required by the EPA was $25 million to $30 million. No amount within this range was considered to be a better estimate than any other amount within the range. This estimate included estimates of the cost of all elements of the remediation effort, including common legal, engineering, construction, monitoring, operation and maintenance costs (including postremediation monitoring for a period of thirty years), and so forth.

XYZ believed that PRP No. 2 and PRP No. 4 could and would pay their full shares of the cost of the remediation effort. PRP No. 3, however, indicated that, because of its deteriorating financial position, it would likely be unable to pay more than two-thirds of its 15 percent share and none of its allocated amount attributed to the orphan and recalcitrant shares, or 10 percent of those costs. XYZ shared PRP No. 3's views about PRP No. 3's ability to pay.

1992

Three years after site studies began, the EPA and its outside contractors evaluated the reports submitted under the terms of the unilateral administrative order. A record of decision (ROD) was issued by the EPA on September 30, 1992, in which remedial actions based on the RI/FS were selected and cost estimates were presented. The PRPs were requested to voluntarily implement the ROD and again sign up to the terms demanded by the government. No preenforcement federal court review is permitted, even if the remedy specified in the ROD is scientifically flawed, unattainable by available, proven technology, non-cost-effective, or open-ended. The PRPs had the following choices: perform the remedy specified in the ROD voluntarily, or refuse to do work, in which case the EPA would either issue another unilateral administrative order or perform the work using its contractor procurement systems and sue the PRPs for cost recovery. The PRPs agreed to perform the remedy specified in the ROD and entered into a consent judgment.

Note: The law requires the EPA to review the ROD and remedy within five years of its implementation by the PRPs. If the objectives of the ROD have not been attained, the EPA may make additional demands on the PRPs. If one or more PRPs believe they have paid a disproportionate share of the costs, they may track down other PRPs and sue them in a contribution action. Although requests for reimbursement from Superfund can also be made for allocations attributed to unidentified or unknown parties (the orphan share) under certain conditions, this is not usually allowed by terms and conditions of consent order settlements with EPA.

Discussion of Case

FASB Statement No. 5, *Accounting for Contingencies,* requires accrual of a loss contingency when it is probable that a liability has been incurred and the amount of the loss can be reasonably estimated. Receipt in 1986 of an information request did not establish that a liability was probable because, notwithstanding the EPA's interest in XYZ's connection, if any, to the site, it had not been established that XYZ was in fact associated with the site. As noted in chapter 5 of the SOP, however, "receipt of notification that an entity may be a PRP compels the entity to action."

When XYZ determined late in 1986 that it had, in fact, contributed hazardous substances to the site, the liability became probable. The criteria for recognition had not yet been met, however, because XYZ did not have sufficient information to reasonably estimate a minimum amount in the range of its liability that would be material to its financial statements. Disclosure of the nature of the contingency and a statement that an estimate of the loss or range of loss cannot be made was required under FASB Statement No. 5.

During 1987, little additional information that would aid XYZ in making an estimate of the loss or range of loss became available. Therefore, the accounting and disclosure for the contingent loss related to the remediation liability remained the same.

In 1988, when XYZ agreed to perform an RI/FS in accordance with the EPA's unilateral administrative order and the PRP group was formed, XYZ should have recorded a liability of $400,000, computed as follows:

XYZ's estimated share of the minimum amount in the range of the estimated cost of the RI/FS [*20 percent of $1,000,000*]	$200,000
XYZ's minimum estimate of its legal costs	200,000
	$400,000

Because other PRPs had agreed during 1988 to participate in the RI/FS effort, they are considered to be participating PRPs. Neither the fact that the unilateral administrative order named only XYZ nor the fact that a preliminary cost-sharing formula had not yet been determined by the arbitrator should have required XYZ to accrue more than its estimated allocable share of the minimum estimated liability.

Although no recognition benchmarks were achieved in 1989 or 1990, XYZ should have refined its estimate of its liability as additional significant information became available. For example, in 1989, when the preliminary cost-sharing formula was developed by the arbitrator and the estimate of the cost of the RI/FS was revised, XYZ should have refined its estimate of its share of the cost of the RI/FS and adjusted its liability to $719,231, less any amounts already expended. $719,231 is computed as follows:

XYZ's allocable share of the minimum amount in the range of the estimated cost of the RI/FS [*20 percent of $1.2 million*]	$240,000
XYZ's pro rata share of amounts allocable to other parties but that are not expected to be paid by those other parties [*20/65 of 35 percent of $1.2 million*]	129,231
XYZ's estimated legal costs	350,000
	$719,231

By the time the feasibility study was substantially completed in 1991, XYZ should have adjusted its liability to reflect its estimated share of the minimum amount of the overall remediation liability. Based on the facts presented, this amount should be $9,350,000, less any amounts already expended. $9,350,000 is computed as follows:

20% of $25 million	$5,000,000
20/65 of 35 percent of $25 million	2,692,308
20/50 of amount allocable to PRP No. 3 that is not expected to be paid by PRP No. 3 [*20/50 of 5 percent of $25 million plus 20/50 of 15/65 of 35 percent of $25 million*]	1,307,692
Estimated legal costs	350,000
	$9,350,000

The estimate of the environmental remediation liability should be further refined when the ROD is issued in 1992 and at various other points when additional information becomes available.

The measurement of the remediation liability should not have been discounted at any point during the period under discussion because the amount of the obligation and the amount and timing of cash payments were not fixed or reliably determinable.

.175

Appendix C

Auditing Environmental Remediation Liabilities

This section presents the recommendations of the Environmental Issues Task Force of the Auditing Standards Board regarding the application of generally accepted auditing standards to the audit of an entity's financial statements as it relates to environmental remediation liabilities. Members of the AICPA's Auditing Standards Board have found this guidance to be consistent with existing auditing standards. AICPA members should be prepared to justify departures from this guidance.

Introduction and Scope

C-1. The accounting and disclosure issues related to environmental remediation liabilities are complex. The exposure to such liabilities and the controls implemented by entities to identify and evaluate these liabilities vary from entity to entity. Estimates of environmental remediation liabilities usually are predicated on subjective information and numerous judgments about how matters will be resolved in the future. Such matters generally increase audit risk in an audit of financial statements in accordance with generally accepted auditing standards (GAAS).

C-2. Management is responsible for establishing and maintaining controls that will enable it to identify, evaluate, and account for litigation, claims, and assessments and to reflect them in the financial statements in conformity with GAAP. FASB Statement No. 5, *Accounting for Contingencies,* requires accrual of a liability when (*a*) information available prior to issuance of the financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the financial statements, and (*b*) the amount of the loss can be reasonably estimated. FASB Statement No. 5 also requires certain disclosures about contingencies. Chapters 5 to 7 of this SOP provide guidance on applying FASB Statement No. 5 to matters involving environmental remediation liabilities.

C-3. The guidance in this section focuses on planning, performing, and reporting on an audit of financial statements in accordance with GAAS as it relates to auditing environmental remediation liabilities arising from Superfund laws, the corrective action provisions of the Resource Conservation and Recovery Act of 1976 (RCRA), and other analogous federal, state, and non-United States laws and regulations. The guidance is not intended to apply to other types of environmental engagements, such as engagements to report on compliance with environmental laws and regulations as performed under Statement on Standards for Attestation Engagements (SSAE) No. 3, *Compliance Attestation.* However, certain aspects of this guidance may be useful in such engagements. This appendix does not provide guidance on auditing the liabilities of insurance companies for unpaid claims or auditing asset impairment.

Audit Planning and Objectives

Understanding the Business

C-4. Statement on Auditing Standards (SAS) No. 22, *Planning and Supervision*, presents guidance on planning the audit of an entity's financial statements. Planning involves the development of an overall strategy for the expected conduct of an audit. SAS No. 22 recognizes that the nature, timing, and extent of the planning will vary with the size and complexity of the entity whose financial statements are being audited and with the auditor's experience with the entity and knowledge of the entity's business. As part of the planning process, the auditor should obtain an understanding of the accounting and disclosure requirements for environmental remediation liabilities, which are set forth in chapters 5 to 7 of this SOP. As stated in paragraphs 6 to 8 of SAS No. 22, the auditor should obtain a level of knowledge about matters related to the nature of the entity's business, its organization, and its operating characteristics that will enable the auditor to plan and perform the audit in accordance with GAAS. Examples of such matters that pertain to environmental remediation liabilities include the following:

- The industry or industries in which the entity operates
- The types of products or services provided by the entity
- The number and characteristics of the entity's locations
- Applicable governmental regulations
- Production and distribution processes

Knowledge about such matters ordinarily is obtained through experience with the entity or its industry and inquiry of entity personnel. Inquiries about environmental remediation liabilities might be directed to accounting, finance, operations, environmental, compliance, or legal personnel. Other useful sources of information about environmental remediation liabilities may include industry publications, financial statements, and other publicly available information from entities in the same industry, and information available from regulatory agencies.

C-5. Questions that might be asked of entity personnel to obtain an understanding of potential environmental remediation liabilities to which an entity may be exposed include the following:

- What controls are in place to identify potential environmental remediation liabilities or related contingencies affecting the entity?
- Has the entity been designated as a PRP by the EPA under the Superfund laws or by state regulatory agencies under analogous state laws?
- If the entity has been designated as a PRP, are there any pending civil or criminal investigations or actions?
- Have regulatory authorities or environmental consultants issued any reports about the entity, such as site assessments or environmental impact studies?
- Are landfills or underground storage tanks used to store or dispose of environmentally hazardous substances?
- Is the entity required to have environmental permits, such as hazardous waste transporter permits or hazardous waste treatment, storage, and disposal permits?
- For property sold, abandoned, purchased, or closed, are there any requirements for site cleanup or for future removal and site restoration?
- Have there been any violations of environmental laws, such as the Superfund laws and the corrective action provisions of RCRA?

It also may be helpful when planning the audit of environmental remediation liabilities to review minutes of meetings of the board of directors (or committees) and reports related to such matters prepared by the entity's internal auditors, compliance officers, or other individuals responsible for such matters.

C-6. Depending on the extent of the entity's exposure to environmental remediation liabilities, the auditor may decide to involve personnel knowledgeable about such matters in the audit and to use the work of a specialist.

Audit Objectives

C-7. It is management's responsibility to develop appropriate estimates of environmental remediation liabilities for use in the preparation of the financial statements. It is the auditor's responsibility to evaluate the reasonableness of those estimates in forming his or her opinion on the financial statements taken as a whole. Most of the auditor's work in forming his or her opinion consists of obtaining and evaluating evidential matter concerning assertions in the financial statements. Assertions are representations by management that are embodied in the financial statement components. With respect to environmental remediation liabilities, the relevant financial statement assertions and the related objectives of the auditor are shown in the following table:

Assertions	*Objective*
Completeness and valuation	To determine whether all environmental remediation liabilities that should be presented in the financial statements are identified and reflected in the financial statements in conformity with GAAP
Presentation and disclosure	To determine whether environmental remediation liabilities and contingencies are classified, described, and disclosed in the financial statements in conformity with GAAP

The auditor assesses inherent risk and control risk to determine the nature, timing, and extent of the substantive procedures that will be performed to achieve these objectives.

Assessing Audit Risk

C-8. Once the auditor has obtained an understanding of the potential environmental remediation liabilities to which the entity may be exposed, he or she should make preliminary judgments about materiality and should assess audit risk. SAS No. 47, *Audit Risk and Materiality in Conducting an Audit*, provides guidance to the auditor on assessing audit risk and materiality when planning and performing an audit of an entity's financial statements. Audit risk is the risk that the auditor may unknowingly fail to appropriately modify his or her opinion on financial statements that are materially misstated. Audit risk is composed of inherent risk, control risk, and detection risk.

C-9. *Inherent Risk.* SAS No. 47 defines inherent risk as the susceptibility of an assertion to a material misstatement, assuming there are no related internal controls. In assessing inherent risk for assertions about environmental remediation liabilities, the auditor should consider the knowledge he or she has obtained about the industry in which the entity operates. Certain industries, by nature, tend to have a significant risk of exposure to environmental remediation liabilities. Examples of such industries include chemicals, oil and gas, pharmaceuticals, mining, and utilities. However, an entity need not operate in one of these industries to be exposed to environmental remediation liabilities. Examples of other industries with potential exposure to environmental remediation liabilities are real estate, banking, insurance, and health care. Certain research and development activities (including those engaged in by some not-for-profit entities) also may be subject to significant exposures.

C-10. Certain transactions, such as past acquisitions involving real property (including acquisitions by a creditor pursuant to default by a debtor), may expose an entity to environmental remediation liabilities. Under the Superfund laws, current and former owners of land may be responsible for clean-up costs. Situations such as the following may indicate the existence of potential environmental remediation liabilities:

- Past or current ownership of property on which hazardous substances are being or were disposed of
- Recent purchases of property at prices that appear to be significantly below market
- Sales of contaminated land under arrangements whereby the seller retains responsibility for clean-up pursuant to indemnification clauses
- Aborted real estate sales transactions
- Sales of businesses involving the retention of real property by the seller

C-11. When assessing inherent risk, the auditor should recognize that estimates of environmental remediation liabilities are affected by factors that management cannot control, such as the actions of regulators and the recommendations and opinions of technical and engineering experts. For this reason, the evaluation of environmental remediation liabilities usually involves considerable analysis and subjective estimation by management and the assistance of third parties such as attorneys and environmental engineers.

C-12. *Control Risk.* SAS No. 47 defines control risk as the risk that a material misstatement that could occur in an assertion will not be prevented or detected on a timely basis by the entity's internal control. SAS No. 55, *Consideration of Internal Control in a Financial Statement Audit*, as amended by SAS No. 78, identifies the components of internal control and explains how an independent auditor should consider internal control in planning and performing an audit. An entity's internal control consists of five components: control environment, risk assessment, control activities, information and communication, and monitoring. For an entity with potential exposure to environmental remediation liabilities, the auditor's understanding of the entity's internal control generally should extend to controls designed to help management identify and evaluate environmental remediation liabilities and loss contingencies. The level of sophistication of an entity's internal control as it relates to environmental remediation matters varies from entity to entity. Relevant factors that an entity might consider when designing its internal control include such matters as the extent of exposure to which the entity is subject, the geographical diversity of the entity, and the remediation activities undertaken or expected to be required. Some entities have specially designed systems for data collection and quantification, and expert personnel involved in the evaluation and oversight of remediation activities. Other entities have less formal means of gathering information and may rely on outside parties to assist management in its evaluation and oversight of remediation activities.

C-13. SAS No. 55 also provides guidance on assessing control risk. The auditor may decide to perform tests of controls, to the extent deemed appropriate in the circumstances, to determine whether control risk may be assessed at less than the maximum level. In other cases, the auditor may assess control risk at the maximum level for all or a portion of the financial statement assertions related to environmental remediation liabilities because the auditor believes that the controls are unlikely to be effective or because evaluating the effectiveness of the controls would be inefficient. The auditor's assessment of inherent risk and control risk, as discussed above, forms the basis for his or her decisions about the nature, timing, and extent of substantive audit procedures to be performed.

Substantive Audit Procedures

C-14. Substantive audit procedures are designed to obtain sufficient competent evidential matter related to the audit objectives. The auditor's substantive tests of environmental remediation liabilities generally consist of testing the accounting estimates recorded by management, making inquiries of legal counsel or identified specialists, and obtaining representations from management.

C-15. SAS No. 57, *Auditing Accounting Estimates,* provides guidance to the auditor on obtaining and evaluating sufficient competent evidential matter to support financial statement assertions that are based on significant accounting estimates. When evaluating the reasonableness of the estimates of environmental remediation liabilities, the auditor should first understand how management developed the estimates. Based on that understanding, the auditor should use one or a combination of the following approaches set forth in SAS No. 57 to audit the estimate.

a. Review and test the process used by management to develop the estimate.

b. Develop an independent expectation of the estimate to corroborate the reasonableness of management's estimate.

c. Review subsequent events or transactions occurring prior to the completion of fieldwork.

When auditing environmental remediation liabilities, approaches *a* and *b*, or a combination thereof, usually will be most effective. Approach *c*, taken alone, normally will not be effective because remediation costs are expended over a long period of time, usually extending well beyond the completion of fieldwork.

C-16. The auditor should select the approach or approaches based on his or her judgment as to the degree of evidential matter necessary in the circumstances, including consideration of the approach or approaches expected to be most efficient. Because of the complexity involved in developing estimates of environmental remediation liabilities, including the possible need to use the work of a specialist, approach *a* normally will be most efficient.

Reviewing and Testing the Process Used by Management to Develop the Estimate

C-17. The auditor may evaluate the reasonableness of estimates of environmental remediation liabilities by reviewing the process used by management to develop the estimate and by performing procedures to test it. This approach often is the most appropriate when the estimates are developed by or based on the work of an environmental specialist.

C-18. SAS No. 57 identifies the following as procedures the auditor may consider performing when using this approach:

a. Identify whether there are controls over the preparation of accounting estimates and supporting data that may be useful in the evaluation. Some of the more common controls over the preparation of estimates of environmental remediation liabilities that might be considered by the auditor include—

- The nature and extent of monitoring by senior management or the board of directors of the entity's consideration of environmental remediation liabilities.
- The nature and extent of procedures in place for assessing compliance with applicable environmental laws and regulations and for evaluating possible violations.
- The nature and extent of procedures in place for involving appropriate operating, financial, legal, and compliance personnel in monitoring the entity's environmental remediation liabilities, and in developing the estimates.
- The information systems used by the entity to compile and access data about the entity's waste generation, emissions, and other environmental impacts.
- The entity's use of environmental specialists, including its procedures for determining whether the specialists have the requisite skill or knowledge regarding environmental remediation matters, knowledge of the entity's business, and understanding of the available methodologies for calculating environmental remediation cost estimates.
- The procedures in place for verifying that data about the nature, destinations, and volumes of hazardous substances or wastes are appropriately collected, classified, and summarized.
- The procedures in place for assessing the appropriateness of industry or other external sources of data used in developing assumptions (for example, information provided by other PRPs, regulatory authorities, and industry associations) and, where applicable, for substantiating such information.

b. Identify the sources of data and factors that management used in forming the assumptions, and consider whether such data and factors are relevant, reliable, and sufficient for the purpose, based on information gathered in other audit tests. Sources of data and factors used may include—

- Internal company records, such as payroll records for employees who devote significant time directly to environmental remediation efforts.
- Information from published sources about socioeconomic trends or other factors that might affect environmental remediation liabilities, such as inflation rates, judicial decisions, and enacted changes in legislation affecting remediation methods or definitions of hazardous substances.

c. Consider whether there are additional key factors or alternative assumptions about the factors. Key factors that might be considered include—

- Information about environmental remediation liabilities included in the response to the inquiry of the entity's lawyer.
- Studies or reports by environmental consultants.
- Reports, notices, or correspondence issued by regulatory authorities.

d. Evaluate whether the assumptions are consistent with each other, the supporting data, relevant historical data, and industry data. Assumptions that might be evaluated include—

- Allocations of remediation responsibilities (and consequently the attendant liabilities) among PRPs.
- Remediation technologies and expected time frames.
- Postclosure monitoring requirements.

e. Analyze historical data used in developing the assumptions to assess whether the data are comparable and consistent with data of the period under audit, and consider whether the data are sufficiently reliable for this purpose. Factors to consider include—

- Whether the entity's current process for estimating environmental remediation liabilities has resulted in reasonably accurate, appropriate estimates in prior periods, and the extent to which current data indicate changes from prior experience.
- Whether changes in the entity's business have been factored into the estimate.
- Relationships between estimates of liabilities for one location and estimates or actual costs incurred for similar locations.

f. Consider whether changes in the business or industry may cause other factors to become significant to the assumptions.

g. Review available documentation of the assumptions used in developing the accounting estimates and inquire about any other plans, goals, and objectives of the entity, as well as consider their relationship to the assumptions. Consider the following, for example:

- Practices concerning the resolution of environmental contingencies that may have a significant effect on the entity's ultimate environmental remediation liability (for example, a practice of vigorously contesting remediation plans proposed by regulators as opposed to a practice of tacitly accepting those plans)
- Plans to sell, dispose of, or abandon specific facilities
- Financial statements or other information used by management to assess participating PRPs' abilities to pay their allocable shares of the estimated environmental remediation liability

h. Consider using the work of a specialist regarding certain assumptions.

i. Test the calculations used by management to translate the assumptions and key factors into the accounting estimate.

Developing an Independent Expectation of the Estimate

C-19. The auditor may decide to develop an independent expectation of the estimate of environmental remediation liabilities generally by using the work of an environmental specialist. For example, the auditor might use this approach if management has not engaged or employed an environmental specialist, or to assess the reasonableness of, or the effects of alternative key factors and assumptions on, an estimate prepared by a specialist engaged or employed by management.

Using the Work of a Specialist

C-20. Because of the complexity of environmental remediation activities and the difficulties involved in developing estimates of environmental remediation liabilities, management often will engage or employ a specialist to perform this work. Examples of such specialists are remediation technologies specialists, responsibility allocation specialists, claims specialists, environmental engineers, and environmental attorneys.

C-21. Specialists might be involved in one or more stages of the process of developing estimates of environmental remediation liabilities, including—

- Identifying situations for which remediation is required.
- Designing or recommending a remedial action plan for the entity.
- Gathering and analyzing data on which to base the estimates of remediation costs (for example, performing a baseline risk assessment).
- Providing information to management that will enable management to estimate the entity's environmental remediation liability and develop the related financial statement disclosures.

C-22. As noted previously, the process of estimating environmental remediation liabilities usually is complex and involves many subjective judgments. Consequently, the auditor may decide to use the work of a specialist to evaluate financial statement assertions about environmental remediation liabilities. SAS No. 73, *Using the Work of a Specialist*, provides guidance to the auditor who uses the work of a specialist in performing an audit.

C-23. *Qualifications and Work of a Specialist.* SAS No. 73 also provides guidance on matters the auditor should consider when evaluating the professional qualifications of a specialist to determine whether the specialist possesses the necessary skill or knowledge in a particular field. The specialist's level of skill or knowledge should be commensurate with the nature and complexity of the entity's environmental remediation liabilities that the specialist has been asked to address. Matters that might be relevant in evaluating the professional qualifications of a specialist include—

- Knowledge of various remediation technologies, including their acceptability, strengths, weaknesses, and applicability.
- Knowledge of environmental remediation issues that are likely to affect the entity, including legal, regulatory, industry, and social developments.
- Technical or educational background related to environmental remediation matters.

- Work experience related to environmental remediation matters.

C-24. The auditor should obtain an understanding of the nature of the work performed or to be performed by the specialist. That understanding should include—

- The objectives and scope of the specialist's work, for example, whether the specialist is engaged to perform a baseline risk assessment or a feasibility study.
- The specialist's relationship to the entity, if any.
- The methods and assumptions used by the specialist, including, for example, a comparison of the methods and assumptions used by the specialist with those used by management or other specialists, or with those used in the preceding period.
- The appropriateness of using the specialist's work for the intended purpose. In some cases, the auditor may decide it is necessary to contact the specialist to determine whether the specialist is aware that his or her work will be used for evaluating assertions in the financial statements.
- The form and content of the specialist's findings, for example, the extent of detail included or to be included in the report.

Reports issued by environmental specialists are not standard in their form or content and do not always clearly express the underlying assumptions or methods used by the specialist. Communication with the specialist in these circumstances may assist the auditor in obtaining the necessary understanding.

C-25. *The Specialist's Relationship to the Entity.* If a specialist is employed by an entity, or otherwise has a relationship that might directly or indirectly influence the findings of the specialist, the auditor should assess the risk that the specialist's objectivity might be impaired. Factors that the auditor might consider when determining whether the specialist's objectivity might be impaired include the auditor's prior experience with the specialist, discussions with the specialist and management, and additional information about the specific nature and significance of the relationship. If the auditor concludes that the specialist's objectivity might be impaired, the auditor should perform additional procedures with respect to the specialist's work, for example, engaging another specialist to review some or all of the related specialist's work.

C-26. *Using the Findings of the Specialist.* The specialist is responsible for the appropriateness and reasonableness of the methods and assumptions used and for their application. However, the auditor should (*a*) obtain an understanding of the methods and assumptions used by the specialist, (*b*) make appropriate tests of data provided to the specialist, taking into account the auditor's assessment of control risk, and (*c*) evaluate whether the specialist's findings support the related financial statement assertions.

C-27. If the auditor concludes that the specialist's findings are unreasonable, the auditor should apply additional procedures that may include obtaining the opinion of another specialist.

Auditing Potential Recoveries

C-28. Potential claims for recovery from insurers, PRPs other than participating PRPs, prior property owners, and governmental or third-party funds should be evaluated separately from the environmental remediation liability. To evaluate whether the recovery of a potential claim is probable, correspondence or communication with others such as the insurer, PRPs other than participating PRPs, or legal counsel generally is necessary. Requests for confirmation of recoverable amounts from such parties should be carefully designed to ensure that the parties fully understand what is being requested. Also, because confirmations do not necessarily provide sufficient evidence regarding the realizability of such amounts, the auditor may need to obtain other evidence to evaluate the realizability of recorded recoverable amounts. As noted in paragraph .141 of this SOP, if a claim is the subject of litigation, a rebuttable presumption exists that realization of the claim is not probable. SAS No. 67, *The Confirmation Process*, provides guidance to the auditor about the confirmation process in audits performed in accordance with GAAS.

Inquiries of a Client's Lawyer

C-29. The auditor should consider requesting information about environmental remediation liabilities and loss contingencies in the letter of inquiry sent to the entity's counsel because such matters frequently involve litigation. The letter of inquiry of a client's lawyer should include a list prepared by management (or a request by management that the lawyer prepare a list) that describes each of the matters the lawyer is currently handling and the expected outcomes of those matters. SAS No. 12, *Inquiry of a Client's Lawyer Concerning Litigation, Claims, and Assessments*, provides guidance on the procedures an auditor should consider performing to identify litigation, claims, and assessments and to satisfy himself or herself as to the financial reporting and disclosure of such matters.

Client Representations

C-30. The auditor should consider obtaining written representations from management about estimates and disclosures of environmental remediation liabilities and loss contingencies affecting the financial statements, including specific representations as to the adequacy of such disclosures and the expected outcomes of uncertainties. SAS No. 19, *Client Representations,* provides guidance to the auditor about representations to be obtained from management as part of an audit.

Assessing Disclosures

C-31. Guidelines for disclosure related to environmental remediation liabilities and loss contingencies are presented in chapter 7 of this SOP. SAS No. 32, *Adequacy of Disclosure in Financial Statements,* requires the auditor to assess the adequacy of disclosures of material matters in the financial statements in connection with rendering an opinion on the presentation of financial statements in conformity with GAAP. In the context of environmental remediation loss contingencies, the auditor should evaluate management's assessment of the likelihood of loss and ability to reasonably estimate the potential loss. If disclosure is required, the auditor should assess the adequacy of the disclosures, including any conclusions expressed by management regarding the expected outcome of such contingencies, based on evidence obtained, as applicable, from the following:

- Operating, environmental, legal, and financial management personnel
- Specialists

- Other audit tests

Evaluating Audit Test Results

C-32. The auditor should evaluate the results of tests of the environmental remediation liabilities and related disclosures in the context of the entity's financial statements taken as a whole. Other auditing literature that provides guidance on evaluating the results of audit tests includes SAS No. 53, *The Auditor's Responsibility to Detect and Report Errors and Irregularities,* which provides guidance on the evaluation of audit test results, and paragraph 29 of SAS No. 47, which provides additional guidance on the auditor's responsibility for evaluating the reasonableness of estimates in relationship to the financial statements taken as a whole.

Reporting

C-33. Departures from GAAP or scope limitations related to environmental remediation liabilities or loss contingencies may require modification of the auditor's standard report on an entity's financial statements. SAS No. 58, *Reports on Audited Financial Statements,* provides guidance to the auditor on reporting when there is a GAAP departure or a scope limitation.

Departures From GAAP

C-34. Departures from GAAP involving environmental remediation liabilities or loss contingencies generally involve (1) inadequate disclosures, (2) the application of inappropriate accounting principles, or (3) unreasonable accounting estimates. The auditor should determine whether the presentation and disclosure of an environmental remediation liability or the disclosure of an uncertainty involving an environmental remediation loss contingency complies with the guidance in chapter 7 of this SOP. The auditor should also assess the appropriateness of the accounting policies used and the reasonableness of the estimates. Chapters 5 and 6 of this SOP present the accounting principles for the recognition and measurement of environmental remediation liabilities. If the auditor concludes that the financial statements are not fairly presented in all material respects because the accounting principles followed are inappropriate or misapplied, the disclosures are inadequate, or management's estimates are unreasonable, the auditor should express a qualified or adverse opinion.

Scope Limitations

C-35. The auditor should consider whether he or she has obtained sufficient competent evidential matter to support management's assertions about environmental remediation liabilities and loss contingencies and their presentation and disclosure in the financial statements. The auditor should distinguish between situations involving uncertainties and those involving scope limitations. An uncertainty exists if resolution of the environmental remediation loss contingency is expected to occur at a future date at which time conclusive evidential matter concerning the outcome of the uncertainty is expected to become available. However, if sufficient evidential matter currently exists or did exist but is not available to the auditor because of restrictions imposed by management, inadequate recordkeeping, or other conditions that prevent the auditor from gaining access to the information, a limitation on the scope of the auditor's work may exist sufficient to cause the auditor to qualify or disclaim an opinion because of a scope limitation.

Making Reference to a Specialist

C-36. Use of specialists is common in the determination and development of financial statement estimates of environmental remediation liabilities and disclosures related to environmental remediation loss contingencies. SAS No. 73 provides the auditor with guidance on considering the effect of the specialist's work on the auditor's report. That guidance precludes the auditor from referring to the work of a specialist in the auditor's report, because such reference might be interpreted as a qualification of the auditor's opinion or a division of responsibility, neither of which is intended. However, the guidance permits the auditor to refer to the specialist in the auditor's report if the auditor believes such reference will facilitate an understanding of the reason for a departure from an unqualified opinion.

Accounting Changes

C-37. As indicated in paragraph .102 of this SOP, the effect of initially applying the provisions of this SOP may have elements of a change in accounting principle that are inseparable from a change in accounting estimate; accordingly, the effect shall be reported as a change in accounting estimate. If the initial application of the accounting guidance in this SOP has a material effect on the comparability of the financial statements, an explanatory paragraph should be added to the auditor's report pursuant to paragraph 12 of SAS No. 1, section 420, *Consistency of Application of Generally Accepted Accounting Principles.*

Communication With Audit Committees

C-38. SAS No. 61, *Communication With Audit Committees,* provides the auditor with guidance on the types of matters related to the scope and results of the audit that should be reported to the audit committee or those of equivalent authority and responsibility. Such matters include management judgments and accounting estimates. The auditor should determine whether the audit committee is informed about the process used by management in formulating particularly sensitive accounting estimates, such as those for environmental remediation liabilities, and the basis for the auditor's conclusions regarding the reasonableness of the estimates.

.176

Appendix D

Response to Comments Received

D-1. An exposure draft of a proposed SOP, *Environmental Remediation Liabilities (Including Auditing Guidance),* was issued for public comment on June 30, 1995. More than seventy comment letters were received in response to the exposure draft.

D-2. The majority of the comments related to the measurement of environmental remediation liabilities. A significant number of commentators also expressed concerns about a lack of symmetry in the measurement of the remediation liability and of any probable recoveries, about the proposed SOP's scope, and about the proposed transition provisions and effective date of the SOP. Some commentators also suggested that, because environmental remediation liabilities is a broad topic, it should be addressed by the FASB rather than the Accounting Standards Executive Committee (AcSEC).

D-3. These comments and AcSEC's responses to them are discussed below.

Scope

D-4. The exposure draft excluded from its scope accounting for remediation actions that are undertaken at the sole discretion of management and that are not induced by the threat of litigation or assertion of a claim or an assessment. A number of commentators recommended expanding the scope to include such actions, with the majority of them recommending that the SOP specifically permit or require the recording of a liability for voluntary remediation programs when management intends to undertake such programs.

D-5. AcSEC continues to believe that such remediation actions should be outside the scope of this SOP. AcSEC believes that addressing the issues would require a far broader project than this SOP was intended to be. Such a broader project would possibly need to be undertaken by the FASB rather than AcSEC since it might require reconsideration of the liability-recognition model established by FASB Statement No. 5, *Accounting for Contingencies.* Moreover, AcSEC believes this SOP, with its relatively narrow scope, will produce significant improvements in practice that should not be delayed unnecessarily.

Measurement of the Liability

D-6. The exposure draft provided that the measurement of the liability should include the following:

a. Incremental direct costs of the remediation effort

b. Costs of compensation and benefits for employees to the extent an employee is expected to devote time directly to the remediation effort

The exposure draft defined the remediation effort to include, among other things, the costs of defending against assertions of liability for remediation.

D-7. Many commentators stated that payroll and payroll-related costs, including the costs of in-house legal counsel, should be treated as period costs rather than being included in the measurement of the environmental remediation liability. Among the reasons cited were the following.

- Because environmental-affairs, technical, and legal personnel who devote time to the remediation effort would be employed by an entity even in the absence of an obligation to remediate a particular site, devoting a portion of their time to a particular site does not represent a sacrifice of economic benefits.
- Salaries and related costs that are not inventoriable generally are treated as period costs; such costs generally are not accrued as part of other kinds of liabilities.
- The cost of estimating and tracking this element of the accrual would be burdensome.
- Whether such costs should be included in the measurement of the liability should be considered by the FASB because of its implications to areas beyond environmental liabilities.

D-8. In addition, many commentators said that the cost of defending against assertions of liability, regardless of whether the defense is to be performed by in-house counsel or outside counsel, should be treated as a period cost. Among the reasons cited were the following.

- Costs of defending against assertions of liability are discretionary and, therefore, do not have one of the essential characteristics of a liability set forth in FASB Concepts Statement No. 6, *Elements of Financial Statements.*
- Such costs may be incurred before it can be determined whether a remediation liability exists.
- The guidance inevitably would be analogized to other kinds of liabilities. Accordingly, it would represent a *de facto* Interpretation of FASB Statement No. 5 that should be exposed and debated as such.

D-9. AcSEC believes that devoting the time of employees to a particular activity, by definition, represents a sacrifice of economic resources. AcSEC acknowledges that, in most situations, compensation and benefits for employees who are not involved with production of inventory are treated as a period cost. AcSEC believes, however, that the measurement of an environmental remediation liability should be based on the cost that will be incurred to extinguish the liability and that the measurement should not vary significantly merely because an entity chooses to satisfy elements of the liability using employees rather than outside contractors. The need to include internal costs in the measurement of a liability is addressed explicitly in various items of authoritative literature. FASB Statement No. 106, *Employers' Accounting for Postretirement Benefits Other Than Pensions,* states in footnote 15, "If significant, the internal and external costs directly associated with administering the postretirement benefit plan also should be accrued as a component of assumed per capita claims costs." FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises,* states in paragraph 20, "A liability for all costs expected to be incurred in connection with the settlement of unpaid claims (claim adjustment expenses) shall be accrued when the related liability for unpaid claims is accrued. . . . Claim adjustment expenses also include other costs that cannot be associated with specific claims but are related to claims paid or in the process of settlement, such as internal costs of the claims function." SOP 81-1, *Accounting for Performance of Construction-Type and Certain Production-Type Contracts* [section 10,330], states in paragraph 87 [section 10,330.87] that a provision for anticipated losses on contracts should include all costs of the type allocable to contracts under paragraph 72 of that SOP [section 10,330.72]. Paragraph 72 of SOP 81-1 [section 10,330.72] states that such costs include all direct costs, such as material, labor, and subcontracting costs, and the following indirect costs: the costs of indirect labor, contract supervision, tools and equipment, supplies, quality control and inspection, insurance, repairs and maintenance, depreciation and amortization, and, in some circumstances, support costs, such as central preparation and processing of payrolls.

D-10. Finally, AcSEC considered accounting literature that provides that certain internal cost be deferred or capitalized rather than treated as a period expense. FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases,* provides that direct loan-origination costs of a completed loan are to be offset against loan-origination fees and any excess deferred. Direct loan-origination costs include incremental direct costs incurred in transactions with independent third parties and certain costs directly related to specified activities performed by the lender. The costs directly related to those activities include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent for the origination of the loan.

D-11. AcSEC was concerned, however, that the requirement to include in the measurement of the environmental remediation liability the costs of compensation and benefits for all employees who are expected to devote time to the remediation effort would create an unjustified record keeping burden on reporting entities. Accordingly, the approach used in the SOP limited the inclusion of nonincremental direct costs to the costs of compensation and benefits for those employees who are expected to devote a *significant amount* of time directly to the remediation effort. AcSEC believes this approach will produce sound and useful reported information at a reasonable cost. As discussed in the SOP, the remediation effort does not include routine environmental compliance matters and costs involved with potential recoveries. Also, indirect internal costs such as administrative and occupancy costs are not included in the measurement of the environmental remediation liability.

D-12. AcSEC believes the cost associated with including the appropriate compensation and benefit costs in the measurement of the liability will not be excessive. In this regard, AcSEC notes that in many cases periodic adjustment of the liability could be performed by reestimating this component of the liability and that this SOP does not impose an obligation to use formal procedures such as time sheets for the development of the liability and to track the actual expenditures.

D-13. AcSEC acknowledges that the treatment of costs to defend against assertions of this and other kinds of liability is diverse: Some include such costs in the measurement of a liability for a loss contingency under FASB Statement No. 5, while the majority of practice treats litigation costs as period costs. AcSEC believes that any authoritative guidance on the treatment of such costs should be developed as a broad issue with appropriate due process. AcSEC, therefore, concluded not to provide guidance on inclusion of the cost of defense against assertions of liability in the measurement of the environmental remediation liability. Costs to defend against assertions of liability in the context of environmental remediation liabilities involve determining whether an entity is responsible for participating in a remediation process. Legal costs involved with determining (*a*) the extent of remedial actions that are required, (*b*) the type of remedial actions to be used, and (*c*) the allocation of costs among PRPs are not part of the cost to defend against assertions of liability and are to be included in the measurement of the environmental remediation liability.

D-14. The exposure draft provided that current measurements of the liability ". . . should be based on remediation technology that exists currently." Certain commentators agreed with this conclusion. In their opinions, the nature of the remediation effort was sufficiently different from liabilities for closure or removal of long-lived assets that a difference in anticipating changes in technology was justified.

D-15. Some commentators concluded that differences between the guidance in the exposure draft concerning anticipation of advances in technology and the FASB's tentative conclusions concerning anticipation of advances in technology in its project on accounting for certain liabilities related to closure or removal of long-lived assets (formerly nuclear decommissioning) should be resolved. These commentators did not always express a preference.

D-16. The majority of commentators suggested that to ignore advances in technology is unrealistic and recommended that changes in technology that are reasonable and that can be supported should be allowed to be considered in determining the remediation liability. FASB Statement No. 106 was cited as an example of authoritative literature that permits consideration of anticipated changes in technology.

D-17. AcSEC acknowledges that, by restricting remediation technologies to those currently available, realistic developments in technology that could substantially reduce the ultimate obligation would be ignored. This approach would be inconsistent with the objective of reporting, in the financial statements, a liability that represents the most likely amount to be paid. Further, AcSEC agrees that the FASB's approach in Statement No. 106 to estimating postemployment health care costs demonstrates the acceptability of anticipating realistic changes in technology when estimating future costs that are affected significantly by technological advances.

D-18. AcSEC believes that information regarding expected advances in remediation technologies is considered routinely by environmental engineers and consultants as they evaluate the effectiveness and cost of alternative remediation strategies. AcSEC acknowledges the inherent uncertainty involved in anticipating developments in technology but concluded that acceptable constraints would be placed on this uncertainty by requiring that advances be considered only to the extent that the entity has a reasonable basis to expect that a remediation technology will be approved. Further, this uncertainty becomes resolved at such time as a record of decision is issued since, at that stage in the process, the remediation technology to be used is defined. Accordingly, AcSEC modified its original position to require that the estimated liability be measured based on the technology that is expected to be approved to remediate the site.

D-19. Paragraph .131 of the SOP states: "In situations in which it is not practicable to estimate inflation and such other factors [productivity improvements] because of uncertainty about the timing of expenditures, a current-cost estimate would be the minimum in the range of the liability to be recorded until such time as these cost effects can be reasonably estimated." That guidance is different from the guidance proposed in the FASB's May 31, 1996, exposure draft of a Proposed Statement of Financial Accounting Standards, *Accounting for Certain Liabilities Related to Closure or Removal of Long-Lived Assets,* which provides that, in determining the estimated future cash outflows that will be required to satisfy closure or removal obligations, current-cost estimates should be adjusted for inflation in all cases. AcSEC believes the difference is justified, because the degree of timing uncertainty that exists concerning some environmental remediation liabilities is significantly greater than the degree of timing uncertainty that typically exists concerning closure or removal liabilities.

D-20. For example, an entity may know that a remedial action for which it has a liability could begin within, say, one year of the reporting date. The entity may also know that, for reasons such as disagreements among potentially responsible parties over their relative responsibility for the site and the methodology to be used at the site, it is equally likely that remedial action will not begin for five, or perhaps ten, years. In such circumstances, consideration of the effects of inflation and of productivity improvements in the measurement of the liability would require an arbitrary assumption about when the remedial action will begin, which would diminish the reliability of the measurement and the usefulness of the reported information.

D-21. Although timing uncertainties also often exist in closure situations (concerning the end of the useful life of a long-lived asset, which is when cash outflows for closure or removal of a long-lived asset would occur), those uncertainties tend to concern periods that are more distant from the measurement date. This factor mitigates the effects of such uncertainties.

D-22. AcSEC believes that, in the context of environmental remediation liabilities, using a current cost estimate until there is a basis for estimating productivity improvements and the timing of the satisfaction of the liability will result in reported information that has the characteristics of usefulness and reliability.

D-23. Uncertainties are pervasive in the measurement of environmental remediation liabilities, and the SOP's approach to addressing those uncertainties is to require reporting entities to recognize their best estimate at the particular point in time (or, if no best estimate can be made, the minimum estimate) of their share of the liability and to refine their estimate as events in the remediation process occur. The guidance provided in this SOP—that an undiscounted current cost estimate would be the minimum in the range of the liability to be recognized until such time as a better estimate can be made—is consistent with that approach.

Measurement of Probable Recoveries

D-24. The exposure draft required discounting of recovery assets in all circumstances. Many commentators expressed concerns that that guidance, in combination with the SOP's guidance concerning discounting of liabilities, produced counterintuitive results when applied, for example, to fully insured liabilities. AcSEC agreed with commentators that the measurement of some recovery assets should be symmetrical with the measurement of the related liability. AcSEC noted that, in FASB Statement No. 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts,* the FASB provided for the measurement of reinsurance receivables on a basis symmetrical to that of the liability. Accordingly, AcSEC concluded that probable recoveries should be measured at their undiscounted amounts if (*a*) the liability is not discounted and (*b*) the timing of the recovery is dependent on the timing of the payment of the liability. This second criterion—dependency of the timing of the recovery on the timing of the payment of the liability—would usually be met, for example, if an insurance company agrees, in accordance with the terms of an insurance contract, to reimburse the reporting entity for all or a percentage of the remediation costs incurred by the reporting entity as the reporting entity expends money to satisfy its obligation, whereas the criterion likely would not be met, for example, in a lump-sum buyout by an insurance company of contested coverage.

Relationship of the Guidance in This SOP to FASB Statement No. 121

D-25. This SOP addresses the recognition of environmental remediation liabilities and explicitly does not address the recognition of asset impairment. FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of,* provides guidance on the recognition and measurement of impairment of long-lived assets. Under FASB Statement No. 121, an entity determines whether a long-lived asset is impaired by comparing the expected future cash flows (undiscounted and without interest charges) from the use and eventual disposition of the asset to the asset's carrying amount. If the asset is determined to be impaired, the impairment loss is measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset.

D-26. FASB Statement No. 121 does not address explicitly cash flows related to environmental remediation that may be associated with a long-lived asset. The EITF reached a consensus in Issue No. 95-23, *The Treatment of Certain Site Restoration/Environmental Exit Costs When Testing a Long-Lived Asset for Impairment,* that future cash flows for environmental exit costs that are associated with a long-lived asset and that have been recognized as a liability should be excluded from the undiscounted expected future cash flows used to test the asset for recoverability under Statement No. 121. However, EITF Issue No. 95-23 relates only to environmental exit costs that may be incurred if a long-lived asset is sold, is abandoned, or ceases operations. It does not address the appropriate treatment of cash outflows to satisfy the environmental remediation liabilities that are the subject of this SOP when an asset would continue operating. AcSEC believes guidance should be developed to address the recognition test under FASB Statement No. 121 and the measurement of impairment under the Statement when an environmental remediation liability associated with a long-lived asset has been recognized pursuant to this SOP. The guidance should avoid consideration of the effect of the environmental remediation obligation twice.

Disclosures

D-27. A number of commentators said the disclosures that are encouraged, but not required, by the SOP should be mandatory. Those commentators believe that the encouraged disclosures provide valuable, or even essential, information to users of the financial statements.

D-28. AcSEC believes the encouraged disclosures will enhance the usefulness of financial statements as tools for decision making. AcSEC recognizes, however, that the FASB is undertaking a project on disclosure effectiveness and decided that it would be inappropriate to impose new disclosure requirements concerning environmental remediation liabilities at this time. Accordingly, the SOP imposes no disclosure requirements that go beyond the requirements of existing authoritative literature.

Transition

D-29. A number of commentators said that the effect of initially applying the SOP should be reported in a manner similar to the cumulative effect of a change in accounting principle. A number of those commentators believe the SOP's guidance on what elements should be included in the accrual; on estimation of the liability in the strict, joint and several, and retroactive legal scheme of environmental remediation liabilities; and on accrual of estimates of components of the overall liability before the overall liability can be reasonably estimated constitute significant new guidance that would result in a change in the application of an accounting principle and should be accounted for as such. Some of those commentators believe that, although in individual cases the effect of applying the SOP would have elements of a change in the application of an accounting principle and of a change in an accounting estimate, the entire change should be reported as a change in accounting principle because that is the predominant characteristic of the change. AcSEC rejected those arguments because treating the effect of initially applying the SOP as a change in accounting principle would directly contradict APB Opinion No. 20, *Accounting Changes,* paragraph 32, which states in part:

> A change in accounting estimate that is recognized in whole or in part by a change in accounting principle should be reported as a change in an estimate because the cumulative effect attributable to the change in accounting principle cannot be separated from the current or future effects of the change in estimate.

Coordination With the FASB

D-30. A number of commentators expressed the view that, because the accounting and reporting issues embraced by the scope of this SOP are of such a broad nature, the FASB rather than AcSEC should address them. AcSEC notes that it coordinates its efforts with the FASB throughout the process of developing an SOP. This coordination begins when AcSEC sends a prospectus that describes a possible project to the FASB. That prospectus is discussed at a public board meeting and, if no more than two FASB members object to having AcSEC take on the project, the project can proceed.

D-31. The criteria considered by the FASB in clearing AcSEC's prospectuses include the following:

- The project does not conflict with current or proposed accounting requirements, unless it is a limited circumstance that is adequately justified.
- The project will result in an improvement in practice.
- The AICPA has demonstrated a need for the project.
- The benefits of any SOP are expected to outweigh the costs of applying it.

D-32. All AcSEC meetings are open to the public, and an FASB representative generally attends all AcSEC meetings. The FASB also clears AcSEC exposure drafts and final SOPs at public board meetings before their promulgation. In connection with clearing the final SOP, the FASB is provided with copies of all comment letters received by AcSEC.

Appendix E

Acronyms

ARAR	Applicable or relevant and appropriate requirement
BACT	Best available control technology
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act (Also referred to as Superfund, together with SARA)
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System
DMR	Discharge monitoring report
EPCRA	Emergency Planning and Community Right-to-Know Act (also referred to as SARA title III)
LAER	Lowest achievable emission rate
MSDS	Material safety data sheet
NAAQS	National ambient air quality standards
NPDES	Nation Pollutant Discharge Elimination System
NPL	National Priorities List
NSPS	New source performance standards
POTW	Publicly owned treatment works
PRAP	Proposed remedial action plan
PRP	Potentially responsible party
PSD	Prevention of significant deterioration
RCRA	Resource Conservation and Recovery Act
RFA	RCRA facility assessment
RFI	RCRA facility investigation
RI/FS	Remedial investigation/feasibility study
ROD	Record of Decision
SARA	Superfund Amendments and Reauthorization Act of 1986 (together with CERCLA, also referred to as Superfund)
SWMU	Solid waste management unit
TSCA	Toxic Substances Control Act
TSDF	Treatment, storage, or disposal facility
UST	Underground storage tank

.178

Glossary

Administrative record. Related to Superfund and EPCRA: all documents containing information the government uses to select response actions and impose administrative sanctions relating to CERCLA and Title III of SARA, the Emergency Planning and Community Right-to-Know Act. This paper trail includes correspondence, the RI/FS, the Record of Decision, and public comments. SARA appears to limit judicial review of the adequacy of a response action to the administrative record.

Applicable or Relevant and Appropriate Requirements (ARARs). ARARs include the federal standards and more stringent state standards that are legally applicable or relevant and appropriate under the circumstances. ARARs include cleanup standards, standards of control, and other environmental protection requirements, criteria, or limitations. RCRA has frequently been used as an ARAR for remediation of Superfund sites.

Baseline risk assessment. Related to Superfund and RCRA: the qualitative and quantitative evaluation performed in an effort to define the risk posed to human health, the environment, or both by the presence or potential presence, use, or both of specific pollutants. Baseline risk assessments are performed as part of the RI/FS process under Superfund and as part of the RCRA facility investigation in RCRA corrective actions.

Closure. Related to RCRA: the process in which the owner-operator of a hazardous waste management unit discontinues active operation of the unit by treating, removing from the site, or disposing of on site all hazardous wastes in accordance with an EPA- or state-approved plan. Included, for example, are the process of emptying, cleaning, and removing or filling underground storage tanks (USTs) and the capping of a landfill. Closure entails specific financial guarantees and technical tasks that are included in a closure plan and must be implemented.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) or CERCLA Information System. A database maintained by the U.S. EPA and the states that lists sites where releases have either been addressed or need to be addressed. CERCLIS consists of three inventories: CERCLIS Removal Inventory, CERCLIS Remedial Inventory, and CERCLIS Enforcement Inventory. Within the three inventories are inactive and active release sites. Inactive release sites are those sites where no further action is needed. Active release sites are those sites that may have an ongoing response action; that may not yet have been addressed by the EPA, but are scheduled for future action; or that may have been addressed and are targeted for further investigation of environmental impacts.

Consent decree. A legal document, approved by a judge, that formalizes an agreement reached between the EPA and potentially responsible parties (PRPs) through which PRPs will conduct all or part of a remedial action at a Superfund site; cease or correct actions or processes that are polluting the environment; or otherwise comply with regulations where PRPs' failure to comply caused the EPA to initiate regulatory enforcement actions. The consent decree describes the actions PRPs will take and may be subject to a public comment period.

Containment. Measures taken to prevent the migration of, or exposure of humans or the environment to, hazardous substances. Containment includes, for example, the construction of dikes, trenches, ditches, fences, underground barrier walls, surface caps, and groundwater pumping facilities as well as monitoring to ensure the integrity of the containment system.

Corrective action. Related to RCRA: action to remedy releases from hazardous waste management units, or any other sources of releases at or from a TSDF.

Disposal. Related to CERCLA and RCRA: under RCRA, the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters. Similarly under CERCLA with regard to hazardous substances.

Hazardous substance. Related to Superfund: the definition of hazardous *substance* in CERCLA is broader than the definition of hazardous *wastes* under RCRA. Under CERCLA, a hazardous substance is any element, compound, mixture, solution, or substance that, when released to the environment, may present substantial danger to the public health or welfare or to the environment. It also includes (1) specifically designated substances; (2) toxic pollutants under the Federal Water Pollution Control Act; (3) hazardous wastes having the characteristics identified under or listed pursuant to RCRA (excluding any waste suspended from regulation under the Solid Waste Disposal Act by Congress); (4) hazardous air pollutants under the Clean Air Act; and (5) any imminently hazardous chemical substance or mixture for which the government has taken action under section 7 of the Toxic Substances Control Act. Petroleum (including crude oil not otherwise specifically listed or designated as a hazardous substance under any of the above laws), natural gas, natural gas liquids, liquefied natural gas, or synthetic gas useable for fuel (or mixtures of natural gas and such synthetic gas) are excluded.

Hazardous waste. Related to RCRA: a waste, or combination of wastes, that because of its quantity, concentration, toxicity, corrosiveness, mutagenicity or inflammability, or physical, chemical, or infectious characteristics may (1) cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (2) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed. Technically, those wastes that are regulated under RCRA 40 CFR Part 261.

Hazardous waste constituent. A constituent that caused the waste to be listed as a hazardous waste under 40 CFR Part 261 Subpart D.

National Priorities List (NPL). The EPA's list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under Superfund. The list is based primarily on the score a site receives from the Hazard Ranking System. The EPA is required to update the NPL at least once a year.

Orphan share. Equitable share of liability for response or remediation costs attributed to orphan-share PRPs, or the amount by which the equitable share of liability for response or remediation costs attributable to other parties exceeds the amount for which those parties have settled their liability.

Orphan-share PRP. An identified PRP that cannot be located or that is insolvent.

Orphan site. A Superfund site where all identified potentially responsible parties no longer exist or are insolvent.

Participating PRP. A party to a Superfund site that has acknowledged potential involvement with respect to the site. Also referred to as a *player*.

Potentially responsible party (PRP). Any individual, legal entity, or government—including owners, operators, transporters, or generators—potentially responsible for, or contributing to, the environmental impacts at a Superfund site. The EPA has the authority to require PRPs, through administrative and legal actions, to remediate such sites.

Recalcitrant PRP. A party whose liability with respect to a Superfund site is substantiated by evidence, but that refuses to acknowledge potential involvement with respect to the site. Also referred to as a *nonparticipating PRP*.

Release. Related to Superfund: any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment. Includes the abandonment or discarding of barrels, containers, and other closed receptacles containing any hazardous substance, pollutant, or contaminant. The law provides for several exclusions. Release also means the substantial threat of release.

Remedial action, remediation. Related to Superfund: generally long-term actions taken to (*a*) investigate, alleviate, or eliminate the effects of a release of a hazardous substance into the environment; (*b*) investigate, alleviate, or eliminate a threat of the release of an existing hazardous substance that could potentially harm human health or the environment; or (*c*) restore natural resources. Also used in this SOP to refer to corrective action under RCRA.

Remedial investigation/feasibility study (RI/FS). Extensive technical studies conducted by the government or by the PRPs to investigate the scope of site impacts (RI) and determine the remedial alternatives (FS) that, consistent with the National Contingency Plan, may be implemented at a Superfund site. Government-funded RI/FSs do not recommend a specific alternative for implementation. RI/FSs conducted by PRPs usually do recommend and technically support a remedial alternative. An RI/FS may include a variety of on- and off-site activities, such as monitoring, sampling, and analysis.

Removal, removal action. Under CERCLA, generally short-term actions taken to respond promptly to an urgent need. The cleanup or removal of released hazardous substances from the environment; actions in response to the threat of release; actions that may be necessary to monitor, assess, and evaluate the release or threat; disposal of removed material; or other actions needed to prevent, minimize, or mitigate damage to public health or welfare or to the environment. Removal also includes, without being limited to, security fencing or other measures to limit access; provision of alternative water supplies; temporary evacuation and housing of threatened individuals not otherwise provided for; and any emergency assistance provided under the Disaster Relief Act.

Response action. Related to Superfund: a broad term encompassing removal, remediation, and containment actions, as well as precleanup and enforcement-related activities.

Solid waste management unit (SWMU). Related to RCRA: any discernible waste management unit from which hazardous constituents may migrate, irrespective of whether the unit was intended for the management of solid or hazardous wastes. The types of units considered SWMUs are landfills, surface impoundments, waste piles, land treatment units, incinerators, injection wells, tanks, container storage areas, waste-water treatment systems, and transfer stations. In addition, areas associated with production processes at facilities that have been affected by routine, systematic, and deliberate releases of wastes (which may include abandoned or discarded products), or hazardous constituents from wastes, are considered SWMUs.

Treatment, storage, or disposal facility (TSDF). Related to RCRA: with some exceptions, any facility that treats hazardous wastes; any facility that stores hazardous wastes, except generators who store their own wastes for less than 90 days for subsequent transport off-site; or any facility that serves to receive hazardous waste and disposes of it.

Unilateral administrative order. Order issued unilaterally by the EPA under section 106(a) of CERCLA to PRPs, or to non-PRPs such as adjacent landowners, requiring them to take a response action. Unilateral administrative orders contain findings of fact and conclusions of law, and they specify the work to be performed and the EPA's right to take over the work in the event of noncompliance, inadequate performance, or an emergency. A unilateral administrative order does not allocate conduct required by the order between individual PRPs; however, the EPA may issue carve-out orders requiring individual PRPs to perform specific actions. Also referred to as a "section 106 order."

Unknown PRP. A party that has liability with respect to a Superfund site, but that has not yet been identified as a potentially responsible party by the U.S. EPA or by an analogous state agency.

Unproven PRP. A party that has been identified as a potentially responsible party for a Superfund site by the U.S. Environmental Protection Agency or by an analogous state agency, but that does not acknowledge potential involvement with respect to the site because no evidence has been presented linking the party to the site. Also referred to as a *hiding-in-the-weeds PRP.*

Section 10,690

Statement of Position 97-1 Accounting by Participating Mortgage Loan Borrowers

May 9, 1997

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position that have been cleared by the Financial Accounting Standards Board as sources of established accounting principles in category *b* of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by the Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Scope

.01 This Statement of Position (SOP) establishes the borrower's accounting for a participating mortgage loan if the lender is entitled to participate in appreciation in the market value of the mortgaged real estate project, the results of operations of the mortgaged real estate project, or in both. This SOP applies to all borrowers in participating mortgage loan arrangements.

.02 This SOP does not apply to participating leases, debt convertible at the option of the lender into equity ownership of the property, or participating loans resulting from troubled debt restructurings.[1] It also does not apply to creditors in participating mortgage loan arrangements.

Background

.03 Through the 1960s, most loans collateralized by real estate projects had fixed interest rates and long-term payment periods with full amortization of principal. Thereafter, loans with variable features, such as adjustable interest rates and variable payments, began to emerge. The desire for instruments

[1] Accounting for leases is addressed in Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 13, *Accounting for Leases.* Accounting for debt convertible at the option of the lender into equity ownership of the property is addressed in Accounting Principles Board (APB) Opinion No. 14, *Accounting for Convertible Debt and Debt Issued with Stock Purchase Warrants.* Participating loans originating from troubled debt restructurings should be accounted for in conformity with FASB Statement No. 15, *Accounting by Debtors and Creditors for Troubled Debt Restructurings.*

in which the return to the lenders was tied more closely to the performance of the property led to the introduction of participating mortgage loans.

.04 Participating mortgage loans and nonparticipating mortgage loans share the following characteristics:

- Debtor-creditor relationships between those who provide initial cash outlays and hold the mortgages, and those who are obligated to make subsequent payments to the mortgage holders
- Real estate collateral
- Periodic fixed-rate or floating-rate interest payments
- Fixed maturity dates for stated principal amounts

.05 However, unlike a nonparticipating mortgage loan arrangement, in a participating mortgage loan, the lender participates in appreciation in the market value of the mortgaged real estate project or the results of operations of the mortgaged real estate project, or in both. The terms and economics of participating mortgage loan agreements vary by agreement. The terms and economics of one agreement may create a circumstance in which any participation payment is remote. In another agreement, the terms and economics may transfer many of the risks and rewards of property ownership.

.06 A lender may be entitled to participate in appreciation in the market value of a project either upon the sale of the project, at a deemed sale date, or at the maturity or refinancing of the loan. In agreements in which lenders participate in results of operations, the definition of the results of operations may vary among agreements. Examples of these definitions include but are not limited to revenue, income, or cash flows before or after debt service.

.07 The participation terms of a participating mortgage loan agreement usually are negotiated concurrently with the other terms of the underlying mortgage loan. A borrower agrees to participation rights generally because of market conditions, or in exchange for concessions granted by the lender on some other term(s) of the loan, such as a lower interest rate or a higher loan-to-value ratio.

.08 The lender's participation reduces the borrower's potential realization of operating results or gain on the sale of the real estate. However, the participation also may reduce the following:

- The contract interest the borrower is required to pay
- The risk that the borrower will be unable to pay interest at the stated or floating rate in the loan agreement and, consequently, the risk that the borrower will default on the loan and need to sell the property
- The amount of capital the borrower has at risk, because the loan-to-value ratio normally is higher

Further, the obligation to pay the lender a share of the property appreciation does not increase the current exposure of the borrower to loss in its investment, because the participation payments are made only if the market value of the property appreciates.

.09 In FASB Emerging Issues Task Force (EITF) Issue No. 86-28, *Accounting Implications of Indexed Debt Instruments,* the EITF considered indexed debt instruments, including participating mortgage obligations. The consensus indicates that the borrower's obligation under a participating mortgage to pay the lender a share of unrealized property appreciation should be recognized as a liability immediately when the property appreciates. A consensus was not reached, however, on how to account for the corresponding charge.

In order to enhance consistency in practice, this SOP provides additional guidance that specifically addresses the borrower's accounting for participating mortgage loans.

Conclusions

At Origination

.10 If the lender is entitled to participate in appreciation in the market value of the mortgaged real estate project, the borrower should determine the fair value of the participation feature at the inception of the loan. The borrower should recognize a participation liability for that amount, with a corresponding debit to a debt discount account. The debt discount should be amortized by the interest method, using the effective interest rate.

Interest Expense

.11 Interest expense on participating mortgage loans consists of the following three components:

a. Amounts designated in the mortgage agreement as interest

b. Amounts related to the lender's participation in results of operations

c. Amortization of debt discount related to the lender's participation in the market value appreciation of the mortgaged real estate project

Amounts Designated in the Mortgage Agreement as Interest

.12 Amounts designated in the mortgage agreement as interest should be charged to income in the period that the interest is incurred. If the loan's stated interest rate varies based on changes in an independent factor, such as an index or rate (for example, the prime rate, the London Interbank Offered Rate, or the United States Treasury bill weekly average rate), the calculation of the interest should be based on the factor (the index or the rate) as it changes over the life of the loan.

Amounts Related to the Lender's Participation in the Results of the Operations of the Mortgaged Real Estate Project

.13 Amounts due to a lender pursuant to the lender's participation in the real estate project's results of operations (as defined in the participating mortgage loan agreement) should be charged to interest expense in the borrower's corresponding financial reporting period, with a corresponding credit to the participation liability.

Amounts Related to the Lender's Participation in the Market Value Appreciation of the Mortgaged Real Estate Project

.14 As discussed in paragraph .10 of this SOP, if the lender is entitled to participate in appreciation in the market value of the mortgaged real estate project, at the inception of the loan the borrower should establish a participation liability equal to the fair value of the participation feature. The corresponding debit should be to a debt-discount account and should be amortized by the interest method over the life of the loan, using the effective interest rate. This amortization should be included in interest expense.[2]

---

[2] Interest recognized pursuant to this SOP is subject to the requirements of FASB Statement No. 34, *Capitalization of Interest Costs.* Once capitalized, amounts should not be adjusted for the effects of reversals of appreciation.

Accounting for a Participation in Appreciation Subsequent to Inception of the Loan

.15 At the end of each reporting period, the balance of the participation liability should be adjusted to equal the current fair value of the participation feature. The corresponding debit or credit should be to the related debt-discount account. The revised debt discount should be amortized prospectively, using the effective interest rate.

Extinguishment of Participating Mortgage Loans

.16 If the participating mortgage loan is extinguished prior to its due date, the difference between the recorded amount of the debt (including the unamortized debt discount and the participation liability) and the amount exchanged to extinguish the debt is a debt extinguishment gain or loss that should be reported as required by FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*.* [Revised, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145.]

Disclosures

.17 The borrower's financial statements should disclose the following:

- The aggregate amount of participating mortgage obligations at the balance-sheet date, with separate disclosure of the aggregate participation liabilities and related debt discounts
- Terms of the participations by the lender in either the appreciation in the market value of the mortgaged real estate project or the results of operations of the mortgaged real estate project, or both

Effective Date and Transition

.18 This SOP is effective for financial statements issued for fiscal years beginning after June 30, 1997, and for financial statements for interim periods in such years. The effect of the initial application of the provisions of this SOP should be reported as a cumulative effect of a change in accounting principle. Presentation of pro forma effects of retroactive application is not required. Restatement of previously issued annual financial statements is not permitted.

.19 Early adoption is encouraged but not required. If a decision is made to adopt the provisions of this SOP in a fiscal year beginning on or before June 30, 1997, and the decision is made in other than the first interim period of the fiscal year, financial statements for previous interim periods of that year should be restated.

.20 For participating loans with variable interest rates, the cumulative effect of adoption should be calculated using the interest rate in effect at incep-

---

* FASB Statement No. 145, *Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections*, supersedes FASB Statement No. 4, *Reporting Gains and Losses From Extinguishment of Debt*. FASB Statement No. 145 eliminated the requirement to classify all gains and losses associated with extinguishment of debt as extraordinary items. However, the rescission of FASB Statement No. 4 does not preclude gains or losses from extinguishment of debt that meet the criteria of APB Opinion No. 30, *Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions*, from being classified as extraordinary items. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of FASB Statement No. 145.]

tion of the participating mortgage loan. The initial interest rate should be treated as a fixed rate for purposes of this calculation.

The provisions of this Statement of Position need not be applied to immaterial items.

Basis for Conclusions

At Origination

.21 In a participating mortgage loan arrangement, the lender generally grants certain concessions to the borrower in return for the right to participate in either the appreciation in the market value of the mortgaged real estate project or the operations of the mortgaged real estate project, or in both. A common concession is granting an interest rate lower than that which would have been included in a comparable nonparticipating mortgage loan. Another common concession is a higher loan-to-value ratio than would be allowed at the same interest rate in a loan that does not include the participation in appreciation. AcSEC believes that in participating loan arrangements, the borrower has received something of value (the lower interest rate) in exchange for something of value (the participation feature) and that such exchanges should be given accounting recognition.

.22 Paragraph 11 of Accounting Principles Board (APB) Opinion No. 21, *Interest on Receivables and Payables*, states that "If cash and some other rights or privileges are exchanged for a note, the value of the rights or privileges should be given accounting recognition as described in paragraph 7." The participation feature included in the loan represents such a right. The participation feature has a market value separate from the loan agreement itself. In order to eliminate the participation feature while retaining the other terms of the mortgage loan, the borrower would be required to make a payment to the lender equal to the market value of the participation feature.

.23 The proposed accounting in the exposure draft that preceded this SOP would have required that borrowers record the loan at inception without allocating any of the proceeds to a liability related to the participation feature. AcSEC had been concerned about the ability to separately price the rights to participate in appreciation in value. AcSEC was informed by several respondents, however, that borrowers do have the ability to price these participation features separately. AcSEC, therefore, modified its original position to require that a separate liability for the participation in appreciation be recognized at inception and that liability should be measured at the fair value of the participation feature.

.24 Also, because of the participation feature, the stated rate of interest on the loan is less than the market rate of interest. AcSEC believes that, in accordance with paragraph 7 of APB Opinion 21, a discount, equal in amount to the fair value of the participation feature, should be established for this difference. That discount should be amortized over the life of the loan.

.25 Although AcSEC notes that a participation in the operations of a mortgaged property can be valued similarly, AcSEC believes that the cost of monitoring and updating the information needed to record and review the ongoing estimate of such a liability would exceed the benefits to be gained by reporting the liability. Consequently, AcSEC concluded that amounts due to a lender pursuant to a participation in operations of the mortgaged real estate should be included in interest expense in the borrower's corresponding financial reporting period.

Interest Expense

.26 Paragraph 15 of APB Opinion 21 requires that the difference between the present value and the face amount of a note be treated as a discount or premium and be amortized over the life of the note in such a way as to result in a constant rate of interest when applied to the carrying amount at the beginning of any given period. Consequently, AcSEC concluded that requiring amortization of the debt discount using the interest method is consistent with paragraph 15 of APB Opinion 21.

.27 Additionally, as discussed in paragraph .25 of this SOP, AcSEC believes that the cost of monitoring and updating the information needed to record and review the fair value of a lender's participation in operations would exceed the benefits to be gained by adjusting the liability. Consequently, AcSEC concluded that amounts due to a lender pursuant to a participation in operations of the mortgaged real estate should be treated as interest expense in the borrower's corresponding financial reporting period and that they should be accounted for in a manner consistent with the accounting for amounts designated in the mortgage loan agreement as interest.

Accounting for a Participation in Appreciation Subsequent to Inception of the Loan

.28 This SOP requires adjustment of the participation liability at each reporting date to its fair value. The exposure draft would have required the borrower to estimate at each balance sheet date the value on which the participation payment would have been based. For example, if the borrower would have been required to make a payment to the lender pursuant to the participation feature if the property were sold at the balance sheet date, the borrower would have been required to recognize a participation liability at the financial statement date equal to the estimated amount of the payment.

.29 Each period, the participation liability would have been debited or credited, if necessary, to adjust the balance in the account to the amount that would have been paid to the lender if the property were sold at its then-estimated market value or if the mortgage loan matured or was refinanced at that date. The corresponding debit or credit would have been made to the related debt-discount account. When applying the interest method, the borrower would have been required to recalculate the effective interest rate to reflect the changes in expected future payments (exclusive of payments related to participations in operations) assuming that (*a*) the expected future payment pursuant to the participation feature was to be paid on the due date of the loan and (*b*) the recalculated expected future payment amount was known at the inception of the loan. The debt discount related to the participation liability would have been adjusted to the amount that would have existed had the new effective interest rate been applied since the origination of the participating mortgage loan. In addition, a corresponding charge or credit to interest expense for this cumulative interest adjustment would have been required.

.30 Several respondents to the exposure draft commented that the proposed accounting in the exposure draft was unnecessarily complex and would have been costly and burdensome to apply. These respondents also commented that the proposed annual cumulative catch-up adjustment would lead to volatility of earnings. These respondents stated that changes in residual-value estimates and their effect on interest rates were more analogous to modifications of interest rates of debt instruments, which are accounted for prospectively. AcSEC considered these comments and agreed that the accounting should be simplified.

.31 This SOP does not require that the borrower's entire debt obligation (including the participation feature) be recorded at fair value. The underlying debt obligation should be recorded at amortized cost, while the participation feature should be recorded at fair value. AcSEC notes that recording debt obligations at fair value is not common practice. Therefore, AcSEC concluded that the underlying debt obligation should continue to be recorded on an amortized cost basis.

.32 However, AcSEC believes that the amortized cost basis is not meaningful with respect to the participation feature. AcSEC believes that because the fair value of the participation feature represents the best estimate of the amount at which it could be settled, the participation feature should be recorded at its fair value.

.33 AcSEC believes that requiring recognition in the current period of the entire amount of the change in the fair value of the participation feature would result in unnecessary volatility. AcSEC notes that the impact of factors that affect effective yields (for example, changes in interest rates) is commonly recognized prospectively. Therefore, AcSEC concluded that changes in the fair value of the participation feature should be amortized into income prospectively as adjustments to the effective yield.

.34 AcSEC believes that this approach results in relevant and reliable reported information about the obligation, that it is broadly consistent with existing practices in accounting for liabilities, and that it alleviates respondents' concerns about complexity and costliness.

.35 Other methods considered and rejected by AcSEC included (*a*) offsetting changes in the participation liability by changing the reported amount of the related asset, (*b*) requiring disclosure, but not recognition, of the lender's share in the appreciation, and (*c*) requiring adjustment of the participation liability balance to the amount that would have been paid to the lender if the property were sold at its estimated market value at the reporting date.

Increasing the Reported Amount of the Asset

.36 AcSEC considered a method under which any change to the participation liability would have been offset by changes in the reported amount of the related asset. This method was proposed by several respondents to the exposure draft. These respondents noted that the change in value of the asset was the underlying and directly offsetting source of the change in the participation liability. They commented that it was troubling that the determination of the property's value is considered reliable enough to recognize and measure a potential obligation and a charge to operations in accordance with FASB Statement No. 5, *Accounting for Contingencies,* but is not reliable enough to recognize an increase in the value of the asset. AcSEC concluded that to use an asset to account for changes in the value of the property would be inconsistent with the historical cost model of accounting. Furthermore, AcSEC believes that amounts due pursuant to participation features represent additional interest on the participating mortgages. Therefore, AcSEC believes that the amount should be recognized as interest expense over the life of the loan. If the change in the participation liability had been offset by changing the reported amount of the related asset, that change would have been recognized through depreciation over the remaining depreciable life of the asset, which only coincidentally would match the remaining life of the loan.

Disclosure

.37 Several respondents to the exposure draft recommended that AcSEC require only disclosure of the lender's share of the appreciation in value of the property or properties. This position appeared to be linked to disagreement with the accounting proposed in the exposure draft. These respondents opposed recording a lender's share of the appreciation in value without recognizing a corresponding increase in the value of the asset. AcSEC considered these comments but notes that disclosure is not a substitute for recognition in financial statements for items that meet recognition criteria.

Disclosures

.38 AcSEC believes that the disclosures required by this SOP are necessary to provide users with adequate information related to the financial position of borrowers in participating mortgage loan arrangements. AcSEC believes that, given the susceptibility of real estate to fluctuations in value, requiring disclosure of the terms of the participations provides users of financial statements with information that is helpful in assessing the risks facing participating mortgage loan borrowers.

Transition

.39 AcSEC believes that the adoption of this SOP constitutes a change in accounting principle for which the advantages of retroactive treatment in prior-period financial statements do not outweigh the disadvantages, as discussed in paragraphs 27 to 30 of APB Opinion 20, *Accounting Changes*. Accordingly, AcSEC concluded that the effect of initial application of this SOP should be reported as a cumulative effect of a change in accounting principle.

.40

Appendix

Illustration of a Participation in Appreciation

A-1. Assume that on January 1, 19X1, Borrower Co. purchased a property for $10 million. On that date, Borrower paid $1 million cash and entered into a participating mortgage loan agreement with Lender Co. in the amount of $9 million.

A-2. The loan agreement has the following terms:

- Fifteen-year term
- Interest-only periodic payments, principal to be repaid at end of term
- Five-percent stated interest rate
- Twenty-percent participation in appreciation in the value of the property above $10 million, payable at maturity (or earlier if the asset is sold or the loan is refinanced)

A-3. Assumptions related to the fair value of the participation feature are as follows:

Date	*Fair Value*	*Estimated Payment*	*Years in Future*
1/1/X1	$25,055	$300,000	15
12/31/X1	40,063	320,000	14
12/31/X2	54,122	333,000	13

A-4. Based on the preceding assumptions, Borrower Co. should make the following journal entries for this participating mortgage loan.

a. On January 1, 19X1, the following journal entries should be recorded:

Cash	$ 9,000,000	
Loan discount	25,055	
Mortgage loan payable		9,000,000
Participation liability		25,055

To record participating debt and estimate of participation liability (based on fair value of participation feature).

Property	$10,000,000	
Cash		10,000,000

To record purchase of property.

b. By the end of 19X1, entries to record interest expense and amortization of discount throughout the year would have taken the following form:

Interest expense	$ 451,159	
Interest payable		450,000
Loan discount		1,159

To record interest expense and amortization of debt discount using the interest method and an effective rate of 5.03 percent (rounded).

Loan discount	$ 15,008	
Participation liability		15,008

To adjust balance of participation liability to fair value at end of period. The adjustment is calculated as follows:

Fair value at 12/31/X1	$ 40,063
Fair value at 1/1/X1	25,055
Adjustment	$ 15,008

Note: For purposes of this illustration, the fair value of the participation feature at 12/31/X1 is based on a revised estimate of the equity participation that would be payable in fourteen years of $320,000.

c. At the end of 19X2, entries to record interest expense and amortization of discount throughout the year would have taken the following form:

Interest expense	$451,979	
Interest payable		450,000
Loan discount		1,979

To record interest expense and amortization of debt discount, using the interest method and an effective rate of 5.04 percent (rounded).

Loan discount	$ 14,059	
Participation liability		14,059

To adjust recorded participation liability of $40,063 to fair value at 12/31/X2 of $54,122.

Statement of Position 97-2
Software Revenue Recognition

October 27, 1997

NOTE

Statements of Position (SOPs) on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA SOPs that have been cleared by the Financial Accounting Standards Board as sources of established accounting principles in category *b* of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this SOP if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by the SOP should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

An effective date provision of this SOP has been deferred by SOP 98-4, *Deferral of the Effective Date of a Provision of SOP 97-2*, Software Revenue Recognition. This SOP is effective March 31, 1998. If an enterprise had applied SOP 97-2 in an earlier period for financial statements or information already issued prior to the promulgation of this SOP, amounts reported in those financial statements or as part of that information may be restated to reflect the deferral of the effective date of the second sentence of paragraphs 10, 37, 41, and 57 of SOP 97-2 and the related examples noted in paragraph .03 of this SOP.

SOP 97-2 is amended by SOP 98-9, *Modification of SOP-97-2*, Software Revenue Recognition, *With Respect to Certain Transactions*. The provisions of this SOP that extend the deferral of the application of certain passages of SOP 97-2 are effective December 15, 1998. All other provisions of this SOP are effective for transactions entered into in fiscal years beginning after March 15, 1999. Earlier adoption is permitted as of the beginning of fiscal years or interior periods for which financial statements or information has not been issued. Retroactive application of the provisions of this SOP is prohibited.

Introduction

.01 Statement of Position (SOP) 91-1, *Software Revenue Recognition*, was issued in 1991 to provide guidance on applying generally accepted accounting principles to software transactions and to narrow the range of revenue recognition practices that were in use before its issuance. Since the issuance of SOP 91-1, practice issues have been identified that the AICPA's Accounting Standards Executive Committee (AcSEC) believes are not addressed adequately in SOP 91-1. In addition, AcSEC believes some of the guidance in SOP 91-1 should be reconsidered. This SOP supersedes SOP 91-1.

Scope

.02 This SOP provides guidance on when revenue should be recognized and in what amounts for **licensing**, selling, leasing, or otherwise marketing computer software.[1] It should be applied to those activities by all entities that earn such revenue. It does not apply, however, to revenue earned on products or services containing software that is incidental[2] to the products or services as a whole.

.03 In connection with the licensing of an existing product, a vendor might offer a small discount (for example, a coupon or other form of offer for five percent off) on additional licenses of the licensed product or other products that exist at the time of the offer but are not part of the arrangement. Such marketing and promotional activities are not unique to software and are not included in the scope of this SOP.[3]

Relationship to Other Pronouncements

.04 If a lease of software includes property, plant, or equipment, the revenue attributable to the property, plant, or equipment should be accounted for in accordance with Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 13, *Accounting for Leases*, and any revenue attributable to the software, including **postcontract customer support (PCS)**, should be accounted for separately in conformity with the guidance set forth in this SOP. However, in conformity with paragraph .02, if the property, plant, or equipment contains software that is incidental to the property, plant, or equipment as a whole, the software should not be accounted for separately.

.05 A number of the requirements of this SOP are similar to or overlap those in certain pronouncements of the Accounting Principles Board (APB) or the FASB, such as FASB Statement No. 48, *Revenue Recognition When Right of Return Exists*. This SOP does not alter the requirements of any APB Opinion or FASB pronouncement.

Conclusions

.06 The following conclusions should be read in conjunction with the *Basis for Conclusions* section, beginning with paragraph .93 of this SOP, and the examples in appendix A, *Examples of the Application of Certain Provisions of this SOP* [paragraph .146].

Basic Principles

.07 Software arrangements range from those that provide a license for a single software product to those that, in addition to the **delivery** of software or a software system, require significant production, modification, or customization of software. If an arrangement to deliver software or a software system, either alone or together with other products or services, requires significant production, modification, or customization of software, the entire arrangement should be accounted for in conformity with Accounting

---

[1] Terms defined in the glossary are set in **boldface** type the first time they appear in this SOP.

[2] Indicators of whether software is incidental to a product as a whole include (but are not limited to) (*a*) whether the software is a significant focus of the marketing effort or is sold separately, (*b*) whether the vendor is providing postcontract customer support, and (*c*) whether the vendor incurs significant costs that are within the scope of FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*. An example of the applicability of this SOP to revenue earned on products containing software is included in appendix A [paragraph .146].

[3] As discussed in paragraph .09, arrangements may include multiple elements. If the discount or other concessions in an arrangement are more than insignificant, a presumption is created that an additional element(s) (as defined in paragraph .09) is being offered in the arrangement.

Research Bulletin (ARB) No. 45, *Long-Term Construction-Type Contracts*, using the relevant guidance herein, and in SOP 81-1, *Accounting for Performance of Construction-Type and Certain Production-Type Contracts* [section 10,330].[4]

.08 If the arrangement does not require significant production, modification, or customization of software, revenue should be recognized when all of the following criteria are met.

- Persuasive evidence of an arrangement exists.
- Delivery has occurred.
- The vendor's fee is fixed or determinable.
- Collectibility is probable.[5]

.09 Software arrangements may provide licenses for multiple software deliverables (for example, software products, **upgrades/enhancements**, PCS, or services), which are termed multiple *elements*. A number of the elements may be described in the arrangement as being deliverable only on a **when-and-if-available** basis. When-and-if-available deliverables should be considered in determining whether an arrangement includes multiple elements. Accordingly, the requirements of this SOP with respect to arrangements that consist of multiple elements should be applied to all additional products and services specified in the arrangement, including those described as being deliverable only on a when-and-if-available basis.

.10 If an arrangement includes multiple elements, the fee should be allocated to the various elements based on vendor-specific objective evidence of fair value, regardless of any separate prices stated within the contract for each element. Vendor-specific objective evidence of fair value is limited to the following:

- The price charged when the same element is sold separately
- For an element not yet being sold separately, the price established by management having the relevant authority; it must be probable that the price, once established, will not change before the separate introduction of the element into the marketplace

The amount allocated to undelivered elements is not subject to later adjustment.[6] However, if it becomes probable that the amount allocated to an undelivered element will result in a loss on that element of the arrangement, the loss should be recognized pursuant to FASB Statement No. 5, *Accounting for Contingencies*. When a vendor's pricing is based on multiple factors such as the number of products and the number of users, the amount allocated to the same element when sold separately must consider all the factors of the vendor's pricing structure.

.11 If a discount is offered in a multiple-element arrangement, a proportionate amount of that discount should be applied to each element included in the arrangement based on each element's fair value without regard to the discount. However, as discussed in paragraph .37, no portion of the discount should be allocated to any upgrade rights. Moreover, to the extent that a discount exists, the residual method described in paragraph .12 attributes that

---

[4] If a software arrangement includes services that meet the criteria discussed in paragraph .65 of this SOP, those services should be accounted for separately.

[5] The term *probable* is used in this SOP with the same definition as used in FASB Statement No. 5, *Accounting for Contingencies*.

[6] This does not apply to changes in the estimated percentage of customers not expected to exercise an upgrade right. See paragraph .37.

discount entirely to the delivered elements. [As amended, effective for transactions entered into in fiscal years beginning after March 15, 1999, by Statement of Position 98-9.]

.12 If sufficient vendor-specific objective evidence does not exist for the allocation of revenue to the various elements of the arrangement, all revenue from the arrangement should be deferred until the earlier of the point at which (*a*) such sufficient vendor-specific objective evidence does exist or (*b*) all elements of the arrangement have been delivered. The following exceptions to this guidance are provided.

- If the only undelivered element is PCS, the entire fee should be recognized ratably (see paragraphs .56 through .62).
- If the only undelivered element is services that do not involve significant production, modification, or customization of software (for example, training or installation), the entire fee should be recognized over the period during which the services are expected to be performed (see paragraphs .63 through .71).
- If the arrangement is in substance a subscription, the entire fee should be recognized ratably (see paragraphs .48 and .49).
- If the fee is based on the number of copies, the arrangement should be accounted for in conformity with paragraphs .43 through .47.
- There may be instances in which there is vendor-specific objective evidence of the fair values of *all* undelivered elements in an arrangement but vendor-specific objective evidence of fair value does not exist for one or more of the delivered elements in the arrangement. In such instances, the fee should be recognized using the residual method, provided that (*a*) all other applicable revenue recognition criteria in this SOP are met and (*b*) the fair value of all of the undelivered elements is less than the arrangement fee. Under the residual method, the arrangement fee is recognized as follows: (*a*) the total fair value of the undelivered elements, as indicated by vendor-specific objective evidence, is deferred and (*b*) the difference between the total arrangement fee and the amount deferred for the undelivered elements is recognized as revenue related to the delivered elements.

[As amended, effective for transactions entered into in fiscal years beginning after March 15, 1999, by Statement of Position 98-9.]

.13 The portion of the fee allocated to an element should be recognized as revenue when the criteria in paragraph .08 of this SOP are met with respect to the element. In applying those criteria, the delivery of an element is considered not to have occurred if there are undelivered elements that are essential to the functionality of the delivered element, because the **customer** would not have the full use of the delivered element.

.14 No portion of the fee (including amounts otherwise allocated to delivered elements) meets the criterion of collectibility if the portion of the fee allocable to delivered elements is subject to forfeiture, refund, or other concession if any of the undelivered elements are not delivered. In order for the revenue related to an arrangement to be considered not subject to forfeiture, refund, or other concession, management must intend not to provide refunds or concessions that are not required under the provisions of the arrangement. All available evidence should be considered to determine whether the evidence persuasively indicates that the revenue is not subject to forfeiture, refund, or other concession. Although no single item of evidence may be persuasive, the following additional items should be considered:

- Acknowledgment in the arrangement of products not currently available or not to be delivered currently
- Separate prices stipulated in the arrangement for each deliverable element
- Default and damage provisions as defined in the arrangement
- Enforceable payment obligations and due dates for the delivered elements that are not dependent on the delivery of the future deliverable elements, coupled with the intent of the vendor to enforce rights of payment
- Installation and use of the delivered software
- Support services, such as telephone support, related to the delivered software being provided currently by the vendor

Regardless of the preceding, the vendor's historical pattern of making refunds or other concessions that were not required under the original provisions (contractual or other) of other arrangements should be considered more persuasive than terms included in the arrangement that indicate that no concessions are required.

Evidence of an Arrangement

.15 Practice varies with respect to the use of written contracts. Although a number of sectors of the industry rely upon signed contracts to document arrangements, other sectors of the industry that license software (notably the packaged software sector) do not.

.16 If the vendor operates in a manner that does not rely on signed contracts to document the elements and obligations of an arrangement, the vendor should have other forms of evidence to document the transaction (for example, a purchase order from a third party or on-line authorization). If the vendor has a customary business practice of utilizing written contracts, evidence of the arrangement is provided only by a contract signed by both parties.

.17 Even if all other requirements set forth in this SOP for the recognition of revenue are met (including delivery), revenue should not be recognized on any element of the arrangement unless persuasive evidence of an arrangement exists.

Delivery

.18 The second criterion in paragraph .08 for revenue recognition is delivery. The principle of not recognizing revenue before delivery applies whether the customer is a **user** or a **reseller**. Except for arrangements in which the fee is a function of the number of copies, delivery is considered to have occurred upon the transfer of the product master or, if the product master is not to be delivered, upon the transfer of the first copy. For software that is delivered electronically, the delivery criterion of paragraph .08 is considered to have been met when the customer either (*a*) takes possession of the software via a download (that is, when the customer takes possession of the electronic data on its hardware), or (*b*) has been provided with access codes that allow the customer to take immediate possession of the software on its hardware pursuant to an agreement or purchase order for the software. In such cases, revenue should be recognized if the other criteria of paragraph .08 have been satisfied.

.19 Paragraphs .20 through .25 provide guidance on determining whether delivery is considered to have occurred in certain kinds of software transactions.

Customer Acceptance

.20 After delivery, if uncertainty exists about customer acceptance of the software, license revenue should not be recognized until acceptance occurs.

Determining Delivery—Multiple Copies of Software Products Versus Multiple Licenses

.21 Arrangements to use multiple copies of a software product under **site licenses** with users and to market multiple copies of a software product under similar arrangements with resellers should be distinguished from arrangements to use or market multiple single licenses of the same software.

- In the former kind of arrangement, duplication is incidental to the arrangement and the delivery criterion is met upon the delivery of the first copy or product master. The vendor may be obligated to furnish up to a specified number of copies of the software, but only if the copies are requested by the user. The licensing fee is payable even if no additional copies are requested by the user or reseller. If the other criteria in this SOP for revenue recognition are met, revenue should be recognized upon delivery of the first copy or product master. The estimated costs of duplication should be accrued at that time.
- In the latter kind of arrangement, the licensing fee is a function of the number of copies delivered to, made by, or deployed by the user or reseller. Delivery occurs and revenue should be recognized as the copies are made by the user or sold by the reseller if the other criteria in this SOP for revenue recognition are met.

Delivery Other Than to the Customer

.22 Delivery should not be considered complete unless the destination to which the software is shipped is the customer's place of business or another site specified by the customer. In addition, if a customer specifies an intermediate site but a substantial portion of the fee is not payable until the delivery by the vendor to another site specified by the customer, revenue should not be recognized until the delivery is made to that other site.

Delivery Agents

.23 Vendors may engage agents, often referred to as fulfillment houses, to either duplicate and deliver or only deliver software products to customers. Revenue from transactions involving delivery agents should be recognized when the software is delivered to the customer. Transferring the fulfillment obligation to an agent of the vendor does not relieve the vendor of the responsibility for delivery. This is the case even if the vendor has no direct involvement in the actual delivery of the software product to the customer.

Authorization Codes

.24 In a number of software arrangements, vendors use **authorization codes**, commonly referred to as *keys*, to permit customer access to software that otherwise would be restricted. Keys are used in a variety of ways and may serve different purposes. For example, permanent keys may be used to control access to the software, or additional permanent keys may be necessary for the duplication of the software. Temporary keys may be used for the same purposes and also may be used to enhance the vendor's ability to collect payment or to control the use of software for demonstration purposes.

.25 In software arrangements involving the use of keys, delivery of a key is not necessarily required to satisfy the vendor's delivery responsibility. The software vendor should recognize revenue on delivery of the software if all other requirements for revenue recognition under this SOP and all of the following conditions are met.

- The customer has licensed the software and the vendor has delivered a version of the software that is fully functional except for the permanent key or the additional keys (if additional keys are used to control the reproduction of the software).
- The customer's obligation to pay for the software and the terms of payment, including the timing of payment, are not contingent on delivery of the permanent key or additional keys (if additional keys are used to control the reproduction of the software).
- The vendor will enforce and does not have a history of failing to enforce its right to collect payment under the terms of the original arrangement.

In addition, if a temporary key is used to enhance the vendor's ability to collect payment, the delivery of additional keys, whether temporary or permanent, is not required to satisfy the vendor's delivery responsibility if (*a*) the above conditions are met and (*b*) the use of a temporary key in such circumstances is a customary practice of the vendor. Selective issuance of temporary keys might indicate that collectibility is not probable or that the software is being used only for demonstration purposes.

Fixed or Determinable Fees and Collectibility

.26 The other prerequisites in paragraph .08 for revenue recognition are that (*a*) the vendor's fee is fixed or determinable and (*b*) collectibility is probable. A software licensing fee is not fixed or determinable if the amount is based on the number of units distributed or copied, or the expected number of users of the product. Revenue recognition for variable-pricing arrangements is discussed in paragraphs .43 through .47 of this SOP. Additionally, if an arrangement includes (*a*) rights of return or (*b*) rights to refunds without return of the software, FASB Statement No. 48 requires that conditions that must be met in order for the vendor to recognize revenue include that the amount of future returns or refunds can be reasonably estimated.

Factors That Affect the Determination of Whether a Fee is Fixed or Determinable and Collectible

.27 A number of arrangements that call for fixed or determinable payments, including minimum royalties or license fees from resellers, specify a payment period that is short in relation to the period during which the customer is expected to use or market the related products. Other arrangements have payment terms that extend over a substantial portion of the period during which the customer is expected to use or market the related products. Because a product's continuing value may be reduced due to the subsequent introduction of enhanced products by the vendor or its competitors, the possibility that the vendor still may provide a refund or concession to a creditworthy customer to liquidate outstanding amounts due under the original terms of the arrangement increases as payment terms become longer.

.28 For the reason cited in paragraph .27 *any* extended payment terms in a software licensing arrangement may indicate that the fee is not fixed or determinable. Further, if payment of a significant portion of the software licensing fee is not due until after expiration of the license or more than twelve months after delivery, the licensing fee should be *presumed* not to be fixed or determinable. However, this presumption may be overcome by evidence that the vendor has a standard business practice of using long-term or installment contracts and a history of successfully collecting under the original payment terms without making concessions. In such a situation, a vendor should consider such fees fixed or determinable and should recognize revenue upon delivery of the software, provided all other conditions for revenue recognition in this SOP have been satisfied.

.29 If it cannot be concluded that a fee is fixed or determinable at the outset of an arrangement, revenue should be recognized as payments from customers become due (assuming all other conditions for revenue recognition in this SOP have been satisfied).

.30 For reseller arrangements, the following factors also should be considered in evaluating whether the fixed or determinable fee and collectibility criteria for revenue recognition are met.

- Business practices, the reseller's operating history, competitive pressures, informal communications, or other factors indicate that payment is substantially contingent on the reseller's success in distributing individual units of the product.[7]
- Resellers are new, undercapitalized, or in financial difficulty and may not demonstrate an ability to honor a commitment to make fixed or determinable payments until they collect cash from their customers.
- Uncertainties about the potential number of copies to be sold by the reseller may indicate that the amount of future returns cannot be reasonably estimated on delivery; examples of such factors include the newness of the product or marketing channel, competitive products, or dependence on the market potential of another product offered (or anticipated to be offered) by the reseller.
- Distribution arrangements with resellers require the vendor to rebate or credit a portion of the original fee if the vendor subsequently reduces its price for a product and the reseller still has rights with respect to that product (sometimes referred to as price protection). If a vendor is unable to reasonably estimate future price changes in light of competitive conditions, or if significant uncertainties exist about the vendor's ability to maintain its price, the arrangement fee is not fixed or determinable. In such circumstances, revenue from the arrangement should be deferred until the vendor is able to reasonably estimate the effects of future price changes and the other conditions of this SOP have been satisfied.

.31 *Customer Cancellation Privileges.* Fees from licenses cancelable by customers are neither fixed nor determinable until the cancellation privileges lapse. Fees from licenses with cancellation privileges expiring ratably over the license period are considered to become determinable ratably over the license period as the cancellation privileges lapse. In applying the provisions of this paragraph, obligations related to warranties for defective software, including warranties that are routine, short-term, and relatively minor, should be accounted for in conformity with FASB Statement No. 5. Additionally, short-term rights of return, such as thirty-day money-back guarantees, should not be considered cancellation privileges; the related returns should be accounted for in conformity with FASB Statement No. 48.

.32 *Fiscal Funding Clauses.* Fiscal funding clauses sometimes are found in software license arrangements in which the licensees are governmental units. Such clauses generally provide that the license is cancelable if the legislature or funding authority does not appropriate the funds necessary for the governmental unit to fulfill its obligations under the licensing arrangement.

---

[7] Contractual arrangements under which the reseller is obligated to pay only as and if sales are made to users should be accounted for as consignments.

.33 Consistent with FASB Technical Bulletin No. 79-10, *Fiscal Funding Clauses in Lease Agreements*, a software licensing arrangement with a governmental unit containing a fiscal funding clause should be evaluated to determine whether the uncertainty of a possible license arrangement cancellation is a remote contingency.[8] If the likelihood is assessed as remote, the software licensing arrangement should be considered noncancelable. Such an assessment should include the factors discussed in paragraphs .27 and .28 of this SOP. If the likelihood is assessed as other than remote, the license should be considered cancelable, thus precluding revenue recognition. A fiscal funding clause with a customer other than a governmental unit that is required to include such a clause creates a contingency that precludes revenue recognition until the requirements of the clause and all other provisions of this SOP have been satisfied.

Multiple-Element Arrangements

.34 As discussed in paragraph .09, multiple-element arrangements to which contract accounting does not apply may include customer rights to any combination of additional software deliverables, services, or PCS. If contract accounting does not apply, individual elements in such arrangements should be accounted for in accordance with paragraphs .08 through .14. Paragraphs .35 through .73 provide guidance on the application of those paragraphs to multiple-element arrangements.

Additional Software Deliverables and Rights to Exchange or Return Software

.35 As part of a multiple-element arrangement, a vendor may agree to deliver software currently and to deliver additional software in the future. The additional deliverables may include upgrades/enhancements or additional software products. Additionally, a vendor may provide the customer with the right to exchange or return software, including the right to transfer software from one hardware **platform** or operating system to one or more other platforms or operating systems (a **platform-transfer right**).

.36 *Upgrades/enhancements.* As part of a multiple-element arrangement, a vendor may agree to deliver software currently and provide the customer with an **upgrade right** for a specified upgrade/enhancement. The upgrade right may be evidenced by a specific agreement, commitment, or the vendor's established practice. (Rights to receive *unspecified* upgrades/enhancements on a when-and-if-available basis are PCS, as it has been redefined in this SOP.) The upgrade right should be accounted for as a separate element in accordance with paragraphs .08 through .14. Guidance on the application of those paragraphs to multiple-element software arrangements that include upgrade rights is given in paragraphs .37 and .38.

.37 If a multiple-element arrangement includes an upgrade right, the fee should be allocated between the elements based on vendor-specific objective evidence of fair value. The fee allocated to the upgrade right is the price for the upgrade/enhancement that would be charged to existing users of the software product being updated. If the upgrade right is included in a multiple-element arrangement on which a discount has been offered (see paragraph .11), no portion of the discount should be allocated to the upgrade right. If sufficient vendor-specific evidence exists to reasonably estimate the percentage of customers that are not expected to exercise the upgrade right, the fee allocated to

---

[8] The evaluation of whether the level of uncertainty of possible cancellation is remote should be consistent with FASB Statement No. 5, which defines *remote* as relating to conditions in which "the chance of the future event or events occurring is slight."

the upgrade right should be reduced to reflect that percentage. This estimated percentage should be reviewed periodically. The effect of any change in that percentage should be accounted for as a change in accounting estimate.

.38 The amount of the fee allocated to the upgrade right should be recognized as revenue when the conditions in paragraphs .08 through .14 are met. If sufficient vendor-specific objective evidence does not exist for the allocation of the fee to the upgrade right, revenue from the arrangement should be deferred until the earlier of the point at which (*a*) such sufficient vendor-specific objective evidence does exist or (*b*) all elements of the arrangement have been delivered.

.39 *Additional Software Products.* As part of a multiple-element arrangement, a vendor may agree to deliver software currently and deliver specified additional software products in the future. The rights to these additional products may be included either in the terms of a PCS arrangement or in a separate agreement. Even if the rights to the additional software products are included in a PCS arrangement, the revenue allocable to the additional software products should be accounted for separately from the PCS arrangement as an element of a multiple-element arrangement.

.40 Multiple-element arrangements that include rights to undelivered additional software products that are not subscriptions (see paragraphs .48 and .49) should be accounted for in accordance with paragraphs .08 through .14 of this SOP. Guidance on the application of those paragraphs to such arrangements is provided in paragraphs .41 through .47 below.

.41 The fee from the arrangement should be allocated among the products based on vendor-specific objective evidence of fair value. The allocation should be based on the relative sales prices (determined pursuant to paragraphs .10 and .11 of this SOP) of the products. If vendor-specific objective evidence of fair value does not exist, paragraph .12 of this SOP requires that all revenue from the arrangement be deferred until the earlier of the point at which (*a*) such sufficient vendor-specific objective evidence does exist or (*b*) all elements of the arrangement have been delivered. The fee allocated to the additional software products should not be reduced by the percentage of any customers that are not expected to exercise the right to receive additional software products.

.42 If the arrangement is based on a price per product (not a price per copy), the portion of the fee allocated to a product should be recognized as revenue when the product is delivered, assuming all other provisions of paragraphs .08 through .14 of this SOP are met.

.43 Some **fixed fee** license or reseller arrangements provide customers with the right to reproduce or obtain copies at a specified price per copy (rather than per product) of two or more software products up to the total amount of the fixed fee. A number of the products covered by the arrangement may not be deliverable or specified at the inception of the arrangement. Although the price per copy is fixed at the inception of the arrangement, an allocation of the arrangement fee to the individual products generally cannot be made, because the total revenue allocable to each software product is unknown and depends on the choices to be made by the customer and, sometimes, future development activity while the arrangement is in effect. Nevertheless, as discussed in paragraph .46 of this SOP, in certain situations, revenue can be allocated to the products that are undeliverable or not specified at the inception of the arrangement.

.44 In arrangements in which no allocation can be made, until the first copy or product master of each product covered by the arrangement has been delivered to the customer assuming the provisions of paragraphs .08 through .14 of this SOP are met, revenue should be recognized as copies of delivered products either (*a*) are reproduced by the customer or (*b*) are furnished to the customer if the vendor is duplicating the software. Once the vendor has delivered the product master or the first copy of all products covered by the arrangement, any licensing fees not previously recognized should be recognized. (At that point, only duplication of the software is required to satisfy the vendor's delivery requirement. As discussed in paragraph .21 of this SOP, duplication of the software is incidental to the arrangement, and delivery is deemed to have occurred upon delivery of the product master or first copy.) When the arrangement terminates, the vendor should recognize any licensing fees not previously recognized.

.45 The revenue from the kind of arrangements discussed in paragraph .44 should not be recognized fully until at least one of the following conditions is met.

- Delivery is complete for all products covered by the arrangement.
- The aggregate revenue attributable to all copies of the software products delivered is equal to the fixed fee, provided that the vendor is not obligated to deliver additional software products under the arrangement.

.46 Nevertheless, certain arrangements that include products that are not deliverable at the inception impose a maximum number of copies of the undeliverable product(s) to which the customer is entitled. In such arrangements, a portion of the arrangement fee should be allocated to the undeliverable product(s). This allocation should be made assuming that the customer will elect to receive the maximum number of copies of the undeliverable product(s).

.47 The revenue allocated to the delivered products should be recognized when the product master or first copy is delivered. If, during the term of the arrangement, the customer reproduces or receives enough copies of these delivered products so that revenue allocable to the delivered products exceeds the revenue previously recognized, such additional revenue should be recognized as the copies are reproduced or delivered. The revenue allocated to the undeliverable product(s) should be reduced by a corresponding amount.

.48 As part of a multiple-element arrangement with a user, a vendor may agree to deliver software currently and to deliver *unspecified* additional software products in the future (including unspecified platform transfer rights that do not qualify for exchange accounting as described in paragraphs .50 through .55). For example, the vendor may agree to deliver all new products to be introduced in a family of products over the next two years. These arrangements are similar to arrangements that include PCS in that future deliverables are unspecified. Nevertheless, they are distinguished from arrangements that include PCS because the future deliverables are products, not unspecified upgrades/enhancements.

.49 The software elements of the kinds of arrangements discussed in paragraph .48 should be accounted for as subscriptions. No allocation of revenue should be made among any of the software products, and all software product-related revenue from the arrangement should be recognized ratably over the term of the arrangement beginning with delivery of the first product. If the term of the arrangement is not stated, the revenue should be recognized ratably over the estimated economic life of the products covered by the arrangement, beginning with delivery of the first product. An intent on the part of the vendor not to develop new products during the term of the arrangement does not relieve the vendor of the requirement to recognize revenue ratably over the term of the arrangement, beginning with the delivery of the first product.

.50 *Rights to Exchange or Return Software.* As part of an arrangement, a software vendor may provide the customer with the right to return software or to exchange software for products with no more than minimal differences in price, functionality, or features. The accounting for returns is significantly different from the accounting for exchanges. Although it is sometimes difficult to determine whether a transaction is a return or exchange of software, the fact that the software is not returned physically does not preclude accounting for the transaction as either an exchange or as a return. If the software is not returned physically and the customer contractually is entitled to continue to use the previously delivered software, the arrangement should be accounted for in the manner prescribed in the section herein entitled "Additional Software Products" (see paragraphs .39 through .49). If the software is not returned physically and the customer contractually is not entitled to continue to use the previously delivered software, the transaction should be accounted for either as a return or as an exchange, as discussed in the following paragraphs.

.51 If the rights discussed in the previous paragraph are offered to users (but not resellers), the exchanges are analogous to "exchanges by ultimate customers of one item for another of the same kind, quality, and price . . . [that] are not considered returns" described in footnote 3 of FASB Statement No. 48. Conversely, exchanges by users of software products for dissimilar software products or for similar software products with more than minimal differences in price, functionality, or features are considered returns, and revenue related to arrangements that provide users with the rights to make such exchanges should be accounted for in conformity with FASB Statement No. 48. If the other product(s) is not available at the time the initial product is delivered, there should be persuasive evidence that demonstrates there will be no more than minimal differences in price, features, or functionality among the products in order for the right to qualify as a right to exchange. Additionally, if the vendor expects to incur a significant amount of development costs related to the other product, the other product should be considered to have more than a minimal difference in functionality.

.52 As part of a multiple-element arrangement, a vendor may grant a user a platform-transfer right. Depending on the circumstances, the exercise of a platform-transfer right may represent an exchange, a return, or additional software products for accounting purposes. If the customer contractually is entitled to continue to use the software that was delivered originally (in addition to the software that is to be delivered for the new platform), the platform transfer right should be accounted for in the manner prescribed in the section herein entitled "Additional Software Products" (see paragraphs .39 through .49).

.53 If, as part of a multiple-element arrangement, a vendor offers a user (not a reseller) a platform-transfer right, and the provisions of paragraphs .08 through .14 of this SOP are met, the revenue from the software license should be recognized upon the initial delivery of the software, and the exercise of the platform-transfer right should be treated as an exchange, if the platform-transfer right—

- Is for the same product (see paragraph .54)
- Does not increase the number of copies or concurrent users of the software product available under the license arrangement.

.54 Products are considered to be the same product if there are no more than minimal differences among them in price, features, and functions, and if they are marketed as the same product, even though there may be differences arising from environmental variables such as operating systems, databases, user interfaces, and platform scales. Indicators of "marketed as the same product" include (*a*) the same product name (although version numbers may differ) and (*b*) a focus on the same features and functions.

.55 As part of their standard sales terms or as a matter of practice, vendors may grant resellers the rights to exchange unsold software for other software (including software that runs on a different hardware platform or operating system). Because the reseller is not the ultimate customer (see paragraph .51), such exchanges, including those referred to as stock balancing arrangements, should be accounted for as returns. Arrangements that grant rights to make such exchanges should be accounted for in conformity with FASB Statement No. 48, even if the vendors require the resellers to purchase additional software to exercise the exchange rights.

Postcontract Customer Support

.56 Software arrangements may include the right to PCS. PCS includes the right to receive PCS services or *unspecified* upgrades/enhancements, or both, offered to users or resellers. A vendor may develop historical patterns of regularly providing all customers or certain kinds of customers with the services or unspecified upgrades/enhancements normally associated with PCS, or may anticipate doing so, even though there is no written contractual obligation or the stipulated PCS term commences at some date after delivery. In those situations, an implied PCS arrangement exists that commences upon product delivery. For purposes of applying the guidance in this SOP, PCS includes a vendor's expected performance based on such patterns, even if performance is entirely at the vendor's discretion and not pursuant to a formal agreement.

.57 If a multiple-element software arrangement includes explicit or implicit rights to PCS, the total fees from the arrangement should be allocated among the elements based on vendor-specific objective evidence of fair value, in conformity with paragraph .10. The fair value of the PCS should be determined by reference to the price the customer will be required to pay when it is sold separately (that is, the renewal rate). The portion of the fee allocated to PCS should be recognized as revenue ratably over the term of the PCS arrangement, because the PCS services are assumed to be provided ratably. However, revenue should be recognized over the period of the PCS arrangement in proportion to the amounts expected to be charged to expense for the PCS services rendered during the period if—

- Sufficient vendor-specific historical evidence exists demonstrating that costs to provide PCS are incurred on other than a straight-line basis. In making this determination, the vendor should take into consideration allocated portions of cost accounted for as research and development (R&D) costs and the amortization of costs related to the upgrade-enhancement capitalized in conformity with FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*. Such costs should be considered as part of the costs to provide PCS.
- The vendor believes that it is probable that the costs incurred in performing under the current arrangement will follow a similar pattern.

Because the timing, frequency, and significance of unspecified upgrades/enhancements can vary considerably, the point at which unspecified upgrades/

enhancements are expected to be delivered should not be used to support income recognition on other than a straight-line basis.

.58 If sufficient vendor-specific objective evidence does not exist to allocate the fee to the separate elements and the only undelivered element is PCS, the entire arrangement fee should be recognized ratably over (*a*) the contractual PCS period (for those arrangements with explicit rights to PCS) or (*b*) the period during which PCS is expected to be provided (for those arrangements with implicit rights to PCS).

.59 PCS revenue may be recognized together with the initial licensing fee on delivery of the software if all of the following conditions are met.

a. The PCS fee is included with the initial licensing fee.

b. The PCS included with the initial license is for one year or less.

c. The estimated cost of providing PCS during the arrangement is insignificant.

d. Unspecified upgrades/enhancements offered during PCS arrangements historically have been and are expected to continue to be minimal and infrequent.

If PCS revenue is recognized upon the delivery of the software, the vendor must accrue all estimated costs of providing the services, including upgrades/enhancements. Upgrades/enhancements are not developed solely for distribution to PCS customers; revenues are expected to be earned from providing the enhancements to other customers as well. Therefore, costs should be allocated between PCS arrangements and other licenses.

.60 A determination that unspecified upgrades/enhancements offered during the PCS arrangement are expected to be minimal and infrequent should be evidenced by the patterns of minimal and infrequent unspecified upgrades/enhancements offered in previous PCS arrangements. A conclusion that unspecified upgrades/enhancements are expected to be minimal and infrequent should not be reached simply because unspecified upgrades/enhancements have been or are expected to be offered less frequently than on an annual basis. Regardless of the vendor's history of offering unspecified upgrades/enhancements to initial licensees, PCS should be accounted for separately from the initial licensing fee if the vendor expects to offer upgrades/enhancements that are greater than minimal or more than infrequent to the users or resellers of the licensed software during the PCS arrangement.

.61 *Postdelivery Telephone Support at No Additional Charge.* Postdelivery telephone support provided to users by the vendor at no additional charge should be accounted for as PCS, in conformity with this SOP, regardless of whether the support is provided explicitly under the licensing arrangement. Although such telephone support may be offered or available for periods exceeding one year, if the vendor has established a history of providing substantially all the telephone support within one year of the licensing or sale of the software, the PCS may be considered to have a term of one year or less in applying paragraph .59, item (*b*) of this SOP. Accordingly, revenue allocable to telephone support may be recognized together with the initial licensing fee on delivery of the software if all the conditions in paragraph .59 of this SOP are met. This provision applies only to telephone support provided at no additional charge. If revenue allocable to telephone support is recognized together with the licensing fee on delivery, the vendor should accrue the estimated cost of providing that support.

.62 *PCS Granted by Resellers.* An arrangement in which a vendor grants a reseller the right to provide unspecified upgrades/enhancements to the reseller's customers is an implied PCS arrangement between the vendor and the reseller, even if the vendor does not provide direct telephone support to the reseller's customers. If sufficient vendor-specific objective evidence does not exist to allocate the fee to the software and the PCS, revenue from both the licensing arrangement and the PCS should be recognized ratably over the period during which PCS is expected to be provided.

Services

.63 Certain arrangements include both software and service elements (other than PCS-related services). The services may include training, installation, or consulting. Consulting services often include implementation support, software design or development, or the customization or modification of the licensed software.

.64 If an arrangement includes such services, a determination must be made as to whether the service element can be accounted for separately as the services are performed. Paragraph .65 discusses the criteria that must be considered in making such a determination. If the nature of the services is such that the service element does not qualify for separate accounting as a service, contract accounting must be applied to both the software and service elements included in the arrangement. Paragraphs .74 through .91 of this SOP address the application of contract accounting to software arrangements.

.65 In order to account separately for the service element of an arrangement that includes both software and services, sufficient vendor-specific objective evidence of fair value must exist to permit allocation of the revenue to the various elements of the arrangement (as discussed in paragraphs .10 and .12). Additionally, the services (*a*) must not be essential to the functionality of any other element of the transaction and (*b*) must be described in the contract such that the total price of the arrangement would be expected to vary as the result of the inclusion or exclusion of the services.

.66 If an arrangement includes services that meet the criteria of paragraph .65 for separate accounting, revenue should be allocated among the service and software elements of the contract. This allocation should be based on vendor-specific objective evidence of fair values. (Fair values are not necessarily the same as any separate prices stated for the separate elements of the arrangement.) Revenue allocated to the service element should be recognized as the services are performed or, if no pattern of performance is discernible, on a straight-line basis over the period during which the services are performed.

.67 If vendor-specific objective evidence of the fair value does not exist to allocate a portion of the fee to the service element, and the only undelivered element is services that do not involve significant production, modification, or customization of the software (for example, training or installation), the entire arrangement fee should be recognized as the services are performed. If no pattern of performance is discernible, the entire arrangement fee should be recognized on a straight-line basis over the period during which the services are performed.

.68 An important factor to consider in determining whether the services are essential to the functionality of any other element is whether the software included in the arrangement is considered **core** or **off-the-shelf software**. Core software is software that a vendor uses in creating other software. It is not sold as is because customers cannot use it unless it is customized to meet system objectives or customer specifications. Off-the-shelf software is software that is marketed as a stock item that can be used by customers with little or no customization.

.69 Software should be considered off-the-shelf software if it can be added to an arrangement with insignificant changes in the underlying code and it could be used by the customer for the customer's purposes upon installation. Actual use by the customer and performance of other elements of the arrangement is not required to demonstrate that the customer could use the software off-the-shelf. If significant modifications or additions to the off-the-shelf software are necessary to meet the customer's purpose (for example, changing or making additions to the software, or because it would not be usable in its off-the-shelf form in the customer's environment), the software should be considered core software for purposes of that arrangement. If the software that is included in the arrangement is not considered to be off-the-shelf software, or if significant modifications or additions to the off-the-shelf software are necessary to meet the customer's functionality, no element of the arrangement would qualify for accounting as a service, and contract accounting should be applied to both the software and service elements of the arrangement.

.70 Factors indicating that the service element is essential to the functionality of the other elements of the arrangement, and consequently should not be accounted for separately, include the following.

- The software is not off-the-shelf software.
- The services include significant alterations to the features and functionality of the off-the-shelf software.
- Building complex interfaces is necessary for the vendor's software to be functional in the customer's environment.
- The timing of payments for the software is coincident with performance of the services.
- **Milestones** or customer-specific acceptance criteria affect the realizability of the software-license fee.

.71 Judgment is required in determining whether the obligation to provide services in addition to the delivery of software should be accounted for separately as a service element. Services that qualify for accounting as a service element of a software arrangement always are stated separately and have one or more of the following characteristics.

- The services are available from other vendors.
- The services do not carry a significant degree of risk or unique acceptance criteria.
- The software vendor is an experienced provider of the services.
- The vendor is providing primarily implementation services, such as implementation planning, loading of software, training of customer personnel, data conversion, building simple interfaces, running test data, and assisting in the development and documentation of procedures.
- Customer personnel are dedicated to participate in the services being performed.

.72 *Funded Software-Development Arrangements.* Software-development arrangements that are fully or partially funded by a party other than the vendor that is developing the software typically provide the funding party with some or all of the following benefits:

- Royalties payable to the funding party based solely on future sales of the product by the software vendor (that is, reverse royalties)
- Discounts on future purchases by the funding party of products produced under the arrangement
- A nonexclusive sublicense to the funding party, at no additional charge, for the use of any product developed (a prepaid or paid-up nonexclusive sublicense)

.73 A funded software-development arrangement within the scope of FASB Statement No. 68, *Research and Development Arrangements*, should be accounted for in conformity with that Statement. If the technological feasibility of the computer software product pursuant to the provisions of FASB Statement No. 86 has been established before the arrangement has been entered into, FASB Statement No. 68 does not apply because the arrangement is not a research and development arrangement. Accounting for costs related to funded software-development arrangements is beyond the scope of this SOP. However, if capitalization of the software-development costs commences pursuant to FASB Statement No. 86, any income from the funding party under a funded software-development arrangement should be credited first to the amount of the development costs capitalized. If the income from the funding party exceeds the amount of development costs capitalized, the excess should be deferred and credited against future amounts that subsequently qualify for capitalization. Any deferred amount remaining after the project is completed (that is, when the software is available for general release to customers and capitalization has ceased) should be credited to income.

Contract Accounting

.74 If an arrangement to deliver software or a software system, either alone or together with other products or services, requires significant production, modification, or customization of software, the service element does not meet the criteria for separate accounting set forth in paragraph .65. The entire arrangement should be accounted for in conformity with ARB No. 45, using the relevant guidance in SOP 81-1 [section 10,330]. Nevertheless, transactions that normally are accounted for as product sales should not be accounted for as long-term contracts merely to avoid the delivery requirements normally associated with product sales for revenue recognition.

.75 In applying contract accounting, the vendor must use either the percentage-of-completion method or the completed-contract method. The determination of the appropriate method should be made according to the recommendations in paragraphs 21 through 33 of SOP 81-1 [section 10,330.21 through .33].

.76 *Segmentation.* Software contracts may have discrete elements that meet the criteria for segmenting in paragraphs 39 through 42 of SOP 81-1 [section 10,330.39 through .42]. If a contract is segmented, each segment is treated as a separate profit center. Progress-to-completion for each segment should be measured in conformity with paragraphs .78 through .80 of this SOP.

.77 Some vendors of arrangements that include software combined with services or hardware or both do not identify the elements separately and do not sell them separately because of agreements with their suppliers. Other vendors who are not restricted by such agreements nevertheless bid or negotiate software and other products and services together. Arrangements that do not meet the segmentation criteria in paragraph 40 of SOP 81-1 [section 10,330.40] are prohibited from being segmented, unless the vendor has a history of providing the software and other products and services to customers under separate arrangements and the arrangement meets the criteria in paragraph 41 of SOP 81-1 [section 10,330.41].

.78 *Measuring Progress-to-Completion Under the Percentage-of-Completion Method.* Paragraph 46 of SOP 81-1 [section 10,330.46] describes the approaches to measuring progress on contracts (or segments thereof) under the percentage-of-completion method. Those approaches are grouped into input and output measures, as follows.

> Input measures are made in terms of efforts devoted to a contract. They include the methods based on costs and on efforts expended. Output measures are made in terms of results achieved. They include methods based on units produced, units delivered, contract milestones, and value added. For contracts under which separate units of output are produced, progress can be measured on the basis of units of work completed.

For software contracts, an example of an input measure is labor hours; an example of an output measure is arrangement milestones, such as the completion of specific program modules.

.79 If, as discussed in paragraph .76 of this SOP, a software contract includes a discrete element that meets the segmentation criteria of SOP 81-1 [section 10,330], the method chosen to measure progress-to-completion on the element should be the method that best approximates progress-to-completion. Progress-to-completion on separate elements of the same software arrangement may be measured by different methods. The software vendor should choose measurement methods consistently, however, so that it uses similar methods to measure progress-to-completion on similar elements.

.80 Output measures, such as value-added or arrangement milestones, may be used to measure progress-to-completion on software arrangements, but many companies use input measures because they are established more easily. As noted in paragraph 47 of SOP 81-1 [section 10,330.47], "The use of either type of measure requires the exercise of judgment and the careful tailoring of the measure to the circumstances." Further, paragraph 51 of SOP 81-1 [section 10,330.51] states that

> The acceptability of the results of input or output measures deemed to be appropriate to the circumstances should be periodically reviewed and confirmed by alternative measures that involve observation and inspection. For example, the results provided by the measure used to determine the extent of progress may be compared to the results of calculations based on physical observations by engineers, architects, or similarly qualified personnel. That type of review provides assurance somewhat similar to that provided for perpetual inventory records by periodic physical inventory counts.

.81 *Input Measures.* Input measures of progress-to-completion on arrangements are made in terms of efforts devoted to the arrangement and, for software arrangements, include methods based on costs, such as cost-to-cost measures, and on efforts expended, such as labor hours or labor dollars. Progress-to-completion is measured indirectly, based on an established or assumed relationship between units of input and productivity. A major advantage of input measures is that inputs expended are easily verifiable. A major disadvantage is that their relationship to progress-to-completion may not hold if inefficiencies exist or if the incurrence of the input at a particular point does not indicate progress-to-completion.

.82 Costs incurred should be included in measuring progress-to-completion only to the extent that they relate to contract performance. Items not specifically produced for the arrangement, such as hardware purchased from third parties or off-the-shelf software, should not be included in the measurement of progress-to-completion.

.83 Labor hours often are chosen as the basis for measuring progress-to-completion, because they closely approximate the output of labor-intensive processes and often are established more easily than output measures. Core software requires labor-intensive customization. Therefore, labor hours provide a good measure of progress-to-completion on elements of software arrangements that involve the customization of core software.

.84 If the measurement of progress-to-completion is based primarily on costs, the contribution to that progress of hardware and software that were produced specifically for the arrangement may be measurable and recognizable before delivery to the user's site. For example, efforts to install, configure, and customize the software may occur at the vendor's site. The costs of such activities are measurable and recognizable at the time the activities are performed.

.85 *Output Measures.* Progress on arrangements that call for the production of identifiable units of output can be measured in terms of the value added or milestones reached. Although progress-to-completion based on output measures is measured directly from results achieved, thus providing a better approximation of progress than is provided by input measures, output measures may be somewhat unreliable because of the difficulties associated with establishing them.

.86 In order for the value added to be verifiable, the vendor must identify elements or subcomponents of those elements. If output measures are neither known nor reasonably estimable, they should not be used to measure progress-to-completion.

.87 If value added by off-the-shelf software is to be included in the measurement of progress-to-completion, such software cannot require more than minor modifications and must be usable by the customer for the customer's purpose in the customer's environment. If more than minor modifications or additions to the off-the-shelf software are necessary to meet the functionality required under the arrangement terms, either by changing or making additions to the software, or because the software would not be usable by the customer in its off-the-shelf form for the customer's purpose in the customer's environment, it should be accounted for as core software.

.88 Value added by the customization of core software should be included in the measurement of progress-to-completion of the customization and installation at the user's site. However, if the installation and customization processes are divided into separate output modules, the value of core software associated with the customization of a module should be included in the measurement of progress-to-completion when that module is completed.

.89 Contract milestones may be based on contractual project plans. Contractual provisions generally require the performance of specific tasks with the approval or acceptance by the customer; project plans generally schedule inspections in which the project's status is reviewed and approved by management. The completion of tasks that trigger such inspections are natural milestones because they are subject to relatively independent review as an intrinsic part of the project management process.

.90 Considerations other than progress-to-completion affect the amounts that become billable at particular times under many arrangements. Accordingly, although the achievement of contract milestones may cause arrangement revenues to become billable under the arrangement, the amounts billable should be used to measure progress-to-completion only if such amounts indeed indicate such progress.

.91 The milestones that are selected to measure progress-to-completion should be part of the management review process. The percentage-of-completion designated for each milestone should be determined considering the experience of the vendor on similar projects.

Effective Date and Transition

.92 This SOP is effective for transactions entered into in fiscal years beginning after December 15, 1997. Earlier application is encouraged as of the beginning of fiscal years or interim periods for which financial statements or information have not been issued. Retroactive application of the provisions of this SOP is prohibited. [*Note:* An effective date provision of this SOP has been deferred by SOP 98-4. See section 10,740.]

The provisions of this Statement need not be applied to immaterial items.

Basis for Conclusions

Background

.93 SOP 91-1 was issued in December 1991. AcSEC understands that certain provisions of that Statement are being applied inconsistently in practice and that various practice issues have arisen that were not addressed in SOP 91-1. As a result, AcSEC added a project to its agenda in March 1993 to interpret those provisions and provide additional guidance. The key issues identified at the outset of the project related to accounting for arrangements that provided for multiple deliverables (including PCS). The project began as an amendment to SOP 91-1. However, as deliberations progressed, AcSEC determined that it would be more appropriate to supersede SOP 91-1 to (*a*) amend the provisions in question and (*b*) incorporate AcSEC's conclusions on practice issues that had not been addressed in SOP 91-1.

Basic Principles

.94 Transfers of rights to software by licenses rather than by outright sales protect vendors from the unauthorized duplication of their products. Nevertheless, the rights transferred under software licenses are substantially the same as those expected to be transferred in sales of other kinds of products. AcSEC believes the legal distinction between a license and a sale should not cause revenue recognition on software products to differ from revenue recognition on the sale of other kinds of products.

.95 Arrangements to deliver software or a software system, either alone or together with other products, may include services. AcSEC believes that if those services entail significant production, modification, or customization of the software, such software before those alterations (even if already delivered) is not the product that has been purchased by the customer. Instead, the product purchased by the customer is the software that will result from the alterations. Accordingly, AcSEC concluded that arrangements that include services that entail significant production, modification, or customization of software are construction-type or production-type contracts, and should be accounted for in conformity with ARB No. 45 and SOP 81-1 [section 10,330]. AcSEC concluded that if the services do not entail significant production, modification, or customization of software, the service element should be accounted for as a separate element.

.96 AcSEC believes that revenue generally should not be recognized until the element has been delivered. The recognition of revenue from product sales on delivery is consistent with paragraphs 83(b) and 84 of FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*. Paragraph 83(b) provides the following guidance for recognition of revenues.

> Revenues are not recognized until earned. An entity's revenue-earning activities involve *delivering* or producing goods, rendering services, or other activities that constitute its ongoing major or central operations, and revenues are considered to have been earned when the entity has substantially accomplished what it must do to be entitled to the benefits represented by the revenues. [Footnote omitted][Emphasis added]

Paragraph 84 states that in recognizing revenues and gains

> [t]he two conditions [for revenue recognition] (being realized or realizable and being earned) are usually met by the time the product or merchandise is delivered...to customers, and revenues...are commonly recognized at time of sale (usually meaning *delivery*). [Emphasis added]

.97 SOP 91-1 did not address arrangements that included software that was deliverable only when-and-if-available. Implementation questions arose as to whether when-and-if-available terms created contingencies that could be disregarded in determining whether an arrangement consists of multiple elements. AcSEC believes that because the when-and-if-available deliverables are bargained for in arrangements, they are of value to the customer. Accordingly, AcSEC concluded that when-and-if-available deliverables should be considered in determining whether an arrangement consists of multiple elements. Thus, the requirements of this SOP with respect to arrangements that consist of multiple elements should be applied to all additional products and services specified in the arrangement, including those described as being deliverable only when-and-if-available.

.98 In SOP 91-1, the accounting for vendor obligations remaining after delivery of the software was dependent upon whether the obligation was significant or insignificant. However, these determinations were not being made in a consistent manner, leading to a diversity in practice. AcSEC believes that all obligations should be accounted for and that revenue from an arrangement should be allocated to each element of the arrangement, based on vendor-specific objective evidence of the fair values of the elements. Further, AcSEC concluded that revenue related to a particular element should not be recognized until the revenue-recognition conditions in paragraphs .08 through

.14 of this SOP are met, because the earnings process related to that particular element is not considered complete until that time.

.99 In paragraph .10 of this SOP, AcSEC concluded that the revenue from an arrangement should be allocated to the separate elements based on vendor-specific objective evidence of fair value, regardless of any separate prices stated in the contract for each element. AcSEC believes that separate prices stated in a contract may not represent fair value and, accordingly, might result in an unreasonable allocation of revenue. AcSEC believes that basing the allocation on fair values is consistent with the accounting for commingled revenue. An example is the following discussion in paragraph 12 of FASB Statement No. 45, *Accounting for Franchise Fee Revenue*.

> The franchise agreement ordinarily establishes a single initial franchise fee as consideration for the franchise rights and the initial services to be performed by the franchisor. Sometimes, however, the fee also may cover tangible property, such as signs, equipment, inventory, and land and building. In those circumstances, the portion of the fee applicable to the tangible assets shall be based on the fair value of the assets.

.100 AcSEC considered allowing the use of surrogate prices such as competitor prices for similar products or industry averages to determine fair value. However, AcSEC believes that inherent differences exist between elements offered by different vendors. These inherent differences led AcSEC to conclude that only vendor-specific evidence of fair value can be considered sufficiently objective to allow the allocation of the revenue to the various elements of the arrangement.

.101 AcSEC believes that the best evidence of the fair value of an element is the price charged if that element is sold separately. Still, an arrangement may include elements that are not yet being sold separately. As discussed in the previous paragraph, because of inherent differences between the elements offered by different vendors, AcSEC concluded that companies should not use surrogate prices, such as competitor prices for similar products or industry averages, as evidence of the fair value for an element. AcSEC believes, however, that if a price for the element has been established by management having the relevant authority, such a price represents evidence of the fair value for that element. To meet the criterion of objectivity, it must be probable that the established price will not change before the introduction of the element to the marketplace. Thus, the internally established prices should be factual and not estimates. For this reason, AcSEC concluded that the allocations may not be adjusted subsequently.

.102 AcSEC is aware that the pricing structure of certain arrangements is not limited to the prices charged for the separate elements. Pricing may be based on many different factors or combinations thereof. For example, certain arrangements are priced based on a combination of (*a*) the prices of products to be licensed and (*b*) the number of users that will be granted access to the licensed products. In some of these arrangements, the vendor requires a minimum number of users.

.103 The products contained in such arrangements are not available to the customer at the prices charged in the arrangement unless the customer also pays for the minimum number of users. Therefore, the prices contained in the arrangement do not represent the prices charged for the product when sold separately. AcSEC believes that it would be inappropriate to determine the fair values of the products (as discussed in paragraph .10) without giving consideration to the impact of the user-based portion of the fee. For this reason, AcSEC concluded in paragraph .10 that when a vendor's pricing is based on multiple factors such as the number of products and the number of users, the price charged for the same element when sold separately must consider all factors of the vendor's pricing structure.

.104 Often, multiple element arrangements are sold at a discount rather than at the sum of the list prices for each element. If the amounts deferred for undelivered elements were based on list prices, the amount of revenue recognized for delivered elements would be understated. Accordingly, AcSEC concluded that relative sales prices should be used in determining the amount of revenue to be allocated to the elements of an arrangement.

.105 AcSEC believes that if an undelivered element is essential to the functionality of a delivered element, the customer does not have full use of the delivered element. Consequently, AcSEC concluded that delivery is considered not to have occurred in such situations.

.106 AcSEC believes that the earnings process with respect to delivered products is not complete if fees allocated to those products are subject to forfeiture, refund, or other concession if the vendor does not fulfill its delivery responsibilities. AcSEC believes that the potential concessions indicate the customer would not have licensed the delivered products without also licensing the undelivered products. Accordingly, AcSEC concluded that in order to recognize revenue, persuasive evidence should exist that fees allocated to delivered products are *not* subject to forfeiture, refund, or other concession. In determining the persuasiveness of the evidence, AcSEC believes that a vendor's history of making concessions that were not required by the provisions of an arrangement is more persuasive than terms included in the arrangement that indicate that no concessions are required.

Delivery

.107 In paragraph .18 of this SOP, AcSEC concluded that for software that is delivered electronically, the delivery criterion of paragraph .08 is deemed to have been met when the customer either (*a*) takes possession of the software via a download or (*b*) has been provided with access codes that allow the customer to take immediate possession of the software on its hardware pursuant to an agreement or purchase order for the software. AcSEC believes that the delivery criterion is met by use of access codes only when software is being delivered electronically.

.108 AcSEC believes that if the fee is not based on the number of copies to be delivered to or made or deployed by the customer, duplication of the software may be incidental to the arrangement. Paragraph .21 of this SOP describes circumstances (arrangements in which duplication is required only if additional copies are requested by the customer; arrangements in which the licensing fee is payable even if no additional copies are requested) that would lead to a conclusion that duplication is incidental to the arrangement. In other arrangements, vendors insist on duplicating the software to maintain quality control or to protect software transmitted by telecommunications. Others agree to duplicate the software as a matter of convenience to the customer.

.109 In arrangements in which duplication is considered incidental, AcSEC believes the vendor has fulfilled its delivery obligation as soon as the first copy or product master of the software has been delivered. Therefore, AcSEC concluded that in such instances, the vendor should not be precluded from recognizing revenue if the customer has not requested additional copies (particularly since the fee is payable regardless of whether such additional copies are requested by the customer). However, the estimated costs of duplicating the software should be accrued when the revenue is recognized.

Fixed or Determinable Fees and Collectibility

.110 In paragraphs .27 through .30, in the discussion of factors that affect the determination of whether a fee is fixed or determinable, AcSEC sought to clarify—but not change—similar provisions in SOP 91-1. In practice, some had interpreted those provisions to mean the following.

- Extended payment considerations could be overcome if customers were creditworthy.
- A fee could never be considered fixed or determinable if payment terms extended for more than twelve months after delivery.

.111 Others had interpreted these provisions to mean the following.

- If payment terms extended beyond customary terms but were twelve months or less, they were fixed or determinable.
- If payment terms exceeded twelve months, a vendor could recognize amounts due in the first twelve months as revenue at the time of the license. Additional revenue would be recognized based on the passage of time such that, at any point, any amounts due within one year would have been recognized as revenue (the *rolling twelve months* approach).

Paragraphs .112 through .114 of this SOP—

- Explain that the concern with extended payment terms is technological obsolescence and similar factors, not customer creditworthiness.
- Describe circumstances in which the presumption that a fee is not fixed or determinable because of extended payment terms may be overcome.
- Confirm that any extended payment terms, even if for less than twelve months, must be assessed for their effects on the fixed or determinable aspects of the fee.
- Clarify that the rolling twelve months approach should not be used.

.112 AcSEC believes that, given the susceptibility of software to significant external factors (in particular, technological obsolescence), the likelihood of vendor refunds or concessions is greater in an arrangement with extended payment terms than in an arrangement without extended payment terms. This is true regardless of the creditworthiness of the customer. Because of this greater likelihood of refunds or concessions, AcSEC believes that *any* extended payment terms outside of a vendor's normal business practices may indicate that the fee is not fixed or determinable.

.113 In paragraph .28 of this SOP, AcSEC concluded that if payment of a significant portion of a licensing fee is not due until after the expiration of the license or more than twelve months after delivery, the fee should be *presumed* not to be fixed or determinable. This conclusion is based on AcSEC's belief that payment terms of such extended duration indicate that vendor refunds or concessions are more likely than not. AcSEC acknowledges that the one-year provision is arbitrary. However, AcSEC concluded that such a limitation is needed to provide greater comparability within the industry.

.114 In considering the "rolling twelve months" approach found in practice, AcSEC considered the guidance in Chapter 1A of ARB No. 43, *Restatement and Revision of Accounting Research Bulletins*, paragraph 1, which states that "Profit is deemed to be realized when a sale in the ordinary course of business is effected, unless the circumstances are such that the collection of the sale price is not reasonably assured." Accordingly, if a fee is considered fixed or determinable, it should be recognized as revenue when the sale is effected. If not, AcSEC believes that it should be recognized as revenue as payments from customers become due.

.115 In paragraph .08 of this SOP, AcSEC concluded that collectibility must be probable before revenue may be recognized. This conclusion is based on paragraph 84g of FASB Concepts Statement No. 5, which reads

> If collectibility of assets received for product, services, or other assets is doubtful, revenues and gains may be recognized on the basis of cash received.

.116 AcSEC notes that requiring collectibility enhances the verifiability of the other revenue recognition criteria of paragraph .08, as discussed below.

- *Persuasive evidence of an arrangement*—AcSEC included this criterion in order to prevent revenue recognition on delivery of elements which, in fact, had not been ordered by a customer. AcSEC believes it is unlikely that a customer would pay for an element that had not been ordered. Therefore, AcSEC believes that requiring collectibility of a receivable related to the sale or license acts to verify that an arrangement does exist.

- *Delivery*—AcSEC believes that until delivery of an element has occurred (including delivery of all other items essential to the functionality of the element in question), the customer has not received full use of the element ordered. A customer that has not received full use of the element ordered is likely to withhold payment or require a refund. Therefore, AcSEC believes that requiring collectibility of a receivable related to the sale or license acts to verify that the element has been delivered.

- *Fixed or determinable fee*—Much of AcSEC's concern related to fixed or determinable fees relates to arrangements with extended payment terms. In the software industry, requiring collectibility of a receivable prior to revenue recognition is important because of the frequency with which upgrades, enhancements, or new versions are released. As discussed elsewhere in this SOP, in certain instances it may be difficult to determine which version of an element induced a customer to enter into an arrangement. By requiring collectibility, AcSEC sought to prevent revenue recognition on sales or licenses of an element in situations in which circumstances may prompt the vendor to make subsequent adjustments to the price of a customer's purchase or license of a subsequent version of that element.

  The likelihood that subsequent versions will be released is greater over the long term than over the short term. Therefore, concerns related to concessions increase in arrangements with extended payment terms. AcSEC notes that prohibiting revenue recognition in circumstances in which the price adjustments discussed above could occur serves to ensure that the portion of the fee allocated to each element is fixed or determinable. That is, if the price on a subsequent element cannot be adjusted for concessions, and the amount allocated to the initial element must be collected in full, neither amount is subject to adjustment. Therefore, AcSEC believes that requiring collectibility of a receivable related to the sale or license acts to verify that the fees are fixed or determinable.

Multiple-Element Arrangements

Additional Software Deliverables and Right to Exchange or Return Software

.117 *Upgrades/enhancements.* In paragraph .37 of this SOP, AcSEC concluded that the portion of the arrangement fee allocated to an upgrade right should be based on the price for the upgrade/enhancement that would be charged to existing users of the software product being updated. AcSEC believes that in arrangements that include upgrade rights, it may be difficult to determine which version of the software induced the customer to enter into the arrangement. For example, a customer licensing an existing version of the software may have done so to facilitate obtaining the updated version upon its introduction. To eliminate the possibility of allocating too much revenue to the delivered software (and thereby accelerating recognition), AcSEC concluded that the upgrade price (without the allocation of any discount on the arrangement) should be used to determine the amount to be deferred. The residual amount, if any, is considered to be the fair value of the original product.

.118 AcSEC believes that upgrades/enhancements do not necessarily contain improvements that all customers would desire. A customer may not exercise an upgrade right for various reasons, including any of the following.

a. The benefits to be gained from the related upgrade/enhancement may not be important to that customer.

b. The customer may not wish to learn new commands for what may be perceived by that customer as marginal improvements.

c. The upgrade/enhancement would require more hardware functionality than the customer currently has.

Consequently, AcSEC concluded that amounts allocated to upgrade rights should be reduced to reflect the percentage of customers not expected to exercise the upgrade right, based on vendor-specific evidence.

.119 *Additional Software Products.* As stated in paragraph .118, AcSEC believes that not all customers entitled to an upgrade/enhancement will exercise their upgrade rights. AcSEC believes, however, that it is probable that all customers will choose to receive additional software products. Consequently, AcSEC concluded that the fee allocated to additional software products should not be reduced by the percentage of any customers not expected to exercise the right to receive the additional products.

.120 Paragraphs .48 and .49 of this SOP discuss accounting for software arrangements in which vendors agree to deliver unspecified additional software products in the future. AcSEC concluded that such arrangements should be accounted for as subscriptions, and that the fee from the arrangement should be recognized ratably as revenue over the term of the arrangement. AcSEC notes that, because the vendor is obligated to deliver these items only if they become available during the term of the arrangement, in some situations, the delivery of additional products will not be required. AcSEC believes that because these items are unspecified, vendor-specific objective evidence of fair value of each unspecified additional product cannot exist. However, AcSEC believes that requiring the deferral of all revenue until the end of the arrangement is too onerous because of the following.

a. All other revenue-recognition conditions in paragraphs .08 through .14 of this SOP have been met.

b. The additional software products in fact may never be delivered.

However, AcSEC also was concerned that if revenue recognition were permitted to begin at the inception of the arrangement, revenue may be recognized too early, particularly in arrangements in which the first product was not delivered for some time after inception. Accordingly, AcSEC concluded that revenue from the arrangement should be recognized ratably over the term of the arrangement beginning with the delivery of the first product.

.121 *Rights to Exchange or Return Software.* AcSEC believes that the rights to exchange or return software (including platform transfer rights) are subject to the provisions of FASB Statement No. 48, even if the software is not returned physically. Accordingly, AcSEC concluded that the accounting for exchanges of software for products with no more than minimal differences in price, functionality, and features by users qualify for exchange accounting because, as discussed in footnote 3 to FASB Statement No. 48, (*a*) users are "ultimate customers" and (*b*) exchanges of software with no more than minimal differences in price, functionality, and features represent "exchanges ... of one item for another of the same kind, quality, and price." AcSEC concluded that because resellers are not "ultimate customers," such exchanges by resellers should be considered returns.

.122 AcSEC reached similar conclusions related to certain platform-transfer rights. Additionally, AcSEC concluded that in situations in which customers are entitled to continue using the software that was originally delivered (in addition to the software that is to be delivered for the new platform), the customer has received additional software products, and the platform-transfer right should be accounted for as such. Other platform-transfer rights do not allow customers to continue to use the software on the original platform. Those platform-transfer rights should be accounted for as exchange rights or rights of return.

.123 It is possible that exchange rights may be granted for software that has not been developed for other platforms at the time revenue from the arrangement is recorded. AcSEC did not address the issue of whether such future development costs related to deliverable software, for which no further revenue will be received, should be capitalized pursuant to FASB Statement No. 86 because it was believed that such costs would not be significant. Accordingly, AcSEC concluded that in the event of significant development costs, the vendor would not be likely to be able to demonstrate persuasively that the future software would have similar pricing, features, and functionality, and would be marketed as the same product (that is, qualify as an exchange for accounting purposes). In that event, the vendor has granted a return right that must be accounted for pursuant to FASB Statement No. 48.

Postcontract Customer Support

.124 An obligation to perform PCS is incurred at the inception of a PCS arrangement and is discharged by delivering unspecified upgrades/enhancements, performing services, or both over the period of the PCS arrangement. The obligation also may be discharged by the passage of time. AcSEC concluded that because estimating the timing of expenditures under a PCS arrangement usually is not practicable, revenue from PCS generally should be recognized on a straight-line basis over the period of the PCS arrangement. However, AcSEC also concluded that if there is sufficient vendor-specific historical evidence that costs to provide the support are incurred on other than a straight-line basis, the vendor should recognize revenue in proportion to the amounts expected to be charged to the PCS services rendered during the period.

.125 SOP 91-1 required that revenue from both the PCS and the initial licensing fee be recognized ratably over the period of the PCS arrangement if no basis existed to derive separate prices for the PCS and the initial licensing fee. Diversity in practice arose as to what constituted a sufficient basis in arrangements involving vendors that did not have a basis to derive a separate price for the PCS. In this SOP, AcSEC has concluded that arrangement fees must be allocated to elements of the arrangement based on vendor-specific objective evidence of fair value. Because AcSEC determined that the evidence should be limited to that which is specific to the vendor, AcSEC believes that vendors that do not sell PCS separately have no basis on which to allocate fair values. AcSEC concluded that the total arrangement fee should be recognized in accordance with the provisions on recognition of PCS revenues. AcSEC also believes that, because a substantial portion of the arrangement fee typically is represented by the delivered software (rather than the performance of support), requiring the deferral of all revenues until the PCS obligation is fully satisfied would be too onerous. Accordingly, AcSEC concluded that, as discussed in the previous paragraph, the total arrangement fee generally should be recognized ratably over the period of the PCS arrangement.

Services

.126 Certain software arrangements include both a software element and an obligation to perform non-PCS services. SOP 91-1 provided guidance on the conditions that must be met in order to account for the obligation to provide services separately from the software component. AcSEC is aware that this guidance has been interpreted in varying ways, leading to a diversity in practice. During its deliberations on this SOP, AcSEC reached conclusions intended to clarify this issue, but did not redeliberate the other conclusions related to services that were included in SOP 91-1.

.127 AcSEC believes the service element should be accounted for separately if the following occur.

a. All other revenue allocation provisions of this SOP are met.

b. The services are not essential to the functionality of any other element in the arrangement.

c. The service and product elements are stated separately such that the total price of the arrangement would vary as a result of inclusion or exclusion of the services.

Accordingly, AcSEC concluded that a service element need not be *priced* separately in an agreement in order to account for the services separately. AcSEC believes that this conclusion represents the original intent of SOP 91-1, and wishes to clarify the language at this time.

.128 Paragraphs .129 through .132 of this SOP are carried forward from SOP 91-1 with certain editorial changes.

.129 *Service Elements.* Footnote 1 to paragraph 11 of SOP 81-1 [section 10,330.11, footnote 1] excludes service transactions from the scope of the SOP, as follows.

> This statement is not intended to apply to "service transactions" as defined in the FASB's October 23, 1978 Invitation to Comment, *Accounting for Certain Service Transactions*. However, it applies to separate contracts to provide services essential to the construction or production of tangible property, such as design . . . [and] engineering . . . .

.130 The previously mentioned Invitation to Comment, which was based on an AICPA-proposed SOP, was issued in 1978. The FASB later included service transactions as part of its project to develop general concepts for revenue recognition and measurement. The resulting FASB Concepts Statement No. 5, however, does not address service transactions in detail. Nevertheless, some of the concepts on service transactions developed in the Invitation to Comment are useful in accounting for certain software transactions.

.131 A service transaction is defined in paragraphs 7 and 8 of the Invitation to Comment as follows.

> A transaction between a seller and a purchaser in which, for a mutually agreed price, the seller performs . . . an act or acts . . . that do not alone produce a tangible commodity or product as the principal intended result. . . A service transaction may involve a tangible product that is sold or consumed as an incidental part of the transaction or is clearly identifiable as secondary or subordinate to the rendering of the service.

The term *service transaction* is used in the same sense in this SOP but, as used in this SOP, does not apply to PCS. Items classified as tangible products in software service transactions generally should be limited to off-the-shelf software or hardware.

.132 This SOP, like the Invitation to Comment, recommends the separation of such arrangements with discrete elements into their product and service elements. Paragraph 8(b) of the Invitation to Comment states the following.

> If the seller of a product offers a related service to purchasers of the product but separately states the service and product elements in such a manner that the total transaction price would vary as a result of the inclusion or exclusion of the service, the transaction consists of two components: a product transaction that should be accounted for separately as such and a service transaction . . . .

Contract Accounting

.133 SOP 91-1 included guidance on the application of contract accounting to software transactions. Questions arose as to whether output measures could be used to measure progress-to-completion if the amounts recorded would differ from those that would have been reported had input measures been used. During its deliberations of this SOP, AcSEC reached conclusions intended to clarify this issue, but did not redeliberate the other conclusions related to services that were included in SOP 91-1.

.134 AcSEC believes that the method chosen to measure progress-to-completion on an individual element of a contract should be the method that best approximates progress-to-completion on that element. Accordingly, AcSEC concluded that output measures may be used to measure progress-to-completion, provided that the use of output measures results in "the method that best approximates progress-to-completion."

.135 Paragraphs .136 through .142 of this SOP are carried forward from SOP 91-1 with certain editorial changes.

.136 ARB No. 45 established the basic principles for measuring performance on contracts for the construction of facilities or the production of goods or the provision of related services with specifications provided by the customer. Those principles are supplemented by the guidance in SOP 81-1 [section 10,330].

Distinguishing Transactions Accounted for Using Contract Accounting From Product Sales

.137 SOP 81-1 [section 10,330] suggests that transactions that normally are accounted for as product sales should not be accounted for using contract accounting merely to avoid the delivery requirements for revenue recognition normally associated with product sales. Paragraph 14 of SOP 81-1 [section 10,330.14] states the following:

> Contracts not covered . . . include . . . [s]ales by a manufacturer of goods produced in a standard manufacturing operation, even if produced to buyers' specifications, and sold in the ordinary course of business through the manufacturer's regular marketing channels if such sales are normally recognized as revenue in accordance with the realization principle for sales of products and if their costs are accounted for in accordance with generally accepted principles of inventory costing.

Application of ARB No. 45 and SOP 81-1

.138 SOP 81-1 [section 10,330] provides guidance on the application of ARB No. 45 that applies to a broad range of contractual arrangements. Paragraph 1 of SOP 81-1 [section 10,330.01] describes contracts that are similar in nature to software arrangements, and paragraph 13 [section 10,330.13] includes the following kinds of contracts within the scope of that SOP:

- Contracts to design, develop, manufacture, or modify complex . . . electronic equipment to a buyer's specification or to provide services related to the performance of such contracts
- Contracts for services performed by . . . engineers . . . or engineering design firms

.139 ARB No. 45 presumes that percentage-of-completion accounting should be used when the contractor is capable of making reasonable estimates. Paragraph 15 of ARB No. 45 states the following:

> [I]n general when estimates of costs to complete and extent of progress toward completion of long-term contracts are reasonably dependable, the percentage-of-completion method is preferable. When lack of dependable estimates or inherent hazards cause forecasts to be doubtful, the completed-contract method is preferable.

Evidence to consider in assessing the presumption that the percentage-of-completion method of accounting should be used includes the technological risks and the reliability of cost estimates, as described in paragraphs 25, 26, 27, 32, and 33 of SOP 81-1 [section 10,330.25, .26, .27, .32, and .33].

.140 Paragraph 24 of SOP 81-1 [section 10,330.24] specifies a further presumption that a contractor is capable of making reasonable estimates and states the following:

> [T]he presumption is that [entities] . . . have the ability to make estimates that are sufficiently dependable to justify the use of the percentage-of-completion method of accounting. Persuasive evidence to the contrary is necessary to overcome that presumption. [Footnote omitted]

.141 Although cost-to-cost measures may be verified easily, they tend to attribute excessive profit to the hardware elements of arrangements with combined software and hardware elements for contracts under which segmentation is not permitted. Although the hardware elements of such arrangements have high cost bases, they generally yield relatively low profit margins to vendors. Furthermore, if excessive revenue is attributed to the hardware element, revenue recognition on the arrangement becomes overly dependent on when that element is included in the measurement of progress-to-completion.

.142 For off-the-shelf software elements, the application of the cost-to-cost method produces the opposite effect. The book basis of the software tends to be low, because most of the costs associated with software development frequently are charged to expense when incurred in conformity with FASB Statement No. 86. Although the profit margins associated with software are generally higher than those for other elements of the arrangement, the application of cost-to-cost measures with a single profit margin for the entire arrangement would attribute little or no profit to the off-the-shelf software. Similarly, the application of the cost-to-cost method to arrangements that include core software, which also has a relatively low cost basis, would attribute a disproportionately small amount of profit to the software.

Effective Date and Transition

.143 AcSEC concluded that the provisions of this SOP should be applied prospectively and that retroactive application should be prohibited. AcSEC recognizes the benefits of comparable financial statements but is concerned that the application of the provisions of this SOP to contracts existing in prior periods would require a significant amount of judgment. The application of that judgment likely would be impacted by the hindsight a company would have, resulting in judgments based on information that did not exist at the time of the initial judgment but that would be called for if the SOP were to be applied retroactively.

.144 Additionally, AcSEC concluded that some entities would be required to incur large expenditures in determining restated amounts or the cumulative effect of adoption. AcSEC concluded that the cost of calculating such amounts likely would exceed the related benefit of that information. This SOP does not preclude an entity from disclosing in the notes to the financial statements the effect of initially applying this SOP if an entity believes it is practicable to do so.

Items Not Retained From SOP 91-1

.145 AcSEC believes that the guidance included in SOP 91-1 related to discounting receivables and the collectibility of receivables (discussed in paragraphs 56 and 78, respectively, of SOP 91-1) is not specific to the software industry and thus does not need to be retained in this SOP.

.146

Appendix A

Examples of the Application of Certain Provisions of This Statement of Position

Scope—Example 1

Facts

An automobile manufacturer installs software into an automobile model. This software is used solely in connection with operating the automobile and is not sold or marketed separately. Once installed, the software is not updated for new versions that the manufacturer subsequently develops. The automobile manufacturer's costs for the development of the software that are within the scope of FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed* and the production costs of such software are insignificant relative to the other development and production costs of the automobile.

Applicability

The Statement of Position (SOP) is not applicable to such software because the software is deemed incidental to the product as a whole.

Discussion

Although the software may be critical to the operations of the automobile, the software itself is not the focus of the marketing effort, nor is it what the customer perceives he or she is obtaining. The development and production costs of the software as a component of the cost of the automobile is incidental.

Scope—Example 2

Facts

An entity develops interactive training courses for sale or licensing to customers. These courses are delivered on a compact disc, which is loaded onto a customer's computer. The courses are developed such that, based on the responses received to a particular question, different questions are generated and content of the course material that is displayed is determined in a manner that directs the user's learning experience in a more focused way. The course developer's costs for the development of the software content are within the scope of FASB Statement No. 86 and are significant. The interactive nature of the courses is mentioned prominently in the marketing efforts.

Applicability

The SOP is applicable because the software is not incidental to the product.

Discussion

Although some might say that the product is educational services, the marketing of the product focuses on the software-reliant interactive features. In addition, the course developer incurs significant costs that are within the scope of FASB Statement No. 86. The nature of the relationship between the vendor and the customer is not one in which the customer would have a need for postcontract services. Consequently, the absence of PCS is not presumptive that software is incidental to the product. Accordingly, a conclusion is reached that the software is not incidental to the product as a whole. Therefore, the provisions of this SOP apply.

Additional Software Products—Price per Copy—Example 1

Facts

A vendor enters into an arrangement under which a customer has the right to make copies of Product A at $100 a copy, copies of Product B at $200 a copy, or copies of Product C at $50 a copy until such time as the customer has made copies aggregating $100,000 based on the per copy prices. The customer is obligated to pay the $100,000 whether or not the customer makes all the copies to which it is entitled under the arrangement. In all other respects, the $100,000 is considered to meet the criteria of a fixed fee, as described in this Statement of Position.

Master copies of products A and B are available currently and have been delivered. Product C is not available yet; therefore, no master copy has been delivered. The contract is clear that no portion of the fee allocable to copies made of products A and B is refundable if Product C is not delivered, nor is there any further obligation to deliver product C if copies of products A and B aggregating $100,000 have been made. The per copy prices included in the arrangement for Products A and B are the per copy prices included in the company's price list, and the company has already approved the per copy price list for Product C to be $50 per copy. Product C is not essential to the functionality of Products A or B.

The maximum number of copies of Product C that can be made is 500.

Revenue Recognition

The vendor should allocate $25,000 of the arrangement fee to Product C. The remaining $75,000 of revenue should be recognized when the master copies of Products A and B are delivered to the customer. The $25,000 allocated to Product C would be recognized when the master copy of Product C is delivered to the customer. If the customer duplicates enough copies of Products A and B so that the revenue allocable to those products exceeds $75,000, the additional revenue should be recognized as the additional copies are made.

Discussion

As discussed in paragraph .43 of this SOP, in an arrangement in which a number of products are not deliverable or specified at the inception of the arrangement, an allocation of the arrangement fee generally cannot be made, because the total revenue allocable to each software product is unknown and depends on choices to be made by the customer and, sometimes, future development activity. As discussed in paragraph .46 of this SOP however, if such an arrangement specifies a maximum number of copies of the undeliverable or unspecified product, a portion of the arrangement fee should be allocated to the undeliverable product(s). This allocation should be made assuming the customer elects to receive the maximum number of copies of the undeliverable product(s).

Because the arrangement states a maximum number of copies of Product C that can be made, a basis for allocating the fair value to each product of the arrangement exists. The amount allocated to the undelivered product is the maximum amount that can be allocable to that product, based on the maximum number of copies of Product C that can be made (500) and the fee per copy ($50). Accordingly, $25,000 should be allocated to Product C and deferred until delivery of the product master. Because all other conditions for revenue recognition in this SOP have been met, revenue related to Products A and B may be recognized upon delivery of the masters of those products as discussed in paragraph .44 of this SOP.

Additional Software Products—Price per Copy—Example 2

Facts

Assume the same facts as in the preceding example, except the arrangement does not state a maximum number of copies of Product C that can be made.

Revenue Recognition

Revenue should be recognized as copies of Products A ($100 of revenue per copy) and B ($200 of revenue per copy) are made, until the master of Product C is delivered to the customer. Any remaining revenue should be recognized upon delivery of the master of Product C.

Discussion

As discussed in paragraph .43 of this SOP, although the fee per copy is fixed at the inception of the arrangement and the cost of duplication is incidental, the total fee allocated to the undelivered software (Product C) is unknown and will depend on the choices made by the customers as to how many copies of each product will be utilized.

Authorization Codes—Example 1

Facts

A vendor includes ten optional functions on a compact disc (CD-ROM) on which its software product is licensed. Access to those optional functions is not available without a permanent key. Users can order the optional functions and receive permanent keys to enable the full use of those functions.

Revenue Recognition

Revenue for each individual optional function should be recognized by the vendor when the user purchases it by placing an order, evidence of such order exists, and the key is delivered to the user.

Discussion

Although the user has received a fully functional version (except for the keys) of the optional functions on the CD-ROM, the user has not agreed to license them. Because no evidence of an arrangement exists (as discussed in paragraphs .15 through .17 of this SOP), revenue for the optional functions may not be recognized when the CD-ROM is delivered.

Authorization Codes—Example 2

Facts

A software vendor's products run on two different levels of central processing units (CPU) of the same manufacturer—Model X and Model Y (both of which are on the same platform). The vendor enters into a license arrangement with a user whereby the user licenses the vendor's products to run on Model X but allows the user to move to Model Y at no additional charge. The vendor delivers the product in the form of a disc pack along with a CPU authorization code. At the time the user chooses to move to Model Y, the user does not receive a new disc pack; rather the vendor gives the user a new CPU authorization code.

Revenue Recognition

Revenue should be recognized on the delivery of the disc pack.

Discussion

Delivery of the authorization code to move to another CPU is not considered to be an additional software deliverable.

Multiple Element Arrangements, Products—Example 1

Facts

A vendor licenses a user one license covering a single copy of products A, B, C, and D for a nonrefundable fixed fee of $80, with no stated price per product. Products A, B, and C are deliverable. Product D is not deliverable and is not essential to the functionality of products A, B, or C. Persuasive evidence exists that indicates that the revenue related to products A, B, or C is not subject to refund, forfeiture, other concessions if product D is not delivered. The vendor has a history of sales prices for products A, B, and C of $25 each. The vendor's pricing committee has established a price for product D of $25. It is probable that the price established by the pricing committee for product D will not change before introduction. Therefore, the vendor is able to derive its specific price for the undelivered software.

Revenue Recognition

Revenue allocated to each product based on the existing prices for products A, B, and C and the probable price for product D should be recognized when each individual product is delivered. The revenue allocated to each of the products would be $20.

Discussion

Revenue allocated to each product should be recognized upon the delivery of that product if the criteria in paragraphs .08 through .14 of this SOP have been met.

The allocation of revenue to each product is based on the relative fair value of each product. As discussed in paragraph .12 of this SOP, sufficient vendor-specific objective evidence must exist to determine allocation. In this example, sufficient vendor-specific objective evidence exists to determine that the fair value of each product on a stand-alone basis is $25. Therefore, in accordance with paragraph .41 of this SOP, the discount should be allocated evenly to each product, and revenue of $20 per product should be recognized when each product is delivered.

Multiple Element Arrangements—Products—Example 2

Facts

The transaction is the same as that outlined in the prior example. The contract is silent about penalties for the nondelivery of product D, but the proposal and other communications indicate that it is a required capability of the offering and that the user does not want any of the vendor's products unless product D is delivered.

Revenue Recognition

All revenue must be deferred until delivery of product D.

Discussion

Because revenue allocable to the delivered software is subject to forfeiture, refund, or other concession if product D is not delivered, all revenue under the agreement should be deferred until product D is delivered, in accordance with paragraph .13 of this SOP.

Multiple Element Arrangements—Products—Example 3

Facts

A vendor licenses version 1.0 of a software product to 100 customers for $300 per copy with a right to receive version 2.0 at no additional cost when it becomes available. The pricing committee has not yet decided whether version 2.0 will be offered to users of version 1.0 for $100 or for $200.

Revenue Recognition

All revenue should be deferred until the pricing committee makes its decision and it is probable that the price established will be the price charged upon introduction.

Discussion

Because the pricing committee has not yet decided whether version 2.0 will be offered at $100 or at $200, sufficient vendor-specific objective evidence does not yet exist supporting the price of the undelivered software. As discussed in paragraph .12 of this SOP, if sufficient vendor-specific objective evidence does not exist to determine the allocation of revenue, all revenue should be deferred until sufficient vendor-specific objective evidence exists.

Multiple Element Arrangements—Products—Example 4

Facts

In the preceding example, assume that the pricing committee determines that version 2.0 will be offered to users of version 1.0 as a specified upgrade/enhancement at a price of $100. It is probable that such price will not change prior to introduction. Persuasive evidence exists indicating that the amount allocated to version 1.0 will not be subject to forfeiture, refund, or other concession. Also, the vendor's experience indicates that 40 percent of customers do not exercise upgrade rights.

Revenue Recognition

The vendor should defer $6,000 (upgrade price of $100 multiplied by 100 copies, reduced by 40 percent to account for the customers expected not to exercise the upgrade right) until delivery of the upgrade/enhancement, and recognize the remaining $24,000 on delivery of version 1.0.

Discussion

The portion of the arrangement fee allocated to the upgrade right is equal to the price for the upgrade/enhancement determined pursuant to paragraph .37 of this SOP. This amount should be deferred and recognized on the delivery of version 2.0. The amount deferred for the specific upgrade/enhancement should be reduced to reflect the percentage of customers that, based on experience, are not expected to exercise the upgrade right (see paragraph .37 of this SOP). Accordingly, the $10,000 revenue allocated to the upgrade right should be reduced by $4,000 (40 percent of the allocated revenue).

If the vendor did not have information based on experience that indicates the percentage of customers that do not exercise the upgrade right, the vendor should defer the entire $10,000 of revenue allocated to the upgrade right, under the assumption that, in the absence of vendor-specific objective evidence to the contrary, 100 percent of customers will exercise the upgrade right.

Multiple Element Arrangements—Products and Services—Example 1

Facts

A vendor has entered into an arrangement to provide a customer with its off-the-shelf software product and related implementation services. The software and service elements of the contract are stated separately and the company has a history of selling these services separately such that the revenue allocation criteria of paragraphs .08 through .14 of this SOP can be satisfied. The software license fees are due under the company's normal trade terms, which are net 30 days. The services are expected to be provided over the next 90 days and are of the type performed routinely by the vendor. The features and functionality of the software are not altered to more than a minor degree as a result of these services.

Revenue Recognition

The vendor should recognize the license revenue allocated to the software element upon its delivery and the revenue allocated to the service element as such services are performed.

Discussion

When license arrangements have multiple elements, revenue should be allocated to each of the elements and recognized when the related element is delivered and the following occur.

1. The undelivered elements are not essential to the functionality of the delivered elements.
2. The revenue allocated to the delivered elements is not subject to forfeiture, refund, or other concession if the undelivered elements are not delivered.
3. Sufficient company-specific objective evidence exists to allocate separate prices to each of the elements.

The service element in this arrangement is not deemed to be essential to the functionality of the software element because the features and functionality of the software are not altered to more than a minor degree as a result of the services.

Multiple Element Arrangements—Products and Services—Example 2

Facts

Assume the same transaction as described above except that the vendor agrees to make more than minor modifications to the functionality of the product to meet needs as defined by the user. Payment terms are 10 percent upon installation of the software, with the remainder according to a time line, and the final 25 percent withheld until acceptance. The desired modifications are not unusual; the vendor has made similar modifications to the product many times and is certain that the planned modifications will meet the user's needs.

Revenue Recognition

This arrangement should be accounted for pursuant to the guidance on contract accounting (using either the percentage-of-completion or completed-contract method, depending on the facts and circumstances) included in paragraphs .74 through .91 of this SOP.

Discussion

The new conditions would preclude service transaction accounting because the functionality of the software product is being altered in more than a minor way, the payment of the fees is coincident with the services being performed, and the software is subject to the user's unique acceptance criteria.

Multiple Element Arrangements—Products and Services—Example 3

Facts

Assume the same transaction as described in "Multiple-Element Arrangements–Products and Services–Example 1," except that the vendor never sells implementation services separately. The implementation services do not involve significant customization of the software.

Revenue Recognition

The vendor should recognize all revenue from the arrangement over the 90 day period during which the services are expected to be performed, commencing with delivery of the software product.

Discussion

The criteria for vendor-specific objective evidence of the fair value require that the element be sold separately or be planned to be sold separately. Because implementation services are neither sold separately nor planned to be sold separately, and upon delivery of the software product such services are the only undelivered elements, paragraph .67 of this SOP requires that all revenue be recognized over the period during which the implementation services are expected to be provided.

Multiple Element Arrangements—Products and Services—Example 4

Facts

A vendor sells software product A for $950. The license arrangement for product A always includes one year of "free" PCS. The annual renewal price of PCS is $150.

Revenue Recognition

Assuming that, apart from the lack of vendor-specific objective evidence of the fair value of the delivered software element, all applicable revenue recognition criteria in this SOP are met, revenue in the amount of $150 should be deferred and recognized in income over the one-year PCS service period. Revenue of $800 should be allocated to the software element and recognized upon delivery of the software.

Discussion

Vendor-specific objective evidence of the fair value of the software does not exist because the software is never sold separately. Consequently, sufficient vendor-specific objective evidence of fair value does not exist for the allocation of revenue to the various elements based on their relative fair values. Paragraph .12 of this SOP states, however, that the residual method should be used when there is vendor-specific objective evidence of the fair values of *all* undelivered elements; all other applicable revenue recognition criteria in this SOP are met; and the fair value of all of the undelivered elements is less than the total arrangement fee.

If there had been vendor-specific objective evidence of the fair value of the delivered software but not of the undelivered PCS, the entire arrangement fee would be deferred and recognized ratably over the contractual PCS period in accordance with paragraphs .12 and .58 of this SOP.

Multiple Element Arrangements—Products and Discounted PCS—Example 1

Facts

A software vendor has entered into an arrangement under which it has licensed software that has a list price of $1 million to a customer for $600,000 (which is the price being charged for the software when sold separately under other arrangements). The arrangement also includes annual PCS, priced for the first year at 15 percent of the discounted license fee, or $90,000 (rather than 15 percent of the list price of the licensed software). After the first year, the customer will have the right to renew annual maintenance on the licensed software at 15 percent of the list price of the software (or $150,000).

There are no other undelivered elements. All revenue recognition conditions of this SOP have been satisfied.

The vendor does not have sufficient vendor-specific historical evidence that costs of providing PCS are incurred on other than a straight-line basis.

Revenue Recognition

In Year 1, the total arrangement fee is $690,000. Of this amount, $552,000 should be allocated to the software element and recognized upon delivery of the software element. The remaining $138,000 should be allocated to the PCS element and recognized ratably over the period during which the PCS services are expected to be performed. The allocation of the $690,000 arrangement fee is determined as shown in the following table.

Fair value when sold separately:

Software element	$600,000	80%
PCS element	150,000	20
	$750,000	100%

Allocation:

PCS element	$690,000 × .20 = $138,000
Software element	$690,000 × .80 = $552,000

Discussion

In allocating the arrangement fee to the PCS element, the vendor should look first to the price the customer will pay for the PCS when it is sold separately as a renewal under the arrangement. In this example, that price is $150,000. This price is considered the vendor-specific objective evidence of the fair value for the PCS element, as discussed in paragraph .10.

If the customer were entitled to the PCS in subsequent years at the same price at which it had been included in the initial year of the arrangement (that is, $90,000), and the vendor's pricing practices were such that renewals of PCS were based on the discounted value of license fees, no additional fees would have been allocated from the software element to the PCS element. Therefore, the vendor would have allocated $600,000 to the software element and $90,000 to the PCS element.

[As amended, effective for transactions entered into in fiscal years beginning after March 15, 1999, by Statement of Position 98-9.]

.147

Appendix B

Response to Comments Received

B.1. An exposure draft of a proposed Statement of Position (SOP), *Software Revenue Recognition*, was issued for public comment on June 14, 1996.

B.2. The majority of the comments received related to the basic principles of the exposure draft, particularly the provisions requiring the allocation of the arrangement fee to individual elements in a multiple-element arrangement based on vendor-specific objective evidence of the fair value. Several commentators requested clarification of the wording in the exposure draft related to extended payment terms and the effect of such terms on the determination of whether a fee is fixed and determinable or collectible. Some commentators requested guidance on the application of the provisions of the SOP to marketing arrangements in which coupons or other price incentives are offered. Other commentators requested the reconsideration of the transition provisions of the exposure draft, which required a cumulative-effect adjustment.

B.3. These comments and the Accounting Standards Executive Committee's (AcSEC's) response to them are discussed below.

Multiple-Element Arrangements

B.4. Several commentators responded that the limitations on what constitutes vendor-specific objective evidence of the fair value were too onerous. These commentators stated that many instances exist in which elements are not priced separately, and that because of these limitations, revenue related to delivered elements would be deferred even though the customer received the element. Additionally, several commentators expressed concern that the requirement to allocate revenue to all elements, particularly those deliverable "when and if available" was not meaningful. (Obligations to deliver "when and if available" elements were considered by the commentators to be either insignificant vendor obligations or not vendor obligations at all.)

B.5. AcSEC considered these comments but continues to support the provisions of the exposure draft. AcSEC noted that these comments had been considered in the process leading to the exposure draft. Although AcSEC agrees that the provisions of the SOP may be troublesome to some companies, AcSEC notes that commentators did not suggest alternatives that AcSEC considered adequate to meet the criteria of objective evidence of fair value.

B.6. AcSEC continues to believe that the allocation of the arrangement fee to all elements, including those deliverable on a when-and-if-available basis, is meaningful. AcSEC believes that these elements are bargained for by the customer and should be accounted for. Furthermore, AcSEC believes that the concept of significant versus insignificant obligations should not be used to determine whether revenue should be allocated to an element. This concept had been included in SOP 91-1 and had resulted in varying interpretations in practice. AcSEC further notes that these comments had been considered previously by AcSEC during the process leading to the exposure draft.

B.7. Several commentators stated that the limitations on vendor-specific objective evidence of fair value should be expanded to permit the use of prices in published price lists. AcSEC believes that the price for an element as included in a price list does not necessarily represent the fair value of that element.

Extended Payment Terms

B.8. The exposure draft stated that a software licensing fee should not be considered fixed or determinable if the payment of a significant portion of the licensing fee is not due until after the expiration of the license or more than twelve months after delivery. Exceptions were permitted for vendors that have a business practice of using installment contracts and an extended history of entering into contracts with terms in excess of twelve months and successfully enforcing payment terms without making concessions. Several commentators requested clarification of these provisions.

B.9. AcSEC considered these comments and agreed that clarification was needed. Relevant clarifications were made to paragraphs .27 through .29 of the SOP. The revised provisions now state that *any* extended payment terms in a software licensing arrangement may indicate that the fee is not fixed or determinable, particularly if the use of extended payment terms is not the vendor's customary practice. Further, if the payment of a significant portion of the software licensing fee is not due until after the expiration of the license or more than twelve months after delivery, the licensing fee should be *presumed* not to be fixed or determinable. However, this presumption may be overcome by evidence that the vendor has a standard business practice of using long-term or installment contracts and a history of successfully collecting under the original payment terms without making concessions. Such a vendor should consider such fees fixed or determinable and should recognize revenue upon the delivery of the software, provided all other conditions for revenue recognition in this SOP have been satisfied.

B.10. Several commentators requested guidance on the application of the SOP to arrangements in which discounts are offered on subsequent licenses of software. The exposure draft did not have provisions addressing such arrangements.

B.11. AcSEC has added wording to the scope section (paragraph .03) of the SOP to address these questions. The new wording states that arrangements in which a vendor offers a small discount on additional licenses of the licensed product or other products that exist at the time of the offer represent marketing and promotional activities that are not unique to software and, therefore, are not included in the scope of this SOP. However, judgment will be required to assess whether price-off and other concessions are so significant that, in substance, additional elements are being offered in the arrangement.

Transition

B.12. The exposure draft required a cumulative-effect adjustment for the adoption of the SOP. Several commentators noted that considerable effort would be required on the part of many vendors to measure the cumulative effect. Additionally, it was noted that in many instances, the application of the provisions of this SOP to contracts existing in prior periods would require a significant amount of judgment. AcSEC was concerned that the application of that judgment likely would be impacted by the hindsight a company would have, resulting in judgments based on information that did not exist at the time of the initial judgment but that would be called for if the SOP were to be applied retroactively.

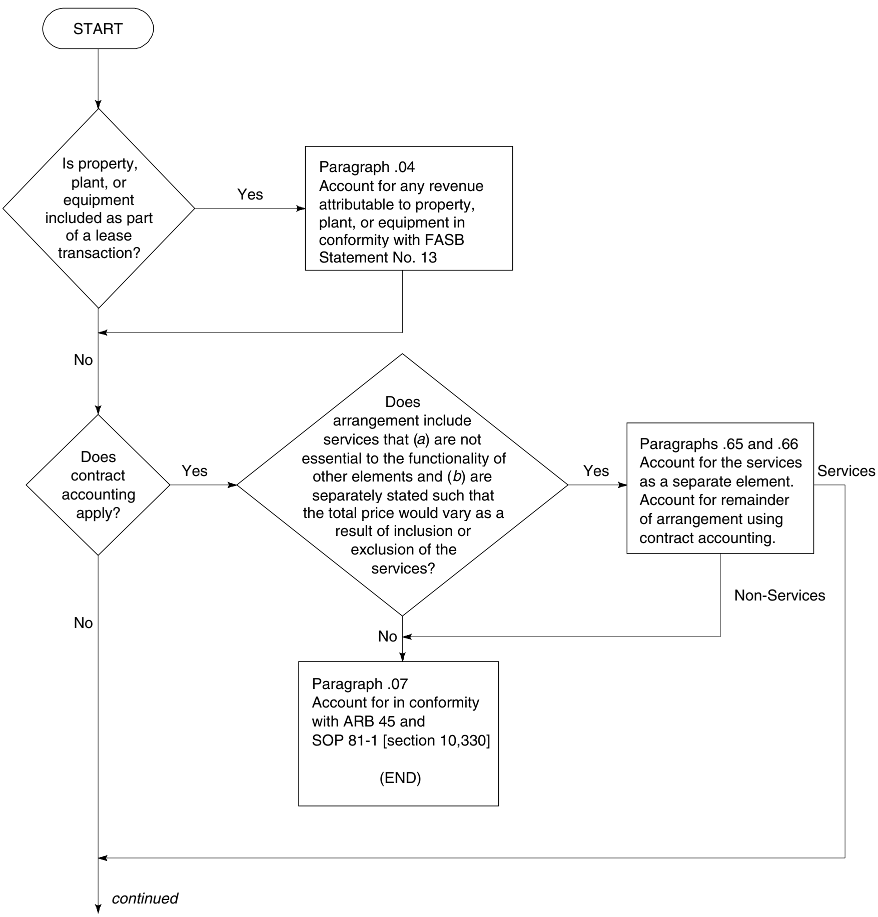
B.13. AcSEC considered these issues and determined that the transition requirements of the SOP should be amended to require prospective application.

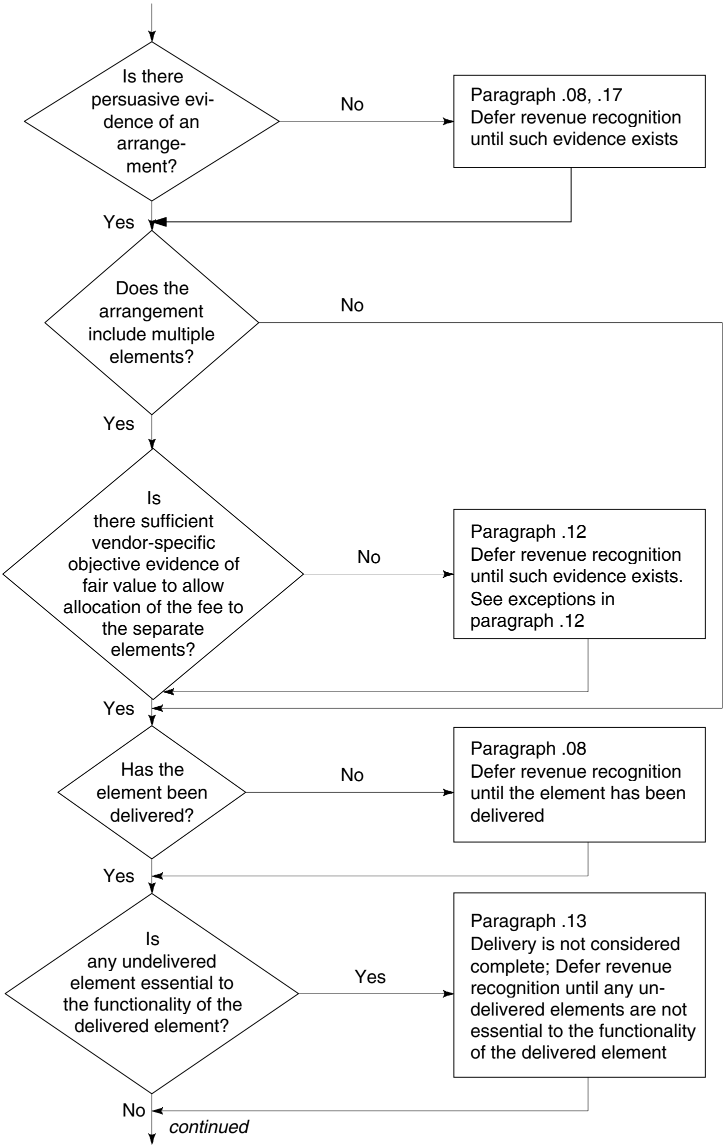
.148

Appendix C

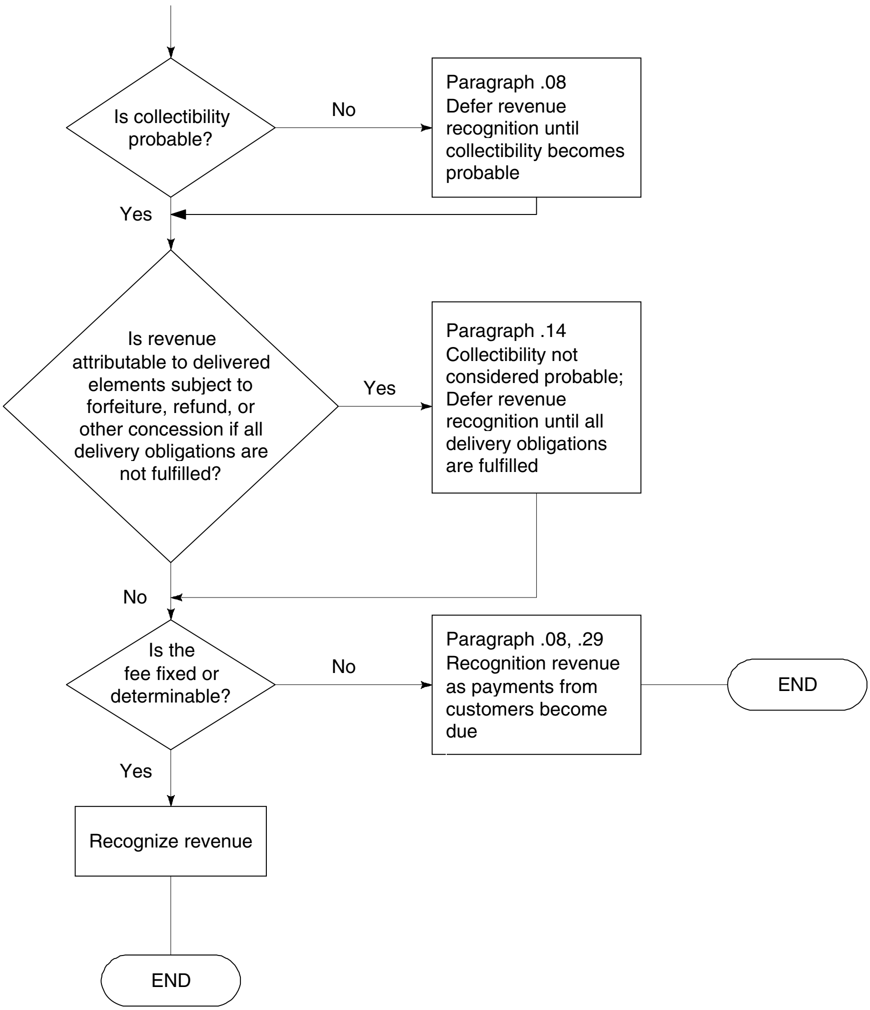
Revenue Recognition on Software Arrangements

The following flowchart illustrates a decision process for recognizing revenue on software arrangements. The flowchart is intended to illustrate the basic principle of revenue recognition and does not address the differences in accounting depending upon the type of element (services, upgrade rights, additional software products, or postcontract customer support) included in the arrangement. The flowchart summarizes certain guidance in this SOP and is not intended as a substitute for the SOP.





Is there persuasive evi-dence of an arrange-ment?
No
Paragraph .08, .17
Defer revenue recognition until such evidence exists
Yes
Does the arrangement include multiple elements?
No
Yes
Is there sufficient vendor-specific objective evidence of fair value to allow allocation of the fee to the separate elements?
No
Paragraph .12
Defer revenue recognition until such evidence exists. See exceptions in paragraph .12
Yes
Has the element been delivered?
No
Paragraph .08
Defer revenue recognition until the element has been delivered
Yes
Is any undelivered element essential to the functionality of the delivered element?
Yes
Paragraph .13
Delivery is not considered complete; Defer revenue recognition until any un-delivered elements are not essential to the functionality of the delivered element
No
continued



Is collectibility probable?
No
Paragraph .08
Defer revenue recognition until collectibility becomes probable
Yes
Is revenue attributable to delivered elements subject to forfeiture, refund, or other concession if all delivery obligations are not fulfilled?
Yes
Paragraph .14
Collectibility not considered probable; Defer revenue recognition until all delivery obligations are fulfilled
No
Is the fee fixed or determinable?
No
Paragraph .08, .29
Recognition revenue as payments from customers become due
END
Yes
Recognize revenue
END

.149

Glossary

Authorization Codes (keys). A vehicle used by vendors to permit customers access to, use of, or duplication of software that would otherwise be restricted.

Core software. An inventory of software that vendors use in creating other software. Core software is not delivered as is because customers cannot use it unless it is customized to meet system objectives or customer specifications.

Customer. A user or reseller.

Delivery. A transfer of software accompanied by documentation to the customer. The transfer may be by the following:

a. A physical transfer of tape, disk, integrated circuit, or other medium

b. Electronic transmission

c. Making available to the customer software that will not be physically transferred, such as through the facilities of a computer service bureau

d. Authorization for duplication of existing copies in the customer's possession

If a licensing agreement provides a customer with the right to multiple copies of a software product in exchange for a fixed fee, delivery means transfer of the product master, or the first copy if the product master is not to be transferred.

Fixed fee. A fee required to be paid at a set amount that is not subject to refund or adjustment. A fixed fee includes amounts designated as minimum royalties.

Licensing. Granting the right to use but not to own software through leases or licenses.

Milestone. A task associated with long-term contracts that, when completed, provides management with a reliable indicator of progress-to-completion on those contracts.

Off-the-shelf software. Software marketed as a stock item that customers can use with little or no customization.

Platform. The hardware architecture of a particular model or family of computers, the system software, such as the operating system, or both.

Platform-transfer right. A right granted by a vendor to transfer software from one hardware platform or operating system to one or more other hardware platforms or operating systems.

Postcontract customer support (PCS). The right to receive services (other than those separately accounted for as described in paragraphs .65 and .66 of this Statement of Position) or unspecified product upgrades/enhancements, or both, offered to users or resellers, after the software license period begins, or after another time as provided for by the PCS arrangement. Unspecified upgrades/enhancements are PCS only if they are offered on a when-and-if-available basis. PCS does not include the following:

- Installation or other services directly related to the initial license of the software

- Upgrade rights as defined in this Statement of Position
- Rights to additional software products

PCS may be included in the license fee or offered separately. PCS is generally referred to in the software industry as maintenance, a term that is defined, as follows, in paragraph 52 of FASB Statement No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*:

> Activities undertaken after the product is available for general release to customers to correct errors or keep the product updated with current information. Those activities include routine changes and additions.

However, the term *maintenance* is not used in this Statement of Position for the following reasons.

1. It has taken on a broader meaning in the industry than the one described in FASB Statement No. 86.
2. It may be confused with hardware maintenance as it is used elsewhere in accounting literature.
3. Its meaning varies from company to company.

The right to receive services and unspecified upgrades/enhancements provided under PCS is generally described by the PCS arrangement. Typical arrangements include services, such as telephone support and correction of errors (bug fixing or debugging), and unspecified product upgrades/enhancements developed by the vendor during the period in which the PCS is provided. PCS arrangements include patterns of providing services or unspecified upgrades/enhancements to users or resellers, although the arrangements may not be evidenced by a written contract signed by the vendor and the customer.

Reseller. Entity licensed by a software vendor to market the vendor's software to users or other resellers. Licensing agreements with resellers typically include arrangements to sublicense, reproduce, or distribute software. Resellers may be distributors of software, hardware, or turnkey systems, or they may be other entities that include software with the products or services they sell.

Site license. A license that permits a customer to use either specified or unlimited numbers of copies of a software product either throughout a company or at a specified location.

Upgrade/Enhancement. An improvement to an existing product that is intended to extend the life or improve significantly the marketability of the original product through added functionality, enhanced performance, or both. The terms upgrade and enhancement are used interchangeably to describe improvements to software products; however, in different segments of the software industry, those terms may connote different levels of packaging or improvements. This definition does not include platform-transfer rights.

Upgrade right. The right to receive one or more specific upgrades/enhancements that are to be sold separately. The upgrade right may be evidenced by a specific agreement, commitment, or the vendor's established practice.

User. Party that ultimately uses the software in an application.

When-and-if-available. An arrangement whereby a vendor agrees to deliver software only when or if it becomes deliverable while the arrangement is in effect. When-and-if-available is an industry term that is commonly used to describe a broad range of contractual commitments. The use of the term when-and-if-available within an arrangement should not lead to a presumption that an obligation does not exist.

Section 10,710

Statement of Position 97-3 Accounting by Insurance and Other Enterprises for Insurance-Related Assessments

December 10, 1997

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position that have been cleared by the Financial Accounting Standards Board as sources of established accounting principles in category *b* of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Introduction

.01 Insurance enterprises as well as noninsurance entities are subject to a variety of assessments related to insurance activities, including those by state guaranty funds and workers' compensation second-injury funds. Some entities may be subject to insurance-related assessments because they self-insure against loss or liability. Current accounting practice is diverse among entities subject to such insurance-related assessments and related recoveries. Some of the diversity is a result of fundamental differences in the methods for assessing entities. Nevertheless, similar assessments are not being accounted for comparably among entities. A number of entities account for assessments on a pay-as-you-go (cash) basis, whereas others account for assessments on an accrual basis. Furthermore, the methods for accrual are varied.

.02 As the prevalence and magnitude of guaranty-fund and other insurance-related assessments have increased, concern about the diversity in practice also has increased. This Statement of Position (SOP) provides guidance on accounting by entities subject to insurance-related assessments and was undertaken to reduce diversity in practice, improve the comparability of the amounts reported, and improve disclosures made by entities subject to guaranty-fund and other insurance-related assessments.

Background Information

Guaranty-Fund Assessments

.03 States have enacted legislation establishing guaranty funds. The state guaranty funds assess entities licensed to sell insurance in the state to provide for the payment of covered claims or to meet other insurance obligations, subject to prescribed limits, of insolvent insurance enterprises. The assessments are generally based upon premium volume for certain covered lines of business. Most state guaranty funds assess entities for costs related to a particular insolvency after the insolvency occurs. At least one state, however, assesses entities prior to insolvencies.

.04 State guaranty funds use a variety of methods for assessing entities. This SOP identifies the following four primary methods of guaranty-fund assessments.

a. *Retrospective-premium-based assessments*. Guaranty funds covering benefit payments of insolvent **life, annuity, and health insurance enterprises** typically assess entities based on **premiums written** or received in one or more years *prior* to the year of insolvency.[1] Assessments in any year are generally limited to an established percentage of an entity's average premiums for the three years preceding the insolvency. Assessments for a given insolvency may take place over several years.

b. *Prospective-premium-based assessments*. Guaranty funds covering claims of insolvent **property and casualty insurance enterprises** typically assess entities based on premiums written in one or more years *after* the insolvency. Assessments in any year are generally limited to an established percentage of an entity's premiums written or received for the year preceding the assessment. Assessments for a given insolvency may take place over several years.

c. *Prefunded-premium-based assessments*. At least one state uses this kind of assessment to cover claims of insolvent property and casualty insurance enterprises. This kind of assessment is intended to prefund the costs of future insolvencies. Assessments are imposed prior to any particular insolvency and are based on the current level of written premiums. Rates to be applied to future premiums are adjusted as necessary.

d. *Administrative-type assessments*. These assessments are typically a flat (annual) amount per entity to fund operations of the guaranty association, regardless of the existence of an insolvency. These assessments are generally expensed in the period assessed and are not addressed further in this SOP.

.05 State laws often allow for recoveries of guaranty-fund assessments by entities subject to assessments through such mechanisms as **premium tax offsets**, policy surcharges, and future premium rate structures.

Other Insurance-Related Assessments

.06 Entities are subject to a variety of other insurance-related assessments. Many states and a number of local governmental units have established

[1] Terms defined in the glossary [paragraph .55] are set in boldface type the first time they appear in this SOP.

other funds supported by assessments. The most prevalent uses for such assessments are (*a*) to fund operating expenses of state insurance regulatory bodies (for example, the state insurance department or workers' compensation board) and (*b*) to fund second-injury funds.[2]

.07 The primary methods used to assess for these other insurance-related assessments are the following.

a. *Premium-based*. The assessing organization imposes the assessment based on the entity's written premiums.[3] The base year of premiums is generally either the current year or the year preceding the assessment.

b. *Loss-based*. The assessing organization imposes the assessment based on the entity's **incurred losses** or paid losses in relation to that amount for all entities subject to that assessment in the particular jurisdiction.

Scope

.08 This SOP applies to all entities that are subject to guaranty-fund and other insurance-related assessments.[4, 5]

.09 Assessments covered by this SOP include any charge mandated by statute or regulatory authority that is related directly or indirectly to underwriting activities (including self-insurance), except for income taxes and premium taxes. This SOP does not apply to amounts payable or paid as a result of reinsurance contracts or arrangements that are in substance reinsurance, including assumed reinsurance activities and certain **involuntary pools** that are covered by Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 113, *Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts.*

Conclusions

Reporting Liabilities

.10 Entities subject to assessments should recognize liabilities for insurance-related assessments when all of the following conditions are met.

a. An assessment has been imposed or information available prior to the issuance of the financial statements indicates it is probable that an assessment will be imposed.

---

[2] Second-injury funds provide reimbursement to insurance carriers or employers for workers' compensation claims when the cost of a second injury combined with a prior accident or disability is greater than what the second accident alone would have produced. The employer of an injured or handicapped worker is responsible only for the workers' compensation benefit for the most recent injury; the second-injury fund would cover the cost of any additional benefits for aggravation of a prior condition or injury. The intent of the fund is to help insure that employers are not made to suffer a greater monetary loss or increased insurance costs because of hiring previously injured or handicapped employees.

[3] The assessing organization may be at the state, county, municipality, or other such level.

[4] Some entities are subject to insurance-related assessments because they self-insure against loss or liability. For example, one state specifies that self-insurers of workers' compensation should use as a base for assessment the amount of premium the self-insurer would have paid if it had insured its liability with an insurer for the previous calendar year.

[5] This SOP does not apply to assessments of depository institutions related to bank insurance and similar funds.

b. The event obligating an entity to pay (underlying cause of) an imposed or probable assessment has occurred on or before the date of the financial statements.

c. The amount of the assessment can be reasonably estimated.

Probability of Assessment

.11 Premium-based guaranty-fund assessments, except those that are prefunded, are presumed probable when a formal determination of insolvency occurs, and presumed not probable prior to a formal determination of insolvency.[6] Prefunded guaranty-fund assessments and premium-based administrative-type assessments (as defined in paragraph .04), are presumed probable when the premiums on which the assessments are expected to be based are written. Loss-based administrative-type and second-injury fund assessments are presumed probable when the losses on which the assessments are expected to be based are incurred.

Obligating Event

.12 Because of the fundamental differences in how assessment mechanisms operate, the event that makes an assessment probable (for example, an insolvency) may not be the event that obligates an entity. The following defines the event that obligates an entity to pay an assessment for each kind of assessment identified in this SOP.

.13 For premium-based assessments, the event that obligates the entity is generally writing the premiums or becoming **obligated to write** or renew (such as multiple-year, noncancelable policies) the premiums on which the assessments are expected to be based. Some states, through law or regulatory practice, provide that an insurance enterprise cannot avoid paying a particular assessment even if that insurance enterprise reduces its premium writing in the future. In such circumstances, the event that obligates the entity is a formal determination of insolvency or similar triggering event. Regulatory practice would be determined based on the stated intentions or prior history of the insurance regulators.

.14 For loss-based assessments, the event that obligates an entity is an entity's incurring the losses on which the assessments are expected to be based.

Ability to Reasonably Estimate the Liability

.15 One of the conditions in FASB Statement No. 5, *Accounting for Contingencies,* for recognition of a liability is that the amount can be reasonably estimated. FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss*, provides that some amount of loss can be reasonably estimated when available information indicates that the estimated amount of the loss is within a range of amounts. When no amount within the range is a better estimate than any other amount, the minimum amount in the range shall be accrued.

.16 Entities subject to assessments may be able to obtain information to assist in estimating the total guaranty-fund cost or the following years' assessments, as appropriate, for an insolvency from organizations such as the state

[6] For purposes of this SOP, a formal determination of insolvency occurs when an entity meets a state's (ordinarily the state of domicile of the insolvent insurer) statutory definition of an insolvent insurer. In most states, the entity must be declared to be financially insolvent by a court of competent jurisdiction. In some states, there must also be a final order of liquidation.

guaranty fund associations, the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF). An entity need not be able to compute the exact amounts of the assessments or be formally notified of such assessments by a guaranty fund to make a reasonable estimate of its liability. Entities subject to assessments may have to make assumptions about future events, such as when the fund will incur costs and pay claims that will determine the amounts and the timing of assessments. The best available information about market share or premiums by state and premiums by line of business generally should be used to estimate the amount of an insurance enterprise's future assessments.

.17 If a noninsurance entity's assessments are based on premiums, it may be necessary to consider the amount of premium the self-insurer would have paid if it had insured its liability with an insurer. If a noninsurance entity's assessments are based on losses, it should consider the losses that have been incurred by the company when determining the liability. Most often, assessments that have an impact of noninsurance entities that self-insure workers' compensation obligations are for second-injury funds. Second-injury funds generally assess insurance entities and self-insurers based on paid losses. A noninsurance entity may develop an accrual for its second-injury liability based on one or more of the following: (*a*) the ratio of the entity's prior period paid workers' compensation claims to aggregate workers' compensation claims in the state that was used as a basis for previous assessments, (*b*) total fund assessments in prior periods, or (*c*) known changes in the current period to either the number of employees self-insured by the entity or the number of workers who are the subject of recoveries from the second-injury fund that might alter total fund assessments and the entity's proportion of the total fund assessments.

.18 Estimates of loss-based assessments should be consistent with estimates of the underlying incurred losses and should be developed based on enacted laws or regulations and expected assessment rates.

.19 Estimates of some insurance-related assessment liabilities may be difficult to derive. The development or determination of estimates is particularly difficult for guaranty-fund assessments because of uncertainties about the cost of the insolvency to the guaranty fund and the portion that will be recovered through assessment. Examples of uncertainties follow:

- Limitations, as provided by statute, on the amount of individual contract liabilities that the guaranty fund will assume, that cause the guaranty fund associations' liability to be less than the amount by which the entity is insolvent
- Contract provisions (for example, credited rates) that may be modified at the time of the insolvency or alternative payout options that may be offered to contractholders that affect the level and payout of the guaranty fund's liability
- The extent and timing of available reinsurance recoveries may be subject to significant uncertainties
- Alternative strategies for the liquidation of assets of the insolvent company that affect the timing and level of assessments
- Certain liabilities of the insolvent insurer may be particularly difficult to estimate (for example, asbestos or environmental liabilities)

Because of the uncertainties surrounding some insurance-related assessments, the range of assessment liability may have to be reevaluated regularly during the assessment process. For some ranges, there may be amounts that appear to be better estimates than any other within the range. If this is the case, the liability recorded should be based on the best estimate within the range. For ranges in which there is no such best estimate, the liability that should be recorded should be based on the amount representing the minimum amount in the range.

Application of Guidance

.20 A discussion on applying the conclusions in paragraphs .10 through .19 to the methods used to address guaranty-fund assessments and other insurance-related assessments (as described in paragraphs .04 and .07) follows.

a. *Retrospective-premium-based guaranty-fund assessments.* An assessment is probable of being imposed when a formal determination of insolvency occurs. At that time, the premium that obligates the entity for the assessment liability has already been written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability for the entire amount of future assessments related to a particular insolvency when a formal determination of insolvency is rendered.

b. *Prospective-premium-based guaranty-fund assessments.* The event that obligates the entity for the assessment liability generally is the writing of, or becoming obligated to write or renew, the premiums on which the expected future assessments are to be based.[7] Therefore, the event that obligates the entity generally will not have occurred at the time of the insolvency.

In states that, through law or regulatory practice, provide that an entity cannot avoid paying a particular assessment in the future (even if the entity reduces premium writings in the future), the event that obligates the entity is a formal determination of insolvency or a similar event. An entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability for the entire amount of future assessments that cannot be avoided related to a particular insolvency when a formal determination of insolvency occurs.

In states without such a law or regulatory practice, the event that obligates the entity is the writing of, or becoming obligated to write, the premiums on which the expected future assessments are to be based. An entity that has the ability to reasonably estimate the amount of the assessments should recognize a liability when the related premiums are written or when the entity becomes obligated to write the premiums.

c. *Prefunded-premium-based guaranty-fund assessments.* A liability for an assessment arises when premiums are written. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability as the related premiums are written.

---

[7] For example, multiple-year contracts under which an insurance enterprise has no discretion to avoid writing future premiums.

d. *Other premium-based assessments.* Other premium-based assessments, as described in paragraph .06, would be accounted for in the same manner as prefunded-premium-based guaranty-fund assessments.

e. *Loss-based assessments.* An assessment is probable of being asserted when the loss occurs. The obligating event of the assessment also has occurred when the loss occurs. Accordingly, an entity that has the ability to reasonably estimate the amount of the assessment should recognize a liability as the related loss is incurred.

Present Value

.21 Current practice in the insurance industry is to allow, but not require (with limited exceptions, such as pensions and postretirement benefits), the discounting of liabilities to reflect the time value of money when the aggregate amount of the obligation and the amount and timing of the cash payments are fixed or reliably determinable for a particular liability. Similarly, for assessments that meet those criteria, the liability may be recorded at its present value by discounting the estimated future cash flows at an appropriate interest rate.

Reporting Assets for Premium Tax Offsets and Policy Surcharges

.22 When it is probable that a paid or accrued assessment will result in an amount that is recoverable from premium tax offsets or policy surcharges, an asset should be recognized for that recovery in an amount that is determined based on current laws and projections of future premium collections or policy surcharges from **in-force policies**. In determining the asset to be recorded, in-force policies do not include expected renewals of short-duration contracts but do include assumptions as to persistency rates for long-duration contracts. The recognition of such assets related to prospective-premium-based assessments is limited to the amount of premium an entity has written or is obligated to write and to the amounts recoverable over the life of the in-force policies. This SOP requires an entity to recognize a liability for prospective-premium-based assessments as the premium is written or obligated to be written by the entity. Accordingly, the expected premium tax offset or policy surcharge asset related to the accrual of prospective-premium-based assessments should similarly be based on and limited to the amount recoverable as a result of premiums the insurer has written or is obligated to write.

.23 For retrospective-premium-based assessments, this SOP requires an entity to recognize a liability for such assessments at the time the insolvency has occurred. Accordingly, to the extent that it is probable that paid or accrued assessments will result in a recoverable amount in a future period from business currently in force considering appropriate persistency rates, an asset should be recognized at the time the liability is recorded.

.24 In all cases, the asset shall be subject to a valuation allowance to reflect any portion of the asset that is no longer probable of realization. Considering expected future premiums other than on in-force policies in evaluating the recoverability of premium tax offsets or policy surcharges is not appropriate. An asset shall not be established for paid or accrued assessments that are recoverable through future premium rate structures.

.25 The time value of money need not be considered in the determination of the recorded amount of the potential recovery if the liability is not discounted.

In instances in which the recovery period for the asset is substantially longer than the payout period for the liability, it may be appropriate to record the asset on a discounted basis regardless of whether the liability is discounted.

.26 The policy surcharges referred to in this SOP are those surcharges that are intended to provide an opportunity for assessed entities to recover some or all of the amounts assessed over a period of time. In some instances, there may be policy surcharges that are required as a pass-through to the state or other regulatory bodies, and these surcharges should be accounted for in a manner such that amounts collected or receivable are not recorded as revenues and amounts due or paid are not expensed (meaning, similar to accounting for sales tax).

Disclosures

.27 FASB Statement No. 5, FASB Interpretation No. 14, and SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties* [section 10,640], address disclosures related to loss contingencies. That guidance is applicable to assessments covered by this SOP. Additionally, if amounts have been discounted, the entity should disclose in the financial statements the undiscounted amounts of the liability and any related asset for premium tax offsets or policy surcharges as well as the discount rate used. If amounts have not been discounted, the entity should disclose in the financial statements the amounts of the liability, any related asset for premium tax offsets or policy surcharges, the periods over which the assessments are expected to be paid, and the period over which the recorded premium tax offsets or policy surcharges are expected to be realized.

Effective Date and Transition

.28 This SOP is effective for financial statements for fiscal years beginning after December 15, 1998. Early adoption is encouraged. Previously issued annual financial statements should not be restated. Initial application of this SOP should be as of the beginning of an entity's fiscal year (that is, if the SOP is adopted prior to the effective date and during an interim period other than the first interim period, all prior interim periods should be restated). Entities subject to assessments should report the effect of initially adopting this SOP in a manner similar to the cumulative effect of a change in accounting principle. (Refer to paragraph 20 of Accounting Principles Board Opinion No. 20, *Accounting Changes*).

The provisions of this Statement need not be applied to immaterial items.

Basis for Conclusions

.29 This section discusses considerations that were deemed significant by members of the AcSEC in reaching the conclusions in this SOP. It provides background information and includes reasons for accepting certain views and rejecting others.

.30 The authoritative financial reporting literature does not address explicitly accounting for guaranty-fund and other insurance-related assessments and related premium tax offsets and policy surcharges of entities subject to assessments. AcSEC considered the following pertinent literature in reaching the conclusions in this SOP:

- FASB Statement No. 5, *Accounting for Contingencies*
- FASB Statement No. 60, *Accounting and Reporting by Insurance Enterprises*
- FASB Statement No. 87, *Employers' Accounting for Pensions*
- FASB Interpretation No. 14, *Reasonable Estimation of the Amount of a Loss*
- FASB Interpretation No. 39, *Offsetting of Amounts Related to Certain Contracts*
- AICPA SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties* [section 10,640]
- AICPA SOP 96-1, *Environmental Remediation Liabilities* [section 10,680]
- Emerging Issues Task Force (EITF) Issue No. 87-22, *Prepayments to the Secondary Reserve of the FSLIC*
- EITF Issue No. 91-10, *Accounting for Special Assessments and Tax Increment Financing Entities*
- EITF Issue No. 92-13, *Accounting for Estimated Payments in Connection with the Coal Industry Retiree Health Benefit Act of 1992*
- EITF Issue No. 93-5, *Accounting for Environmental Liabilities*
- EITF Issue No. 93-6, *Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises*
- EITF Topic D-47, *Accounting for the Refund of Bank Insurance Funds and Savings Association Insurance Fund Premiums*
- FASB Concepts Statement No. 6, *Elements of Financial Statements*
- Securities and Exchange Commission (SEC) Staff Accounting Bulletin (SAB) No. 62, *Discounting by Property/Casualty Insurance Companies*
- SEC SAB No. 92, *Accounting and Disclosures Relating to Loss Contingencies*

Reporting Liabilities

.31 FASB Statement No. 5, paragraph 8, requires the accrual of a liability when "a. Information available prior to issuance of the financial statements indicates that it is probable that . . . a liability has been incurred at the date of the financial statements" and "b. The amount of loss can be reasonably estimated." With respect to assessments, FASB Statement No. 5, paragraph 33, states, in part:

> The following factors, among others, must be considered in determining whether accrual and/or disclosure is required with respect to pending or threatened litigation and actual or possible claims and assessments:
>
> a. The period in which the underlying cause (i.e., the cause for action) of the pending or threatened litigation or of the actual or possible claim or assessment occurred.

FASB Statement No. 5, paragraph 34, states, in part:

> As a condition for accrual of a loss contingency, paragraph 8(a) requires that information available prior to the issuance of financial statements indicate that it is probable that an asset had been impaired or a liability had been incurred at the date of the financial statements. Accordingly, accrual would clearly be inappropriate for . . . assessments whose underlying cause is an event or condition occurring after the date of financial statements . . . .

.32 Therefore, for a liability to be recognized in the financial statements, the underlying cause must have occurred on or before the date of the financial statements. The SOP identifies the obligating event for each kind of assessment, which is the underlying cause.

.33 In reaching the conclusions in this SOP concerning when to recognize liabilities for assessments, AcSEC considered the definition of liabilities in paragraph 35 of FASB Concepts Statement No. 6 and the concept of present obligation:

> Liabilities are probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events. [*Footnote references omitted.*]

.34 To apply the definition of liabilities in paragraph 35 of FASB Concepts Statement No. 6 to assessments, AcSEC considered the underlying cause that creates a present obligation for entities subject to assessments to pay assessments. In order to have a present obligation, the entity must have little or no discretion to avoid the future sacrifice, and the event that obligates the entity must have occurred no later than the date of the financial statements.

.35 AcSEC concluded that the fundamental differences in the assessment mechanisms justified identifying different events, depending on the kind of assessment, that would obligate an entity and require recognition of a liability.

Obligating Event

.36 More than one event may need to occur before there is a cause for an assessment. AcSEC believes that only when all of the events required to give rise to a cause for action have occurred has the event underlying a liability occurred. AcSEC concluded that the insolvency is the initial event that will give rise to a cause for an assessment, either currently or at some point in the future. The insolvency may or may not also be the final event.

.37 If, through the operation of law or regulatory practice, the enterprise has at the time of an insolvency an unavoidable obligation (subject only to the actual imposition of the assessment) to pay for some portion of the insolvency, no further events are required for there to be an underlying cause of a liability. However, if at the moment of the insolvency the enterprise does not, through the operation of law or regulatory practice, have an unavoidable obligation (subject only to the actual imposition of the assessment), then another event is the final event underlying the obligation.

Assessments Based on Premiums

.38 For assessments based on premiums written after the insolvency, AcSEC concluded that the writing of premiums on which a potential assessment is based generally should be considered the underlying cause of an entity's obligation to pay cash in the future.[8]

.39 In making its decision, AcSEC noted that entities generally have the option of reducing or eliminating their premium-writing activity, thereby reducing or eliminating their assessment. AcSEC was also influenced by the fact that entities subject to assessments that enter a new state or increase market share in a state will be required to pay assessments for insolvencies that occurred before they entered that state or increased their market share. The fact that such entities will have to pay assessments for insolvencies that occurred previously supports the conclusion that the writing of premiums is the underlying cause of the assessments.

.40 AcSEC believes that a number of analogies support the conclusions in this SOP. For example, in EITF Issue No. 93-6, a ceding enterprise would recognize a liability for obligatory retrospectively rated contracts only to the extent that it has an obligation to pay cash (or other consideration) to a reinsurer that would not have been required in the absence of experience under the contract. Furthermore, EITF Issue No. 93-6 specifically prohibits ceding companies from recognizing liabilities for amounts expected to be paid in the future that relate to prior catastrophe losses (for example, through increased costs of reinsurance) when no contractual obligation to make such payments exists. AcSEC believes that entities subject to assessments have no obligation to pay assessments unless the premiums on which the assessments are to be based are written.

.41 In EITF Issue No. 92-13, the EITF reached a consensus that allowed enterprises with operations in the coal industry to account for their obligations under the Coal Industry Retiree Health Benefit Act of 1992 (which created a fund to pay benefits related to certain coal-industry benefit trusts that were operating at deficits) as multiemployer pension plans. Guaranty funds are similar to multiemployer pension plans in that each insurance enterprise's payments to the fund are used to satisfy the general obligations of the fund and are not segregated for the benefit of any one enterprise.

.42 AcSEC also believes that accounting for claims-made insurance provides an appropriate analogy. In claims-made insurance, the insured event is the reporting, during the term of the policy or within a specified period following the coverage period, to the insurer of a claim for a covered loss. For such policies, entities subject to assessments estimate a liability for unpaid claims based only on claims reported, despite the fact that other losses may have been incurred that eventually may result in claims to that insurance enterprise. The agreement between the insurer and the insured is that the insurance enterprise is not obligated to cover those unreported losses, unless that insurance enterprise is providing coverage under a claims-made policy when the claim is made. Similarly, the substance of the arrangement for most premium-based assessment mechanisms is that an insurance enterprise is obligated to pay assessments only if the premiums on which the assessments are to be based are written.

Assessments Based on Losses

.43 For loss-based assessments, AcSEC concluded that the event underlying an insurance enterprise's obligation to pay the assessment is the incur-

---

[8] As discussed in paragraph .13, some states, through law or regulatory practice, provide that an insurance enterprise cannot avoid paying a particular assessment even if the insurance enterprise reduces premium writings in the future. For example, in certain states, an insurance enterprise may remain liable for assessments even though the insurance enterprise discontinues the writing of premiums. In this case, the underlying cause of the liability is not the writing of the premium, but the insolvency.

rence of losses on which the assessments are expected to be based (regardless of whether the assessment is based on paid or incurred losses). AcSEC believes that entities subject to assessments have little or no discretion to avoid the future sacrifice once the losses on which the assessments are expected to be based have been incurred. Unlike premium-based assessments, in which the insurance enterprise has the discretion to write or not to write premiums (even if it is unlikely that the insurance enterprise will not write such future premiums), an insurance enterprise is obligated to pay the loss-based assessments once those losses are incurred.

.44 AcSEC considered whether it is appropriate to recognize a liability for assessments for administrative-type state funds as the losses on which the assessments are based are incurred by entities. Some have indicated that it is not appropriate to accrue a liability for operating costs of a state fund that have not yet been incurred by the state fund. AcSEC concluded that loss-based assessments for administrative-type funds should be accrued as losses of an entity occur if it is probable that a related assessment will be made. AcSEC believes this is similar to the accounting in FASB Statement No. 60, whereby liabilities for claim adjustment expenses that relate to unpaid claims are accrued before the costs are incurred. Once the losses are incurred, insurance enterprises have little or no discretion to avoid paying the assessment.

Probability of Assessment

.45 Although entities subject to assessments may be able to determine that future assessments are probable for some period before a formal determination of insolvency occurs, AcSEC concluded that assessments should not be considered probable until a formal determination of insolvency occurs, unless the assessments are being made by a prefunded guaranty fund. AcSEC believes that the formal determination date is the most objectively determinable measurement date and that requiring its use will foster comparability in reporting. Furthermore, AcSEC believes mere speculation about an insurance enterprise's insolvency should not be considered an accounting event.

Present Value

.46 AcSEC believes that recognizing assessment liabilities at their present value provides the most representative measure of the economic substance of the situation. Nevertheless, AcSEC declined to mandate present-value-based measurements while the FASB is still considering the role of present-value-based measurements in financial reporting. For the same reason, this SOP provides no detailed guidance on present-value methodologies and discount rates.

Premium Tax Offsets, Policy Surcharges, and Future Rate Making

.47 AcSEC believes that, when it is probable that paid or accrued assessments will result in premium tax offsets or policy surcharges, the recognition of an asset is appropriate based on current laws and projections of future premium collections from in-force policies. No asset should be recognized related to expected new business or renewal of in-force short-duration contracts. In making this determination, AcSEC considered the characteristics of an asset in paragraph 26 of FASB Concepts Statement No. 6, which states, in part:

> An asset has three essential characteristics: (*a*) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (*b*) a particular entity can obtain the benefit and control others' access to it, and (*c*) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.

.48 Premium tax offsets, policy surcharges, and the incorporation of assessment costs in future premium rate structures have a similar purpose, that is, to allow entities subject to assessments to recoup some portion of assessment costs. Nevertheless, AcSEC concluded that the ability to include assessments in future premium rate structures should be treated differently from premium tax offsets and policy surcharges. Premium tax offsets and policy surcharges are statutorily provided and generally are not dependent on the ability or intent of an insurance enterprise to take any action. In contrast, there can be no assurance that the future competitive or regulatory environment will allow an insurance enterprise to include assessments in future premium rate structures in such a manner as to result in a recovery of costs. Thus, AcSEC concluded that the statutory ability to include assessment costs in future premium structures should not result in asset recognition and should not be used to reduce current assessment costs.

.49 To the extent that paid or accrued guaranty-fund costs are expected to result in premium tax offsets or policy surcharges, AcSEC believes that it is appropriate to consider the recognition of such recoveries as assets. AcSEC believes that the amount of the asset should be limited to expected future premiums related to policies in force at the measurement date. AcSEC considered whether it is appropriate to consider all expected future premiums in establishing such recoveries and concluded that this approach would introduce an inconsistency with AcSEC's decision not to recognize a liability for guaranty-fund and similar assessments that are based on future premiums. Therefore, AcSEC determined that considering all expected future premiums in evaluating the recoverability of premium tax offsets or policy surcharges is not appropriate.

.50 AcSEC also considered whether there was an inappropriate inconsistency between requiring the use of persistency assumptions in asset recognition and not for liability recognition in prospective-premium-based assessments (for example, for multiple-year contracts). AcSEC concluded that this treatment was appropriate due to the limited number of instances in which persistency assumptions would be applicable for liability measurement.

Prefunded-Premium-Based Assessments

.51 For prefunded-premium-based assessments, as long as such funds do not provide, either by statute or practice, for a return of excess assessments, no asset should be recorded.

Transition

.52 AcSEC decided to prohibit the retroactive application of this SOP. AcSEC recognizes the benefits of comparative financial statements but believes that the necessary information for entities subject to assessments to create for prior periods the necessary estimates of liabilities for future assessments and of the timing and amounts of cash flows would not be readily available.

.53

Appendix A

Illustration of Computation of Assessment Liabilities

Example 1—Prospective-Premium-Based Assessment[9]

Scenario

As a result of insolvencies in prior years, ABC Property & Liability Insurance Company (ABC) expects to be assessed in the future by the guaranty fund in a state where it writes premiums. Any such assessments will be limited to 2 percent of premium writings in the prior year and are recoverable through premium tax offsets on a ratable basis over the five-year period following the year of each assessment.

Although it does not expect to do so, ABC is free to cease writing the lines of business that are subject to the guaranty-fund assessments.

As of December 31, 19X0, ABC has neither paid nor received a notice of an assessment related to the insolvencies. Based on communications from the state guaranty association, ABC expects to receive an assessment in 19X1, which is allocated among entities based on 19X0 market share, for at least 1 percent of 19X0 premiums that are subject to the assessment. A best estimate cannot be determined, and no amount within the range of estimates (meaning, from 1 to 2 percent of 19X0 premiums) is a better estimate than any other amount, therefore the minimum amount in the range should be accrued.

Result

As of December 31, 19X0, ABC should recognize a liability equal to 1 percent of the premiums written in 19X0 that are subject to the assessment. No additional liability should be recognized, and no asset related to the premium tax offset should be recognized. Disclosure of the loss contingency of up to an additional 1 percent of the subject premiums should be considered.

Discussion

ABC would recognize a liability only for those future assessments it is obligated to pay as a result of the premiums written. Because ABC is not obligated to write any future premiums, its liability is limited to that related to premiums written in 19X0. Because no amount within the range of estimates is a better estimate than any other amount, the minimum amount in the range is accrued. Further, because the premium tax offset is realizable only on business that will be written in the future (that is, 19X2 and subsequent years), no asset or receivable is recognized as of December 31, 19X0.

Example 2—Retrospective-Premium-Based Assessment

Scenario

As a result of an insolvency that occurred during 19X0, DEF Life and Health Insurance Company (DEF) expects to be assessed in the future by the guaranty

[9] This kind of assessment is considered prospective since the assessment relates to premium written subsequent to the insolvency.

fund in a state where it has written business. Any such assessment will be based on DEF's average market share, determined based on premiums that are subject to the assessment for the three years prior to the insolvency, and limited to 2 percent of the average annual subject premiums for the three years prior to the insolvency. Further, such assessments are recoverable through premium tax offsets over the five-year period following the year of payment for each assessment.

As of December 31, 19X0, DEF has not paid or received a notice of an assessment related to the insolvency. Based on initial input from the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and experience with other insolvencies, DEF assumes that the first assessment will not be made until 19X3 and that it will take three to five annual assessments in order for the guaranty fund to be able to meet its obligations. Based on the estimated nationwide cost of the insolvency and the distribution of the insolvent company's business, DEF estimates that its assessment will be at least 1 percent of the average annual premiums that are subject to the assessment. No amount within the range of estimates (meaning, from 1 to 2 percent of the average annual premiums for three to five years) is a better estimate than any other amount, therefore the minimum amount in the range should be accrued.

Result

As of December 31, 19X0, DEF should recognize a liability for three years of assessments at 1 percent of the average annual premiums that are subject to the assessment (that is, the assessments expected in 19X3, 19X4, and 19X5). Disclosure of the loss contingency for additional assessments (meaning, in 19X6 and 19X7) or assessment of greater than 1 percent of the average annual premiums that are subject to the assessment should be considered. An asset related to premium tax offsets that are available on accrued assessments would be recorded provided there were sufficient premium taxes based on business in force at December 31, 19X0 (with assumed levels of policy retention) to allow realization of the asset.

The resulting recognized liability and asset are as follows (shown on both a discounted and undiscounted basis, based on paragraphs .21 and .25, discounting is optional), assuming average annual subject premiums of $100,000 for the three years prior to the insolvency.

Schedule of Assessments and Premium Tax Offsets

	Recorded At	Cash Payments									
	12/31/19X0	19X1	19X2	19X3	19X4	19X5	19X6	19X7	19X8	19X9	20X0
Assessments											
19X3 Assessment				1,000							
19X4 Assessment					1,000						
19X5 Assessment						1,000					
Total	3,000			1,000	1,000	1,000					
Premium Tax Offset											
19X3 Assessment (1)					200	200	200	200	200		
19X4 Assessment (1)						200	200	200	200	200	
19X5 Assessment (1)							200	200	200	200	200
Total	3,000				200	400	600	600	600	400	200
Present value of assessments											
at 12/31/19X0 (2)	2,470										
Present value of Premium											
Tax Offset at 12/31/19X0 (2)	2,139										

(1) Assumes that, based upon anticipated levels of policy retention from the business in force at December 31, 19X0, there will be sufficient premium to realize the premium tax offset.

(2) Discounted at 5 percent, assuming all assessments are paid and offsets realized at the end of each year.

Discussion

DEF would record a liability for all future assessments related to the insolvency. Because no amount within the range of estimates (meaning, from 1 to 2 percent of the average annual premiums for three to five years) is a better estimate than any other amount, the minimum amount in the range (meaning, 1 percent per year for three years of assessments) is accrued.

Since it is assumed that based upon the anticipated levels of policy retention from the business in force at December 31, 19X0, there will be sufficient premium to realize the premium tax offset, the premium tax offset is recorded.

Example 3—Loss-Based Assessment

Scenario

GHI Industrial Company (GHI) is self-insured for workers' compensation and therefore participates in the second injury fund in the state where it conducts operations. GHI is entitled to recover from the fund for some or all of the indemnity claims for previously injured workers. GHI is also subject to annual assessments (maximum of 1 percent per year) on indemnity claims paid each year.

Assessment rates have been climbing steadily, from 0.6 percent five years ago to 0.75 percent in 19X0.

Results

As of December 31, 19X0, GHI should have an assessment liability recognized for 0.75 percent of its liability for the payment of future indemnity claims, unless there was information to support the assessment rate being reduced or the assessments being eliminated in the future. Disclosure of the loss contingency of up to an additional 0.25 percent of the liability for the payment of future indemnity claims should be considered.

Discussion

GHI would recognize a liability based on the current assessment rate, unless there was clear evidence that the rate would change. The liability would be based on the entire liability base that was subject to the assessment.

.54

Appendix B

Discussion of Comments Received on the Exposure Draft

An exposure draft of a proposed statement of position (SOP), *Accounting by Insurance and Other Enterprises for Guaranty-Fund and Certain Other Insurance-Related Assessments*, was issued for public comment on December 5, 1996, and distributed to a variety of interested parties to encourage comment by those who would be affected by the proposal. Twenty-four comment letters were received in response on the exposure draft. The most significant and pervasive comments received were in the following four areas:

1. Reporting assets and policy surcharges
2. Estimation of the assessment liability
3. Accounting for prospective-premium-based assessments
4. Scope

Reporting Assets and Policy Surcharges

The guidance in the exposure draft on reporting assets and policy surcharges caused some confusion. Several respondents requested clarification about the kind of entity that would recognize assets for premium tax offsets and policy surcharges. AcSEC clarified the guidance to explain how an asset should be accounted for when it is probable that a paid or accrued assessment will result in an amount that is expected to be recoverable.

Estimation of the Assessment Liability

Several respondents commented that they do not believe a liability can be reasonably estimated by an entity for guaranty-fund assessments because the entity will not have the necessary information to estimate the amount of loss. These respondents commented that a determination of estimates is particularly difficult for guaranty-fund assessments because of uncertainties about the cost of the insolvency to the guaranty fund and the portion that will be recovered through assessment because of such factors as alternative strategies for the liquidation of assets of the insolvent company that affect the timing and level of assessments and certain liabilities of the insolvent insurer may be particularly difficult to estimate (for example, asbestos or environmental liabilities). AcSEC believes that, although it may be difficult to calculate a point estimate in certain circumstances (see paragraph .19), in the majority of cases, enough information is available to calculate a range of estimates. Further, in the case of prospective-premium-based assessments, the liability to be recorded is related only to premiums written or obligated to be written, rather than to all expected future premiums.

Accounting for Prospective-Premium-Based Assessments

The exposure draft contained an alternative view on accounting for prospective-premium-based assessments, which discussed that a minority of AcSEC believed that the insolvency should be considered the underlying cause of an entity's obligation to pay future assessments, irrespective of the basis used to determine the amount due from each insurance enterprise subject to the assessment. The majority of respondents did not support this minority view. AcSEC continues to believe that the writing of the premium on which potential assessments are expected to be based is the underlying cause of an entity's obligation to pay cash in the future.

Scope

Because entities other than insurance enterprises are assessed insurance-related assessments, the scope of the exposure draft included all reporting entities. Although some noninsurance entities requested to be excluded from the scope, most of the respondents believe that both insurance enterprises and noninsurance enterprises would have sufficient information to recognize a liability for the assessments covered in the SOP.

.55

Glossary

incurred losses. Losses paid or unpaid for which the company has become liable during a period.

in-force policies. Policies effective before a specified date that have not yet expired or been canceled.

involuntary pools. A residual market mechanism for insureds who cannot obtain insurance in the voluntary market.

life, annuity, and health insurance enterprise. An enterprise that may issue annuity, endowment, and accident and health insurance contracts as well as life insurance contracts. Life and health insurance enterprises may be either stock or mutual organizations.

obligated to write. If an entity has no discretion to cancel a policy because of legal obligation under state statute or contract terms, or regulatory practice and is required to offer or issue insurance policies for a period in the future.

premium tax offsets. Offsets against premium taxes levied on insurance companies by states.

premiums written. The premiums on all policies a company has issued in a period.

property and casualty insurance enterprise. An enterprise that issues insurance contracts providing protection against either (1) damage to or loss of property caused by various perils, such as fire and theft or (2) legal liability resulting from injuries to other persons or damage to their property. Property and liability insurance enterprises may be either stock or mutual organizations.

Section 10,720

Statement of Position 98-1
Accounting for the Costs of Computer Software Developed or Obtained for Internal Use

March 4, 1998

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position that have been cleared by the Financial Accounting Standards Board as sources of established accounting principles in category *b* of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by the Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Summary

This Statement of Position (SOP) provides guidance on accounting for the costs of computer software developed or obtained for internal use. The SOP requires the following:

- Computer software meeting the characteristics specified in this SOP is internal-use software.
- Computer software costs that are incurred in the preliminary project stage should be expensed as incurred. Once the capitalization criteria of the SOP have been met, external direct costs of materials and services consumed in developing or obtaining internal-use computer software; payroll and payroll-related costs for employees who are directly associated with and who devote time to the internal-use computer software project (to the extent of the time spent directly on the project); and interest costs incurred when developing computer software for internal use should be capitalized. Training costs and data conversion costs, except as noted in paragraph .21, should be expensed as incurred.
- Internal costs incurred for upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20–.23. Internal costs incurred for maintenance should be expensed as incurred. Entities that cannot separate internal costs on a reasonably cost-effective basis between maintenance and relatively minor upgrades and enhancements should expense such costs as incurred.

- External costs incurred under agreements related to specified upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20–.23. However, external costs related to maintenance, unspecified upgrades and enhancements, and costs under agreements that combine the costs of maintenance and unspecified upgrades and enhancements should be recognized in expense over the contract period on a straight-line basis unless another systematic and rational basis is more representative of the services received.
- Impairment should be recognized and measured in accordance with the provisions of FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*.[*]
- The capitalized costs of computer software developed or obtained for internal use should be amortized on a straight-line basis unless another systematic and rational basis is more representative of the software's use.
- If, after the development of internal-use software is completed, an entity decides to market the software, proceeds received from the license of the computer software, net of direct incremental costs of marketing, should be applied against the carrying amount of that software.

The SOP identifies the characteristics of internal-use software and provides examples to assist in determining when computer software is for internal use.

The SOP applies to all nongovernmental entities and is effective for financial statements for fiscal years beginning after December 15, 1998. The provisions of this SOP should be applied to internal-use software costs incurred in those fiscal years for all projects, including those projects in progress upon initial application of the SOP. Earlier application is encouraged in fiscal years for which annual financial statements have not been issued. Costs incurred prior to initial application of this SOP, whether capitalized or not, should not be adjusted to the amounts that would have been capitalized had this SOP been in effect when those costs were incurred.

Foreword

The accounting guidance contained in this document has been cleared by the Financial Accounting Standards Board (FASB). The procedure for clearing accounting guidance in documents issued by the Accounting Standards Executive Committee (AcSEC) involves the FASB reviewing and discussing in public board meetings (1) a prospectus for a project to develop a document, (2) a proposed exposure draft that has been approved by at least ten of AcSEC's fifteen members, and (3) a proposed final document that has been approved by at least ten of AcSEC's fifteen members. The document is cleared if at least five of the seven FASB members do not object to AcSEC undertaking the project, issuing the proposed exposure draft, or after considering the input received by AcSEC as a result of the issuance of the exposure draft, issuing the final document.

---

[*] FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, supersedes FASB Statement No. 121. [Footnote added, October 2002, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144.]

The criteria applied by the FASB in their review of proposed projects and proposed documents include the following:

1. The proposal does not conflict with current or proposed accounting requirements, unless it is a limited circumstance, usually in specialized industry accounting, and the proposal adequately justifies the departure.
2. The proposal will result in an improvement in practice.
3. The AICPA demonstrates the need for the proposal.
4. The benefits of the proposal are expected to exceed the costs of applying it.

In many situations, prior to clearance, the FASB will propose suggestions, many of which are included in the documents.

Introduction and Background

.01 The Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards No. 86, *Accounting for the Costs of Computer Software to Be Sold, Leased, or Otherwise Marketed*, in 1985. At that time, the FASB considered expanding the scope of that project to include costs incurred for the development of computer software for internal use. The FASB concluded, however, that accounting for the costs of software used internally was not a significant problem and, therefore, decided not to expand the scope of the project. The FASB stated that it recognized that at that time the majority of entities expensed all costs of developing software for internal use, and it was not convinced that the predominant practice was improper.

.02 Because of the absence of authoritative literature that specifically addresses accounting for the costs of computer software developed or obtained for internal use and the growing magnitude of those costs, practice became diverse. Some entities capitalize costs of internal-use computer software, whereas some entities expense costs as incurred. Still other entities capitalize costs of purchased internal-use computer software and expense costs of internally developed internal-use computer software as incurred.

.03 The staff of the Securities and Exchange Commission (SEC) and other interested parties have requested that standard setters develop authoritative guidance to eliminate the inconsistencies in practice. In a November 1994 letter, the Chief Accountant of the SEC suggested that the Emerging Issues Task Force (EITF) develop that guidance. However, the EITF and the Accounting Standards Executive Committee (AcSEC) agreed that AcSEC should develop the guidance.

.04 AcSEC issued an exposure draft of a proposed Statement of Position (SOP), *Accounting for the Costs of Computer Software Developed or Obtained for Internal Use*, on December 17, 1996. AcSEC received about 130 comment letters in response to the exposure draft.

Scope

.05 This SOP provides guidance on accounting by all nongovernmental entities, including not-for-profit organizations, for the costs of computer software developed or obtained for internal use and provides guidance for determining whether computer software is for internal use.

.06 This SOP clarifies that the costs of computer software developed or obtained are costs of either (*a*) software to be sold, leased, or otherwise marketed as a separate product or as part of a product or process, subject to FASB Statement No. 86; (*b*) software to be used in research and development, subject to FASB Statement No. 2, *Accounting for Research and Development Costs*, and FASB Interpretation No. 6, *Applicability of FASB Statement No. 2 to Computer Software*; (*c*) software developed for others under a contractual arrangement, subject to contract accounting standards; or (*d*) internal-use software, subject to this SOP. This SOP does not change any of the provisions in FASB Statement Nos. 86, 2, or FASB Interpretation No. 6.

.07 Costs of computer software that is "sold, leased, or otherwise marketed as a separate product or as part of a product or process" are within the scope of FASB Statement No. 86. The Appendix of this SOP includes examples of computer software considered to be for internal use and thus not "part of a product or process."

.08 This SOP provides guidance on when costs incurred for internal-use computer software are and are not capitalized.

.09 This SOP provides guidance on accounting for the proceeds of computer software developed or obtained for internal use that is marketed.

.10 This SOP provides guidance on accounting for computer software that consists of more than one component or module. For example, an entity may develop an accounting software system containing three elements: a general ledger, an accounts payable subledger, and an accounts receivable subledger. In this example, each element might be viewed as a component or module of the entire accounting software system. The guidance in this SOP should be applied to individual components or modules.

.11 Accounting for costs of reengineering activities, which often are associated with new or upgraded software applications, is not included within the scope of this SOP.[1]

Conclusions

Characteristics of Internal-Use Computer Software

.12 For purposes of this SOP, internal-use software is software having the following characteristics:

a. The software is acquired, internally developed, or modified solely to meet the entity's internal needs.

b. During the software's development or modification, no substantive plan exists or is being developed to market the software externally.

A substantive plan to market software externally could include the selection of a marketing channel or channels with identified promotional, delivery, billing, and support activities. To be considered a substantive plan under this SOP, implementation of the plan should be reasonably possible. Arrangements providing for the joint development of software for mutual internal use (for example, cost-sharing arrangements) are not substantive plans to market software for purposes of this SOP. Similarly, routine market feasibility studies are not substantive plans to market software for purposes of this SOP.

---

[1] This SOP does not change the conclusions reached in Emerging Issues Task Force Issue No. 97-13, *Accounting for Costs Incurred in Connection with a Consulting Contract or an Internal Project That Combines Business Process Reengineering and Information Technology Transformation*, which requires that the costs of reengineering activities be expensed as incurred.

.13 An entity must meet both characteristics in paragraph .12 for software to be considered for internal use.

.14 An entity's past practices related to selling software may help determine whether the software is for internal use or is subject to a plan to be marketed externally. For example, an entity in the business of selling computer software often both uses and sells its own software products. Such a past practice of both using and selling computer software creates a rebuttable presumption that any software developed by that entity is intended for sale, lease, or other marketing, and thus is subject to the guidance in FASB Statement No. 86.

.15 Computer software to be sold, leased, or otherwise marketed includes software that is part of a product or process to be sold to a customer and should be accounted for under FASB Statement No. 86. For example, software designed for and embedded in a semiconductor chip is included in the scope of FASB Statement No. 86 because it is an integral part of the product. By contrast, software for internal use, though it may be used in developing a product, is not part of or included in the actual product or service sold. If software is used by the vendor in the production of the product or providing the service but the customer does not acquire the software or the future right to use it, the software is covered by this SOP. For example, for a communications company selling telephone services, software included in a telephone switch is part of the internal equipment used to deliver a service but is not part of the product or service actually being acquired or received by the customer.

.16 The Appendix [paragraph .93] provides examples of when computer software is and is not for internal use.

Stages of Computer Software Development

.17 The following table illustrates the various stages and related processes of computer software development.

Preliminary Project Stage	*Application Development Stage*	*Post-Implementation/ Operation Stage*
Conceptual formulation of alternatives	Design of chosen path, including software configuration and software interfaces	Training
Evaluation of alternatives	Coding	Application maintenance
Determination of existence of needed technology	Installation to hardware	
Final selection of alternatives	Testing, including parallel processing phase	

The SOP recognizes that the development of internal-use computer software may not follow the order shown above. For example, coding and testing are often performed simultaneously. Regardless, for costs incurred subsequent to completion of the preliminary project stage, the SOP should be applied based on the nature of the costs incurred, not the timing of their incurrence. For example, while some training may occur in the application development stage, it should be expensed as incurred as required in paragraphs .21 and .23.

Research and Development

.18 The following costs of internal-use computer software are included in research and development and should be accounted for in accordance with the provisions of FASB Statement No. 2:

a. Purchased or leased computer software used in research and development activities where the software does not have alternative future uses.

b. All internally developed internal-use computer software[2] (including software developed by third parties, for example, programmer consultants) if (1) the software is a pilot project (that is, software of a nature similar to a pilot plant as noted in paragraph 9(h) of FASB Statement No. 2) or (2) the software is used in a particular research and development project, regardless of whether the software has alternative future uses.

Capitalize or Expense

.19 *Preliminary Project Stage.* When a computer software project is in the preliminary project stage, entities will likely—

a. Make strategic decisions to allocate resources between alternative projects at a given point in time. For example, should programmers develop a new payroll system or direct their efforts toward correcting existing problems in an operating payroll system?

b. Determine the performance requirements (that is, what it is that they need the software to do) and systems requirements for the computer software project it has proposed to undertake.

c. Invite vendors to perform demonstrations of how their software will fulfill an entity's needs.

d. Explore alternative means of achieving specified performance requirements. For example, should an entity make or buy the software? Should the software run on a mainframe or a client server system?

e. Determine that the technology needed to achieve performance requirements exists.

f. Select a vendor if an entity chooses to obtain software.

g. Select a consultant to assist in the development or installation of the software.

.20 Internal and external costs incurred during the preliminary project stage should be expensed as they are incurred.

.21 *Application Development Stage.* Internal and external costs incurred to develop internal-use computer software during the application development stage should be capitalized. Costs to develop or obtain software that allows for access or conversion of old data by new systems should also be capitalized. Training costs are not internal-use software development costs and, if incurred during this stage, should be expensed as incurred.

.22 The process of data conversion from old to new systems may include purging or cleansing of existing data, reconciliation or balancing of the old data

---

[2] FASB Interpretation No. 6 excludes from research and development costs computer software related to an entity's selling and administrative activities.

and the data in the new system, creation of new/additional data, and conversion of old data to the new system. Data conversion often occurs during the application development stage. Data conversion costs, except as noted in paragraph .21, should be expensed as incurred.

.23 *Post-Implementation/Operation Stage*. Internal and external training costs and maintenance costs should be expensed as incurred.

.24 *Upgrades and Enhancements*. For purposes of this SOP, upgrades and enhancements are defined as modifications to existing internal-use software that result in additional functionality—that is, modifications to enable the software to perform tasks that it was previously incapable of performing. Upgrades and enhancements normally require new software specifications and may also require a change to all or part of the existing software specifications. In order for costs of specified upgrades and enhancements to internal-use computer software to be capitalized in accordance with paragraphs .25 and .26, it must be probable[3] that those expenditures will result in additional functionality.[4]

.25 Internal costs incurred for upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20–.23.[5] Internal costs incurred for maintenance should be expensed as incurred. Entities that cannot separate internal costs on a reasonably cost-effective basis between maintenance and relatively minor upgrades and enhancements should expense such costs as incurred.

.26 External costs incurred under agreements related to specified upgrades and enhancements should be expensed or capitalized in accordance with paragraphs .20–.23. (If maintenance is combined with specified upgrades and enhancements in a single contract, the cost should be allocated between the elements as discussed in paragraph .33 and the maintenance costs should be expensed over the contract period.) However, external costs related to maintenance, unspecified upgrades and enhancements, and costs under agreements that combine the costs of maintenance and unspecified upgrades and enhancements should be recognized in expense over the contract period on a straight-line basis unless another systematic and rational basis is more representative of the services received.

.27 Capitalization of costs should begin when both of the following occur.

a. Preliminary project stage is completed.

b. Management, with the relevant authority, implicitly or explicitly authorizes and commits to funding a computer software project and it is probable[6] that the project will be completed and the software will be used to perform the function intended. Examples of authorization include the execution of a contract with a third party to develop the software, approval of expenditures related to internal development, or a commitment to obtain the software from a third party.

---

[3] See paragraph .62 of this SOP for meaning of “probable.”

[4] This SOP does not change the conclusions reached in Emerging Issues Task Force Issue No. 96-14, *Accounting for the Costs Associated with Modifying Computer Software for the Year 2000*, which requires that external and internal costs associated with modifying internal-use software currently in use for the Year 2000 be charged to expense as incurred. New internal-use software developed or obtained that replaces previously existing internal-use software should be accounted for in accordance with this SOP.

[5] See footnote 4.

[6] See paragraph .62 of this SOP for meaning of “probable.”

.28 When it is no longer probable[7] that the computer software project will be completed and placed in service, no further costs should be capitalized, and guidance in paragraphs .34 and .35 on impairment should be applied to existing balances.

.29 Capitalization should cease no later than the point at which a computer software project is substantially complete and ready for its intended use. For purposes of this SOP, computer software is ready for its intended use after all substantial testing is completed.

.30 New software development activities should trigger consideration of remaining useful lives of software that is to be replaced. When an entity replaces existing software with new software, unamortized costs of the old software should be expensed when the new software is ready for its intended use.

Capitalizable Costs

.31 Costs of computer software developed or obtained for internal use that should be capitalized include only the following:

a. External direct costs of materials and services consumed in developing or obtaining internal-use computer software. Examples of those costs include but are not limited to fees paid to third parties for services provided to develop the software during the application development stage, costs incurred to obtain computer software from third parties, and travel expenses incurred by employees in their duties directly associated with developing software.

b. Payroll and payroll-related costs (for example, costs of employee benefits) for employees who are directly associated with and who devote time to the internal-use computer software project, to the extent of the time spent directly on the project. Examples of employee activities include but are not limited to coding and testing during the application development stage.

c. Interest costs incurred while developing internal-use computer software. Interest should be capitalized in accordance with the provisions of FASB Statement No. 34, *Capitalization of Interest Cost.*[8]

General and administrative costs and overhead costs should not be capitalized as costs of internal-use software.

.32 Entities often license internal-use software from third parties. Though FASB Statement No. 13, *Accounting for Leases*, excludes licensing agreements from its scope, entities should analogize to that Statement when determining the asset acquired in a software licensing arrangement.

Multiple-Element Software Arrangements Included in Purchase Price

.33 Entities may purchase internal-use computer software from a third party. In some cases, the purchase price includes multiple elements, such as training for the software, maintenance fees for routine maintenance work to be

[7] See paragraph .62 of this SOP for meaning of "probable."

[8] Paragraph 17 of FASB Statement No. 34, *Capitalization of Interest Cost*, states, "If the enterprise suspends substantially all activities related to acquisition of the asset, interest capitalization shall cease until activities are resumed."

performed by the third party, data conversion costs, reengineering costs, and rights to future upgrades and enhancements. Entities should allocate the cost among all individual elements. The allocation should be based on objective evidence of fair value of the elements in the contract, not necessarily separate prices stated within the contract for each element. Those elements included in the scope of this SOP should be accounted for in accordance with the provisions of this SOP.

Impairment

.34 Impairment should be recognized and measured in accordance with the provisions of FASB Statement No. 121, *Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of*.[*] Paragraph 8 of FASB Statement No. 121[*] requires that assets should be grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets. FASB Statement No. 121[*] guidance is applicable, for example, when one of the following occurs related to computer software being developed or currently in use:

a. Internal-use computer software is not expected to provide substantive service potential,

b. A significant change occurs in the extent or manner in which the software is used or is expected to be used,

c. A significant change is made or will be made to the software program,

d. Costs of developing or modifying internal-use computer software significantly exceed the amount originally expected to develop or modify the software.

.35 Paragraph 10 of FASB Statement No. 121[*] requires that "if the asset is not expected to provide any service potential to the entity, the asset shall be accounted for as if abandoned or held for disposal in accordance with the provisions of paragraph 15 of [FASB Statement No. 121[*]]." When it is no longer probable[9] that computer software being developed will be completed and placed in service, the asset should be reported at the lower of the carrying amount or fair value, if any, less costs to sell. The rebuttable presumption is that such uncompleted software has a fair value of zero. Indications that the software may no longer be expected to be completed and placed in service include the following:

a. A lack of expenditures budgeted or incurred for the project

b. Programming difficulties that cannot be resolved on a timely basis

c. Significant cost overruns

d. Information has been obtained indicating that the costs of internally developed software will significantly exceed the cost of comparable third-party software or software products, so that management intends to obtain the third-party software or software products instead of completing the internally developed software

e. Technologies are introduced in the marketplace, so that management intends to obtain the third-party software or software products instead of completing the internally developed software

---

[*] FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, supersedes FASB Statement No. 121. [Footnote added, October 2002, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144.]

[9] See paragraph .62 of this SOP for meaning of "probable."

f. Business segment or unit to which the software relates is unprofitable or has been or will be discontinued.

Amortization

.36 The costs of computer software developed or obtained for internal use should be amortized on a straight-line basis unless another systematic and rational basis is more representative of the software's use.

.37 In determining and periodically reassessing the estimated useful life over which the costs incurred for internal-use computer software will be amortized, entities should consider the effects of obsolescence, technology, competition, and other economic factors. Entities should consider rapid changes that may be occurring in the development of software products, software operating systems, or computer hardware and whether management intends to replace any technologically inferior software or hardware. Given the history of rapid changes in technology, software often has had a relatively short useful life.

.38 For each module or component of a software project, amortization should begin when the computer software is ready for its intended use, regardless of whether the software will be placed in service in planned stages that may extend beyond a reporting period. For purposes of this SOP, computer software is ready for its intended use after all substantial testing is completed. If the functionality of a module is entirely dependent on the completion of other modules, amortization of that module should begin when both that module and the other modules upon which it is functionally dependent are ready for their intended use.

Internal-Use Computer Software Marketed

.39 If, after the development of internal-use software is completed, an entity decides to market the software, proceeds received from the license of the computer software, net of direct incremental costs of marketing, such as commissions, software reproduction costs, warranty and service obligations, and installation costs, should be applied against the carrying amount of that software. No profit should be recognized until aggregate net proceeds from licenses and amortization have reduced the carrying amount of the software to zero. Subsequent proceeds should be recognized in revenue as earned.

.40 If, during the development of internal-use software, an entity decides to market the software to others, the entity should follow FASB Statement No. 86. Amounts previously capitalized under this SOP should be evaluated at each balance sheet date in accordance with paragraph 10 of FASB Statement No. 86. Capitalized software costs should be amortized in accordance with paragraph 8 of FASB Statement No. 86. A pattern of deciding to market internal-use software during its development creates a rebuttable presumption that any software developed by that entity is intended for sale, lease, or other marketing, and thus is subject to the guidance in FASB Statement No. 86.

Disclosures

.41 This SOP does not require any new disclosures; disclosure should be made in accordance with existing authoritative literature, including Accounting Principles Board (APB) Opinion No. 12, *Disclosure of Depreciable Assets and*

Depreciation; APB Opinion No. 22, *Disclosure of Accounting Policies* (for example, amortization methods); FASB Statement Nos. 2 and 121*; and SOP 94-6, *Disclosure of Certain Significant Risks and Uncertainties*.

Effective Date and Transition

.42 This SOP is effective for financial statements for fiscal years beginning after December 15, 1998, and should be applied to internal-use computer software costs incurred in those fiscal years for all projects, including those projects in progress upon initial application of this SOP. Earlier application is encouraged in fiscal years for which annual financial statements have not been issued.

.43 Costs incurred prior to initial application of this SOP, whether capitalized or not, should not be adjusted to the amounts that would have been capitalized had this SOP been in effect when those costs were incurred. However, the provisions of this SOP concerning amortization and impairment should be applied to any unamortized costs capitalized prior to initial application of this SOP that continue to be reported as assets after the effective date. In accordance with paragraph 33 of APB Opinion No. 20, *Accounting Changes*, the effect on income before extraordinary items, net income, and related per share amounts of the current period should be disclosed for the change in accounting.

.44 Initial application of this SOP should be as of the beginning of the fiscal year in which the SOP is first adopted (that is, if the SOP is adopted prior to the effective date and during an interim period other than the first interim period, all prior interim periods of that fiscal year should be restated).

The provisions of this Statement need not be applied to immaterial items.

Basis for Conclusions

Characteristics of Internal-Use Computer Software

.45 AcSEC recognizes that entities may develop computer software for internal use and also plan to sell, lease, or otherwise market the software to recover some costs. AcSEC believes that the presence of a substantive plan to market software externally before or during software development indicates an intent to sell, lease, or otherwise market software, which requires accounting prescribed by FASB Statement No. 86. AcSEC believes that it is impractical to allocate costs between internal-use software and software to be marketed.

.46 AcSEC considered whether one of the characteristics of internal-use computer software should be that during the software's development, no substantive plan *or intent* to market the software externally exists. AcSEC decided that it could not provide operational guidance to help entities define intent. For example, many entities will consider opportunities to recover some of the software development costs through subsequent sales of the product. AcSEC believes that it cannot provide guidance to distinguish between a true intent to market software and routine inquiries and studies about the possibility of recovering some costs.

* FASB Statement No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, supersedes FASB Statement No. 121. [Footnote added, October 2002, to reflect conforming changes necessary due to the issuance of FASB Statement No. 144.]

.47 Because FASB Statement No. 86 does not define "part of a product or process," many entities have difficulty determining whether computer software is for internal use and subject to the SOP or "part of a product or process" and subject to the accounting prescribed by FASB Statement No. 86. A FASB staff article (which Statement on Auditing Standards No. 69, *The Meaning of* Present Fairly in Accordance With Generally Accepted Accounting Principles, subordinates to an SOP) *Computer Software: Guidance on Applying Statement No. 86* that appeared in a 1986 FASB Status Report attempted to clarify that term as follows: "Indications that the software in question falls under the Statement's scope include the dependence of the company on the software to provide the service. In other words, could the company earn revenue from providing the service without the software? Would the service be as timely or accurate without the software? If the answer to any of these questions is no, that may indicate that the software is part of a product or process and is included in the scope of Statement No. 86."

.48 In this SOP, AcSEC provides what it believes to be operational guidance that will help entities determine if computer software is for internal use. AcSEC believes that the distinction can be based on what the customer is buying. If the customer is acquiring the software or the future right to use it, the costs of that software are accounted for in accordance with the provisions of FASB Statement No. 86. However, if the software is used by the vendor in production of the product or in providing the service but the customer does not acquire the software or the future right to use it, the software is for internal use. The Appendix [paragraph .93] provides examples of when computer software is and is not for internal use.

.49 AcSEC believes that the guidance in this SOP should be applied at the component or module level. One computer software project may result in several different working modules, which with appropriate software interfaces can be used independently of other modules. AcSEC analogized to an entity that constructs a building complex. Though several buildings are ultimately constructed, each building is an asset and may function without the others.

Research and Development

.50 Some respondents to the exposure draft believe that the costs of computer software developed or obtained for internal use should be charged to expense when incurred as research and development until technological feasibility has been established for the software. They believe that, like the costs of computer software to be sold, leased, or otherwise marketed, the costs of internal-use computer software are within the scope of paragraph 9(i) of FASB Statement No. 2, which states that "engineering activity required to advance the design of a product to the point that it meets specific functional and economic requirements and is ready for manufacture," and therefore those costs should be included within research and development.

.51 AcSEC considered whether this SOP should require entities to meet some technological feasibility threshold before they could capitalize costs of internal-use computer software. AcSEC decided and most respondents to the exposure draft agreed that technological feasibility should not apply to this SOP. AcSEC reasoned that the technological feasibility criteria applied in FASB Statement No. 86 to software that is sold, leased, or otherwise marketed were appropriate to an inventory model. That inventory model includes an implicit marketability test, a notion that is not applicable to this SOP.

.52 FASB Interpretation No. 6 states that the costs of computer software that is developed or obtained for use in an entity's selling and administrative activities are not research and development costs. In addition, it states that, "costs incurred to purchase or lease computer software developed by others are not research and development costs under FASB Statement No. 2 unless the software is for use in research and development activities." Further, FASB Interpretation No. 6 states, "costs incurred by an enterprise in developing computer software internally for use in its research and development activities are research and development costs . . ., " regardless of whether the software has alternative future uses.

.53 AcSEC also considered the guidance of paragraphs 9(h) and 10(h) of FASB Statement No. 2 to determine whether other costs of internal-use software are excluded from research and development. Paragraph 10(h) of FASB Statement No. 2 states that "activity, including design and construction engineering, related to the construction, relocation, rearrangement, or start-up of facilities or equipment other than (1) pilot plants and (2) facilities or equipment whose sole use is for a particular research and development project" are excluded from research and development.

.54 Because of the guidance in FASB Statement No. 2 and FASB Interpretation No. 6, AcSEC concluded that not all internal-use software costs are research and development costs (see paragraph 52). However, AcSEC evaluated the process of developing internal-use software within the context of FASB Statement No. 2 because that statement is either directly relevant or is a reasonable basis for determining which costs of internal-use software development activities should be expensed. Consistent with FASB Statement No. 2, AcSEC did not specify the income statement classifications of expensed internal-use software development costs.

.55 Paragraphs 9(c) and 9(d), respectively, of FASB Statement No. 2 include "conceptual formulation and design of possible product or process alternatives" and "testing in search for or evaluation of product or process alternatives" as examples of activities that are research and development and therefore are expensed as incurred. AcSEC believes paragraphs 9(c) and 9(d) are relevant to the process of developing internal-use computer software. AcSEC believes that as part of these activities an entity will determine whether the needed technology exists. If the technology does not exist, then research and development-type activities have not yet been completed, and therefore those costs should be expensed as incurred.

.56 AcSEC also believes that development risks associated with creating internal-use computer software are conceptually no different from development risks associated with creating other assets such as high-tech automated plants. Entities, at the start of both kinds of projects, often expect that existing technology will allow the entity to complete projects that will provide future benefits.

Capitalize or Expense

.57 About two-thirds of the respondents to the exposure draft believe that the internal and external costs of computer software developed or obtained for internal use should be reported as assets. However, certain representatives of the financial statement user community oppose capitalization of internal costs incurred to develop or obtain internal-use software.

.58 Those users and some others oppose the exposure draft's provisions for capitalization because they believe that the benefits of capitalizing internal costs are limited. They believe that capitalized internal costs related to developing or obtaining internal-use software are often unrelated to the software's actual value and that such capitalized costs are often irrelevant in the investment and credit evaluation process. In addition, some who oppose the exposure draft believe that external costs of developing or obtaining internal-use software are a more reliable measure of the software asset than internal costs.

.59 Some respondents to the exposure draft believe that costs of computer software developed or obtained for internal use should be expensed as incurred. They believe that such costs should not be capitalized because they do not result in demonstrable probable future economic benefits. They believe that capitalization would result in assets that have arbitrary amortization periods. They cite paragraph 148 of FASB Concepts Statement No. 6, *Elements of Financial Statements*, which states that some "costs are also recognized as expenses in the period in which they are incurred because the period to which they otherwise relate is indeterminable or not worth the effort to determine."

.60 Some respondents to the exposure draft believe that capitalizing the costs of computer software developed or obtained for internal use frequently results in a subsequent writeoff of those costs when they are eventually determined to not be recoverable. Thus, they believe that readers of financial statements can be misled by the initial capitalization and subsequent writeoff of those costs.

.61 AcSEC considered all of these views. AcSEC believes that entities develop or obtain internal-use computer software often for the same end-purposes that they develop or obtain other assets. Examples are to reduce costs, operate more efficiently, improve internal controls, service customers better, and gain competitive advantages.

.62 Paragraph 25 in FASB Concepts Statement No. 6 defines assets as "*probable* future economic benefits obtained or controlled by a particular entity as a result of past transactions or events." Footnote 18 to FASB Concepts Statement No. 6 states that "probable is used with its general meaning, rather than in a specific accounting or technical sense, . . . and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved . . . . " Paragraph 26 states: "An asset has three essential characteristics: (*a*) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (*b*) a particular entity can obtain the benefit and control others' access to it, and (*c*) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred."

.63 Paragraph 63 in FASB Concepts Statement No. 5, *Recognition and Measurement in Financial Statements of Business Enterprises*, sets forth the following criteria that should be met to recognize an item in the financial statements:

- *Definitions*—The item meets the definition of an element of financial statements.
- *Measurability*—It has a relevant attribute measurable with sufficient reliability.
- *Relevance*—The information about it is capable of making a difference in user decisions.
- *Reliability*—The information is representationally faithful, verifiable, and neutral.

.64 Some proponents of capitalization of internal-use software observe that paragraph 24 of APB Opinion 17, *Intangible Assets*, requires that entities capitalize acquired intangible assets. Paragraph 24 also states that "costs of developing, maintaining, or restoring intangible assets which are not specifically identifiable, have indeterminate lives, or are inherent in a continuing business and related to an enterprise as a whole—such as goodwill—should be deducted from income when incurred." AcSEC believes that the costs of computer software developed or obtained for internal use are specifically identifiable, have determinate lives, relate to probable future economic benefits (FASB Concepts Statement No. 6), and meet the recognition criteria of definitions, measurability, relevance, and reliability (FASB Concepts Statement No. 5).

.65 AcSEC decided that it was not necessary to characterize computer software as either intangible assets or tangible assets when similar characterizations have not been made for most other assets.[†]

.66 One of the characteristics of an asset in FASB Concepts Statement No. 6 is that it must contribute directly or indirectly to future net cash inflows, thus providing probable future economic benefits. AcSEC recognizes that the specific future economic benefits related to the costs of computer software will sometimes be difficult to identify. However, AcSEC believes that this is also true for some other assets. For example, computer hardware or furniture used in back-office operations are indirectly related to future benefits. Likewise, corporate office facilities do not result in identifiable future benefits, but the facilities do support the operations of the company.

.67 AcSEC also recognizes that costs of computer software developed or obtained for internal use reported as assets may be subsequently written-off due to lack of adequate funding or lack of management's continued commitment to a project. However, AcSEC believes similar changes in direction also occur for long-lived-asset projects. Regardless, AcSEC has established guidance to determine when capitalization should cease and when impairment should be recognized and measured.

.68 *Preliminary Project Stage*. AcSEC believes that activities performed during the preliminary project stage of development for internal-use software are analogous to research and development activities, and costs incurred during this stage should be expensed as they are incurred.

.69 *Application Development Stage*. AcSEC believes that software development activities performed during the application development stage create probable future economic benefits. Therefore, software development costs incurred during this stage should be capitalized.

.70 AcSEC believes that paragraph 24 of APB Opinion No. 17 applies to the costs of data conversion. Therefore, AcSEC believes that data conversion costs, as discussed in paragraph .22, should be expensed as they are incurred. However, AcSEC also believes that computer software developed or obtained for old and new systems interface is internal-use software that is subject to the guidance in this SOP.

.71 *Post-Implementation/Operation Stage*. AcSEC believes that training costs are not software development costs and should be expensed as they

---

[†] Paragraph A14 section e(2) of FASB Statement No. 141, *Business Combinations*, identifies computer software as an intangible asset that meets the criteria for recognition apart from goodwill. [Footnote added, May 2005, to reflect conforming changes necessary due to the issuance of FASB Statement No. 141.]

are incurred because entities do not control the continued employment of the trained employees, are not able to identify the specific future period benefitted, and amortization periods would be arbitrary.

.72 A number of respondents to the exposure draft said that they could not distinguish between internal costs of maintenance and upgrades/enhancements; many of those respondents requested further guidance from AcSEC. AcSEC decided that it could not provide examples that would adequately distinguish between all possible activities related to maintenance and upgrades/enhancements. As a result, AcSEC concluded that entities that cannot separate internal costs on a reasonably cost-effective basis between maintenance and relatively minor upgrades and enhancements should expense such costs as incurred.

.73 AcSEC acknowledges that SOP 97-2, *Software Revenue Recognition*, defines an upgrade and enhancement, in part, as an extension of useful life. AcSEC concluded that, from the perspective of the user of the software, solely extending the software's useful life without adding additional functionality is a maintenance activity rather than an activity for which the costs should be capitalized. Accordingly, AcSEC's criteria for determining capitalizable upgrades and enhancements focus on providing additional functionality.

.74 AcSEC believes and most respondents to the exposure draft agree that entities should not have the option to expense or capitalize costs of computer software developed or obtained for internal use as those costs are incurred. FASB Concepts Statement No. 2, *Qualitative Characteristics of Accounting Information*, states: "Comparability between enterprises and consistency in the application of methods over time increases the informational value of comparisons of relative economic opportunities or performance. The significance of information, especially quantitative information, depends to a great extent on the user's ability to relate it to some benchmark."

.75 Capitalization should begin when (*a*) the preliminary project stage is completed and (*b*) management, with the relevant authority, implicitly or explicitly authorizes and commits to funding a computer software project and it is probable that the project will be completed and the software will be used to perform the function intended. Capitalization should cease when it is no longer probable that the computer software project will be completed and placed in service. Capitalization should cease no later than the point at which a computer software project is substantially complete and ready for its intended use. *Probable* does not require absolute certainty. *Probable* is used in the same context as it is in FASB Concepts Statement No. 6, which states that "probable is used with its general meaning, rather than in a specific accounting or technical sense, . . . and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved . . . . "

.76 AcSEC used paragraph 18 of FASB Statement No. 34 as a basis for concluding that capitalization should cease no later than the point at which a computer software project is substantially complete and ready for its intended use.

.77 AcSEC considered whether it should provide guidance to limit the amount of costs that could be capitalized to the amount an entity would spend to purchase a viable alternative software product from a third party. AcSEC concluded that it could not provide practicable guidance other than the ability to recover the capitalized costs as discussed in FASB Statement No. 121. AcSEC believes that many entities will not be able to identify a third-party software product that is comparable to the entity's internal-use software. In addition, AcSEC believes that many entities would incur undue costs in trying to determine what is a viable alternative software product.

.78 AcSEC believes that it would be desirable for the costs of internally developed computer software (whether developed by employees or per diem independent contractors) that are capitalized to be accounted for no differently than the capitalized costs of purchased software (whether the software is obtained retail or developed by outside consultants for a flat fee or price). AcSEC acknowledges, however, that certain costs of internally developed software will be expensed as research and development whereas a portion of the research and development costs incurred by a third party will be capitalized by the purchasing entity because the third party's research and development costs are implicitly part of the acquisition price of the software. AcSEC noted that similar differences exist elsewhere; for example, the costs of acquiring a patent are usually capitalized and the costs of developing a patent are usually expensed as incurred.

.79 AcSEC believes that users of financial information will find the results of this SOP useful. AcSEC believes that the marketplace inherently considers the technological capabilities, including software, of many entities when it establishes market values. This SOP provides a reasonable methodology to record the costs of internal-use software. In addition, AcSEC believes that the disclosures required by existing authoritative literature are sufficient to help users make informed decisions.

Capitalizable Costs

.80 AcSEC used SOP 93-7, *Reporting on Advertising Costs*, and FASB Statement No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, as a basis for determining the kinds of costs of computer software developed or obtained for internal use that should be included in amounts reported as assets. AcSEC recognizes that the costs of some activities, such as allocated overhead, may be part of the overall cost of assets, but it excluded such costs because it believes that, as a practical matter, costs of accumulating and assigning overhead to software projects would generally exceed the benefits that would be derived from a "full costing" accounting approach. AcSEC considered that costing systems for inventory and plant construction activities, while sometimes complex, were necessary costs given the routine activities that such systems support. Overhead costs associated with a particular internal-use software development project could be even more complex to measure than production overhead and, as they most often represent an allocation among capitalizable and expensed functions, may not be sufficiently reliable. Moreover, certain users commented that they believe that overhead costs had little relationship to the value of software. In light of such apparently high costs, modest benefits, and the view of some users that such costs should be expensed, AcSEC chose to analogize to advertising costs and FASB Statement No. 91 and to require such costs to be expensed as incurred.

Multiple-Element Software Arrangements Included in Purchase Price

.81 This SOP requires that, when a software arrangement includes multiple elements, entities should estimate the fair value of those multiple elements and exclude the fair value of the appropriate elements from the capitalized cost of the software. This approach is consistent with the treatment of executory costs that are included in a lease payment to a lessor, but which are not specified in the lease agreement. Paragraph 10 of FASB Statement No. 13, *Accounting for Leases*, requires the lessee to make an estimate of the executory costs and exclude that amount from the minimum lease payments. The treatment of the costs of the multiple elements specified here is consistent with those provisions.

.82 In addition, AcSEC believes that the guidance related to recognizing combined maintenance and unspecified upgrade/enhancement fees over the contract period is consistent with paragraph 3 in FASB Technical Bulletin No. 90-1, *Accounting for Separately Priced Extended Warranty and Product Maintenance Contracts*.

.83 The SOP requires that entities allocate costs based on relative fair values. AcSEC decided that the SOP should be consistent with SOP 97-2, *Software Revenue Recognition*, though vendor-specific information is not as relevant to this SOP.

Impairment

.84 AcSEC considered whether there were any alternatives to following FASB Statement No. 121 for impairment of internal-use computer software. AcSEC concluded that internal-use computer software is a long-lived asset covered by FASB Statement No. 121.

.85 Paragraphs 7, 8, 10, and 15 of FASB Statement No. 121 are the basis for the guidance in this SOP on accounting for internal-use computer software that is not expected to provide substantive future service potential to an entity.

.86 AcSEC concluded that when it is no longer probable that computer software being developed will be completed and placed in service, the asset should be reported at the lower of carrying amount or fair value, if any, less costs to sell, in accordance with FASB Statement No. 121. AcSEC believes that uncompleted internal-use computer software is not likely to have any fair value (measured in accordance with paragraph 7 of FASB Statement No. 121).

.87 A number of respondents to the exposure draft requested that AcSEC provide more guidance and/or examples of how to recognize and measure impairment of internal-use computer software. AcSEC concluded that there are broader implications to this request and that if further guidance on impairment is to be provided, it should be provided by the FASB.

Amortization

.88 AcSEC used Accounting Research Bulletin No. 43, *Restatement and Revision of Accounting Research Bulletins*, chapter 9, section C, and APB Opinion 17 as a basis for its conclusions on amortization. AcSEC decided not to specify a maximum amortization period because each entity is better able to determine an appropriate useful life.

Internal-Use Computer Software Marketed

.89 The SOP requires that entities use the cost recovery method of accounting for internal-use computer software subsequently marketed. AcSEC believes that this method will provide a reasonable reporting outcome for instances in which enterprises find that internally developed software can meet a market demand.

Disclosures

.90 In the spirit of minimizing less relevant disclosures, AcSEC decided not to include any new disclosures in the exposure draft (though entities are required to follow disclosure requirements set forth in existing authoritative literature). AcSEC continues to believe that existing authoritative literature requires adequate disclosures to help meet financial statement user needs.

Effective Date and Transition

.91 AcSEC believes that the transition guidance in the SOP should be comparable to that contained in FASB Statement No. 86. Some enterprises that develop or purchase software for internal use currently expense those costs as incurred. AcSEC believes that the costs of developing the information that would be necessary to determine the amounts that would be capitalized if this SOP were to be applied retroactively would exceed the benefits retroactive application might offer and that such a retroactive determination should not be made. However, AcSEC decided to permit but not require application in financial statements for a fiscal year for which annual financial statements have not been issued. AcSEC further concluded that costs capitalized before the application of this SOP should be subject to the impairment and amortization provisions in this SOP, but should not otherwise be adjusted to an amount that would have been capitalized had this SOP been applied. Amortization and impairment of previously capitalized costs in accordance with the provisions of this SOP should result in an acceptable level of comparability and understandability.

.92 AcSEC considered whether it should provide materiality thresholds to determine when an entity should follow the guidance in this SOP. AcSEC decided not to do so because it believes an entity can best determine the materiality of internal-use computer software costs in its individual circumstances.

.93

Appendix

Examples Illustrating When Computer Software Is for Internal Use

1. A manufacturing entity purchases robots and customizes the software that the robots use to function. The robots are used in a manufacturing process that results in finished goods.
2. An entity develops software that helps it improve its cash management, which may allow the entity to earn more revenue.
3. An entity purchases or develops software to process payroll, accounts payable, and accounts receivable.
4. An entity purchases software related to the installation of an online system used to keep membership data.
5. A travel agency purchases a software system to price vacation packages and obtain airfares.
6. A bank develops software that allows a customer to withdraw cash, inquire about balances, make loan payments, and execute wire transfers.
7. A mortgage loan servicing entity develops or purchases computer software to enhance the speed of services provided to customers.
8. A telecommunications company develops software to run its switches that are necessary for various telephone services such as voice mail and call forwarding.
9. An entity is in the process of developing an accounts receivable system. The software specifications meet the company's internal needs and the company did not have a marketing plan before or during the development of the software. In addition, the company has not sold any of its internal-use software in the past. Two years after completion of the project, the company decided to market the product to recoup some or all of its costs.
10. A broker-dealer entity develops a software database and charges for financial information distributed through the database.
11. An entity develops software to be used to create components of music videos (for example, the software used to blend and change the faces of models in music videos). The entity then sells the final music videos, which do not contain the software, to another entity.
12. An entity purchases software to computerize a manual catalog and then sells the manual catalog to the public.
13. A law firm develops an intranet research tool that allows firm members to locate and search the firm's databases for information relevant to their cases. The system provides users with the ability to print cases, search for related topics, and annotate their personal copies of the database.

Examples Illustrating When Computer Software Is *Not* Internal Use

14. An entity sells software required to operate its products, such as robots, electronic game systems, video cassette recorders, automobiles, voice-mail systems, satellites, and cash registers.

15. A pharmaceutical company buys machines and writes all of the software that allows the machines to function. The pharmaceutical company then sells the machines, which help control the dispensation of medication to patients and help control inventory, to hospitals.

16. A semiconductor entity develops software embedded in a microcomputer chip used in automobile electronic systems.

17. An entity purchases software to computerize a manual catalog and then sells the computer version and the related software to the public.

18. A software company develops an operating system for sale and for internal use. Though the specifications of the software meet the company's internal needs, the company had a marketing plan before the project was complete. In addition, the company has a history of selling software that it also uses internally and the plan has a reasonable possibility of being implemented.

19. An entity is developing software for a point-of-sale system. The system is for internal use; however, a marketing plan is being developed concurrently with the software development. The plan has a reasonable possibility of being implemented.

20. A telecommunications entity purchases computer software to be used in research and development activities.

21. An entity incurs costs to develop computer software for another entity under a contract with that other entity.

Section 10,730

Statement of Position 98-2 Accounting for Costs of Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include Fund Raising

March 11, 1998

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. AU section 411, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, identifies AICPA Statements of Position that have been cleared by either the Financial Accounting Standards Board (for financial statements of nongovernmental entities) or the Governmental Accounting Standards Board (for financial statements of state and local governmental entities), as sources of established accounting principles in category b of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Summary

This Statement of Position (SOP) applies to all nongovernmental not-for-profit organizations (NPOs) and all state and local governmental entities that solicit contributions.

This SOP requires—

- If the criteria of purpose, audience, and content as defined in this SOP are met, the costs of joint activities that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function.
- If any of the criteria of purpose, audience, and content are not met, all costs of the activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising.

- Certain financial statement disclosures if joint costs are allocated.
- Some commonly used and acceptable allocation methods are described and illustrated although no methods are prescribed or prohibited.

This SOP amends existing guidance in AICPA Audit and Accounting Guides *Health Care Organizations*, *Not-for-Profit Organizations* (which was issued in August 1996 and supersedes SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, because the provisions of SOP 87-2 are incorporated into the Guide), and *Audits of State and Local Governmental Units*.*

This SOP is effective for financial statements for years beginning on or after December 15, 1998. Earlier application is encouraged in fiscal years for which financial statements have not been issued. If comparative financial statements are presented, retroactive application is permitted but not required.

Foreword

The accounting guidance contained in this document has been cleared by the Financial Accounting Standards Board (FASB) and the Governmental Accounting Standards Board (GASB). The procedure for clearing accounting guidance in documents issued by the Accounting Standards Executive Committee (AcSEC) involves the FASB and the GASB reviewing and discussing in public board meetings (1) a prospectus for a project to develop a document, (2) a proposed exposure draft that has been approved by at least ten of AcSEC's fifteen members, and (3) a proposed final document that has been approved by at least ten of AcSEC's fifteen members. The document is cleared if at least five of the seven FASB members and three of the five GASB members do not object to AcSEC undertaking the project, issuing the proposed exposure draft or, after considering the input received by AcSEC as a result of the issuance of the exposure draft, issuing the final document.†

The criteria applied by the FASB and the GASB in their review of proposed projects and proposed documents include the following:

1. The proposal does not conflict with current or proposed accounting requirements, unless it is a limited circumstance, usually in specialized industry accounting, and the proposal adequately justifies the departure.
2. The proposal will result in an improvement in practice.
3. The AICPA demonstrates the need for the proposal.
4. The benefits of the proposal are expected to exceed the costs of applying it.

---

* The AICPA Audit and Accounting Guide *State and Local Governments* supersedes the 1994 AICPA Audit and Accounting Guide *Audits of State and Local Governmental Units* and subsequent editions of that Guide with conforming changes made by the AICPA staff. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this Statement of Position (SOP) to state and local governments. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of the AICPA Audit and Accounting Guide *State and Local Governments*.]

† This document was cleared prior to July 1, 1997. In July 1997, the GASB increased to seven members. Documents considered by the GASB after July 1, 1997 are cleared if at least four of the seven GASB members do not object. [Footnote renumbered, June 2004, to reflect conforming changes necessary due to the issuance of the AICPA Audit and Accounting Guide *State and Local Governments*.]

In many situations, prior to clearance, the FASB and the GASB will propose suggestions, many of which are included in the documents.

Introduction

.01 Some nongovernmental not-for-profit organizations (NPOs) and some state and local governmental entities,[1] such as governmental colleges and universities and governmental health care providers, solicit support through a variety of **fund-raising activities.**[2] These **activities** include direct mail, telephone solicitation, door-to-door canvassing, telethons, special events, and others. Sometimes fund-raising activities are conducted with activities related to other functions, such as **program activities** or supporting services, such as **management and general activities**.[3] Sometimes fund-raising activities include components that would otherwise be associated with program or supporting services, but in fact support fund raising.

.02 External users of financial statements—including contributors, creditors, accreditation agencies, and regulators—want assurance that fund-raising costs, as well as program costs and management and general costs, are stated fairly.

.03 In 1987, the AICPA issued Statement of Position (SOP) 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*.[4] SOP 87-2 required that all circumstances concerning informational materials and activities that include a fund-raising appeal be considered in accounting for **joint costs** of those materials and activities and that certain criteria be applied

---

[1] This Statement of Position (SOP) uses the term *entity* to refer to both nongovernmental not-for-profit organizations (NPOs) and state and local governments.

[2] Terms that appear in the Glossary [paragraph .30] are set in **boldface type** the first time they appear.

[3] The functional classifications of fund raising, program, and management and general are discussed throughout this SOP for purposes of illustrating how the guidance in this SOP would be applied by entities that use those functional classifications. Some entities have a functional structure that does not include fund raising, program, or management and general, or that includes other functional classifications, such as **membership development**. This SOP is not intended to require reporting the functional classifications of fund raising, program, and management and general. In circumstances in which entities that have a functional structure that includes other functional classifications conduct joint activities, all costs of those joint activities should be charged to fund raising (or the category in which fund raising is reported—see the following two parenthetical sentences), unless the purpose, audience, and content of those joint activities are appropriate for achieving those other functions. (An example of an entity that reports fund raising in a category other than fund raising is a state and local governmental entity applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8. As discussed in paragraph D.5 of this SOP [paragraph .24], those entities are required to report fund raising as part of the "institutional support" function. See also footnote ** to paragraph D.5.) [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34 and No. 35.]

[4] In August 1996, the AICPA issued the Audit and Accounting Guide *Not-for-Profit Organizations*. The Guide supersedes SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, because the provisions of SOP 87-2 are incorporated into paragraphs 13.36 to 13.45 of *Not-for-Profit Organizations*. *Not-for-Profit Organizations* applies to all nongovernmental NPOs other than those required to follow the Audit and Accounting Guide *Health Care Organizations*. The discussion in this SOP of SOP 87-2 refers to both SOP 87-2 and the guidance included in paragraphs 13.36 to 13.45 of *Not-for-Profit Organizations*. Also, SOP 87-2 was not applicable to entities that are within the scope of Governmental Accounting Standards Board (GASB) Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*.

in determining whether joint costs of those materials and activities should be charged to fund raising or allocated to program or management and general. Those criteria include requiring verifiable indications of the reasons for conducting the activity, such as the content, audience, and action, if any, requested of the participant, as well as other corroborating evidence. Further, SOP 87-2 required that all joint costs of those materials and activities be charged to fund raising unless the appeal is designed to motivate its audience to action other than providing financial support to the organization.

.04 The provisions of SOP 87-2 have been difficult to implement and have been applied inconsistently in practice. (Appendix B [paragraph .22], "Background," discusses this further.)

.05 This SOP establishes financial accounting standards for accounting for **costs of joint activities**. In addition, this SOP requires financial statement disclosures about the nature of the activities for which joint costs have been allocated and the amounts of joint costs. Appendix F [paragraph .26] provides explanations and illustrations of some acceptable allocation methods.

Scope

.06 This SOP applies to all nongovernmental NPOs and all state and local governmental entities that solicit **contributions**.

Conclusions

Accounting for Joint Activities

.07 If the criteria of purpose, audience, and content are met, the costs of a **joint activity** that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function. If any of the criteria are not met, all costs of the joint activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising.

Purpose

.08 The purpose criterion is met if the purpose of the joint activity includes accomplishing program or management and general functions. (Paragraphs .09 and .10 provide guidance that should be considered in determining whether the purpose criterion is met. Paragraph .09 provides guidance pertaining to program functions only. Paragraph .10 provides guidance pertaining to both program and management and general functions.)

.09 *Program functions.* To accomplish program functions, the activity should call for specific action by the audience that will **help accomplish the entity's mission**. For purposes of applying the guidance in this SOP, the following are examples of activities that do and do not call for specific action by the audience that will help accomplish the entity's mission:

- An entity's mission includes improving individuals' physical health. For that entity, motivating the audience to take specific action that will improve their physical health is a call for specific action by the audience that will help accomplish the entity's mission. An example of an activity that motivates the audience to take specific action that will improve their physical health is sending the audience a brochure that urges them to stop smoking and suggests specific methods, instructions, references, and resources that may be used to stop smoking.

- An entity's mission includes educating individuals in areas other than the causes, conditions, needs, or concerns that the entity's programs are designed to address (referred to hereafter in this SOP as "causes"). For that entity, educating the audience in areas other than causes or motivating the audience to otherwise engage in specific activities that will educate them in areas other than causes is a call for specific action by the audience that will help accomplish the entity's mission. Examples of entities whose mission includes educating individuals in areas other than causes are universities and possibly other entities. An example of an activity motivating individuals to engage in education in areas other than causes is a university inviting individuals to attend a lecture or class in which the individuals will learn about the solar system.

- Educating the audience about causes or motivating the audience to otherwise engage in specific activities that will educate them about causes is not a call for specific action by the audience that will help accomplish the entity's mission. Such activities are considered in support of fund raising. (However, some educational activities that might otherwise be considered as educating the audience about causes may implicitly call for specific action by the audience that will help accomplish the entity's mission. For example, activities that educate the audience about environmental problems caused by not recycling implicitly call for that audience to increase recycling. If the need for and benefits of the specific action are clearly evident from the educational message, the message is considered to include an implicit call for specific action by the audience that will help accomplish the entity's mission.)

- Asking the audience to make contributions is not a call for specific action by the audience that will help accomplish the entity's mission.

If the activity calls for specific action by the audience that will help accomplish the entity's mission, the guidance in paragraph .10 should also be considered in determining whether the purpose criterion is met.

.10 *Program and management and general functions.* The following factors should be considered, in the order in which they are listed,[5] to determine whether the purpose criterion is met:

a. *Whether **compensation or fees** for performing the activity are based on contributions raised.* The purpose criterion is *not* met if a majority of compensation or fees for any party's performance of any component

[5] In considering the guidance in paragraph .10, the factor in paragraph .10*a* (the compensation or fees test) is the preeminent guidance. If the factor in paragraph .10*a* is not determinative, the factor in paragraph .10*b* (whether a similar program or management and general activity is conducted separately and on a similar or greater scale) should be considered. If the factor in paragraph .10*b* is not determinative, the factor in paragraph .10*c* (other evidence) should be considered.

of the discrete joint activity varies based on contributions raised for that discrete joint activity.[6, 7]

b. *Whether a similar program or management and general activity is conducted separately and on a similar or greater scale.* The purpose criterion is met if either of the following two conditions is met:

(1) *Condition 1:*

— The program component of the joint activity calls for specific action by the recipient that will help accomplish the entity's mission and

— A similar program component is conducted without the fund-raising component using the same **medium** and on a scale that is similar to or greater than the scale on which it is conducted with the fund raising.[8]

(2) *Condition 2:*

A management and general activity that is similar to the management and general component of the joint activity being accounted for is conducted without the fund-raising component using the same medium and on a scale that is similar to or greater than the scale on which it is conducted with the fund raising.

If the purpose criterion is met based on the factor in paragraph .10*b*, the factor in paragraph .10*c* should not be considered.

c. *Other evidence.* If the factors in paragraph .10*a* or .10*b* do not determine whether the purpose criterion is met, other evidence may determine whether the criterion is met. All available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, the purpose criterion is met.

.11 The following are examples of indicators that provide evidence for determining whether the purpose criterion is met:

a. Evidence that the purpose criterion may be met includes—

- *Measuring program results and accomplishments of the activity.* The facts may indicate that the purpose criterion is met if the entity measures program results and accomplishments of the activity (other than measuring the extent to which the public was educated about causes).

---

[6] Some compensation contracts provide that compensation for performing the activity is based on a factor other than contributions raised, but not to exceed a specified portion of contributions raised. For example, a contract may provide that compensation for performing the activity is $10 per contact hour, but not to exceed 60 percent of contributions raised. In such circumstances, compensation is not considered based on amounts raised, unless the stated maximum percentage is met. In circumstances in which it is not yet known whether the stated maximum percentage is met, compensation is not considered based on amounts raised, unless it is probable that the stated maximum percentage will be met.

[7] The *compensation or fees test* is a negative test in that it either (*a*) results in failing the purpose criterion or (*b*) is not determinative of whether the purpose criterion is met. Therefore, if the activity fails the purpose criterion based on this factor (the compensation or fees test), the activity fails the purpose criterion and the factor in paragraph .10*b* should not be considered. If the purpose criterion is not failed based on this factor, this factor is not determinative of whether the purpose criterion is met and the factor in paragraph .10*b* should be considered.

[8] Determining the scale on which an activity is conducted may be a subjective determination. Factors to consider in determining the scale on which an activity is conducted may include dollars spent, the size of the audience reached, and the degree to which the characteristics of the audience are similar to the characteristics of the audience of the activity being evaluated.

- *Medium*. The facts may indicate that the purpose criterion is met if the program component of the joint activity calls for specific action by the recipient that will help accomplish the entity's mission and if the entity conducts the program component without a significant fund-raising component in a different medium. Also, the facts may indicate that the purpose criterion is met if the entity conducts the management and general component of the joint activity without a significant fund-raising component in a different medium.

b. Evidence that the purpose criterion may not be met includes—

- *Evaluation or compensation*. The facts may indicate that the purpose criterion is not met if (*a*) the evaluation of any party's performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity or (*b*) some, but less than a majority, of compensation or fees for any party's performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity.

c. Evidence that the purpose criterion may be either met or not met includes—

- *Evaluation of measured results of the activity*. The entity may have a process to evaluate measured program results and accomplishments of the activity (other than measuring the extent to which the public was educated about causes). If the entity has such a process, in evaluating the effectiveness of the joint activity, the entity may place significantly greater weight on the activity's effectiveness in accomplishing program goals or may place significantly greater weight on the activity's effectiveness in raising contributions. The former may indicate that the purpose criterion is met. The latter may indicate that the purpose criterion is not met.

- *Qualifications*. The qualifications and duties of those performing the joint activity should be considered.

  — If a third party, such as a consultant or contractor, performs part or all of the joint activity, such as producing brochures or making telephone calls, the third party's experience and the range of services provided to the entity should be considered in determining whether the third party is performing fund-raising, program (other than educating the public about causes), or management and general activities on behalf of the entity.

  — If the entity's employees perform part or all of the joint activity, the full range of their job duties should be considered in determining whether those employees are performing fund-raising, program (other than educating the public about causes), or management and general activities on behalf of the entity. For example, (*a*) employees who are not members of the fund-raising department and (*b*) employees who are members of the fund-raising department but who perform non-fund-raising activities are more likely to perform activities that include program or management and general functions than are employees who otherwise devote significant time to fund raising.

- *Tangible evidence of intent.* Tangible evidence indicating the intended purpose of the joint activity should be considered. Examples of such tangible evidence include
  - The entity's written mission statement, as stated in its fund-raising activities, bylaws, or annual report.
  - Minutes of board of directors', committees', or other meetings.
  - Restrictions imposed by donors (who are not related parties) on gifts intended to fund the joint activity.
  - Long-range plans or operating policies.
  - Written instructions to other entities, such as script writers, consultants, or list brokers, concerning the purpose of the joint activity, audience to be targeted, or method of conducting the joint activity.
  - Internal management memoranda.

Audience

.12 A rebuttable presumption exists that the audience criterion is not met if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute to the entity. That presumption can be overcome if the audience is also selected for one or more of the reasons in paragraph .13*a*, .13*b*, or .13*c*. In determining whether that presumption is overcome, entities should consider the extent to which the audience is selected based on its ability or likelihood to contribute to the entity and contrast that with the extent to which it is selected for one or more of the reasons in paragraph .13*a*, .13*b*, or .13*c*. For example, if the audience's ability or likelihood to contribute is a significant factor in its selection and it has a need for the action related to the program component of the joint activity, but having that need is an insignificant factor in its selection, the presumption would not be overcome.

.13 In circumstances in which the audience includes no prior donors and is not otherwise selected based on its ability or likelihood to contribute to the entity, the audience criterion is met if the audience is selected for one or more of the following reasons:

a. The audience's need to use or reasonable potential for use of the specific action called for by the program component of the joint activity

b. The audience's ability to take specific action to assist the entity in meeting the goals of the program component of the joint activity

c. The entity is required to direct the management and general component of the joint activity to the particular audience or the audience has reasonable potential for use of the management and general component

Content

.14 The content criterion is met if the joint activity supports program or management and general functions, as follows:

a. *Program.* The joint activity calls for specific action by the recipient that will help accomplish the entity's mission. If the need for and benefits of the action are not clearly evident, information describing the action and explaining the need for and benefits of the action is provided.

b. *Management and general.* The joint activity fulfills one or more of the entity's management and general responsibilities through a component of the joint activity.[9]

.15 Information identifying and describing the entity, causes, or how the contributions provided will be used is considered in support of fund raising.

Allocation Methods

.16 The cost allocation methodology used should be rational and systematic, it should result in an allocation of joint costs that is reasonable, and it should be applied consistently given similar facts and circumstances.

Incidental Activities

.17 Some fund-raising activities conducted in conjunction with program or management and general activities are incidental to such program or management and general activities. For example, an entity may conduct a fund-raising activity by including a generic message, "Contributions to Organization X may be sent to [*address*]" on a small area of a message that would otherwise be considered a program or management and general activity based on its purpose, audience, and content. That fund-raising activity likely would be considered incidental to the program or management and general activity being conducted. Similarly, entities may conduct program or management and general activities in conjunction with fund-raising activities that are incidental to such fund-raising activities. For example, an entity may conduct a program activity by including a generic program message such as "Continue to pray for [*a particular cause*]" on a small area of a message that would otherwise be considered fund raising based on its purpose, audience, and content. That program activity would likely be considered incidental to the fund-raising activity being conducted. Similarly, an entity may conduct a management and general activity by including a brief management and general message—"We recently changed our phone number. Our new number is 123-4567"—on a small area of a message that would otherwise be considered a program or fund-raising activity based on its purpose, audience, and content. That management and general activity would likely be considered incidental to the program or fund-raising activity being conducted. In circumstances in which a fund-raising, program, or management and general activity is conducted in conjunction with another activity and is incidental to that other activity, and the conditions in this SOP for allocation are met, joint costs are permitted but not required to be allocated and may therefore be charged to the functional classification related to the activity that is not the incidental activity. However, in circumstances in which the program or management and general activities are incidental to the fund-raising activities, it is unlikely that the conditions required by this SOP to permit allocation of joint costs would be met.

Disclosures

.18 Entities that allocate joint costs should disclose the following in the notes to their financial statements:

a. The types of activities for which joint costs have been incurred

b. A statement that such costs have been allocated

---

[9] Some states or other regulatory bodies require that certain disclosures be included when soliciting contributions. For purposes of applying the guidance in this SOP, communications that include such required disclosures are considered fund-raising activities and are not considered management and general activities.

c. The total amount allocated during the period and the portion allocated to each functional expense category

.19 This SOP encourages, but does not require, that the amount of joint costs for each kind of joint activity be disclosed, if practical.

Effective Date

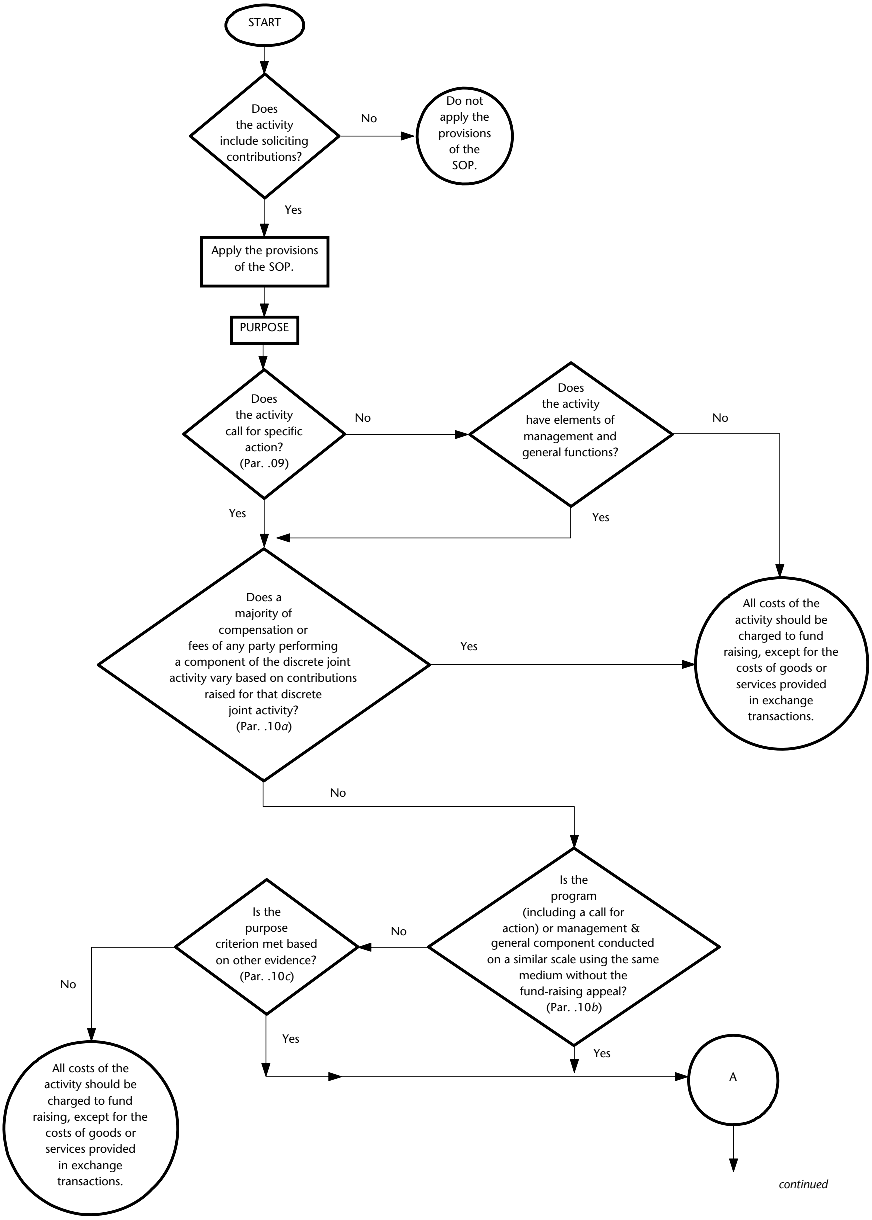
.20 This SOP is effective for financial statements for years beginning on or after December 15, 1998. Earlier application is encouraged in fiscal years for which financial statements have not been issued. If comparative financial statements are presented, retroactive application is permitted but not required.

The provisions of this Statement of Position need not be applied to immaterial items.

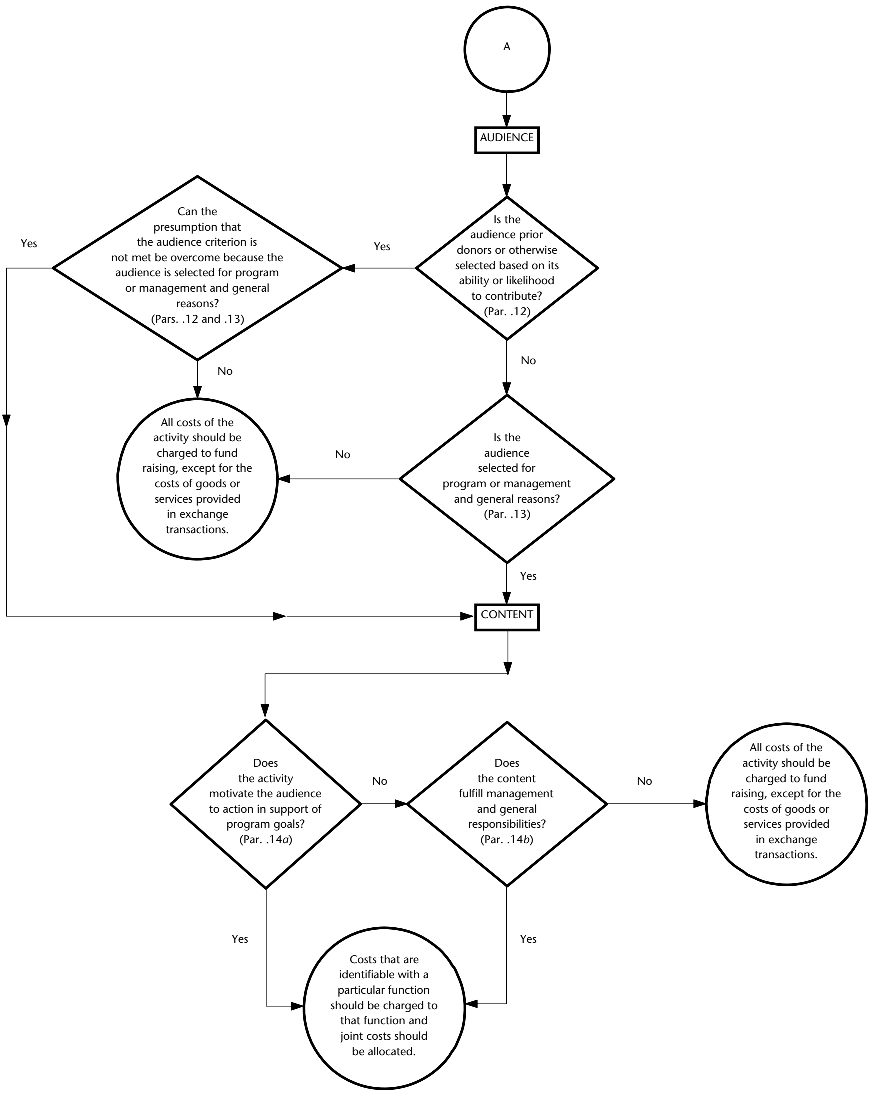
.21

Appendix A

Accounting for Joint Activities[10]



[10] ***Note:*** This flowchart summarizes certain guidance in this SOP and is not intended as a substitute for the SOP.



A
AUDIENCE
Is the audience prior donors or otherwise selected based on its ability or likelihood to contribute? (Par. .12)
Yes
No
Can the presumption that the audience criterion is not met be overcome because the audience is selected for program or management and general reasons? (Pars. .12 and .13)
Yes
No
All costs of the activity should be charged to fund raising, except for the costs of goods or services provided in exchange transactions.
Is the audience selected for program or management and general reasons? (Par. .13)
No
Yes
CONTENT
Does the activity motivate the audience to action in support of program goals? (Par. .14a)
No
Does the content fulfill management and general responsibilities? (Par. .14b)
No
All costs of the activity should be charged to fund raising, except for the costs of goods or services provided in exchange transactions.
Yes
Yes
Costs that are identifiable with a particular function should be charged to that function and joint costs should be allocated.

.22

Appendix B

Background

B.1. As stated in paragraph .04, the provisions of Statement of Position (SOP) 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, have been difficult to implement and applied inconsistently in practice. That difficulty has been due in part to the following:

- The second sentence of paragraph 1 of SOP 87-2 stated that "some of the costs incurred by such organizations are clearly identifiable with fundraising, such as the cost of fund-raising consulting services." It is unclear whether activities that would otherwise be considered program activities should be characterized as program activities if they are performed or overseen by professional fund raisers. Also, it is unclear whether activities would be reported differently (for example, as program rather than fund raising) depending on whether the fund-raising consultant is compensated by a predetermined fee or by some other method, such as a percentage of contributions raised.
- SOP 87-2 was unclear about whether allocation of costs to fund-raising expense is required if the activity for which the costs were incurred would not have been undertaken without the fund-raising component.
- SOP 87-2 defined joint costs through examples, and it is therefore unclear what kinds of costs were covered by SOP 87-2. For example, it is unclear whether salaries and indirect costs can be joint costs.
- Some believe the guidance in SOP 87-2 was inadequate to determine whether joint activities, such as those that request contributions and also list the warning signs of a disease, are designed to motivate their audiences to action other than to provide contributions to the entity. It is unclear what attributes the targeted audience should possess in order to conclude that a program function is being conducted.

B.2. In 1992, the Accounting Standards Executive Committee (AcSEC) undertook a project to supersede SOP 87-2, to provide clearer guidance than that provided by SOP 87-2, as well as to provide guidance that would improve on the guidance in SOP 87-2. In September 1993, AcSEC released an exposure draft of a proposed SOP, *Accounting for Costs of Materials and Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include a Fund-Raising Appeal*, for public comment. AcSEC received more than 300 comment letters on the exposure draft. AcSEC redeliberated the issues based on the comments received.

B.3. In 1996, after redeliberating the issues based on the comments received and making certain revisions to the draft SOP, AcSEC conducted a field test of the draft SOP. The objectives of the field test were to determine whether the provisions of the draft SOP were sufficiently clear and definitive to generate consistent and comparable application of the SOP. Based on the field test results, AcSEC concluded that the provisions of the draft SOP, with certain revisions, were sufficiently clear and definitive to generate consistent and comparable application of the SOP.

B.4. Some respondents who commented on the exposure draft, as well as some interested parties who followed the project through its due process subsequent to the exposure draft, commented that the SOP should be reexposed for public comment. Reasons cited include:

- Approximately three years had passed between the end of the comment period and AcSEC's decision to issue the SOP.
- AcSEC made significant revisions to the SOP subsequent to releasing the exposure draft for comment.

Considering whether a proposed standard should be reexposed for public comment is inherently a subjective process. Factors that AcSEC considered include—

- The significance of changes made to the exposure draft and whether those changes result in guidance that the public did not have an opportunity to consider.
- Whether the scope was revised in such a way that affected entities did not have an opportunity to comment.
- New information about or changes in the nature of the transactions being considered, practice, or other factors.

AcSEC believes that the length of time between exposure and final issuance is not pertinent to whether the SOP should be reexposed for public comment.

B.5. Based on consideration of the factors identified, AcSEC believes that the SOP should not be reexposed for public comment. AcSEC notes that although the SOP has been revised based on comments received on the exposure draft, those revisions do not change the overall model in the SOP. Those revisions were made primarily to clarify the SOP and improve its operationality. Further, AcSEC believes that the project received a high level of attention from interested parties. AcSEC provided working drafts to interested parties and those parties provided input throughout the process, up to and including the Financial Accounting Standard Board's and the Governmental Accounting Standards Board's clearance of the SOP for issuance.

B.6. Appendix C [paragraph .23] discusses the key issues in the exposure draft and comments received on those issues, as well as the basis for AcSEC's conclusions on those and certain other issues.

.23

Appendix C

Basis for Conclusions

C.1. This section discusses considerations that were deemed significant by members of the Accounting Standards Executive Committee (AcSEC) in reaching the conclusions in this Statement of Position (SOP). It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

Overall Framework

C.2. This SOP uses the model in SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal,* as a starting point and clarifies guidance that was unclear, provides more detailed guidance, revises some guidance, and expands the scope of costs covered to include all costs of joint activities. The model established by SOP 87-2 was to account for joint costs as fund raising unless an entity could demonstrate that a program or management and general function had been conducted. SOP 87-2 used verifiable indications of the reasons for conducting the activity, such as content, audience, the action requested, if any, and other corroborating evidence as a basis for determining whether a program or management and general function had been conducted.

C.3. On an overall basis, the majority of respondents who commented on the September 1993 exposure draft of a proposed SOP, *Accounting for Costs of Materials and Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include a Fund-Raising Appeal*, opposed it, for various reasons, including the following:

- The guidance in SOP 87-2 is operational, results in sound financial reporting, and should be retained.
- The guidance in SOP 87-2 should be retained but clarified.
- The guidance proposed in the exposure draft should be revised. (Some commented that it overstates fund raising; others commented that it understates fund raising.)

C.4. AcSEC concluded that it supports the model in the exposure draft, subject to certain revisions. AcSEC believes that this SOP provides clear, detailed accounting guidance that, when applied, will increase comparability of financial statements. Those statements will also include more meaningful disclosures without incurring increased costs.

C.5. Some respondents commented that the model in the exposure draft would adversely affect entities both financially and operationally. Various reasons were given, including the following:

- It would inhibit the ability of entities, particularly small entities and entities that raise contributions through direct solicitations, to generate the necessary revenue to perform their program services.
- Most entities would not meet the criteria in this SOP for reporting costs of joint activities as program or management and general, because they must combine their mission statements, public informa-

tion and education, and fund-raising appeals due to a lack of resources. Some noted that this may result in unsatisfactory ratings from public watchdog groups.

AcSEC did not find these arguments compelling. This SOP provides accounting guidance; it provides no guidance concerning how entities should undertake their activities. Also, this SOP does not prohibit allocation merely because activities carrying out different functions are combined. In fact, this SOP provides guidance for reporting costs as program or management and general in circumstances in which those activities are combined with fund-raising. Moreover, actions taken by financial statement users are not the direct result of the requirements of this SOP. Rather, those actions may result from more relevant and useful information on which to base decisions.

C.6. Some respondents commented that the exposure draft is biased toward reporting expenses as fund raising. AcSEC believes that determining whether the costs of joint activities should be classified as program, management and general, or fund raising sometimes is difficult, and such distinctions sometimes are subject to a high degree of judgment. AcSEC believes that external financial statement users focus on and have perceptions about amounts reported as program, management and general, and fund raising. That focus and those perceptions provide incentives for entities to report expenses as program or management and general rather than fund raising. Therefore, in circumstances in which joint activities are conducted, a presumption exists that expenses should be reported as fund raising rather than as program or management and general. The criteria in this SOP provide guidance for entities to overcome that presumption.

Accounting for Joint Activities

C.7. This SOP requires that if any of the criteria of purpose, audience, and content are not met, all costs of the activity should be reported as fund raising, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising. (This SOP expands on the model established by SOP 87-2 by including all costs of joint activities other than costs of goods or services provided in exchange transactions, rather than merely joint costs.) AcSEC believes that the criteria of purpose, audience, and content are each relevant in determining whether a joint activity should be reported as fund raising, program, or management and general because each provides significant evidence about the benefits expected to be obtained by undertaking the activity.

C.8. Some respondents commented that reporting costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity as fund raising is misleading and that the scope of the SOP should include only joint costs of joint activities. Some commented that reporting costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity as fund raising conflicts with Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 117, *Financial Statements of Not-for-Profit Organizations*, which defines fund raising, program, and management and general and requires not-for-profit organizations (NPOs) to report information about expenses using those functional classifications.

C.9. AcSEC believes that the purpose for which costs other than joint costs are incurred may be fund raising, program, or management and general, depending on the context in which they are used in the activity undertaken. For example, a program-related pamphlet may be sent to an audience in need of the program. In that context, the pamphlet is used for program purposes. However, in order to demonstrate to potential donors that the entity's programs are worthwhile, that same pamphlet may be sent to an audience that is likely to contribute, but that has no need or reasonable potential for use of the program. In that context, the pamphlet is used for fund raising. AcSEC believes this broader scope will result in more comparability and more meaningful financial reporting by covering all costs of activities that include fund raising and by assigning those costs to the function for which they are incurred, consistent with the guidance in Statement No. 117.

C.10. AcSEC believes that costs of goods or services provided in exchange transactions should not be charged to fund raising because those costs are incurred in exchange for revenues other than contributions.

Criteria of Purpose, Audience, and Content

Call For Action

C.11. The definition of *program* in FASB Statement No. 117 includes public education. As noted in paragraph C.6, AcSEC believes that in circumstances in which joint activities are conducted, a presumption exists that expenses should be reported as fund raising rather than as program or management and general. AcSEC believes that in order to overcome that presumption, it is not enough that (*a*) the purpose of the activity include educating the public about causes, (*b*) the audience has a need or reasonable potential for use of any educational component of the activity pertaining to causes, or (*c*) the audience has the ability to assist the entity in meeting the goals of the program component of the activity by becoming educated about causes. Therefore, AcSEC concluded that for purposes of this SOP, in order to conclude that the criteria of purpose, audience, and content are met program activities are required to call for specific action by the recipient (other than becoming educated about causes) that will help accomplish the entity's mission. As discussed in paragraph .09, in certain circumstances educational activities may call for specific action by the recipient that will help accomplish the entity's mission.

Purpose

C.12. AcSEC believes meeting the purpose criterion demonstrates that the purpose of the activity includes accomplishing program or management and general functions. Inherent in the notion of a joint activity is that the activity has elements of more than one function. Accordingly, the purpose criterion provides guidance for determining whether the purpose of the activity includes accomplishing program or management and general functions in addition to fund raising.

Compensation and Evaluation Tests

C.13. The exposure draft proposed that all costs of the joint activity should be charged to fund raising if (*a*) substantially all compensation or fees for performing the activity are based on amounts raised or (*b*) the evaluation of the party performing the activity is based on amounts raised. Some respondents commented that basing the method of compensation or evaluating the performance of the party performing the activity based on contributions raised should not lead to the conclusion that all costs of the activity should be charged to fund raising. Others commented that the method of compensation is unrelated to whether the purpose criterion is met. The reasons given included the following:

- It is counterintuitive to imply that those performing multipurpose activities that include fund raising would not be compensated or evaluated based on amounts raised.
- Such guidance would create a bias toward entities that use employees to raise contributions and against entities that hire professional fund raisers and public relations firms and is therefore not neutral.

Some respondents gave examples of circumstances in which substantially all compensation is based on contributions raised and asserted that the activity was nevertheless a program activity. In each of those examples, AcSEC considered all the facts presented and concluded that the activity was fund raising.

C.14. AcSEC continues to support the spirit of the proposed guidance, because AcSEC believes that basing a majority of compensation on funds raised is persuasive evidence that the activity is a fund-raising activity. Nevertheless, AcSEC believes that the proposed guidance was unclear and would be difficult to implement, primarily because of the broad definition of "based on contributions raised" included in the glossary of the exposure draft. In connection with that issue, AcSEC was concerned that any joint activities performed by a fund-raising department or by individuals whose duties include fund raising, such as executive officers of small NPOs who are employed based on their ability to raise contributions, would be required to be reported as fund raising because the compensation of the parties performing those activities is based on amounts raised. Also, AcSEC had concerns that it would be difficult to determine whether fixed contract amounts were negotiated based on expected contributions. Therefore, AcSEC concluded that the compensation test should be revised to provide that the purpose criterion is not met if a majority of compensation or fees for any party's performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity. AcSEC believes that guidance is sound and is operational.

C.15. AcSEC believes that the guidance in paragraph .10*a* is not biased against entities that hire professional fund raisers, because it applies to the entity's employees as well as professional fund raisers. For example, if a majority of an employee's compensation or fees for performing a component of a discrete joint activity varies based on contributions raised for that discrete joint activity, the purpose criterion is not met.

Similar Function-Similar Medium Test

C.16. Some respondents misinterpreted the exposure draft as providing that, in order to meet the purpose criterion, the program or management and general activity must be conducted without the fund-raising component, using the same medium and on a scale that is similar to or greater than the program or management and general component of the activity being accounted for. That was not a requirement proposed by the exposure draft. The exposure draft proposed that meeting that condition would result in meeting the purpose criterion. Failing the criterion merely leads to consideration of other evidence, such as the indicators in paragraph .11. AcSEC has revised the SOP to state this more clearly.

Other Evidence

C.17. The compensation test and the similar function-similar medium test may not always be determinative because the attributes that they consider may not be present. Therefore, this SOP includes indicators that should be considered in circumstances in which the compensation test and the similar function-similar medium test are not determinative. The nature of those indicators is such that they may be present in varying degrees. Therefore, all available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, the purpose criterion is met.

Audience

C.18. The exposure draft proposed that if the audience for the materials or activities is selected principally on its ability or likelihood to contribute, the audience criterion is not met and all the costs of the activity should be charged to fund raising. Further, the exposure draft proposed that if the audience is selected principally based on its need for the program or because it can assist the entity in meeting its program goals other than by financial support provided to the entity, the audience criterion is met. Some respondents commented that that audience criterion is too narrow, because it is based on the principal reason for selecting the audience. They asserted that for some activities no principal reason exists for selecting an audience; entities select the audience for those activities for multiple reasons, such as both the audience's ability to contribute and its ability to help meet program goals. Some commented that for some activities, entities select audiences that have provided past financial support because, by providing financial support, those audiences have expressed an interest in the program.

C.19. AcSEC believes that meeting the audience criterion should demonstrate that the audience is selected because it is a suitable audience for accomplishing the activity's program or management and general functions. Therefore, the reasons for selecting the audience should be consistent with the program or management and general content of the activity. However, AcSEC believes it is inherent in the notion of joint activities that the activity has elements of more than one function, including fund raising, and acknowledges that it may be difficult to determine the principal reason for selecting the audience. Accordingly, AcSEC concluded that if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute, a rebuttable presumption should exist that the audience was selected to raise funds. AcSEC believes that the reasons for selecting the audience that can overcome that presumption, which are included in paragraph .13 of this SOP, demonstrate that the audience is selected because it is a suitable audience for accomplishing the activity's program or management and general functions based on the program or management and general content of the activity.

Content

C.20. AcSEC believes that meeting the content criterion demonstrates that the content of the activity supports program or management and general functions. AcSEC believes that accounting guidance should not impose value judgments about whether the entity's mission, programs, and responsibilities are worthwhile. Therefore, whether the content criterion is met depends on the relationship of the content to the entity's mission, programs, and management and general responsibilities.

C.21. Paragraph .14 provides that, to meet the content criterion, program activities should call for specific action by the recipient that will help accomplish the entity's mission. The exposure draft proposed that slogans, general calls to prayer, and general calls to protest do not meet the content criterion; some respondents disagreed. AcSEC concluded that this SOP should be silent concerning whether slogans, general calls to prayer, and general calls to protest are calls to action that meet the content criterion. AcSEC believes that determining whether those items are calls to action that meet the content criterion requires judgments based on the particular facts and circumstances.

C.22. Some respondents commented that educating the public about causes without calling for specific action should satisfy the content criterion. They noted that this is particularly relevant for NPOs subject to Internal Revenue Code (IRC) Section 501(c)4, because those NPOs are involved in legislative reform. Also, some noted that it may be the entity's mission or goal to educate the public about causes. They believe that, in those cases, the NPO's program is to educate the public about causes without necessarily calling for specific action by the recipient.

C.23. As discussed in paragraph C.11, AcSEC concluded that education that does not motivate the audience to action is in fact done in support of fund raising. However, this SOP acknowledges that some educational messages motivate the audience to specific action, and those messages meet the content criterion. AcSEC believes that that provision will result in the activities of some NPOs subject to IRC Section 501(c)4 (and some other entities, whose mission or goal is to educate the public) meeting the content criterion.

C.24. Paragraph .13*c* provides that one way that the audience criterion is met is if the entity is required to direct the management and general component of the activity to the particular audience. Further, as discussed in paragraph D.13, in *Discussion of Conclusions*, an audience that includes prior donors and is selected because the entity is required to send them certain information to comply with requirements of the Internal Revenue Service (IRS) is an example of an audience that is selected because the entity is required to direct the management and general component of the activity to that audience. Paragraph .14*b* provides that one way that the content criterion is met is if the activity fulfills one or more of the entity's management and general responsibilities through a component of the joint activity. However, footnote 9 to paragraph .14*b* provides that disclosures made when soliciting contributions to comply with requirements of states or other regulatory bodies are considered fund-raising activities, and are not considered management and general activities. AcSEC considered whether it is inconsistent to conclude both that (*a*) activities conducted to comply with requirements of regulatory bodies concerning contributions that have been received are management and general activities, and that (*b*) activities conducted to comply with requirements of regulatory bodies concerning soliciting contributions are fund-raising activities. AcSEC believes that those provisions are not inconsistent. AcSEC believes there is a distinction between (*a*) requirements that must be met as a result of receiving contributions and (*b*) requirements that must be met in order to solicit contributions. AcSEC believes that activities that are undertaken as a result of receiving contributions are management and general activities while activities that are undertaken in order to solicit contributions are fund-raising activities.

Incidental Activities

C.25. Many entities conduct fund-raising activities in conjunction with program or management and general activities that are incidental to such program or management and general activities. Similarly, entities may conduct program or management and general activities in conjunction with fund-raising activities that are incidental to such fund-raising activities. Such efforts may be a practical and efficient means for entities to conduct activities, although the principal purpose of the activity may be to fulfill either fund-raising, program, or management and general functions. The exposure draft proposed that incidental activities need not be considered in applying this SOP. Some respondents disagreed with that guidance, while others commented that it was confusing. AcSEC continues to support that guidance. AcSEC believes that guidance is necessary to avoid requiring complex allocations in circumstances in which the criteria of purpose, audience, and content are met but the activity is overwhelmingly either fund raising, program, or management and general.

Allocation Methods

C.26. Respondents had various comments concerning allocation methods, including the following:

- The SOP should focus on allocation methods rather than on circumstances in which entities should allocate.
- The SOP should prescribe allocation methods.
- The approach taken in the SOP—discussing, rather than requiring or prohibiting allocation methods—is sound.
- Certain allocation methods should be prohibited.
- The SOP should set maximum allocation percentages.

AcSEC believes that no particular allocation method or methods are necessarily more desirable than other methods in all circumstances. Therefore, this SOP neither prescribes nor prohibits any particular allocation methods. AcSEC believes entities should apply the allocation methods that result in the most reasonable cost allocations for their activities. Appendix F [paragraph .26] of this SOP illustrates several allocation methods, any one of which may result in a reasonable or unreasonable allocation of costs in particular circumstances. The methods illustrated are not the only acceptable methods. However, AcSEC believes that the methods illustrated in this SOP are among those most likely to result in meaningful cost allocations.

C.27. Accounting Principles Board (APB) Opinion No. 20, *Accounting Changes*, states in paragraph 7 that "the term *accounting principle* includes 'not only accounting principles and practices but also the methods of applying them.'" APB Opinion 20 also states in paragraphs 15 and 16 that

> . . . In the preparation of financial statements there is a presumption that an accounting principle once adopted should not be changed in accounting for events and transactions of a similar type . . . . The presumption that an entity should not change an accounting principle may be overcome only if the enterprise justifies the use of an alternative acceptable accounting principle [*allocation method*] on the basis that it is preferable.

A change in cost allocation methodology may be a change in accounting principle for entities covered by this SOP. Accordingly, paragraph .16 of this SOP provides that the cost allocation methodology used should be applied consistently, given similar facts and circumstances.

Disclosures

C.28. Respondents made various comments concerning the required and encouraged disclosures, including recommendations for additional disclosures and recommendations that certain disclosures be deleted. AcSEC was not persuaded that the costs of the other disclosures recommended by respondents are justified by their benefits. AcSEC believes that, with the exception of one disclosure, the disclosures prescribed by the exposure draft provide relevant information about the kinds of activities for which joint costs have been incurred and the manner in which those costs are reported in the financial statements. In considering disclosures proposed by the exposure draft about the allocation method, AcSEC observed that there are no requirements to disclose methods of allocating other expenses and questioned the utility of disclosing the allocation method in this circumstance. AcSEC concluded that the requirement to disclose the allocation method should be deleted.

C.29. Paragraph .19 encourages, but does not require, certain disclosures. AcSEC believes those disclosures provide useful information but that they should be encouraged rather than required because the costs of making them may not be justified by the benefits in all cases.

Effective Date

C.30. Some respondents commented that the effective date should be deferred. AcSEC believes that the accounting systems required to implement this SOP are already in place and that implementation should be relatively straightforward. However, AcSEC acknowledges that some entities may change their operations based on the reporting that would result from this SOP. Therefore, AcSEC concluded that this SOP should be effective for financial statements for years beginning on or after December 15, 1998.

Cost-Benefit

C.31. Some respondents commented that the guidance would increase record keeping costs. AcSEC believes that implementing this SOP will not significantly increase record keeping costs, which are primarily the costs of documenting reasons for undertaking joint activities. Further, AcSEC believes that the costs of making the disclosures required by this SOP should be minimal, because entities should already have the information that is required to be disclosed. AcSEC believes that implementing this SOP will result in more relevant, meaningful, and comparable financial reporting and that the cost of implementing this SOP will be justified by its benefits.

.24

Appendix D

Discussion of Conclusions

Scope

D.1. This Statement of Position (SOP) applies only to costs of joint activities. It does not address allocations of costs in other circumstances.

Reporting Models and Related Requirements

D.2. Paragraph 26 of Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 117, *Financial Statements of Not-for-Profit Organizations*, specifies that a statement of activities or notes to the financial statements should provide information about expenses reported by their functional classification, such as major classes of program services and supporting activities. Paragraph 13.34 of the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*, provides that the financial statements of not-for-profit organizations (NPOs) should disclose the total fund-raising expenses. [Revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

D.3. Governmental Accounting Standards Board (GASB) Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities,* provides that governmental entities should not change their accounting and financial reporting to apply the provisions of FASB Statements No. 116, *Accounting for Contributions Received and Contributions Made*, and No. 117. GASB Statement No. 29 permits governmental entities that have applied the accounting and financial reporting principles in SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations,* or in the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* (modified by all applicable FASB pronouncements issued through November 30, 1989, and by most applicable GASB pronouncements) to continue to do so, pending GASB pronouncements on the accounting and financial reporting model for governmental entities. Alternatively, those governmental entities are permitted to change to the current governmental financial reporting model.[‡]

D.4. GASB Statement No. 15, *Governmental College and University Accounting and Financial Reporting Models*, requires governmental colleges and universities to use one of two accounting and financial reporting models. One model, referred to as the "AICPA College Guide Model," encompasses the accounting and financial reporting guidance in the 1973 AICPA Industry

---

[‡] GASB Statement No. 34, *Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments*, supersedes the provisions of GASB Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*, relating to the use of the AICPA Not-for-Profit model. See GASB Statement No. 34, including paragraph 147. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this SOP to state and local governments. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statement No. 34.]

Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8, *Financial Accounting and Reporting by Colleges and Universities*, and as modified by applicable FASB pronouncements issued through November 30, 1989, and all applicable GASB pronouncements. (The other model, referred to as the "Governmental Model," is based on the pronouncements of the National Council on Governmental Accounting [NCGA] and the GASB.)[||]

D.5. For state and local governmental entities, some are required to report expenses by function using the functional classifications of program, management and general, and fund raising. Other state and local governmental entities that report expenses or expenditures by function have a functional structure that does not include fund raising, program, or management and general. Still other state and local governmental entities do not report expenses or expenditures by function. Examples of those various reporting requirements are as follows:[#]

- Entities applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations*, as well as those that follow SOP 78-10 and that receive significant amounts of contributions from the public, are required to report separately the costs of the fund-raising, program, and management and general functions.
- Entities applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8, are required to report fund raising as part of the "institutional support" function.

D.6. As discussed in footnote 3 to paragraph .01 of this SOP, this SOP is not intended to require reporting the functional classifications of fund raising, program, and management and general. Rather, those functional classifications are discussed throughout this SOP for purposes of illustrating how the guidance in this SOP would be applied by entities that use those functional classifications. Entities that do not use the functional classifications of fund raising, program, and management and general should apply the guidance in this SOP for purposes of accounting for joint activities, using their reporting model. For example, some entities may conduct membership-development activities. As discussed in the Glossary [paragraph .30] of this SOP, if there are no significant benefits or duties connected with membership, the substance of the membership-development activities may, in fact, be fund raising. In such circumstances, the costs of those activities should be charged to fund raising. To the extent that member benefits are received, membership is an exchange transaction. In circumstances in which membership development is in part soliciting revenues from exchange transactions and in part soliciting contributions and the purpose, audience, and content of the activity are appropriate for achieving membership development, joint costs should be allocated between fund raising and the exchange transaction.

[||] GASB Statement No. 35, *Basic Financial Statements—and Management's Discussion and Analysis—for Public Colleges and Universities,* supersedes GASB Statement No. 15, *Governmental College and University Accounting and Financial Reporting Models*. See GASB Statements No. 34 and No. 35. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this SOP to governmental (public) colleges and universities. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statement No. 35.]

[#] This discussion is no longer applicable. See footnotes ‡ and || in paragraphs D.3 and D.4, respectively. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34 and No. 35.]

Assigning Costs of Joint Activities

D.7. Paragraph .07 provides: "If the criteria of purpose, audience, and content are met, the costs of a joint activity that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function. If any of the criteria are not met, all costs of the joint activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity. . . ." For example, if the criteria are met, the costs of materials that accomplish program goals and that are unrelated to fund raising, such as the costs of a program-related pamphlet included in a joint activity, should be charged to program, while joint costs, such as postage, should be allocated between fund raising and program. However, if the pamphlet is used in fund-raising packets and the criteria are not met, the costs of the pamphlets used in the fund-raising packets, as well as the joint costs, should be charged to fund raising. (If some pamphlets are used in program activities that include no fund raising, the cost of the pamphlets used in those separate program activities that include no fund raising should be charged to program.)

Educational Activities

D.8. Some entities have missions that include educating the public (students) in areas other than causes. Paragraph .09 provides that, for those entities, educating the audience in areas other than causes or motivating the audience to engage in specific activities, such as attending a lecture or class, that will educate them in areas other than causes is considered a call for specific action by the recipients that will help accomplish the entity's mission. Educating the audience about causes or motivating the audience to engage in specific activities that will educate them about causes without educating them in other subjects is not considered a call for specific action by the audience that will help accomplish the entity's mission. An example of a lecture or class that will educate students in an area other than causes is a lecture on the nesting habits of the bald eagle, given by the Save the Bald Eagle Society, an NPO whose mission is to save the bald eagle from extinction and educate the public about the bald eagle. An example of a lecture or class that will address particular causes is a lecture by the Bald Eagle Society on the potential extinction of bald eagles and the need to raise contributions to prevent their extinction. For purposes of applying the guidance in this SOP, motivating the audience to attend a lecture on the nesting habits of the bald eagle is a call for specific action that will help accomplish the entity's mission. If the lecture merely addresses the potential extinction of bald eagles and the need to raise contributions to prevent their extinction, without addressing the nesting habits of the bald eagle, motivating the audience to attend the lecture is not considered a call for specific action by the recipient that will help accomplish the entity's mission.

D.9. AcSEC notes that most transactions in which a student attends a lecture or class are exchange transactions and are not joint activities. Such transactions are joint activities only if the activity includes fund raising.

Audience

D.10. Paragraph .12 provides that a rebuttable presumption exists that the audience criterion is not met if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute to the entity. That presumption can be overcome if the audience is also selected for the program or management and general reasons specified in paragraph .13. Further, paragraph .12 provides that in determining whether that presumption is overcome, entities should consider the extent to which the audience is selected based on its ability or likelihood to contribute to the entity and contrast that with the extent to which it is selected for the reasons that may overcome that presumption. Some organizations conduct joint activities that are special events, such as symposia, dinners, dances, and theater parties, in which the attendee receives a direct benefit (for example, a meal or theater ticket) and for which the admission price includes a contribution. For example, it may cost $500 to attend a dinner with a fair value of $50. In that case, the audience is required to make a $450 contribution in order to attend. In circumstances in which the audience is required to make a contribution to participate in a joint activity, such as attending a special event, the audience's ability or likelihood to contribute is a significant factor in its selection. Therefore, in circumstances in which the audience is required to make a contribution to participate in a joint activity, the extent to which the audience is selected for the program or management and general reasons in paragraph .13 must be overwhelmingly significant in order to rebut the presumption that the audience criterion is not met.

D.11. The source of the names and the characteristics of the audience should be considered in determining the reason for selecting the audience. Some entities use lists compiled by others to reach new audiences. The source of such lists may indicate the purpose or purposes for which they were selected. For example, lists acquired from entities with similar or related programs are more likely to meet the audience criterion than are lists acquired from entities with dissimilar or unrelated programs. Also, the characteristics of those on the lists may indicate the purpose or purposes for which they were selected. For example, a list based on a consumer profile of those who buy environmentally friendly products may be useful to an entity whose mission addresses environmental concerns and could therefore indicate that the audience was selected for its ability to take action to assist the entity in meeting program goals. However, a list based on net worth would indicate that the audience was selected based on its ability or likelihood to contribute, unless there was a correlation between net worth and the program or management and general components of the activity.

D.12. Some audiences may be selected because they have an interest in or affinity to the program. For example, homeowners may have an interest in the homeless because they are sympathetic to the plight of the homeless. Nevertheless, including homeowners in the audience of a program activity to provide services to the homeless would not meet the audience criterion, because they do not have a need or reasonable potential for use of services to the homeless.

D.13. Paragraph .13*c* provides that the audience criterion is met if the entity is required to direct the management and general component of the joint activity to the particular audience or the audience has reasonable potential for use of the management and general component. An example of a joint activity in which the audience is selected because the entity is required to direct the management and general component of the joint activity to the particular audience is an activity in which the entity sends a written acknowledgment or other information to comply with requirements of the Internal Revenue Service to prior donors and includes a request for contributions. An example of a joint activity in which the audience is selected because the audience has reasonable potential for use of the management and general component is an activity in which the entity sends its annual report to prior donors and includes a request for contributions.

Content

D.14. Paragraph .14 provides that, to meet the content criterion, program activities should call for specific action by the recipient that will help accomplish the entity's mission. As discussed in the Glossary [paragraph .30], the action should benefit the recipient or society. Examples of actions that benefit the recipient (such as by improving the recipient's physical, mental, emotional, or spiritual health and well-being) or society (such as by addressing societal problems) include the following:

a. Actions that benefit the recipient:

- *Stop smoking.* Specific methods, instructions, references, and resources should be suggested.
- *Do not use alcohol or drugs.* Specific methods, instructions, references, and resources should be suggested.

b. Actions that benefit society:

- *Write or call.* The party to communicate with and the subject matter to be communicated should be specified.
- *Complete and return the enclosed questionnaire.* The results of the questionnaire should help the entity achieve its mission. For example, if the entity discards the questionnaire, it does not help the entity achieve its mission.
- *Boycott.* The particular product or company to be boycotted should be specified.

D.15. Paragraph .14*b* provides that to meet the content criterion, management and general functions are required to fulfill one or more of the entity's management and general responsibilities through a component of the joint activity. Some states or other regulatory bodies require that certain disclosures be included when soliciting contributions. Paragraph .14, footnote 9, of this SOP provides that for purposes of applying the guidance in this SOP, communications that include such required disclosures are considered fund-raising activities and are not considered management and general activities. Some examples of such disclosures include the following:

- Information filed with the attorney general concerning this charitable solicitation may be obtained from the attorney general of [*the state*] by calling 123-4567. Registration with the attorney general does not imply endorsement.
- A copy of the registration and financial information may be obtained from the Division of Consumer Services by calling toll-free, within [*the state*], 1-800-123-4567. Registration does not imply endorsement, approval, or recommendation by [*the state*].
- Information about the cost of postage and copying, and other information required to be filed under [*the state*] law, can be obtained by calling 123-4567.
- The organization's latest annual report can be obtained by calling 123-4567.

Allocation Methods

D.16. Paragraph .16 of this SOP states, "The cost allocation methodology used should be rational and systematic, it should result in an allocation of joint costs that is reasonable, and it should be applied consistently given similar facts and circumstances." The allocation of joint costs should be based on the degree to which costs were incurred for the functions to which the costs are allocated (that is, program, management and general, or fund raising). For purposes of determining whether the allocation methodology for a particular joint activity should be consistent with methodologies used for other particular joint activities, facts and circumstances that may be considered include factors related to the content and relative costs of the components of the activity. The audience should not be considered in determining whether the facts and circumstances are similar for purposes of determining whether the allocation methodology for a particular joint activity should be consistent with methodologies used for other particular joint activities.

Practicability of Measuring Joint Costs

D.17. The Glossary [paragraph .30] of this SOP includes a definition of joint costs. Some costs, such as utilities, rent, and insurance, commonly referred to as indirect costs, may be joint costs. For example, the telephone bill for a department that, among other things, prepares materials that include both fund-raising and program components may commonly be referred to as an indirect cost. Such telephone bills may also be joint costs. However, for some entities, it is impracticable to measure and allocate the portion of the costs that are joint costs. Considerations about which joint costs should be measured and allocated, such as considerations about materiality and the costs and benefits of developing and providing the information, are the same as considerations about cost allocations in other circumstances.

.25

Appendix E

Illustrations of Applying the Criteria of Purpose, Audience, and Content to Determine Whether a Program or Management and General Activity Has Been Conducted

Illustration 1

Facts

E.1. Entity A's mission is to prevent drug abuse. Entity A's annual report states that one of its objectives in fulfilling that mission is to assist parents in preventing their children from abusing drugs.

E.2. Entity A mails informational materials to the parents of all junior high school students explaining the prevalence and dangers of drug abuse. The materials encourage parents to counsel children about the dangers of drug abuse and inform them about how to detect drug abuse. The mailing includes a request for contributions. Entity A conducts other activities informing the public about the dangers of drug abuse and encouraging parents to counsel their children about drug abuse that do not include requests for contributions and that are conducted in different media. Entity A's executive director is involved in the development of the informational materials as well as the request for contributions. The executive director's annual compensation includes a significant bonus if total annual contributions exceed a predetermined amount.

Conclusion

E.3. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.4. The activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse and informing them about how to detect drug abuse) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. (Although Entity A's executive director's annual compensation varies based on annual contributions, the executive director's compensation does not vary based on contributions raised for this discrete joint activity.) Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (*a*) the program component of this activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse) that will help accomplish the entity's mission, and it otherwise conducts the program activity in this illustration without a request for contributions, and (*b*) performing such programs helps accomplish Entity A's mission. (Note that had Entity A conducted the activity using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions, the purpose criterion would have been met under paragraph .10*b*.)

E.5. The audience criterion is met because the audience (parents of junior high school students) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.6. The content criterion is met because the activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse and informing them about how to detect drug abuse) that will help accomplish the entity's mission (assisting parents in preventing their children from abusing drugs), and it explains the need for and benefits of the action (the prevalence and dangers of drug abuse).

Illustration 2

Facts

E.7. Entity B's mission is to reduce the incidence of illness from ABC disease, which afflicts a broad segment of the population. One of Entity B's objectives in fulfilling that mission is to inform the public about the effects and early warning signs of the disease and specific action that should be taken to prevent the disease.

E.8. Entity B maintains a list of its prior donors and sends them donor renewal mailings. The mailings include messages about the effects and early warning signs of the disease and specific action that should be taken to prevent it. That information is also sent to a similar-sized audience but without the request for contributions. Also, Entity B believes that recent donors are more likely to contribute than nondonors or donors who have not contributed recently. Prior donors are deleted from the mailing list if they have not contributed to Entity B recently, and new donors are added to the list. There is no evidence of a correlation between recent contributions and participation in the program component of the activity. Also, the prior donors' need to use or reasonable potential for use of the messages about the effects and early warning signs of the disease and specific action that should be taken to prevent it is an insignificant factor in their selection.

Conclusion

E.9. The purpose and content criteria are met. The audience criterion is not met.[11] All costs, including those that might otherwise be considered program or management and general costs if they had been incurred in a different activity, should be charged to fund raising.

E.10. The activity calls for specific action by the recipient (action that should be taken to prevent ABC disease) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (*a*) the program component of the activity calls for specific action by the recipient that will help accomplish the entity's mission (to reduce the incidence of illness from the disease), and (*b*) the program is also

---

[11] Paragraph .07 of this SOP provides that all costs of joint activities, except for costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should be charged to fund raising if any of the criteria of purpose, audience, or content are not met. Accordingly, if one or more criteria are not met, the other criteria need not be considered. However, the illustrations in this Appendix provide conclusions about whether each of the criteria would be met in circumstances in which one or more criteria are not met in order to provide further guidance.

conducted using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions (a similar mailing is done without the request for contributions, to a similar-sized audience).

E.11. The audience criterion is not met. The rebuttable presumption that the audience criterion is not met because the audience includes prior donors is not overcome in this illustration. Although the audience has a need to use or reasonable potential for use of the program component, that was an insignificant factor in its selection.

E.12. The content criterion is met because the activity calls for specific action by the recipient (actions to prevent ABC disease) that will help accomplish the entity's mission (to reduce the incidence of ABC disease), and it explains the need for and benefits of the action (to prevent ABC disease).

Illustration 3

Facts

E.13. Entity C's mission is to reduce the incidence of illness from ABC disease, which afflicts a broad segment of the population. One of Entity C's objectives in fulfilling that mission is to increase governmental funding for research about ABC disease.

E.14. Entity C maintains a list of its prior donors and its employees call them on the telephone reminding them of the effects of ABC disease, asking for contributions, and encouraging them to contact their elected officials to urge increased governmental funding for research about ABC disease. The callers are educated about ABC, do not otherwise perform fund-raising functions, and are not compensated or evaluated based on contributions raised. Entity C's research indicates that recent donors are likely to contact their elected officials about such funding while nonrecent donors are not. Prior donors are deleted from the calling list if they have not contributed to Entity C recently, and new donors are added to the list.

Conclusion

E.15. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.16. The activity calls for specific action by the recipient (contacting elected officials concerning funding for research about ABC disease) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (*a*) the qualifications and duties of the personnel performing the activity indicate that it is a program activity (the callers are educated about ABC and do not otherwise perform fund-raising functions), (*b*) the method of compensation for performing the activity does not indicate that it is a fund-raising activity (the employees are not compensated or evaluated based on contributions raised), and (*c*) performing such programs helps accomplish Entity C's mission.

E.17. The audience criterion is met because the audience (recent donors) is selected based on its ability to assist Entity C in meeting the goals of the program component of the activity (recent donors are likely to contact their elected officials about such funding while nonrecent donors are not).

E.18. The content criterion is met because the activity calls for specific action by the recipient (contacting elected officials concerning funding for research about ABC disease) that will help accomplish the entity's mission (to reduce the incidence of ABC disease), and it explains the need for and benefits of the action (to prevent ABC disease).

Illustration 4

Facts

E.19. Entity D's mission is to improve the quality of life for senior citizens. One of Entity D's objectives included in that mission is to increase the physical activity of senior citizens. One of Entity D's programs to attain that objective is to send representatives to speak to groups about the importance of exercise and to conduct exercise classes.

E.20. Entity D mails a brochure on the importance of exercise that encourages exercise in later years to residents over the age of sixty-five in three zip code areas. The last two pages of the four-page brochure include a perforated contribution remittance form on which Entity D explains its program and makes an appeal for contributions. The content of the first two pages of the brochure is primarily educational; it explains how seniors can undertake a self-supervised exercise program and encourages them to undertake such a program. In addition, Entity D includes a second brochure on various exercise techniques that can be used by those undertaking an exercise program.

E.21. The brochures are distributed to educate people in this age group about the importance of exercising, to help them exercise properly, and to raise contributions for Entity D. These objectives are documented in a letter to the public relations firm that developed the brochures. The audience is selected based on age, without regard to ability to contribute. Entity D believes that most of the recipients would benefit from the information about exercise.

Conclusion

E.22. The purpose, audience, and content criteria are met, and the joint costs should be allocated. (Note that the costs of the second brochure should be charged to program because all the costs of the brochure are identifiable with the program function.)

E.23. The activity calls for specific action by the recipient (exercising) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (*a*) performing such programs helps accomplish Entity D's mission, and (*b*) the objectives of the program are documented in a letter to the public relations firm that developed the brochure.

E.24. The audience criterion is met because the audience (residents over sixty-five in certain zip codes) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.25. The content criterion is met because the activity calls for specific action by the recipient (exercising) that will help accomplish the entity's mission (increasing the physical activity of senior citizens), and the need for and benefits of the action are clearly evident (explains the importance of exercising).

Illustration 5

Facts

E.26. The facts are the same as those in Illustration 4, except that Entity E employs a fund-raising consultant to develop the first brochure and pays that consultant 30 percent of contributions raised.

Conclusion

E.27. The content and audience criteria are met. The purpose criterion is not met, however, because a majority of compensation or fees for the fund-raising consultant varies based on contributions raised for this discrete joint activity (the fund-raising consultant is paid 30 percent of contributions raised). All costs should be charged to fund raising, including the costs of the second brochure and any other costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity.

Illustration 6

Facts

E.28. Entity F's mission is to protect the environment. One of Entity F's objectives included in that mission is to take action that will increase the portion of waste recycled by the public.

E.29. Entity F conducts a door-to-door canvass of a community that recycles a low portion of its waste. The purpose of the activity is to help increase recycling by educating the community about environmental problems created by not recycling, and to raise contributions. Based on the information communicated by the canvassers, the need for and benefits of the action are clearly evident. The ability or likelihood of the residents to contribute is not a basis for communities selected, and all neighborhoods in the geographic area are covered if their recycling falls below a predetermined rate. The canvassers are selected from individuals who are well-informed about the organization's environmental concerns and programs and who previously participated as volunteers in program activities such as answering environmental questions directed to the organization and developing program activities designed to influence legislators to take actions addressing those concerns. The canvassers have not previously participated in fund-raising activities.

Conclusion

E.30. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.31. The activity calls for specific action by the recipient (implicitly—to help increase recycling) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (*a*) the qualifications and duties of the personnel performing the activity indicate that it is a program activity (the canvassers are selected from individuals who are well-informed about the organization's environmental concerns and programs and who previously participated as volunteers in program activities such as answering environmental questions directed to the organization and developing program activities designed to influence legislators to take actions addressing those concerns), and (*b*) performing such programs helps accomplish Entity F's mission (to protect the environment).

E.32. The audience criterion is met because the audience (neighborhoods whose recycling falls below a predetermined rate) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.33. The content criterion is met because the activity calls for specific action by the recipient (implicitly—to help increase recycling) that will help accomplish the entity's mission (to protect the environment), and the need for and benefits of the action are clearly evident (increased recycling will help alleviate environmental problems).

Illustration 7

Facts

E.34. Entity G's mission is to provide summer camps for economically disadvantaged youths. Educating the families of ineligible youths about the camps is not one of the program objectives included in that mission.

E.35. Entity G conducts a door-to-door solicitation campaign for its camp programs. In the campaign, volunteers with canisters visit homes in middle-class neighborhoods to collect contributions. Entity G believes that people in those neighborhoods would not need the camp's programs but may contribute. The volunteers explain the camp's programs, including why the disadvantaged children benefit from the program, and distribute leaflets to the residents regardless of whether they contribute to the camp. The leaflets describe the camp, its activities, who can attend, and the benefits to attendees. Requests for contributions are not included in the leaflets.

Conclusion

E.36. The purpose, audience, and content criteria are not met. All costs should be charged to fund raising.

E.37. The activity does not include a call for specific action because it only educates the audience about causes (describing the camp, its activities, who can attend, and the benefits to attendees). Therefore, the purpose criterion is not met.

E.38. The audience criterion is not met, because the audience is selected based on its ability or likelihood to contribute, rather than based on (*a*) its need to use or reasonable potential for use of the action called for by the program component, or (*b*) its ability to take action to assist the entity in meeting the goals of the program component of the activity. (Entity G believes that people in those neighborhoods would not need the camp's programs but may contribute.)

E.39. The content criterion is not met because the activity does not call for specific action by the recipient. (The content educates the audience about causes that the program is designed to address without calling for specific action.)

Illustration 8

Facts

E.40. Entity H's mission is to educate the public about lifesaving techniques in order to increase the number of lives saved. One of Entity H's objectives in fulfilling that mission, as stated in the minutes of the board's meetings, is to produce and show television broadcasts including information about lifesaving techniques.

E.41. Entity H conducts an annual national telethon to raise contributions and to reach the American public with lifesaving educational messages, such as summary instructions concerning dealing with certain life-threatening situations. Based on the information communicated by the messages, the need for and benefits of the action are clearly evident. The broadcast includes segments describing Entity H's services. Entity H broadcasts the telethon to the entire country, not merely to areas selected on the basis of giving potential or prior fund raising results. Also, Entity H uses national television broadcasts devoted entirely to lifesaving educational messages to conduct program activities without fund raising.

Conclusion

E.42. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.43. The activity calls for specific action by the recipient (implicitly—to save lives) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (*a*) the program component of the activity calls for specific action by the recipient that will help accomplish Entity H's mission (to save lives by educating the public), and (*b*) a similar program activity is conducted without the fund raising using the same medium and on a scale that is similar to or greater than the scale on which it is conducted with the appeal (Entity H uses national television broadcasts devoted entirely to lifesaving educational messages to conduct program activities without fund raising).

E.44. The audience criterion is met because the audience (a broad segment of the population) is selected based on its need to use or reasonable potential for use of the action called for by the program activity.

E.45. The content criterion is met because the activity calls for specific action by the recipient (implicitly—to save lives) that will help accomplish the entity's mission (to save lives by educating the public), and the need for and benefits of the action are clearly evident (saving lives is desirable).

Illustration 9

Facts

E.46. Entity I's mission is to provide food, clothing, and medical care to children in developing countries.

E.47. Entity I conducts television broadcasts in the United States that describe its programs, show the needy children, and end with appeals for contributions. Entity I's operating policies and internal management memoranda state that these programs are designed to educate the public about the needs of children in developing countries and to raise contributions. The employees producing the programs are trained in audiovisual production and are familiar with Entity I's programs. Also, the executive producer is paid $25,000 for this activity, with a $5,000 bonus if the activity raises over $1,000,000.

Conclusion

E.48. The purpose, audience, and content criteria are not met. All costs should be charged to fund raising.

E.49. The activity does not include a call for specific action because it only educates the audience about causes (describing its programs and showing the needy children). Therefore, the purpose criterion is not met. (Also, note that if the factor in paragraph .10*a* were considered, it would not be determinative of whether the purpose criterion is met. Although the executive producer will be paid $5,000 if the activity raises over $1,000,000, that amount would not be a majority of the executive producer's total compensation for this activity, because $5,000 would not be a majority of the executive producer's total compensation of $30,000 for this activity. Also, note that if other evidence, such as the indicators in paragraph .11, were considered, the purpose criterion would not be met based on the other evidence. Although the qualifications and duties of the personnel performing the activity indicate that the employees producing the program are familiar with Entity I's programs, the facts that some, but less than a majority, of the executive producer's compensation varies based on contributions raised, and that the operating policies and internal management memoranda state that these programs are designed to educate the public about the needs of children in developing countries [with no call for specific action by recipients] and to raise contributions, indicate that the purpose is fund raising.)

E.50. The audience criterion is not met because the audience is selected based on its ability or likelihood to contribute, rather than based on (*a*) its need to use or reasonable potential for use of the action called for by the program component, or (*b*) its ability to take action to assist the entity in meeting the goals of the program component of the activity. (The audience is a broad segment of the population of a country that is not in need of or has no reasonable potential for use of the program activity.)

E.51. The content criterion is not met because the activity does not call for specific action by the recipient that will help accomplish the entity's mission. (The content educates the audience about the causes without calling for specific action.)

Illustration 10

Facts

E.52. Entity J is a university that distributes its annual report, which includes reports on mission accomplishments, to those who have made significant contributions over the previous year, its board of trustees, and its employees. The annual report is primarily prepared by management and general personnel, such as the accounting department and executive staff. The activity is coordinated by the public relations department. Internal management memoranda indicate that the purpose of the annual report is to report on how management discharged its stewardship responsibilities, including the university's overall performance, goals, financial position, cash flows, and results of operations. Included in the package containing the annual report are requests for contributions and donor reply cards.

Conclusion

E.53. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.54. The activity has elements of management and general functions. Therefore, no call for specific action is required. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (*a*) the employees performing the activity are not members of the fund-raising department and perform other non-fund-raising activities and (*b*) internal management memoranda indicate that the purpose of the annual report is to fulfill one of the university's management and general responsibilities.

E.55. The audience criterion is met because the audience is selected based on its reasonable potential for use of the management and general component. Although the activity is directed primarily at those who have previously made significant contributions, the audience was selected based on its presumed interest in Entity J's annual report (prior donors who have made significant contributions are likely to have an interest in matters discussed in the annual report).

E.56. The content criterion is met because the activity (distributing annual reports) fulfills one of the entity's management and general responsibilities (reporting concerning management's fulfillment of its stewardship function).

Illustration 11

Facts

E.57. Entity K is an NPO. In accordance with internal management memoranda documenting its policies requiring it to comply with Internal Revenue Service (IRS) regulations, it mails prior donors who have made quid pro quo payments in excess of $75 documentation required by the IRS. The documentation is included on a perforated piece of paper. The information above the perforation line pertains to the documentation required by the IRS. The information below the perforation line includes a request for contributions and may be used as a donor reply card.

Conclusion

E.58. The purpose, audience, and content criteria are met, and the joint costs should be allocated. (Note that the costs of the information below the perforation line are identifiable with fund raising and therefore should be charged to fund raising.)

E.59. The activity has elements of management and general functions. Therefore, no call for specific action is required. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because internal management memoranda indicate that the purpose of the activity is to fulfill one of Entity K's management and general responsibilities.

E.60. The audience criterion is met because the entity is required to direct the management and general component of the activity to the particular audience. Although the activity is directed at those who have previously contributed, the audience was selected based on its need for the documentation.

E.61. The content criterion is met because the activity (sending documentation required by the IRS) fulfills one of the entity's management and general responsibilities (complying with IRS regulations).

Illustration 12

Facts

E.62. Entity L is an animal rights organization. It mails a package of material to individuals included in lists rented from various environmental and other organizations that support causes that Entity L believes are congruent with its own. In addition to donor response cards and return envelopes, the package includes (*a*) materials urging recipients to contact their legislators and urge the legislators to support legislation to protect those rights, and (*b*) postcards addressed to legislators urging support for legislation restricting the use of animal testing for cosmetic products. The mail campaign is part of an overall strategy that includes magazine advertisements and the distribution of similar materials at various community events, some of which are undertaken without fund-raising appeals. The advertising and community events reach audiences similar in size and demographics to the audience reached by the mailing.

Conclusion

E.63. The purpose, audience, and content criteria are met, and the joint costs should be allocated.
