Risks of material misstatement can arise from a variety of sources, including external factors, including conditions in the company's industry and environment and company-specific factors, such as the nature of the company, its activities, and internal control over financial reporting which can affect the judgments involved in determining accounting estimates or create pressures to manipulate the financial statements to achieve certain financial targets.³⁶

In an integrated audit, many factors can affect the risk associated with a control including the design of the control,³⁷ nature of the control and the frequency with which it operates as well as the competence of the personnel who perform the control or monitor its performance and whether there have been changes in key personnel who perform the control or monitor its performance.³⁸ Accordingly, an increase in the volume of foreclosures or loan repurchases could affect the risks associated with related controls.

³³ AU sec. 722.22.

³⁴ AU sec. 722.29–722.31.

³⁵ Paragraph 15 of Auditing Standard No. 9, *Audit Planning*. On August 5, the Board adopted Auditing Standards No. 8 through No. 15 related to the auditor's assessment of and response to risk ("the Risk Assessment Standards"), which, if approved by the SEC, would become effective for audits of fiscal periods beginning on or after December 15, 2010. For audits of fiscal periods before the Risk Assessment Standards are effective, auditors should refer to the relevant requirements of AU sec. 311, *Planning and Supervision*, AU sec. 312, AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*, AU sec. 319, *Consideration of Internal Control in a Financial Statement Audit*, and Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*.

³⁶ Paragraph 5 of Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*.

³⁷ Paragraph .42 of Auditing Standard No. 5.

³⁸ Paragraph .47, Auditing Standard No. 5.

Attestation Reports on Assessments of Compliance With Servicing Criteria

Section 1122 of the SEC's Regulation AB requires an attestation report by a registered public accounting firm on a servicer's assessment of compliance with servicing criteria.³⁹ These criteria include, among other things, maintaining collateral or security on pool assets as required by the transaction agreements or related pool asset documents; and initiating, conducting, and concluding loss mitigation or recovery actions in accordance with the timeframes or other requirements established by the transaction agreements.⁴⁰

In adopting Regulation AB, the SEC provided that AT sec. 601, *Compliance Attestation*, applies to the preparation of these attest reports⁴¹ and generally requires that, in assessing whether the servicer has complied with the criteria, an auditor should consider risk factors similar to those an auditor would consider when planning an audit of financial statements,⁴² as well as factors relevant⁴³ to the compliance engagement.⁴⁴ For example, in assessing risk, the auditor considers whether the servicer or its parent has identified noncompliance as part of an internal investigation, internal audit, or other compliance review.

³⁹ Item 1122, *Compliance with applicable servicing criteria*, under Regulation AB.

⁴⁰ *Ibid.*

⁴¹ See SEC Release No. 338518, *Asset-Backed Securities* (December 22, 2004), which states in part: "On April 25, 2003, the Commission approved the PCAOB's adoption of the auditing and attestation standards in existence as of April 16, 2003 as interim auditing and attestation standards. The Attestation Standard for Compliance Attestation (AT sec. 601) in those interim auditing and attestation standards should be used in performing this examination engagement."

⁴² AT sec. 601.33.

⁴³ *Ibid.*

⁴⁴ Rules 13a18(c) and 15d18(c) under the Exchange Act require that the attestation report on the assessment of compliance with servicing criteria for assetbacked securities be made in accordance with standards for attestation engagements issued or adopted by the PCAOB.

.08 Staff Audit Practice Alert No. 8 Audit Risks in Certain Emerging Markets

October 3, 2011

Staff Audit Practice Alerts highlight new, emerging, or otherwise noteworthy circumstances that may affect how auditors conduct audits under the existing requirements of the standards and rules of the PCAOB and relevant laws. Auditors should determine whether and how to respond to these circumstances based on the specific facts presented. The statements contained in Staff Audit Practice Alerts do not establish rules of the Board and do not reflect any Board determination or judgment about the conduct of any particular firm, auditor, or any other person.

Executive Summary

Emerging markets play an increasingly important role in the global economy given their high economic growth outlook and significant market size.¹ Recent disclosures of possible improprieties in financial reporting by companies based in certain large emerging markets in Asia and observations from the Board's oversight activities highlight the need for heightened awareness of risks when performing audits of companies with operations in emerging markets.

This practice alert focuses on risks of misstatement due to fraud ("fraud risks") that auditors might encounter in audits of companies with operations in emerging markets, auditors' responsibilities for addressing those risks, and certain other auditor responsibilities under PCAOB auditing standards. Local business practices and cultural norms in emerging markets may differ from those in more developed markets, and auditors should be alert to the effect of these differences on the risks of material misstatement. Auditors should focus on the audit procedures required to respond to those risks.

Fraud risks may be encountered in audits of companies in any region, whether the region is an emerging or developed market. Auditors have a responsibility to assess fraud risks in the financial statements that they audit and to perform audit procedures that respond to those risks, regardless of the regulatory environment.² The specific nature and characteristics of fraud risks, however, can vary depending upon, among other things, the environment in which the company operates, including the maturity and the robustness of the regulatory environments in the countries in which the company conducts its business activities.

Authorities in many emerging market countries are taking steps to improve investor protection. The PCAOB, however, has observed from its oversight activities some conditions in audits of certain companies in emerging markets that indicate heightened fraud risk. Other situations have come to light in recent corporate filings with the Securities and Exchange Commission ("SEC") and in SEC orders suspending trading in securities of certain companies in emerging markets. In just two months in 2011, more than 24 companies with their principal place of business in the People's Republic of China ("PRC") filed

¹ According to information in the Statistical Appendix of International Monetary Fund *World Economic Outlook: Slowing Growth Rising Risks* (September 2011), emerging market countries accounted for over 40 percent of global gross domestic product in 2010.

² See paragraph 4 of Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement* and paragraphs 3-4 of Auditing Standard No. 13, *The Auditor's Responses to the Risks of Material Misstatement*.

Forms 8-K with the SEC reporting auditor resignations, accounting irregularities, or both.³ In some instances, the auditor's letter of resignation stated that the auditor resigned because of circumstances that could constitute illegal acts for purposes of Section 10A of the Securities Exchange Act of 1934 ("Exchange Act").⁴ Since then the SEC's actions have expanded, including instituting stop order proceedings against two PRC-based companies.⁵ Further, additional auditor resignations have occurred.⁶

Examples of conditions and situations indicating heightened fraud risk in certain companies in emerging markets that have been observed by PCAOB staff or reported in an SEC filing include:

- Existence of two separate and different sets of financial books and records;
- Discrepancies between the company's financial books and records and audit evidence obtained with respect to the existence and accuracy of cash balances, accounts receivable, and revenues;
- Auditor difficulties in confirming cash balances, including when requesting to visit the offices of the company's bank, or questions about the authenticity of bank statements provided to the auditor;
- Auditors' follow-up visits to bank offices indicating serious discrepancies between bank confirmations provided to the auditor and the bank's actual records, such as previously undisclosed material borrowings and no record of or significant differences regarding certain transactions;
- Attempts by management to intercept or alter confirmation requests or responses;
- Irregularities in sales contracts, such as a company-specific seal affixed on the sales contract that does not belong to the purported customer named in the contract;
- Recognizing revenue from contracts or customers whose existence could not be corroborated;
- Recording sales of products shipped to warehouses or freight forwarders where no customer is identified;
- Undisclosed material facts surrounding acquisition transactions, sales transactions, and off-balance-sheet transactions with related parties;
- Recording of assets for which evidence of control, ownership, or title is either unclear or difficult to corroborate;
- Potential double counting of fixed assets;
- Recording of uncorroborated operating expenses for which the business purpose is unclear;

⁴ See the discussion in the section on illegal acts below.

⁵ See SEC Press Release, Stop Order Proceedings Instituted Against China Intelligent Lightning and Electronics, Inc., and China Century Dragon Media, Inc. (June 13, 2011) at: <http://www.sec.gov/news/press/2011/2011-127.htm>.

⁶ See, e.g., Longtop Financial Technologies Limited, Form 6-K (May 23, 2011), Exhibit 2 at: <http://www.sec.gov/Archives/edgar/data/1412494/000095012311052882/d82501exv99w2.htm>.

- Manipulation of the accounting records to mischaracterize or conceal payment of bribes or other improper payments;
- Significant unexplained discrepancies between amounts included in the financial statements in SEC filings and amounts included in financial reports to other regulators, such as local authorities;
- Use of personal-type bank accounts held in the name of corporate officers or employees instead of corporate-type bank accounts for company business; and
- Unusual delays by management in the production of routine documents requested by the auditor.⁷

PCAOB standards require auditors to perform their audits to respond to fraud risks and other risks of material misstatement, and to obtain relevant and reliable evidence that is sufficient to support the auditor's opinion.⁸ This practice alert discusses certain considerations that may be relevant when performing audits in emerging markets.

Although the conditions, situations, and fraud risks described in this alert have been observed in audits of companies in certain emerging markets, they might also be present at companies in other markets. The matters discussed in this alert are relevant whenever such conditions, situations, or fraud risks are present in audits of companies located in emerging or developed markets.

Consideration of Fraud is an Integral Part of the Audit

The consideration of fraud is an integral part of the audit under PCAOB standards. PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement due to error or fraud.⁹ The auditor should exercise professional skepticism, and "conduct the audit engagement with a mindset that recognizes the possibility that a material misstatement due to fraud could be present."¹⁰ PCAOB auditing standards related to the auditor's assessment of and response to risk¹¹ and AU sec. 316, collectively, describe the auditor's responsibilities for identification, assessment, and response to fraud risks.

⁷ In addition to indicating a heightened fraud risk, in some circumstances, the conditions and situations in this list also may be indications of illegal acts which are discussed in the section on illegal acts below.

⁸ See, generally, AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*; Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, Auditing Standard No. 13 and Auditing Standard No. 15, *Audit Evidence*.

⁹ See paragraph 3 of Auditing Standard No. 8, *Audit Risk*.

Identifying and Assessing Fraud Risk Factors¹²

Fraud risks may arise from a variety of sources, including external factors and internal factors. The auditor should perform risk assessment procedures¹³ and evaluate whether the information gathered from those procedures indicates that one or more fraud risk factors are present and should be taken into account in identifying and assessing fraud risks.¹⁴

As part of risk assessment procedures, the auditor “should obtain an understanding of the company and its environment”¹⁵ in order to “understand the events, conditions, and company activities that might reasonably be expected to have a significant effect on the risks of material misstatement.”¹⁶ This includes, for example, understanding:¹⁷

- The relevant industry and regulatory factors, including the legal, and political environment, which may include matters such as:
 - The company’s significance in the regional or local economy and its level of influence over its industry, and regional or local government, and
 - Cultural norms in the business and regulatory environments;
- The company’s objectives, strategies, and related business risks; its organizational structure; and sources of funding of the company’s operations;
- The company’s significant investments, including equity method investments, joint ventures, and variable interest entities (“VIEs”),¹⁸
- The sources of the company’s earnings, including the relative profitability of key products and services; and
- The company’s key supplier and customer relationships.

Significant differences can exist between the business environments faced by companies with operations in emerging markets and those in developed markets, which may affect the risk of misstatement in the financial statements. For example, companies in emerging markets may be subject to rapidly changing or less consistent regulatory oversight and reporting requirements, whereas companies in developed markets may not.¹⁹ These and other aspects of the business environment in emerging markets can create incentives, pressures, and opportunities that may lead to a heightened risk of fraud.

¹² According to paragraph 65 of Auditing Standards 12, “[f]raud risk factors are events or conditions that indicate (1) an incentive or pressure to perpetrate fraud, (2) an opportunity to carry out the fraud, or (3) an attitude or rationalization that justifies the fraudulent action. Fraud risk factors do not necessarily indicate the existence of fraud; however, they often are present in circumstances in which fraud exists.” See, generally, AU sec. 316.85.

¹³ See paragraphs 4-58 of Auditing Standard No. 12, which describe risk assessment procedures the auditor should perform.

¹⁴ See paragraphs 59-73 of Auditing Standard No. 12, which discuss identifying and assessing the risks of material misstatement, due to error or fraud, using information obtained from performing risk assessment procedures.

¹⁹ See, generally, Silvia Iorgova and Li Lian Ong *The Capital Markets of Emerging Europe: Institutions, Instruments and Investors*, IMF Working Paper WP/08/103 (April 2008), at: www.imf.org/external/pubs/ft/wp/2008/wp08103.pdf.

Incentives and Pressures

As with public companies in developed countries, emerging market companies seeking to raise capital in international markets may wish to present a strong financial position and robust growth in revenue and earnings. In turn, this may create incentives or pressures to manipulate the financial statements rather than report poor results or bad news to the investing public. For example, if a company failed to consummate a previously announced acquisition, there is a risk that management might manipulate the financial statements to make them appear as though the acquisition has occurred. As another example, management at remotely located operating units of large multinational companies locations may feel pressure to report inflated results.

In addition to the incentives and pressures routinely considered in audits of public companies, auditors should consider any unique characteristics of the emerging market company or its environment that might result in specific fraud risks. For example, a company might engage in a significant business partnership with a state-owned entity or VIE. In that situation, the company might be motivated to consolidate the partnership or VIE to strengthen its reported financial position, even if significant legal restrictions prevent the company from obtaining a controlling interest in the partnership or assets. For instance, a company might enter into contractual arrangements with a VIE that are designed to enable the company to consolidate the VIE, even though there might be significant uncertainties regarding the economic substance of those arrangements.²⁰ As another example, legal restrictions on the movement of company assets might lead companies to maintain substantial amounts of cash or other liquid assets in business units in certain jurisdictions, which can create incentives for misappropriation of assets.

Opportunities

Some fraud risks arise when internal or external conditions and weak internal controls provide opportunities for management or employees of the company to engage in fraudulent activities. Certain aspects of the business environment in emerging markets can create opportunities to perpetrate fraud, as discussed in the examples below.

For example, a company in an emerging market might have a dominant presence in the geographic region in which it is located because it is the single largest employer in the region, or it may exercise control over raw materials on which other companies in the region depend. The company's management might have strong ties with the local or state government. In such circumstances:

- Management might be able to dictate terms or conditions to local suppliers or customers, which might result in non-arm's length transactions.
- Management might be able to pressure personnel of a local bank or other third parties to provide fraudulent information to the auditor.
- Company employees might not be willing to report instances of fraud for cultural reasons or fear of retribution from management. While whistleblower protections have been introduced in many emerging

²⁰ Additionally, such VIE structures can result in increased risks related to omitted, incomplete, or inaccurate disclosures. See paragraphs 12-13 of Auditing Standard No. 12.

market countries, observers have said that there is still a need to improve the effectiveness of the whistleblower programs.²¹

Additionally, weak internal controls and lack of robust governance mechanisms have been observed in companies in certain emerging market countries. This may stem from a lack of familiarity in local cultures with certain governance concepts, such as prohibition of self-dealing, even where similar legal concepts exist.²² For example, such a culture might provide opportunities for management to influence other senior company officials or various third parties to provide false or misleading information to the company's auditors.

If criticizing or questioning a figure of authority is contrary to the local culture, the company's employees may be hesitant to express any concerns about management's actions to an auditor. Such an environment can provide additional opportunities for management to override controls or intentionally misstate the financial statements.²³

As another example, a company in an emerging market might be created as a spin-off from a larger private or state-owned entity. The operating components of the larger entity may be among the company's largest suppliers or customers. In certain instances, the same individual or group that controls the company might also control the company's suppliers and customers.²⁴ Such situations might provide opportunities for management to:

- Enter into undisclosed side agreements with the related parties, or
- Collude with the related parties to create false documentation to support fictitious transactions.

Some emerging market companies employ as their chief financial officer ("CFO") an individual based in, or from, another region or country. Such a CFO might lack knowledge of the local language and the company's business practices and, therefore, might not be able to effectively perform certain important entity-level controls, thereby creating opportunities for company personnel to commit or conceal fraudulent misstatement of the financial statements. Similar conditions and risks may be present at significant subsidiaries of multi-national companies in emerging markets.

In some emerging market countries, controlling shareholders exercise strong oversight over executive management and foster a corporate culture focused on long-term value creation. In other jurisdictions, controlling shareholders have the opportunity to engage in abusive conduct, a problem that is magnified in jurisdictions where transparency is poor and where a weak rule of law fails to give minority investors proper judicial recourse.²⁵

The Auditor's Response to Fraud Risks

PCAOB standards require that the auditor design and implement audit responses that address the identified and assessed fraud risks.²⁶ The auditor's responses should include responses that have an overall effect on how the audit is conducted (e.g., making appropriate engagement assignments) and responses involving the nature, timing, and extent of audit procedures (e.g., modifying the planned audit procedures).²⁷

Under PCAOB standards, “[t]he auditor’s responses to the assessed risks of material misstatement, particularly fraud risks, should involve the application of professional skepticism in gathering and evaluating audit evidence.”²⁸ Ineffective responses to fraud risks may result in the auditor’s failure to detect material misstatement of the financial statements or failure to obtain sufficient appropriate audit evidence to support the opinion in the auditor’s report. Examples of the application of professional skepticism in response to the assessed fraud risks may include “modifying the planned audit procedures to obtain more reliable evidence regarding relevant assertions and ... obtaining sufficient appropriate evidence to corroborate management’s explanations or representations.”²⁹

Performing Audit Procedures to Respond to Fraud Risks

The auditor should perform substantive procedures, including tests of details, that are specifically responsive to the assessed fraud risks, including certain procedures to address the risk of management override of controls.³⁰

Many of the conditions discussed above that indicate heightened fraud risk appear to involve possible attempts to overstate the amounts of assets or revenues in the companies’ financial statements. When performing audit procedures to address certain fraud risks, especially those involving the existence of assets such as cash and accounts receivable, it is important to obtain audit evidence through direct written communication with a knowledgeable third party who is objective and free from bias with respect to the audited entity.³¹

If, through the performance of risk assessment procedures, other audit procedures, or by other means, the auditor becomes aware of conditions that call for a heightened degree of professional skepticism with respect to the authenticity of documents, the auditor should perform additional procedures to determine that the reliability of evidence obtained in the course of the audit has not been compromised.³² In such circumstances, it would be unlikely for auditors to rely solely on management-provided documentation without obtaining documentation directly from third parties to corroborate management’s assertions.

²⁶ See paragraph 3 of Auditing Standard No. 13.

²⁷ See Auditing Standard No. 13, which establishes requirements regarding designing and implementing appropriate responses to the risks of material misstatement.

²⁸ Paragraph 7 of Auditing Standard No. 13.

²⁹ Ibid.

³⁰ See paragraphs 13 and 15 of Auditing Standard No. 13. Additionally, as part of the auditor’s response to the assessed risks of material misstatement due to fraud, the auditor should incorporate an element of unpredictability in the selection of auditing procedures to be performed. See paragraph 5c of Auditing Standard No. 13. Also, see paragraphs 14-15 of Auditing Standard No. 5.

³¹ See paragraphs .26-.27 of AU sec. 330, *The Confirmation Process* and the section on confirmations below.

³² See paragraph 9 of Auditing Standard No. 15.

Confirmations

To respond to fraud risks related to the company's accounts with a bank or amounts due from customers, it is important for the auditor to confirm amounts included in the company's financial statements directly with a knowledgeable individual from the bank or customer who is objective and free from bias with respect to the audited entity rather than rely solely on information provided by the company's management.³³ Under PCAOB standards, "[e]vidence obtained from a knowledgeable source that is independent of the company is more reliable than evidence obtained only from internal company sources."³⁴

Further, under PCAOB standards, the auditor "should maintain control over the confirmation requests and responses."³⁵ If the auditor identifies a risk that the company's management, or someone else at management's request, could attempt to intercept or alter the confirmation requests or responses, the auditor should maintain control over the confirmation process by taking actions aimed specifically at addressing that risk. For example, if the auditor uses a courier to expedite the delivery of confirmation requests, the courier should be reliable and independent from management to ensure that the confirmation requests are delivered directly to the intended recipient. If there is a heightened risk of management interference in the confirmation process, it might be necessary for the auditor to deliver the confirmation request personally and/or to observe the intended recipient of the confirmation request complete the response in order to communicate directly with an independent and knowledgeable source.

Also, the auditor should evaluate who the intended recipient of the confirmation request is and whether the company's management has any influence over this individual to provide false or misleading information to the auditor.³⁶ For example, if the company is the only or a significant customer or supplier of the confirming entity, the staff of that entity may be more susceptible to pressure from the company's management to falsify documentation provided to the auditor. As another example, the auditor might determine that confirmation responses cannot be relied upon if it appears that management interfered with the process because responses to confirmation requests were received from a personal e-mail account rather than a company network domain, or multiple confirmations are returned with similar handwriting and the same date, or confirmations returned from companies with different physical addresses contain mail stamps indicating same time processing.

If there is a heightened risk that the intended recipient is susceptible to management influence, the auditor should consider whether the response will provide meaningful and appropriate evidence and determine whether other procedures are necessary to obtain sufficient appropriate audit evidence.³⁷

³³ See AU sec. 330.34, which states that there is a presumption that the auditor will request the confirmation of accounts receivable during an audit except under certain conditions that are unlikely to be present when fraud risks are present. For example, one of those conditions, the auditor's combined assessed level of inherent and control risk is low, is unlikely to be the case when a fraud risk is present.

³⁴ Paragraph 8 of Auditing Standard No. 15. Also, AU secs. 330.26-27 describe the auditor's responsibilities regarding confirmation with knowledgeable third parties who are objective and free from bias with respect to the audited entity.

³⁵ AU sec. 330.28.

³⁶ See AU sec. 330.26-27.

³⁷ See paragraph 4 of Auditing Standard No. 15 and AU sec. 330.27.

Revenue Recognition

Under PCAOB standards, “[t]he auditor should presume that there is a fraud risk involving improper revenue recognition and evaluate which types of revenue, revenue transactions, or assertions may give rise to such risks.”³⁸ Management might use a variety of tools to attempt to overstate revenue or conceal improprieties in recording revenue, including entering into improper bill-and-hold transactions, generating invoices and customer contracts for non-existent transactions, altering original documentation, and establishing fake customers and mailing addresses.

To develop an effective response to such fraud risks, it is important for the auditor to obtain an understanding of the company and its environment, including the sources and composition of revenues; specific attributes of revenue transactions; the company’s business and financial reporting processes regarding revenue and amounts due from customers; and unique industry considerations. Such an understanding is important in order for the auditor to consider the ways in which revenue could be fraudulently misstated in order to design appropriate audit procedures to detect those types of misstatements. Also, PCAOB standards require the auditor to gain an understanding of the business rationale for significant unusual transactions and whether that rationale (or the lack thereof) suggests that the transactions may have been entered into to engage in fraudulent financial reporting or conceal misappropriation of assets.³⁹

Exercising professional skepticism requires the auditor to, among other things, perform procedures to obtain and critically evaluate evidence from all sources rather than rely solely on management representations about the company’s performance.⁴⁰ For example, if the auditor performs an analytical procedure regarding revenue and management represents that a significant unexpected increase in revenue from the prior year results from increased production, the auditor should obtain evidence to corroborate this representation and critically evaluate whether the representation is reasonable based on the evidence obtained, such as, whether the company is capable of producing the additional output.⁴¹

While the auditor is not expected to be an expert in document authentication, the auditor should exercise professional skepticism in reviewing documentation obtained as audit evidence, especially documentation provided by the company. Under PCAOB standards, “if conditions indicate that a document may not be authentic or that the terms in a document have been modified but that the modifications have not been disclosed to the auditor, the auditor should modify the planned audit procedures or perform additional audit procedures to respond to those conditions and should evaluate the effect, if any, on the other aspects of the audit.”⁴² For example, if the auditor suspects that management has falsified sales documentation, the auditor should perform additional procedures, such as performing procedures to obtain documentation directly from the company’s customers or suppliers to compare it to documents provided by management.

³⁸ Paragraph 68 of Auditing Standard No. 12.

³⁹ See AU sec. 316.66.

⁴⁰ See paragraph 7 of Auditing Standard No. 13 and AU sec. 333.02-.04.

⁴¹ See paragraphs 5-9 of Auditing Standard No. 14. When the auditor is performing an analytical procedure as a substantive test, see the requirements of AU sec. 329, *Substantive Analytical Procedures*.

⁴² Paragraph 9 of Auditing Standard No. 15.

Transactions with Related Parties

It is not uncommon for companies in emerging markets to be owned or controlled by a small group of individuals or a family. These individuals often serve as the senior members of the company's management and also may control some of the entities that the company does business with, such as customers or suppliers. Accordingly, transactions with related parties may play a significant role in the company's operations. The auditor, therefore, should be aware of a risk of undisclosed related party transactions or side agreements.

To obtain sufficient appropriate audit evidence with respect to related party transactions, an auditor should design and perform procedures that take into account the specific environment in which a company operates.⁴³ In addition, pursuant to section 10A(a)(2) of the Exchange Act, auditors are required to include "procedures designed to identify related party transactions that are material to the financial statements or otherwise require disclosure therein."⁴⁴

Some companies in emerging markets might have significant transactions with related entities that are not audited or are audited by another firm. For example, a company might purchase substantially all of its raw materials and utility services from or extend significant loans to a related unaudited entity. Paragraph A.2 of AU sec. 316.85 states in the Opportunities subsection that "significant related-party transactions not in the ordinary course of business or with related entities not audited or audited by another firm" constitute an example of a fraud risk factor that provides opportunities to engage in fraudulent financial reporting. Staff Audit Practice Alert No. 5, *Auditor Considerations Regarding Significant Unusual Transactions*, issued on April 7, 2010, describes certain requirements in PCAOB auditing standards regarding significant unusual transactions.⁴⁵

Other Matters that Affect Fraud Risk

Under PCAOB standards, "the auditor should evaluate whether the accumulated results of auditing procedures and other observations affect the assessment of the fraud risks made throughout the audit and whether the audit procedures need to be modified to respond to those risks."⁴⁶ Matters indicating a heightened risk of fraud may include, for example:⁴⁷

- *Inconsistent, vague, or implausible responses from management* – In situations in which management fraudulently recorded non-existent sales transactions, management's explanation of an unexpected increase in revenue may be vague or inconsistent with the auditor's understanding of the company's operations.
- *Conflicting or missing evidence* – Documents provided by management may appear to have been altered or have internal inconsistencies. The auditor should critically assess such inconsistencies and discrepancies to identify whether they are indicative of fraudulent activities by the company's management or employees. For example:

⁴³ See AU sec. 334, *Related Parties*, which describes procedures for the auditor to perform "to identify related party relationships and transactions and to satisfy himself concerning the required financial statement accounting and disclosure."

⁴⁴ See 15 U.S.C. §78j-1(a).

⁴⁵ Staff Audit Practice Alert No. 5 is located on the Board's web site at: http://pcaobus.org/Standards/QandA/04-07-2010_APA_5.pdf.

⁴⁶ Paragraph 28 of Auditing Standard No. 14.

⁴⁷ See Appendix C of Auditing Standard No. 14.

- The name of a third party on the letterhead of a confirmation response may be different from the name on a seal used to authenticate a signed document.
- Amounts confirmed by the local branch of a bank may be different from those confirmed by the bank headquarters.
- There may be conflicting or missing documentary support for the company's rights to assets.
- *Problematic relationships between the auditor and management* – To conceal fraudulent financial reporting, management might attempt to control the audit process by limiting the auditor's access to sources of audit evidence, such as the company's personnel or third parties. For example:
 - Management could request that the auditor send confirmation requests and receive replies through personnel of the company.
 - Management could instruct the bank not to respond to the auditor's request to confirm the company's cash, deposit, or loan payable balances with the bank.
 - Management engaged in fraudulent financial reporting might be unwilling to add or revise disclosures in the financial statements to make them more transparent.
 - Management engaged in fraudulent financial reporting might be unwilling to appropriately address significant deficiencies in internal control on a timely basis, e.g., before the end of a financial reporting period.

Under PCAOB standards, restrictions on the scope of the audit imposed by the company's management or by circumstances, such as – among other things – the inability to obtain sufficient appropriate evidence or an inadequacy in the accounting records, may require the auditor to qualify his or her opinion or to disclaim an opinion on the company's financial statements.⁴⁸

Other Considerations

Client Acceptance and Continuance

Under PCAOB standards, client acceptance and continuance is a required element of quality control for an auditor.⁴⁹ This includes establishing policies and procedures to provide reasonable assurance that the auditor:

- “Undertakes only those engagements that the firm can reasonably expect to be completed with professional competence.
- Appropriately considers the risks associated with providing professional services in the particular circumstances.”⁵⁰

Conditions and situations previously described in this alert that indicate heightened fraud risk in companies with operations in emerging markets may also place additional demands on the auditor's professional competence. In performing acceptance and continuance assessments for clients with operations

⁴⁸ See paragraph .22 of AU sec. 508, *Reports on Audited Financial Statements*. Also, Auditing Standard No. 5 provides direction regarding modifications to the auditor's report due to restrictions on the scope of the audit of internal control over financial reporting.

⁴⁹ See paragraph .07 of QC sec. 20, *System of Quality Control for a CPA Firm's Accounting and Auditing Practice*.

⁵⁰ QC sec. 20.15.

in emerging markets, the auditor should consider his or her own ability to perform audits in emerging markets and, if using the work of accountants outside the auditor's own firm, the auditor's ability to supervise or assume responsibility for that work in accordance with PCAOB standards.

The PCAOB previously directed auditors' attention to the standards that apply to using the work of other auditors and engaging assistants from outside the firm – including auditors and assistants based outside the U.S. – in Staff Audit Practice Alert No. 6, *Auditor Considerations Regarding Using the Work of Other Auditors and Engaging Assistants from Outside the Firm* (“Practice Alert No. 6”), issued on July 12, 2010.⁵¹ Practice Alert No. 6 noted, among other things, that the following factors may affect how an auditor plans and performs an audit of the financial statements of an issuer with substantially all of its operations outside of the U.S., including emerging market countries:

- Use of local audit firms or assistants from an outside firm to complete a portion of the audit work;
- The need to understand the local language;
- Additional travel time and expense necessary to complete an audit; and
- The need to understand the local business environment in which the client operates.

Making Engagement Assignments and Coordinating the Auditor's Response with Another Accounting Firm

PCAOB standards require that the knowledge, skill, and ability of engagement team members with significant engagement responsibilities, and the extent of supervision of engagement team members, be commensurate with the risks of material misstatement, including fraud risks.⁵² The higher risk areas of the audit, including the areas of fraud risk, require more supervisory attention from the engagement partner. When the auditor uses the work of accountants outside the auditor's own firm, the auditor should take into account the knowledge, skill, and ability of each engagement team member from outside the firm.⁵³ Through the Board's oversight activities, the Board's staff has observed instances in certain audits of emerging market companies in which the engagement partner or other engagement team members inappropriately delegated to junior assistants the identification of audit issues, analysis of documents provided by the company, and certain communication with management and third parties; additionally, supervision by the auditor of the junior personnel was not in compliance with PCAOB standards.

In some situations, another independent accounting firm (including accounting firms affiliated with the same network as the auditor) performs an audit of and issues a report on one or more of the company's subsidiaries, divisions, branches, components, or investments. The auditor should inquire about the professional reputation of the other auditor and adopt other appropriate measures, e.g., ascertaining that the other auditor is familiar with the relevant

⁵¹ Practice Alert No. 6 is located on the Board's web site at: http://pcaobus.org/Standards/Qanda/2010-07-12_APA_6.pdf

⁵² See paragraph 6 of Auditing Standard No. 10 and paragraph 5 of Auditing Standard No. 13. If the auditor uses as assistants personnel of another accounting firm or individual accountants not employed by an accounting firm, the auditor should follow the same requirements as for supervising assistants from the auditor's own firm.

⁵³ See paragraph 6 of Auditing Standard No. 10.

financial reporting requirements and PCAOB standards.⁵⁴ PCAOB inspection reports, when available, may provide the auditor with relevant information.⁵⁵ The auditor should adopt appropriate measures to assure the coordination of the auditor's activities with those of the other auditor, including the audit procedures performed in response to fraud risks.⁵⁶ Through the Board's oversight activities, the Board's staff has observed instances in certain audits of companies in emerging markets in which the auditor did not properly coordinate the audit with another auditor. When significant parts of the audit are performed by other auditors, the auditor must decide whether the auditor's own participation in the audit is sufficient.⁵⁷

Making appropriate engagement assignments and coordinating the auditor's response with another auditor necessarily entails overcoming any language barriers. In some audits of companies in emerging markets, key engagement team members⁵⁸ might be from outside the country in which substantially all of the company's operations, its top management, or the other auditor is located. In those circumstances, the auditor should take the necessary steps to enable effective communication among the engagement team members, effective communication between the auditor and the company's personnel or the other auditor, and effective review of documentation prepared in a foreign language.⁵⁹

Individual accountants or accounting firms that participate in the audit from the same region where the company is located (the "local accountants") may be aware of local customs, cultural norms, and business practices that have an impact on the company's corporate governance and business activities. When planning and performing the audit, the auditor should discuss such matters with the local accountants and determine whether any of these matters affect fraud risks. The auditor should discuss with the local accountants identified fraud risks and determine that appropriate steps are taken to respond to these risks.⁶⁰

Illegal Acts

During the course of an audit, the auditor may determine that violations of laws or government regulations by company management or employees may constitute illegal acts, as defined by AU sec. 317, *Illegal Acts by Clients*,⁶¹ and

⁵⁴ See paragraph .10 of AU sec. 543, *Part of Audit Performed by Other Independent Auditors*.

⁵⁵ According to PCAOB Rule 2100, each public accounting firm that (a) prepares or issues any audit report with respect to any issuer; or (b) plays a substantial role in the preparation or furnishing of an audit report with respect to any issuer must be registered with the Board. The Board publishes on its Web site a list that names every registered firm that has triggered an inspection requirement under PCAOB Rule 4003 and notes whether the firm has ever been inspected. See <http://pcaobus.org/Inspections/Pages/InspectedFirms.aspx>. In addition, the Board has published on its Web site a listing of issuer audit clients of non-U.S. registered firms in jurisdictions where the PCAOB had been denied access to conduct inspections. See <http://pcaobus.org/International/Inspections/Pages/IssuerClientsWithoutAccess.aspx>.

⁵⁶ See AU sec. 543.10, and AU sec. 316.53.

⁵⁷ See AU sec. 543.02.

⁵⁸ The term "key engagement team members" includes all engagement team members who have significant engagement responsibilities, including the engagement partner. See paragraph 50 of Auditing Standard No. 12.

⁵⁹ See paragraph 5 of Auditing Standard No. 10 and AU sec. 543.10.

⁶⁰ See paragraph 5 of Auditing Standard No. 10, paragraphs 51-52 of Auditing Standard No. 12, and AU sec. 316.53.

⁶¹ See AU sec. 317.02. For example, even though not fraud, a violation of the books and records provisions of the Foreign Corrupt Practices Act ("FCPA"), Exchange Act sections 13(b)(2) through (b)(7), would be an illegal act as defined in AU sec. 317. These FCPA provisions generally require issuers with securities registered under section 12 of the Exchange Act or required to file reports under section 15(d) of the Exchange Act, among other things, to make

section 10A of the Exchange Act.⁶² AU sec. 317 describes the considerations an auditor should give to the possibility of illegal acts as well as the auditor's responsibilities when a possible illegal act is detected. In addition, pursuant to section 10A(a)(1) of the Exchange Act, auditors are required to perform procedures designed to provide reasonable assurance of detecting illegal acts that would have a direct and material effect on the determination of the financial statement amounts.⁶³ The auditor's responsibility to detect and report misstatements resulting from illegal acts having a direct and material effect on the determination of financial statement amounts is the same as that for misstatements caused by error or fraud.⁶⁴

When the auditor becomes aware of information concerning a possible illegal act, the auditor should obtain an understanding of the nature of the act, the circumstances in which it occurred, and sufficient other information to evaluate the effect on the financial statements, as well as the implications for other aspects of the audit, such as the reliability of representations of management.⁶⁵ The implications of particular illegal acts will depend on the relationship of the perpetration and concealment, if any, of the illegal act to specific control procedures, and the level of management or employees involved.⁶⁶ The auditor should also evaluate the adequacy of disclosure in the financial statements of the potential effects of an illegal act on the entity's operations.⁶⁷ If the illegal act results in uncorrected misstatements of even relatively small amounts, it further could have a material effect on the financial statements. For example, an illegal payment of an otherwise immaterial amount could be material if there is a reasonable possibility that it could lead to a material contingent liability or a material loss of revenue.⁶⁸ If the auditor concludes that an illegal act has or is likely to have occurred, AU sec. 317 requires that the auditor, among other things, determine "that the audit committee, or others with equivalent authority and responsibility, is adequately informed with respect to [the] illegal acts."⁶⁹

Section 10A(b) of the Exchange Act imposes additional requirements that apply when the auditor "detects or otherwise becomes aware of information indicating that an illegal act (whether or not perceived to have a material effect on the financial statements) has or may have occurred."⁷⁰

Subsequent Discovery of Facts Existing at the Date of the Auditor's Report

AU sec. 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report*, describes procedures that "should be followed by the auditor who, subsequent to the date of the [audit report], becomes aware that facts may have existed at that date which might have affected the report had he or she then

(footnote continued)

and keep books and records that fairly reflect the transactions and assets of the issuer and to devise and maintain internal accounting controls sufficient to permit the preparation of financial statements in conformity with the applicable financial reporting framework.

⁶² See 15 U.S.C. §78j-1(a).

⁶³ *Ibid.*

⁶⁴ See AU 317.05.

⁶⁵ See AU sec. 317.10 and .16. See also section 13(b)(2) of the Exchange Act.

⁶⁶ See AU sec. 317.16.

⁶⁷ See AU sec. 317.15.

⁶⁸ Paragraph 17 of Auditing Standard No. 14.

⁶⁹ AU sec. 317.17.

⁷⁰ See 15 U.S.C. §78j-1(b).

been aware of such facts.”⁷¹ The auditor should follow the requirements of AU sec. 561 if, subsequent to the date of the audit report, the auditor becomes aware of information indicating the possibility of fraudulent financial reporting.

.09 Staff Audit Practice Alert No. 9 Assessing and Responding to Risk in the Current Economic Environment

December 6, 2011

Staff Audit Practice Alerts highlight new, emerging, or otherwise noteworthy circumstances that may affect how auditors conduct audits under the existing requirements of the standards and rules of the PCAOB and relevant laws. Auditors should determine whether and how to respond to these circumstances based on the specific facts presented. The statements contained in Staff Audit Practice Alerts do not establish rules of the Board and do not reflect any Board determination or judgment about the conduct of any particular firm, auditor, or any other person.

Background

In December 2008, Staff Audit Practice Alert No. 3, *Audit Considerations in the Current Economic Environment* ("Practice Alert No. 3"),¹ was issued to assist auditors in identifying matters related to the then-current economic environment that might affect the risk of material misstatement of issuers' financial statements and the related auditor's responsibilities under Public Company Accounting Oversight Board ("PCAOB" or "the Board") standards.

Since the issuance of Practice Alert No. 3, economic conditions have been slower to recover than many had originally anticipated.² Uncertainty continues regarding global economic conditions, and certain volatility indicators are higher than they were before the financial crisis. In September 2011, the International Monetary Fund ("IMF") reduced its estimate of 2012 global growth from 4.5%, which was provided in June 2011, to 4% and, at the same time, reduced its 2012 growth forecast for U.S. growth from 2.7% to 1.8%.³

In November 2011, the Federal Reserve Board also reduced its projections for short- and longer-term GDP while increasing its estimated unemployment rate.⁴ While countries work toward addressing their economic challenges, market volatility continues, and economic conditions may vary significantly among different regions or sectors of the economy.

Difficult economic conditions may affect companies' operations and financial reporting and, in turn, may have implications for audits of financial statements and internal control over financial reporting. Matters discussed in Practice Alert No. 3, such as auditing fair value measurements, auditing accounting estimates, the auditor's consideration of a company's ability to continue as a going concern, and auditing financial statement disclosures, continue to be critical in the current economic environment.

¹ See Staff Audit Practice Alert No. 3 on the Board's web site at: http://pcaobus.org/Standards/QandA/12-5-2008_APA_3.pdf.

² For example, in August 2011, the Congressional Budget Office reported that "[a]lthough economic output began to expand again two years ago, the pace of the recovery has been slow, and the economy remains in a severe slump." Congress of the United States Congressional Budget Office, *The Budget and Economic Outlook: An Update* (August 2011).

³ On September 15, 2011, Christine Lagarde, Managing Director of the IMF, said "[o]verall, global growth is continuing, but slowing down. The advanced countries in particular are facing an anemic and bumpy recovery, with unacceptably high unemployment." The full text of Ms. Lagarde's speech is available at: <http://www.imf.org/external/np/speeches/2011/091511.htm>.

⁴ See Federal Reserve Board *Economic Projections of Federal Reserve Board Members and Federal Reserve Bank Presidents, November 2011*, available at: <http://www.federalreserve.gov/newsevents/press/monetary/20111102b.htm>.

Although many of the risks discussed in Practice Alert No. 3 continue to have relevance, a number of the auditing standards referenced in that alert regarding the auditor's assessment of and response to risk were superseded in 2010 when the Board adopted a suite of eight new auditing standards ("risk assessment standards").⁵ The risk assessment standards, which enhance the effectiveness of the auditor's assessment of and response to risk of material misstatement in an audit, became effective for audits of fiscal years beginning on or after December 15, 2010. As compared to the Board's interim standards, the risk assessment standards, among other things, establish enhanced requirements pertaining to the performance of risk assessment procedures, provide additional factors relevant to identifying significant risks, and enhance requirements for auditing financial statement disclosures. Auditors should be alert to the new requirements contained in the risk assessment standards and how those requirements relate to audits performed in the current economic climate.

The purpose of this staff audit practice alert is to assist auditors in identifying matters related to the current economic environment that might affect the risk of material misstatement and, therefore, require additional audit attention. The practice alert discusses certain issues posed by the current economic environment, highlights certain requirements in the risk assessment standards, and is organized into four sections:

- Considering the impact of economic conditions on the audit;
- Auditing fair value measurements and estimates;
- The auditor's consideration of a company's ability to continue as a going concern; and
- Auditing financial statement disclosures.

While the alert highlights certain issues, it is not intended to identify all issues that might affect audit risk in the current economic environment or serve as a substitute for the relevant auditing standards. All audits of issuers must be conducted in accordance with the standards of the PCAOB.

Considering the Impact of Economic Conditions on the Audit

As year-end approaches for many issuers, changing economic conditions might require the auditor to reassess the appropriateness of the planned audit strategy, materiality levels, risk assessments (including identified fraud risks and other significant risks), and planned audit responses. Such a reassessment is especially important if the auditor planned the audit and performed the initial risk assessment procedures early in the year or performed initial testing as of or through an interim date.

Audit Planning and Materiality Considerations

Audit planning is not a discrete phase of an audit but, rather, a continual and iterative process.⁶ The nature and extent of planning activities that are necessary depend on, among other things, changes in circumstances that occur

⁵ Auditing Standards Nos. 8-15 were adopted by the Board on August 5, 2010. See PCAOB Release No. 2010-004, *Auditing Standards Related to the Auditor's Assessment of and Response to Risk and Related Amendments to PCAOB Standards* available at: http://pcaobus.org/Rules/Rulemaking/Docket%20026/Release_2010-004_Risk_Assessment.pdf.

⁶ See paragraph 5 of Auditing Standard No. 9, *Audit Planning*.

during the audit.⁷ Accordingly, the auditor should modify the overall audit strategy and the audit plan as necessary if circumstances change significantly during the course of the audit.⁸ For example, in an audit of the financial statements of a company with operations in multiple locations, changes in regional economic conditions might alter the risks associated with certain locations, which in turn, could affect the selection of locations for testing or determination of extent of testing at selected locations.⁹

The current economic environment may also require the auditor to re-evaluate the established materiality level or levels and tolerable misstatement (e.g., if the auditor initially established the materiality level or levels and tolerable misstatement based on estimated or preliminary financial statement amounts that differ significantly from actual amounts).¹⁰ The auditor should evaluate whether, in light of the particular circumstances, there are certain accounts or disclosures for which there is a substantial likelihood that misstatements of lesser amounts than the materiality level established for the financial statements as a whole would influence the judgment of a reasonable investor.¹¹ If so, the auditor should establish separate materiality levels for those accounts or disclosures to plan the nature, timing, and extent of audit procedures.¹² For example, this might be appropriate if certain financial statement line items are particularly important to a regulatory requirement or a debt covenant.

Risk Assessment

The effectiveness of a risk-based audit approach is dependent on the ability of the auditor to identify the risks of material misstatement and to have an appropriate basis for assessing those risks. Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*, establishes requirements regarding the process of identifying and assessing risks of material misstatement of the financial statements, including the auditor's responsibilities for performing risk assessment procedures.

Examples of risk assessment procedures that may provide particularly relevant information in identifying and assessing the risks of material misstatement in the current economic environment include, among other things:

- Reading public information about the impact of the current economic environment on the company, including, for example, analyst reports and company-issued press releases.¹³
- Obtaining an understanding of the company's performance measures (including, for example, performance measures that form the basis for contractual commitments or incentive compensation arrangements or measures used by external parties, such as analysts and rating agencies, to review the company's performance).¹⁴ When slowdowns in a company's market or industry reduce the likelihood that a company will meet its consensus earnings estimate, there could be additional

⁷ See paragraph 7 of Auditing Standard No. 9.

⁸ See paragraph 15 of Auditing Standard No. 9.

⁹ See paragraphs 11–14 of Auditing Standard No. 9.

¹⁰ See paragraph 11 of Auditing Standard No. 11, *Consideration of Materiality in Planning and Performing an Audit*.

¹¹ Paragraph 7 of Auditing Standard No. 11.

¹² *Ibid.*

¹³ See paragraph 11 of Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*.

¹⁴ See paragraphs 16–17 of Auditing Standard No. 12.

pressure on management to manipulate the financial statements to achieve this estimate.¹⁵

- Obtaining an understanding of a company's current and prospective financing requirements. In the current economic environment, companies may not be able to regularly access funds through short-term borrowings, may have other liquidity issues, such as significant collateral calls or a lack of acceptable collateral, may be at risk of violating debt covenants, or may have significant tranches of debt becoming due within one year. In such cases, companies may be unable to settle their obligations as they become due. In turn, this situation could affect the risks of material misstatement related to, for example, the classification of long-term liabilities or valuation of long-term assets, or it could result in substantial doubt about the company's ability to continue as a going concern.¹⁶
- Performing analytical procedures designed to enhance the auditor's understanding of the client's business and the significant transactions and events that have occurred since the prior year-end and identify areas that might represent specific risks relevant to the audit.¹⁷ When performing an analytical procedure, the auditor should use his or her understanding of the company to develop expectations about plausible relationships among the data to be analyzed.¹⁸

The risk assessment standards include requirements for the auditor to incorporate knowledge obtained during past audits and interim reviews into the auditor's process for identifying risks of material misstatement; however, in a changing economic environment, the auditor should evaluate whether the prior years' information remains relevant and reliable.¹⁹ For example, when performing an analytical procedure in the current economic environment, prior period financial information may not be an appropriate data point in developing an expectation.

The risk assessment standards also require the auditor's assessment of the risks of material misstatement to continue throughout the audit.²⁰ For example, significant changes in industry or market conditions near year-end, such as a sovereign debt rating downgrade in a market in which a company has a concentration of customers, might provide audit evidence that contradicts the evidence on which the auditor originally based his or her risk assessments regarding the valuation of assets. In such cases, the auditor should revise the risk assessments and modify planned audit procedures or perform additional procedures in response to the revised risk assessments.²¹

Communication among the engagement team members about significant matters affecting the risks of material misstatement should continue throughout the audit, including when conditions change.²² For instance, the results of the "brainstorming" discussion among the key engagement team members about how and where they believe the company's financial statements might be susceptible to material misstatement due to fraud may need to be updated to

¹⁵ See, for example, paragraph 52 of Auditing Standard No. 12 and paragraph .85 of AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*.

¹⁶ See paragraph 14-15 of Auditing Standard No. 12.

¹⁷ See paragraph 46 of Auditing Standard No. 12.

¹⁸ See paragraph 48 of Auditing Standard No. 12.

¹⁹ See paragraphs 42-44 of Auditing Standard No. 12.

²⁰ See paragraph 74 of Auditing Standard No. 12.

²¹ *Ibid.*

²² Paragraph 51 of Auditing Standard No. 12.

reflect additional fraud risks that could result from the specific effects of the current economic environment on the company.²³

Identifying Fraud Risks and Other Significant Risks

In identifying and assessing risks of material misstatement, the auditor should evaluate whether the information gathered from the risk assessment procedures indicates that one or more fraud risk factors are present and should be taken into account in identifying and assessing fraud risks.²⁴ Staff Audit Practice Alert No. 8, *Audit Risks in Certain Emerging Markets* ("Practice Alert No. 8"), issued in October 2011, focuses on fraud risks that auditors might encounter in audits of companies with operations in emerging markets and auditors' responsibilities for addressing those risks.²⁵ While the focus of Practice Alert No. 8 was on emerging markets, fraud risks may be encountered in audits of companies in any region, especially when the company is faced with challenging economic conditions. In addition, auditors are reminded that their consideration of fraud includes misstatements from the misappropriation of assets.²⁶

Fraud risk factors are events or conditions that indicate (1) an incentive or pressure to perpetrate fraud, (2) an opportunity to carry out the fraud, or (3) an attitude or rationalization that justifies the fraudulent action.²⁷ Incentives or pressures to perpetrate fraud may exist when:

- Financial stability or profitability is threatened by economic conditions. For example, in the current economic environment, a company with substantial direct or indirect sovereign debt exposure may be motivated to not consider all relevant market information when determining a fair value measurement or enter into off-balance sheet arrangements that fail to be appropriately accounted for or disclosed.²⁸
- Excessive pressure exists for management to meet the requirements or expectations of third parties (e.g., due to expectations created by management in, for example, press releases or annual report messages that are no longer realistic).
- There is excessive pressure on operating personnel, including, for example, operating personnel in remote locations, to meet financial targets set by management, including sales or profitability incentive goals.²⁹

In identifying and assessing risks of material misstatement, the auditor should determine whether any of the auditor's identified and assessed risks are

²³ See paragraph 52 of Auditing Standard No. 12.

²⁴ Paragraph 65 of Auditing Standard No. 12.

²⁵ See Staff Audit Practice Alert No. 8 on the Board's web site at: <http://pcaobus.org/Standards/Pages/Guidance.aspx>.

²⁶ See AU sec. 316.06.

²⁷ Paragraph 65 of Auditing Standard No. 12.

²⁸ Staff Audit Practice Alert No. 5, *Auditor Considerations Regarding Significant Unusual Transactions*, discussed audit considerations regarding significant transactions that are outside the normal course of business for a company, or that otherwise appear to be unusual given the auditor's understanding of the company and its environment. See Staff Audit Practice Alert No. 5 on the Board's website at: http://pcaobus.org/Standards/QandA/04-07-2010_APA_5.

²⁹ AU sec. 316.85 A.2 describes further examples of risk factors relating to misstatements arising from fraudulent financial reporting.

significant risks.³⁰ A significant risk is defined as “[a] risk of material misstatement that requires special audit consideration.”³¹ To determine whether a risk is a significant risk, the auditor should evaluate whether the risk requires special audit consideration because of the nature of the risk or the likelihood and potential magnitude of misstatement related to the risk.³² One of the factors that should be evaluated in determining which risks are significant risks is whether the risk is related to recent significant economic developments.³³ Accordingly, risks of material misstatement that may be particularly susceptible to changes in the economic environment should be evaluated in this context. Other factors that the auditor should evaluate in determining significant risks include:³⁴

- The degree of complexity or judgment in the recognition or measurement of financial information related to the risk, especially those measurements involving a wide range of measurement uncertainty;
- Whether the risk involves significant transactions that are outside the normal course of business for the company or that otherwise appear to be unusual due to their timing, size, or nature; and
- Whether the risk involves significant transactions with related parties. Transactions with related parties may be motivated solely, or in large measure, by conditions such as a lack of sufficient working capital or credit to continue the business, an overly optimistic earnings forecast, or a declining industry characterized by a large number of business failures.³⁵

Planned Audit Responses

When the identified and assessed risks of material misstatement change, corresponding changes to planned audit responses may be necessary to adequately address the assessed risks.³⁶ Depending on the circumstances, these changes may need to be pervasive.³⁷ An example of such a pervasive change includes modifying the audit strategy to increase the substantive testing of the valuation of numerous significant accounts at year-end because of significant volatility in market conditions.³⁸

For significant risks, it is unlikely that audit evidence obtained from substantive analytical procedures alone will be sufficient.³⁹ Accordingly, for significant risks, the auditor’s substantive procedures should include tests of details that are specifically responsive to the assessed risks.⁴⁰

When using an analytical procedure as a substantive test, the expected effectiveness of the procedure depends on, among other things, the plausibility and predictability of relationships among financial and non-financial data.⁴¹ As

³⁰ See paragraph 59f of Auditing Standard No. 12.

³¹ Paragraph A5 of Appendix A to Auditing Standard No. 12.

³² See paragraph 70 of Auditing Standard No. 12.

³³ See paragraph 71 of Auditing Standard No. 12.

³⁴ *Ibid.*

³⁵ See paragraph .06 of AU sec. 334, *Related Parties*.

³⁶ See paragraph 3 of Auditing Standard No. 13, *The Auditor’s Responses to the Risks of Material Misstatement*.

³⁷ See paragraph 6 of Auditing Standard No. 13.

³⁸ *Ibid.*

³⁹ See paragraph .09 of AU sec. 329, *Substantive Analytical Procedures*.

⁴⁰ See paragraph 11 of Auditing Standard No. 13.

⁴¹ See AU sec. 329.11.

higher levels of assurance are desired from analytical procedures that are used as substantive procedures, more predictable relationships are required to develop the expected analytical relationships.⁴² Relationships in a stable environment are usually more predictable than relationships in a dynamic or unstable environment.⁴³

When testing controls over relevant assertions in an audit, the auditor should evaluate whether the controls are designed and operating effectively.⁴⁴ Practice Alert No. 3 discussed matters that may require additional auditor attention regarding the effective operation of internal controls, including job eliminations that may increase the risk of deficiencies in internal control over financial reporting because of, for example, lack of segregation of duties or lack of effective monitoring controls.

Auditing Fair Value Measurements and Estimates

The current economic environment continues to present challenges relating to auditing fair value measurements and estimates.⁴⁵ When auditing accounting estimates, the auditor should perform procedures to determine whether the accounting estimates are determined in conformity with the applicable financial reporting framework, are reasonable, and do not result in bias that materially misstates the financial statements.⁴⁶ When testing management's process for determining fair value measurements or estimates, the auditor should perform procedures commensurate with the related risk, including considering whether significant assumptions are best supported by the available audit evidence.⁴⁷ For example:

- Significant assumptions used in fair value measurements and estimates that are based on past experience and management expectations, such as revenue projections, cash flow estimates, charge-off rates, or projected rate of return assumptions and discount rates used in determining pension liabilities, may not reflect current market information or be representative of expected future conditions or events.
- Reductions in forecasts of macro-economic growth or extended periods of low interest rates may affect important assumptions underlying certain estimates, such as impairment determinations or the valuation of servicing assets. Uncertainty regarding the value of certain types of collateral or increasing counter-party risk may affect the valuation of financial instruments.

⁴² See AU sec. 329.14.

⁴³ Ibid.

⁴⁴ See, for example, paragraphs 16-22 of Auditing Standard No. 13.

⁴⁵ Fair value measurements and estimates were the subject of a number of audit deficiencies noted in the Board's Rule 4010 *Report on Observations of PCAOB Inspectors Related to Audit Risk Areas Affected by the Economic Crisis* (available at: http://pcaobus.org/Inspections/Documents/4010_Report_Economic_Crisis.pdf). In addition, fair value measurements and estimates were discussed in a number of previous staff audit practice alerts. See Staff Audit Practice Alert No. 2, *Matters Related to Auditing Fair Value Measurements of Financial Instruments and the Use of Specialists*, Practice Alert No. 3, *Staff Audit Practice Alert No. 4, Auditor Considerations Regarding Fair Value Measurements, Disclosures, and Other-Than-Temporary Impairments*, and Staff Audit Practice Alert No. 7, *Auditor Considerations of Litigation and Other Contingencies Arising from Mortgage and Other Loan Activities*. Staff Audit Practice Alerts are available at: <http://pcaobus.org/Standards/Pages/Guidance.aspx>.

⁴⁶ See, for example, paragraph 23 of AU sec. 328, *Auditing Fair Value Measurements and Disclosures*, paragraph .11 of AU sec. 342, *Auditing Accounting Estimates*, and paragraphs 13 and 24-27 of Auditing Standard No. 14, *Evaluating Audit Results*.

⁴⁷ Ibid.

- Additional risks, such as sovereign default risk or currency volatility, could add a higher level of complexity in determining the ultimate collectability of sales or the appropriateness of other significant assumptions used in certain fair value determinations or estimates, including the fair value of certain financial instruments.
- An active market may not exist for certain financial instruments which in turn may result in complex valuation methods. Assumptions are integral components of more complex valuation methods, for example, valuation methods that employ a combination of estimates of expected future cash flows together with estimates of the values of assets or liabilities in the future, discounted to the present. Auditors pay particular attention to the significant assumptions underlying a valuation method and evaluate whether such assumptions are reasonable and reflect, or are not inconsistent with, market information.⁴⁸

Auditors are reminded that audit evidence consists of both information that supports and corroborates management's assertions and information that contradicts such assertions including assertions regarding fair values, estimates and related disclosures.⁴⁹

Bias in Accounting Estimates

Business conditions today may create increased pressures to achieve certain financial results that could result in bias in management's estimates.⁵⁰ Applying professional skepticism is of particular importance when evaluating estimates and assumptions in judgmental areas that are susceptible to management bias.

The auditor should evaluate whether the difference between estimates best supported by the audit evidence and estimates included in the financial statements, which are individually reasonable, indicate a possible bias on the part of the company's management.⁵¹ A lack of consistency in assumptions used to support different estimates might be indicative of errors or bias in estimates. For instance, revenue assumptions used in the goodwill impairment test that are inconsistent with revenue assumptions used to accrue discretionary compensation might be indicative of management bias. Further, bias might be evidenced by assumptions that are inconsistent with industry economic forecasts or the company's budgets or future business plans or the consistent use of overly optimistic assumptions (e.g. consistently missing projected revenue by a substantial amount in each recent period).⁵² If each accounting estimate included in the financial statements is individually reasonable but the effect of the difference between each estimate and the estimate best supported by the audit evidence is to increase earnings or loss, the auditor should evaluate whether these circumstances indicate potential management bias in the estimates.⁵³ Bias also can result from the cumulative effect of changes in multiple accounting estimates. If the estimates in the financial statements are grouped at one end of the range of reasonable estimates in the prior year and are grouped at the other end of the range of reasonable estimates in the current year, the auditor should evaluate whether management is using swings in

⁴⁸ AU sec. 328.29.

⁴⁹ See paragraph 2 of Auditing Standard No. 15, *Audit Evidence*.

⁵⁰ See paragraph 25d of Auditing Standard No. 14.

⁵¹ Paragraph 27 of Auditing Standard No. 14.

⁵² See, for example, AU sec. 342.09.

⁵³ Paragraph 27 of Auditing Standard No. 14.

estimates to achieve an expected or desired outcome, e.g., to offset higher or lower than expected earnings.⁵⁴

If the auditor identifies bias in management's judgments about the amounts and disclosures in the financial statements, the auditor should evaluate whether the effect of that bias, together with the effect of uncorrected misstatements, results in material misstatement of the financial statements.⁵⁵ Also, the auditor should evaluate whether the auditor's risk assessments, including, in particular, the assessment of fraud risks, and the related audit responses remain appropriate.⁵⁶ Auditors are reminded that indications of management bias in accounting estimates and in selecting accounting principles may affect the auditor's conclusions about the operating effectiveness of controls and should be included in the auditor's evaluation of controls in an integrated audit.⁵⁷

Consideration of Changes to Accounting Standards

Practice Alert No. 3 provided information on selected financial reporting areas that might be affected by the then-current economic environment. While these areas continue to pose audit and financial reporting risk, certain accounting requirements have been amended since the issuance of Practice Alert No. 3.⁵⁸ For example, the Financial Accounting Standards Board ("FASB") recently issued Accounting Standards Codification Update 2011-08, *Intangibles-Goodwill and Others (Topic 350): Testing Goodwill for Impairment* ("ASU No. 2011-08").⁵⁹ That guidance allows companies to first assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying value as a basis for determining whether it is necessary to perform the two-step goodwill impairment test described in Topic 350.⁶⁰

If a company opts to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount, ASU No. 2011-08 provides examples of events and circumstances that the company should consider in its evaluation.⁶¹ These examples include, among others:

- Macroeconomic conditions such as a deterioration in general economic conditions;
- Limitations on accessing capital;
- Fluctuations in foreign exchange rates, or other developments in equity and credit markets; and

⁵⁴ Ibid.

⁵⁵ Paragraph 26 of Auditing Standard No. 14.

⁵⁶ Ibid.

⁵⁷ See paragraph B8 of Appendix B to Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated With An Audit of Financial Statements*.

⁵⁸ The Board has no authority to prescribe the form or content of a company's financial statements. That authority, and the authority to make binding determinations concerning compliance with generally accepted accounting standards ("GAAP"), rests with the U.S. Securities and Exchange Commission. Accordingly, while this staff audit practice alert describes applicable GAAP, it does not establish or interpret GAAP.

⁵⁹ See <http://www.fasb.org/cs/ContentServer?site=FASB&c=Page&pagename=FASB%2FPage%2FSectionPage&cid=1176156316498>.

⁶⁰ ASU No. 2011-08 at 1.

⁶¹ ASU No. 2011-08 at 2.

- Industry and market considerations such as a deterioration in the environment in which an entity operates, an increased competitive environment, a decline in market-dependent multiples or metrics (considered in both absolute terms and relative to peers), a change in the market for an entity's products or services, or a regulatory or political development.⁶²

When reviewing and testing the process for a company's assessment of qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying value, audit considerations include, among others:

- Identifying the sources of data and factors that the company used in forming the assumptions, and consideration of whether such data and factors are relevant, reliable, and sufficient for the purpose based on information gathered in other audit tests.
- Considering whether there are additional key factors or alternative assumptions about the factors.
- Evaluating whether the assumptions are consistent with each other, the supporting data, relevant historical data, and industry data.
- Considering whether changes in the business or industry may cause other factors to become significant to the assumptions.⁶³

The Auditor's Consideration of a Company's Ability to Continue as a Going Concern

Practice Alert No. 3 noted certain challenges companies may face in their ability to continue operating as a going concern in light of the then-current economic environment. These challenges included a reduction of the availability of funding under lines of credit or from short-term borrowing markets, difficulty in meeting debt covenants, and a lack of acceptable collateral. Some companies may continue to face such challenges in the current economic environment.

The auditor has a responsibility to evaluate whether there is substantial doubt about the company's ability to continue as a going concern for a reasonable period of time, not to exceed one year beyond the date of the financial statements being audited.⁶⁴ The auditor's going concern evaluation can affect the auditor's evaluation of financial disclosures and the auditor's report.⁶⁵

The auditor's going concern evaluation is based on his or her knowledge of relevant conditions and events that exist at or have occurred prior to the date of the auditor's report.⁶⁶ Information about such conditions or events is obtained from the application of auditing procedures planned and performed to achieve audit objectives that are related to management's assertions embodied in the financial statements being audited, as described in Auditing Standard No. 15, *Audit Evidence*.⁶⁷

⁶² ASU No. 2011-08, paragraph 350-20-35-3c.

⁶³ See AU sec. 342.11.

⁶⁴ Paragraph .02 of AU sec. 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*.

⁶⁵ See AU secs. 341.12 and 341.14.

⁶⁶ AU sec. 341.02.

⁶⁷ See paragraph 11 of Auditing Standard No. 15.

Conditions or events, such as negative trends and other indications of possible financial difficulties as well as internal and external matters that have occurred, when considered in the aggregate, may indicate there could be substantial doubt about the company's ability to continue as a going concern for a reasonable period of time.⁶⁸ If the auditor believes there is substantial doubt about the company's ability to continue as a going concern for a reasonable period of time, the auditor should (1) obtain information about management's plans that are intended to mitigate the effect of such conditions or events, and (2) assess the likelihood that such plans can be effectively implemented.⁶⁹

Management's plans for dealing with the adverse effects of the conditions or events may include the disposal of assets, borrowing additional funds or restructuring existing debt, planned reduction of expenditures, or increasing equity by raising capital.⁷⁰ When evaluating management's plans, the auditor should identify those elements that are particularly significant to overcoming the adverse effects of the conditions and events and should plan and perform auditing procedures to obtain evidential matter about them.⁷¹

In the current economic environment, it is important for the auditor to consider the adequacy of support for such plans,⁷² including whether it is likely that the adverse effects will be mitigated for a reasonable period of time and whether the plans can be effectively implemented.⁷³ For example, if management indicates that the company plans to dispose of assets to raise capital, audit considerations may include the existence of any restrictions on the disposal of the assets, issues related to the marketability of the assets, and any possible direct or indirect effects of disposal of the assets.⁷⁴ As another example, if management is relying on a pledge of financial support from a significant shareholder, consideration should be given to the impact of current economic conditions on the shareholder's ability to provide such funding.⁷⁵ Another important consideration in the current economic environment is the willingness of a third party to continue to provide financial support, especially if the third party has already provided support to ongoing operations or in light of a potentially longer time frame for the company to return to profitability or positive cash flow.

When prospective financial information is particularly significant to management's plans, the auditor should request management to provide that information and should consider the adequacy of support for significant assumptions underlying that information.⁷⁶ In considering the adequacy of support for significant assumptions, the auditor should consider whether the assumptions are consistent with current economic conditions, such as, recent reductions in economic growth forecasts and information obtained by the auditor in other audit areas.

In the current economic environment, assumptions that are especially sensitive or susceptible to change and that are important to the auditor's evaluation of

⁶⁸ See AU sec. 341.06.

⁶⁹ AU sec. 341.03.b.

⁷⁰ See AU sec. 341.07.

⁷¹ AU sec. 341.08.

⁷² *Ibid.*

⁷³ See AU sec. 341.07.

⁷⁴ *Ibid.*

⁷⁵ Such consideration may include information contained in, among other things, the audited financial statements of the shareholder, reports issued by regulatory agencies, financial publications, or credit agencies concerning the shareholder, and income tax returns of the shareholder, to the extent available.

⁷⁶ AU sec. 341.09.

whether or not substantial doubt remains about the company's ability to continue as a going concern may warrant particularly careful consideration by the auditor.⁷⁷ When, primarily because of the consideration of management's plans, the auditor concludes that substantial doubt about the company's ability to continue as a going concern for a reasonable period of time is alleviated, the auditor should consider the need for disclosure in the financial statements, the principal conditions and events that initially caused him or her to believe there was substantial doubt, including the possible effects of such conditions and events, and any mitigating factors, including management's plans.⁷⁸

Auditing Financial Statement Disclosures

The risk assessment standards recognize the importance of financial statement disclosures by directing the auditor's attention to them throughout the audit process. The current economic environment may increase the risk related to omitted, incomplete, or inaccurate disclosures, including, for example, disclosures regarding contingent liabilities, risks and uncertainties, concentrations of credit risk, and liquidity concerns.

The risk assessment standards require auditors to perform procedures to assess the risk of omitted, incomplete, or inaccurate disclosures, whether intentional or unintentional,⁷⁹ and to identify and test significant disclosures.⁸⁰ To identify and assess such risks, the auditor should develop expectations about the disclosures that are necessary for the company's financial statements to be presented fairly in conformity with the applicable financial reporting framework.⁸¹ The key engagement team members should discuss (1) the company's selection and application of accounting principles, including related disclosure requirements, and (2) the susceptibility of the company's financial statements to material misstatement due to error or fraud.⁸² The discussion among the key engagement team members should include how fraud might be perpetrated or concealed by omitting or presenting incomplete or inaccurate disclosures.⁸³

The nature of certain financial statement disclosure requirements, the complexity of the matters disclosed, and the qualitative nature of certain disclosures can pose additional risks of material misstatement. Also, internal controls over disclosures that are qualitative, judgmental, or complex often are different from those controls over the processing and reporting of routine historical transactions. For these types of disclosures, the necessary controls are more likely to be manual controls than automated controls and may require significant judgment in the operation of the control, which, in turn, can affect the risk associated with the control.

When evaluating whether the financial statements are fairly presented in conformity with the applicable financial reporting framework, the auditor also is required to evaluate the disclosures, which includes, among other things:

⁷⁷ Ibid.

⁷⁸ See AU sec. 341.11.

⁷⁹ See, for example, paragraphs 49, 52, and 67 of Auditing Standard No. 12.

⁸⁰ See, for example, paragraphs 59–64 of Auditing Standard No. 12 and paragraph 9 and footnote 6 of Auditing Standard No. 13. A disclosure is a significant disclosure if there is a reasonable possibility that the disclosure could contain a misstatement that, individually or when aggregated with others, has a material effect on the financial statements. See paragraph A10 of Auditing Standard No. 5.

⁸¹ See paragraph 12 of Auditing Standard No. 12.

⁸² Paragraph 49 of Auditing Standard No. 12.

⁸³ See paragraph 52 of Auditing Standard No. 12.

- Evaluating whether the financial statements, including the related notes, are informative of matters that may affect their use, understanding, and interpretation;⁸⁴ and
- Considering the form, arrangement, and content of the financial statements (including the accompanying notes), encompassing matters such as the terminology used, the amount of detail given, the classification of items in the statements, and the bases of amounts set forth.⁸⁵

Evaluation of disclosures also involves evaluation of the effect on the financial statements of uncorrected misstatements in disclosures, such as omitted, incomplete, or inaccurate disclosures. Qualitative considerations are particularly important when evaluating misstatements in disclosures that are more narrative in nature, such as those relating to risks and uncertainties or loss contingencies where an estimate has not yet been disclosed.⁸⁶ PCAOB auditing standards describe the auditor's responsibilities for considering qualitative factors in the context of the auditor's consideration of materiality.⁸⁷

To determine the extent of supervision necessary for engagement team members to perform their work as directed and form appropriate conclusions, the engagement partner and other engagement team members performing supervisory activities should take into account, among other things, the nature of the assigned work for each engagement team member, including the controls or accounts and disclosures to be tested.⁸⁸ For example, additional supervision over audit areas including disclosures that are more qualitative, judgmental, or complex in nature may be merited. Also, to effectively evaluate those disclosures, auditors need to exercise professional skepticism and be alert for events or conditions that may contradict management's assertions in the disclosures.⁸⁹ Events or conditions that may contradict information in the disclosures may arise during the performance of other audit procedures including reading information in documents containing audited financial statements or may be based on more general factors, such as conditions in the industry in which the company operates. PCAOB standards require auditors to read other information in documents containing audited financial statements and consider whether such information is materially inconsistent with information appearing in the financial statements, including disclosures.⁹⁰

Obtaining audit evidence that is relevant for evaluating disclosures that are more judgmental or qualitative in nature might require different auditing procedures from those used to evaluate disclosures of routine historical data. For example, the evidence needed to evaluate a disclosure relating to a loss contingency might come from sources outside the company's accounting system or possibly from sources outside the company.

⁸⁴ See paragraph .04 of AU sec. 411, *The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles*.

⁸⁵ See paragraph 31 of Auditing Standard No. 14.

⁸⁶ Practice Alert No. 3 discussed communications with audit committee, including communications about the clarity and completeness of the financial statements, that include related disclosures.

⁸⁷ See, for example, paragraph 24 and Appendix B of Auditing Standard No. 14.

⁸⁸ See paragraph 6b(2) of Auditing Standard No. 10, *Supervision of the Audit Engagement*.

.10 Staff Audit Practice Alert No. 10 Maintaining and Applying Professional Skepticism in Audits

December 4, 2012

Staff Audit Practice Alerts highlight new, emerging, or otherwise noteworthy circumstances that may affect how auditors conduct audits under the existing requirements of the standards and rules of the PCAOB and relevant laws. Auditors should determine whether and how to respond to these circumstances based on the specific facts presented. The statements contained in Staff Audit Practice Alerts do not establish rules of the Board and do not reflect any Board determination or judgment about the conduct of any particular firm, auditor, or any other person.

Executive Summary

Professional skepticism is essential to the performance of effective audits under Public Company Accounting Oversight Board (“PCAOB” or “Board”) standards. Those standards require that professional skepticism be applied throughout the audit by each individual auditor on the engagement team.

PCAOB standards define professional skepticism as an attitude that includes a questioning mind and a critical assessment of audit evidence. The standards also state that professional skepticism should be exercised throughout the audit process. While professional skepticism is important in all aspects of the audit, it is particularly important in those areas of the audit that involve significant management judgments or transactions outside the normal course of business. Professional skepticism also is important as it relates to the auditor’s consideration of fraud in an audit. When auditors do not appropriately apply professional skepticism, they may not obtain sufficient appropriate evidence to support their opinions or may not identify or address situations in which the financial statements are materially misstated.

Observations from the PCAOB’s oversight activities continue to raise concerns about whether auditors consistently and diligently apply professional skepticism. Certain circumstances can impede the appropriate application of professional skepticism and allow unconscious biases to prevail, including incentives and pressures resulting from certain conditions inherent in the audit environment, scheduling and workload demands, or an inappropriate level of confidence or trust in management. Audit firms and individual auditors should be alert for these impediments and take appropriate measures to assure that professional skepticism is applied appropriately throughout all audits performed under PCAOB standards.

Firms’ quality control systems can help engagement teams improve the application of professional skepticism in a number of ways, including setting a proper tone at the top that emphasizes the need for professional skepticism; implementing and maintaining appraisal, promotion, and compensation processes that enhance rather than discourage the application of professional skepticism; assigning personnel with the necessary competencies to engagement teams; establishing policies and procedures to assure appropriate audit documentation, especially in areas involving significant judgments; and appropriately monitoring the quality control system and taking necessary corrective actions to address deficiencies, such as, instances in which engagement teams do not apply professional skepticism.

The engagement partner is responsible for, among other things, setting an appropriate tone that emphasizes the need to maintain a questioning mind throughout the audit and to exercise professional skepticism in gathering and evaluating evidence, so that, for example, engagement team members have the confidence to challenge management representations. It is also important for the engagement partner and other senior engagement team members to be actively involved in planning, directing, and reviewing the work of other engagement team members so that matters requiring audit attention, such as unusual matters or inconsistencies in audit evidence, are identified and addressed appropriately.

It is the responsibility of each individual auditor to appropriately apply professional skepticism throughout the audit, including in identifying and assessing the risks of material misstatement, performing tests of controls and substantive procedures to respond to the risks, and evaluating the results of the audit. This involves, among other things, considering what can go wrong with the financial statements, performing audit procedures to obtain sufficient appropriate audit evidence rather than merely obtaining the most readily available evidence to corroborate management's assertions, and critically evaluating all audit evidence regardless of whether it corroborates or contradicts management's assertions.

The Office of the Chief Auditor is issuing this practice alert to remind auditors of the requirement to appropriately apply professional skepticism throughout their audits. The timing of this release is intended to facilitate firms' emphasis in upcoming calendar year-end audits, as well as in future audits, on the importance of the appropriate use of professional skepticism. Due to the fundamental importance of the appropriate application of professional skepticism in performing an audit in accordance with PCAOB standards, the PCAOB also is continuing to explore whether additional actions might meaningfully enhance auditors' professional skepticism.

Professional Skepticism and Due Professional Care

Professional skepticism, an attitude that includes a questioning mind and a critical assessment of audit evidence, is essential to the performance of effective audits under PCAOB standards. The audit is intended to provide investors with an opinion on whether the financial statements prepared by company management are presented fairly, in all material respects, in conformity with the applicable financial reporting framework. If the audit is conducted without professional skepticism, the value of the audit is impaired.

The auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud.¹ This responsibility includes obtaining sufficient appropriate evidence to determine whether the financial statements are materially misstated rather than merely looking for evidence that supports management's assertions.²

PCAOB standards require the auditor to exercise due professional care in planning and performing the audit and in preparing the audit report. Due professional care requires the auditor to exercise professional skepticism. PCAOB standards define professional skepticism as an attitude that includes a questioning mind and a critical assessment of audit evidence. PCAOB

¹ Paragraph .02 of AU sec. 110, *Responsibilities and Functions of the Independent Auditor*.

² See, e.g., paragraph 3 of Auditing Standard No. 8, *Audit Risk* and paragraph 3 of Auditing Standard No. 14, *Evaluating Audit Results*.

standards require the auditor to exercise professional skepticism throughout the audit.³

While professional skepticism is important in all aspects of the audit, it is particularly important in those areas of the audit that involve significant management judgments or transactions outside the normal course of business, such as nonrecurring reserves, financing transactions, and related party transactions that might be motivated solely, or in large measure, by an expected or desired accounting outcome. Effective auditing involves diligent pursuit of sufficient appropriate audit evidence, particularly if contrary evidence exists, and critical assessment of all the evidence obtained.

Professional skepticism is also important as it relates to the auditor's consideration of fraud in the audit.⁴ Company management has a unique ability to perpetrate fraud because it frequently is in a position to directly or indirectly manipulate accounting records and present fraudulent financial information.⁵ Company personnel who intentionally misstate the financial statements often seek to conceal the misstatement by attempting to deceive the auditor. Because of this incentive, applying professional skepticism is integral to planning and performing audit procedures to address fraud risks. In exercising professional skepticism, the auditor should not be satisfied with less than persuasive evidence because of a belief that management is honest.⁶

Examples of the application of professional skepticism in response to the assessed fraud risks are (a) modifying the planned audit procedures to obtain more reliable evidence regarding relevant assertions and (b) obtaining sufficient appropriate evidence to corroborate management's explanations or representations concerning important matters, such as through third-party confirmation, use of a specialist engaged or employed by the auditor, or examination of documentation from independent sources.⁷

PCAOB inspectors continue to observe instances in which the circumstances suggest that auditors did not appropriately apply professional skepticism in their audits.⁸ As examples, audit deficiencies like the following raise concerns that a lack of professional skepticism was at least a contributing factor:

- For certain hard-to-value Level 2 financial instruments, the engagement team did not obtain an understanding of the specific methods and/or assumptions underlying the fair value estimates that were obtained from pricing services or other third parties and used in the

³ See paragraphs .01 and .07-.08 of AU sec. 230, *Due Professional Care in the Performance of Work*.

⁴ See paragraph .13 of AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*.

⁵ AU sec. 316.08.

⁶ See AU secs. 230.07-.09.

⁷ Paragraph 7 of Auditing Standard No. 13, *The Auditor's Responses to the Risks of Material Misstatement*.

⁸ The PCAOB is not alone in identifying concerns regarding professional skepticism in audits. Regulators in countries such as Australia, Canada, Germany, the Netherlands, Singapore, Switzerland, and the United Kingdom have cited concerns about professional skepticism in public reports on their inspections. See, e.g., the Financial Reporting Council's *Audit Quality Inspections Annual Report 2011/12*, available at <http://www.frc.org.uk/Our-Work/Publications/AIU/Audit-Quality-Inspections-Annual-Report-2011-12.aspx>, the Canadian Public Accountability Board's, *Meeting the Challenge "A Call to Action" 2011 Public Report*, available at http://www.epab-ccrc.ca/en/content/2011Public_Report_EN.pdf, the Australian Securities & Investments Commission's Report 242, *Audit inspection program public report for 2009 - 2010*, available at [http://www.asic.gov.au/asic/pdflib.nsf/LookupByFileName/rep242-published-29-June-2011.pdf/\\$file/rep242-published-29-June-2011.pdf](http://www.asic.gov.au/asic/pdflib.nsf/LookupByFileName/rep242-published-29-June-2011.pdf/$file/rep242-published-29-June-2011.pdf), and the Accounting and Corporate Regulatory Authority *Practise Monitoring Programme Sixth Public Report*, August 2012, available at <http://www.acra.gov.sg/NR/rdonlyres/E7E2A4BF-EC46-4AB2-877D-297D4E618042/0/PMPReport2012170712finalclean.pdf>.

engagement team's testing related to these financial instruments. Further, the firm used the price closest to the issuer's recorded price in testing the fair value measurements, without evaluating the significance of differences between the other prices obtained and the issuer's prices.

- The issuer discontinued production of a significant product line during the prior year and introduced a new product line to replace it. There were no sales of the discontinued product line during the last nine months of the year under audit. The engagement team did not test, beyond inquiry, the significant assumptions management used to calculate its separate inventory reserve for this product line.
- The engagement team did not evaluate the effects on the financial statements of management's determination not to test a significant portion of its property and equipment for impairment, despite indicators that the carrying amount may not have been recoverable. These indicators in this situation included operating losses for the relevant segment for the last three years, substantial charges for the impairment of goodwill and other intangible assets during the year, a projected loss for the segment for the upcoming year, and reduced and delayed customer orders.
- After the date of the issuer's balance sheet, but before the release of the firm's opinion, the issuer reported that it anticipated that comparable store sales for the first quarter of the year would be significantly lower than those for the first quarter of the year under audit. The engagement team had performed sensitivity analyses as part of its assessment on the issuer's evaluation of its compliance with its debt covenants, the issuer's ability to continue as a going concern, and the possibility of the impairment of the issuer's long-lived assets. The engagement team did not consider the implications of the anticipated decline in sales on its sensitivity analyses and its conclusions with respect to compliance with debt covenants, the issuer's ability to continue as a going concern, and impairment of long-lived assets.

The PCAOB's enforcement activities also have identified instances in which auditors did not appropriately apply professional skepticism. For example, in one recent disciplinary order, the Board found, among other things, that certain of a firm's audit partners accepted a company's reliance on an exception to generally accepted accounting principles ("GAAP") requirements for reserving for expected future product returns even though doing so conflicted with the plain language of the exception and the firm's internal accounting literature. The partners were aware of, but did not appropriately consider, contradictory audit evidence indicating that the returns were not eligible for the exception. This illustration of a lack of professional skepticism reappeared in the firm's response when the issue was questioned by the firm's internal audit quality reviewers. Although certain of the partners involved determined that the company's reliance on the exception to GAAP did not support the company's accounting, they, along with other firm personnel, formulated another equally deficient rationale that supported the company's existing accounting result.⁹

⁹ See *In the Matter of Ernst & Young LLP, Jeffrey S. Anderson, CPA, Ronald Butler, Jr., CPA, Thomas A. Christie, CPA, and Robert H. Thibault, CPA, Respondents*, PCAOB Release No. 105-2012-001, (Feb. 8, 2012).

Impediments to the Application of Professional Skepticism

Although PCAOB standards require auditors to appropriately apply professional skepticism throughout the audit, observations from the PCAOB's oversight activities indicate that, as a practical matter, auditors are often challenged in meeting this fundamental audit requirement. In maintaining an attitude that includes a questioning mind and a critical assessment of audit evidence, it is important for auditors to be alert to unconscious human biases and other circumstances that can cause auditors to gather, evaluate, rationalize, and recall information in a way that is consistent with client preferences rather than the interests of external users.

Certain conditions inherent in the audit environment can create incentives and pressures that can serve to impede the appropriate application of professional skepticism and allow unconscious bias to prevail. For example, incentives and pressures to build or maintain a long-term audit engagement, avoid significant conflicts with management, provide an unqualified audit opinion prior to the issuer's filing deadline, achieve high client satisfaction ratings, keep audit costs low, or cross-sell other services can all serve to inhibit professional skepticism.

In addition, over time, auditors may sometimes develop an inappropriate level of trust or confidence in management, which may lead auditors to accede to inappropriate accounting. In some situations, auditors may feel pressure to avoid potential negative interactions with, or consequences to, individuals they know (that is, management) instead of representing the interests of the investors they are charged to protect.

Other circumstances also can impede the appropriate application of professional skepticism. For example, scheduling and workload demands can put pressure on partners and other engagement team members to complete their assignments too quickly, which might lead auditors to seek audit evidence that is easier to obtain rather than evidence that is more relevant and reliable, to obtain less evidence than is necessary, or to give undue weight to confirming evidence without adequately considering contrary evidence.

Although powerful incentives and pressures exist that can impede professional skepticism, the importance of professional skepticism to an effective audit cannot be overstated, particularly given the increasing judgment and complexity in financial reporting and issues posed by the current economic environment.¹⁰ Auditors and audit firms must remember that their overriding duty is to put the interests of investors first. Appropriate application of professional skepticism is key to fulfilling the auditor's duty to investors. In the words of the U.S. Supreme Court:

By certifying the public reports that collectively depict a corporation's financial status, the independent auditor assumes a public responsibility transcending any employment relationship with the client. The independent public accountant performing this special function owes ultimate allegiance to the corporation's creditors and stockholders, as well as to the investing public. This "public watchdog" function demands that the accountant maintain total independence from the client at all times and requires complete fidelity to the public trust.¹¹

¹⁰ See Staff Practice Alert No. 9, *Assessing and Responding to Risk in the Current Economic Environment* (Dec. 6, 2011).

¹¹ *U.S. v. Arthur Young & Co.*, 465 U.S. 805, 817-18 (1984).

However, inadequate performance of audit procedures may be caused by factors other than the lack of skepticism, or in combination with a lack of skepticism. As discussed further below, firms should take appropriate steps to understand the various factors that influence audit quality, including those circumstances and pressures that can impede the application of professional skepticism.

Promoting Professional Skepticism via an Appropriate System of Quality Control

PCAOB standards require firms to establish a system of quality control to provide the firm with reasonable assurance that its personnel comply with applicable professional standards and the firm's standards of quality.¹² This includes designing and implementing policies and procedures that lead engagement teams to appropriately apply professional skepticism in their audits.

Firms' quality control systems can help engagement teams improve the application of professional skepticism in a number of ways, including the following:

- *“Tone-at-the-Top” Messaging.* The PCAOB's inspection findings have identified instances in which the firm's culture allows or tolerates audit approaches that do not consistently emphasize the need for professional skepticism. Consistent communication from firm leadership that professional skepticism is integral to performing a high quality audit, backed up by a culture that supports it, could improve the quality of work performed by audit partners and staff. On the other hand, messages from firm leadership that are excessively focused on revenue or profit growth over achieving audit quality, can undermine the application of professional skepticism.
- *Performance Appraisal, Promotion, and Compensation Processes.* An audit firm's performance appraisal, promotion, and compensation processes can enhance or detract from the application of professional skepticism in its audit practice, depending on how they are designed and executed. For example, if a firm's promotion process emphasizes selling non-audit services or places an undue focus on reducing audit costs, or retaining and acquiring audit clients over achieving high audit quality, the firm's personnel may perceive those goals as being more important to their own compensation, job security, and advancement within the firm than the appropriate application of professional skepticism.
- *Professional Competence and Assigning Personnel to Engagement Teams.* A firm's quality control system depends heavily on the proficiency of its personnel,¹³ which includes their ability to exercise professional skepticism. To perform the audit with professional skepticism, it is important that personnel assigned to engagement teams have the necessary knowledge, skill, and ability required in the circumstances,¹⁴ which includes appropriate technical training and experience. Professional skepticism is interrelated with an auditor's training and experience, as auditors need an appropriate level of competence in order to appropriately apply professional skepticism throughout the audit. In addition, it is important for the firm's culture

¹² See paragraph .03 of Quality Control (“QC”) sec. 20, *System of Quality Control for a CPA Firm's Accounting and Auditing Practice*.

¹³ QC sec. 20.11.

¹⁴ See QC sec. 20.12.

to continually reinforce the appropriate application of professional skepticism throughout the audit.

- *Documentation.* It is important for a firm's quality control system to establish policies and procedures that cover documenting the results of each engagement.¹⁵ Although documentation should support the basis for the auditor's conclusions concerning every relevant financial statement assertion, areas that require greater judgment generally need more extensive documentation of the procedures performed, evidence obtained, and rationale for the conclusions reached. In addition to the documentation necessary to support the auditor's final conclusions, audit documentation must include information the auditor has identified relating to significant findings or issues that is inconsistent with or contradicts the auditor's final conclusions.¹⁶
- *Monitoring.* Under PCAOB standards, a firm's quality control policies and procedures should include an element of monitoring to ensure that quality control policies and procedures are suitably designed and being effectively applied.¹⁷ If the firm identifies deficiencies, the firm should evaluate the reasons for the deficiencies and determine the necessary corrective actions or improvements to the quality control system.¹⁸ Accordingly, if a firm identifies deficiencies that include failures to appropriately apply professional skepticism as a contributing factor, the firm should take appropriate corrective actions.

Importance of Supervision to the Application of Professional Skepticism

The supervisory activities performed by the engagement partner and other senior engagement team members are important to the application of professional skepticism.¹⁹ The engagement partner is responsible for the proper supervision of the work of engagement team members.²⁰ Accordingly, the engagement partner is responsible for setting an appropriate tone that emphasizes the need to maintain a questioning mind throughout the audit and to exercise professional skepticism in gathering and evaluating evidence, so that, for example, engagement team members have the confidence to challenge management representations.²¹

It is also important for the engagement partner and other senior engagement team members to be actively involved in planning, directing, and reviewing the work of other engagement team members so that matters requiring audit attention are identified and addressed appropriately. In directing the work of others, senior engagement team members, including the engagement partner,

¹⁵ See QC secs. 20.17-.18. Also, see generally Auditing Standard No. 3, *Audit Documentation*.

¹⁶ See, e.g., paragraphs 7-8 of Auditing Standard No. 3.

¹⁷ See QC sec. 20.07 and paragraph .02 of QC sec. 30, *Monitoring a CPA Firm's Accounting and Auditing Practice*.

¹⁸ See QC sec. 30.03.

¹⁹ Besides supervision by the engagement partner and other engagement team members, the engagement quality reviewer also plays an important role in assessing the application of professional skepticism by the engagement team. In particular, the engagement quality reviewer is required to perform specific procedures to evaluate the significant judgments made by the engagement team.

²⁰ Paragraph 3 of Auditing Standard No. 10, *Supervision of the Audit Engagement*.

²¹ See paragraph 53 of Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*.

may have knowledge and experience that may assist less experienced engagement team members in applying professional skepticism. For example, senior engagement team members might help more junior auditors identify matters that are unusual or inconsistent with other evidence. In addition, senior members of the engagement team might be better able to challenge the assertions of senior levels of management, when necessary.

Appropriate Application of Professional Skepticism

Although a firm's quality control systems and the actions of the engagement partner and other senior engagement team members can contribute to an environment that supports professional skepticism, it is ultimately the responsibility of each individual auditor to appropriately apply professional skepticism throughout the audit, including the following areas among others:

- Identifying and assessing risks of material misstatement;
- Performing tests of controls and substantive procedures; and
- Evaluating audit results to form the opinion to be expressed in the auditor's report.

Identifying and Assessing Risks of Material Misstatement

By its nature, risk assessment involves looking at internal and external factors to determine what can go wrong with the financial statements, whether due to error or fraud. When properly applied, the risk assessment approach set forth in PCAOB standards should focus auditors' attention on those areas of the financial statements that are higher risk and thus most susceptible to misstatement. This includes considering events and conditions that create incentives or pressures on management or create opportunities for management to manipulate the financial statements. The evidence obtained from the required risk assessment procedures should provide a reasonable basis for the auditor's risk assessments, which, in turn, should drive the auditor's tests of accounts and disclosures in the financial statements.

The risk assessment procedures required by PCAOB standards also should provide the auditor with a thorough understanding of the company and its environment as a basis for identifying unusual transactions or matters that warrant further investigation. They also provide a basis for the auditor to evaluate and challenge management's assertions.²² It is important to note that the auditor's understanding should be based on actual information obtained from the risk assessment procedures. It is not sufficient for auditors merely to rely on their perceived knowledge of the industry or information obtained from prior audits or other engagements for the company.

Performing Tests of Controls and Substantive Procedures

Appropriately applying professional skepticism is critical to obtaining sufficient appropriate audit evidence to determine whether the financial statements are free of material misstatement and, in an integrated audit, whether internal controls over financial reporting are operating effectively. Application of professional skepticism is not merely obtaining the most readily available evidence to corroborate management's assertion.

The need for auditors to appropriately apply professional skepticism is echoed throughout PCAOB standards. For example, PCAOB standards caution that

²² For example, risk assessment procedures may provide the auditor a basis for challenging management's responses to the required inquiries of management in Auditing Standard No. 12.

representations from management are not a substitute for the application of those auditing procedures necessary to afford a reasonable basis for an opinion regarding the financial statements under audit.²³ Also, the standards warn that inquiry alone does not provide sufficient appropriate evidence to support a conclusion about a relevant assertion.²⁴

In addition, PCAOB standards require auditors to design and perform audit procedures in a manner that addresses the assessed risks of material misstatement and to obtain more persuasive evidence the higher the assessment of risk.²⁵ The auditor is required to apply professional skepticism, which includes a critical assessment of the audit evidence.²⁶ Substantive procedures generally provide persuasive evidence when they are designed and performed to obtain evidence that is relevant and reliable.²⁷ When discussing the characteristics of reliable audit evidence, PCAOB standards observe that generally, among other things, evidence obtained from a knowledgeable source independent of the company is more reliable than evidence obtained only from internal company sources and evidence obtained directly by the auditor is more reliable than evidence obtained indirectly.²⁸

Taken together, this means that in higher risk areas, the auditor's appropriate application of professional skepticism should result in procedures that are focused on obtaining evidence that is more relevant and reliable, such as evidence obtained directly and evidence obtained from independent, knowledgeable sources.²⁹ Further, if audit evidence obtained from one source is inconsistent with that obtained from another, the auditor should perform the audit procedures necessary to resolve the matter and should determine the effect, if any, on other aspects of the audit.³⁰

The following are examples of audit procedures in PCAOB standards that reflect the need for professional skepticism:

- Resolving inconsistencies in or doubts about the reliability of confirmations;³¹
- Examining journal entries and other adjustments for evidence of possible material misstatement due to fraud;³²
- Reviewing accounting estimates for biases that could result in material misstatement due to fraud;³³
- Evaluating the business rationale for significant unusual transactions;³⁴ and

²³ See paragraph .02 of AU sec. 333, *Management Representations*.

²⁴ Paragraph 39 of Auditing Standard No. 13.

²⁵ See paragraphs 8-9 of Auditing Standard No. 13. For fraud risks and significant risks, the auditor also is required to perform procedures, including tests of details, that are specifically responsive to the assessed risks.

²⁶ See AU sec. 230.07.

²⁷ Paragraph 39 of Auditing Standard No. 13.

²⁸ See paragraph 8 of Auditing Standard No. 15, *Audit Evidence*.

²⁹ See paragraph 9.a. of Auditing Standard No. 13.

³⁰ Paragraph 29 of Auditing Standard No. 15.

³¹ See, e.g., paragraphs .27 and .33 of AU sec. 330, *The Confirmation Process*.

³² See AU secs. 316.58-.62.

³³ See AU secs. 316.63-.65.

³⁴ See AU secs. 316.66-.67.

- Evaluating whether there is substantial doubt about an entity's ability to continue as a going concern.³⁵

Evaluating Audit Results to Form the Opinion to be Expressed in the Audit Report

When professional skepticism is applied appropriately, the auditor does not presume that the financial statements are presented fairly in conformity with the applicable financial reporting framework. Instead, the auditor employs an attitude that includes a questioning mind in making critical assessments of the evidence obtained to determine whether the financial statements are materially misstated. PCAOB standards indicate that the auditor should take into account all relevant audit evidence, regardless of whether the evidence corroborates or contradicts the assertions in the financial statements.³⁶ Examples of areas in the evaluation that reflect the need for the auditor to apply professional skepticism, include, but are not limited to, the following:

- *Evaluating uncorrected misstatements.* This includes evaluating whether the uncorrected misstatements identified during the audit result in material misstatement of the financial statements, individually or in combination, considering both qualitative and quantitative factors.³⁷
- *Evaluating management bias.* This includes evaluating potential bias in accounting estimates, bias in the selection and application of accounting principles, the selective correction of misstatements identified during the audit, and identification by management of additional adjusting entries that offset misstatements accumulated by the auditor.³⁸ When evaluating bias, it is important for auditors to consider the incentives and pressures on management to manipulate the financial statements.
- *Evaluating the presentation of the financial statements.* This includes evaluating whether the financial statements contain the information essential for a fair presentation of the financial statements in conformity with the applicable financial reporting framework.³⁹

When evaluating misstatements, bias, or presentation and disclosures, it is important for auditors to appropriately apply professional skepticism and avoid dismissing matters as immaterial without adequate consideration.

Conclusion

The Office of the Chief Auditor is issuing this practice alert to remind auditors of the requirement to appropriately apply professional skepticism throughout their audits, which includes an attitude of a questioning mind and a critical assessment of audit evidence. The timing of this release is intended to facilitate firms' emphasis in upcoming calendar year-end audits, as well as in future audits, on the importance of the appropriate use of professional skepticism. Due to the fundamental importance of the appropriate application of professional skepticism in performing an audit in accordance with PCAOB standards, the

³⁵ See AU sec. 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*.

.11 Staff Audit Practice Alert No. 11 Considerations for Audits of Internal Control Over Financial Reporting

October 24, 2013

Staff Audit Practice Alerts highlight new, emerging, or otherwise noteworthy circumstances that may affect how auditors conduct audits under the existing requirements of the standards and rules of the PCAOB and relevant laws. Auditors should determine whether and how to respond to these circumstances based on the specific facts presented. The statements contained in Staff Audit Practice Alerts do not establish rules of the Board and do not reflect any Board determination or judgment about the conduct of any particular firm, auditor, or any other person.

Summary

The Office of the Chief Auditor is issuing this practice alert in light of significant auditing practice issues observed by the Public Company Accounting Oversight Board (“PCAOB” or the “Board”) staff in the past three years relating to audits of internal control over financial reporting (“audits of internal control”). The practice alert highlights certain requirements of the auditing standards of the PCAOB in aspects of audits of internal control in which significant auditing deficiencies have been cited frequently in PCAOB inspection reports. Specifically, this alert discusses the following topics:

- Risk assessment and the audit of internal control
- Selecting controls to test
- Testing management review controls
- Information technology (“IT”) considerations, including system-generated data and reports
- Roll-forward of controls tested at an interim date
- Using the work of others
- Evaluating identified control deficiencies

Auditors should take note of the matters discussed in this alert in planning and performing their audits of internal control. Because of the nature and importance of the matters covered in this alert, it is particularly important for the engagement partner and senior engagement team members to focus on these areas and for engagement quality reviewers to keep these matters in mind when performing their engagement quality reviews. Auditing firms also should consider whether additional training of their auditing personnel is needed for the topics discussed in this alert.

Audit committees of companies for which audits of internal control are conducted might wish to discuss with their auditors the level of auditing deficiencies in this area identified in their auditors’ internal inspections and PCAOB inspections, request information from their auditors about potential root causes of such findings, and ask how they are addressing the matters discussed in this alert. In particular, audit committees may want to inquire about the involvement and focus by senior members of the firm on these matters.

Introduction

Effective internal control over financial reporting (“internal control”) helps assure that companies produce reliable published financial statements that investors can use in making investment decisions. Since the 1970s, federal laws have required public companies to maintain sufficient “internal accounting controls.”¹ The Sarbanes-Oxley Act of 2002, as amended, (“Act”) requires company management to annually assess and report on the effectiveness of the company’s internal control. For larger companies, the Act also requires independent auditors to attest to management’s assessment of the effectiveness of the company’s internal control.²

Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, establishes requirements for performing and reporting on audits of internal control. The audit of internal control should be integrated with the audit of the financial statements. The objectives of the audits are not identical, and the auditor must plan and perform the work to achieve the objectives of both audits. In reporting on an integrated audit of internal control and financial statements (“integrated audit”), the auditor expresses an opinion on the financial statements and an opinion on the effectiveness of the company’s internal control.

Auditing Standard No. 5 establishes a top-down,³ risk-based approach to the audit of internal control. The auditing standard is designed to focus auditors on the most important matters in the audit of internal control and avoid procedures that are unnecessary to an effective audit.

When Auditing Standard No. 5 was adopted, the Board announced its intention to monitor the implementation of that auditing standard. The PCAOB has continued to monitor Auditing Standard No. 5 execution as part of its ongoing oversight activities. Over the last three years, the PCAOB’s inspections staff has observed a significant number of auditing deficiencies in audits of internal control. As reported in *Observations from 2010 Inspections of Domestic Annually Inspected Firms Regarding Deficiencies in Audits of Internal Control Over Financial Reporting* (“the general inspection report”),⁴ in 46 of the 309 integrated audit engagements (or 15 percent) covered by the general inspection

¹ See 15 U.S.C. 78m, which was added to federal securities law by the Foreign Corrupt Practices Act of 1977, which sets forth requirements for devising and maintaining a “system of internal accounting controls” sufficient to provide reasonable assurance that, among other things, transactions are recorded as necessary to permit preparation of financial statements in conformity with generally accepted accounting principles or any other applicable criteria.

² See § 404 of the Act. The auditor attestation requirement applies to companies that qualify as “large accelerated filers” or “accelerated filers,” other than “emerging growth companies.” Pursuant to 17 C.F.R. § 240.12b-2, the designation of accelerated filers and large accelerated filers is based on, among other things, the aggregate worldwide market value of the voting and non-voting common equity held by non-affiliates as of the last business day of the issuer’s most recently completed second fiscal quarter. For an accelerated filer, the aggregate market value criterion is \$75 million or more, but less than \$700 million. For a large accelerated filer, the aggregate market value criterion is \$700 million or more.

³ Under PCAOB standards, a top-down approach begins at the financial statement level and with the auditor’s understanding of the overall risks to internal control over financial reporting. The auditor then focuses on entity-level controls and works down to significant accounts and disclosures and their relevant assertions. This approach directs the auditor’s attention to accounts, disclosures, and assertions that present a reasonable possibility of material misstatement to the financial statements and related disclosures. The auditor then verifies his or her understanding of the risks in the company’s processes and selects for testing those controls that sufficiently address the assessed risk of misstatement to each relevant assertion. See paragraph 21 of Auditing Standard No. 5.

⁴ See PCAOB Release 2012-006, *Observations from 2010 Inspections of Domestic Annually Inspected Firms Regarding Deficiencies in Audits of Internal Control Over Financial Reporting* (December 10, 2012).

report, inspections staff found that the firm, at the time it issued its audit report, had failed to obtain sufficient appropriate evidence to support its opinion on the effectiveness of internal control due to one or more auditing deficiencies identified by the inspections staff. The general inspection report also noted that, in an additional 16 percent of the engagements covered by the report, the inspections staff identified other deficiencies in the auditing of internal control that did not involve findings of such significance that they indicated a failure to support the firm's internal control opinion.⁵ Inspections in subsequent years have continued to identify similarly high levels of deficiencies in audits of internal control.

Deficiencies in audits of internal control also can affect the audit of the financial statements. In integrated audits, auditors often rely on controls to reduce their substantive testing of financial statement accounts and disclosures. Thus, deficiencies in testing and evaluating internal control can lead to inadequate testing of accounts and disclosures in the financial statement audit. The general inspection report notes that, in 39 of the 46 engagements (85 percent) in which the inspection staff found that the firm did not have sufficient appropriate evidence to support the firm's internal control opinion, representing 13 percent of the 309 integrated audit engagements that were inspected, inspection staff found that the firm also failed to obtain sufficient appropriate evidence to support its opinion on the financial statements.

Significant auditing deficiencies in audits of internal control that have been frequently cited in PCAOB inspection reports include failures to:

- Identify and sufficiently test controls that are intended to address the risks of material misstatement;
- Sufficiently test the design and operating effectiveness of management review controls that are used to monitor the results of operations;
- Obtain sufficient evidence to update the results of testing of controls from an interim date to the company's year end (i.e., the roll-forward period);
- Sufficiently test controls over the system-generated data and reports that support important controls;⁶
- Sufficiently perform procedures regarding the use of the work of others; and
- Sufficiently evaluate identified control deficiencies.⁷

This practice alert discusses the application of certain requirements of Auditing Standard No. 5 and other PCAOB standards to specific aspects of the audit of internal control in light of recent observations of auditing deficiencies. Specifically, this alert discusses the following topics:

- *Risk assessment and the audit of internal control.* This alert explains how the risk assessment process set forth in PCAOB standards relates to certain aspects of the audit of internal control. It also discusses

⁵ Although the general inspection report relates to inspections of eight domestic registered firms that have been inspected annually since the inception of the PCAOB inspections program, as the report states, PCAOB inspections have found similar problems with audits of internal control at other registered firms.

⁶ See paragraph 39 of Auditing Standard No. 5, which provides that the auditor should test those controls that are important to the auditor's conclusion about whether the company's controls sufficiently address the assessed risk of misstatement to each relevant assertion.

⁷ See, e.g., PCAOB Release 2012-006, *Observations from 2010 Inspections of Domestic Annually Inspected Firms Regarding Deficiencies in Audits of Internal Control Over Financial Reporting* (December 10, 2012).

coordinating the procedures for obtaining an understanding of internal control with the Auditing Standard No. 5 objectives for understanding likely sources of misstatement, assessing risks for components of significant accounts and disclosures, and considering risk in determining the scope of testing in multi-location engagements.

- *Selecting controls to test.* The alert discusses the requirements for selecting controls to test and considerations for making an appropriate selection of controls to test, including controls that operate infrequently.
- *Testing management review controls.* The alert discusses management review controls and the requirements in PCAOB standards for testing those controls.
- *Information technology (“IT”) considerations, including system-generated data and reports.* The alert highlights requirements in PCAOB standards regarding the consideration of IT in audits of internal control, including testing controls that use system-generated data and reports and evaluating deficiencies in IT general controls (“ITGCs”).
- *Roll-forward of controls tested at an interim date.* The alert discusses the auditor’s responsibilities when controls are tested at an interim date in the audit of internal control, including the necessary roll-forward procedures to extend the results of interim testing to year end.
- *Using the work of others.* The alert discusses the requirements in PCAOB standards regarding when it is appropriate to use the work of others, how to determine the extent to which the work can be used, and the importance of testing the work of others.
- *Evaluating identified control deficiencies.* The alert discusses the auditor’s responsibilities for evaluating control deficiencies and highlights the importance of testing compensating controls and performing the evaluation with professional skepticism and careful analysis.

Risk Assessment and the Audit of Internal Control

One of the potential root causes for the deficiencies in audits of internal control, as cited in the general inspection report, is improper application of the top-down approach set forth in PCAOB standards.⁸ For example, the general inspection report notes that, in some instances, it appears that firms, in implementing a top-down approach, placed undue emphasis on testing management review controls and other detective controls without considering whether they adequately addressed the assessed risks of material misstatement of the significant account or disclosure. In some instances, inspections staff observed that firms failed to test controls for all relevant assertions of the significant accounts and disclosures. In other instances, it appeared to the inspections staff that firms did not sufficiently understand the likely sources of potential misstatements related to significant accounts or disclosures as part of selecting controls to test.

⁸ See paragraph 21 of Auditing Standard No. 5. Also, the general inspection report notes that the improper application of the top-down approach may be caused, in part, by other root causes discussed in that report and a reduced focus by firms on the requirements of Auditing Standard No. 5. See the general inspection report at 18.

Risk assessment is a key element of the top-down approach, and it underlies the entire audit process in the audit of internal control.⁹ An effective risk assessment process pursuant to PCAOB standards is fundamental to the audit of internal control.¹⁰ Identifying the risks of material misstatement – including the types of potential misstatements that can occur and the likely sources of those potential misstatements – is necessary for the auditor to select appropriate controls to test and to evaluate whether those controls adequately address the risks. For example, an auditor who identifies revenue overstatement as a risk, without assessing how overstatements might occur or understanding the controls in place to address the risk, lacks the basis to make an informed selection of controls to test or to meaningfully evaluate whether the selected controls are designed and operating to prevent or detect potential misstatements.

Auditing Standard No. 5 requires a risk-based audit approach. Proper application of the auditing standards for assessing and responding to risk (“risk assessment standards”)¹¹ is important for performing effective audits of internal control and integrating the audit of internal control with the audit of financial statements.

Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*, establishes a process for identifying and assessing risks of material misstatement in an audit, which applies to audits of internal control and audits of financial statements. The risk assessment procedures required by Auditing Standard No. 12 include, among other things, obtaining an understanding of the company and its environment and obtaining an understanding of internal control. The auditing standard also sets forth a process for assessing identified risks, which includes determining the likely sources of potential misstatement and evaluating the types of misstatements that could result from the risks; the accounts, disclosures, and assertions that could be affected; and the likelihood and magnitude of potential misstatements. potential misstatement and evaluating the types of misstatements that could result from the risks; the accounts, disclosures, and assertions that could be affected; and the likelihood and magnitude of potential misstatements. potential misstatement and evaluating the types of misstatements that could result from the risks; the accounts, disclosures, and assertions that could be affected; and the likelihood and magnitude of potential misstatements.¹²

Obtaining an Understanding of Internal Control

In an audit of internal control, a thorough understanding of the company’s internal control is important because it enables the auditor to appropriately plan and perform the necessary tests of controls. Auditing Standard No. 12 requires the auditor to obtain a sufficient understanding of each component¹³ of internal control to (1) identify the types of potential misstatements, (2) assess

⁹ See paragraph 10 of Auditing Standard No. 5. Also, see generally, Auditing Standard No. 8, *Audit Risk*, Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*, and Auditing Standard No. 13, *The Auditor’s Responses to the Risks of Material Misstatement*.

¹⁰ See paragraph 6 of Auditing Standard No. 12 and paragraphs 6 and 10 of Auditing Standard No. 5.

¹¹ Auditing Standard Nos. 8-15.

¹² See paragraphs 59 and 61 of Auditing Standard No. 12.

¹³ Paragraph 21 of Auditing Standard No. 12 provides that internal control can be described as consisting of the following components: the control environment, company’s risk assessment process, information and communication, control activities, and monitoring of controls.

the factors that affect the risks of material misstatement, and (3) design tests of controls and substantive procedures.¹⁴

Understanding internal control includes understanding the information system, including the related business processes, relevant to financial reporting, which comprise the following:

- a. The classes of transactions in the company's operations that are significant to the financial statements;
- b. The procedures, within both automated and manual systems, by which those transactions are initiated, authorized, processed, recorded, and reported;
- c. The related accounting records, supporting information, and specific accounts in the financial statements that are used to initiate, authorize, process, and record transactions;
- d. How the information system captures events and conditions, other than transactions, that are significant to the financial statements; and
- e. The period-end financial reporting process.¹⁵

In an audit of internal control, Auditing Standard No. 5 requires the auditor to perform procedures to achieve certain objectives for further understanding likely sources of potential misstatements and as part of selecting controls to test.¹⁶ The procedures performed to achieve those objectives may be performed concurrently with procedures for identifying and assessing risks of material misstatement pursuant to Auditing Standard No. 12. Performing the procedures concurrently could facilitate compliance with PCAOB standards, enhance the auditor's understanding of the company's processes and likely sources of potential misstatements, and avoid potential duplication of audit effort.

The following table illustrates how certain of the procedures required by Auditing Standard No. 12 can be coordinated with the procedures applied to meet certain of the Auditing Standard No. 5 objectives. For example, while obtaining an understanding of the information system pursuant to Auditing Standard No. 12, the auditor also can perform procedures to understand the flow of transactions for relevant assertions. Similarly, while obtaining an understanding of the company's risk assessment process and control activities, the auditor also can identify the controls that management has implemented to address potential misstatements.

<i>Procedures Required by Auditing Standard No. 12</i>	<i>Related Objective in Auditing Standard No. 5¹⁷</i>
Obtain an understanding of the information system, including the related business processes, relevant to financial reporting ¹⁸	Understand the flow of transactions related to the relevant assertions, including how these transactions are initiated, authorized, processed, and recorded

(continued)

¹⁴ See paragraph 18 of Auditing Standard No. 12 and paragraph 13 of Auditing Standard No. 15, *Audit Evidence*.

¹⁵ See paragraph 28 of Auditing Standard No. 12.

¹⁶ See paragraph 34 of Auditing Standard No. 5.

¹⁷ *Id.*

¹⁸ See paragraph 28 of Auditing Standard No. 12.

<i>Procedures Required by Auditing Standard No. 12</i>	<i>Related Objective in Auditing Standard No. 5¹⁷</i>
Identify and assess the risks of material misstatement at the assertion level and identify significant accounts and disclosures and their relevant assertions ¹⁹	Verify that the auditor has identified the points within the company's processes at which a misstatement – including a misstatement due to fraud – could arise that, individually or in combination with other misstatements, would be material
Obtain an understanding of the company's risk assessment process and ²⁰ control activities, ²¹ and consider controls that address fraud risks and other significant risks ²²	Identify the controls that management has implemented to address the potential misstatements Identify the controls that management has implemented over the prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could result in a material misstatement of the financial statements

Auditing Standard No. 5 and Auditing Standard No. 12 provide that, although walkthroughs are not required, performing walkthroughs that encompass the procedures set forth in the standard²³ is an effective way to meet the required Auditing Standard No. 5 objectives in the table above and may be used in testing the design of controls.²⁴ Thus, careful planning and execution of walkthroughs, particularly when performed or supervised by experienced personnel, can enhance the effectiveness of those aspects of the integrated audit and avoid duplication of effort. Incomplete or poorly executed walkthroughs, however, can lead to inadequate risk assessments, which can impair the effectiveness of auditors' selection and testing of controls.

The general inspection report notes that, in some situations, firms' walkthrough procedures were not adequate to verify the auditor's understanding of the risks in the company's processes and to identify and select for testing controls sufficient to address the risk of misstatement for the relevant assertions, as they were limited to:

- Performing inquiry and observation to confirm that there have been no significant changes to the processes;
- Obtaining an understanding through controls testing and substantive procedures;

¹⁹ See paragraphs 59-64 of Auditing Standard No. 12.

²⁰ See paragraphs 26-27 of Auditing Standard No. 12.

²¹ See paragraph 34 of Auditing Standard No. 12.

²² See paragraphs 72-73 of Auditing Standard No. 12.

²³ Paragraph 37 of Auditing Standard No. 5 provides that, in performing a walkthrough, the auditor follows a transaction from origination through the company's processes, including information systems, until it is reflected in the company's financial records, using the same documents and information technology that company personnel use. Walkthrough procedures usually include a combination of inquiry, observation, inspection of relevant documentation, and re-performance of controls.

²⁴ See paragraphs 37-38 and 43 of Auditing Standard No. 5, paragraphs 20 and 37-38 of Auditing Standard No. 12, and paragraph 20 of Auditing Standard No. 13.

- Reviewing walkthroughs performed by the company's internal auditor who did not provide direct assistance under the firm's supervision; or
- Relying on the auditor's knowledge and experience obtained from prior years' audits.

Assessing Risks of Material Misstatement in Components of Significant Accounts and Disclosures

In assessing risks of material misstatement and selecting controls to test, it is important for auditors to be aware that the components of a potential significant account or disclosure might be subject to significantly different risks.²⁵ Also, different risks of material misstatement affecting the same assertion of an account or disclosure might arise at different points within the company's processes. If risks differ among components, the auditor might need to select and test different controls to support a conclusion that the controls adequately address the risks to the account or disclosure.

The following are some examples of accounts and disclosures for which individual components could have different risks:

- Individual revenue categories might have different risks because of varying types of products and services, sales terms, information systems, including revenue processes, or accounting requirements.
- Individual investment securities or categories of securities in a portfolio might have different risks if they vary in nature and complexity, level of market activity, or availability of observable market data.
- The components of an allowance for loan losses might have different risks, for instance, if those components reflect different credit exposures, are determined using different methods, or are subject to different accounting requirements.
- The components of a reserve for sales returns and allowances might have different risks if they relate to different sales terms or repayment terms, use different information systems, including business processes, or are subject to different accounting requirements.

Effect of Risk Assessment on the Scope of Testing in Multi-location Engagements

Inspections staff have observed instances, such as the following, in which it appeared that firms did not sufficiently test controls that addressed the risks of material misstatement in multi-location engagements:

- Testing a sample of locations and extrapolating the results of that testing to other locations without performing procedures to evaluate whether the issuers' systems and controls were designed and implemented consistently across all of those locations.
- Excluding certain locations from testing without establishing whether there was a reasonable basis for excluding those locations.

Also, inspections staff have observed instances in which it appeared that firms, in implementing a top-down approach, placed undue emphasis on testing management review controls and other detective controls without considering whether the controls selected for testing, individually or in combination,

²⁵ See paragraph 63 of Auditing Standard No. 12.

adequately addressed the assessed risks of material misstatement of the significant account or disclosure across the significant locations.

In multi-location engagements, PCAOB standards require the auditor to assess the risks of material misstatement to the consolidated financial statements associated with the location or business unit and correlate the amount of auditing attention devoted to the location or business unit with the degree of risk.²⁶ Auditing Standard No. 9 lists factors that are relevant to the assessment of the risk of material misstatement associated with a location or business unit and the determination of the necessary audit procedures.²⁷ Certain of the factors listed in Auditing Standard No. 9 relate to the inherent risks of material misstatement, while others – such as the control environment, centralized processing, and monitoring activities – relate to entity-level controls. Auditing Standard No. 5 provides that, in lower risk locations, the auditor might first evaluate whether entity-level controls, including controls in place to provide assurance that appropriate controls exist throughout the organization, provide the auditor with sufficient evidence.²⁸ Auditing Standard No. 5 also provides that the auditor may take into account the work of others in determining the locations or business units at which to perform tests of controls.²⁹ Using the work of others is discussed later in this alert.

To illustrate the application of these principles, assume that an auditor is performing an integrated audit of a company with business units in several locations. After assessing the risks associated with the individual locations, an auditor might design an audit strategy involving:

- a. Identifying and testing controls over specific risks that present a reasonable possibility of material misstatement to the company's consolidated financial statements;
- b. To the extent not covered in item a above, identifying and testing controls at locations or business units that, individually or in combination, present a reasonable possibility of material misstatement through one or more of the following:
 - (1) Testing entity-level controls that operate at a level of precision that would detect material misstatements in the locations or business units, individually or in combination.
 - (2) For locations with centralized systems and processes and homogeneous controls, performing tests of the common controls across the locations or business units.
 - (3) Using the work of others who tested controls at the locations, to the extent appropriate, as discussed later in this release.
- c. No specific testing of controls for locations or business units that individually or in combination do not present a reasonable possibility of material misstatement of the consolidated financial statements.

In testing controls at locations or business units other than controls that address specific risks, the auditor should reassess the audit strategy if the auditor obtains information that is contrary to the premises under which the

²⁶ See paragraph 11 of Auditing Standard No. 9, *Audit Planning*, and paragraph B10 of Auditing Standard No. 5.

²⁷ See paragraph 12 of Auditing Standard No. 9.

²⁸ See paragraph B11 of Auditing Standard No. 5.

²⁹ See paragraph B12 of Auditing Standard No. 5.

audit strategy was developed.³⁰ For example, the strategy should be reassessed if the auditor obtains information indicating certain locations have risks not identified previously; certain locations have higher risk than the initial assessment; certain locations do not have homogeneous processes, systems, controls, or operating environments as previously thought; entity-level controls do not, by themselves, operate with the necessary level of precision; or the work of others cannot be used to the extent planned.

Selecting Controls to Test

As discussed previously, the general inspection report notes that, in some instances, it appears that firms, in implementing a top-down approach, placed undue emphasis on testing management review controls and other detective controls without considering whether they adequately addressed the assessed risks of material misstatement of the significant account or disclosure. In some instances, inspections staff observed that firms failed to test controls for all the relevant assertions of the significant accounts and disclosures.

In the audit of internal control, PCAOB standards require the auditor to test:³¹

- a. Entity-level controls that are important to the auditor's conclusion about whether the company has effective internal control over financial reporting, including evaluating the control environment and period-end financial reporting process;³² and
- b. Controls that are important to the auditor's conclusion about whether the company's controls sufficiently address the assessed risk of misstatement to each relevant assertion (which may be entity-level controls or other controls).³³

Also, Auditing Standard No. 5 cautions that a control must be tested directly to obtain evidence about its effectiveness; an auditor cannot merely infer that a control is effective because no misstatements were detected by substantive procedures.³⁴

In selecting controls over significant accounts and disclosures, an important consideration is determining that the auditor has selected controls that, individually or in combination, are intended to address the identified risks of material misstatement, including risks for the relevant assertions and the components of the account or disclosure with differing risks. The following is a partial list from the general inspection report of assertions or account components for which inspections staff observed that auditors failed to identify and sufficiently test controls that addressed the risks of material misstatement:

- Revenue: Significant business units or significant revenue categories, significant contract provisions affecting revenue recognition, and significant inputs to percentage-of-completion calculations
- Inventory: Pricing of significant inventory components and determination of reserves for excess and obsolete inventory

³⁰ See paragraph 15 of Auditing Standard No. 9 and paragraph 74 of Auditing Standard No. 12, which discuss the auditor's responsibilities for changing the audit strategy and planned audit procedures when circumstances change or contrary information is identified.

³¹ Paragraph 14 of Auditing Standard No. 5 provides that the auditor also should evaluate whether the company's controls sufficiently address identified fraud risks and controls intended to address the risk of management override.

³² See paragraphs 22 and 26 of Auditing Standard No. 5.

³³ See paragraphs 23, 39, and 41 of Auditing Standard No. 5.

³⁴ See paragraph B9 of Auditing Standard No. 5.

- Fair value of financial instruments: Inputs used to value hard-to-value financial instruments and determinations of the classification of securities within the fair value hierarchy set forth in Financial Accounting Standards Board *Accounting Standards Codification* Topic 820, *Fair Value Measurement*
- Valuation of pension plan assets³⁵

To illustrate the process of selecting controls to test, assume that an auditor identifies risks of material misstatement related to reserves for excess and obsolete inventory. When selecting controls that are important to address the risks of material misstatement, it is important to look for controls that encompass each segment of inventory for which there is a reasonable possibility of material misstatement regarding the related reserve for excess and obsolete inventory. Limiting the selection to controls over inventory segments that have no reserves, for example, would not be sufficient to address the risk of material misstatement.

The procedures performed to obtain an understanding of internal control pursuant to Auditing Standard No. 12 and to meet the objectives of paragraph 34 of Auditing Standard No. 5 can provide a basis for the auditor to determine whether the selected controls cover the identified risks. For example, performing those procedures enables the auditor to understand the likely sources of potential misstatement and the controls intended to prevent or detect those misstatements.

Another important consideration in selecting controls to test is whether the controls, individually or in combination, are capable of addressing the risks of material misstatement to the relevant assertion.³⁶ Some risks, especially those related to complex processes or subjective estimates, might require a combination of controls to prevent or detect misstatements. For example, if a company has a complex income tax calculation, the controls needed to address the risks of material misstatement might consist of a combination of (1) a review of the overall tax calculation by a person with the necessary authority and competence and (2) certain other types of controls over key aspects of the calculation. As another example, an auditor might select a combination of a manual review control that uses system-generated data and IT controls over the completeness and accuracy of that data, as discussed later in this alert.

Controls over Infrequent Processes and Transactions

Internal control is not limited to frequent processes and normal recurring transactions. It also applies to infrequent processes, such as an analysis of whether long-term assets are impaired, and to nonrecurring transactions outside the normal course of business, such as a material business combination.

When a company has infrequent processes or enters into nonrecurring transactions that present a reasonable possibility of material misstatement of the financial statements, the auditor should test the controls over those processes or transactions. Performing substantive audit procedures to determine whether the accounts or transactions are accounted for properly is important for the financial statement audit but, by itself, does not provide sufficient appropriate evidence to support a conclusion that the controls over those transactions or analyses are designed and operating effectively. As discussed previously, Auditing Standard No. 5 cautions that a control must be tested directly to obtain evidence about its effectiveness; an auditor cannot merely infer that a control

³⁵ See the general inspection report at 5-6.

³⁶ See paragraphs 23, 39, and 41 of Auditing Standard No. 5.

is effective because no misstatements were detected by substantive procedures.³⁷

In some cases, auditors are able to design and perform procedures that test controls over nonrecurring transactions concurrently with substantive tests of those transactions, thereby obtaining sufficient appropriate evidence to fulfill the related objectives for the financial statement audit and the audit of internal control. For example, when auditing the company's accounting for a business combination, the auditor also might obtain an understanding of the company's financial reporting process, and related controls, regarding the business combination. In that situation, the auditor could test important controls over the accounting for business combinations when auditing the accounting for the business combination. In that situation, the auditor's substantive testing and tests of controls should be sufficient to meet the objectives of both tests.

Testing Management Review Controls

Auditors often select and test management review controls in audits of internal control. Such management reviews might be performed to monitor the results of operations, such as (1) monthly comparisons of actual results to forecasted revenues or budgeted expenses; (2) comparisons of other metrics, such as gross profit margins and expenses as a percentage of sales; and (3) quarterly balance sheet reviews. These reviews typically involve comparing recorded financial statement amounts to expected amounts and investigating significant differences from expectations.

As with other types of controls, the auditor should perform procedures to obtain evidence about how a management review control is designed and operates to prevent or detect misstatements.³⁸ Verifying that a review was signed off provides little or no evidence by itself about the control's effectiveness.

Evaluating the Precision of Management Review Controls

Many management review controls are entity-level controls, so testing those review controls can be an appropriate part of a top-down approach. Auditing Standard No. 5 provides that entity-level controls vary in nature and precision and that some entity-level controls might operate at a level of precision that would adequately prevent or detect misstatements on a timely basis.³⁹ Other entity-level controls, by themselves, might not operate with the necessary level of precision, but might be effective in combination with other controls in addressing the assessed risk of material misstatement.

Thus, the main consideration in assessing the level of precision is whether the control is designed and operating to prevent or detect on a timely basis misstatements that could cause the financial statements to be materially misstated. Factors that can affect the level of precision of an entity-level control include the following:

- *Objective of the review.* A procedure that functions to prevent or detect misstatements generally is more precise than a procedure that merely identifies and explains differences.
- *Level of aggregation.* A control that is performed at a more granular level generally is more precise than one performed at a higher level.

³⁷ See paragraph B9 of Auditing Standard No. 5.

³⁸ See paragraphs 42-45 of Auditing Standard No. 5, which describe the auditor's responsibilities for testing the design and operating effectiveness of controls.

³⁹ See paragraph 23 of Auditing Standard No. 5.

For example, an analysis of revenue by location or product line normally is more precise than an analysis of total company revenue.

- *Consistency of performance.* A control that is performed routinely and consistently generally is more precise than one performed sporadically.
- *Correlation to relevant assertions.* A control that is indirectly related to an assertion normally is less likely to prevent or detect misstatements in the assertion than a control that is directly related to an assertion. For example, a control designed to detect errors in the recorded amounts of accounts receivable might not operate with a sufficient level of precision to detect errors in the valuation of delinquent receivables.
- *Predictability of expectations.* Some entity-level controls are designed to detect misstatements by using key performance indicators or other information to develop expectations about reported amounts (“detective controls”). The precision of those controls depends on the ability to develop sufficiently precise expectations to highlight potentially material misstatements.
- *Criteria for investigation.* For detective controls, the threshold for investigating deviations or differences from expectations relative to materiality is an indication of a control’s precision. For example, a control that investigates items that are near the threshold for financial statement materiality has less precision and a greater risk of failing to prevent or detect misstatements that could be material than a control with a lower threshold for investigation.

Testing Design Effectiveness

Auditing Standard No. 5 provides that the auditor should test the design effectiveness of controls by determining whether the company’s controls, if they are operated as prescribed by persons possessing the necessary authority and competence, satisfy the company’s control objectives⁴⁰ and can effectively prevent or detect errors or fraud that could result in material misstatement of the financial statements.⁴¹

Evaluating whether a management review control is capable of preventing or detecting potential material misstatements generally involves obtaining an understanding of and evaluating the following:

- a. Whether the control satisfies the corresponding control objective, including whether it addresses the risks of material misstatement to the relevant assertion of the significant account or disclosure;
- b. The factors affecting the precision of the review, including the objective of the review and the appropriateness of the expectations, level of aggregation, and criteria for investigation for identifying potentially material misstatements;
- c. The steps involved in identifying, investigating, and resolving significant differences from expectations;
- d. The person(s) who performs the control, including the competence and authority of the person(s);

⁴⁰ See paragraph A2 of Auditing Standard No. 5 for the definition of the term “control objective.”

⁴¹ See paragraph 42 of Auditing Standard No. 5.

- e. The frequency of performance of the control, that is, whether the review occurs often enough to prevent or detect misstatements before they have a material effect on the financial statements; and
- f. The information used in the review, for example, whether the review uses system-generated data or reports, as discussed later in this alert.

The evaluation of design may be performed in conjunction with obtaining an understanding of internal control over financial reporting and performing procedures to achieve the objectives of paragraph 34 of Auditing Standard No. 5, which were presented in the prior table.⁴² For example, to assess whether a control is effectively designed, it is important to identify the risk of material misstatement to the relevant assertion of the significant account or disclosure that the control is intended to address.

Testing Operating Effectiveness

Auditing Standard No. 5 provides that the auditor should test the operating effectiveness of a control by determining whether the control is operating as designed and whether the person performing the control has the necessary authority and competence to perform the control effectively.⁴³ The auditing standard also provides that the evidence necessary to persuade the auditor that a control is effective depends upon the risk associated with the control.⁴⁴

Testing the operating effectiveness of a management review control involves performing procedures to evaluate whether the control is working as designed to prevent or detect potentially material misstatements. Testing typically involves, for selected operations of the control, obtaining and evaluating evidence about:⁴⁵

- a. The steps performed to identify and investigate significant differences; and
- b. The conclusions reached in the reviewer's investigation, including whether potential misstatements were appropriately investigated and whether corrective actions were taken as needed.

The nature, timing, and extent of testing should be commensurate with the risk associated with the controls. Higher risk controls warrant more testing.

The auditor also should take into account other relevant evidence obtained in the audit when evaluating the effectiveness of a control, such as identified misstatements that were not prevented or detected by the control.⁴⁶

Example: Test of a Management Review Control

To illustrate the process of testing management review controls, assume that, in an audit of a commercial enterprise with four similar branch locations, the auditor selects for testing a monthly control over the existence, completeness,

⁴² See paragraph 43 of Auditing Standard No. 5, which provides that procedures the auditor performs to test design effectiveness include a mix of inquiry of appropriate personnel, observation of the company's operations, and inspection of relevant documentation. Walk-throughs that include these procedures ordinarily are sufficient to evaluate design effectiveness.

⁴³ See paragraph 44 of Auditing Standard No. 5.

⁴⁴ See paragraph 46 of Auditing Standard No. 5.

⁴⁵ If the control uses system-generated information or reports, the auditor also should obtain evidence about the completeness and accuracy of those reports, as discussed in the information technology considerations section of this alert. This also applies to other internally-produced information used by the company in an important control.

⁴⁶ See paragraph 71 of Auditing Standard No. 5.

and allocation assertions for certain selling, general, and administrative expenses, such as salaries and wages, utilities, facilities, and depreciation. In the selected control, each branch controller performs an analysis comparing the expense-related accounts in the branch's financial statements to the prior year and forecasted financial statements for the branch and investigates differences over a predetermined threshold set by the company's chief financial officer ("CFO"). Each branch controller discusses the results of the analysis with the CFO to enable the CFO to understand the basis for significant differences and determine whether any financial statement adjustments or other corrective actions are needed.

The auditor assesses a higher risk associated with the management review control because the control applies to multiple assertions for several material accounts with varying levels of risk of material misstatement.⁴⁷

In this illustration, the auditor's procedures may include the following:⁴⁸

- a. Evaluating whether the control addresses the risks of material misstatement to the relevant assertions of the selling, general, and administrative expense accounts, as intended;
- b. Evaluating whether the use of prior year and forecast information at the branch level is an appropriate basis for establishing expectations to identify potential misstatements;
- c. Evaluating whether the criteria used for identifying differences for investigation are set at an appropriate level to enable the branch controller to identify misstatements that could be material to the financial statements, individually or in combination with other misstatements;
- d. Evaluating the competencies of the CFO and branch controllers based on, among other things, the auditor's knowledge of the individuals and experience with them in current and prior audits;
- e. Evaluating whether the control operates often enough to prevent or detect misstatements before they have a material effect on the financial statements;
- f. For selected operations of the control, obtaining the information used by the branch controller in the analysis, understanding the steps performed by the branch controller to investigate significant differences, reperforming the analysis and comparing the auditor's identification of significant differences and evaluation of results – including identified misstatements, if any – to the branch controller's analysis; and
- g. Observing or reading summaries of selected meetings in which the results of the analyses by the branch controllers were discussed with the CFO; inspecting the information presented to the CFO; and evaluating the matters discussed, conclusions reached, and corrective actions taken, if any.

⁴⁷ See, e.g., paragraph 47 of Auditing Standard No. 5, which provides that two factors affecting the risk associated with a control are (1) the nature and materiality of misstatements that the control is intended to prevent or detect and (2) the inherent risk associated with the related account(s) and assertion(s).

⁴⁸ The procedures listed here are illustrative. The actual procedures needed for a particular management review control will depend on, among other things, the nature of the control, the risk associated with the control, the information used in the control, and the evidence of the control's operation.

The auditor also determined that the control uses financial statement and forecast information that is maintained and reported by the same IT system. The company's IT systems are centrally managed, and the IT controls for that system were tested in conjunction with tests of IT controls for the company's other financial statement related systems.

The preceding example illustrates an approach to testing accounts that tend to be routine and predictable. If testing controls over accounts or assertions that are more complex or less predictable, management review controls consisting primarily of comparisons to budgets or forecasts might not operate at a sufficient level of precision. In those situations, it might be necessary to test a combination of management review controls and other controls to conclude on whether the company's controls sufficiently address the risks of material misstatement for the relevant assertions of significant accounts.

Information Technology Considerations, Including System-generated Data and Reports

The general inspection report notes that inspections staff have observed instances in which firms selected controls for testing but failed to sufficiently test controls over the completeness and accuracy of system-generated data or reports used in the operation of those controls. For example, some firms failed to: (1) test ITGCs that are important to the effective operation of the applications that generated the data or reports, (2) test the logic of the queries (or parameters) used to extract data from the IT applications used in the reports, or (3) address control deficiencies that were identified with respect to the ITGCs over either the applications that process the data used in the reports or the applications that generated the reports.⁴⁹ Similarly, inspections staff have observed instances in which firms have identified that certain ITGCs were ineffective but failed to perform other procedures to test report writers and systems used to produce spreadsheets, queries, or reports. In other instances, the firms planned their tests of controls to include testing of ITGCs for IT-dependent controls, but those IT-dependent controls used customized data or queries that were not subject to the ITGCs the firms tested.

A company's use of IT can significantly affect a company's internal control. The following are examples of IT-related matters that can affect the auditor's evaluation of internal control:

- Risks of material misstatement resulting from the company's IT processes or systems;⁵⁰
- Important controls that depend on the effectiveness of IT controls ("IT-dependent controls"), for example, because they use system-generated data or reports; and
- Important IT controls, such as, automated controls that address risks of material misstatement to one or more assertions, along with the IT controls that support the effectiveness of the automated controls.

PCAOB standards require the auditor to obtain an understanding of the company's information system relevant to financial reporting and take into account IT considerations in assessing the risks of material misstatement. This includes obtaining an understanding of the extent of manual controls and

⁴⁹ See the general inspection report at 11.

⁵⁰ See, e.g., paragraphs 36 and 47 of Auditing Standard No. 5 and paragraphs B1-B6 and 29 of Auditing Standard No. 12.

automated controls used by the company, including the ITGCs that are important to the effective operation of the automated controls.⁵¹ The auditor also should obtain an understanding of specific risks to a company's internal control resulting from IT.⁵²

In an audit of internal control, if the auditor selects an IT-dependent control for testing, the auditor should test the IT-dependent controls and the IT controls on which the selected control relies to support a conclusion about whether those controls address the risks of material misstatement.⁵³ For example, if a control selected for testing uses system-generated data or reports, the effectiveness of the control depends in part on the controls over the accuracy and completeness of the system-generated data or reports. In those situations, supporting a conclusion on the effectiveness of the selected control involves testing both the selected control and the controls over the system-generated data and reports.

As discussed later in this alert, PCAOB standards require evaluation of the severity of identified control deficiencies. This includes deficiencies in IT controls. However, the nature of IT systems, processes, and controls can affect how deficiencies in IT controls should be evaluated. For example, an IT control might not be intended to prevent or detect misstatements by itself, but it might impair the effectiveness of important IT-dependent controls if it were deficient. In those situations, evaluating the severity of a deficient IT control involves assessing the effect of the deficiency on important IT-dependent controls and, in turn, the likelihood and magnitude of potential misstatements that could result, individually or in combination with other control deficiencies. Also, deficient IT controls might impair the effectiveness of multiple controls across multiple accounts. In those situations, it may be necessary to assess the severity of those impaired controls in combination across the affected accounts and with other control deficiencies affecting those accounts.

Roll-forward of Controls Tested at an Interim Date

The general inspection report notes that inspections staff have identified instances in which firms tested significant controls at an interim date and either did not perform any testing, or used inquiry alone, to update the results of their testing of higher risk controls that had been performed prior to year end. For example, an engagement team performed tests of highly subjective controls during the interim period, three to six months prior to year end. Yet the engagement team's procedures to update the results of its testing of these controls from the interim date to year end were limited to general inquires as to whether the operation of any of these controls had changed, despite higher degrees of risks associated with these controls, including, in some cases, high inherent risks or heightened fraud risks. In another example, the engagement team's procedures to update the results of its testing of internal control for the six-month period from the interim date to year end were limited to inquiry, including for higher-risk controls and controls affected by a change in management review and approval responsibilities.⁵⁴

Although the auditor expresses an opinion on internal control as of the end of the year, auditors may decide to test some important controls at an earlier date. When auditors test controls at an interim date, PCAOB standards require

⁵¹ See paragraph B1 of Auditing Standard No. 12.

⁵² See paragraph B4 of Auditing Standard No. 12.

⁵³ See, e.g., paragraphs 39-41 of Auditing Standard No. 5, which discuss selecting controls to test and paragraph 47 of Auditing Standard No. 5, which cite situations in which controls rely on the effectiveness of IT general controls.

⁵⁴ See the general inspection report at 10.

auditors to perform “roll-forward” procedures to update the results of interim testing to year end.⁵⁵ The amount of evidence needed from the roll-forward procedures depends on the following factors:

- The specific control tested at an interim date, including the risks associated with the control and the nature of the control, and the results of those tests;
- The sufficiency of the evidence of effectiveness obtained at an interim date;
- The length of the roll-forward period; and
- The possibility that there have been any significant changes in internal control over financial reporting subsequent to the interim date.⁵⁶

Auditing Standard No. 5 provides that inquiry might be a sufficient roll-forward procedure when evaluation of the preceding factors indicates a low risk that the controls are no longer effective during the roll-forward period.⁵⁷ For example, inquiry might be appropriate if the risk associated with the control were low, the auditor obtained substantially all of the evidence necessary to support the conclusion on the control as of the interim date with no observed test exceptions, the roll-forward period was relatively short, and there were no significant changes in internal control during the roll-forward period. Conversely, inquiry is unlikely to be sufficient if the control is more complex, subjective or otherwise higher risk; the control was not tested extensively at the interim date; exceptions were noted in the interim testing; the roll-forward period spans a significant portion of the year; or significant changes occurred in internal control during the roll-forward period. Similarly, when inquiry is not sufficient, the additional evidence to cover the roll-forward period cannot be inferred from the absence of misstatements detected by substantive procedures.⁵⁸

Using the Work of Others

The general inspection report notes that inspections staff have identified situations in which firms used the work of others, most often internal audit, who performed tests of controls without establishing a sufficient basis for using that work. For example, in some instances, the extent to which firms used the work of internal audit in higher risk areas involving significant judgment, such as aspects of revenue and the valuation of complex, hard-to-value investment securities, was inappropriate. Also, in some instances, firms failed to evaluate the design of internal audit’s control testing procedures, including the scoping and the identification of important controls. For example, the engagement team used the work of internal audit to test controls over revenue. The engagement team did not re-perform any of the tests of controls performed by the issuer’s internal audit group. In addition, there was no documentation of the nature, timing, and extent of the control testing performed by internal audit.⁵⁹

⁵⁵ See paragraph 55 of Auditing Standard No. 5. If the auditor plans to rely on controls in the financial statement audit, the auditor must obtain evidence about the controls over the entire period of reliance, as discussed in paragraphs 16 and 29-30 of Auditing Standard No. 13.

⁵⁶ See paragraph 56 of Auditing Standard No. 5.

⁵⁷ *Id.*

⁵⁸ See paragraph B9 of Auditing Standard No. 5.

⁵⁹ See the general inspection report at 12.

PCAOB standards allow the auditor to use the work of others as evidence of the effectiveness of selected controls, and Auditing Standard No. 5 requires auditors to determine the extent to which the work of others will be used.⁶⁰

PCAOB standards provide that the extent to which the work of others can be used depends on the following factors:

- The risk associated with the control being tested;⁶¹ and
- The competence and objectivity of the persons whose work the auditor plans to use.⁶² For example, persons who test controls are less objective if they report to those responsible for the operation of the controls being tested.

The risk associated with the control is the risk that a control might not be effective and, if not effective, that a material weakness would result.⁶³ Auditing Standard No. 5 discusses factors that affect the risk associated with a control, including the complexity of the control and significance of judgments that must be made in connection with its operation and the inherent risks of the related account or assertion.⁶⁴ As the risk associated with the control increases, the need for the auditor to perform his or her own testing of the control increases.⁶⁵ In higher risk areas, such as testing complex controls, controls that address specific fraud risks, or controls that require significant judgment to operate or evaluate, use of the work of others would be limited, if at all.⁶⁶ Conversely, the work of competent and objective persons could be used more extensively in lower risk areas.

PCAOB standards provide direction on evaluating the competence and objectivity of others.⁶⁷ The higher the degree of competence and objectivity, the greater use the auditor may make of the work. The impact of the work of others on the auditor's work also depends on the relationship between the risk associated with the control and the competence and objectivity of those who performed the work. As the risk decreases, the necessary level of competence and objectivity decreases.⁶⁸

When the auditor uses the work of others, the auditor also should test and evaluate that work, including evaluating the quality and effectiveness of the others' work.⁶⁹ The necessary extent of testing of that work depends on the risk associated with the control and the competence and objectivity of the others. More extensive testing of the others' work is needed as the risk increases or the others' level of competence or objectivity decreases. When using the work of

⁶⁰ See paragraphs 16-17 of Auditing Standard No. 5.

⁶¹ See paragraph 19 of Auditing Standard No. 5.

⁶² See paragraph 18 of Auditing Standard No. 5 and paragraphs .09-.11 of AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*.

⁶³ See paragraph 46 of Auditing Standard No. 5.

⁶⁴ See paragraph 47 of Auditing Standard No. 5.

⁶⁵ See paragraph 19 of Auditing Standard No. 5.

⁶⁶ See PCAOB Release 2007-005A, *Auditing Standard No. 5—An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements and Related Independence Rule and Conforming Amendments* (June 12, 2007), at 14.

⁶⁷ See paragraph 18 of Auditing Standard No. 5 and AU sec. 322.09-.11. For example, the objectivity of the others is lower when they report directly to management or to the person performing the control they are evaluating.

⁶⁸ See PCAOB Release 2007-005A at 14.

⁶⁹ See paragraph 16 of Auditing Standard No. 5 and AU sec. 322.24-.27. See also PCAOB Release 2007-005A at A4-4.

others that provide direct assistance, the auditor should supervise that work, including reviewing the work, as well as testing and evaluating it.⁷⁰

Evaluating Identified Control Deficiencies

The general inspection report notes that inspections staff observed instances in which firms failed to evaluate sufficiently the severity of the control deficiencies that they had identified. Specifically, in some cases firms did not:

- *Sufficiently evaluate whether audit adjustments and exceptions identified from substantive procedures were indicators of the existence of control deficiencies.* For example, the firm's valuation specialist concluded that the recorded fair values of certain of the issuer's assets were outside a reasonable range due to the use of unsupported assumptions. This resulted in a significant audit adjustment that the issuer recorded. The issuer's controls had failed to identify that the valuation assumptions were not supported; however, the engagement team failed to identify and evaluate this control deficiency.
- *Consider all of the relevant risk factors that should have affected the determination of whether there was a reasonable possibility that a deficiency, or a combination of deficiencies, could result in a material misstatement.* For example, a significant deficiency was identified over the issuer's process for valuing hard-to-value financial instruments. The engagement team failed to appropriately evaluate the severity of the deficiency as it did not evaluate relevant risk factors, such as, the nature of the accounts affected by the deficiency, and the subjectivity, complexity, or extent of judgment required to determine the valuations. In addition, the engagement team did not consider the magnitude of audit adjustments related to this control deficiency in determining whether the control deficiency was a material weakness rather than a significant deficiency.
- *Consider all of the relevant factors that should have affected the determination of the magnitude of potential misstatements.* For example, an engagement team did not sufficiently evaluate the severity of certain control deficiencies identified through tests of controls over revenue. Specifically, as part of the issuer's evaluation of control deficiencies, management calculated the magnitude of the potential misstatement resulting from the control deficiencies using certain significant assumptions. The engagement team used the issuer's evaluation but did not assess the reasonableness of the issuer's assumptions.
- *Sufficiently evaluate compensating controls, including identifying and testing those controls and determining whether they operated at a level of precision that would prevent or detect a misstatement that could be material.* For example, an engagement team concluded that certain compensating controls partially mitigated the effect of the deficiencies and that the control deficiencies therefore constituted a significant deficiency rather than a material weakness. The engagement team, however, failed to obtain sufficient appropriate audit evidence to support its conclusion that the compensating controls operated at a level of precision that would prevent or detect a misstatement that could be material. Specifically, the engagement team concluded that one of the compensating controls operated effectively even though the

⁷⁰ *Id.*

control failed to identify an error that was in excess of the engagement team's established materiality.⁷¹

Control deficiencies might be identified during the audit of the financial statements as well as the audit of internal control. For example, an error identified in the financial statement audit often results from a deficiency in the design or operation of controls, or a lack of controls, over that account or disclosure. PCAOB standards require auditors to evaluate the effect of the findings of the substantive procedures performed in the financial statement audit on the effectiveness of internal control.⁷² This includes identifying and evaluating any specific control deficiencies related to the identified misstatements.

PCAOB standards require auditors to evaluate the severity of each control deficiency that comes to his or her attention to determine whether the deficiencies, individually or in combination, are material weaknesses.⁷³ Auditing Standard No. 5 provides that the severity of a control deficiency depends on (1) whether there is a reasonable possibility that the company's controls will fail to prevent or detect a misstatement of an account balance or disclosure and (2) the magnitude of the potential misstatement resulting from the deficiency or deficiencies.⁷⁴ The severity of a deficiency does not depend on whether a misstatement actually has occurred but rather on whether there is a reasonable possibility that the company's controls will fail to prevent or detect a misstatement.⁷⁵

Auditing Standard No. 5 also provides additional direction on evaluating the severity of control deficiencies, including risk factors that affect the evaluation of the likelihood and potential magnitude of misstatements resulting from control deficiencies and indicators of material weaknesses.⁷⁶ For example, deficiencies in controls over the key assumptions in a significant accounting estimate could result in a reasonable possibility of misstatement because of the subjectivity, complexity, or extent of judgment required to determine the amount of the estimate. Also, multiple control deficiencies affecting the same account can increase the likelihood of misstatement. Similarly, the magnitude of potential misstatements resulting from a deficiency is greater for control deficiencies affecting processes with large transaction volumes or the existence of accounts with large recorded amounts.

In forming a conclusion about whether a control deficiency or combination of deficiencies is a material weakness, the auditor should evaluate the effect of compensating controls, if any. This includes testing the compensating controls to determine whether they operate at a level of precision that would prevent or detect a misstatement that could be material. This includes evaluating whether the control addresses the risk of material misstatement to the relevant assertion intended to be addressed by the deficient control. If the compensating control is a management review control, the previously discussed considerations for testing management review controls apply to the compensating control.

Evaluating whether a control deficiency, or a combination of control deficiencies, results in a material weakness requires professional skepticism and a

⁷¹ See the general inspection report at 13-14.

⁷² See paragraph B8 of Auditing Standard No. 5.

⁷³ See, e.g., paragraph 62 and the second note to paragraph 65 of Auditing Standard No. 5.

⁷⁴ See paragraph 63 of Auditing Standard No. 5.

⁷⁵ See paragraph 64 of Auditing Standard No. 5.

⁷⁶ See paragraphs 64-70 of Auditing Standard No. 5, which set forth additional requirements and direction regarding evaluating the severity of control deficiencies.

Careful analysis of all the evidence obtained. Auditors who perform a mechanical or cursory evaluation of deficiencies might reach premature conclusions without appropriately considering critical information. For example, a mechanical or cursory evaluation may lead an auditor to

- Assess control deficiencies in isolation, without considering the effects of deficiencies in combination;
- Consider only the amount of identified misstatements, without evaluating the magnitude of potential misstatement that could occur; or
- Focus on a checklist of material weakness indicators without considering other relevant factors.

Conclusion

An integrated audit of financial statements and internal control benefits investors because the auditor's reports address both the audited financial statements and the effectiveness of the controls the company uses to produce its financial statements. Appropriate application of the top-down, risk based approach pursuant to PCAOB standards can result in an effective audit of internal control while avoiding unnecessary work.

The PCAOB has observed through its inspections a significant number of audit deficiencies in audits of internal control over the past three years. This alert discusses certain significant matters relating to the application of PCAOB standards to audits of internal control, in light of these inspections observations.

Auditors should take note of the matters discussed in this alert in planning and performing their audits of internal control. Because of the nature and importance of the matters covered in this alert, it is particularly important for the engagement partner and senior engagement team members to focus on these areas and for engagement quality reviewers to keep these matters in mind when performing their engagement quality reviews. Auditing firms also should consider whether additional training of their auditing personnel is needed for the topics discussed in this alert.

Audit committees of companies for which audits of internal control are conducted might wish to discuss with their auditors the level of auditing deficiencies in this area identified in their auditors' internal inspections and PCAOB inspections, request information from their auditors about potential root causes of such findings and ask how they are addressing the matters discussed in this alert. In particular, audit committees may want to inquire about the involvement and focus by senior members of the firm on these matters.

As noted in the general report, audit committees may consider inquiring of the issuer's auditor how the controls to be tested will address the assessed risks of material misstatement for relevant assertions of significant accounts and disclosures. Also, audit committees may consider discussing with the auditor his or her assessment of risks, evaluation of control deficiencies, and whether the auditor has adjusted as necessary the nature, timing, and extent of his or her control testing and substantive audit procedures in response to risks related to identified control deficiencies.

The PCAOB will continue to monitor the execution of audits of internal control as part of its ongoing oversight activities.

Section 100

Trust Services Principles and Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy

(To supersede the 2009 version of *Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy* (TSP section 100A). The privacy criteria are presented in appendix C. These criteria are the same criteria set forth in appendix D of TSP section 100A. The privacy criteria are currently under revision. The criteria in TSP section 100 are effective for periods ending on or after December 15, 2014, with earlier implementation permitted. TSP section 100A will retain the superseded material until March 31, 2016. The practitioner should identify which set of criteria was used for the report and assertion.)

Introduction

.01 The AICPA Assurance Services Executive Committee (ASEC) has developed a set of principles and criteria (trust services principles and criteria) to be used in evaluating controls relevant to the security, availability, and processing integrity of a system, and the confidentiality and privacy of the information processed by the system. In this document, a *system* is designed, implemented, and operated to achieve specific business objectives (for example, delivery of services, production of goods) in accordance with management-specified requirements. System components can be classified into the following five categories:

- *Infrastructure*. The physical structures, IT, and other hardware (for example, facilities, computers, equipment, mobile devices, and telecommunications networks).
- *Software*. The application programs and IT system software that supports application programs (operating systems, middleware, and utilities).
- *People*. The personnel involved in the governance, operation, and use of a system (developers, operators, entity users, vendor personnel, and managers).
- *Processes*. The automated and manual procedures.
- *Data*. Transaction streams, files, databases, tables, and output used or processed by a system.

.02 This document presents the trust services principles and criteria for assessing the effectiveness of an entity's controls over a system relevant to the security, availability, or processing integrity of the system, or the confidentiality or privacy of the information processed by the system. Management of an entity may use the principles and criteria to evaluate its controls over a system or may engage a CPA to report on or provide consulting services related to those controls.

.03 Attestation services, performed under the AICPA's Statements on Standards for Attestation Engagements (commonly known as the *attestation*

standards), include examination, review,¹ and agreed-upon procedures engagements. In the attestation standards, the CPA performing an attest engagement is known as a practitioner. In an examination engagement, the practitioner provides a report that expresses an opinion about subject matter or an assertion about subject matter in relation to an identified set of criteria. For example, a practitioner may report on whether controls over a system were operating effectively to meet the trust services criteria for processing integrity and confidentiality. In an agreed-upon procedures engagement, the practitioner does not express an opinion but rather performs procedures agreed upon by specified parties and reports the results of those procedures. Examination engagements are performed in accordance with AT section 101, *Attest Engagements*, of the attestation standards and agreed-upon procedures engagements are performed in accordance with AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*).

.04 The following are the types of subject matter a practitioner may examine and report on using the trust services principles and criteria:

- The design and operating effectiveness of a service organization's controls over a system relevant to one or more of the trust services principles of security, availability, processing integrity, confidentiality, and privacy (SOC 3SM engagement).
- The fairness of the presentation of a description of a service organization's system relevant to one or more of the trust services principles of security, availability, processing integrity, confidentiality, and privacy using the description criteria in paragraph 1.34 of the AICPA Guide *Reporting on Controls at a Service Organization Relevant to Security, Availability, Processing Integrity, Confidentiality or Privacy* (SOC 2SM), and additionally in paragraph 1.35 for the privacy principle; for a type 1 report, the suitability of the design of controls to meet the related trust services criteria; and, for a type 2 report, the operating effectiveness of those controls throughout a specified period to meet those trust services criteria (SOC 2 engagement).
- The suitability of the design of an entity's controls over a system relevant to one or more of the trust services principles of security, availability, processing integrity, confidentiality, and privacy to meet the related trust services criteria. (This engagement would typically be performed prior to the system's implementation.)

.05 The nature and extent of the services that an organization provides to each user entity may vary significantly depending on the user entity's needs. For example, a social organization that uses a website for a monthly newsletter would have a much more limited need for data center hosting service availability than would a securities trading firm. The social organization is likely to be only slightly inconvenienced if its newsletter is unavailable for one day; whereas, the securities trading firm could experience a significant financial loss if the system is unavailable for 15 minutes. Such user needs generally are

¹ Review engagements generally consist of the performance of inquiries and analytical procedures designed to provide a moderate level of assurance (that is, negative assurance). However, the Assurance Services Executive Committee believes that a practitioner ordinarily could not perform meaningful analytical procedures on an entity's controls or compliance with requirements of specified laws, regulations, rules, contracts, or grants to achieve this level of assurance, and it is uncertain what other procedures could be identified that, when combined with inquiry procedures, could form the basis for a review engagement. Also due to this uncertainty, users of a review report are at greater risk of misunderstanding the nature and extent of the practitioner's procedures. Accordingly, the feasibility of a review engagement related to trust services is uncertain.

addressed by management declarations in written contracts, service level agreements, or public statements (for example, a privacy notice). These management declarations are referred to in the trust services principles and criteria as *commitments*. Specifications regarding how the system should function to enable management to meet its business objectives, commitments, and obligations (for example, legal and regulatory) are referred to as *requirements* in the trust services principles and criteria. For example, security requirements may result from management's commitments relating to security, availability, processing integrity, confidentiality, or privacy.

Commitments and requirements are the objectives for which the entity implements controls, and, consequently, the objectives of the trust services criteria. Accordingly, many of the trust services criteria refer to commitments and requirements. For example, "The entity has established workforce conduct standards, implemented workforce candidate background screening procedures, and conducts enforcement procedures to enable it to meet its commitments and requirements as they relate to *[insert the principle(s) being reported on; for example, security, availability, processing integrity, and confidentiality]*." In an engagement in which the practitioner expresses an opinion on compliance with or achievement of the commitments and requirements, they serve as the engagement criteria.

.06 Management is responsible for maintaining a record of and complying with its commitments and requirements. In identifying its commitments and requirements, management should specify in its assertion what its commitments and requirements consist of for the particular engagement, for example:

- Obligations included in written customer contracts
- Baseline obligations that are applicable to all customers but which exclude special commitments made to particular customers when those commitments result in the implementation of additional processes or controls outside the services provided to a broad range of users

In addition, trust services engagements do not require the practitioner to report on the entity's compliance, or internal control over compliance, with laws, regulations, rules, contracts, or grant agreements, related to the principles being reported upon. If the practitioner is engaged to report on compliance with laws, regulations, rules, contracts, or grant agreements in conjunction with an engagement to report on the operating effectiveness of an entity's controls (for example, a SOC 3 privacy engagement), such an engagement would be performed in accordance with AT section 601, *Compliance Attestation* (AICPA, *Professional Standards*).

.07 Consulting services include developing findings and recommendations for the consideration and use of management of an entity when making decisions. The practitioner does not express an opinion or form a conclusion about the subject matter in these engagements. Generally, the work is performed only for the use and benefit of the client. Practitioners providing such services follow CS section 100, *Consulting Services: Definitions and Standards* (AICPA, *Professional Standards*).

Principles, Criteria, Controls, and Risks

.08 Trust services principles represent attributes of a system that support the achievement of management's objectives.

.09 For each of the principles there are detailed criteria that serve as benchmarks used to measure and present the subject matter and against which the practitioner evaluates the subject matter. The attributes of suitable criteria are as follows:

- *Objectivity*. Criteria should be free from bias.
- *Measurability*. Criteria should permit reasonably consistent measurements, qualitative or quantitative, of subject matter.
- *Completeness*. Criteria should be sufficiently complete so that those relevant factors that would alter a conclusion about subject matter are not omitted.
- *Relevance*. Criteria should be relevant to the subject matter.

.10 ASEC has concluded that the trust services criteria for each individual principle that include the common criteria have all of the attributes of suitable criteria. In addition to being suitable, AT section 101 indicates that the criteria must be available to users of the practitioner's report. The publication of the principles and criteria makes the criteria available to users.

.11 The trust services principles and criteria are designed to be flexible and enable the achievement of the objectives of users and management. Accordingly, a practitioner may be engaged to perform an engagement related to a single principle, multiple principles, or all of the principles.

.12 The environment in which the system operates; the commitments, agreements, and responsibilities of the entity operating the system; as well as the nature of the components of the system result in risks that the criteria will not be met. These risks are addressed through the implementation of suitably designed controls that, if operating effectively, provide reasonable assurance that the criteria are met. Because each system and the environment in which it operates are unique, the combination of risks to meeting the criteria and the controls necessary to address the risks will be unique. As part of the design and operation of the system, management of an entity needs to identify the specific risks that the criteria will not be met and the controls necessary to address those risks. Appendix B provides examples of risks that may prevent the criteria from being met as well as examples of controls that would address those risks. These illustrations are not intended to be applicable to any particular entity or all-inclusive of the risks to meeting the criteria or the controls necessary to address those risks.

Trust Services Principles

.13 The following are the trust services principles:²

- a. *Security*. The system is protected against unauthorized access, use, or modification.

The *security principle* refers to the protection of the system resources through logical and physical access control measures in order to

² SysTrustSM, SysTrust for Service OrganizationsSM, and WebTrustSM are specific branded assurance services offerings developed by the AICPA and Canadian Institute of Chartered Accountants (CICA) that are based on the trust services principles and criteria. Practitioners must be licensed by CICA to use these registered service marks. Service marks can only be issued for engagements that result in an unqualified examination opinion. For more information on licensure, see www.webtrust.org.

support the achievement of management's commitments and requirements related to security, availability, processing integrity, and confidentiality. Controls over the security of a system prevent or detect the breakdown and circumvention of segregation of duties, system failure, incorrect processing, theft or other unauthorized removal of data or system resources, misuse of software, and improper access to, or use of, alteration, destruction, or disclosure of information.

- b. *Availability.* The system is available for operation and use as committed or agreed.

The *availability principle* refers to the accessibility of the system, products, or services as committed by contract, service-level agreement, or other agreements. This principle does not, in itself, set a minimum acceptable performance level for system availability. The *availability principle* does not address system functionality (the specific functions a system performs) and system usability (the ability of users to apply system functions to the performance of specific tasks or problems), but does address whether the system includes controls to support system accessibility for operation, monitoring, and maintenance.

- c. *Processing integrity.* System processing is complete, valid, accurate, timely, and authorized.

The *processing integrity principle* refers to the completeness, validity, accuracy, timeliness, and authorization of system processing. Processing integrity addresses whether the system achieves its aim or the purpose for which it exists, and whether it performs its intended function in an unimpaired manner, free from unauthorized or inadvertent manipulation. Processing integrity does not automatically imply that the information received and stored by the system is complete, valid, accurate, current, and authorized. The risk that data contains errors introduced prior to its input in the system often cannot be addressed by system controls and detecting such errors is not usually the responsibility of the entity. Similarly, users outside the boundary of the system may be responsible for initiating processing. In these instances, the data may become invalid, inaccurate, or otherwise inappropriate even though the system is processing with integrity.

- d. *Confidentiality.* Information designated as confidential is protected as committed or agreed.

The *confidentiality principle* addresses the system's ability to protect information designated as confidential in accordance with the organization's commitments and requirements through its final disposition and removal from the system. Information is confidential if the custodian of the information, either by law or regulation, the custodian's own assertion, commitment, or other agreement, is obligated to limit its access, use, and retention, and restrict its disclosure to a specified set of persons or organizations (including those that may otherwise have authorized access within the boundaries of the system). The need for information to be confidential may arise for many different reasons. For example, the information is proprietary information, information intended only for company personnel, personal information, or merely embarrassing information. Confidentiality is distinguished from privacy in that (i) privacy deals with personal information whereas, confidentiality refers to a broader range of information that is not

restricted to personal information; and (ii) privacy addresses requirement for the treatment, processing, and handling of personal information.

e. *Privacy.*

The *privacy principle* addresses the system's collection, use, retention, disclosure, and disposal of personal information³ in conformity with the commitments in the entity's privacy notice and with criteria set forth in generally accepted privacy principles (GAPP) issued by the AICPA and Canadian Institute of Chartered Accountants (see appendix C, "Generally Accepted Privacy Principles"). GAPP is a management framework that includes the measurement criteria for the trust services privacy principle. GAPP consists of 10 sub-principles:

- i. *Management.* The entity defines documents, communicates, and assigns accountability for its privacy policies and procedures.
- ii. *Notice.* The entity provides notice about its privacy policies and procedures and identifies the purposes for which personal information is collected, used, retained, and disclosed.
- iii. *Choice and consent.* The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.
- iv. *Collection.* The entity collects personal information only for the purposes identified in the notice.
- v. *Use and retention.* The entity limits the use of personal information to the purposes identified in the notice and for which the individual has provided implicit or explicit consent. The entity retains personal information for only as long as necessary to fulfill the stated purposes or as required by law or regulations and thereafter appropriately disposes of such information.
- vi. *Access.* The entity provides individuals with access to their personal information for review and update.
- vii. *Disclosure to third parties.* The entity discloses personal information to third parties only for the purposes identified in the notice and with the implicit or explicit consent of the individual.
- viii. *Security for privacy.* The entity protects personal information against unauthorized access (both physical and logical).
- ix. *Quality.* The entity maintains accurate, complete, and relevant personal information for the purposes identified in the notice.
- x. *Monitoring and enforcement.* The entity monitors compliance with its privacy policies and procedures and has procedures to address privacy-related complaints and disputes.

³ Personal information is information that is about or can be related to an identifiable individual. It may include information about customers, employees, and other individuals.

Trust Services Criteria

.14 Many of the criteria used to evaluate a system are shared amongst all of the principles; for example, the criteria related to risk management apply to the security, availability, processing integrity, and confidentiality principles. As a result, the criteria for the security, availability, processing integrity, and confidentiality principles are organized into (a) the criteria that are applicable to all four principles (common criteria) and (b) criteria applicable only to a single principle. The common criteria constitute the complete set of criteria for the security principle. For the principles of availability, processing integrity, and confidentiality, a complete set of criteria is comprised of all of the common criteria and all of the criteria applicable to the principle(s) being reported on.

The common criteria are organized into seven categories:

- a. *Organization and management.* The criteria relevant to how the organization is structured and the processes the organization has implemented to manage and support people within its operating units. This includes criteria addressing accountability, integrity, ethical values and qualifications of personnel, and the environment in which they function.
- b. *Communications.* The criteria relevant to how the organization communicates its policies, processes, procedures, commitments, and requirements to authorized users and other parties of the system and the obligations of those parties and users to the effective operation of the system.
- c. *Risk management and design and implementation of controls.* The criteria relevant to how the entity (i) identifies potential risks that would affect the entity's ability to achieve its objectives, (ii) analyzes those risks, (iii) develops responses to those risks including the design and implementation of controls and other risk mitigating actions, and (iv) conducts ongoing monitoring of risks and the risk management process.
- d. *Monitoring of controls.* The criteria relevant to how the entity monitors the system, including the suitability, and design and operating effectiveness of the controls, and takes action to address deficiencies identified.
- e. *Logical and physical access controls.* The criteria relevant to how the organization restricts logical and physical access to the system, provides and removes that access, and prevents unauthorized access to meet the criteria for the principle(s) addressed in the engagement.
- f. *System operations.* The criteria relevant to how the organization manages the execution of system procedures and detects and mitigates processing deviations, including logical and physical security deviations, to meet the objective(s) of the principle(s) addressed in the engagement.
- g. *Change management.* The criteria relevant to how the organization identifies the need for changes to the system, makes the changes following a controlled change management process, and prevents unauthorized changes from being made to meet the criteria for the principle(s) addressed in the engagement.

The GAPP management framework does not use the common criteria structure for organizing the criteria. See appendix C for GAPP criteria.

Trust Services Principles and Criteria

.15

Criteria Common to All [Security, Availability, Processing Integrity, and Confidentiality] Principles	
CC1.0	Common Criteria Related to Organization and Management
CC1.1	The entity has defined organizational structures, reporting lines, authorities, and responsibilities for the design, development, implementation, operation, maintenance and monitoring of the system enabling it to meet its commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .
CC1.2	Responsibility and accountability for designing, developing, implementing, operating, maintaining, monitoring, and approving the entity's system controls are assigned to individuals within the entity with authority to ensure policies and other system requirements are effectively promulgated and placed in operation.
CC1.3	Personnel responsible for designing, developing, implementing, operating, maintaining and monitoring the system affecting <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> have the qualifications and resources to fulfill their responsibilities.
CC1.4	The entity has established workforce conduct standards, implemented workforce candidate background screening procedures, and conducts enforcement procedures to enable it to meet its commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .
CC2.0	Common Criteria Related to Communications
CC2.1	Information regarding the design and operation of the system and its boundaries has been prepared and communicated to authorized internal and external system users to permit users to understand their role in the system and the results of system operation.
CC2.2	The entity's <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments are communicated to external users, as appropriate, and those commitments and the associated system requirements are communicated to internal system users to enable them to carry out their responsibilities.
CC2.3	The entity communicates the responsibilities of internal and external users and others whose roles affect system operation.
CC2.4	Internal and external personnel with responsibility for designing, developing, implementing, operating, maintaining, and monitoring controls, relevant to the <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> of the system, have the information necessary to carry out those responsibilities.
CC2.5	Internal and external system users have been provided with information on how to report <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> failures, incidents, concerns, and other complaints to appropriate personnel.

CC2.6	System changes that affect internal and external system user responsibilities or the entity's commitments and requirements relevant to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> are communicated to those users in a timely manner.
CC3.0	<i>Common Criteria Related to Risk Management and Design and Implementation of Controls</i>
CC3.1	The entity (1) identifies potential threats that would impair system <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements, (2) analyzes the significance of risks associated with the identified threats, and (3) determines mitigation strategies for those risks (including controls and other mitigation strategies).
CC3.2	The entity designs, develops, and implements controls, including policies and procedures, to implement its risk mitigation strategy.
CC3.3	The entity (1) identifies and assesses changes (for example, environmental, regulatory, and technological changes) that could significantly affect the system of internal control for <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> and reassesses risks and mitigation strategies based on the changes and (2) reassesses the suitability of the design and deployment of control activities based on the operation and monitoring of those activities, and updates them as necessary.
CC4.0	<i>Common Criteria Related to Monitoring of Controls</i>
CC4.1	The design and operating effectiveness of controls are periodically evaluated against <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements, corrections and other necessary actions relating to identified deficiencies are taken in a timely manner.
CC5.0	<i>Common Criteria Related to Logical and Physical Access Controls</i>
CC5.1	Logical access security software, infrastructure, and architectures have been implemented to support (1) identification and authentication of authorized users; (2) restriction of authorized user access to system components, or portions thereof, authorized by management, including hardware, data, software, mobile devices, output, and offline elements; and (3) prevention and detection of unauthorized access.
CC5.2	New internal and external system users are registered and authorized prior to being issued system credentials, and granted the ability to access the system. User system credentials are removed when user access is no longer authorized.
CC5.3	Internal and external system users are identified and authenticated when accessing the system components (for example, infrastructure, software, and data).
CC5.4	Access to data, software, functions, and other IT resources is authorized and is modified or removed based on roles, responsibilities, or the system design and changes to them.
CC5.5	Physical access to facilities housing the system (for example, data centers, backup media storage, and other sensitive locations as well as sensitive system components within those locations) is restricted to authorized personnel.

(continued)

CC5.6	Logical access security measures have been implemented to protect against <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> threats from sources outside the boundaries of the system.
CC5.7	The transmission, movement, and removal of information is restricted to authorized users and processes, and is protected during transmission, movement, or removal enabling the entity to meet its commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .
CC5.8	Controls have been implemented to prevent or detect and act upon the introduction of unauthorized or malicious software.
CC6.0	<i>Common Criteria Related to System Operations</i>
CC6.1	Vulnerabilities of system components to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> breaches and incidents due to malicious acts, natural disasters, or errors are monitored and evaluated and countermeasures are implemented to compensate for known and new vulnerabilities.
CC6.2	<i>[Insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> incidents, including logical and physical security breaches, failures, concerns, and other complaints, are identified, reported to appropriate personnel, and acted on in accordance with established incident response procedures.
CC7.0	<i>Common Criteria Related to Change Management</i>
CC7.1	<i>[Insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements, are addressed, during the system development lifecycle including design, acquisition, implementation, configuration, testing, modification, and maintenance of system components.
CC7.2	Infrastructure, data, software, and procedures are updated as necessary to remain consistent with the system commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .
CC7.3	Change management processes are initiated when deficiencies in the design or operating effectiveness of controls are identified during system operation and monitoring.
CC7.4	Changes to system components are authorized, designed, developed, configured, documented, tested, approved, and implemented in accordance with <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements.
<i>Additional Criteria for Availability</i>	
A1.1	Current processing capacity and usage are maintained, monitored, and evaluated to manage capacity demand and to enable the implementation of additional capacity to help meet availability commitments and requirements.
A1.2	Environmental protections, software, data backup processes, and recovery infrastructure are designed, developed, implemented, operated, maintained, and monitored to meet availability commitments and requirements.

A1.3	Procedures supporting system recovery in accordance with recovery plans are periodically tested to help meet availability commitments and requirements.
<i>Additional Criteria for Processing Integrity</i>	
PI1.1	Procedures exist to prevent, detect, and correct processing errors to meet processing integrity commitments and requirements.
PI1.2	System inputs are measured and recorded completely, accurately, and timely in accordance with processing integrity commitments and requirements.
PI1.3	Data is processed completely, accurately, and timely as authorized in accordance with processing integrity commitments and requirements.
PI1.4	Data is stored and maintained completely and accurately for its specified life span in accordance with processing integrity commitments and requirements.
PI1.5	System output is complete, accurate, distributed, and retained in accordance with processing integrity commitments and requirements.
PI1.6	Modification of data is authorized, using authorized procedures in accordance with processing integrity commitments and requirements.
<i>Additional Criteria for Confidentiality</i>	
C1.1	Confidential information is protected during the system design, development, testing, implementation, and change processes in accordance with confidentiality commitments and requirements.
C1.2	Confidential information within the boundaries of the system is protected against unauthorized access, use, and disclosure during input, processing, retention, output, and disposition in accordance with confidentiality commitments and requirements.
C1.3	Access to confidential information from outside the boundaries of the system and disclosure of confidential information is restricted to authorized parties in accordance with confidentiality commitments and requirements.
C1.4	The entity obtains confidentiality commitments that are consistent with the entity's confidentiality requirements from vendors and other third parties whose products and services comprise part of the system and have access to confidential information.
C1.5	Compliance with confidentiality commitments and requirements by vendors and others third parties whose products and services comprise part of the system is assessed on a periodic and as-needed basis and corrective action is taken, if necessary.
C1.6	Changes to confidentiality commitments and requirements are communicated to internal and external users, vendors, and other third parties whose products and services are included in the system.

Privacy Principles and Criteria

.16 These criteria are set forth in appendix C.

Effective Date

.17 The trust services principles and criteria are effective for periods ending on or after December 15, 2014. Early implementation is permitted.

Appendix A — Definitions

accuracy. The key information associated with the submitted transaction remains accurate throughout the processing of the transaction and that the transaction or service is processed or performed as intended.

authorization. The processing is performed in accordance with and subject to the required approvals and privileges defined by policies governing system processing.

authorized access. Access is authorized only if (a) the access has been approved by a person designated to do so by management, and (b) the access does not compromise segregation of duties, confidentiality commitments, or otherwise increase risk to the system beyond the levels approved by management (that is, access is appropriate).

boundary of the system. The physical and logical perimeter of that portion of an entity's operations that is used to achieve management's specific business objectives of a system. The boundary includes all components of the system for which the entity is responsible, including those provided by vendors and other third parties.

For a privacy or confidentiality engagement, the boundary of the system includes the components starting with the capture of the information through its disclosure and final disposition (often referred to as the information life cycle). The boundary of the system includes (a) the collection, use, retention, disclosure and de-identification, or anonymization of the information until its destruction and (b) all business segments and locations for the entire entity or only certain identified segments of the business (for example, retail operations but not manufacturing operations or only operations originating on the entity's website or specified Web domains) or geographic locations (for example, only Canadian operations).

commitments. Declarations made by management to customers regarding the performance of a system. Commitments can be communicated through individual agreements, standardized contracts, service level agreements, or published statements (for example, security practices statement). An individual commitment may relate to one or more principles. The practitioner need only consider commitments related to the principles on which he or she is engaged to report. Commitments may take many forms including the following:

- Specification of the algorithm used in a calculation
- Contractual agreement that states the hours a system will be available
- Published password standards
- Encryption standards used to encrypt stored customer data

completeness. Transactions are processed or all services are performed without omission.

environmental protections. Measures implemented by the entity to detect, prevent, and manage the risk of casualty damage to the physical parts of the system (for example, protections from fire, flood, wind, earthquake, power surge, or power outage).

external users. Individuals outside the boundary of the system who are authorized by customers, entity management, or other authorized persons to interact with the system.

internal users. Entity and entity vendor personnel whose job function causes them to be members of the people component of the system.

report users. Intended users of the practitioner's report in accordance with AT section 101, *Attest Engagements* (AICPA, *Professional Standards*). Report users may be the general public or may be restricted to specified parties in accordance with AT section 101 paragraph .78.

requirements. Specifications regarding how the system should function to meet management's business objectives, commitments to customers, and obligations (for example, legal and regulatory). Requirements are often specified in the system policies, system design documentation, contracts with customers, and government regulations. Examples of requirements are

- employee fingerprinting and background checks established in government banking regulations.
- input edits defined in application design documents.
- maximum acceptable intervals between periodic review of employee logical access as documented in the security policy manual.
- data definition and tagging standards, including any associated metadata requirements, established by industry groups of other bodies, such as the Simple Object Access Protocol.
- business processing rules and standards established by regulators; for example, security requirements under the Health Insurance Portability and Accountability Act (HIPAA).

Security requirements may result from management commitments relating to security, availability, processing integrity, or confidentiality. For example, a commitment to programmatically enforce segregation of duties between data entry and data approval creates system requirements regarding user access administration.

SOC 2 engagement. An examination engagement to report on the suitability of design (type 1) or suitability of design and operating effectiveness (type 2) of controls at a service organization using the Guide *Reporting on Controls at a Service Organization Relevant to Security, Availability, Processing Integrity, Confidentiality, or Privacy (SOC 2)*.

SOC 3 engagement. An examination engagement to report on the suitability of design and the operating effectiveness of an entity's controls over a system relevant to one or more trust services principles.

timeliness. The provision of services or the delivery of goods addressed in the context of commitments made for such delivery.

trust services. A set of professional attestation and advisory services based on a core set of principles and criteria that address the operation and protection of a system and related data.

workforce. Employees, contractors and others engaged by company to perform activities as part of the system.

Appendix B – Illustrative Risks and Controls

The illustrative risks and controls presented in this appendix are for illustrative purposes only. They are based on a hypothetical entity in a hypothetical industry. They are not intended to be a comprehensive set of risks and controls or applicable to any particular entity. Accordingly, they should not be used as a checklist of risks and controls for the criteria. Practitioners should consider using other frameworks such as, NIST 800-53, Cloud Controls Matrix (CCM) for such guidance.

Criteria	Risks	Illustrative Controls
Criteria Common to All [Security, Availability, Processing Integrity, and Confidentiality] Principles		
CC1.0 Common Criteria Related to Organization and Management		
CC1.1	The entity has defined organizational structures, reporting lines, authorities, and responsibilities for the design, development, implementation, operation, maintenance, and monitoring of the system enabling it to meet its commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .	The entity's organizational structure does not provide the necessary information flow to manage <i>[security, availability, processing integrity, or confidentiality]</i> activities.
		The roles and responsibilities of key managers are not sufficiently defined to permit proper oversight, management, and monitoring of <i>[security, availability, processing integrity, or confidentiality]</i> activities.
		Job descriptions are reviewed by entity management on an annual basis for needed changes and where job duty changes are required necessary

Criteria		Risks	Illustrative Controls
			changes to these job descriptions are also made.
		Reporting relationships and organizational structure do not permit effective senior management oversight of <i>[security, availability, processing integrity, or confidentiality]</i> activities.	Reporting relationships and organizational structures are reviewed periodically by senior management as part of organizational planning and adjusted as needed based on changing entity commitments and requirements.
		Personnel have not been assigned responsibility or delegated insufficient authority to meet <i>[security, availability, processing integrity, or confidentiality]</i> commitments and requirements.	Roles and responsibilities are defined in written job descriptions.
CC1.2	Responsibility and accountability for designing, developing, implementing, operating, maintaining, monitoring, and approving the entity's system controls are assigned to individuals within the entity with authority to ensure policies, and other system requirements are effectively promulgated and placed in operation.	Personnel have not been assigned responsibility or delegated insufficient authority to meet <i>[security, availability, processing integrity, or confidentiality]</i> commitments and requirements.	Roles and responsibilities are defined in written job descriptions.
			Job descriptions are reviewed on a periodic basis for needed changes and updated if such changes are identified.
CC1.3	Personnel responsible for designing, developing, implementing, operating, maintaining, and	Newly hired or transferred personnel do not have sufficient knowledge and experience to perform their responsibilities.	Job requirements are documented in the job descriptions and candidates' abilities to meet these requirements are evaluated as part of

(continued)

Criteria		Risks	Illustrative Controls
	monitoring of the system affecting <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> have the qualifications and resources to fulfill their responsibilities.		the hiring or transfer evaluation process.
			The experience and training of candidates for employment of transfer are evaluated before they assume the responsibilities of their position.
		Personnel do not have sufficient continuous training to perform their responsibilities.	Management establishes skills and continued training with its commitments and requirements for employees.
			Management monitors compliance with training requirements.
		Tools and knowledge resources are insufficient to perform assigned tasks.	Management evaluates the need for additional tools and resources in order to achieve business objectives, during its ongoing and periodic business planning and budgeting process and as part of its ongoing risk assessment and management process.
CC1.4	The entity has established workplace conduct standards, implemented workplace candidate background screening procedures, and conducts enforcement procedures to enable it to meet its commitments and requirements as they relate to <i>[insert the principle(s) being</i>	Personnel do not adhere to the code of conduct.	Management monitors employees' compliance with the code of conduct through monitoring of customer and employee complaints and the use of an anonymous third-party administered ethics hotline.

Criteria		Risks	Illustrative Controls
	<i>reported on: security, availability, processing integrity, or confidentiality or any combination thereof].</i>		
			Personnel are required to read and accept the code of conduct and the statement of confidentiality and privacy practices upon their hire and to formally re-affirm them annually thereafter.
		Candidate has a background considered to be unacceptable by management of the entity.	Senior management develops a list of characteristics that would preclude employee candidate from being hired based on sensitivity or skill requirements for the given position.
			Personnel must pass a criminal and financial trust background check before they may be hired by the entity or third party vendors hired by the entity.
CC2.0 Common Criteria Related to Communications			
CC2.1	Information regarding the design and operation of the system and its boundaries has been prepared and communicated to authorized internal and external system users to permit users to understand their role in the system and the results of system operation.	Users misuse the system due to their failure to understand its scope, purpose, and design.	System descriptions are available to authorized external users that delineate the boundaries of the system and describe relevant system components as well as the purpose and design of the system. Documentation of the system description is available to authorized users via the entity's customer-facing website.
			A description of the system is posted on the entity's intranet and is available to the entity's internal users. This description delineates the boundaries of the

(continued)

Criteria		Risks	Illustrative Controls
			system and key aspects of processing.
		Users are unaware of key organization and system support functions, processes, and roles and responsibilities.	A description of the entity organization structure, system support functions, processes, and organizational roles and responsibilities is posted on the entity's intranet and available to entity internal users. The description delineates the parties responsible, accountable, consented, and informed of changes in design and operation of key system components.
		External users fail to address risks for which they are responsible that arise outside the boundaries of the system.	System descriptions are available to authorized external users that delineate the boundaries of the system and describe significant system components as well as the purpose and design of the system. The system description is available to users via ongoing communications with customers or via the customer website.
CC2.2	The entity's <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments are communicated to external users, as appropriate, and those commitments and the associated system requirements are communicated to internal system users to enable them to carry out their responsibilities.	Users misunderstand the capabilities of the system in providing for <i>[security, availability, processing integrity, or confidentiality]</i> and take actions based on the misunderstanding.	The entity's <i>[security, availability, processing integrity, or confidentiality]</i> commitments regarding the system are included in the master services agreement and customer-specific service level agreements. In addition, a summary of these commitments is available on the entity's customer facing website.
		The entity fails to meet its commitments due to	Policy and procedures documents for

Criteria		Risks	Illustrative Controls
		lack of understanding on the part of personnel responsible for providing the service.	significant processes are available on the entity's intranet.
			Personnel are required to attend annual security, confidentiality, and privacy training.
			Personnel are required to read and accept the entity's code of conduct and the statement of security, confidentiality, and privacy practices upon hire and annually thereafter.
			Processes are monitored through service level management procedures that monitor compliance with service level commitments and agreements. Results are shared with applicable personnel and customers, and actions are taken and communicated to relevant parties, including customers, when such commitments and agreements are not met.
CC2.3	The entity communicates the responsibilities of internal and external users and others whose roles affect system operation.	The system fails to function as designed due to internal user failure to comply with their responsibilities.	Policy and procedures documents for significant processes that address system requirements are available on the intranet.
			Personnel are required to attend annual security, confidentiality, and privacy training.
			Personnel are required to read and accept the code of conduct and the statement of confidentiality and privacy practices upon hire and annually thereafter.

(continued)

Criteria		Risks	Illustrative Controls
			Processes are monitored through service level management procedures that monitor compliance with commitments and requirements. Results are shared with applicable personnel and customers.
		The system fails to function as designed due to external users' failure to meet their responsibilities.	Customer responsibilities are described on the customer website and in system documentation.
CC2.4	Internal and external personnel with responsibility for designing, developing, implementing, operating, maintaining, and monitoring controls, relevant to the <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> of the system, have the information necessary to carry out those responsibilities.	Controls fail to function as designed or operate effectively due to misunderstanding on the part of personnel responsible for implementing and performing those controls resulting in failure to achieve <i>[security, availability, processing integrity, or confidentiality]</i> commitments and requirements.	Policy and procedures documents for significant processes are available on the intranet.
			Processes are monitored following service level management procedures that monitor compliance with commitments and requirements. Results are shared according to policies.
			Customer responsibilities are described on the customer website and in system documentation.

Criteria		Risks	Illustrative Controls
CC2.5	Internal and external system users have been provided with information on how to report <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> failures, incidents, concerns, and other complaints to appropriate personnel.	System anomalies are detected by internal or external users but the failures are not reported to appropriate personnel resulting in the system failing to achieve its <i>[security, availability, processing integrity, or confidentiality]</i> commitments and requirements.	Policy and procedures documents for significant processes, which include responsibility for reporting operational failures, incidents, system problems, concerns, and user complaints (and the process for doing so), are published and available on the intranet.
			Customer responsibilities, which include responsibility for reporting operational failures, incidents, problems, concerns and complaints, and the process for doing so, are described on the customer website and in system documentation.
CC2.6	System changes that affect internal and external system user responsibilities or the entity's commitments and requirements relevant to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> are communicated to those users in a timely manner.	Users misunderstand changes in system capabilities or their responsibilities in providing for <i>[security, availability, processing integrity, or confidentiality]</i> due to system changes and take actions based on the misunderstanding.	Proposed system changes affecting customers are published on the customer website XX days before their implementation. Users are given the chance to participate in user acceptance testing for major changes XX days prior to implementation. Changes made to systems are communicated and confirmed with customers through ongoing communications mechanisms such as customer care meetings and via the customer website.
			Management of the business unit must

(continued)

Criteria		Risks	Illustrative Controls
			confirm understanding of changes by authorizing them.
			The system change calendar that describes changes to be implemented is posted on the entity intranet.
			Updated system documentation is published on the customer website and intranet 30 days prior to implementation.
			System changes that result from incidents are communicated to internal and external users through e-mail as part of the implementation process.
		Changes in roles and responsibilities and changes to key personnel are not communicated to internal and external users in a timely manner.	Major changes to roles and responsibilities and changes to key personnel are communicated to affected internal and external users via e-mail as part of the change management process.
CC3.0 Common Criteria Related to Risk Management and Design and Implementation of Controls			
CC3.1	The entity (1) identifies potential threats that would impair system [<i>insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof</i>] commitments and requirements, (2) analyzes the significance of risks associated with the identified threats, and (3) determines mitigation strategies for those risks (including controls and other mitigation strategies).	Not all system components are included in the risk management process resulting in a failure to identify and mitigate or accept risks.	A master list of the entity's system components is maintained, accounting for additions and removals, for management's use.

	Criteria	Risks	Illustrative Controls
		Personnel involved in the risk management process do not have sufficient information to evaluate risks and the tolerance of the entity for those risks.	The entity has defined a formal risk management process that specifies risk tolerances and the process for evaluating risks based on identified threats and the specified tolerances.
		One or more internal or external risks, that are significant, threaten the achievement of [<i>security, availability, processing integrity, or confidentiality</i>] commitments and requirements that can be addressed by security controls, are not identified.	During the risk assessment and management process, risk management office personnel identify changes to business objectives, commitments and requirements, internal operations, and external factors that threaten the achievement of business objectives and update the potential threats to system objectives.
			Identified risks are rated using a risk evaluation process and ratings are reviewed by management.
			The risk and controls group evaluates the effectiveness of controls and mitigation strategies in meeting identified risks and recommends changes based on its evaluation.
			The risk and controls group's recommendations are reviewed and approved by senior management.
			The entity uses a configuration management database and related process to capture key system components, technical and installation specific implementation details, and to support ongoing asset and service management

(continued)

Criteria		Risks	Illustrative Controls
			commitments and requirements.
CC3.2	The entity designs, develops, and implements controls, including policies and procedures, to implement its risk mitigation strategy.	Controls and mitigation strategies selected, developed, and deployed do not adequately mitigate risk.	Control self-assessments are performed by operating units on a quarterly basis.
			Internal audits are performed based on the annual risk-based internal audit plan.
			Business recovery plans are tested annually.
			Internal and external vulnerability scans are performed quarterly and annually and their frequency is adjusted as required to meet ongoing and changing commitments and requirements.
		Deployed controls and mitigation strategies create new risks that fail to be assessed.	See CC3.1 illustrative controls.
CC3.3	The entity (1) identifies and assesses changes (for example, environmental, regulatory, and technological) that could significantly affect the system of internal control for <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> and reassesses risks and mitigation strategies based on the changes and (2) reassesses the suitability of the design and deployment of control activities based on the	Not all changes that significantly affect the system are identified resulting in a failure to reassess related risks.	During the risk assessment and management process, risk management personnel identify changes to business objectives, commitments and requirements, internal operations, and external factors that threaten the achievement of business objectives and update the potential threats to system objectives.

Criteria		Risks	Illustrative Controls
	operation and monitoring of those activities, and updates them as necessary.		
		Changes that are not properly identified create risks due to the failure of those changes to undergo the risk management process.	During the risk assessment and management process, risk management office personnel identify environmental, regulatory, and technological changes that have occurred.
CC4.0 Common Criteria Related to Monitoring of Controls			
CC4.1	The design and operating effectiveness of controls are periodically evaluated against <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements, corrections and other necessary actions relating to identified deficiencies are taken in a timely manner.	Controls are not suitably designed, configured in accordance with established policies, or operating in an effective manner resulting in a system that does not meet system commitments and requirements.	Monitoring software is used to identify and evaluate ongoing system performance, security threats, changing resource utilization needs, and unusual system activity. This software sends a message to the operations center and automatically opens an incident, problem, or change management “ticket” record when specific predefined thresholds are met.
			Operations and security personnel follow defined protocols for resolving and escalating reported events.
CC5.0 Common Criteria Related to Logical and Physical Access Controls			
CC5.1	Logical access security software, infrastructure, and architectures have been implemented to support (1) identification and authentication of authorized users; (2) restriction of	Not all system infrastructure or system components are protected by logical access security measures resulting in unauthorized modification or use.	Established entity standards exist for infrastructure and software hardening and configuration that include requirements for implementation of access control software, entity configuration standards, and

(continued)

Criteria		Risks	Illustrative Controls
	authorized user access to system components, or portions thereof, authorized by management, including hardware, data, software, mobile devices, output, and offline elements; and (3) prevention and detection of unauthorized access.		standardized access control lists.
			Network scans are performed for infrastructure elements to identify variance from entity standards.
			Assets are assigned owners who are responsible for evaluating access based on job roles. The owners define access rights when assets are acquired or changed and periodically evaluate access for assets under their custody or stewardship.
			Online applications match each user ID to a single customer account number. Requests for access to system records require the matching of the customer account number against a list of privileges each user possesses when granted access to the system initially.
		Logical access security measures do not identify or authenticate users prior to permitting access to IT components.	Infrastructure components and software are configured to use the shared sign-on functionality when available. Systems not using the shared sign-on functionality are required to be implemented with separate user ID and password submission.

Criteria		Risks	Illustrative Controls
			External access by employees is permitted only through a two factor (for example, a swipe card and a password) encrypted virtual private network (VPN) connection.
		Logical access security measures do not provide for the segregation of duties required by the system design.	A role based security process has been defined with an access control system that is required to use roles when possible.
			Assets are assigned owners who are responsible for evaluating the appropriateness of access based on job roles. Roles are periodically reviewed and updated by asset owners and the risk and controls group on an annual basis. Access change requests resulting from the review are submitted to the security group via a change request record.
			For software or infrastructure that does not support the use of role-based security, a separate database of roles and related access is maintained. The security group uses this database when entering access rules in these systems.
		Logical access security measures do not restrict access to system configurations, privileged functionality, master passwords, powerful utilities, security devices, and other high risk resources.	Privileged access to sensitive resources is restricted to defined user roles and access to these roles must be approved by the chief information security officer. This access is reviewed by the chief information security officer on a periodic basis as established by the chief information security officer.

(continued)

Criteria		Risks	Illustrative Controls
CC5.2	New internal and external system users are registered and authorized prior to being issued system credentials and granted the ability to access the system. User system credentials are removed when user access is no longer authorized.	Valid user identities are granted to unauthorized persons.	On a daily basis, employee user IDs are automatically created in or removed from the active directory and the VPN systems as of the date of employment using an automated feed of new users collected from employee changes in the human resource management system.
			Employee access to protected resources is created or modified by the security group based on an authorized change request from the system's asset owner.
			Contractor and vendor IDs are created by the security group based on an authorized change request from the contractor office. These IDs are valid for the lesser of the expected period of relationship or XX days.
			Privileged customer accounts are created based on a written authorization request from the designated customer point of contact. These accounts are used by customers to create customer user access.
			System security is configured to require users to change their password upon initial sign-on and every XX days thereafter.
		A user that is no longer authorized continues to access system resources.	On a daily basis, the human resources system sends an automated feed to the active directory and the VPN for removal of access for employees for whom it is the last day of employment. The list is used by security

Criteria		Risks	Illustrative Controls
			personnel to remove access. The removal of the access is verified by the security manager.
			On a weekly basis, the human resources system sends to the security group a list of terminated employees for whose access is to be removed. The list is used by security personnel to remove access. The removal of the access is verified by a security manager.
			On a weekly basis, the contractor office sends to the security group a list of terminated vendors and contractors whose access is to be removed. The list is used by security personnel to remove access. The removal of the access is verified by a security manager.
			Entity policies prohibit the reactivation or use of a terminated employee's ID without written approval of the chief information security officer. Requests for reactivation are made using the change management record system and must include the purpose and justification of the access (for business need), the systems that are to be reactivated, and the time period for which the account will be active (no more than XX days). The account is reset with a new password and is activated for the time period requested. All use of the account is logged and reviewed by security personnel.

(continued)

Criteria		Risks	Illustrative Controls
			Account sharing is prohibited unless a variance from policy is granted by the chief information security officer as might be provided by the entity using an account and password vaulting software product that provides account sharing controlled circumstances and active logging of each use. Otherwise, shared accounts are permitted for low risk applications (for example, informational system where access with shared IDs cannot compromise segregation of duties) or when system technical limitations require their use (for example, UNIX root access). The chief information security officer must approve the use of all shared accounts. Mitigating controls are implemented when possible (for example, required use of <i>su</i> when accessing the UNIX root account).
CC5.3	Internal and external system users are identified and authenticated when accessing the system components (for example, infrastructure, software, and data).	Users are not identified when accessing information system components.	Entity standards are established for infrastructure and software hardening and configuration that includes requirements for implementation of access control software, entity configuration standards, and standardized access control lists.
			Account sharing is prohibited unless a variance from policy is granted by the chief information security officer as might be provided by the entity using an account and password vaulting

Criteria		Risks	Illustrative Controls
			software product that provides account sharing controlled circumstances and active logging of each use. Otherwise, shared accounts are permitted for low risk applications (for example, informational system where access with shared IDs cannot compromise segregation of duties) or when system technical limitations require their use (for example, UNIX root access). The chief information security officer must approve the use of all shared accounts. Mitigating controls are implemented when possible (for example, required use of <i>su</i> when accessing the UNIX root account).
		Valid user identities are assumed by an unauthorized person to access the system.	The online application matches each user ID to a single customer account number. Requests for access to system records require the matching of the customer account number.
			Two factor authentication and use of encrypted VPN channels help to ensure that only valid users gain access to IT components.
			Infrastructure components and software are configured to use the active directory shared sign-on functionality when available. Systems not using the shared sign-on functionality are configured to require a separate user ID and password.

(continued)

Criteria		Risks	Illustrative Controls
		User access credentials are compromised allowing an unauthorized person to perform activities reserved for authorized persons.	Users can only access the system remotely through the use of the VPN, secure sockets layer (SSL), or other encrypted communication system.
			Password complexity standards are established to enforce control over access control software passwords.
CC5.4	Access to data, software, functions, and other IT resources is authorized and is modified or removed based on roles, responsibilities, or the system design and changes to them.	Valid users obtain unauthorized access to the system resulting in a breakdown in segregation of duties or an increase in the risk of intentional malicious acts or error.	When possible, formal role-based access controls limit access to system and infrastructure components are created and these are enforced by the access control system. When it is not possible, authorized user IDs with two factor authentication are used.
			User access requests for a specific role are approved by the user manager and are submitted to the security group via the change management record system.
		Access granted through the provisioning process compromises segregation of duties or increases the risk of intentional malicious acts or error.	When possible, formal role-based access controls limit access to system and infrastructure components and these are enforced by the access control system. When it is not possible, authorized user IDs with two factor authentication are used.
			Roles are reviewed and updated by asset owners and the risk and controls group on an annual basis. Access change requests resulting from the review are submitted to the security group via a change request record.

Criteria		Risks	Illustrative Controls
CC5.5	Physical access to facilities housing the system (for example, data centers, backup media storage, and other sensitive locations as well as sensitive system components within those locations) is restricted to authorized personnel.	Unauthorized persons gain physical access to system components resulting in damage to components (including threats to personnel), fraudulent or erroneous processing, unauthorized logical access, or compromise of information.	An ID card-based physical access control system has been implemented within the perimeter of facilities and at the entry and exit points of sensitive areas within these facilities.
			ID cards that include an employee picture must be worn at all times when accessing or leaving the facility.
			ID cards are created by the human resources department during the employee orientation period and distributed after all required background investigations are completed. ID cards initially provide access only to nonsensitive areas.
			Access to sensitive areas is added to ID cards by the physical security director based on a request for access approved by the owner of the sensitive area and after required background investigations have been performed and any issues resolved. Requests for access and changes to access are made, approved, and communicated through the change management record system.
			The contractor office may request ID cards for vendors and contractors. Cards are created by the physical security director. Requests are made,

(continued)

Criteria		Risks	Illustrative Controls
			approved, and communicated through the change management record system.
			Visitors must be signed in by an employee before a single-day visitor badge that identifies them as an authorized visitor can be issued.
			Visitor badges are for identification purposes only and do not permit access to any secured areas of the facility.
			All visitors must be escorted by an entity employee when visiting facilities where sensitive system and system components are maintained and operated.
		Formerly appropriate physical access becomes inappropriate due to changes in user job responsibilities or system changes resulting in a breakdown in segregation of duties or an increase in the risk of intentional malicious acts or error.	Owners of sensitive areas of the facilities review the list of names and roles of those granted physical access to their areas on a semi-annual basis to check for continued business need. Requests for changes are made through the change management record system.
		A formerly authorized person continues to access system resources after that person is no longer authorized.	Owners of sensitive areas of the facilities review access to their areas on a semi-annual basis. Requests for changes are made through the change management record system.
			Vendors are asked to review a list of employees with ID cards on a semi-annual basis and request any modifications. The contractor office requests changes based on the vendor review.

Criteria		Risks	Illustrative Controls
			On a daily basis, as of the last day of employment, the human resources system sends to physical security a list of terminated employees for whom it is the last day of employment and whose access is to be removed and their pass cards to be disabled.
		A user obtains the identification credentials and authentication credentials of a formerly authorized person and uses them to gain unauthorized access to the system.	On a weekly basis, the contractor office sends to the security group a list of terminated vendors and contractors for whom access is to be removed.
			On a weekly basis, the human resources system sends to the physical security group a list of terminated employees for whom access is to be removed.
			Employees and contractors are required to return their ID cards during exit interviews, and all ID badges are disabled prior to exit interviews therefore employees and contractors must be physically escorted from the entity's facilities at the completion of the exit interview.
			The sharing of access badges and tailgating are prohibited by policy.
			Mantraps or other physical devices are used for controlling accessing highly sensitive facilities.
			Doors that bypass mantraps can only be opened by the ID cards

(continued)

Criteria		Risks	Illustrative Controls
			of designated members of management.
CC5.6	Logical access security measures have been implemented to protect against <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> threats from sources outside the boundaries of the system.	Threats to the system are obtained through external points of connectivity.	Defined entity standards exist for infrastructure and software hardening and configuration that include requirements for implementation of access control software, entity configuration standards, and standardized access control lists that define which privileges are attributable to each user or system account.
			External points of connectivity are protected by a firewall complex.
			Firewall hardening standards are based on relevant applicable technical specifications and these are compared against product and industry recommended practices and updated periodically.
			External access to nonpublic sites is restricted through the use of user authentication and message encryption systems such as VPN and SSL.
		Authorized connections to the system are compromised and used to gain unauthorized access to the system.	Firewall rules and the online system limit the times when remote access can be granted and the types of activities and service requests that can be performed from external connections.
CC5.7	The transmission, movement, and removal of information is restricted to authorized users and processes, and is protected during	Nonpublic information is disclosed during transmission over public communication paths.	VPN, SSL, secure file transfer program (SFTP), and other encryption technologies are used for defined points of connectivity and to protect communications

Criteria		Risks	Illustrative Controls
	transmission, movement, or removal enabling the entity to meet its commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .		between the processing center and users connecting to the processing center from within or external to customer networks.
			Entity policies prohibit the transmission of sensitive information over the Internet or other public communications paths (for example, e-mail) unless it is encrypted.
			Data loss prevention software is used to scan for sensitive information in outgoing transmissions over public communication paths.
		Removable media (for example, USB drives, DVDs, or tapes) are lost, intercepted, or copied during physical movement between locations.	Backup media are encrypted during creation.
			Storage for workstations and laptops is encrypted. Removable media for workstations and laptops are encrypted automatically by the software. Removable media is readable only by other entity owned devices.
			Other removable media are produced by data center operations and are transported via courier.
		Removable media used to make unauthorized copies of software or	Storage for workstations and laptops is encrypted.

(continued)

Criteria		Risks	Illustrative Controls
		data are taken beyond the boundaries of the system.	Removable media for these devices is encrypted automatically by the software. Removable media is readable only by other entity owned devices.
			Backup media are encrypted during creation.
CC5.8	Controls have been implemented to prevent or detect and act upon the introduction of unauthorized or malicious software.	Malicious or otherwise unauthorized code is used to intentionally or unintentionally compromise logical access controls or system functionality through data transmission, removable media, and portable or mobile devices.	The ability to install software on workstations and laptops is restricted to IT support personnel.
			Antivirus software is installed on workstations, laptops, and servers supporting such software.
			Antivirus software is configured to receive an updated virus signature at least daily. A network operation receives a report of devices that have not been updated in 30 days and follows up on the devices.
			The ability to install applications on systems is restricted to change implementation and system administration personnel.
CC6.0 Common Criteria Related to System Operations			
CC6.1	Vulnerabilities of system components to [insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof] breaches and incidents due to	Vulnerabilities that could lead to a breach or incident are not detected in a timely manner.	Logging and monitoring software is used to collect data from system infrastructure components and endpoint systems and used to monitor system performance, potential security threats and vulnerabilities, resource utilization, and to

Criteria		Risks	Illustrative Controls
	malicious acts, natural disasters, or errors are monitored and evaluated and countermeasures are implemented to compensate for known and new vulnerabilities.		detect unusual system activity or service requests. This software sends a message to the operations center and security organization and automatically opens a priority incident or problem ticket and change management system record item.
			Call center personnel receive telephone and e-mail requests for support, which may include requests to reset user passwords or notify entity personnel of potential breaches and incidents. Call center personnel follow defined protocols for recording, resolving, and escalating received requests.
		Security or other system configuration information is corrupted or otherwise destroyed, preventing the system from functioning as designed.	Weekly full-system and daily incremental backups are performed using an automated system.
CC6.2	<i>[Insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> incidents, including logical and physical security breaches, failures, concerns, and other complaints are identified, reported to appropriate personnel, and acted on in accordance with established incident response procedures.	Breaches and incidents are not identified, prioritized, or evaluated for effects.	Operations personnel follow defined protocols for evaluating reported events. Security related events are assigned to the security group for evaluation
		Corrective measures to address breaches and incidents are not	Operations and security personnel follow defined protocols

Criteria		Risks	Illustrative Controls
		implemented in a timely manner.	for resolving and escalating reported events.
			Resolution of security events (incidents or problems) is reviewed at the daily and weekly operations and security group meetings.
			Internal and external users are informed of incidents in a timely manner and advised of corrective measure to be taken on their part.
		Corrective measures are not effective or sufficient.	Resolution of events is reviewed at the weekly operations and security group meetings.
			Change management requests are opened for events that require permanent fixes.
		Lack of compliance with policies and procedures is not addressed through sanctions or remedial actions resulting in increased noncompliance in the future.	The resolution of events is reviewed at the weekly operations and security group meetings. Relevant events with effects on user or customer are referred to user and customer care management to be addressed.
			Entity policies include probation, suspension, and termination as potential sanctions for employee misconduct.
		Breaches and incidents recur because preventive measures are not implemented after a previous event.	Change management requests are opened for events that require permanent fixes.
CC7.0	<i>Common Criteria Related to Change Management</i>		
CC7.1	<i>[Insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements	Commitments and requirements are not addressed at one or more points during the system development lifecycle resulting in a system that does not meet system commitments and requirements.	System change requests are evaluated to determine the potential effect of the change on security, availability, processing integrity, and confidentiality commitments and

Criteria		Risks	Illustrative Controls
	are addressed during the system development lifecycle including design, acquisition, implementation, configuration, testing, modification, and maintenance of system components.		requirements throughout the change management process.
			System changes other than those classified as minor require the approval of the chief information security officer and operations manager prior to implementation.
CC7.2	Infrastructure, data, software, and procedures are updated as necessary to remain consistent with the system commitments and requirements as they relate to <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> .	System components are not updated for changes in requirements resulting in a system that does not meet system commitments and requirements.	During the ongoing risk assessment process and the periodic planning and budgeting processes, infrastructure, data, software, and procedures are evaluated for needed changes. Change requests are created based on the identified needs.
			For high severity incidents, a root cause analysis is prepared and reviewed by operations management. Based on the root cause analysis, change requests are prepared and the entity's risk management process and relevant risk management data is updated to reflect the planned incident and problem resolution.
CC7.3	Change management processes are initiated when deficiencies in the design or operating effectiveness of	Identified breaches, incidents, and other system impairments are not considered during the change management lifecycle.	For high severity incidents, a root cause analysis is prepared and reviewed by operations management. Based on

(continued)

Criteria		Risks	Illustrative Controls
	controls are identified during system operation and monitoring.		the root cause analysis, change requests are prepared and the entity's risk management process and relevant risk management data is updated to reflect the planned incident and problem resolution.
CC7.4	Changes to system components are authorized, designed, developed, configured, documented, tested, approved, and implemented in accordance with <i>[insert the principle(s) being reported on: security, availability, processing integrity, or confidentiality or any combination thereof]</i> commitments and requirements.	System changes are not authorized by those responsible for the design and operation of the system resulting in changes to the system that impairs its ability to meet system commitments and requirements.	System change requests must be reviewed and approved by the owner of the infrastructure or software and the change advisory board prior to work commencing on the requested change.
		System changes do not function as intended resulting in a system that does not meet system commitments and requirements.	Functional and detailed designs are prepared for other than minor changes (more than XX hours). Functional designs are reviewed and approved by the application or infrastructure and software owner and detailed designs are approved by the director of development for the application and the change advisory board prior to work commencing on the requested change or development project.
			Test plans and test data are created and used in required system and regression testing. Test plans and test data are reviewed and approved by the testing manager prior to and at the completion of testing,

Criteria		Risks	Illustrative Controls
			and reviewed by the change advisory board prior to newly developed or changed software being authorized for migration to production. Security vulnerability testing is included in the types of tests performed on relevant application, database, network, and operating system changes.
			System and regression testing is prepared by the testing department using approved test plans and test data. Deviations from planned results are analyzed and submitted to the developer.
			Code review or walkthrough is required for high impact changes that meet established criteria (that mandate code reviews and walkthroughs) and these are performed by a peer programmer that does not have responsibility for the change.
			Changes are reviewed and approved by the change advisory board prior to implementation.
			Established entity standards exist for infrastructure and software hardening and configuration that include requirements for implementation of access control software, entity configuration standards, and standardized access control lists.

(continued)

Criteria		Risks	Illustrative Controls
			Changes to hardening standards are reviewed and approved by the director in infrastructure management.
		Unauthorized changes are made to the system resulting in a system that does not meet system commitments and requirements.	Separate environments are used for development, testing, and production. Developers do not have the ability to make changes to software in testing or production.
			Logical access controls and change management tools restrict the ability to migrate between development, test, and production to change deployment personnel.
			Changes are reviewed and approved by the change advisory board prior to implementation.
		Unforeseen system implementation problems impair system operation resulting in a system that does not function as designed.	A turnover process that includes verification of operation and back out steps is used for every migration.
			Post implementation procedures that are designed to verify the operation of system changes are performed for one week after the implementation for other than minor changes, and results are shared with users and customers as required to meet commitments and requirements.
		Incompatibility duties exist within the change management process, particularly between approvers, designers, implementers, testers, and owners, resulting in	The change management process has defined the following roles and assignments: <ul style="list-style-type: none"> • Authorization of change requests—

Criteria		Risks	Illustrative Controls
		the implemented system not functioning as intended.	<p>owner or business unit manager</p> <ul style="list-style-type: none"> • Development—application design and support department • Testing—quality assurance department • Implementation—software change management group
<i>Additional Criteria for Availability</i>			
A1.1	Current processing capacity and usage are maintained, monitored and evaluated to manage capacity demand and to enable the implementation of additional capacity to help meet availability commitments and requirements.	Current processing capacity is not sufficient to meet availability commitments and requirements in the event of the loss of individual elements within the system components.	Processing capacity is monitored on an ongoing basis.
			Critical infrastructure components have been reviewed for criticality classification and assignment of a minimum level of redundancy.
		Processing capacity is not monitored, planned, and expanded or modified, as necessary, to provide for the continued availability of the system in accordance with system commitments and requirements.	Processing capacity is monitored on a daily basis.
			Future processing demand is forecasted and compared to scheduled capacity on an ongoing basis. Forecasts are reviewed and approved by senior operations management. Change requests are initiated as needed based on approved forecasts.

(continued)

Criteria		Risks	Illustrative Controls
A1.2	Environmental protections, software, data backup processes, and recovery infrastructure are designed, developed, implemented, operated, maintained, and monitored to meet availability commitments and requirements.	Environmental vulnerabilities and changing environmental conditions are not identified or addressed through the use of environmental protections resulting in a loss of system availability.	Environmental protections have been installed including the following: <ul style="list-style-type: none"> • Cooling systems • Battery and natural gas generator backup in the event of power failure • Redundant communications lines • Smoke detectors • Dry pipe sprinklers
		Environmental vulnerabilities are not monitored or acted upon increasing the severity of an environmental event.	Operations personnel monitor the status of environmental protections during each shift.
			Environmental protections receive maintenance on at least an annual basis.
		Software or data are lost or not available due to processing error, intentional act, or environmental event.	Weekly full-system and daily incremental backups are performed using an automated system.
			Backups are monitored for failure using an automated system and the incident management process is automatically invoked.
			Backups are transported and stored offsite by a third-party storage provider.
		System availability commitments and requirements are not met due to a lack of recovery infrastructure.	Business continuity and disaster recovery plans have been developed and updated annually.
			The entity has contracted with a third-party recovery facility to permit the resumption of IT operations in the event of a disaster at its data center.
			The entity uses a multi-location strategy for its facilities to permit the resumption

Criteria		Risks	Illustrative Controls
			of operations at other entity facilities in the event of loss of a facility.
A1.3	Procedures supporting system recovery in accordance with recovery plans are periodically tested to help meet availability commitments and requirements.	Recovery plans are not suitably designed and backups are not sufficient to permit recovery of system operation in accordance with commitments and requirements.	Business continuity and disaster recovery plans, including restoration of backups, are tested annually.
			Test results are reviewed and the contingency plan is adjusted.
<i>Additional Criteria for Processing Integrity</i>			
PI1.1	Procedures exist to prevent and detect and correct processing errors to meet processing integrity commitments and requirements.	Software or data are lost or not available due to processing error, intentional act, or environmental event.	Weekly full-system and daily incremental backups are performed using an automated system.
			Backups are monitored for failure using an automated system and the incident management process is automatically invoked.
			Backups are transported and stored offsite by a third-party storage provider.
		Environmental vulnerabilities are not addressed through the use of environmental protections resulting in a loss of system availability.	Environmental protections have been installed including the following: <ul style="list-style-type: none"> • Cooling systems • Battery and natural gas generator backup in the event of power failure • Redundant communications lines • Smoke detectors • Dry pipe sprinklers
		Environmental vulnerabilities are not monitored or acted upon	Operations personnel monitor the status of environmental

Criteria		Risks	Illustrative Controls
		increasing the severity of an environmental event.	protections during each shift.
			Environmental protections receive maintenance on at least an annual basis.
		Current processing capacity is not sufficient to meet processing requirements resulting in processing errors.	Processing capacity is monitored on a daily basis.
			Critical infrastructure components have at a minimum level of redundancy.
PI1.2	System inputs are measured and recorded completely, accurately, and timely in accordance with processing integrity commitments and requirements.	Inputs are captured incorrectly.	Application edits limit input to acceptable value ranges.
			The data preparation clerk batches documents by date received and enters the date and number of sheets on the batch ticket. Batched forms are scanned by a purchased imaging system. Upon completion of the scanning process, the scanned sheets are compared to the count per the batch ticket by the scanning operator.
			Scanned images are processed through the optical character recognition (OCR) system. Key fields including customer identifier, customer name, and record type are validated by the system against records in the master data file.
			Text from free form sections from scan sheets is manually entered. This information is input

Criteria		Risks	Illustrative Controls
			twice by two separate clerks. The input information is compared and records with differences are sent to a third clerk for resolution.
		Inputs are not captured or captured completely.	System edits require mandatory fields to be complete before record entry is accepted.
			The data preparation clerk batches documents by date received and enters the date and number of sheets on the batch ticket. Batched forms are scanned by a purchased imaging system. Upon completion of the scanning process, the sheets scanned are compared to the count per the batch ticket by the scanning operator.
			Scanned images are processed through the OCR system. Key fields including customer identifier, customer name, and record type are validated by the system against records in the master data file.
			Text from free form sections from scan sheets is manually entered. This information is input twice by two separate clerks. The input information is compared and records with differences are sent to a third clerk for resolution.
			Electronic files received contain batch control totals. During the load processing data captured is reconciled to batch totals

(continued)

Criteria		Risks	Illustrative Controls
			automatically by the application.
		Inputs are not captured in a timely manner.	Electronic files received are processed as received. The application monitors files that fail to process completely and generate an incident management error record.
			Manual forms for data entry are batched upon receipt. Batches are traced to batches entered for processing daily by the date entry supervisor and differences are investigated.
		The final disposition of input cannot be traced to its source to validate that it was processed correctly and the results of processing cannot be traced to initial input to validate completeness and accuracy.	Inputs are coded with identification numbers, registration numbers, registration information, or time stamps to enable them to be traced from initial input to output and final disposition and from output to source inputs.
PI1.3	Data is processed completely, accurately, and timely as authorized in accordance with processing integrity commitments and requirements.	Data is lost during processing.	Input record counts are traced from entry to final processing. Any differences are investigated.
		Data is inaccurately modified during processing.	Application regression testing validates key processing for the application during the change management process.
			Output values are compared against prior cycle values. Variances greater than X percent are flagged on the variance report, logged to the incident management system, and investigated by the output clerk. Resolutions are

Criteria		Risks	Illustrative Controls
			documented in the incident management system. Open incidents are reviewed daily by the operations manager.
			Daily, weekly, and monthly trend reports are reviewed by the operations manager for unusual trends.
		Newly created data is inaccurate.	Application regression testing validates key processing for the application during the change management process.
			The system compares generated data to allowable values. Values outside the allowable values are written to the value exception report. Items on the value exception report are reviewed by the output clerk on a daily basis.
		Processing is not completed within required timeframes.	Scheduling software is used to control the submission and monitoring of job execution. An incident management record is generated automatically when processing errors are identified.
PI1.4	Data is stored and maintained completely and accurately for its specified life span in accordance with processing integrity commitments and requirements.	Data is not available for use as committed or agreed.	A mirror image of application data files is created nightly and stored on a second system for use in recovery and restoration in the event of a system disruption or outage.
		Stored data is inaccurate.	Logical access to stored data is restricted to the application and database administrators.
		Stored data is incomplete.	Data is reconciled on a monthly basis to help

(continued)

Criteria		Risks	Illustrative Controls
			meet customer commitments and requirements.
PI1.5	System output is complete, accurate, distributed, and retained in accordance with processing integrity commitments and requirements.	System output is not complete.	Application regression testing validates key processing for the application during the change management process.
			Output values are compared against prior cycle values. Variances greater than five percent are flagged on the variance report, logged to the incident management system, and investigated by the output clerk. Resolutions are documented in the incident management system. Open incidents are reviewed daily by the operations manager.
			On a monthly basis, total records processed are compared versus total records received via electronic submission, manual entry, and sheet scanned by the OCR system.
		System output is not accurate.	Application regression testing validates key processing for the application during the change management process.
			Output values are compared against prior cycle values. Variances greater than x percent are flagged on the variance report, logged to the incident management system, and investigated by the output clerk. Resolutions are documented in the incident management system. Open incidents

Criteria		Risks	Illustrative Controls
			are reviewed daily by the operations manager.
			Daily, weekly, and monthly trend reports are reviewed by the operations manager for unusual trends.
		System output is provided to unauthorized recipients.	Application security restricts output to approved user IDs.
		System output is not available to authorized recipients.	Application regression testing validates key processing for the application during the change management process.
			Output is generated by the system based on a master schedule. Changes to the master schedule are managed through the change management process and are approved by the customer service executive. On a daily basis, an automated routine scans output files to validate that all required output has been generated. The routine generates an incident record for any missing output. Incident tickets are managed through the incident management process.
PI1.6	Modification of data is authorized, using authorized procedures in accordance with processing integrity commitments and requirements.	Data is modified by an unauthorized process or procedure resulting in inaccurate or incomplete data.	Application regression testing validates key processing for the application during the change management process.
			Access to data is restricted to authorized applications through access control software. Access rules are created and maintained by information security personnel during the

(continued)

Criteria		Risks	Illustrative Controls
			application development process.
			Application level security restricts the ability to access, modify, and delete data to authenticated users who have been granted access through a record in the access control list. Creation and modification of access control records occurs through the access provisioning process.
		Data is modified without authorization.	Logical access to stored data is restricted to the application and database administrators.
		Data is lost or destroyed.	Logical access to stored data is restricted to the application and database administrators.
			A mirror image of application data files is created nightly and stored on a second secure system for use in recovery and restoration in the event of a system disruption or outage.
<i>Additional Criteria for Confidentiality</i>			
C1.1	Confidential information is protected during the system design, development, testing, implementation, and change processes in accordance with confidentiality commitments and requirements.	Data used in nonproduction environments is not protected from unauthorized access as committed.	The entity creates test data using data masking software that replaces confidential information with test information prior to the creation of test databases.
C1.2	Confidential information within the boundaries of the system is protected against unauthorized access, use, and disclosure during input, processing, retention, output, and disposition in	Unauthorized access to confidential information is obtained during processing.	Access to data is restricted to authorized applications through access control software. Access rules are created and maintained by information security personnel during the application development process.

Criteria		Risks	Illustrative Controls
	accordance with confidentiality commitments and requirements.		
			Logical access other than through authorized application is restricted to administrators through database management system native security. Creation and modification of access control records for the database management systems occurs through the access provisioning process.
			Application level security restricts the ability to access, modify, and delete data to authenticated users who have been granted access through a record in the access control list. Creation and modification of access control records occurs through the access provisioning process.
		Unauthorized access to confidential information in output is obtained after processing.	Application security restricts output to approved roles or user IDs.
			Output containing sensitive information is printed at the secure print facility and is marked with the legend "Confidential."
			Paper forms are physically secured after data entry. Physical access is restricted to storage clerks.
C1.3	Access to confidential information from outside the boundaries of the system and disclosure of confidential information is restricted to	Confidential information transmitted beyond the boundaries of the system is provided to unauthorized user entity personnel.	Application security restricts output to approved user IDs.

(continued)

Criteria		Risks	Illustrative Controls
	authorized parties in accordance with confidentiality commitments and requirements.		
			Transmission of digital output beyond the boundary of the system occurs through the use of authorized software supporting the advanced encryption standard (AES).
			Logical access to stored data is restricted to application and database administrators.
			Data is stored in encrypted format using software supporting the AES.
		Confidential information is transmitted to related parties, vendors, or other approved parties contravening confidentiality commitments.	Application security restricts output to approved user IDs.
			Transmission of digital output beyond the boundary of the system occurs through the use authorized software supporting the advanced encryption standard.
C1.4	The entity obtains confidentiality commitments that are consistent with the entity's confidentiality requirements, from vendors and other third parties whose products and services comprise part of the system and have access to confidential information.	Related party and vendor personnel are unaware of the entity's confidentiality commitments.	Formal information sharing agreements are in place with related parties and vendors. These agreements include confidentiality commitments applicable to that entity. Agreement terms include requirements for marking and identifying data as confidential, handling standards for confidential data in the custody of related parties and vendors, and return and

Criteria		Risks	Illustrative Controls
			disposal of confidential information when no longer required.
		Requirements for handling of confidential information are not communicated to and agreed to by related parties and vendors.	Formal information sharing agreements are in place with related parties and vendors. These agreements include confidentiality commitments applicable to that entity.
C1.5	Compliance with confidentiality commitments and requirements by vendors and others third parties whose products and services comprise part of the system is assessed on a periodic and as-needed basis and corrective action is taken, if necessary.	Related party and vendor systems are not suitably designed or operating effectively to comply with confidentiality commitments.	Related party and vendor systems are subject to review as part of the vendor risk management process. Attestation reports (SOC 2 reports) are obtained and evaluated when available. Site visits and other procedures are performed based on the entity's vendor management criteria.
C1.6	Changes to confidentiality commitments and requirements are communicated to internal and external users, vendors, and other third parties whose products and services are included in the system.	Confidentiality practices and commitments are changed without the knowledge or ascent of user entities.	The chief information security officer is responsible for changes to confidentiality practices and commitments. A formal process is used to communicate these changes to users, related parties, and vendors.
		Confidentiality practices and commitments are changed without the knowledge of related parties or vendors resulting in their systems not complying with the required practices and not meeting the commitments.	The chief information security officer is responsible for changes to confidentiality practices and commitments. A formal process is used to communicate these changes to users, related parties, and vendors.
			Related party and vendor agreements are modified to reflect changes in confidentiality practices and commitments.

(continued)

Criteria		Risks	Illustrative Controls
			Related party and vendor systems are subject to review as part of the vendor risk management process. Attestation reports (SOC 2 reports) are obtained and evaluated when available. Site visits and other procedures are performed based on the entity's vendor management criteria.

Appendix C – Generally Accepted Privacy Principles

[**Notice to Readers:** The criteria for the trust services privacy principle are currently under revision. These criteria are being revised separately from the trust services principles and criteria for security, availability, processing integrity, and confidentiality. Accordingly, until the criteria for the trust service privacy principle are finalized, the 2009 version of the generally accepted privacy principles contained in this appendix should be used.]

Generally Accepted Privacy Principles

August 2009

Foreword

The AICPA and the Canadian Institute of Chartered Accountants (CICA) strongly believe that privacy is a business issue. Considering what organizations face when trying to address privacy issues, we quickly concluded that businesses did not have a comprehensive framework to manage their privacy risks effectively. The institutes decided that they could provide a significant contribution by developing a privacy framework that would address the needs of all of the parties affected by privacy requirements or expectations. Therefore, the institutes developed a privacy framework called AICPA and CICA *Generally Accepted Privacy Principles*. The institutes are making these principles and criteria widely available to all parties interested in addressing privacy issues.

These principles and criteria were developed and updated by volunteers who considered both current international privacy regulatory requirements and best practices. These principles and criteria were issued following the due process procedures of both institutes, which included exposure for public comment. The adoption of these principles and criteria is voluntary.

An underlying premise to these principles is that good privacy is good business. Good privacy practices are a key component of corporate governance and accountability. One of today's key business imperatives is maintaining the privacy of personal information collected and held by an organization. As business systems and processes become increasingly complex and sophisticated, growing amounts of personal information are being collected. Because more data is being collected and held, most often in electronic format, personal information may be at risk to a variety of vulnerabilities, including loss, misuse, unauthorized access, and unauthorized disclosure. Those vulnerabilities raise concerns for organizations, governments, individuals, and the public in general.

For organizations operating in a multijurisdictional environment, managing privacy risk can be an even more significant challenge. Adherence to generally accepted privacy principles does not guarantee compliance with all laws and regulations to which an organization is subject. Organizations need to be aware of the significant privacy requirements in all of the jurisdictions in which they do business. Although this framework provides guidance on privacy in general, organizations should consult their own legal counsel to obtain advice and guidance on particular laws and regulations governing an organization's specific situation.

With these issues in mind, the AICPA and CICA developed *Generally Accepted Privacy Principles* to be used as an operational framework to help management address privacy in a manner that takes into consideration many local, national, or international requirements. The primary objective is to facilitate privacy compliance and effective privacy management. The secondary objective is to

provide suitable criteria against which a privacy attestation engagement (usually referred to as a privacy audit) can be performed.

Generally Accepted Privacy Principles represents the AICPA and CICA contribution to aid organizations in maintaining the effective management of privacy risk, recognizing the needs of organizations, and reflecting the public interest. Additional history about the development and additional privacy resources can be found online at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx and www.cica.ca/privacy. *Generally Accepted Privacy Principles* can be downloaded from the AICPA and the CICA websites, at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx and www.cica.ca/privacy, respectively.

Because the privacy environment is constantly changing, *Generally Accepted Privacy Principles* will need to be revised from time to time; accordingly, please forward any comments about this document by e-mail to the AICPA (GAPP@aicpa.org) or the CICA (privacy@cica.ca).

Privacy—An Introduction to Generally Accepted Privacy Principles

Introduction

Many organizations find challenges in managing privacy¹ on local, national, or international bases. Most are faced with a number of differing privacy laws and regulations whose requirements need to be operationalized.

Generally Accepted Privacy Principles (GAPP) has been developed from a business perspective, referencing some, but by no means all, significant local, national, and international privacy regulations. GAPP operationalizes complex privacy requirements into a single privacy objective that is supported by 10 privacy principles. Each principle is supported by objective, measurable criteria that form the basis for effective management of privacy risk and compliance in an organization. Illustrative policy requirements, communications, and controls, including monitoring controls, are provided as support for the criteria.

GAPP can be used by any organization as part of its privacy program. GAPP has been developed to help management create an effective privacy program that addresses privacy risks and obligations, and business opportunities. It can also be a useful tool to boards and others charged with governance and providing oversight. This introduction includes a definition of privacy and an explanation of why privacy is a business issue and not solely a compliance issue. Also illustrated is how these principles can be applied to outsourcing scenarios and the potential types of privacy initiatives that can be undertaken for the benefit of organizations and their customers.

This introduction and the set of privacy principles and related criteria that follow will be useful to those who

- oversee and monitor privacy and security programs.
- implement and manage privacy in an organization.
- implement and manage security in an organization.

¹ The first occurrence of each word contained in the glossary is linked to the top of glossary.

- oversee and manage risks and compliance in an organization.
- assess compliance and audit privacy and security programs.
- regulate privacy.

Why Privacy Is a Business Issue

Good privacy is good business. Good privacy practices are a key part of corporate governance and accountability. One of today's key business imperatives is maintaining the privacy of personal information. As business systems and processes become increasingly complex and sophisticated, organizations are collecting growing amounts of personal information. As a result, personal information is vulnerable to a variety of risks, including loss, misuse, unauthorized access, and unauthorized disclosure. Those vulnerabilities raise concerns for organizations, governments, and the public in general.

Organizations are trying to strike a balance between the proper collection and use of their customers' personal information. Governments are trying to protect the public interest and, at the same time, manage their cache of personal information gathered from citizens. Consumers are very concerned about their personal information, and many believe they have lost control of it. Furthermore, the public has a significant concern about identity theft and inappropriate access to personal information, especially financial and medical records, and information about children.

Individuals expect their privacy to be respected and their personal information to be protected by the organizations with which they do business. They are no longer willing to overlook an organization's failure to protect their privacy. Therefore, all businesses need to effectively address privacy as a risk management issue. The following are specific risks of having inadequate privacy policies and procedures:

- Damage to the organization's reputation, brand, or business relationships
- Legal liability and industry or regulatory sanctions
- Charges of deceptive business practices
- Customer or employee distrust
- Denial of consent by individuals to have their personal information used for business purposes
- Lost business and consequential reduction in revenue and market share
- Disruption of international business operations
- Liability resulting from identity theft

International Privacy Considerations

For organizations operating in more than one country, the management of their privacy risk can be a significant challenge.

For example, the global nature of the Internet and business means regulatory actions in one country may affect the rights and obligations of individual users and customers around the world. Many countries have laws regulating trans-border data flow, including the European Union's (EU) directives on data protection and privacy, with which an organization must comply if it wants to do business in those countries. Therefore, organizations need to comply with changing privacy requirements around the world. Further, different jurisdictions have different privacy philosophies, making international compliance a complex task. To illustrate this, some countries view personal information as

belonging to the individual and take the position that the enterprise has a fiduciary-like relationship when collecting and maintaining such information. Alternatively, other countries view personal information as belonging to the enterprise that collects it.

In addition, organizations are challenged to try and stay up to date with the requirements for each country in which they do business. By adhering to a high global standard, such as those set out in this document, compliance with many regulations will be facilitated.

Even organizations with limited international exposure often face issues of compliance with privacy requirements in other countries. Many of these organizations are unsure how to address often stricter overseas regulations. This increases the risk that an organization inadvertently could commit a breach that becomes an example to be publicized by the offended host country.

Furthermore, many local jurisdictions (such as states or provinces) and certain industries, such as healthcare or banking, have specific requirements related to privacy.

Outsourcing and Privacy

Outsourcing increases the complexity for dealing with privacy. An organization may outsource a part of its business process and, with it, some responsibility for privacy; however, the organization cannot outsource its ultimate responsibility for privacy for its business processes. Complexity increases when the entity that performs the outsourced service is in a different country and may be subject to different privacy laws or perhaps no privacy requirements at all. In such circumstances, the organization that outsources a business process will need to ensure it manages its privacy responsibilities appropriately.

GAPP and its supporting criteria can assist an organization in completing assessments (including independent examinations) about the privacy policies, procedures, and practices of the third party providing the outsourced services.

The fact that these principles and criteria have global application can provide comfort to an outsourcer that privacy assessments can be undertaken using a consistent measurement based on internationally known fair information practices.

What Is Privacy?

Privacy Definition

Privacy is defined in *Generally Accepted Privacy Principles* as “the rights and obligations of individuals and organizations with respect to the collection, use, retention, disclosure, and disposal of personal information.”

Personal Information

Personal information (sometimes referred to as personally identifiable information) is information that is about, or can be related to, an identifiable individual. It includes any information that can be linked to an individual or used to directly or indirectly identify an individual. Individuals, for this purpose, include prospective, current, and former customers, employees, and others with whom the entity has a relationship. Most information collected by an organization about an individual is likely to be considered personal information if it can be attributed to an identified individual. Some examples of personal information are as follows:

- Name
- Home or e-mail address

- Identification number (for example, a Social Security or Social Insurance Number)
- Physical characteristics
- Consumer purchase history

Some personal information is considered sensitive. Some laws and regulations define the following to be sensitive personal information:

- Information on medical or health conditions
- Financial information
- Racial or ethnic origin
- Political opinions
- Religious or philosophical beliefs
- Trade union membership
- Sexual preferences
- Information related to offenses or criminal convictions

Sensitive personal information generally requires an extra level of protection and a higher duty of care. For example, some jurisdictions may require explicit consent rather than implicit consent for the collection and use of sensitive information.

Some information about or related to people cannot be associated with specific individuals. Such information is referred to as *nonpersonal information*. This includes statistical or summarized personal information for which the identity of the individual is unknown or linkage to the individual has been removed. In such cases, the individual's identity cannot be determined from the information that remains because the information is deidentified or anonymized. Nonpersonal information ordinarily is not subject to privacy protection because it cannot be linked to an individual. However, some organizations may still have obligations over nonpersonal information due to other regulations and agreements (for example, clinical research and market research).

Privacy or Confidentiality?

Unlike personal information, which is often defined by law or regulation, no single definition of confidential information exists that is widely recognized. In the course of communicating and transacting business, partners often exchange information or data that one or the other party requires be maintained on a “need to know” basis. Examples of the kinds of information that may be subject to a confidentiality requirement include the following:

- Transaction details
- Engineering drawings
- Business plans
- Banking information about businesses
- Inventory availability
- Bid or ask prices
- Price lists
- Legal documents
- Revenue by client and industry

Also, unlike personal information, rights of access to confidential information to ensure its accuracy and completeness are not clearly defined. As a result, interpretations of what is considered to be confidential information can vary significantly from organization to organization and, in most cases, are driven by contractual arrangements. For additional information on criteria for confidentiality, refer to the AICPA and CICA *Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy* (see www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/TRUSTSERVICES/Pages/default.aspx or www.webtrust.org).

Introducing Generally Accepted Privacy Principles

GAPP is designed to assist management in creating an effective privacy program that addresses their privacy obligations, risks, and business opportunities.

The privacy principles and criteria are founded on key concepts from significant local, national, and international privacy laws, regulations, guidelines,² and good business practices. By using GAPP, organizations can proactively address the significant challenges that they face in establishing and managing their privacy programs and risks from a business perspective. GAPP also facilitates the management of privacy risk on a multijurisdictional basis.

Overall Privacy Objective

The privacy principles and criteria are founded on the following privacy objective.

Personal information is collected, used, retained, disclosed, and disposed of in conformity with the commitments in the entity's privacy notice and with criteria set forth in *Generally Accepted Privacy Principles* issued by the AICPA and CICA.

Generally Accepted Privacy Principles

The privacy principles are essential to the proper protection and management of personal information. They are based on internationally known fair information practices included in many privacy laws and regulations of various jurisdictions around the world and recognized good privacy practices.

The following are the 10 *generally accepted privacy principles*:

1. *Management.* The entity defines, documents, communicates, and assigns accountability for its privacy policies and procedures.
2. *Notice.* The entity provides notice about its privacy policies and procedures and identifies the purposes for which personal information is collected, used, retained, and disclosed.
3. *Choice and consent.* The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.

² For example, the Organisation for Economic Co-operation and Development has issued Guidelines on the Protection of Privacy and Transborder Flows of Personal Data and the European Union has issued Directive on Data Privacy (Directive 95/46/EC). In addition, the United States has enacted the Gramm-Leach-Bliley Act, the Health Insurance Portability and Accountability Act, and the Children's Online Privacy Protection Act. Canada has enacted the Personal Information Protection and Electronic Documents Act and Australia has enacted the Australian Privacy Act of 1988, as amended in 2001. A chart comparing these international privacy concepts with generally accepted privacy principles can be found online at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx. Compliance with this set of generally accepted privacy principles and criteria may not necessarily result in compliance with applicable privacy laws and regulations, and entities should seek appropriate legal advice regarding compliance with any laws and regulations.

4. *Collection.* The entity collects personal information only for the purposes identified in the notice.
5. *Use, retention, and disposal.* The entity limits the use of personal information to the purposes identified in the notice and for which the individual has provided implicit or explicit consent. The entity retains personal information for only as long as necessary to fulfill the stated purposes or as required by law or regulations and thereafter appropriately disposes of such information.
6. *Access.* The entity provides individuals with access to their personal information for review and update.
7. *Disclosure to third parties.* The entity discloses personal information to third parties only for the purposes identified in the notice and with the implicit or explicit consent of the individual.
8. *Security for privacy.* The entity protects personal information against unauthorized access (both physical and logical).
9. *Quality.* The entity maintains accurate, complete, and relevant personal information for the purposes identified in the notice.
10. *Monitoring and enforcement.* The entity monitors compliance with its privacy policies and procedures and has procedures to address privacy related complaints and disputes.

For each of the 10 privacy principles, relevant, objective, complete, and measurable criteria have been specified to guide the development and evaluation of an entity's privacy policies, communications, and procedures and controls. *Privacy policies* are written statements that convey management's intent, objectives, requirements, responsibilities, and standards. *Communications* refers to the organization's communication to individuals, internal personnel, and third parties about its privacy notice and its commitments therein and other relevant information. *Procedures and controls* are the other actions the organization takes to achieve the criteria.

Using GAPP

GAPP can be used by organizations for the following:

- Designing, implementing, and communicating privacy policy
- Establishing and managing privacy programs
- Monitoring and auditing privacy programs
- Measuring performance and benchmarking

Establishing and managing a privacy program involves the following activities:

Strategizing. Performing privacy strategic and business planning.

Diagnosing. Performing privacy gap and risk analyses.

Implementing. Developing, documenting, introducing, and institutionalizing the program's action plan, including establishing controls over personal information.

Sustaining and managing. Monitoring activities of a privacy program.

Auditing. Internal or external auditors evaluating the organization's privacy program.

The following table summarizes and illustrates how GAPP can be used by an organization to address these business activities.

<i>Activity</i>	<i>General Discussion</i>	<i>Potential Use of Generally Accepted Privacy Principles</i>
Strategizing	<p>Vision. An entity's strategy is concerned with its long-term direction and prosperity. The vision identifies the entity's culture and helps shape and determine how the entity will interact with its external environment, including customers, competitors, and legal, social, and ethical issues.</p> <p>Strategic Planning. This is an entity's overall master plan, encompassing its strategic direction. Its objective is to ensure that the entity's efforts are all headed in a common direction. The strategic plan identifies the entity's long-term goals and major issues for becoming privacy compliant.</p> <p>Resource Allocation. This step identifies the human, financial, and other resources allocated to achieve the goals and objectives set forth in the strategic plan or business plan.</p>	<p>Vision. Within an entity's privacy effort, establishing the vision helps the entity integrate preferences and prioritize goals.</p> <p>Strategic Planning. Within an entity's privacy effort, <i>Generally Accepted Privacy Principles</i> (GAPP) can be used to assist the organization in identifying significant components that need to be addressed.</p> <p>Resource Allocation. Using GAPP, the entity would identify the people working with and responsible for areas that might include systems management, privacy and security concerns, and stipulate the resourcing for their activities.</p> <p>Overall Strategy. A strategic document describes expected or intended future development. GAPP can assist an entity in clarifying plans for the systems under consideration or for the business's privacy objectives. The plan identifies the process to achieve goals and milestones. It also provides a mechanism to communicate critical implementation elements, including details on services, budgets, development costs, promotion, and privacy advertising.</p>
Diagnosing	<p>This stage, often referred to as the assessment phase, encompasses a thorough analysis of the entity's environment, identifying opportunities where weaknesses, vulnerability, and threats exist. The most common initial project for an organization is a diagnostic assessment. The purpose of such an assessment is to evaluate the entity against its privacy goals and objectives and determine to what extent the organization is achieving those goals and objectives.</p>	<p>GAPP can assist the entity in understanding its high-level risks, opportunities, needs, privacy policy and practices, competitive pressures, and the requirements of the relevant laws and regulations to which the entity is subject.</p> <p>GAPP provides a legislative neutral benchmark to allow the entity to assess the current state of privacy against the desired state.</p>

<i>Activity</i>	<i>General Discussion</i>	<i>Potential Use of Generally Accepted Privacy Principles</i>
Implementing	At this point, an action plan is mobilized or a diagnostic recommendation is put into effect, or both. Implementing involves developing and documenting a privacy program and action plan and the execution of all planned and other tasks necessary to make the action plan operational. It includes defining who will perform what tasks, assigning responsibilities, and establishing schedules and milestones. This involves the planning and implementation of a series of planned projects to provide guidance, direction, methodology, and tools to the organization in developing its initiatives.	GAPP can assist the entity in meeting its implementation goals. At the completion of the implementation phase, the entity should have developed the following deliverables: <ul style="list-style-type: none"> • Systems, procedures, and processes to address the privacy requirements • Updated privacy compliant forms, brochures, and contracts • Internal and external privacy awareness programs
Sustaining and managing	Sustaining and managing involves monitoring the work to identify how progress differs from the action plan in time to initiate corrective action. Monitoring refers to the management policies, processes, and supporting technology to ensure compliance with organizational privacy policies and procedures and the ability to exhibit due diligence.	The entity can use GAPP to develop appropriate reporting criteria for monitoring requests for information, the sources used to compile the information and the information actually disclosed. It can also be used for determining validation procedures to ensure that the parties to whom the information was disclosed are entitled to receive that information.
Internal privacy audit	Internal auditors provide objective assurance and consulting services designed to add value and improve an entity's operations. They help an entity accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes.	Internal auditors can evaluate an entity's privacy program and controls using GAPP as a benchmark and provide useful information and reporting to management.
External privacy audit	External auditors, notably certified public accountants (CPAs) and chartered accountants (CAs), can perform attestation and assurance services. Generally, these services, whether performed on financial and nonfinancial information, build trust and confidence for individuals, management, customers, business partners, and other users.	An external auditor can evaluate an entity's privacy program and controls in accordance with GAPP and provide reports useful to individuals, management, customers, business partners, and other users.

Presentation of Generally Accepted Privacy Principles and Criteria

Under each principle, the criteria are presented in a three column format. The first column contains the measurement criteria. The second column contains illustrative controls and procedures, which are designed to provide examples and enhance the understanding of how the criteria might be applied. The illustrations are not intended to be comprehensive, nor are any of the illustrations required for an entity to have met the criteria. The third column contains additional considerations, including supplemental information such as good privacy practices and selected requirements of specific laws and regulations that may pertain to a certain industry or country.

Some of the criteria may not be directly applicable to some organizations or some processes. When a criterion is considered not applicable, the entity should consider justifying that decision to support future evaluation.

These principles and criteria provide a basis for designing, implementing, maintaining, evaluating, and auditing a privacy program to meet an entity's needs.

Generally Accepted Privacy Principles and Criteria

Management

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.0	The entity defines, documents, communicates, and assigns accountability for its privacy policies and procedures.		
1.1	Policies and Communications		
1.1.0	Privacy Policies The entity defines and documents its privacy policies with respect to the following: <i>a.</i> Notice (See 2.1.0) <i>b.</i> Choice and consent (See 3.1.0) <i>c.</i> Collection (See 4.1.0) <i>d.</i> Use, retention, and disposal (See 5.1.0) <i>e.</i> Access (See 6.1.0) <i>f.</i> Disclosure to third parties (See 7.1.0) <i>g.</i> Security for privacy (See 8.1.0) <i>h.</i> Quality (See 9.1.0) <i>i.</i> Monitoring and enforcement (See 10.1.0)	Privacy policies are documented in writing and made readily available to internal personnel and third parties who need them.	
1.1.1	Communication to Internal Personnel Privacy policies and the consequences of noncompliance with such policies are communicated, at least	The entity <ul style="list-style-type: none"> periodically communicates to internal personnel (for example, on a network or a website) relevant information about the entity's 	Privacy policies (as used herein) include security policies relevant to the protection of personal information.

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	<p>annually, to the entity's internal personnel responsible for collecting, using, retaining, and disclosing personal information. Changes in privacy policies are communicated to such personnel shortly after the changes are approved.</p>	<p>privacy policies. Changes to its privacy policies are communicated shortly after approval.</p> <ul style="list-style-type: none"> requires internal personnel to confirm (initially and periodically) their understanding of the entity's privacy policies and their agreement to comply with them. 	
1.1.2	<p>Responsibility and Accountability for Policies Responsibility and accountability are assigned to a person or group for developing, documenting, implementing, enforcing, monitoring, and updating the entity's privacy policies. The names of such person or group and their responsibilities are communicated to internal personnel.</p>	<p>The entity assigns responsibility for privacy policies to a designated person, such as a corporate privacy officer. (Those assigned responsibility for privacy policies may be different from those assigned for other policies, such as security).</p> <p>The responsibility, authority, and accountability of the designated person or group are clearly documented. Responsibilities include the following:</p> <ul style="list-style-type: none"> Establishing with management the standards used to classify the sensitivity of personal information and to determine the level of protection required Formulating and maintaining the entity's privacy policies Monitoring and updating the entity's privacy policies Delegating authority for enforcing the entity's privacy policies Monitoring the degree of compliance and initiating action 	<p>The individual identified as being accountable for privacy should be from within the entity.</p>

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>to improve the training or clarification of policies and practices</p> <p>A committee of the board of directors includes privacy periodically in its regular review of overall corporate governance.</p>	
1.2	Procedures and Controls		
1.2.1	Review and Approval Privacy policies and procedures, and changes thereto, are reviewed and approved by management.	<p>Privacy policies and procedures are</p> <ul style="list-style-type: none"> • reviewed and approved by senior management or a management committee. • reviewed at least annually and updated as needed. 	
1.2.2	Consistency of Privacy Policies and Procedures With Laws and Regulations Policies and procedures are reviewed and compared to the requirements of applicable laws and regulations at least annually and whenever changes to such laws and regulations are made. Privacy policies and procedures are revised to conform with the requirements of applicable laws and regulations.	<p>Corporate counsel or the legal department</p> <ul style="list-style-type: none"> • determines which privacy laws and regulations are applicable in the jurisdictions in which the entity operates. • identifies other standards applicable to the entity. • reviews the entity's privacy policies and procedures to ensure they are consistent with the applicable laws, regulations, and appropriate standards. 	<p>In addition to legal and regulatory requirements, some entities may elect to comply with certain standards, such as those published by International Organization for Standardization (ISO), or may be required to comply with certain standards, such as those published by the payment card industry, as a condition of doing business. Entities may include such standards as part of this process.</p>
1.2.3	Personal Information Identification and Classification The types of personal information and sensitive personal information and the related processes, systems, and third parties involved in the handling of such information are identified. Such	<p>The entity has both an information classification policy and process, which include the following:</p> <ul style="list-style-type: none"> • A classification process, which identifies and classifies information into one or more of the following categories: <ul style="list-style-type: none"> — Business confidential 	

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	information is covered by the entity's privacy and related security policies and procedures.	<ul style="list-style-type: none"> — Personal information (sensitive and other personal information) — Business general — Public • Identifying processes, systems, and third parties that handle personal information • Specific security and privacy policies and procedures that apply to each category of information 	
1.2.4	<p>Risk Assessment</p> <p>A risk assessment process is used to establish a risk baseline and to, at least annually, identify new or changed risks to personal information and to develop and update responses to such risks.</p>	<p>A process is in place to periodically identify the risks to the entity's personal information. Such risks may be external (such as loss of information by vendors or failure to comply with regulatory requirements) or internal (such as emailing unprotected sensitive information). When new or changed risks are identified, the privacy risk assessment and the response strategies are updated.</p> <p>The process considers factors such as experience with privacy incident management, the complaint and dispute resolution process, and monitoring activities.</p>	<p>Ideally, the privacy risk assessment should be integrated with the security risk assessment and be a part of the entity's overall enterprise risk management program. The board or a committee of the board should provide oversight and review of the privacy risk assessment.</p>
1.2.5	<p>Consistency of Commitments With Privacy Policies and Procedures</p> <p>Internal personnel or advisers review contracts for consistency with privacy policies and procedures and address any inconsistencies.</p>	<p>Both management and the legal department review all contracts and service-level agreements for consistency with the entity's privacy policies and procedures.</p>	

(continued)

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.2.6	<p>Infrastructure and Systems Management</p> <p>The potential privacy impact is assessed when new processes involving personal information are implemented, and when changes are made to such processes (including any such activities outsourced to third parties or contractors), and personal information continues to be protected in accordance with the privacy policies. For this purpose, processes involving personal information include the design, acquisition, development, implementation, configuration, modification and management of the following:</p> <ul style="list-style-type: none"> • Infrastructure • Systems • Applications • Websites • Procedures • Products and services • Data bases and information repositories • Mobile computing and other similar electronic devices <p>The use of personal information in process and system test and development is prohibited unless such information is anonymized or otherwise protected in accordance with the entity's privacy policies and procedures.</p>	<p>The following are used for addressing privacy impact:</p> <ul style="list-style-type: none"> • Management assesses the privacy impact of new and significantly changed products, services, business processes, and infrastructure. • The entity uses a documented systems development and change management process for all information systems and related technology (including manual procedures, application programs, technology infrastructure, organizational structure, and the responsibilities of users and systems personnel), used to collect, use, retain, disclose, and destroy personal information. • The entity assesses planned new systems and changes for their potential effect on privacy. • Changes to system components are tested to minimize the risk of any adverse effect on the protection of personal information. All test data are anonymized. A controlled test database is maintained for full regression testing to ensure that changes to one program do not adversely affect other programs that process personal information. • Procedures ensure the maintenance of 	<p>Some jurisdictions prohibit the use of personal information for test and development purposes unless it has been anonymized or otherwise protected to the same level required in its policies for production information.</p>

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>integrity and protection of personal information during migration from old to new or changed systems.</p> <ul style="list-style-type: none"> • Documentation and approval by the privacy officer, security officer, business unit manager, and IT management are required before implementing the changes to systems and procedures that handle personal information, including those that may affect security. Emergency changes are required to maintain the same level of protection of personal information; however, they may be documented and approved on an after-the-fact basis. 	
		<p>The IT function maintains a listing of all software that processes personal information and the respective level, version, and patches that have been applied.</p>	
		<p>Procedures exist to provide that only authorized, tested, and documented changes are made to the system.</p>	
		<p>Where computerized systems are involved, appropriate procedures are followed, such as the use of separate development, test, and production libraries to ensure that access to personal information is appropriately restricted.</p>	
		<p>Personnel responsible for initiating or implementing new systems and changes,</p>

2.2.3	<p>Clear and Conspicuous The entity's privacy notice is conspicuous and uses clear language.</p>	<ul style="list-style-type: none"> • Types of third parties (for example, delivery companies and other types of service providers) • Types of information (for example, information about customers and potential customers) • Sources of information (for example, mail order or online) <p>The entity informs individuals when they might assume they are covered by the entity's privacy policies but, in fact, are no longer covered (for example, linking to another website that is similar to the entity's, or using services on the entity's premises provided by third parties).</p> <p>The privacy notice is</p> <ul style="list-style-type: none"> • in plain and simple language. • appropriately labeled, easy to see, and not in unusually small print. • linked to or displayed on the website at points of data collection. • available in the national languages used on the site or in languages required by law. 	<p>If multiple notices are used for different subsidiaries or segments of an entity, similar formats are encouraged to avoid consumer confusion and allow consumers to identify any differences.</p> <p>Some regulations may contain specific information that a notice must contain.</p> <p>Illustrative notices are often available for certain industries and types of collection, use, retention, and disclosure.</p>

Choice and Consent

<i>Ref.</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
3.0	The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.		
3.1	Policies and Communications		
3.1.0	Privacy Policies		
	The entity's privacy policies address the choices available to individuals and the consent to be obtained.		
3.1.1	Communication to Individuals		
	Individuals are informed about (a) the choices available to them with respect to the collection, use, and disclosure of personal information, and (b) that implicit or explicit consent is required to collect, use, and disclose personal information, unless a law or regulation specifically requires or allows otherwise.	<p>The entity's privacy notice describes, in a clear and concise manner, the following:</p> <ul style="list-style-type: none"> • The choices available to the individual regarding the collection, use, and disclosure of personal information • The process an individual should follow to exercise these choices (for example, checking an opt out box to decline receiving marketing materials) • The ability of, and process for, an individual to change contact preferences • The consequences of failing to provide personal information required for a transaction or service <p>Individuals are advised of the following:</p> <ul style="list-style-type: none"> • Personal information not essential to the purposes identified in the privacy notice need not be provided. • Preferences may be changed, and consent may be withdrawn at a later time, subject to legal or contractual 	<p>Some laws and regulations (such as Principle 11, "Limits on disclosure of personal information," section 1 of the Australian Privacy Act of 1988) provide specific exemptions for the entity not to obtain the individual's consent. Examples of such situations include the following:</p> <ul style="list-style-type: none"> • The record keeper believes, on reasonable grounds, that use of the information for that other purpose is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual concerned or another person. • Use of the information for that other purpose is required or authorized by or under law.

<i>Ref</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		restrictions and reasonable notice. The type of consent required depends on the nature of the personal information and the method of collection (for example, an individual subscribing to a newsletter gives implied consent to receive communications from the entity).	
3.1.2	<p>Consequences of Denying or Withdrawing Consent When personal information is collected, individuals are informed of the consequences of refusing to provide personal information or of denying or withdrawing consent to use personal information for purposes identified in the notice.</p>	<p>At the time of collection, the entity informs individuals of the following:</p> <ul style="list-style-type: none"> • About the consequences of refusing to provide personal information (for example, transactions may not be processed) • About the consequences of denying or withdrawing consent (for example, opting out of receiving information about products and services may result in not being made aware of sales promotions) • About how they will or will not be affected by failing to provide more than the minimum required personal information (for example, services or products will still be provided) 	
3.2	<p>Procedures and Controls</p>		
3.2.1	<p>Implicit or Explicit Consent Implicit or explicit consent is obtained from the individual at or before the time personal</p>	<p>The entity</p> <ul style="list-style-type: none"> • obtains and documents an individual's consent in a timely manner (that is, at or before the

<i>Ref.</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	information is collected or soon after. The individual's preferences expressed in his or her consent are confirmed and implemented.	<p>time personal information is collected or soon after).</p> <ul style="list-style-type: none"> • confirms an individual's preferences (in writing or electronically). • documents and manages changes to an individual's preferences. • ensures that an individual's preferences are implemented in a timely fashion. • addresses conflicts in the records about an individual's preferences by providing a process for users to notify and challenge a vendor's interpretation of their contact preferences. • ensures that the use of personal information, throughout the entity and by third parties, is in accordance with an individual's preferences. 	
3.2.2	<p>Consent for New Purposes and Uses If information that was previously collected is to be used for purposes not previously identified in the privacy notice, the new purpose is documented, the individual is notified, and implicit or explicit consent is obtained prior to such new use or purpose.</p>	<p>When personal information is to be used for a purpose not previously specified, the entity</p> <ul style="list-style-type: none"> • notifies the individual and documents the new purpose. • obtains and documents consent or withdrawal of consent to use the personal information for the new purpose. • ensures that personal information is being used in accordance with the new purpose or, if consent was withdrawn, not so used. 	
3.2.3	<p>Explicit Consent for Sensitive Information</p>	<p>The entity collects sensitive information only if the individual</p>	<p>Canada's Personal Information Protection and Electronic</p>

Ref.	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	<p>Explicit consent is obtained directly from the individual when sensitive personal information is collected, used, or disclosed, unless a law or regulation specifically requires otherwise.</p>	<p>provides explicit consent. <i>Explicit consent</i> requires that the individual affirmatively agree, through some action, to the use or disclosure of the sensitive information. Explicit consent is obtained directly from the individual and documented, for example, by requiring the individual to check a box or sign a form. This is sometimes referred to as opt in.</p>	<p>Documents Act (PIPEDA), Schedule 1, clause 4.3.6, states that an organization should generally seek explicit consent when the information is likely to be considered sensitive.</p> <p>Many jurisdictions prohibit the collection of sensitive data, unless specifically allowed. For example, in the EU member state of Greece, Article 7 of Greece's "Law on the protection of individuals with regard to the processing of personal data" states, "The collection and processing of sensitive data is forbidden." However, a permit to collect and process sensitive data may be obtained.</p> <p>Some jurisdictions consider government-issued personal identifiers, for example, Social Security numbers or Social Insurance numbers, to be sensitive information.</p>
3.2.4	<p>Consent for Online Data Transfers To or From an Individual's Computer or Other Similar Electronic Devices</p> <p>Consent is obtained before personal information is transferred to or from an individual's computer or other similar device.</p>	<p>The entity requests customer permission to store, alter, or copy personal information (other than cookies) in the customer's computer or other similar electronic device.</p> <p>If the customer has indicated to the entity that it does not want cookies, the entity has controls to ensure that cookies are not stored on the customer's computer or other similar electronic device.</p> <p>Entities will not download software that will transfer personal information without obtaining permission.</p>	<p>Consideration should be given to prevent or detect the introduction of software that is designed to mine or extract information from a computer or other similar electronic device and therefore may be used to extract personal information, for example, spyware.</p>

Collection

<i>Ref.</i>	<i>Collection Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
4.0	The entity collects personal information only for the purposes identified in the notice.		
4.1	Policies and Communications		
4.1.0	Privacy Policies The entity's privacy policies address the collection of personal information.		Some jurisdictions, such as some countries in Europe, require entities that collect personal information to register with their regulatory body.
4.1.1	Communication to Individuals Individuals are informed that personal information is collected only for the purposes identified in the notice.	The entity's privacy notice discloses the types of personal information collected, the sources and methods used to collect personal information, and whether information is developed or acquired about individuals, such as buying patterns.	
4.1.2	Types of Personal Information Collected and Methods of Collection The types of personal information collected and the methods of collection, including the use of cookies or other tracking techniques, are documented and described in the privacy notice.	Types of personal information collected include the following: <ul style="list-style-type: none"> • Financial (for example, financial account information) • Health (for example, information about physical or mental status or history) • Demographic (for example, age, income range, social geo-codes) Methods of collecting and third-party sources of personal information include the following: <ul style="list-style-type: none"> • Credit reporting agencies • Over the telephone • Via the Internet using forms, cookies, or Web beacons The entity's privacy notice discloses whether it uses cookies and Web beacons and how they are used. The notice also describes the	Some jurisdictions, such as those in the EU, require that individuals have the opportunity to decline the use of cookies.

<i>Ref</i>	<i>Collection Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		consequences if the cookie is refused.	
4.2	Procedures and Controls		
4.2.1	Collection Limited to Identified Purpose The collection of personal information is limited to that necessary for the purposes identified in the notice.	Systems and procedures are in place to <ul style="list-style-type: none"> • specify the personal information essential for the purposes identified in the notice and differentiate it from optional personal information. • periodically review the entity's program or service needs for personal information (for example, once every five years or when changes to the program or service are made). • obtain explicit consent when sensitive personal information is collected (see 3.2.3, "Explicit Consent for Sensitive Information"). • monitor that the collection of personal information is limited to that necessary for the purposes identified in the privacy notice and that all optional data is identified as such. 	
4.2.2	Collection by Fair and Lawful Means Methods of collecting personal information are reviewed by management before they are implemented to confirm that personal information is obtained (a) fairly, without intimidation or deception, and (b) lawfully, adhering to all relevant rules of law, whether derived from statute or common law,	The entity's management, privacy officer, and legal counsel, review the methods of collection and any changes thereto.	The following may be considered deceptive practices: <ul style="list-style-type: none"> • To use tools, such as cookies and Web beacons, on the entity's website to collect personal information without providing notice to the individual • To link information collected during an individual's visit to a website with personal information from other sources

<i>Ref.</i>	<i>Use, Retention, and Disposal Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>marketing, surveys, or market analysis</p> <ul style="list-style-type: none"> • Personalization of websites or downloading software • Legal requirements • Direct marketing <p>The entity's privacy notice explains that personal information will be retained only as long as necessary to fulfill the stated purposes, or for a period specifically required by law or regulation and thereafter will be disposed of securely or made anonymous so that it cannot be identified to any individual.</p>	
5.2	Procedures and Controls		
5.2.1	<p>Use of Personal Information</p> <p>Personal information is used only for the purposes identified in the notice and only if the individual has provided implicit or explicit consent, unless a law or regulation specifically requires otherwise.</p>	<p>Systems and procedures are in place to ensure that personal information is used</p> <ul style="list-style-type: none"> • in conformity with the purposes identified in the entity's privacy notice. • in agreement with the consent received from the individual. • in compliance with applicable laws and regulations. 	<p>Some regulations have specific provisions concerning the use of personal information. Examples are the GLBA, the Health Insurance Portability and Accountability Act (HIPAA), and the Children's Online Privacy Protection Act (COPPA).</p>
5.2.2	<p>Retention of Personal Information</p> <p>Personal information is retained for no longer than necessary to fulfill the stated purposes unless a law or regulation specifically requires otherwise.</p>	<p>The entity</p> <ul style="list-style-type: none"> • documents its retention policies and disposal procedures. • retains, stores, and disposes of archived and backup copies of records in accordance with its retention policies. • ensures personal information is not kept beyond the standard retention time unless a justified business or legal reason for doing so exists. 	<p>Some laws specify the retention period for personal information. For example, HIPAA has retention requirements on accounting for disclosures of personal health information—three years for electronic health records, and six years for nonelectronic health records.</p> <p>Other statutory record retention requirements may exist; for example, certain data may need</p>

Ref.	<i>Use, Retention, and Disposal Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
5.2.3	<p>Disposal, Destruction and Redaction of Personal Information</p> <p>Personal information no longer retained is anonymized, disposed of, or destroyed in a manner that prevents loss, theft, misuse, or unauthorized access.</p>	<p>Contractual requirements are considered when establishing retention practices when they may be exceptions to normal policies.</p> <p>The entity</p> <ul style="list-style-type: none"> • erases or destroys records in accordance with the retention policies, regardless of the method of storage (for example, electronic, optical media, or paper based). • disposes of original, archived, backup and ad hoc or personal copies of records in accordance with its destruction policies. • documents the disposal of personal information. • within the limits of technology, locates and removes or redacts specified personal information about an individual as required, for example, removing credit card numbers after the transaction is complete. • regularly and systematically destroys, erases, or makes anonymous personal information no longer required to fulfill the identified purposes or as required by laws and regulations. 	<p>to be retained for tax purposes or in accordance with employment laws.</p> <p>Consideration should be given to using the services of companies that provide secure destruction services for personal information. Certain of these companies will provide a certificate of destruction where needed.</p> <p>Certain archiving techniques, such as DVDs, CDs, microfilm, or microfiche may not permit the removal of individual records without destruction of the entire database contained on such media.</p>
		<p>Contractual requirements are considered when establishing disposal, destruction, and redaction practices if they may result in exception to the entity's normal policies.</p>	

Access

<i>Ref.</i>	<i>Access Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
6.0	The entity provides individuals with access to their personal information for review and update.		
6.1	Policies and Communications		
6.1.0	Privacy Policies		
	The entity's privacy policies address providing individuals with access to their personal information.		
6.1.1	Communication to Individuals	The entity's privacy notice	
	Individuals are informed about how they may obtain access to their personal information to review, update, and correct that information.	<ul style="list-style-type: none"> explains how individuals may gain access to their personal information and any costs associated with obtaining such access. outlines the means by which individuals may update and correct their personal information (for example, in writing, by phone, by e-mail, or by using the entity's website). explains how disagreements related to personal information may be resolved. 	
6.2	Procedures and Controls		
6.2.1	Access by Individuals to Their Personal Information	Procedures are in place to	Some laws and regulations specify the following:
	Individuals are able to determine whether the entity maintains personal information about them and, upon request, may obtain access to their personal information.	<ul style="list-style-type: none"> determine whether the entity holds or controls personal information about an individual. communicate the steps to be taken to gain access to the personal information. respond to an individual's request on a timely basis. provide a copy of personal information, upon request, 	<ul style="list-style-type: none"> Provisions and requirements for providing access to personal information (for example, HIPAA) Requirements that requests for access to personal information be submitted in writing

Ref	Access Criteria	Illustrative Controls and Procedures	Additional Considerations
6.2.2	<p>Confirmation of an Individual's Identity The identity of individuals who request access to their personal information is authenticated before they are given access to that information.</p>	<p>in printed or electronic form that is convenient to both the individual and the entity.</p> <ul style="list-style-type: none"> • record requests for access and actions taken, including denial of access and unresolved complaints and disputes. <p>Employees are adequately trained to authenticate the identity of individuals before granting the following:</p> <ul style="list-style-type: none"> • Access to their personal information • Requests to change sensitive or other personal information (for example, to update information such as address or bank details) <p>The entity</p> <ul style="list-style-type: none"> • does not use government-issued identifiers (for example, Social Security numbers or Social Insurance numbers) for authentication. • mails information about a change request only to the address of record or, in the case of a change of address, to both the old and new addresses. • requires that a unique user identification and password (or equivalent) be used to access user account information online. 	<p>The extent of authentication depends on the type and sensitivity of personal information that is made available. Different techniques may be considered for the different channels, such as the following:</p> <ul style="list-style-type: none"> • Web • Interactive voice response system • Call center • In person

(continued)

<i>Ref.</i>	<i>Access Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
6.2.3	<p>Understandable Personal Information, Time Frame, and Cost</p> <p>Personal information is provided to the individual in an understandable form, in a reasonable timeframe, and at a reasonable cost, if any.</p>	<p>The entity</p> <ul style="list-style-type: none"> • provides personal information to the individual in a format that is understandable (for example, not in code, not in a series of numbers, not in overly technical language or other jargon), and in a form convenient to both the individual and the entity. • makes a reasonable effort to locate the personal information requested and, if personal information cannot be found, keeps sufficient records to demonstrate that a reasonable search was made. • takes reasonable precautions to ensure that personal information released does not identify another person, directly or indirectly. • provides access to personal information in a timeframe that is similar to the entity's normal response times for other business transactions, or as permitted or required by law. • provides access to personal information in archived or backup systems and media. • informs individuals of the cost of access at the time the access request is made or as soon as practicable thereafter. • charges the individual for access to personal information at an amount, if any, 	<p>Entities may provide individuals with access to their personal information at no cost or at a minimal cost because of the potential business and customer-relationship benefits, as well as the opportunity to enhance the quality of the information.</p>

Ref	Access Criteria	Illustrative Controls and Procedures	Additional Considerations
6.2.4	<p>Denial of Access Individuals are informed, in writing, of the reason a request for access to their personal information was denied, the source of the entity's legal right to deny such access, if applicable, and the individual's right, if any, to challenge such denial, as specifically permitted or required by law or regulation.</p>	<p>which is not excessive in relation to the entity's cost of providing access.</p> <ul style="list-style-type: none"> • provides an appropriate physical space to inspect personal information. <p>The entity</p> <ul style="list-style-type: none"> • outlines the reasons why access to personal information may be denied. • records all denials of access and unresolved complaints and disputes. • provides the individual with partial access in situations in which access to some of his or her personal information is justifiably denied. • provides the individual with a written explanation about why access to personal information is denied. • provides a formal escalation (appeal) process if access to personal information is denied. • conveys the entity's legal rights and the individual's right to challenge, if applicable. 	<p>Some laws and regulations (for example, Principle 5, "Information relating to records kept by record-keeper," point 2 of the Australian Privacy Act of 1988, and PIPEDA, Sections 8.(4), 8.(5), 8.(7), 9, 10, and 28) specify the situations in which access can be denied, the process to be followed (such as notifying the customer of the denial in writing within 30 days), and potential penalties or sanctions for lack of compliance.</p>
6.2.5	<p>Updating or Correcting Personal Information Individuals are able to update or correct personal information held by the entity. If practical and economically feasible to do so, the entity provides such updated or corrected information to third parties that previously were provided with the</p>	<p>The entity</p> <ul style="list-style-type: none"> • describes the process an individual must follow to update or correct personal information records (for example, in writing, by phone, by e-mail, or by using the entity's website). • verifies the accuracy and completeness of personal information that an individual updates or changes (for example, by edit 	<p>In some jurisdictions (for example, PIPEDA, Schedule 1, clauses 4.5.2 and 4.5.3), personal information cannot be erased, but an entity is bound to cease further processing.</p>

		report provided by an independent auditor.	
7.2.3	<p>New Purposes and Uses Personal information is disclosed to third parties for new purposes or uses only with the prior implicit or explicit consent of the individual.</p>	<p>Systems and procedures are in place to</p> <ul style="list-style-type: none"> • notify individuals and obtain their consent prior to disclosing personal information to a third party for purposes not identified in the privacy notice. • document whether the entity has notified the individual and received the individual's consent. • monitor that personal information is being provided to third parties only for uses specified in the privacy notice. 	<p>Other types of onward transfers include transfers to third parties who are</p> <ul style="list-style-type: none"> • subsidiaries or affiliates. • providing a service requested by the individual. • law enforcement or regulatory agencies. • in another country and may be subject to other requirements.
7.2.4	<p>Misuse of Personal Information by a Third Party The entity takes remedial action in response to misuse of personal information by a third party to whom the entity has transferred such information.</p>	<p>The entity</p> <ul style="list-style-type: none"> • reviews complaints to identify indications of any misuse of personal information by third parties. • responds to any knowledge of a third party using or disclosing personal information in variance with the entity's privacy policies and procedures or contractual arrangements. • mitigates, to the extent practicable, any harm caused by the use or disclosure of personal information by the third party in violation of the entity's privacy policies and procedures (for example, notify individuals affected, attempt to recover information disclosed to others, void affected numbers and reissue new numbers). 	

<i>Ref.</i>	<i>Disclosure to Third Parties Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<ul style="list-style-type: none"> takes remedial action in the event that a third party misuses personal information (for example, contractual clauses address the ramification of misuse of personal information). 	

Security for Privacy

<i>Ref.</i>	<i>Security for Privacy Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
8.0	The entity protects personal information against unauthorized access (both physical and logical).		
8.1	Policies and Communications		
8.1.0	Privacy Policies The entity's privacy policies (including any relevant security policies), address the security of personal information.	Privacy policies adequately address security measures to safeguard the privacy of personal information whether in electronic, paper, or other forms. Security measures are consistent with the sensitivity of the personal information.	Personal information in any location under control of the entity or deemed to be under control of the entity must be protected.
8.1.1	Communication to Individuals Individuals are informed that precautions are taken to protect personal information.	The entity's privacy notice describes the general types of security measures used to protect the individual's personal information, for example: <ul style="list-style-type: none"> Employees are authorized to access personal information based on job responsibilities. Authentication is used to prevent unauthorized access to personal information stored electronically. Physical security is maintained over personal information stored in hard copy form, and encryption is used to prevent unauthorized access 	Users, management, providers, and other parties should strive to develop and adopt good privacy practices and to promote conduct that recognizes security needs and respects the legitimate interests of others. Consideration should be given to disclosing in the privacy notice the security obligations of individuals, such as keeping user IDs and passwords confidential and reporting security compromises. Consideration should be given to limiting the disclosure of detailed security procedures so

Ref.	<i>Security for Privacy Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		to personal information sent over the Internet. <ul style="list-style-type: none"> Additional security safeguards are applied to sensitive information. 	as not to compromise internal security.
8.2	Procedures and Controls		
8.2.1	Information Security Program A security program has been developed, documented, approved, and implemented that includes administrative, technical, and physical safeguards to protect personal information from loss, misuse, unauthorized access, disclosure, alteration, and destruction. The security program should address, but not be limited to, the following areas ³ insofar as they relate to the security of personal information: <ol style="list-style-type: none"> a. Risk assessment and treatment [1.2.4] b. Security policy [8.1.0] c. Organization of information security [sections 1, 7, and 10] d. Asset management [section 1] e. Human resources security [section 1] f. Physical and environmental security [8.2.3 and 8.2.4] 	The entity's security program addresses the following matters related to protection of personal information: <ul style="list-style-type: none"> Periodic risk assessments Identification of all types of personal information and the related processes, systems, and third parties that are involved in the handling of such information Identification and documentation of the security requirements of authorized users Allowing access, the nature of that access, and who authorizes such access Preventing unauthorized access by using effective physical and logical access controls The procedures to add new users, modify the access levels of existing users, and remove users who no longer need access 	Safeguards employed may consider the nature and sensitivity of the data, as well as the size and complexity of the entity's operations. For example, the entity may protect personal information and other sensitive information to a level greater than it applies for other information. Some regulations (for example, HIPAA) provide a greater level of detail and guidance on specific security measures to be considered and implemented. Some security rules (for example, GLBA-related rules for safeguarding information) require the following: <ul style="list-style-type: none"> Board (or committee or individual appointed by the board) approval and oversight of the entity's information security program. That an entity take reasonable steps to

³ These areas are drawn from ISO/IEC 27002:2005, Information technology—Security techniques—Code of practice for information security management. Permission is granted by the American National Standards Institute (ANSI) on behalf of the International Organization for Standardization (ISO). Copies of ISO/IEC 27002 can be purchased from ANSI in the United States at <http://webstore.ansi.org/> and in Canada from the Standards Council of Canada at www.store.ansi.org/Canada. It is not necessary to meet all of the criteria of ISO/IEC 27002:2005 to satisfy *Generally Accepted Privacy Principles'* criterion 8.2.1. The references associated with each area indicate the most relevant *Generally Accepted Privacy Principles'* criteria for this purpose.

	Individuals are informed that they are responsible for providing the entity with accurate and complete personal information, and for contacting the entity if correction of such information is required.	needs to be kept accurate and complete only when the individual has an ongoing relationship with the entity.	
9.2	Procedures and Controls		
9.2.1	Accuracy and Completeness of Personal Information Personal information is accurate and complete for the purposes for which it is to be used.	<p>Systems and procedures are in place to</p> <ul style="list-style-type: none"> • edit and validate personal information as it is collected, created, maintained, and updated. • record the date when the personal information is obtained or updated. • specify when the personal information is no longer valid. • specify when and how the personal information is to be updated and the source for the update (for example, annual reconfirmation of information held and methods for individuals to proactively update personal information). • indicate how to verify the accuracy and completeness of personal information obtained directly from an individual, received from a third party (see 4.2.3, “Collection From Third Parties”), or disclosed to a third party (see 7.2.2, “Protection of Personal Information”). • ensure personal information used on an ongoing basis is sufficiently accurate and complete to 	

<i>Ref</i>	<i>Quality Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Consideration</i>
		<p>make decisions, unless clear limits exist for the need for accuracy.</p> <ul style="list-style-type: none"> ensure personal information is not routinely updated unless such a process is necessary to fulfill the purposes for which it is to be used. <p>The entity undertakes periodic assessments to check the accuracy of personal information records and to correct them, as necessary, to fulfill the stated purpose.</p>	
9.2.2	<p>Relevance of Personal Information Personal information is relevant to the purposes for which it is to be used.</p>	<p>Systems and procedures are in place to</p> <ul style="list-style-type: none"> ensure personal information is sufficiently relevant for the purposes for which it is to be used and to minimize the possibility that inappropriate information is used to make business decisions about the individual. periodically assess the relevance of personal information records and to correct them, as necessary, to minimize the use of inappropriate data for decision making. 	

Monitoring and Enforcement

<i>Ref.</i>	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
10.0	The entity monitors compliance with its privacy policies and procedures and has procedures to address privacy related inquiries, complaints and disputes.		
10.1	Policies and Communications		
10.1.0	Privacy Policies The entity's privacy policies address the monitoring and enforcement of privacy policies and procedures.		
10.1.1	Communication to Individuals Individuals are informed about how to contact the entity with inquiries, complaints and disputes.	The entity's privacy notice <ul style="list-style-type: none"> describes how individuals can contact the entity with complaints (for example, via an e-mail link to the entity's website or a telephone number). provides relevant contact information to which the individual can direct complaints (for example, name, telephone number, mailing address, and e-mail address of the individual or office responsible for handling complaints). 	
10.2	Procedures and Controls		
10.2.1	Inquiry, Complaint, and Dispute Process A process is in place to address inquiries, complaints, and disputes.	The corporate privacy officer or other designated individual is authorized to address privacy related complaints, disputes, and other problems. Systems and procedures are in place that allow for <ul style="list-style-type: none"> procedures to be followed in communicating and resolving complaints about the entity. action that will be taken with respect to 	

Ref:	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
10.2.2	<p>Dispute Resolution and Recourse Each complaint is addressed, and the resolution is documented and communicated to the individual.</p>	<p>the disputed information until the complaint is satisfactorily resolved.</p> <ul style="list-style-type: none"> • remedies to be available in case of a breach of personal information and how to communicate this information to an individual. • recourse and a formal escalation process to be in place to review and approve any recourse offered to individuals. • contact information and procedures to be followed with any designated third party dispute resolution or similar service (if offered). <p>The entity has a formally documented process in place to</p> <ul style="list-style-type: none"> • train employees responsible for handling individuals' complaints and disputes about the resolution and escalation processes. • document and respond to all complaints in a timely manner. • periodically review unresolved disputes and complaints to ensure they are resolved in a timely manner. • escalate unresolved complaints and disputes for review by management. • identify trends and the potential need to change the entity's privacy policies and procedures. • use specified independent third-party dispute resolution 	<p>Some regulations (for example HIPAA and COPPA) have specific procedures and requirements.</p> <p>Some laws (for example, PIPEDA) permit escalation through the court system up to the most senior court.</p>

(continued)

<i>Ref.</i>	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>services or other processes mandated by regulatory bodies in the event the individual is not satisfied with the entity's proposed resolution, together with a commitment from such third parties to handle such re-courses.</p> <p>If the entity offers a third-party dispute resolution process for complaints that cannot be resolved directly with the entity, an explanation is provided about how an individual can use that process.</p>	
10.2.3	<p>Compliance Review Compliance with privacy policies and procedures, commitments and applicable laws, regulations, service-level agreements, and other contracts is reviewed and documented, and the results of such reviews are reported to management. If problems are identified, remediation plans are developed and implemented.</p>	<p>Systems and procedures are in place to</p> <ul style="list-style-type: none"> • annually review compliance with privacy policies and procedures, commitments and applicable laws, regulations, service-level agreements, standards adopted by the entity, and other contracts. • document periodic reviews, for example, internal audit plans, audit reports, compliance checklists, and management sign offs. • report the results of the compliance review and recommendations for improvement to management, and implement a remediation plan. • monitor the resolution of issues and vulnerabilities noted in the compliance review to ensure that appropriate corrective action is taken on a timely basis (that is, privacy policies and procedures 	<p>In addition to legal, regulatory and contractual requirements, some entities may elect to comply with certain standards, such as those published by ISO, or may be required to comply with certain standards, such as those published by the payment card industry, as a condition of doing business.</p>

<i>Ref.</i>	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
			are revised, as necessary).
10.2.4	<p>Instances of Noncompliance Instances of noncompliance with privacy policies and procedures are documented and reported and, if needed, corrective and disciplinary measures are taken on a timely basis.</p>	<p>Systems and procedures are in place to</p> <ul style="list-style-type: none"> • notify employees of the need to report privacy breaches and security vulnerabilities in a timely manner. • inform employees of the appropriate channels to report security vulnerabilities and privacy breaches. • document instances of noncompliance with privacy policies and procedures. • monitor the resolution of security vulnerabilities and privacy breaches to ensure appropriate corrective measures are taken on a timely basis. • discipline employees and others, as appropriate, who cause privacy incidents or breaches. • mitigate, to the extent practicable, any harm caused by the use or disclosure of personal information by the third party in violation of the entity's privacy policies and procedures (for example, notify individuals affected, attempt to recover information disclosed to others, void affected account numbers and reissue new numbers). • identify trends that may require revisions to privacy policies and procedures. 	

(continued)

<i>Ref.</i>	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
10.2.5	<p>Ongoing Monitoring</p> <p>Ongoing procedures are performed for monitoring the effectiveness of controls over personal information, based on a risk assessment [1.2.4], and for taking timely corrective actions where necessary.</p>	<p>The entity uses the following:</p> <ul style="list-style-type: none"> • Control reports • Trend analysis • Training attendance and evaluations • Complaint resolutions • Regular internal reviews • Internal audit reports • Independent audit reports covering controls at service organizations • Other evidence of control effectiveness <p>The selection of controls to be monitored, and the frequency with which they are monitored are based on the sensitivity of the information and the risks of possible exposure of the information.</p> <p>Examples of such controls are as follows:</p> <ul style="list-style-type: none"> • Policies require that all employees take initial privacy training within 30 days of employment. Ongoing monitoring activities would include a review of human resource files of selected employees to determine that they contain the appropriate evidence of course completion. • Policies require that whenever an employee changes job responsibilities or is terminated, such employee's access to personal information be reviewed and appropriately modified or terminated within 24 hours (or immediately in the case of 	<p><i>Guidance on Monitoring Internal Control Systems</i>, published by COSO (the Committee of Sponsoring Organizations of the Treadway Commission), provides helpful guidance for monitoring the effectiveness of controls.</p>

<i>Ref:</i>	<i>Monitoring and Enforcement Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>employee termination). This is controlled by an automated process within the human resource system which produces a report of employee status changes, which requires supervisor action to avoid automatic termination of access. This is monitored by the security group which receives copies of these reports and the related supervisor actions.</p> <ul style="list-style-type: none"> • Policies state that confirmation of a privacy-related complaint is provided to the complainant within 72 hours, and if not resolved within 10 working days, then the issue is escalated to the CPO. The control is a log used to record privacy complaints, including complaint date, and subsequent activities through to resolution. The monitoring activity is the monthly review of such logs for consistency with this policy. 	

Appendix A — Glossary

- affiliate.** An entity that controls, is controlled by, or is under common control with another entity.
- anonymize.** The removal of any person-related information that could be used to identify a specific individual.
- confidentiality.** The protection of nonpersonal information and data from unauthorized disclosure.
- consent.** Agreement by the individual for the entity to collect, use, and disclose personal information in accordance with the privacy notice. Such agreement can be explicit or implied. *Explicit consent* is given orally, electronically, or in writing, is unequivocal and does not require any inference on the part of the entity seeking consent. *Implicit consent* may reasonably be inferred from the action or inaction of the individual such as not having *opted out*, or providing credit card information to complete a transaction. (see opt in and opt out).
- cookies.** Cookies are pieces of information generated by a Web server and stored in the user's computer, ready for future access. The information can then be used to identify the user when returning to the website, to personalize Web content, and suggest items of potential interest based on previous buying habits. Certain advertisers use tracking methods, including cookies, to analyze the patterns and paths through a site.
- encryption.** The process of transforming information to make it unreadable to anyone except those possessing special key (to decrypt).
- entity.** An organization that collects, uses, retains, and discloses personal information.
- individual.** The person about whom the personal information is being collected (sometimes referred to as the *data subject*).
- internal personnel.** Employees, contractors, agents, and others acting on behalf of the entity and its affiliates.
- opt in.** Personal information may not be collected, used, retained and disclosed by the entity without the explicit consent of the individual.
- opt out.** Implied consent exists for the entity to collect, use, retain, and disclose personal information unless the individual explicitly denies permission.
- outsourcing.** The use and handling of personal information by a third party that performs a business function for the entity.
- personal information.** Information that is or can be about or related to an identifiable individual.
- personal information cycle.** The collection, use, retention, disclosure, disposal, or anonymization of personal information.
- policy.** A written statement that communicates management's intent, objectives, requirements, responsibilities, and standards.
- privacy.** The rights and obligations of individuals and organizations with respect to the collection, use, retention, disclosure, and destruction of personal information.
- privacy breach.** A privacy breach occurs when personal information is collected, retained, accessed, used, or disclosed in ways that are not in accordance with the provisions of the enterprise's policies, applicable privacy laws, or regulations.

privacy program. The policies, communications, procedures, and controls in place to manage and protect personal information in accordance with business and compliance risks and requirements.

purpose. The reason personal information is collected by the entity.

redact. To delete or black out personal information from a document or file.

sensitive personal information. Personal information that requires an extra level of protection and a higher duty of care, for example, information on medical or health conditions, certain financial information, racial or ethnic origin, political opinions, religious or philosophical beliefs, trade union membership, sexual preferences, or information related to offenses or criminal convictions.

third party. An entity that is not affiliated with the entity that collects personal information or any affiliated entity not covered by the entity's privacy notice.

Web beacon. Web beacons, also known as Web bugs, are small strings of code that provide a method for delivering a graphic image on a Web page or in an e-mail message for the purpose of transferring data. Businesses use Web beacons for many purposes, including site traffic reporting, unique visitor counts, advertising and e-mail auditing and reporting, and personalization. For example, a Web beacon can gather a user's IP address, collect the referrer, and track the sites visited by users.

Section 100A

Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy—2009

(To supersede the 2006 version of the *Suitable Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy*)

Introduction

.01 This section provides guidance to a practitioner providing attestation services, advisory services, or both that address IT-enabled systems including electronic commerce (e-commerce) systems¹ and privacy programs. The guidance is relevant when providing services with respect to system security, availability, processing integrity, confidentiality, and privacy.

.02 The guidance provided in this section includes

- trust services principles and criteria;
- examples of system descriptions; and
- illustrative practitioner reports for trust services engagements.

Trust Services

.03 The term *trust services* is defined as a set of professional attestation and advisory services based on a core set of principles and criteria that addresses the risks and opportunities of IT-enabled systems and privacy programs. Trust services principles and criteria are issued by the Assurance Services Executive Committee of the AICPA (the committee).

Attestation Services

.04 Attestation services include examination, review,² and agreed-upon procedures engagements. In examination and review engagements, the reporting practitioner expresses an opinion. In an examination engagement, for example, there is an opinion as to whether controls over a defined system were

¹ A *system* consists of five key components organized to achieve a specified objective. The five components are categorized as follows:

- *Infrastructure*. The physical and hardware components of a system (facilities, equipment, and networks)
- *Software*. The programs and operating software of a system (systems, applications, and utilities)
- *People*. The personnel involved in the operation and use of a system (developers, operators, users, and managers)
- *Procedures*. The programmed and manual procedures involved in the operation of a system (automated and manual)
- *Data*. The information used and supported by a system (transaction streams, files, databases, and tables)

² A practitioner should not accept an engagement to review an entity's controls over a system related to the trust services principles and criteria.

operating effectively to meet the criteria for systems reliability. In an agreed-upon procedures engagement, the practitioner does not express an opinion but rather performs procedures agreed upon by specified parties and reports the findings. Attestation services are developed in accordance with AT section 101, *Attest Engagements* (AICPA, *Professional Standards*).

Advisory Services

.05 In the context of trust services, advisory services include strategic, diagnostic, implementation, sustaining, and managing services using trust services principles and criteria. Practitioners providing such services follow CS section 100, *Consulting Services: Definitions and Standards* (AICPA, *Professional Standards*). The practitioner does not express an opinion in these engagements.

Principles, Criteria, and Illustrative Controls

.06 The following guidance sets out (1) principles, which are broad statements of objectives, and (2) specific criteria that should be achieved to meet each principle. Criteria are benchmarks used to measure and present the subject matter and against which the practitioner evaluates the subject matter. The attributes of suitable criteria are objectivity, measurability, completeness, and relevance. The committee has concluded that the trust services criteria have all the attributes of suitable criteria. Furthermore, the publication of this guidance makes the criteria available to users. Trust services principles are used to describe the overall objective; however, the practitioner's opinion makes reference only to the criteria.

.07 In the trust services principles and criteria, the criteria are supported by a list of illustrative controls that, if operating effectively, enable a system to meet the criteria. These illustrations are not intended to be all-inclusive and are presented as examples only. Actual controls in place at an entity may not be included in the list, and some of the listed controls may not be applicable to all systems and client circumstances. The practitioner should identify and assess the relevant controls that the client has in place to satisfy the criteria. The choice and number of those controls would be based on such factors as the entity's management style, philosophy, size, and industry.

.08 The following are the types of engagements a practitioner may perform using the trust services principles and criteria:

- Reporting on the operating effectiveness of an entity's controls over the system.
- Reporting on the operating effectiveness of an entity's controls and the entity's compliance with its commitments related to the trust services principle(s) and criteria.
- Reporting on the suitability of the design of the entity's controls over the system to achieve the trust services principle(s) and criteria, if the controls were operating effectively. (This engagement would typically be performed prior to the system's implementation.)

When the subject matter of the engagement is an entity's privacy program, the report must cover the entity's compliance with its commitments. For purposes of brevity, this document primarily addresses engagements in which the practitioner reports on the operating effectiveness of controls over a system to achieve the trust services principles and criteria. However, the guidance is equally applicable to engagements to report on any of the subject matters listed in this paragraph, unless otherwise specified. In addition, AT section 101

permits a practitioner to report on either the subject matter or an assertion about the subject matter (see appendix C, “Management’s Assertion”).

Consistency with Applicable Laws and Regulations, Defined Commitments, Service-Level Agreements, and Other Contracts

.09 Several of the principles and criteria refer to “consistency with applicable laws and regulations, defined commitments, service-level agreements, and other contracts.” Management is responsible for identification of and compliance with laws and regulations. It is beyond the scope of the engagement for the practitioner to undertake identification of all relevant “applicable laws and regulations, defined commitments, service-level agreements, and other contracts.” Furthermore, when reporting on the operating effectiveness of an entity’s controls, trust services engagements do not require the practitioner to test or report on an entity’s compliance with applicable laws and regulations, defined commitments, service-level agreements, and other contracts but rather to report on the effectiveness of the entity’s controls over monitoring compliance with them. When reporting on compliance with commitments, reference also should be made to other professional standards related to reporting on an entity’s compliance with laws, regulations, and agreements.³

Foundation for Trust Services—Trust Services Principles and Criteria

.10 The following principles and related criteria have been developed by the AICPA and the Canadian Institute of Chartered Accountants (CICA) for use by practitioners in the performance of trust services engagements:⁴

- a. *Security*. The system is protected against unauthorized access (both physical and logical).
- b. *Availability*. The system is available for operation and use as committed or agreed.
- c. *Processing integrity*. System processing is complete, accurate, timely, and authorized.
- d. *Confidentiality*. Information designated as confidential is protected as committed or agreed.
- e. *Privacy*. Personal information⁵ is collected, used, retained, disclosed, and destroyed in conformity with the commitments in the entity’s privacy notice and with criteria set forth in generally accepted privacy principles (GAPP) issued by the AICPA and CICA (found in appendix D [paragraph .48]).

.11 The trust services principles and criteria of security, availability, processing integrity, and confidentiality are organized into four broad areas:

- a. *Policies*. The entity has defined and documented its policies relevant to the particular principle. (The term *policies* as used here refer to

³ See AT section 601, *Compliance Attestation* (AICPA, *Professional Standards*).

⁴ SysTrust and WebTrust are two specific assurance services offerings developed by the AICPA and Canadian Institute of Chartered Accountants (CICA) that are based on the Trust Services Principles and Criteria. Practitioners must be licensed by the CICA to use these registered service marks. For more information on licensure, see www.webtrust.org.

⁵ Personal information is information that is about or can be related to an identifiable individual.

written statements that communicate management's intent, objectives, requirements, responsibilities, and standards for a particular subject.)

- b. *Communications.*⁶ The entity has communicated its defined policies to responsible parties and authorized users of the system.
- c. *Procedures.* The entity placed in operation procedures to achieve its objectives in accordance with its defined policies.
- d. *Monitoring.* The entity monitors the system and takes action to maintain compliance with its defined policies.

.12 For the trust services principles and criteria of security, availability, processing integrity, and confidentiality, a two-column format has been used to present the criteria. The first column presents the criteria for each principle, and the second column provides illustrative controls.

.13 A system description is used to delineate the boundaries of the system under examination for the trust services principles and criteria of security, availability, processing integrity, and confidentiality. For engagements covering an entity's compliance with its commitments, those commitments should be included in system description or should otherwise accompany the report. Examples of system descriptions for both e-commerce and non-e-commerce systems are included in appendix A (paragraph .45) and appendix B (paragraph .46), respectively. Appendix A (paragraph .45) also includes sample disclosures related to specific principles and criteria for e-commerce systems.

.14 A reliable system is one that is capable of operating without material error, fault, or failure during a specified period in a specified environment. A practitioner may provide a report on systems reliability that addresses the trust services principles and criteria of security, availability, and processing integrity. These criteria are used to evaluate whether a system is reliable.

.15 The trust services principles and criteria of privacy are organized into two broad areas:

- a. *Policies and communications.* Privacy policies are written statements that convey management's intent, objectives, requirements, responsibilities, and standards concerning privacy. Communications refers to the organization's communication to individuals, internal personnel, and third parties about its privacy notice and its commitments therein and other relevant information.
- b. *Procedures and controls.* The other actions the organization takes to achieve the criteria.

.16 The scope of a privacy engagement can cover (1) either all personal information or only certain identified types of personal information, such as customer information or employee information, and (2) all business segments and locations for the entire entity or only certain identified segments of the business (for example, retail operations but not manufacturing operations or only operations originating on the entity's Web site or specified Web domains) or geographic locations (such as only Canadian operations). The scope of a privacy engagement should cover all of the activities in the information life

⁶ In certain e-commerce environments, the terms and conditions, including the rights, responsibilities, and commitments of both parties, are implicit in the user's completion of a transaction on the Web site. To meet the underlying intent of the "Communications" category of the criteria in such circumstances, the policies and processes required by each of the "Communications" criteria should be disclosed on the entity's Web site. Examples of such disclosures for each of the trust services principles are contained in appendix A (paragraph .45).

cycle that consists of the collection, use, retention, disclosure and destruction, de-identification, or anonymization.

.17 For the trust services principles and criteria of privacy, a three-column format has been used to present the criteria. The first column contains the measurement criteria for each principle—the attributes that the entity must meet to be able to demonstrate that it has achieved the principle. The second column provides illustrative controls and procedures, which are designed to enhance the understanding of the criteria. The illustrations are not intended to be comprehensive, nor are any of the illustrations necessary for an entity to have met the criteria. The third column presents additional considerations, including supplemental information such as good privacy practices and selected requirements of specific laws and regulations that pertain to a certain industry or country.

Effective Date

.18 The trust services principles and criteria are effective as of September 15, 2009.

Principles and Criteria

Security Principle and Criteria

.19 The *security principle* refers to the protection of the system from unauthorized access, both logical and physical. Limiting access to the system helps prevent potential abuse of the system, theft of resources, misuse of software, and improper access to, or the use, alteration, destruction, or disclosure of information. Key elements for the protection of the system include permitting authorized access based on relevant needs and preventing unauthorized access to the system in all other instances.

Security Principle and Criteria Table

.20 The system is protected against unauthorized access (both physical and logical)

	<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
1.0	Policies: The entity defines and documents its policies for the security of its system.	
1.1	The entity's security policies are established and periodically reviewed and approved by a designated individual or group.	Written security policy, addressing both IT and physical security, has been approved by the IT standards committee and is implemented throughout the company.

(continued)

⁷ Illustrative controls are presented as examples only. It is the practitioner's responsibility to identify and document the policies, procedures, and controls actually in place at the entity under examination.

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
	<p>As part of the periodic corporate risk assessment process, the security officer identifies changes to the IT risk assessment based on new applications and infrastructure, significant changes to applications and infrastructure, new environmental security risks, changes to regulations and standards, and changes to user requirements as identified in service level agreements and other documents. The security officer then updates the security policy based on the IT risk assessment.</p> <p>Changes to the IT security policy are approved by the IT standards committee prior to implementation.</p>
<p>1.2 The entity's security policies include, but may not be limited to, the following matters:</p> <ul style="list-style-type: none"> a. Identifying and documenting the security requirements of authorized users b. Classifying data based on its criticality and sensitivity and that classification is used to define protection requirements, access rights and access restrictions, and retention and destruction requirements c. Assessing risks on a periodic basis d. Preventing unauthorized access e. Adding new users, modifying the access levels of existing users, and removing users who no longer need access f. Assigning responsibility and accountability for system security g. Assigning responsibility and accountability for system changes and maintenance h. Testing, evaluating, and authorizing system components before implementation 	<p><i>An example of an illustrative control for this criterion would be an entity's documented security policy addressing the elements set out in criterion 1.2. An illustrative security policy has been omitted for brevity.</i></p>

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
<ul style="list-style-type: none"> i. Addressing how complaints and requests relating to security issues are resolved j. Identifying and mitigating security breaches and other incidents k. Providing for training and other resources to support its system security policies l. Providing for the handling of exceptions and situations not specifically addressed in its system security policies m. Providing for the identification of and consistency with applicable laws and regulations, defined commitments, service-level agreements, and other contractual requirements n. Providing for sharing information with third parties 	
1.3 Responsibility and accountability for developing and maintaining the entity's system security policies, and changes and updates to those policies, are assigned.	Management has assigned responsibilities for the maintenance and enforcement of the entity security policy to the security officer under the directions of the CIO. The IT standards committee of the executive committee assists in the review, update, and approval of the policy as outlined in the executive committee handbook.
2.0 Communications: The entity communicates its defined system security policies to responsible parties and authorized users.	
2.1 The entity has prepared an objective description of the system and its boundaries and communicated such description to authorized users.	<p>For its e-commerce system, the entity has posted a system description on its Web site. <i>(For an example of a system description for an e-commerce system, refer to appendix A [paragraph .45].)</i></p> <p>For its non-e-commerce system, the entity has provided a system description to authorized users. <i>(For an example of a system description for a non-e-commerce based system, refer to appendix B [paragraph .46].)</i></p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
2.2 The security obligations of users and the entity's security commitments to users are communicated to authorized users.	<p>The entity's security commitments and required security obligations to its customers and other external users are posted on the entity's Web site and as part of the entity's standard services agreement.</p> <p>For its internal users (employees and contractors), the entity's policies relating to security are reviewed with new employees and contractors as part of their orientation, and the key elements of the policies and their impact on the employee are discussed.</p> <p>New employees must sign a statement signifying that they have read, understand, and will follow these policies.</p> <p>Each year, employees must reconfirm their understanding of and compliance with the entity's security policies. Security obligations of contractors are detailed in their contracts.</p> <p>A security awareness program has been implemented to communicate the entity's IT security policies to employees.</p>
2.3 Responsibility and accountability for the entity's system security policies and changes and updates to those policies are communicated to entity personnel responsible for implementing them.	<p>The entity publishes its IT security policies on its corporate intranet.</p> <p>The security administration team has custody of and is responsible for the day-to-day maintenance of the entity's security policies, and recommends changes to the CIO and the IT steering committee.</p> <p>Written job descriptions have been defined and are communicated to the security administration team.</p> <p>Written process and procedure manuals for all defined security processes are provided to security administration team personnel. The security officer updates the processes and procedures manuals based on changes to the security policy.</p>
2.4 The process for informing the entity about breaches of the system security and for submitting complaints is communicated to authorized users.	<p>The entity publishes its IT security policies on its corporate intranet.</p> <p>The security administration team has custody of and is responsible for the day-to-day maintenance of the entity's security policies, and recommends changes to the CIO and the IT steering committee.</p> <p>Written job descriptions have been defined and are communicated to the security administration team.</p> <p>Written process and procedure manuals for all defined security processes are provided to security administration team personnel. The security officer updates the processes and procedures manuals based on changes to the security policy.</p> <p>The process for customers and external users to inform the entity of possible security breaches and other incidents is posted on the entity's Web site and is provided as part of the new user welcome kit.</p> <p>The entity's security awareness program includes information concerning the identification of possible security breaches and the process for informing the security administration team.</p>

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
2.5 Changes that may affect system security are communicated to management and users who will be affected.	<p>Documented procedures exist for the identification and escalation of security breaches and other incidents.</p> <p>Planned changes to system components and the scheduling of those changes are reviewed as part of the monthly IT steering committee meetings.</p> <p>Changes to system components, including those that may affect system security, require the approval of the security administrator before implementation.</p> <p>Changes that may affect customers and users and their security obligations or the entity's security commitments are highlighted on the entity's Web site.</p> <p>Changes that may affect system security and confidentiality are communicated in writing to affected customers for review and approval under the provisions of the standard services agreement before implementation of the proposed change.</p> <p>There is periodic communication of changes, including changes that affect system security.</p> <p>Changes that affect system security are incorporated into the entity's ongoing security awareness program.</p>
3.0 Procedures: The entity placed in operation procedures to achieve its documented system security objectives in accordance with its defined policies.	
3.1 Procedures exist to (1) identify potential threats of disruption to systems operation that would impair system security commitments and (2) assess the risks associated with the identified threats.	<p>A risk assessment is performed periodically. As part of this process, threats to security are identified and the risk from these threats is formally assessed.</p> <p>Security processes and procedures are revised by the security officer based on the assessed threats.</p>
3.2 Procedures exist to restrict logical access to the defined system including, but not limited to, the following matters:	
<p>a. Logical access security measures to restrict access to information resources not deemed to be public.</p>	<ul style="list-style-type: none"> • Logical access to nonpublic information resources is protected through the use of native operating system security, native application and resource security, and add-on security software.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
<p>b. Identification and authentication of users.</p>	<ul style="list-style-type: none"> • Resource specific or default access rules have been defined for all non-public resources. • Access to resources is granted to an authenticated user based on the user's identity. • Users must establish their identity to the entity's network and application systems when accessing nonpublic resources through the use of a valid user ID that is authenticated by an associated password. • Unique user IDs are assigned to individual users. • Use of group or shared IDs is permitted only after completion of an assessment of the risk of the shared ID and written approval of the manager of the requesting business unit. • Passwords are case sensitive and must contain at least 8 characters, one of which is nonalphanumeric. • Security configuration parameters force passwords to be changed every 90 days. • Login sessions are terminated after 3 unsuccessful login attempts.
<p>c. Registration and authorization of new users.</p>	<ul style="list-style-type: none"> • Customers can self-register on the entity's Web site, under a secure session in which they provide new user information and select appropriate user ID and password. Privileges and authorizations associated with self-registered customer accounts provide specific limited system functionality. • The line-of-business supervisor authorizes access privilege change requests for employees and contractors. Access to restricted resources is authorized by the resource owner. • Customer access privileges beyond the default privileges granted during self-registration are approved by the customer account manager or the resource owner. • Proper segregation of incompatible duties is considered in granting privileges based on the user's job description or role. • The ability to create or modify users and user access privileges (other than the limited functionality "customer accounts") is limited to the security administration team.
<p>d. The process to make changes and updates to user profiles.</p>	<ul style="list-style-type: none"> • Changes and updates to self-registered customer accounts can be done by the individual user at any

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
	<p>time on the entity's Web site after the user has successfully logged onto the system. Changes are reflected immediately.</p> <ul style="list-style-type: none"> • Unused customer accounts (no activity for six months) are purged by the system. • Changes to other accounts and profiles are made by the security administration team and require the written approval of the appropriate line-of-business supervisor or customer account manager and the resource owner. • The human resource management system provides the human resources team with a list of newly terminated employees on a weekly basis. This listing is sent to the security administration team for deactivation.
e. Distribution of output restricted to authorized users.	<ul style="list-style-type: none"> • Access to computer processing output is provided to authorized individuals based on the classification of the information. • Processing output is stored in an area that reflects the classification of the information. • Processing output is distributed in accordance with the security policy based on classification of the information.
f. Restriction of access to offline storage, backup data, systems, and media.	<ul style="list-style-type: none"> • Access to offline storage, backup data, systems, and media is limited to computer operations staff through the use of physical and logical access controls.
g. Restriction of access to system configurations, superuser functionality, master passwords, powerful utilities, and security devices (for example, firewalls).	<ul style="list-style-type: none"> • Hardware and operating system configuration tables are restricted to appropriate personnel through physical access controls, native operating system security, and add-on security software. • Application software configuration tables are restricted to authorized users and under the control of application change management software. • Utility programs that can read, add, change, or delete data or programs are restricted to authorized technical services staff. Usage is logged and monitored by the manager of computer operations. • The information security team, under the direction of the CIO, maintains access to firewall and other logs, as well as access to any storage media.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
3.3 Procedures exist to restrict physical access to the defined system including, but not limited to, facilities, backup media, and other system components such as firewalls, routers, and servers.	<p>Any access is logged and reviewed in accordance with the company's IT policies.</p> <ul style="list-style-type: none"> • A listing of all master passwords is stored in an encrypted database, and an additional copy is maintained in a sealed envelope in the entity safe. <p>Physical access to the computer rooms, which house the entity's IT resources, servers, and related hardware such as firewalls and routers, is restricted to authorized individuals by card key systems and monitored by video surveillance.</p> <p>Physical access cards are managed by building security staff. Access card usage is logged. Logs are maintained and reviewed by building security staff.</p> <p>Requests for physical access privileges to the entity's computer facilities require the approval of the manager of computer operations.</p>
3.4 Procedures exist to protect against unauthorized access to system resources.	<p>Documented procedures exist for the identification and escalation of potential physical security breaches.</p> <p>Offsite media are stored in locked containers in secured facilities. Physical access to these containers is restricted to facilities personnel and employees authorized by the manager of computer operations.</p> <p>Login sessions are terminated after three unsuccessful login attempts. Virtual private networking (VPN) software is used to permit remote access by authorized users. Users are authenticated by the VPN server through specific "client" software and user ID and passwords.</p> <p>Firewalls are used and configured to prevent unauthorized access. Firewall events are logged and reviewed daily by the security administrator.</p> <p>Unneeded network services (for example, telnet, ftp, and http) are deactivated on the entity's servers. A listing of the required and authorized services is maintained by the IT department. This list is reviewed by entity management on a routine basis for its appropriateness for the current operating conditions.</p>

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
3.5 Procedures exist to protect against infection by computer viruses, malicious code, and unauthorized software.	<p>Intrusion detection systems are used to provide continuous monitoring of the entity's network and early identification of potential security breaches.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p> <p>In connection with other security monitoring, the security administration team participates in user groups and subscribes to services relating to computer viruses.</p> <p>Antivirus software is in place, including virus scans of incoming e-mail messages. Virus signatures are updated promptly.</p> <p>Any viruses discovered are reported to the security team, and an alert is created for all users notifying them of a potential virus threat.</p>
3.6 Encryption or other equivalent security techniques are used to protect user authentication information and the corresponding session transmitted over the Internet or other public networks.	<p>The ability to install, modify, and replace operating system and other system programs is restricted to authorized personnel.</p> <p>Access to superuser functionality and sensitive system functions is restricted to authorized personnel.</p> <p>The entity uses industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment) for the transmission of private or confidential information over public networks, including user IDs and passwords. Users are required to upgrade their browsers to the most current version tested and approved for use by the security administration team to avoid possible security problems.</p> <p>Account activities, subsequent to successful login, are encrypted through industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment). Users are logged out on request (by selecting the "Sign-out" button on the Web site) or after 10 minutes of inactivity.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
Criteria related to execution and incident management used to achieve objectives	
3.7	<p>Procedures exist to identify, report, and act upon system security breaches and other incidents.</p> <p>Users are provided instructions for communicating potential security breaches to the information security team. The information security team logs incidents reported through customer hotlines and e-mail.</p> <p>Intrusion detection systems and other tools are used to identify, log, and report potential security breaches and other incidents. The system notifies the security administration team or the network administrator via e-mail and text of potential incidents in progress.</p> <p>Incident logs are monitored and evaluated by the information security team daily.</p> <p>When an incident is detected or reported, a defined incident management process is initiated by authorized personnel. Corrective actions are implemented in accordance with defined policies and procedures.</p> <p>Procedures include a defined incident escalation process and notification mechanisms.</p> <p>All incidents are tracked by management until resolved.</p> <p>Closed incidents are reviewed by management for appropriate resolution.</p> <p>Resolution of incidents not related to security includes consideration of the effect of the incident and its resolution on security requirements.</p>
Criteria related to the system components used to achieve the objectives	
3.8	<p>Procedures exist to classify data in accordance with classification policies and periodically monitor and update such classifications as necessary</p> <p>Data owners periodically review data access rules and request modifications based on defined security requirements and risk assessments.</p> <p>Whenever new data are captured or created, the data are classified based on security policies,</p> <p>Propriety of data classification is considered as part of the change management process.</p>
3.9	<p>Procedures exist to provide that issues of noncompliance with security policies are</p> <p>All incidents are tracked by management until resolved.</p>

<i>Criteria</i>	<i>Illustrative Controls⁷</i>
promptly addressed and that corrective measures are taken on a timely basis.	Closed incidents are reviewed by management for appropriate resolution.
3.10 Design, acquisition, implementation, configuration, modification, and management of infrastructure and software are consistent with defined system security policies to enable authorized access and to prevent unauthorized access.	The internal audit process includes the development of management actions plans for findings and the tracking of action plans until closed.
	The entity has adopted a formal systems development life cycle (SDLC) methodology that governs the development, acquisition, implementation, and maintenance of computerized information systems and related technology.
	The SDLC methodology includes a framework for classifying data and creating standard user profiles that are established based on an assessment of the business impact of the loss of security. Users are assigned standard profiles based on needs and functional responsibilities.
	The security administration team reviews and approves the architecture and design specifications for new systems development and acquisition to help ensure consistency with the entity's security objectives, policies, and standards.
	Changes to system components that may affect security require the approval of the security administration team.
3.11 Procedures exist to provide that personnel responsible for the design, development, implementation, and operation of systems affecting security have the qualifications and resources to fulfill their responsibilities.	The entity has written job descriptions specifying the responsibilities and academic and professional requirements for key job positions.
	Hiring procedures include a comprehensive screening of candidates for key positions and consideration of whether the verified credentials are commensurate with the proposed position. New personnel are offered employment subject to background checks and reference validation.
	Candidates, including internal transfers, are approved by the line-of-business manager before the employment position is offered.
	Periodic performance appraisals are performed by employee supervisors and include the assessment and review of professional development activities.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
	<p>Personnel receive training and development in system security concepts and issues.</p> <p>Procedures are in place to provide alternate personnel for key system security functions in case of absence or departure.</p>
Change management-related criteria applicable to the system's security	
3.12	<p>Procedures exist to maintain system components, including configurations consistent with the defined system security policies.</p> <p>Entity management receives a third-party opinion on the adequacy of security controls and routinely evaluates the level of performance it receives (in accordance with its contractual service-level agreement) from the service provider that hosts the entity's systems and Web site.</p> <p>The IT department maintains an up-to-date listing of all software and the respective level, version, and patches that have been applied.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>System configurations are tested annually and evaluated against the entity's security policies and current service-level agreements. An exception report is prepared and remediation plans are developed and tracked.</p>
3.13	<p>Procedures exist to provide that only authorized, tested, and documented changes are made to the system.</p> <p>The responsibilities for authorizing, testing, developing, and implementing changes have been segregated.</p> <p>The entity's documented systems development methodology describes the change initiation, software development and maintenance, and approval processes, as well as the standards and controls that are embedded in the processes. These include programming, documentation, and testing standards.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and</p>

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷	
3.14	<p>Procedures exist to provide that emergency changes are documented and authorized timely.</p>	<p>procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their outstanding and closed requests.</p> <p>Changes to system infrastructure and software are developed and tested in a separate development or test environment before implementation into production.</p> <p>As part of the change control policies and procedures, there is a “promotion” process (for example, from “test” to “staging” to “production”). Promotion to production requires the approval of the business owner who sponsored the change and the manager of computer operations.</p> <p>When changes are made to key systems components, there is a “backout” plan developed for use in the event of major interruption(s).</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>Emergency changes that require deviations from standard procedures are logged and reviewed by IT management daily and reported to the affected line-of-business manager. Permanent corrective measures follow the entity’s change management process, including line-of-business approvals.</p>
4.0 Monitoring: The entity monitors the system and takes action to maintain compliance with its defined system security policies.		
4.1	<p>The entity’s system security is periodically reviewed and compared with the defined system security policies.</p>	<p>The information security team monitors the system and assesses the system vulnerabilities using proprietary and publicly available tools. Potential risks are evaluated and compared to service-level agreements and other obligations of the entity. Remediation plans are proposed and implementations are monitored.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. The internal audit function conducts system security reviews as part of its annual audit plan.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i> ⁷
	Results and recommendations for improvement are reported to management.
4.2 There is a process to identify and address potential impairments to the entity's ongoing ability to achieve its objectives in accordance with its defined system security policies.	<p>Logs are analyzed either manually or by automated tools to identify trends that may have a potential impact on the entity's ability to achieve its system security objectives.</p> <p>Monthly IT staff meetings are held to address system security concerns and trends; findings are discussed at quarterly management meetings.</p>
4.3 Environmental, regulatory, and technological changes are monitored and their effect on system security is assessed on a timely basis and policies are updated for that assessment.	<p>Senior management, as part of its annual IT planning process, considers developments in technology and the impact of applicable laws or regulations on the entity's security policies.</p> <p>The entity's IT security group monitors the security impact of emerging technologies.</p> <p>Users are proactively invited to contribute to initiatives to improve system security through the use of new technologies.</p>

Availability Principle and Criteria

.21 The *availability principle* refers to the accessibility to the system, products, or services as advertised or committed by contract, service-level, or other agreements. It should be noted that this principle does not, in itself, set a minimum acceptable performance level for system availability. The minimum performance level is established through commitments made by mutual agreement (contract) between the parties.

.22 Although there is a connection between system availability, system functionality, and system usability, the availability principle does not address system functionality (the specific functions a system performs) and system usability (the ability of users to apply system functions to specific tasks or problems). It does address system availability, which relates to whether the system is accessible for processing, monitoring, and maintenance.

Availability Principle and Criteria Table

.23 The system is available for operation and use as committed or agreed.

<i>Criteria</i>	<i>Illustrative Controls</i>
1.0 Policies: The entity defines and documents its policies for the availability of its system.	
1.1 The entity's system availability and related security policies are established and periodically reviewed and approved by a designated individual or group.	<p>A written availability policy has been approved by the IT standards committee and is implemented throughout the company.</p> <p>The entity's documented systems development and acquisition process includes procedures to identify and document authorized users of the system and their availability and related security requirements.</p> <p>User requirements are documented in service-level agreements or other documents.</p>
<p>1.2 The entity's system availability and related security policies include, but may not be limited to, the following matters:</p> <ul style="list-style-type: none"> a. Identifying and documenting the system availability and related security requirements of authorized users. b. Classifying data based on its criticality and sensitivity and that classification is used to define protection requirements, access rights and access restrictions, and retention and destruction requirements c. Assessing risks on a periodic basis d. Preventing unauthorized access. e. Adding new users, modifying the access levels of existing users, and removing users who no longer need access. f. Assigning responsibility and accountability for system availability and related security. 	<p><i>An example of an illustrative control for this criterion would be an entity's documented availability policy and related security policy addressing the elements set out in criterion 1.2. Illustrative availability and securities policies have been omitted for brevity.</i></p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
<ul style="list-style-type: none"> <li data-bbox="198 152 510 248">g. Assigning responsibility and accountability for system changes and maintenance. <li data-bbox="198 262 510 357">h. Testing, evaluating, and authorizing system components before implementation. <li data-bbox="198 371 510 484">i. Addressing how complaints and requests relating to system availability and related security issues are resolved. <li data-bbox="198 498 510 593">j. Identifying and mitigating system availability and related security breaches and other incidents. <li data-bbox="198 607 510 703">k. Monitoring system capacity to achieve customer commitments or other agreements regarding availability 	
<p data-bbox="127 1359 510 1524">1.3 Responsibility and accountability for developing and maintaining the entity's system availability and related security policies, and changes and updates to those policies, are assigned.</p>	<p data-bbox="568 1359 989 1550">Management has assigned responsibilities for the maintenance and enforcement of the entity's availability policies to the CIO. The IT standards committee of the executive committee assists in the review, update, and approval of these policies as outlined in the executive committee handbook.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>Ownership and custody of significant information resources (for example, data, programs, and transactions) and responsibility for establishing and maintaining the system availability of and related security over such resources are defined.</p>	
2.0 Communications: The entity communicates the defined system availability policies to responsible parties and authorized users.	
2.1	<p>The entity has prepared an objective description of the system and its boundaries and communicated such description to authorized users.</p> <p>For its e-commerce system, the entity has posted a system description on its Web site. <i>(For an example of a system description for an e-commerce system, refer to appendix A [paragraph .45].)</i></p> <p>For its non-e-commerce system, the entity has provided a system description to authorized users. <i>(For an example of a system description for a non-e-commerce based system, refer to appendix B [paragraph .46].)</i></p>
2.2	<p>The availability and related security obligations of users and the entity's availability and related security commitments to users are communicated to authorized users.</p> <p>The entity's system availability and related security commitments and required system availability and related security obligations of its customers and other external users are posted on the entity's Web site or as part of the entity's standard services agreement. Service-level agreements are reviewed with the customer annually.</p> <p>For its internal users (employees and contractors), the entity's policies relating to system security are reviewed with new employees and contractors as part of their orientation, and the key elements of the policies and their impact on the employee are discussed. New employees must sign a statement signifying that they have read, understand, and will follow these policies. Each year, as part of their performance review, employees must reconfirm their understanding of and compliance with the entity's policies. Obligations of contractors are detailed in their contract.</p> <p>A security awareness program has been implemented to communicate the entity's IT security policies to employees.</p> <p>The entity publishes its IT security policies on its corporate intranet.</p>
2.3	<p>Responsibility and accountability for the entity's system availability and related security policies and changes</p> <p>The network operations team is responsible for implementing the entity's availability policies under the direction of the CIO. The security administration</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
and updates to those policies are communicated to entity personnel responsible for implementing them.	<p>team is responsible for implementing the related security policies.</p> <p>The network operations team has custody of and is responsible for the day-to-day maintenance of the entity's availability policies and recommends changes to the CIO and the IT steering committee. The security administration team is responsible for the related security policies.</p>
2.4 The process for informing the entity about system availability issues and breaches of system security and for submitting complaints is communicated to authorized users.	<p>Written job descriptions have been defined and are communicated to the network operations team and the security administration team.</p> <p>Written processes and procedures manuals for all operations and security processes are provided to personnel. Designated personnel update the processes and procedures manuals based on changes to availability requirements and security policies.</p> <p>The process for customers and external users to inform the entity of system availability issues, possible security breaches, and other incidents is posted on the entity's Web site and is provided as part of the new user welcome kit.</p> <p>The entity's user training program includes modules dealing with the identification and reporting of system availability issues, security breaches, and other incidents.</p> <p>The entity's security awareness program includes information concerning the identification of possible security breaches and the process for informing the security administration team.</p>
2.5 Changes that may affect system availability and system security are communicated to management and users who will be affected.	<p>Documented procedures exist for the identification and escalation of system availability issues, security breaches, and other incidents.</p> <p>Changes that may affect system availability, customers and users and their security obligations, or the entity's security commitments are highlighted on the entity's Web site.</p> <p>Changes that may affect system availability and related system security are communicated in writing to affected customers for review and approval under the provisions of the standard services agreement before implementation of the proposed change.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Planned changes to system components and the scheduling of those changes are reviewed as part of the monthly IT steering committee meetings.</p> <p>Changes to system components, including those that may affect system security, require the approval of the manager of network operations or the security administration team before implementation.</p> <p>There is periodic communication of system changes to users and customers, including changes that affect availability and system security.</p>
3.0	Procedures: The entity placed in operation procedures to achieve its documented system availability objectives in accordance with its defined policies.
3.1	<p>Procedures exist to (1) identify potential threats of disruptions to systems operation that would impair system availability commitments and (2) assess the risks associated with the identified threats.</p> <p>A threat identification risk assessment is prepared and reviewed on a periodic basis or when a significant change occurs in either the internal or external physical environment. Threats such as fire, flood, dust, power failure, excessive heat and humidity, and labor problems have been considered.</p>
3.2	<p>Measures to prevent or mitigate threats have been implemented consistent with the risk assessment when commercially practicable.</p> <p>Management maintains measures to protect against environmental factors (for example, fire, flood, dust, power failure, and excessive heat and humidity) based on its periodic risk assessment. The entity's controlled areas are protected against fire using both smoke detectors and a fire suppression system. Water detectors are installed within the raised floor areas.</p> <p>The entity site is protected against a disruption in power supply to the processing environment by both uninterruptible power supplies and emergency power supplies. This equipment is tested semiannually.</p> <p>Preventive maintenance agreements and scheduled maintenance procedures are in place for key system hardware components.</p> <p>Vendor warranty specifications are complied with and tested to determine if the system is properly configured.</p> <p>Procedures to address minor processing errors, outages, and destruction of records are documented.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Procedures exist for the identification, documentation, escalation, resolution, and review of problems.</p> <p>Physical and logical security controls are implemented to reduce the opportunity for unauthorized actions that could impair system availability.</p>
3.3 Procedures exist to provide for backup, offsite storage, restoration, and disaster recovery consistent with the entity's defined system availability and related security policies.	<p>Management has implemented a comprehensive strategy for backup and restoration based on a review of business requirements. Backup procedures for the entity are documented and include redundant servers, daily incremental backups of each server, and a complete backup of the entire week's changes on a weekly basis. Daily and weekly backups are stored offsite in accordance with the entity's system availability policies.</p> <p>Disaster recovery and contingency plans are documented.</p> <p>The disaster recovery plan defines the roles and responsibilities and identifies the critical IT application programs, operating systems, personnel, data files, and time frames needed to ensure high availability and system reliability based on a business impact analysis.</p> <p>The business continuity planning coordinator reviews and updates the business impact analysis with the lines of business annually.</p> <p>Disaster recovery and contingency plans are tested annually in accordance with the entity's system availability policies. Testing results and change recommendations are reported to the entity's management committee.</p> <p>The entity's management committee reviews and approves changes to the disaster recovery plan.</p> <p>Contracted capacity at resumption facilities is compared to documented processing requirements on an annual basis and modified as necessary.</p> <p>All critical personnel identified in the business continuity plan hold current versions of the plan, both onsite and offsite. An electronic version is stored offsite.</p>
3.4 Procedures exist to provide for the integrity of backup data and systems maintained to	<p>Automated backup processes include procedures for testing the integrity of the backup data.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
support the entity's defined system availability and related security policies.	<p>Backups are performed in accordance with the entity's defined backup strategy, and usability of backups is verified at least annually.</p> <p>An inventory of available backups and the physical location of the backups are maintained by operations personnel.</p> <p>Backup systems and data are stored offsite at the facilities of a third-party service provider.</p> <p>Under the terms of its service provider agreement, the entity performs an annual verification of media stored at the offsite storage facility. As part of the verification, media at the offsite location are matched to the appropriate media management system. The storage site is reviewed biannually for physical access security and security of data files and other items.</p> <p>Backup systems and data are tested as part of the annual disaster recovery test.</p>

Security-related criteria relevant to the system's availability

<p>3.5 Procedures exist to restrict logical access to the defined system including, but not limited to, the following matters:</p> <p>a. Logical access security measures to restrict access to information resources not deemed to be public.</p> <p>b. Identification and authentication of users.</p>	<ul style="list-style-type: none"> • Logical access to nonpublic information resources is protected through the use of native operating system security, native application or resource security, and add-on security software. • Resource specific or default access rules have been defined for all nonpublic resources. • Access to resources granted to authenticated users based on their user profiles. • Users must establish their identity to the entity's network and application systems when accessing nonpublic resources through the use of a valid user ID that is authenticated by an associated password. • Unique user IDs are assigned to individual users. • Use of group or shared IDs is permitted only after completion of an assessment of the risk of the shared ID and written approval of the manager of the requesting business unit.
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
c. Registration and authorization of new users.	<ul style="list-style-type: none"> • Passwords are case sensitive must contain at least 8 characters, one of which is nonalphanumeric. • Security configuration parameters force passwords to be changed every 90 days. • Login sessions are terminated after 3 unsuccessful login attempts. • Customers can self-register on the entity's Web site, under a secure session in which they provide new user information and select appropriate user ID and password. Privileges and authorizations associated with self-registered customer accounts provide specific limited system functionality. • The ability to create or modify users and user access privileges (other than the limited functionality "customer accounts") is limited to the security administration team. • The line-of-business supervisor authorizes access privilege change requests for employees and contractors. Access to restricted resources is authorized by the resource owner. • Customer access privileges beyond the default privileges granted during self-registration are approved by the customer account manager. Proper segregation of duties is considered in granting privileges.
d. The process to make changes and updates to user profiles.	<ul style="list-style-type: none"> • Changes and updates to self-registered customer accounts can be done by the individual user at any time on the entity's Web site after the user has successfully logged onto the system. Changes are reflected immediately. • Unused customer accounts (no activity for six months) are purged by the system. • Changes to other accounts and profiles are restricted to the security administration team and require the approval of the appropriate line-of-business supervisor or customer account manager. • The human resource management system provides the human resources team with a list of newly terminated employees on a weekly basis. This listing is sent to the security administration team for deactivation.
e. Restriction of access to offline storage, backup data, systems and media.	<ul style="list-style-type: none"> • Access to offline storage, backup data, systems, and media is limited to computer operations staff through the

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>f. Restriction of access to system configurations, superuser functionality, master passwords, powerful utilities, and security devices (for example, firewalls).</p>	<p>use of physical and logical access controls.</p> <ul style="list-style-type: none"> • Hardware and operating system configuration tables are restricted to appropriate personnel. • Application software configuration tables are restricted to authorized users and under the control of application change management software. • Utility programs that can read, add, change, or delete data or programs are restricted to authorized technical services staff. Usage is logged and monitored by the manager of computer operations. • The information security team, under the direction of the CIO, maintains access to firewall and other logs, as well as access to any storage media. Any access is logged and reviewed in accordance with the company's IT policies. • A listing of all master passwords is stored in an encrypted database and an additional copy is maintained in a sealed envelope in the entity safe.
<p>3.6 Procedures exist to restrict physical access to the defined system including, but not limited to, facilities, backup media, and other system components such as firewalls, routers, and servers.</p>	<p>Physical access to the computer rooms, which house the entity's IT resources, servers, and related hardware such as firewalls and routers, is restricted to authorized individuals by card key systems and monitored by video surveillance.</p> <p>Physical access cards are managed by building security staff. Access card usage is logged. Logs are maintained and reviewed by building security staff.</p> <p>Requests for physical access privileges to the entity's computer facilities require the approval of the manager of computer operations.</p> <p>Documented procedures exist for the identification and escalation of potential physical security breaches.</p> <p>Offsite backup data and media are stored at service provider facilities. Access to offsite data and media requires the approval of the manager of computer operations.</p>
<p>3.7 Procedures exist to protect against unauthorized access to system resources.</p>	<p>Login sessions are terminated after three unsuccessful login attempts.</p> <p>Virtual private networking (VPN) software is used to permit remote access</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>by authorized users. Users are authenticated by the VPN server through specific “client” software and user ID and passwords.</p> <p>Firewalls are used and configured to prevent unauthorized access. Firewall events are logged and reviewed daily by the security administrator.</p> <p>Unneeded network services (for example, telnet, ftp, and http) are deactivated on the entity’s servers. A listing of the required and authorized services is maintained by the IT department. This list is reviewed by entity management on a routine basis for its appropriateness for the current operating conditions.</p> <p>Intrusion detection systems are used to provide continuous monitoring of the entity’s network and early identification of potential security breaches.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p>
3.8 Procedures exist to protect against infection by computer viruses, malicious codes, and unauthorized software.	<p>In connection with other security monitoring, the security administration team participates in user groups and subscribes to services relating to computer viruses.</p> <p>Antivirus software is in place, including virus scans of incoming e-mail messages. Virus signatures are updated promptly.</p> <p>Any viruses discovered are reported to the security team and an alert is created for all users notifying them of a potential virus threat.</p> <p>The ability to install, modify, and replace operating system and other system programs is restricted to authorized personnel</p> <p>Access to superuser functionality and sensitive system functions is restricted to authorized personnel.</p>
3.9 Encryption or other equivalent security techniques are used to protect user authentication information and the corresponding session transmitted over the Internet or other public networks.	<p>The entity uses industry standard encryption technology, VPN software or other secure communication systems (consistent with its periodic IT risk assessment) for the transmission of private or confidential information over public networks, including user IDs and passwords. Users are required to upgrade</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>their browsers to the most current versions tested and approved for use by the security administration team to avoid possible security problems.</p> <p>Account activities, subsequent to successful login, are encrypted through industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment). Users are logged out on request (by selecting the “Sign-out” button on the Web site) or after 10 minutes of inactivity.</p>
Criteria related to execution and incident management used to achieve objectives	
3.10	<p>Procedures exist to identify, report, and act upon system availability issues and related security breaches and other incidents.</p> <p>Users are provided instructions for communicating system availability issues, potential security breaches, and other issues to the help desk or customer service center.</p> <p>Documented procedures exist for the escalation of system availability issues and potential security breaches that cannot be resolved by the help desk.</p> <p>Network performance and system processing are monitored using system monitoring tools by onsite operations staff 24 hours a day, 7 days a week. Documented procedures exist for the escalation and resolution of performance and processing availability issues.</p> <p>Intrusion detection system and other tools are used to identify, log, and report potential security breaches and other incidents. The system notifies the security administration team and the network administrator via e-mail and text of potential incidents in progress.</p> <p>Incident logs are monitored and evaluated by the information security team daily.</p> <p>Documented incident identification and escalation procedures are approved by management and include a defined incident escalation process and notification mechanisms.</p> <p>Network performance, system availability, and security incident statistics and comparisons to approved targets are accumulated and reported to the IT steering committee monthly.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>System performance and capacity analysis and projections are completed annually as part of the IT planning and budgeting process.</p> <p>System and network operations are actively monitored by operations personnel.</p> <p>When a system disruption is detected or reported, a defined incident management process is initiated by systems and network operations personnel. Corrective actions are implemented in accordance with defined policies and procedures.</p> <p>All incidents are tracked by operations management until resolved.</p> <p>Closed incidents are reviewed by operations personnel for appropriate resolution.</p>

Criteria related to the system components used to achieve the objectives

3.11	<p>Procedures exist to classify data in accordance with classification policies and periodically monitor and update such classifications as necessary.</p>	<p>Data owners periodically review data access rules and request modifications based on defined security and availability requirements and risk assessments</p> <p>Whenever new data are captured or created, the data are classified based on security and availability policies.</p> <p>Propriety of data classification is considered as part of the change management process.</p>
3.12	<p>Procedures exist to provide that issues of noncompliance with system availability and related security policies are promptly addressed and that corrective measures are taken on a timely basis.</p>	<p>All incidents are tracked by management until resolved.</p> <p>Closed incidents are reviewed by management for appropriate resolution.</p> <p>The internal audit process includes the development of management actions plans for findings and the tracking of action plans until closed.</p>
3.13	<p>Design, acquisition, implementation, configuration, modification, and management of infrastructure and software are consistent with defined system availability and related security policies.</p>	<p>The entity has adopted a formal systems development life cycle (SDLC) methodology that governs the development, acquisition, implementation, and maintenance of computerized information systems and related technology.</p> <p>The SDLC methodology includes a framework for</p> <ul style="list-style-type: none"> • establishing performance level and system availability requirements based on user needs.

<i>Criteria</i>	<i>Illustrative Controls</i>
3.14 Procedures exist to provide that personnel responsible for the design, development, implementation, and operation of systems affecting availability and security have the qualifications and resources to fulfill their responsibilities.	<ul style="list-style-type: none"> • maintaining the entity’s backup and disaster recovery planning processes in accordance with user requirements. • classifying data and creating standard user profiles that are established based on an assessment of the business impact of the loss of security; assigning standard profiles to users based on needs and functional responsibilities. • testing changes to system components to minimize the risk of an adverse impact to system performance and availability. • developing “backout” plans before implementation of changes. <p>The security administration team reviews and approves the architecture and design specifications for new systems development and acquisition to ensure consistency with the entity’s related security policies.</p> <p>Changes to system components that may affect systems processing performance, availability, and security require the approval of the security administration team.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p> <p>The entity has written job descriptions specifying the responsibilities and academic and professional requirements for key job positions.</p> <p>Hiring procedures include a comprehensive screening of candidates for key positions and consideration of whether the verified credentials are commensurate with the proposed position. New personnel are offered employment subject to background checks and reference validation.</p> <p>Candidates, including internal transfers, are approved by the line-of-business manager before the employment position is offered.</p> <p>Periodic performance appraisals are performed by employee supervisors and include the assessment and review of professional development activities.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Personnel receive training and development in system availability concepts and issues.</p> <p>Procedures are in place to provide alternate personnel for key system availability and security functions in case of absence or departure.</p>
Change management-related criteria applicable to the system's availability	
3.15	<p>Procedures exist to maintain system components, including configurations consistent with the defined system availability and related security policies.</p> <p>Entity management receives a third-party opinion on the adequacy of security controls and routinely evaluates the level of performance it receives (in accordance with its contractual service-level agreement) from the service provider that hosts the entity's systems and Web site.</p> <p>The IT department maintains an up-to-date listing of all software and the respective level, version, and patches that have been applied.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>Staffing, infrastructure, and software requirements are periodically evaluated, and resources are allocated consistent with the entity's availability and related security policies.</p> <p>System configurations are tested annually and evaluated against the entity's processing performance, availability, security policies, and current service-level agreements. An exception report is prepared, and remediation plans are developed and tracked.</p>
3.16	<p>Procedures exist to provide that only authorized, tested, and documented changes are made to the system.</p> <p>The responsibilities for authorizing, testing, developing, and implementing changes have been segregated.</p> <p>The entity's documented systems development methodology describes the change initiation, software development and maintenance, and approval processes, as well as the standards and controls that are embedded in the processes. These include programming, documentation, and testing standards.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their outstanding and closed requests.</p> <p>Changes to system infrastructure and software are developed and tested in a separate development or test environment before implementation into production.</p> <p>As part of the change control policies and procedures, there is a “promotion” process (for example, from “test” to “staging” to “production”). Promotion to production requires the approval of the business owner who sponsored the change and the manager of computer operations.</p> <p>When changes are made to key systems components, there is a “backout” plan developed for use in the event of major interruption(s).</p>
3.17 Procedures exist to provide that emergency changes are documented and authorized (including after-the-fact approval).	<p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>Emergency changes that require deviations from standard procedures are logged and reviewed by IT management daily and reported to the affected line-of-business manager. Permanent corrective measures follow the entity’s change management process, including line-of-business approvals.</p>
4.0	Monitoring: The entity monitors the system and takes action to maintain compliance with its defined system availability policies.
4.1 The entity’s system availability and security performance is periodically reviewed and compared with the defined system availability and related security policies.	<p>Network performance and system processing are monitored using system monitoring tools by onsite operations staff 24 hours a day, 7 days a week. Network performance, system availability, and security incident statistics and comparisons to approved targets are accumulated and reported to the IT</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>steering committee monthly.</p> <p>The customer service group monitors system availability and related customer complaints. It provides a monthly report of such matters together with recommendations for improvement, which are considered and acted on at the monthly IT steering committee meetings.</p> <p>The information security team monitors the system and assesses the system vulnerabilities using proprietary and publicly available tools. Potential risks are evaluated and compared to service-level agreements and other obligations of the entity. Remediation plans are proposed, and implementations are monitored.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. The internal audit function conducts system availability and system security reviews as part of its annual audit plan. Results and recommendations for improvement are reported to management.</p>
4.2	<p>There is a process to identify and address potential impairments to the entity's ongoing ability to achieve its objectives in accordance with its defined system availability and related security policies.</p> <p>Network performance and system processing are monitored using system monitoring tools by onsite operations staff 24 hours a day, 7 days a week. Network performance, system availability, and security incident statistics and comparisons to approved targets are accumulated and reported to the IT steering committee monthly.</p> <p>Future system performance, availability, and capacity requirements are projected and analyzed as part of the annual IT planning and budgeting process.</p> <p>Logs are analyzed either manually or by automated tools to identify trends that may have a potential impact on the entity's ability to achieve its system availability and related security objectives.</p> <p>Monthly IT staff meetings are held to address system performance, availability, capacity, and security concerns and trends; findings are discussed at quarterly management meetings.</p>
4.3	<p>Environmental, regulatory, and technological changes are monitored, and their effect on system availability and security is assessed on a timely</p> <p>The entity's data center facilities include climate and environmental monitoring devices. Deviations from optimal performance ranges are escalated and resolved.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
basis; policies are updated for that assessment.	<p>Senior management, as part of its annual IT planning process, considers developments in technology and the impact of applicable laws or regulations on the entity's availability and related security policies.</p> <p>The entity's customer service group monitors the impact of emerging technologies, customer requirements, and competitive activities.</p>

Processing Integrity Principle and Criteria

.24 The *processing integrity principle* refers to the completeness, accuracy, validity, timeliness, and authorization of system processing. Processing integrity exists if a system performs its intended function in an unimpaired manner, free from unauthorized or inadvertent manipulation. Completeness generally indicates that all transactions are processed or all services are performed without exception. Validity means that transactions and services are not processed more than once and that they are in accordance with business values and expectations. Accuracy means that key information associated with the submitted transaction remains accurate throughout the processing of the transaction and that the transaction or service is processed or performed as intended. The timeliness of the provision of services or the delivery of goods is addressed in the context of commitments made for such delivery. Authorization means that processing is performed in accordance with the required approvals and privileges defined by policies governing system processing.

.25 The risks associated with processing integrity are that the party initiating the transaction will not have the transaction completed or the service provided correctly and in accordance with the desired or specified request. Without appropriate and effective processing integrity controls, the user may not receive the information, goods, or services requested. For example, a buyer may not receive the goods or services ordered, receive more than requested, or receive the wrong goods or services altogether. However, if appropriate processing integrity controls exist and operate effectively, there is a greater likelihood that the user will receive the information, goods, or services requested in the correct quantity, at the correct price, and when promised. Processing integrity addresses all of the system components including procedures to initiate, record, process, and report the information related to the product or service that is the subject of the engagement. The nature of data input in e-commerce systems typically involves the user entering data directly over Web-enabled input screens or forms, whereas in other systems, the nature of data input can vary significantly. Because of this difference in data input processes, the nature of controls over the completeness and accuracy of data input in e-commerce systems may be somewhat different than for other systems. The illustrative controls outlined in paragraph .27 identify some of these differences.

.26 Processing integrity differs from data integrity. Processing integrity does not automatically imply that the information stored by the system is complete, accurate, current, and authorized. If a system processes information inputs from sources outside of the system's boundaries, an entity can establish only limited controls over the completeness, accuracy, authorization, and timeliness of the information submitted for processing. Errors that may have been

introduced into the information and the control procedures at external sites are typically beyond the entity's control. Even in a case when the information stored by the system is explicitly included in the description of the system that defines the engagement, it is still possible that the system exhibits high processing integrity without exhibiting high data integrity. For example, an address stored in the system may have passed all appropriate edit checks and other processing controls when it was added to the system, but it may no longer be current (if a person or company relocated) or it may be incomplete (if an apartment number or mailing location is omitted from the address).

Processing Integrity Principle and Criteria Table

.27 System processing is complete, accurate, timely, and authorized.

<i>Criteria</i>	<i>Illustrative Controls</i>
1.0 Policies: The entity defines and documents its policies for the processing integrity of its system.	
1.1 The entity's processing integrity and related security policies are established and periodically reviewed and approved by a designated individual or group.	<p>Written policies addressing processing integrity have been approved by the executive committee and are implemented throughout the company.</p> <p>As part of the periodic corporate risk assessment process, management identifies changes to the risk assessment based on: new applications and infrastructure, significant changes to applications and infrastructure, new environmental risks, changes to regulations and standards, and changes to user requirements as identified in service level agreements and other documents. Management then updates the policies based on the risk assessment.</p> <p>User requirements are documented in service-level agreements or other documents.</p> <p>Changes to policies are approved by leadership prior to implementation</p>
1.2 The entity's system processing integrity and related security policies include, but may not be limited to, the following matters:	<p><i>An example of an illustrative control for this criterion would be an entity's documented processing integrity policy and security policy addressing the elements set out in criterion 1.2. Illustrative process integrity and security policies have been omitted for brevity.</i></p>
<p>a. Identifying and documenting the system processing integrity and related security requirements of authorized users</p> <p>b. Classifying data based on their criticality and sensitivity; that</p>	

<i>Criteria</i>	<i>Illustrative Controls</i>
	classification is used to define protection requirements, access rights and access restrictions, and retention and destruction requirements
<i>c.</i>	Assessing risks on a periodic basis
<i>d.</i>	Preventing unauthorized access
<i>e.</i>	Adding new users, modifying the access levels of existing users, and removing users who no longer need access
<i>f.</i>	Assigning responsibility and accountability for system processing integrity and related security
<i>g.</i>	Assigning responsibility and accountability for system changes and maintenance
<i>h.</i>	Testing, evaluating, and authorizing system components before implementation
<i>i.</i>	Addressing how complaints and requests relating to system processing integrity and related security issues are resolved
<i>j.</i>	Identifying and mitigating errors and omissions and other system processing integrity and related security breaches and other incidents
<i>k.</i>	Providing for training and other resources to support its system processing integrity and related system security policies
<i>l.</i>	Providing for the handling of exceptions and situations not specifically addressed in its system processing integrity and related system security policies
<i>m.</i>	Providing for the identification of and consistency with applicable

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>laws and regulations, defined commitments, service-level agreements, and other contractual requirements</p>	
<p>1.3 Responsibility and accountability for developing and maintaining entity's system processing integrity and related system security policies; changes, updates, and exceptions to those policies are assigned.</p>	<p>Management has assigned responsibilities for the implementation of the entity's processing integrity and related security policies to individual members of management. Others on the executive committee assist in the review, update, and approval of the policies as outlined in the executive committee handbook.</p>
<p>2.0 Communications: The entity communicates its documented system processing integrity policies to responsible parties and authorized users.</p>	
<p>2.1 The entity has prepared an objective description of the system and its boundaries and communicated such description to authorized users.</p> <p>If the system is an e-commerce system, additional information provided on its Web-site includes, but may not be limited to, the following matters:</p> <p><i>a.</i> Descriptive information about the nature of the goods or services that will be provided, including, where appropriate,</p> <ul style="list-style-type: none"> — condition of goods (whether they are new, used, or reconditioned). — description of services (or service contract). — sources of information (where it was obtained and how it was compiled). <p><i>b.</i> The terms and conditions by which it conducts its e-commerce transactions including, but not limited to, the following matters:</p> <ul style="list-style-type: none"> — Time frame for completion of transactions (<i>transaction</i> means fulfillment of orders where goods are being sold and delivery of service where a service is being provided) 	<p>For its e-commerce system, the entity has posted a system description including the elements set out in criterion 2.1 on its Web site. (<i>For an example of a system description and additional disclosures for an e-commerce system, refer to appendix A [paragraph .45].</i>)</p> <p>For its non-e-commerce system, the entity has provided a system description to authorized users. (<i>For an example of a system description for a non-e-commerce based system, refer to appendix B [paragraph .46].</i>)</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
<ul style="list-style-type: none"> — Time frame and process for informing customers of exceptions to normal processing of orders or service requests — Normal method of delivery of goods or services, including customer options, where applicable — Payment terms, including customer options, if any — Electronic settlement practices and related charges to customers — How customers may cancel recurring charges, if any — Product return policies and limited liability, where applicable <p>c. Where customers can obtain warranty, repair service, and support related to the goods and services purchased on its Web site.</p> <p>d. Procedures for resolution of issues regarding processing integrity. These may relate to any part of a customer's e-commerce transaction, including complaints related to the quality of services and products, accuracy, completeness, and the consequences for failure to resolve such complaints.</p>	
<p>2.2 The processing integrity and related security obligations of users and the entity's processing integrity and related security commitments to users are communicated to authorized users.</p>	<p>The entity's processing integrity and related security commitments and required processing integrity and related security obligations of its customers and other external users are posted on the entity's Web site, as part of the entity's standard services agreement, or in both places.</p> <p>For its internal users (employees and contractors), the entity's policies relating to processing integrity and security are reviewed with new employees and contractors as part of their orientation, and the key elements of the policies and their impact on the employee are discussed. New employees must sign a statement signifying that they have read,</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>understand, and will follow these policies. Each year, as part of their performance review, employees must reconfirm their understanding of and compliance with the entity's processing integrity and security policies. Obligations of contractors are detailed in their contracts.</p> <p>A security awareness program has been implemented to communicate the entity's processing integrity and related security policies to employees.</p> <p>The entity publishes its IT security policies on its corporate intranet.</p>
2.3 Responsibility and accountability for the entity's system processing integrity and related security policies, and changes and updates to those policies, are communicated to entity personnel responsible for implementing them.	<p>Management has assigned responsibilities for the enforcement of the entity's processing integrity policies to the COO.</p> <p>The security administration team has custody of and is responsible for the day-to-day maintenance of the entity's security policies, and recommends changes to the CIO and the IT steering committee.</p> <p>Processing integrity and related security commitments are reviewed with the customer account managers as part of the annual IT planning process.</p> <p>Written job descriptions have been defined and are communicated to the security administration team.</p> <p>Written process and procedure manuals for all defined security processes are provided to security administration team personnel. The security officer updates the processes and procedures manuals based on changes to the security policy.</p>
2.4 The process for obtaining support and informing the entity about system processing integrity issues, errors and omissions, and breaches of systems security and for submitting complaints is communicated to authorized users.	<p>The process for customers and external users to inform the entity of possible processing integrity issues, security breaches, and other incidents is posted on the entity's Web site, is provided as part of the new user welcome kit, or is in both places.</p> <p>The entity's user training and security awareness programs include information concerning the identification of processing integrity issues and possible security breaches and the process for informing the security administration team.</p> <p>Documented procedures exist for the identification and escalation of system processing integrity issues, security breaches, and other incidents.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>	
2.5	<p>Changes that may affect system processing integrity and system security are communicated to management and users who will be affected.</p>	<p>Planned changes to system components and the scheduling of those changes are reviewed as part of the monthly IT steering committee meetings.</p> <p>Changes to system components, including those that may affect system security, require the approval of the security administrator and the sponsor of the change before implementation.</p> <p>Changes that may affect customers and users and their processing integrity and related security obligations or the entity's processing integrity and related security commitments are highlighted on the entity's Web site.</p> <p>Changes that may affect processing integrity and related system security are communicated in writing to affected customers for review and approval by affected customers under the provisions of the standard services agreement before implementation of the proposed change.</p> <p>There is periodic communication of changes that affect system security, including changes to users and customers.</p> <p>Changes are incorporated into the entity's ongoing user training and security awareness programs.</p>
3.0 Procedures: The entity placed in operation procedures to achieve its documented system processing integrity objectives in accordance with its defined policies.		
3.1	<p>Procedures exist to (1) identify potential threats of disruptions to systems operations that would impair processing integrity commitments and (2) assess the risks associated with the identified threats.</p>	<p>A risk assessment is performed periodically. As part of this process, threats to processing integrity are identified and the risks from these threats are formally assessed.</p> <p>Processes and procedures are revised by management based on the assessed threats.</p>
3.2	<p>The procedures related to completeness, accuracy, timeliness, and authorization of inputs are consistent with the documented system processing integrity policies.</p> <p>If the system is an e-commerce system, the entity's procedures include, but may not be limited to, the following matters:</p>	<p>The entity has established data preparation procedures to be followed by user departments.</p> <p>Data entry screens contain field edits and range checks, and input forms are designed to reduce errors and omissions.</p> <p>Source documents are reviewed for appropriate authorizations before input.</p> <p>Error handling procedures are followed during data origination to ensure that</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	errors and irregularities are detected, reported, and corrected.
a. The entity checks each request or transaction for accuracy and completeness.	Original source documents are retained on image management systems for a minimum of seven years, to facilitate the retrieval or reconstruction of data as well as to satisfy legal requirements.
b. Positive acknowledgment is received from the customer before the transaction is processed.	<p>Logical access controls restrict data entry capability to authorized personnel. (See item 3.6 in this table.)</p> <p>The customer account manager performs a regular review of customer complaints, back-order logs, and other transactional analysis. This information is compared to customer service agreements.</p> <p>The entity protects information from unauthorized access, modification, and misaddressing during transmission and transport using a variety of methods including</p> <ul style="list-style-type: none"> • encryption of transmission information. • batch header and control total reconciliations. • message authentication codes and hash totals. • private leased lines or virtual private networking connections with authorized users. • bonded couriers and tamper-resistant packaging. <p>Because of the Web-based nature of the input process, the nature of the controls to achieve the criterion set out in item 3.1 may take somewhat different forms, such as</p> <ul style="list-style-type: none"> • account activity, subsequent to successful login, is encrypted through industry standard encryption software. • Web scripts contain error checking for invalid inputs. • the entity's order processing system contains edits, validity, and range checks, which are applied to each order to check for accuracy and completeness of information before processing. • before a transaction is processed by the entity, the customer is presented with a request to confirm the intended transaction and the customer is required to click on the "Yes, please process this order" button before the transaction is processed.

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>3.3 The procedures related to completeness, accuracy, timeliness, and authorization of system processing, including error correction and database management, are consistent with documented system processing integrity policies.</p> <p>If the system is an e-commerce system, the entity's procedures include, but are not necessarily limited to, the following matters:</p> <ol style="list-style-type: none"> a. The correct goods are shipped in the correct quantities in the time frame agreed upon, or services and information are provided to the customer as requested. b. Transaction exceptions are promptly communicated to the customer. c. Incoming messages are processed and delivered accurately and completely to the correct IP address. d. Outgoing messages are processed and delivered accurately and completely to the service provider's (SP's) Internet access point. e. Messages remain intact while in transit within the confines of the SP's network. 	<p>The entity e-mails an order confirmation to the customer-supplied e-mail address. The order confirmation contains order details, shipping and delivery information, and a link to an online customer order tracking service. Returned e-mails are investigated by customer service.</p> <p>Responsibilities for order processing, application of credits and cash receipts, custody of inventory, user account management, and database management have been segregated.</p> <p>The entity's documented systems development life cycle (SDLC) methodology is used in the development of new applications and the maintenance of existing applications. The methodology contains required procedures for user involvement, testing, conversion, and management approvals of system processing integrity features.</p> <p>Computer operations and job scheduling procedures exist, are documented, and contain procedures and instructions for operations personnel regarding system processing integrity objectives, policies, and standards. Exceptions require the approval of the manager of computer operations.</p> <p>The entity's application systems contain edit and validation routines to check for incomplete or inaccurate data. Errors are logged, investigated, corrected, and resubmitted for input. Management reviews error logs daily to ensure that errors are corrected on a timely basis.</p> <p>End-of-day reconciliation procedures include the reconciliation of the number of records accepted to the number of records processed to the number of records output.</p> <p>The following additional controls are included in the entity's e-commerce system:</p> <ul style="list-style-type: none"> • Packing slips are created from the customer sales order and checked by warehouse staff as the order is packed. • Commercial delivery methods are used that reliably meet expected delivery schedules. Vendor performance is monitored and assessed periodically.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>3.4 The procedures related to completeness, accuracy, timeliness, and authorization of outputs are consistent with the documented system processing integrity policies.</p> <p>If the system is an e-commerce system, the entity's procedures include, but are not necessarily limited to, the following matters:</p> <ul style="list-style-type: none"> • The entity displays sales prices and all other costs and fees to the customer before processing the transaction. • Transactions are billed and electronically settled as agreed. • Billing or settlement errors are promptly corrected. 	<ul style="list-style-type: none"> • Service delivery targets are maintained, and actual services provided are monitored against such targets. • The entity uses a feedback questionnaire to confirm customer satisfaction with completion of service or delivery of information to the customer. • Computerized back-order records are maintained and are designed to notify customers of back orders within 24 hours. Customers are given the option to cancel a back order or have an alternate item delivered. • Monitoring tools are used to continuously monitor latency, packet loss, hops, and network performance. • The organization maintains network integrity software and has documented network management policies. • Appropriately documented escalation procedures are in place to initiate corrective actions to unfavorable network performance. <p>Written procedures exist for the distribution of output reports that conform to the system processing integrity objectives, policies, and standards.</p> <p>Control clerks reconcile control totals of transaction input to output reports daily, on both a system-wide and an individual customer basis. Exceptions are logged, investigated, and resolved.</p> <p>The customer service department logs calls and customer complaints. An analysis of customer calls, complaints, back-order logs, and other transactional analysis and comparison to the entity's processing integrity policies are reviewed at monthly management meetings, and action plans are developed and implemented as necessary.</p> <p>The following additional controls are included in the entity's e-commerce system:</p> <ul style="list-style-type: none"> • All costs, including taxes, shipping, and duty costs, and the currency used, are displayed to the customer. Customer accepts the order, by clicking on the "yes" button, before the order is processed. • Customers have the option of printing, before an online order is processed, an "order confirmation" for

<i>Criteria</i>	<i>Illustrative Controls</i>
3.5 There are procedures to enable tracing of information inputs from their source to their final disposition and vice versa.	<p>future verification with payment records (such as credit card statement) detailing information about the order (such as item(s) ordered, sales prices, costs, sales taxes, and shipping charges).</p> <ul style="list-style-type: none"> • All foreign exchange rates are displayed to the customer before performing a transaction involving foreign currency. • Billing or settlement errors are followed up and corrected within 24 hours of reporting by the customer. <p>Input transactions are date and time stamped by the system and identified with the submitting source (user, terminal, IP address). Each order has a unique identifier that can be used to access order and related shipment and payment settlement information. This information can also be accessed by customer name and dates of order, shipping, or billing.</p> <p>The entity maintains transaction histories for a minimum of 10 years. Order history information is maintained online for 3 years and is available for immediate access by customer service representatives. After 3 years, this information is maintained in offline storage.</p> <p>Original source documents are retained on image management systems for a minimum of 7 years, to facilitate the retrieval or reconstruction of data as well as to satisfy legal requirements.</p> <p>The entity performs an annual audit of tapes stored at the offsite storage facility. As part of the audit, tapes at the offsite location are matched to the appropriate tape management system.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
Security-related criteria relevant to the system's processing integrity	
3.6 Procedures exist to restrict logical access to the defined system including, but not limited to, the following matters:	
<p>a. Logical access security measures to access information not deemed to be public</p>	<ul style="list-style-type: none"> • Logical access to nonpublic information resources is protected through the use of native operating system security, native application and resource security, and add-on security software. • Resource specific or default access rules have been defined for all non-public resources. • Access to resources is granted to an authenticated user based on the user's identity.
<p>b. Identification and authentication of authorized users</p>	<ul style="list-style-type: none"> • Users must establish their identity to the entity's network and application systems when accessing nonpublic resources through the use of a valid user ID that is authenticated by an associated password. • Unique user IDs are assigned to individual users. • Use of group or shared IDs is permitted only after completion of an assessment of the risk of the shared ID and written approval of the manager of the requesting business unit. • Passwords are case sensitive must contain at least 8 characters, one of which is nonalphanumeric. • Security configuration parameters force passwords to be changed every 90 days. • The login sessions are terminated after 3 unsuccessful login attempts.
<p>c. Registration and authorization of new users</p>	<ul style="list-style-type: none"> • Customers can self-register on the entity's Web site, under a secure session in which they provide new user information and select appropriate user ID and password. Privileges and authorizations associated with self-registered customer accounts provide specific limited system functionality. • The ability to create or modify users and user access privileges (other than the limited functionality "customer accounts") is limited to the security administration team. • The line-of-business supervisor authorizes access privilege change requests for employees and contractors. Access to restricted resources is authorized by the resource owner.

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>d. The process to make changes and updates to user profiles</p>	<ul style="list-style-type: none"> • Customer access privileges beyond the default privileges granted during self-registration are approved by the customer account manager. • Proper segregation of duties is considered in granting privileges. • Changes and updates to self-registered customer accounts can be done by the individual user at any time on the entity's Web site after the user has successfully logged onto the system. Changes are reflected immediately. • Unused customer accounts (no activity for six months) are purged by the system. • Changes to other accounts and profiles are restricted to the security administration team and require the approval of the appropriate line-of-business supervisor or customer account manager. • The human resource management system provides the human resources team with a list of newly terminated employees on a weekly basis. This listing is sent to the security administration team for deactivation.
<p>e. Distribution of output restricted to authorized users</p>	<ul style="list-style-type: none"> • Access to computer processing output is provided to authorized individuals based on the classification of the information. • Processing outputs are stored in an area that reflects the classification of the information.
<p>f. Restriction of access to offline storage, backup data, systems, and media</p>	<ul style="list-style-type: none"> • Access to offline storage, backup data, systems, and media is limited to computer operations staff.
<p>g. Restriction of access to system configurations, superuser functionality, master passwords, powerful utilities, and security devices (for example, firewalls)</p>	<ul style="list-style-type: none"> • Hardware and operating system configuration tables are restricted to appropriate personnel. • Application software configuration tables are restricted to authorized users and under the control of application change management software. • Utility programs that can read, add, change, or delete data or programs are restricted to authorized technical services staff. Usage is logged and monitored by the manager of computer operations. • The information security team, under the direction of the CIO, maintains access to firewall and other logs, as well as access to any storage media.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>	
3.7	<p>Procedures exist to restrict physical access to the defined system including, but not limited to, facilities, offline storage media, backup media and systems, and other system components such as firewalls, routers, and servers.</p>	<p>Any access is logged and reviewed in accordance with the company's IT policies.</p> <ul style="list-style-type: none"> • A listing of all master passwords is stored in an encrypted database, and an additional copy is maintained in a sealed envelope in the entity safe. <p>Physical access to the computer rooms, which house the entity's IT resources, servers, and related hardware such as firewalls and routers, is restricted to authorized individuals by card key systems and is monitored by video surveillance.</p> <p>Physical access cards are managed by building security staff. Access card usage is logged. Logs are maintained and reviewed by building security staff.</p> <p>Requests for physical access privileges to the entity's computer facilities require the approval of the manager of computer operations.</p> <p>Documented procedures exist for the identification and escalation of potential physical security breaches.</p> <p>Offsite backup data and media are stored at service provider facilities. Access to offsite data and media requires the approval of the manager of computer operations.</p>
3.8	<p>Procedures exist to protect against unauthorized access to system resources.</p>	<p>Login sessions are terminated after three unsuccessful login attempts.</p> <p>Virtual private networking (VPN) software is used to permit remote access by authorized users. Users are authenticated by the VPN server through specific "client" software and user ID and passwords.</p> <p>Firewalls are used and configured to prevent unauthorized access. Firewall events are logged and reviewed daily by the security administrator.</p> <p>Unneeded network services (for example, telnet, ftp, and http) are deactivated on the entity's servers. A listing of the required and authorized services is maintained by the IT department. This list is reviewed by entity management on a routine basis for its appropriateness for the current operating conditions.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
3.9 Procedures exist to protect against infection by computer viruses, malicious code, and unauthorized software.	<p>Intrusion detection systems are used to provide continuous monitoring of the entity's network and early identification of potential security breaches.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p> <p>In connection with other security monitoring, the security administration team participates in user groups and subscribes to services relating to computer viruses.</p> <p>Antivirus software is in place, including virus scans of incoming e-mail messages. Virus signatures are updated promptly.</p> <p>Any viruses discovered are reported to the security team, and an alert is created for all users notifying them of a potential virus threat.</p> <p>The ability to install, modify, and replace operating systems and other system programs is restricted to authorized personnel.</p>
3.10 Encryption or other equivalent security techniques are used to protect user authentication information and the corresponding session transmitted over the Internet or other public networks.	<p>Access to superuser functionality and sensitive system functions is restricted to authorized personnel.</p> <p>The entity uses industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment) for the transmission of private or confidential information over public networks, including user IDs and passwords. Users are required to upgrade their browsers to the most current version tested and approved for use by the security administration team to avoid possible security problems.</p> <p>Account activity, subsequent to successful login, is encrypted through industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment). Users are logged out on request (by selecting the "Sign-out" button on the Web site) or after 10 minutes of inactivity.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
Criteria related to execution and incident management used to achieve objectives	
3.11 Procedures exist to identify, report, and act upon system processing integrity issues and related security breaches and other incidents.	<p>Users are provided instructions for communicating system processing integrity issues and potential security breaches to the IT hotline. Processing integrity issues are escalated to the manager of computer operations. The information security team investigates security-related incidents reported through customer hotlines and e-mail.</p> <p>Production run and automated batch job scheduler logs are reviewed each morning, and processing issues are identified, escalated, and resolved.</p> <p>Intrusion detection systems and other tools are used to identify, log, and report potential security breaches and other incidents. The system notifies the security administration team, the network administrator, or both via e-mail and text of potential incidents in progress.</p> <p>Incident logs are monitored and evaluated by the information security team daily.</p> <p>When an incident is detected or reported, a defined incident management process is initiated by authorized personnel. Corrective actions are implemented in accordance with defined policies and procedures.</p> <p>Procedures include a defined incident escalation process and notification mechanisms.</p> <p>All incidents are tracked by management until resolved.</p> <p>Closed incidents are reviewed by management for appropriate resolution.</p> <p>Resolution of incidents not related to security includes consideration of the impact of the incident and its resolution on security requirements.</p>
Criteria related to the system components used to achieve the objectives	
3.12 Procedures exist to classify data in accordance with classification policies and periodically monitor and update such classifications as necessary	<p>The entity has a data quality assurance function.</p> <p>The data quality assurance group reviews data usage and ensures that metadata is documented, including, but not limited to, the following matters:</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<ul style="list-style-type: none"> a. Purpose b. Origin/Ownership, both internal and external c. Used by d. Custodian/Steward e. Standards governing f. Classification for security/privacy g. Access privileges h. Location (for searchability) i. Version j. Timestamp k. Retention/Disposal Requirements l. Source; Owner/responsible party/Lineage/Audit trail m. Assurance
	<p>Whenever new data are captured or created, the data are classified based on security and process integrity policies.</p> <p>Propriety of data classification is considered as part of the change management process.</p>
3.13 Procedures exist to provide that issues of noncompliance with system processing integrity and related security policies are promptly addressed and that corrective measures are taken on a timely basis.	<p>The entity requires procedures to be consistent with policies and there is a process to check that procedures are consistent with policies.</p> <p>The entity monitors changes to policies and promptly updates procedures affected by those changes.</p> <p>Computer operations team meetings are held each morning to review the previous day's processing. Processing issues are discussed, remedial action is taken, and additional action plans are developed, where necessary, and implemented.</p> <p>Standard procedures exist for the review, documentation, escalation, and resolution of system processing problems.</p> <p>Entity management routinely evaluates the level of performance it receives from the Internet service provider (ISP) which hosts the entity's Web site. This includes evaluating the security controls the ISP has in place by an independent third party as well as following up with the ISP management on any open items or causes for concern.</p> <p>Processing integrity and related security issues are recorded and accumulated in a problem report. Corrective action is noted and monitored by management.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
3.14 Design, acquisition, implementation, configuration, modification, and management of infrastructure and software are consistent with defined processing integrity and related security policies.	<p>On a routine basis, processing integrity and related security policies, controls, and procedures are audited by the internal audit department. Results of such examinations are reviewed by management, a response is prepared, and a remediation plan is put in place.</p> <p>The entity has adopted a formal systems development life cycle (SDLC) methodology that governs the development, acquisition, implementation, and maintenance of computerized information systems and related technology.</p> <p>The SDLC methodology includes a framework for assigning ownership of systems and classifying data. Process owners are involved in development of user specifications, solution selection, testing, conversion, and implementation.</p> <p>The security administration team reviews and approves the architecture and design specifications for new systems development and/or acquisition to ensure consistency with the entity's processing integrity and related security objectives, policies, and standards.</p> <p>Process owner review, approval of test results, and authorization are required for implementation of changes.</p>
3.15 Procedures exist to provide that personnel responsible for the design, development, implementation, and operation of systems affecting processing integrity and security have qualifications and resources to fulfill their responsibilities.	<p>Changes to system components that may affect security require the approval of the security administration team.</p> <p>A separate systems quality assurance group reporting to the CIO has been established.</p> <p>The entity has written job descriptions specifying the responsibilities and academic and professional requirements for key job positions.</p> <p>Hiring procedures include a comprehensive screening of candidates for key positions and consideration of whether the verified credentials are commensurate with the proposed position. New personnel are offered employment subject to background checks and reference validation.</p> <p>Candidates, including internal transfers, are approved by the line-of-business manager before the employment position is offered.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Outsourced activities are included in assessments of personnel qualifications and resource adequacy.</p> <p>Periodic performance appraisals are performed by employee supervisors and include the assessment and review of professional development activities.</p> <p>Personnel receive training and development in computer operations, system design and development, testing, and security concepts and issues.</p> <p>Procedures are in place to provide alternate personnel for key system processing functions in case of absence or departure.</p> <p>Procedures are in place for allocating the number of personnel and other resources commensurate with the processing integrity and related security requirements.</p>
Change management-related criteria applicable to the system's processing integrity	
3.16 Procedures exist to maintain system components, including configurations consistent with the defined system processing integrity and related security policies.	<p>Entity management receives a third-party opinion on the adequacy of security controls, and routinely evaluates the level of performance it receives (in accordance with its contractual service-level agreement) from the service provider that hosts the entity's systems and Web site.</p> <p>The IT department maintains an up-to-date listing of all software and the respective level, version, and patches that have been applied.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>System configurations are tested annually and evaluated against the entity's processing integrity and security policies and current service-level agreements. An exception report is prepared and remediation plans are developed and tracked.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
3.17 Procedures exist to provide that only authorized, tested, and documented changes are made to the system.	<p>The entity monitors changes to policies and promptly updates procedures affected by those changes.</p> <p>The entity's documented systems development methodology describes the change initiation, software development and maintenance, and testing and approval processes, as well as the standards and controls that are embedded in the processes. These include programming, documentation, and testing standards.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their outstanding and closed requests.</p> <p>Changes to system infrastructure and software are developed and tested in a separate development and test environment before implementation into production.</p> <p>As part of the change control policies and procedures, there is a "promotion" process (for example, from "test" to "staging" to "production"). Promotion to production requires the approval of the business owner who sponsored the change and the manager of computer operations.</p> <p>When changes are made to key systems components, there is a "backout" plan developed for use in the event of major interruption(s).</p>
3.18 Procedures exist to provide that emergency changes are documented and authorized (including after-the-fact approval).	<p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
Availability-related criteria applicable to the system's processing integrity	
3.19 Procedures exist to protect the system against potential risks (for example, environmental risks, natural disasters, and routine operational errors and omissions) that might impair system processing integrity.	<p>Emergency changes that require deviations from standard procedures are logged and reviewed by IT management daily and reported to the affected line-of-business manager. Permanent corrective measures follow the entity's change management process, including line-of-business approvals.</p> <p>A risk assessment is prepared and reviewed on a periodic basis or when a significant change occurs in either the internal or external physical environment. Threats such as fire, flood, dust, power failure, excessive heat and humidity, and labor problems have been considered.</p> <p>Management maintains measures to protect against environmental factors (for example, fire, dust, power failure, and excessive heat and humidity) based on its periodic risk assessment. The entity's controlled areas are protected against fire using both smoke detectors and a fire suppression system. Water detectors are installed within the raised floor areas.</p> <p>The entity site is protected against a disruption in power supply to the processing environment by both uninterruptible power supplies and emergency power supplies. This equipment is tested semiannually.</p> <p>Preventive maintenance agreements and scheduled maintenance procedures are in place for key system hardware components.</p> <p>Vendor warranty specifications are complied with and tested to determine if the system is properly configured.</p> <p>Procedures to address minor processing errors, outages, and destruction of records are documented.</p> <p>Procedures exist for the identification, documentation, escalation, resolution, and review of problems.</p> <p>Physical and logical security controls are implemented to reduce the opportunity for unauthorized actions that could impair system processing integrity.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
3.20 Procedures exist to provide for restoration and disaster recovery consistent with the entity's defined processing integrity policies.	<p>Management has implemented a comprehensive strategy for backup and restoration based on a review of business requirements. Backup procedures for the entity are documented and include redundant servers, daily incremental backups of each server, and a complete backup of the entire week's changes on a weekly basis. Daily and weekly backups are stored offsite in accordance with the entity's system policies.</p> <p>Disaster recovery and contingency plans are documented.</p> <p>The disaster recovery plan defines the roles and responsibilities and identifies the critical IT application programs, operating systems, personnel, data files, and time frames needed to ensure high availability and system reliability based on the business impact analysis.</p> <p>The business continuity planning coordinator reviews and updates the business impact analysis with the lines of business annually.</p> <p>Disaster recovery and contingency plans are tested annually in accordance with the entity's system policies. Testing results and change recommendations are reported to the entity's management committee.</p> <p>The entity's management committee reviews and approves changes to the disaster recovery plan.</p> <p>All critical personnel identified in the business continuity plan hold current versions of the plan, both onsite and offsite. An electronic version is stored offsite.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
3.21 Procedures exist to provide for the completeness, accuracy, and timeliness of backup data and systems.	<p>Automated backup processes include procedures for testing the integrity of the backup data.</p> <p>Backups are performed in accordance with the entity's defined backup strategy, and usability of backups is verified at least annually.</p> <p>Backup systems and data are stored offsite at the facilities of a third-party service provider.</p> <p>Under the terms of its service provider agreement, the entity performs an annual verification of media stored at the offsite storage facility. As part of the verification, media at the offsite location are matched to the appropriate media management system. The storage site is reviewed biannually for physical access security and security of data files and other items.</p> <p>Backup systems and data are tested as part of the annual disaster recovery test.</p>
4.0 Monitoring: The entity monitors the system and takes action to maintain compliance with the defined system processing integrity policies.	
4.1 System processing integrity and security performance are periodically reviewed and compared with the defined system processing integrity and related security policies.	<p>System processing is monitored using system monitoring tools by onsite operations staff 24 hours a day, 7 days a week. Processing logs, performance and security incident statistics, and comparisons to approved targets are reviewed by the operations team daily and are accumulated and reported to the IT steering committee monthly.</p> <p>The customer service group monitors system processing and related customer complaints. It provides a monthly report of such matters together with recommendations for improvement, which are considered and acted on at the monthly IT steering committee meetings.</p> <p>The information security team monitors the system and assesses the system vulnerabilities using proprietary and publicly available tools. Potential risks are evaluated and compared to service-level agreements and other obligations of the entity. Remediation plans are proposed and implementations are monitored.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. The internal</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>	
4.2	<p>There is a process to identify and address potential impairments to the entity's ongoing ability to achieve its objectives in accordance with its defined system processing integrity and related security policies.</p>	<p>audit function conducts processing integrity and system security reviews as part of its annual audit plan. Results and recommendations for improvement are reported to management.</p> <p>System processing is monitored using system monitoring tools by onsite operations staff 24 hours a day, 7 days a week. Processing logs and performance and security incident statistics and comparisons to approved targets are reviewed by the operations team daily and are accumulated and reported to the IT steering committee monthly.</p> <p>Future system processing performance and capacity requirements are projected and analyzed as part of the annual IT planning and budgeting process.</p> <p>Logs are analyzed either manually or by automated tools to identify trends that may have a potential impact on the entity's ability to achieve its system processing integrity and related security objectives.</p> <p>Monthly IT staff meetings are held to address system processing, capacity, and security concerns and trends; findings are discussed at quarterly management meetings.</p>
4.3	<p>Environmental, regulatory, and technological changes are monitored, their impact on system processing integrity and security is assessed on a timely basis, and policies are updated for that assessment.</p>	<p>The entity's data center facilities include climate and environmental monitoring devices. Deviations from optimal performance ranges are escalated and resolved.</p> <p>Senior management, as part of its annual IT planning process, considers developments in technology and the impact of applicable laws or regulations on the entity's processing integrity and related security policies.</p> <p>The entity's customer service group monitors the impact of emerging technologies, customer requirements, and competitive activities.</p>

Confidentiality Principle and Criteria

.28 The *confidentiality principle* refers to the system's ability to protect the information designated as confidential, as committed or agreed. Unlike personal information, which is defined by regulation in a number of countries worldwide and is subject to the privacy principles (see paragraph .33), there is no widely recognized definition of what constitutes confidential information. In the course of communicating and transacting business, partners often exchange information they require to be maintained on a confidential basis. In most

instances, the respective parties wish to ensure that the information they provide is available only to those individuals who need access to that information to complete the transaction or to resolve any questions that may arise. To enhance business partner confidence, it is important that the business partner be informed about the entity's system and information confidentiality policies, procedures, and practices. The entity needs to disclose its system and information confidentiality policies, procedures, and practices relating to the manner in which it provides for authorized access to its system and uses and shares information designated as confidential.

.29 Examples of the kinds of information that may be subject to confidentiality include

- transaction details,
- engineering drawings,
- business plans,
- banking information about businesses,
- intellectual property,
- inventory availability,
- bid or ask prices,
- price lists,
- legal documents,
- client and customer lists, and
- revenue by client and industry.

.30 What is considered to be confidential information can vary significantly from business to business and is determined by contractual arrangements or regulations. It is important to understand and agree upon what information is to be maintained in the system on a confidential basis and what, if any, rights of access will be provided.

.31 Confidential information that is provided to another party is susceptible to unauthorized access during transmission and while it is stored on the other party's computer systems. For example, an unauthorized party may intercept business partner profile information and transaction and settlement instructions while the information is being transmitted. Controls such as encryption can be used to protect the confidentiality of this information during its transmission. Firewalls and rigorous access controls can also be used to help protect the information while it is processed or stored on computer systems.

Confidentiality Principle and Criteria Table

.32 Information designated as confidential is protected by the system as committed or agreed.

<i>Criteria</i>	<i>Illustrative Controls</i>
1.0 Policies: The entity defines and documents its policies related to the system protecting confidential information, as committed or agreed.	
1.1 The entity's system confidentiality and related security policies are established	Written system confidentiality and security policies, addressing both IT and physical security, have been approved by the IT

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>and periodically reviewed and approved by a designated individual or group.</p>	<p>standards committee and are implemented throughout the company.</p> <p>As part of the periodic corporate risk assessment process, the security officer identifies changes to the IT risk assessment based on</p> <ul style="list-style-type: none"> • new applications and infrastructure changes, • significant changes to applications and infrastructure components, • new environmental based confidentiality and security risks, • changes to regulations and standards, and • changes to user requirements as identified in service level agreements and other documents. <p>The security officer then updates the confidentiality and security policies based on the IT risk assessment.</p> <p>Changes to the IT security policy are approved by the IT standards committee prior to implementation.</p> <p>User confidentiality requirements are documented in service-level agreements, nondisclosure agreements, or other documents.</p>
<p>1.2 The entity's policies related to the system's protection of confidential information and security include, but are not limited to, the following matters:</p> <ol style="list-style-type: none"> a. Identifying and documenting the confidentiality and related security requirements of authorized users b. Classifying data based on its criticality and sensitivity that is used to define protection requirements, access rights and access restrictions, and retention and destruction requirements c. Assessing risk on a periodic basis d. Preventing unauthorized access e. Adding new users, modifying the access levels 	<p><i>An example of an illustrative control for this criterion would be an entity's documented confidentiality policy and related security policy addressing the elements set out in criterion 1.2. Illustrative confidentiality policies and security policies have been omitted for brevity.</i></p>

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>of existing users, and removing users who no longer need access</p> <p><i>f.</i> Assigning responsibility and accountability for confidentiality and related security</p> <p><i>g.</i> Assigning responsibility and accountability for system changes and maintenance</p> <p><i>h.</i> Testing, evaluating, and authorizing system components before implementation</p> <p><i>i.</i> Addressing how complaints and requests relating to confidentiality and related security issues are resolved</p> <p><i>j.</i> Handling confidentiality and related security breaches and other incidents</p> <p><i>k.</i> Providing for training and other resources to support its system confidentiality and related security policies</p> <p><i>l.</i> Providing for the handling of exceptions and situations not specifically addressed in its system confidentiality and related security policies</p> <p><i>m.</i> Providing for the identification of and consistency with, applicable laws and regulations, defined commitments, service-level agreements, and other contractual requirements</p> <p><i>n.</i> Sharing information with third parties</p>	
<p>1.3 Responsibility and accountability for developing and maintaining the entity's system confidentiality and related security policies, and changes and updates to those policies, are assigned.</p>	<p>Management has assigned responsibilities for implementation of the entity's confidentiality policies to the human resources team. Responsibility for implementation of the entity's security policies has been assigned to the security officer under the direction of the CIO. The IT standards committee of the executive committee assists in the review, update, and approval of the policies as outlined in the executive committee handbook.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
2.0	Communications: The entity communicates its defined policies related to the system's protection of confidential information to responsible parties and authorized users.
2.1	<p>The entity has prepared an objective description of the system and its boundaries and communicated such description to authorized users.</p> <p>For its e-commerce system, the entity has posted a system description on its Web site. <i>(For an example of a system description for an e-commerce system, refer to appendix A [paragraph .45].)</i></p> <p>For its non-e-commerce system, the entity has provided a system description to authorized users. <i>(For an example of a system description for a non-e-commerce based system, refer to appendix B [paragraph .46].)</i></p>
2.2	<p>The system confidentiality and related security obligations of users and the entity's confidentiality and related security commitments to users are communicated to authorized users before the confidential information is provided. This communication includes, but is not limited to, the following matters:</p> <p><i>a.</i> How information is designated as confidential and ceases to be confidential. The handling, destruction, maintenance, storage, back-up, and distribution or transmission of confidential information.</p> <p><i>b.</i> How access to confidential information is authorized and how such authorization is rescinded.</p> <p><i>c.</i> How confidential information is used.</p> <p>The entity's confidentiality and related security commitments and required confidentiality and security obligations of its customers and other external users are posted on the entity's Web site. The entity's confidentiality policies and practices can also be outlined in its customer contracts, service-level agreements, vendor contract terms and conditions, and standard nondisclosure agreement.</p> <p>Signed nondisclosure agreements are required before sharing information designated as confidential with third parties. Customer contracts, service-level agreements, and vendor contracts are negotiated before performance or receipt of service. Changes to the standard confidentiality provisions in these contracts require the approval of executive management.</p> <p>For its internal users (employees and contractors), the entity's policies relating to confidentiality and security are reviewed with new employees and contractors as part of their orientation, and the key elements of the policies and their impact on the employee are discussed. New employees must sign a statement signifying that they have read, understand, and will follow these policies. Each year, as part of their performance review, employees must reconfirm their understanding of and compliance with the entity's security policies. Confidentiality and security obligations of contractors are detailed in their contract.</p> <p>A security awareness program has been implemented to communicate the entity's confidentiality and security policies to employees.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>d. How confidential information is shared.</p> <p>e. If information is provided to third parties, disclosures include any limitations on reliance on the third party's confidentiality practices and controls. Lack of such disclosure indicates that the entity is relying on the third party's confidentiality practices and controls that meet or exceed those of the entity.</p> <p>f. Practices to comply with applicable laws and regulations addressing confidentiality.</p>	<p>The entity publishes its confidentiality and related security policies on its corporate intranet.</p> <p>Signed nondisclosure agreements are required before sharing information designated as confidential with third parties.</p>
<p>2.3 Responsibility and accountability for the entity's system confidentiality and related security policies and changes and updates to those policies are communicated to entity personnel responsible for implementing them.</p>	<p>The security administration team has custody of and is responsible for the day-to-day maintenance of the entity's confidentiality and related security policies and recommends changes to the CIO and the IT steering committee.</p> <p>Confidentiality and related security commitments are reviewed with the customer account managers and legal department representatives as part of the annual IT planning process.</p> <p>Written job descriptions have been defined and are communicated to the responsible personnel.</p> <p>Written process and procedure manuals for defined confidentiality processes are provided to responsible personnel. The security officer updates the processes and procedures manuals based on changes to the confidentiality policy.</p>
<p>2.4 The process for informing the entity about breaches of confidentiality and system security and for submitting complaints is communicated to authorized users.</p>	<p>The process for customers and external users to inform the entity of possible confidentiality or security breaches and other incidents is posted on the entity's Web site, provided as part of the new user welcome kit, or both.</p> <p>The entity's security awareness program includes information concerning the identification of possible confidentiality and security breaches and the process for informing the security administration team.</p> <p>Documented procedures exist for the identification and escalation of possible</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
2.5 Changes that may affect confidentiality and system security are communicated to management and users who will be affected.	<p>confidentiality or security breaches and other incidents.</p> <p>Planned changes to system components and the scheduling of those changes are reviewed as part of monthly IT steering committee meetings.</p> <p>Changes to system components, including those that may affect system security, require the approval of the security administrator before implementation.</p> <p>Changes that may affect customers and users and their confidentiality and related security obligations or the entity's confidentiality and security commitments are highlighted on the entity's Web site.</p> <p>Changes that may affect confidentiality and system security are communicated in writing to affected customers for review and approval under the provisions of the standard services agreement before implementation of the proposed change.</p> <p>There is periodic communication of changes, including changes that may affect confidentiality and system security.</p> <p>Changes that affect confidentiality or system security are incorporated into the entity's ongoing security awareness program.</p>
3.0 Procedures: The entity placed in operation procedures to achieve its documented system confidentiality objectives in accordance with its defined policies.	
3.1 Procedures exist to (1) identify potential threats of disruptions to systems operations that would impair system confidentiality commitments and (2) assess the risks associated with the identified threats.	<p>A risk assessment is performed periodically. As part of this process, threats to confidentiality are identified, and the risk from these threats is formally assessed.</p> <p>Confidentiality processes and procedures are revised by the security officer based on the assessed threats.</p>
3.2 The system procedures related to confidentiality of inputs are consistent with the documented confidentiality policies.	<p>Confidentiality processes are established to help ensure that all inputs have been authorized, have been accepted for processing, and are accounted for. Any missing or unaccounted source documents or input files have been identified and investigated. These processes require that exceptions be resolved within a specified time period but before data processing occurs or is completed.</p> <p>Confidentiality processes are implemented to limit access to input routines and physical input media (blank and completed) to authorized individuals.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Confidentiality processes exist to restrict the capability to input information to only authorized individuals. This should include limitations based on specific operational or project roles and responsibilities.</p> <p>Error messages are revealed to authorized personnel. Error messages do not reveal potentially harmful information that could be used by others, and sensitive information (for example, e-mail content and financial data) is not listed in error logs or associated administrative messages.</p>
3.3 The system procedures related to confidentiality of data processing are consistent with the documented confidentiality policies.	<p>Confidentiality processes use transaction logs to reasonably ensure that all transactions are processed and to identify transactions that were not completely processed. Processes are in place to identify and review the incomplete execution of transactions, analyze them, and take appropriate action.</p> <p>Confidentiality processes exist to monitor, in a timely manner, unauthorized attempts to access data for any purposes, or for purposes beyond the authorization level of the person accessing the data, including inappropriate or unusual actions, overrides, or bypasses applied to data and transaction processing.</p>
3.4 The system procedures related to confidentiality of outputs are consistent with the documented confidentiality policies.	<p>Management has developed a reporting strategy that includes the sensitivity and confidentiality of data and appropriateness of user access to output data.</p> <p>Management has processes in place to monitor the replication or production of confidential output data used in reports or other communications within or outside the entity.</p> <p>User access to output data is appropriately aligned with the user's role and confidentiality of information.</p> <p>Access to reports is restricted to those users with a legitimate business need for the information.</p> <p>Users should have appropriate authorization for accessing reports containing confidential information.</p>
3.5 The system procedures provide that confidential information is disclosed to parties only in accordance with the entity's defined confidentiality and related security policies.	<p>Employees are required to sign a confidentiality agreement as a routine part of their employment. This agreement prohibits any disclosures of information and other data to which the employee has been granted access.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<p>Logical access controls are in place that limit access to confidential information based on job function and need. Requests for access privileges to confidential data require the approval of the data owner.</p> <p>Business partners are subject to nondisclosure agreements or other contractual confidentiality provisions.</p>
3.6 The entity has procedures to obtain assurance or representation that the confidentiality policies of third parties to whom information is transferred and upon which the entity relies are in conformity with the entity's defined system confidentiality and related security policies and that the third party is in compliance with its policies.	<p>The entity outsources technology support or service and transfers data to an outsource provider. The requirements of the service provider with respect to confidentiality of information provided by the entity are included in the service contract. Legal counsel reviews third-party service contracts to assess conformity of the service provider's confidentiality provisions with the entity's confidentiality policies.</p> <p>The entity obtains representations and assurances about the controls that are followed by the outsource provider and obtains a report on the effectiveness of such controls from the outsource provider's independent auditor.</p>
3.7 In the event that a disclosed confidentiality practice is discontinued or changed to be less restrictive, the entity has procedures to protect confidential information in accordance with the system confidentiality practices in place when such information was received, or obtains customer consent to follow the new confidentiality practice with respect to the customer's confidential information.	<p>Changes to confidentiality provisions in business partner contracts are renegotiated with the business partner.</p> <p>When changes resulting in less restrictive policy are made, the entity attempts to obtain the agreement of its customers to the new policy. Confidential information for those customers who do not agree to the new policy is either removed from the system and destroyed or isolated to receive continued protection under the old policy.</p>

System security-related criteria relevant to confidentiality

3.8 Procedures exist to restrict logical access to the system and the confidential information resources maintained in the system including, but not limited to, the following matters:	
<p>a. Logical access security measures to restrict access to information resources not deemed to be public</p>	<ul style="list-style-type: none"> • Logical access to nonpublic confidential information resources is protected through the use of native operating system security, native application and resource security, and add-on security software. • Resource specific or default access rules have been defined for all nonpublic resources.

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>b. Identification and authentication of all users.</p>	<ul style="list-style-type: none"> • Access to resources is granted to an authenticated user based on the user's identity. • Users must establish their identity to the entity's network and application systems when accessing nonpublic confidential information resources through the use of a valid user ID that is authenticated by an associated password. • Unique user IDs are assigned to individual users. • Use of group or shared IDs is permitted only after completion of an assessment of the risk of the shared ID and written approval of the manager of the requesting business unit. • Passwords are case sensitive and must contain at least 8 characters, one of which is nonalphanumeric. • Security configuration parameters force passwords to be changed every 90 days. • Login sessions are terminated after 3 unsuccessful login attempts.
<p>c. Registration and authorization of new users.</p>	<ul style="list-style-type: none"> • Customers can self-register on the entity's Web site, under a secure session in which they provide new user information and select appropriate user ID or user account and password. Privileges and authorizations associated with self-registered customer accounts provide access to specific limited system functionalities. • The ability to create or modify users and user access privileges (other than the limited functionality "customer accounts") is limited to the security administration team. • The line-of-business supervisor authorizes access privilege change requests for employees and contractors. Access to restricted resources is authorized by the resource owner. • Customer access privileges beyond the default privileges granted during self-registration are approved by the customer account manager. • Confidentiality and proper segregation of duties are considered in granting privileges.
<p>d. The process to make changes and updates to user profiles.</p>	<ul style="list-style-type: none"> • Changes and updates to self-registered customer accounts can be done by the individual user at any time on the entity's Web site after the user has successfully logged onto the system. Changes are reflected immediately.

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
	<ul style="list-style-type: none"> • Unused customer accounts (no activity for six months) are purged by the system. • Changes to other accounts and profiles are restricted to the security administration team and require the approval of the appropriate line-of-business supervisor or customer account manager • The human resource management system provides the human resources team with a list of newly terminated employees on a weekly basis. This listing is sent to the security administration team for deactivation.
e. Procedures to prevent customers, groups of individuals, or other entities from accessing confidential information other than their own.	<ul style="list-style-type: none"> • Corporate customers are assigned a unique company identifier that is required as part of the login process. Access software is used to restrict user access based on the company identifier used at login. • Individual customers have their access restricted to their own confidential information resources based on their unique user IDs.
f. Procedures to limit access to confidential information to only authorized employees based upon their assigned roles and responsibilities.	<ul style="list-style-type: none"> • Requests for privileges to access confidential customer information resources require the approval of the customer account manager. • Simulated customer data are used for system development and testing purposes. Confidential customer information is not used for this purpose.
g. Distribution of output containing confidential information restricted to authorized users.	<ul style="list-style-type: none"> • Access to computer processing output is provided to authorized individuals based on the classification of the information. • Processing outputs are stored in an area that reflects the classification of the information.
h. Restriction of access to offline storage, backup data, systems, and media.	<ul style="list-style-type: none"> • Access to offline storage, backup data, systems, and media is limited to computer operations staff through the use of physical and logical access controls.
i. Restriction of access to system configurations, superuser functionality, master passwords, powerful utilities, and security devices (for example, firewalls).	<ul style="list-style-type: none"> • Hardware and operating system configuration tables are restricted to appropriate personnel. • Application software configuration tables are restricted to authorized users and under the control of application change management software. • Utility programs that can read, add, change, or delete data or other programs are restricted to authorized technical services staff. Usage of such programs are logged and monitored by the manager of computer operations.

<i>Criteria</i>	<i>Illustrative Controls</i>
3.9 Procedures exist to restrict physical access to the defined system including, but not limited to, facilities, backup media, and other system components such as firewalls, routers, and servers.	<ul style="list-style-type: none"> • The information security team, under the direction of the CIO, maintains access controls over firewall and other logs, as well as access to any storage media. Such access is logged and reviewed in accordance with the entity's IT policies. • The listing of all master passwords is stored in an encrypted database, and an additional copy is maintained in a sealed envelope in the entity safe. <p>Physical access to the computer rooms, which house the entity's IT resources, servers, and related hardware such as firewalls and routers, is restricted to authorized individuals by card key systems and monitored by video surveillance. Physical access cards are managed by building security staff. Access card usage is logged. Logs are maintained and reviewed by building security staff.</p> <p>Requests for physical access privileges to the entity's computer facilities require the approval of the manager of computer operations.</p> <p>Documented procedures exist for the identification and escalation of potential physical security breaches.</p> <p>Offsite backup data and media are stored at service provider facilities. Access to offsite data and media requires the approval of the manager of computer operations.</p>
3.10 Procedures exist to protect against unauthorized access to system resources.	<p>Login sessions are terminated after three unsuccessful login attempts.</p> <p>Virtual private networking (VPN) software is used to permit remote access by authorized users. Users are authenticated by the VPN server through specific "client" software and user ID and passwords.</p> <p>Firewalls are used and configured to prevent unauthorized access. Firewall events are logged and reviewed daily by the security administrator.</p> <p>Unneeded network services (for example, telnet, ftp, and http) are deactivated on the entity's servers. A listing of the required and authorized services is maintained by the IT department. This list is reviewed by entity management on a routine basis for its appropriateness for the current operating conditions.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
3.11 Procedures exist to protect against infection by computer viruses, malicious code, and unauthorized software.	<p>Intrusion detection systems are used to provide continuous monitoring of the entity's network and the early identification of potential security breaches.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p> <p>In connection with other security monitoring, the security administration team participates in user groups and subscribes to services relating to computer viruses.</p> <p>Antivirus software is in place, including virus scans of incoming e-mail messages. Virus signatures are updated promptly.</p> <p>Any viruses discovered are reported to the security team, and an alert is created for all users notifying them of a potential virus threat.</p>
3.12 Encryption or other equivalent security techniques are used to protect transmissions of user authentication and other confidential information passed over the Internet or other public networks.	<p>The entity employs industry standard encryption technology, VPN software, or other secure communication systems (consistent with its periodic IT risk assessment) for the transmission of private or confidential information over public networks, including user IDs and passwords. Users are required to upgrade their browsers to the most current version tested and approved for use by the security administration team to avoid possible security problems.</p> <p>Account activities, subsequent to successful login, are encrypted through industry standard encryption technology, VPN software, or other secure communication systems (consistent with the entity's periodic IT risk assessment). Users are logged out on request (by selecting the "Sign-out" button on the Web site) or after 10 minutes of inactivity.</p> <p>Confidential information submitted to the entity over its trading partner extranet is encrypted.</p> <p>Transmission of confidential customer information to third-party service providers is done over leased lines.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
Criteria related to execution and incident management used to achieve the objectives	
3.13 Procedures exist to identify, report, and act upon system confidentiality and security breaches and other incidents.	<p>Users are provided instructions for communicating potential confidentiality and security breaches to the information security team. The information security team logs incidents reported through customer hotlines and e-mail.</p> <p>Intrusion detection and other tools are used to identify, log, and report potential security breaches and other incidents. The system notifies the security administration team, the network administrator, or both via e-mail and pager of potential incidents in progress.</p> <p>Incident logs are monitored and evaluated by the information security team daily.</p> <p>When an incident is detected or reported, a defined incident management process is initiated by authorized personnel. Corrective actions are implemented in accordance with defined policies and procedures.</p> <p>Procedures include a defined incident escalation process and notification mechanisms.</p> <p>All incidents are tracked by management until resolved.</p> <p>Closed incidents are reviewed by management for appropriate resolution.</p> <p>Resolution of incidents not related to security includes consideration of the impact of the incident and its resolution on security requirements.</p>
Criteria related to the system components used to achieve the objectives	
3.14 Procedures exist to provide that system data are classified in accordance with the defined confidentiality and related security policies.	<p>Data owners periodically review data access rules and request modifications based on defined security requirements and risk assessments.</p> <p>Whenever new data are captured or created, the data are classified based on security and confidentiality policies.</p> <p>Propriety of data classification is considered as part of change management process.</p>
3.15 Procedures exist to provide that issues of noncompliance with defined confidentiality and related security policies are	<p>All incidents are tracked by management until resolved.</p> <p>Closed incidents are reviewed by management for appropriate resolution.</p>

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
<p>promptly addressed and that corrective measures are taken on a timely basis.</p> <p>3.16 Design, acquisition, implementation, configuration, modification, and management of infrastructure and software are consistent with defined confidentiality and related security policies.</p>	<p>The internal audit process includes the development of management actions plans for findings and the tracking of action plans until closed.</p> <p>The entity has adopted a formal systems development life cycle (SDLC) methodology that governs the development, acquisition, implementation, and maintenance of computerized information systems and related technology.</p> <p>The SDLC methodology includes a framework for classifying data, including customer confidentiality requirements. Standard user profiles are established based on customer confidentiality requirements and an assessment of the business impact of the loss of security. Users are assigned standard profiles based on needs and functional responsibilities.</p> <p>Internal information is assigned to an owner based on its classification and use. Customer account managers are assigned as custodians of customer data. Owners of internal information and custodians of customer information and data classify its sensitivity and determine the protection mechanisms required to maintain an appropriate level of confidentiality and security.</p> <p>The security administration team reviews and approves the architecture and design specifications for new systems development or acquisition to help ensure consistency with the entity's confidentiality and related security policies.</p> <p>Changes to system components that may affect security or the confidentiality of information require the approval of the security administration team.</p> <p>The access control and operating system facilities have been installed, including the implementation of options and parameters, to restrict access in accordance with the entity's confidentiality and related security policies.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. Results and recommendations for improvement are reported to management.</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
3.17 Procedures exist to help ensure that personnel responsible for the design, development, implementation, and operation of systems affecting confidentiality and security have the qualifications and resources to fulfill their responsibilities.	<p>The entity has written job descriptions specifying the responsibilities and academic and professional requirements for key job positions.</p> <p>Hiring procedures include a comprehensive screening of candidates for key positions and consideration of whether the candidates' verified credentials are commensurate with the proposed position. New personnel are offered conditional employment subject to background checks and reference validation.</p> <p>Candidates, including internal transfers, are approved by the line-of-business manager before the employment position is offered.</p> <p>Periodic performance appraisals are performed by employee supervisors and include the assessment and review of professional development activities.</p> <p>Personnel receive training and development in system confidentiality and security concepts and issues.</p> <p>Procedures are in place to provide alternate personnel for key system confidentiality and security functions in case of absence or departure.</p>

Change management-related criteria relevant to confidentiality

3.18 Procedures exist to maintain system components, including configurations consistent with the defined system confidentiality and related security policies.	<p>Entity management receives a third-party opinion on the adequacy of security controls, and routinely evaluates the level of performance it receives (in accordance with its contractual service-level agreement) from the service provider that hosts the entity's systems and Web site.</p> <p>The IT department maintains an up-to-date listing of all software and the respective level, version, and patches that have been applied.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their outstanding and closed requests.</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

(continued)

<i>Criteria</i>	<i>Illustrative Controls</i>
3.19 Procedures exist to provide that only authorized, tested, and documented changes are made to the system.	<p>System configurations are tested annually and evaluated against the entity's security policies and current service-level agreements. An exception report is prepared, and remediation plans are developed and tracked.</p> <p>The responsibilities for authorizing, testing, developing, and implementing changes have been segregated. The entity's documented systems development methodology describes the change initiation, software development and maintenance, and approval processes, as well as the standards and controls that are embedded in the processes. These include programming, documentation, and testing standards.</p> <p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their outstanding and closed requests.</p> <p>Changes to system infrastructure and software are developed and tested in a separate development or test environment before implementation into production.</p> <p>As part of the change control policies and procedures, there is a "promotion" process (for example, from "test" to "staging" to "production"). Promotion to production requires the approval of the business owner who sponsored the change and the manager of computer operations.</p> <p>When changes are made to key systems components, there is a "backout" plan developed for use in the event of major interruption(s).</p>
3.20 Procedures exist to provide that emergency changes are documented and authorized (including after-the-fact approval).	<p>Requests for changes, system maintenance, and supplier maintenance are standardized and subject to documented change management procedures. Changes are categorized and ranked according to priority, and procedures are in place to handle urgent matters. Change requestors are kept informed about the status of their requests.</p> <p>Emergency changes that require deviations from standard procedures are logged and reviewed by IT management daily and reported to the affected line-of-business manager. Permanent corrective measures</p>

<i>Criteria</i>	<i>Illustrative Controls</i>
	follow the entity's change management process, including the requirements for obtaining line-of-business approvals.
3.21 Procedures exist to provide that confidential information is protected during the system development, testing, and change processes in accordance with defined system confidentiality and related security policies.	<p>Information designated as confidential is not stored, processed, or maintained in test or development systems and environments.</p> <p>Test or development systems and environments that must contain information designated as confidential use data encryption, masking, and sanitization techniques to protect the confidentiality of the information.</p>
4.0 Monitoring: The entity monitors the system and takes action to maintain compliance with its defined confidentiality policies.	
4.1 The entity's system confidentiality and security performance is periodically reviewed and compared with the defined system confidentiality and related security policies.	<p>The information security team monitors the system and assesses the systems vulnerabilities using proprietary and publicly available tools. Potential risks are evaluated and compared to service-level agreements and other obligations of the entity. Remediation plans are proposed, and implementations are monitored.</p> <p>The entity contracts with third parties to conduct periodic security reviews and vulnerability assessments. The internal audit function conducts system security reviews as part of its annual audit plan. Results and recommendations for improvement are reported to management.</p>
4.2 There is a process to identify and address potential impairments to the entity's ongoing ability to achieve its objectives in accordance with its system confidentiality and related security policies.	<p>Logs are analyzed, either manually or by automated tools, to identify trends that may have a potential impact on the entity's ability to achieve its system confidentiality and related security objectives.</p> <p>Monthly IT staff meetings are held to address system security concerns and trends; findings are discussed at quarterly management meetings.</p>
4.3 Environmental, regulatory, and technological changes are monitored, and their impact on system confidentiality and security is assessed on a timely basis. System confidentiality policies and procedures are updated for such changes as required.	<p>Trends and emerging technologies and their potential impact on customer confidentiality requirements are reviewed with corporate customers as part of the annual performance review meeting.</p> <p>Senior management, as part of its annual IT planning process, considers developments in technology and the impact of applicable laws or regulations on the entity's confidentiality and related security policies.</p> <p>The entity's customer service group monitors the impact of emerging technologies, customer requirements, and competitive activities.</p>

Privacy Principles and Criteria

.33 This section provides a brief overview of privacy concepts, objectives, and principles. The complete set of privacy principles is contained in generally accepted privacy principles (GAPP) found in appendix D (paragraph .48).

.34 The *privacy principles*, which are included in GAPP, focus on protecting the personal information an organization may collect about its customers, employees, and other individuals. GAPP have been developed from a business perspective, referencing significant domestic and international privacy regulations. GAPP operationalizes complex privacy requirements into a single privacy objective that is supported by 10 privacy principles.

Privacy Concepts

.35 *Privacy* is defined in GAPP as the rights and obligations of individuals and organizations with respect to the collection, use, retention, disclosure, and destruction of personal information.

.36 *Personal information* is information that is about or can be related to an identifiable individual. It includes any information that can be linked to an individual or used to directly or indirectly identify an individual. Most information collected by an organization about an individual is likely to be considered personal information if it can be attributed to an identified individual. Some examples of personal information are

- name,
- home or e-mail address,
- identification number (for example, a Social Security or Social Insurance Number),
- physical characteristics, and
- consumer purchase history.

.37 Some personal information is considered *sensitive*. Some laws and regulations define the following to be sensitive personal information:

- Information on medical or health conditions
- Financial information
- Racial or ethnic origin
- Political opinions
- Religious or philosophical beliefs
- Trade union membership
- Sexual preferences
- Information related to offenses or criminal convictions

.38 Sensitive personal information generally requires an extra level of protection and a higher duty of care. For example, the use of sensitive information may require explicit consent rather than implicit consent.

.39 Some information about or related to people cannot be associated with specific individuals. Such information is referred to as *nonpersonal information*. This includes statistical or summarized personal information for which the identity of the individual is unknown or linkage to the individual has been removed. In such cases, the individual's identity cannot be determined from the

information that remains because the information is “de-identified” or “anonymized.” Nonpersonal information ordinarily is not subject to privacy protection because it cannot be linked to an individual.

.40 *Privacy or Confidentiality?* As discussed in the confidentiality principle, personal information is different from confidential information. Unlike personally identifiable information, which is often defined by regulation in a number of countries worldwide, there is no single definition of confidential information that is widely recognized. In the course of communicating and transacting business, partners often exchange information or data that one or the other party requires be maintained on a “need to know” basis.

Generally Accepted Privacy Principles

.41 *Overall Privacy Objective.* GAPP are founded on the following privacy objective:

Personal information is collected, used, retained, disclosed, and destroyed in conformity with the commitments in the entity’s privacy notice and with criteria set forth in generally accepted privacy principles issued by the AICPA and CICA.

.42 *The Privacy Principles.* GAPP are essential to the proper protection and management of personal information. They are based on internationally known fair information practices included in many privacy laws and regulations of various jurisdictions around the world and recognized good privacy practices. The following are the 10 GAPP:

1. *Management.* The entity defines, documents, communicates, and assigns accountability for its privacy policies and procedures.
2. *Notice.* The entity provides notice about its privacy policies and procedures and identifies the purposes for which personal information is collected, used, retained, and disclosed.
3. *Choice and consent.* The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.
4. *Collection.* The entity collects personal information only for the purposes identified in the notice.
5. *Use and retention.* The entity limits the use of personal information to the purposes identified in the notice and for which the individual has provided implicit or explicit consent. The entity retains personal information for only as long as necessary to fulfill the stated purposes.
6. *Access.* The entity provides individuals with access to their personal information for review and update.
7. *Disclosure to third parties.* The entity discloses personal information to third parties only for the purposes identified in the notice and with the implicit or explicit consent of the individual.
8. *Security for privacy.* The entity protects personal information against unauthorized access (both physical and logical).
9. *Quality.* The entity maintains accurate, complete, and relevant personal information for the purposes identified in the notice.
10. *Monitoring and enforcement.* The entity monitors compliance with its privacy policies and procedures and has procedures to address privacy-related complaints and disputes.

For each of the 10 privacy principles, relevant, objective, complete, and measurable criteria have been developed for evaluating an entity's privacy policies, communications, procedures, and controls.

.43 These criteria are set forth in the separate publication *Generally Accepted Privacy Principles*.

Online Privacy Engagements

.44 When the privacy engagement relates to an online segment, an entity may choose to display a privacy seal. For these engagements, the scope needs to include, as a minimum, an online business segment of the entity. For additional considerations, see appendix C of *Generally Accepted Privacy Principles*.

Appendix A

Illustrative Disclosures for E-Commerce Systems

This appendix sets out illustrative disclosures for e-commerce systems that are required to meet the trust services principles and criteria. The required disclosures are identified separately in the trust services principles (security, availability, processing integrity, and confidentiality). The following disclosures are illustrative only and should be tailored to the particular organization's system.

System Description

Rather than addressing the components of a system (used for describing non-e-commerce systems), an organization may describe the functionality of the system as follows:

Illustrative System Description

Our site (abc-xyz.org) enables entrepreneurs and small business owners to create and manage their own online store (myABC-xyz.org) using the abc-xyz.org suite of business services. It also covers the fulfillment and settlement systems that integrate with abc-xyz.org to facilitate ordering from these online stores and the use of third-party service providers with which we have contracted to provide various services related to our site.

The description covers the functionality in our abc-xyz.org site that allows users to create and manage their own online store. It also covers the fulfillment and settlement systems that integrate with abc-xyz.org to facilitate ordering from customer sites created on abc-xyz.org.

Disclosures Related to Specific Principles and Criteria

The following tables set out illustrative disclosures for e-commerce systems.

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
Security	
2.2 The security obligations of users and the entity's security commitments to users are communicated to authorized users.	<p>Even though we strive to protect the information you provide through ABC.com, no data transmission over the Internet can be guaranteed to be 100 percent secure. As a result, even though we strive to protect your information, we cannot guarantee or warrant the security of any information you transmit to or receive from us through our Web site and online services.</p> <p>We review our security policies on a regular basis, and changes are made as necessary. They undergo an intense review on an annual basis by the IT department. These defined security policies detail access privileges, information collection needs, accountability, and other such matters. Documented system security objectives, policies, and standards are consistent with</p>

(continued)

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
	<p>system security requirements defined in contractual, legal, and other service-level agreements. For example, only a select group of authorized individuals within ABC has access to user information. A complete policy with details regarding access, scripting, updates, and remote access is available for review by qualified personnel within the organization. This document is not available to the general public for study.</p> <p>ABC.com operates secure data networks that are password-protected and are not available to the public. When transmitting information between you and ABC.com, data security is handled through a security protocol called secured sockets layer (SSL). SSL is an Internet security standard using data encryption and Web server authentication.</p> <p>Encryption strength is measured by the length of the key used to encrypt the data; that is, the longer the key, the more effective the encryption. Using the SSL protocol, data transmission between you and the ABC.com server is performed at industry standard encryption strength.</p>
2.4	<p>The process for informing the entity about breaches of the system security and for submitting complaints is communicated to authorized users.</p> <p>If you feel that there has been a breach to the security of this site, please contact us <i>immediately</i> at (800) XXX-XXXX.</p>
2.5	<p>Changes that may affect system security are communicated to management and users who will be affected.</p> <p>Any changes that affect the security of our Web site as it affects you as a site user will be communicated to you by posting the highlight of the change to the Web page that summarizes our security policies and significant controls.</p>

Availability

2.2	<p>The availability and related security obligations of users and the entity's availability and related security commitments to users are communicated to authorized users.</p> <p>To allow sufficient time for file maintenance and backup, the maximum number of hours per day that our network will be made available is 22 hours per day, 7 days a week. In the event of a disaster or other prolonged service interruption, the entity has arranged for the use of alternative service sites to allow for full business resumption within 24 hours.</p> <p>Our company's defined security policies detail access privileges, information collection needs, accountability, and other such matters. They are reviewed and updated at quarterly management meetings and undergo an intense review on an annual basis by the IT department.</p>
-----	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
	Documented system security objectives, policies, and standards are consistent with system security requirements defined in contractual, legal, and other service-level agreements. For example, current policy prohibits shared IDs; each support person has his or her own unique ID to log on and maintain network equipment. A complete policy with details regarding access, scripting, updates, and remote access is available for review by qualified personnel. This document will not be released to the general public for study.
2.4 The process for informing the entity about system availability issues and breaches of system security and for submitting complaints is communicated to authorized users.	Management has in place a consumer hotline to allow customers to telephone in any comments, complaints, or concerns regarding the security of the site and availability of the system. If you are unable to obtain access to this site, please contact our customer support personnel at (800) XXX-XXXX. If you believe that there has been a breach to the security of this site, please contact us <i>immediately</i> at (800) XXX-XXXX.
2.5 Changes that may affect system availability and system security are communicated to management and users who will be affected.	Highlights of any changes that affect the security of our Web site and availability of the system as it affects you as a site user will be communicated to you by e-mail seven days in advance of the anticipated change. The highlights of the change will be posted to the Web page that summarizes our availability and security policies.

Processing Integrity

2.1 The entity has prepared an objective description of the system and its boundaries and communicated such description to authorized users. If the system is an e-commerce system, additional information provided on its Web site includes, but may not be limited to, the following matters:	You can purchase new and used books on our site; used books are clearly labeled as such. The mortgage rate information we obtain for your brokerage transaction is gathered from 12 different lending institutions on a daily basis. A complete listing of these lending institutions can be obtained by clicking here [<i>insert hot link/URL</i>]. ABC's Online RFQ Brokerage is the online clearing house for requests for quotes (RFQ) on custom-made parts. Through our unique service, Original Equipment Manufacturers (OEM) looking for parts will be connected to contract manufacturers looking for work.
a. Descriptive information about the nature of the goods or services that will be provided, including, where appropriate	RFQs published on our online brokerage undergo an intensive review process to ensure that contract manufacturers get all the information needed to compose a quote. ABC's trained personnel will work closely with OEM manufacturers new to the outsourcing market to ease their fears.

(continued)

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
<ul style="list-style-type: none"> condition of goods (whether they are new, used, or reconditioned). 	Contract manufacturers participating in the RFQ bidding process are members of ABC's BizTrust program. New members are subjected to an assortment of checks such as credit checks and reference checks to ensure that they are qualified to bid on RFQs. The results from these checks are organized into an easy-to-read BizTrust Report accessible by all members of ABC.
<ul style="list-style-type: none"> description of services (or service contract). 	The nationwide survey, conducted by the compensation-research firm of Dowden & Co., presents data on 20X2 compensation that was gathered from among more than 900 employers of information systems professionals, including corporations of all sizes, in every industry group, and from every U.S. region. The survey was completed July 20X1.
<ul style="list-style-type: none"> sources of information (where it was obtained and how it was compiled). 	Our policy is to ship orders within 1 week of receipt of a customer-approved order. Our experience is that over 90 percent of our orders are shipped within 48 hours; the remainder is shipped within 1 week.
<p>b. The terms and conditions by which it conducts its e-commerce transactions including, but not limited to, the following matters:</p>	We will notify you by e-mail within 24 hours if we cannot fulfill your order as specified at the time you placed it and will provide you the option of canceling the order without further obligation. You will not be billed until the order is shipped.
<ul style="list-style-type: none"> Time frame for completion of transactions (<i>transaction</i> means fulfillment of orders where goods are being sold and delivery of service where a service is being provided) 	You have the option of downloading the requested information now, or we will send it to you on CD-ROM by UPS 2-day or Federal Express overnight delivery. Credit approval is required before shipment. All goods will be invoiced on shipment according to either our normal terms of settlement (net 30 days), or where alternative contractual arrangements are in place, those arrangements shall prevail.
<ul style="list-style-type: none"> Time frame and process for informing customers of exceptions to normal processing of orders or service requests 	We require an electronic funds transfer of fees and costs at the end of the transaction. For new customers, a deposit may be required. To cancel your monthly service fee, send us an e-mail at Subscriber@ABC.com or call us at (800) XXX-XXXX. Be sure to include your account number or have it ready when you call.
<ul style="list-style-type: none"> Normal method of delivery of goods or services, including customer options, where applicable 	Purchases can be returned for a full refund within 30 days of receipt of shipment. Call our toll-free number or e-mail us for a return authorization number, which should be written clearly on the outside of the return package.

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
<ul style="list-style-type: none"> • Payment terms, including customer options, if any • Electronic settlement practices and related charges to customers • How customers may cancel recurring charges, if any • Product return policies and limited liability, where applicable 	<p>Warranty and other service can be obtained at any one of our 249 locations worldwide that are listed on this Web site. A list of these locations is also provided with delivery of all of our products.</p> <p>Transactions at this site are covered by binding arbitration conducted through our designated arbitrator [<i>name of arbitrator</i>]. They can be reached at www.name.org or by calling toll-free (800) XXX-XXXX. For the details of the terms and conditions of arbitration, click here [<i>insert hot link/URL</i>].</p> <p>Our process for consumer dispute resolution requires that you contact our customer toll-free hotline at (800) XXX-XXXX or contact us via e-mail at custhelp@ourcompany.com.</p> <p>If your problem has not been resolved to your satisfaction, you may contact the Cyber Complaint Dispute Resolution Association, which can be reached at (877) XXX-XXXX during normal business hours (8:00 a.m. to 5:00 p.m. central time) or via their Web site at www.ccomplaint.com.</p>
c. Where customers can obtain warranty, repair service, and support related to the goods and services purchased on its Web site.	For the details of the terms and conditions of arbitration, click here [<i>insert hot link/URL</i>].
d. Procedures for resolution of issues regarding processing integrity. These may relate to any part of a customer's e-commerce transaction, including complaints related to the quality of services and products, accuracy, completeness, and the consequences for failure to resolve such complaints.	If you, our customer, require follow-up or response to your questions or complaints regarding transactions at this site, you may contact us at www.xxxquestions.org . If your follow-up or your complaint is not handled to your satisfaction, you should contact the e-commerce ombudsman who handles consumer complaints for e-commerce in this country. He or she can be reached at www.ecommercombud.org or by calling toll-free at (800) XXX-XXXX.
2.2 The processing integrity and related security obligations of users and the entity's processing integrity and related security commitments to users are communicated to authorized users.	Our company's defined processing integrity policies and related security policies are communicated to all authorized users of the company. The security policies detail access privileges, information collection needs, accountability, and other such matters. They are reviewed and updated at quarterly management meetings and undergo an intense review on an annual basis by the IT department. Documented system security objectives, policies, and standards are consistent with system security requirements defined in contractual, legal, and other service-level agreements. For example, current policy prohibits shared IDs; each support person has his or her own

A complete policy with details regarding access, scripting, updates, and remote access is available for review by qualified personnel. This document will not be released to the general public for study.</p> <p>For service and other information, contact one of our customer service representatives at (800) XXX-XXXX between 7:00 a.m. and 8:00 p.m. (central standard time), or you can write to us at CustServ@ABC.com or at the following address:</p> <p style="padding-left: 40px;">Customer Service Department ABC Company 1234 Anystreet Anytown, Illinois 60000</p>
2.5	<p>Changes that may affect system processing integrity and system security are communicated to management and users who will be affected.</p>	<p>If you believe that there has been a breach to the integrity or security of this site, please contact us <i>immediately</i> at (800) 123-1234.</p> <p>Highlights of any changes that affect the security of our Web site and processing integrity of the system as it affects you as a site user will be communicated to you by e-mail seven days in advance of the anticipated change. The highlights of the change will be posted to the Web page that summarizes our processing integrity and security policies.</p>

Confidentiality

2.2	<p>The confidentiality and related security obligations of users and the entity's confidentiality and related security commitments to users are communicated to authorized users before the confidential information is provided. This communication includes, but is not limited to, the following matters:</p> <p>a. How information is designated as confidential and ceases to be confidential; the handling, destruction, back-up, and distribution or transmission of confidential information.</p> <p>b. How access to confidential information is authorized</p>	<p>XYZ manufacturing.com is a high quality custom manufacturer of electronic components. Customers and potential customers can submit engineering drawings, specifications, and requests for manufacturing price quotes through our Web site or e-mail.</p> <p>Access to your information is limited to our employees and any third-party subcontractors we may elect to use in preparing our quote. We will not use any information you provide for any purpose other than a price quote and subsequent manufacturing and order fulfillment on your behalf. However, access may need to be provided in response to subpoenas, court orders, legal process, or other needs to comply with applicable laws and regulations.</p> <p>Using our encryption software, you may designate information as confidential by</p>
-----	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
and how such authorization is rescinded.	checking the “Confidential Treatment” box. This software can be downloaded from our site and will accept information in most formats. Such information will automatically be encrypted using our public key before transmission over the Internet. You may transmit such information to us through our Web site or by e-mail.
c. How confidential information is used.	Access to information designated as confidential will be restricted only to our employees with a need to know. We will not provide such information to third parties without your prior permission.
d. How confidential information is shared.	When we provide information to third parties, we do not provide your company name. However, we make no representation regarding third-party confidential treatment of such information.
e. If information is provided to third parties, disclosures include any limitations on reliance on the third party’s confidentiality practices and controls. Lack of such disclosure indicates that the entity is relying on the third party’s confidentiality practices and controls that meet or exceed those of the entity.	Our confidentiality protection is for a period of two years, after which any confidential information will be returned to you, upon request, or destroyed.
f. Practices to comply with applicable laws and regulations addressing confidentiality.	If you are not a customer at the time of submitting such information, you will be provided with an account number and password. You may use this account number and password to access the information you have submitted in addition to any related price quote information provided by us. You may also set up an additional 10 sub-accounts and passwords so others in your organization can also access this information. Our services and the protection of confidential information are subject to third-party dispute resolution. This process is described under “Arbitration Process” elsewhere on our Web site.
2.4 The process for informing the entity about breaches of confidentiality and system security and for submitting complaints is communicated to authorized users.	If you have any questions about our organization or our policies on confidentiality as stated at this site, please contact CustServ@XYZ-manufacturing.com. If you feel that there has been a breach to the security of this site, please contact us immediately at (800) XXX-XXXX.

(continued)

	<i>Criteria Reference</i>	<i>Illustrative Disclosures</i>
2.5	Changes that may affect confidentiality and system security are communicated to management and users who will be affected.	Effective January 200X, we eliminated our “secret” category of information. Information submitted under the secret category will continue to be protected in accordance with our commitments at that time.
<hr/> <i>Privacy</i> <hr/>		
See generally accepted privacy principles in appendix D (paragraph .48) for related criteria.		

Appendix B

Illustrative System Description of a Non-E-Commerce System

The purpose of a system description is to delineate the boundaries of the system covered by management's assertion or the subject matter of the practitioner's report (in this example, a pension processing service). The system description should be an integrated part of the entity's communication of policies related to the specific principles subject to the practitioner's attestation. In all cases, the system description should accompany the practitioner's report.

Background

XYZ Co. Pension Services (XPS), based in New York, New York, with offices across North America, manages and operates the Pension Administration System (PAS) on behalf of pension plan sponsors who are XPS's customers. The plan members are the employees of XPS's customers who are enrolled in the pension plan. XPS uses PAS for recordkeeping of pension-related activities.

Infrastructure

PAS uses a three-tier architecture, including proprietary client software, application servers, and database servers.

Various peripheral devices, such as tape cartridge silos, disk drives, and laser and impact printers, are also used.

Software

The PAS application was developed by programming staff in XYZ Co.'s Information Technology Department (XITD) Systems Development and Application Support area. PAS enables the processing of contributions to members' pension plans and withdrawals at retirement, based on plan rules. PAS generates all the required reports for members, plan sponsors, and tax authorities. PAS also provides a facility to record investments and related transactions (purchases, sales, dividends, interest, and other miscellaneous transactions). Batch processing of transactions is performed nightly.

PAS provides a facility for online data input and report requests. In addition, PAS accepts input from plan sponsors in the form of digital or magnetic media or files transmitted via the telecommunications infrastructure.

People

XPS has a staff of approximately 200 employees organized in the following functional areas:

- Pension administration includes a team of specialists that set up pension rules, maintain master files, process contributions to PAS, report to plan sponsors and members, and assist with inquiries from plan members.
- Financial operations is responsible for processing withdrawals, depositing contributions, and investment accounting.
- Trust accounting is responsible for bank reconciliation.

- Investment services is responsible for processing purchases of stocks, bonds, certificates of deposits, and other financial instruments.

XITD has a staff of approximately 50 employees who are dedicated to PAS and its related infrastructure and are organized in the following functional areas:

- The help desk provides technical assistance to users of PAS and other infrastructure as well as plan sponsors.
- Systems development and application support provides application software development and testing for enhancements and modifications to PAS.
- Product support specialists prepare documentation manuals and training material.
- Quality assurance monitors compliance with standards and manages and controls the change migration process.
- Information security and risk is responsible for security administration, intrusion detection, security monitoring, and business-recovery planning.
- Operational services performs day-to-day operation of servers and related peripherals.
- System software services installs and tests system software releases, monitors daily system performance, and resolves system software problems.
- Technical delivery services maintains job scheduling and report distribution software, manages security administration, and maintains policies and procedures manuals for the PAS processing environment.
- Voice and data communications maintains the communication environment, monitors the network, and provides assistance to users and plan sponsors in resolving communication problems and network planning.

Procedures

The pension administration services covered by this system description include

- pension master file maintenance,
- contributions,
- withdrawals,
- investment accounting, and
- reporting to members.

These services are supported by XITD, which supports PAS 24 hours a day, 7 days a week. The key support services provided by XITD include

- systems development and maintenance,
- security administration and auditing,
- intrusion detection and incident response,

- data center operations and performance monitoring,
- change controls, and
- business recovery planning.

Data

PAS data consist of the following:

- Master file data
- Transaction data
- Error and suspense logs
- Output reports
- Transmission records
- System and security files

Transaction processing is initiated by the receipt of paper documents, electronic media, or calls to XYZ Co.'s call center. Transaction data are processed by PAS in either online or batch modes of processing and are used to update master files. Output reports are available either in hard copy or through a report-viewing facility to authorized users based on their job functions. Pension statement and transaction notices are mailed to plan sponsors and members.

Appendix C

Practitioner Guidance on Scoping and Reporting Issues

This appendix deals with issues related to engagement planning, performance, and reporting using the trust services principles and criteria. This section deals with

- engagement components,
- the practitioner's report,
- review engagements,
- agreed-upon procedures engagements, and
- other matters.

Trust services engagements are attest engagements performed under the AICPA Statements of Standards for Attestation Engagements.

Engagement Components

Trust Services Principles

Trust services provides for a modular approach using five different principles—security, availability, processing integrity, confidentiality, and privacy. A practitioner may perform a trust services examination that covers only one or any combination of the principles. Each principle describes an attribute of a system (for example, availability) and is followed by criteria for evaluating the system with respect to that attribute.

Trust Services Criteria

Criteria are the benchmarks used to measure and present the subject matter. The practitioner evaluates the subject matter against these criteria.

AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), of the attestation standards,¹ states that suitable criteria must have each of the following attributes:

- *Objectivity.* Criteria should be free from bias.
- *Measurability.* Criteria should permit reasonably consistent measurements, qualitative or quantitative, of subject matter.
- *Completeness.* Criteria should be sufficiently complete so that those relevant factors that would alter a conclusion about subject matter are not omitted.
- *Relevance.* Criteria should be relevant to the subject matter.

The trust services criteria meet the requirement for being suitable criteria and are the result of a public exposure and comment process.

Management's Assertion

AT section 101 states that the practitioner should ordinarily obtain a written assertion² from management, or the practitioner will be required to modify his

¹ See AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), paragraph .24.

² See AT section 101 paragraph .09.

or her report.³ Specifically, management asserts that, during the period covered by the report and based on the AICPA and CICA trust services criteria, it maintained effective controls over the system under examination to satisfy the stated trust services principle(s) and criteria. For engagements covering only certain principles, management's assertion should only address the principles covered by the engagement. In addition, for engagements covering an entity's compliance with its commitments, those commitments covered by the report should be indentified in management's assertion.

Under AT section 101, the practitioner may report on either management's assertion or on the subject matter of the engagement. When the practitioner reports on the assertion, the assertion should accompany the practitioner's report or be included in the first paragraph of the practitioner's report.⁴ When the practitioner reports on the subject matter, the practitioner may want to request that management make its assertion available to the users of the practitioner's report. If one or more deviations from the criteria exist, the practitioner should modify the report. When issuing a modified report, the practitioner should report directly on the subject matter rather than on the assertion.⁵

Period of Coverage

AT section 101 provides that the practitioner's report and management's assertion should specify the time period covered by the report and the assertion, respectively. A practitioner may issue a report for a period of time or at a point in time. The determination of an appropriate period should be at the discretion of the practitioner and the entity.

The committee has identified the following factors that the practitioner may want to consider in establishing the reporting period:

- The anticipated users of the report and their needs
- The need for contiguous coverage between reports
- The degree and frequency of change in each of the system components
- The cyclical nature of processing within the system
- Historical information about the system

The Practitioner's Report

The committee has identified the following items that the practitioner may want to consider when reporting on trust services principles and criteria.

Reporting on Multiple Principles

In most cases, a practitioner will be asked to report on one or more trust services principles and related criteria, rather than on the entire set of five principles. In the introductory paragraph of the report, the practitioner should identify the principles included in the scope of the examination.

Individual or Combined Report

When engaged to perform a trust services examination for multiple principles, the practitioner can, depending on the needs of the client, issue either a combined report or individual reports for each of the principles. For the purpose

³ See AT section 101 paragraph .58 for a description of a practitioner's options if a written assertion is not obtained.

⁴ See AT section 101 paragraph .64.

⁵ See AT section 101 paragraph .66.

of this discussion, it is assumed that the practitioner has been asked to report on three principles and related criteria: security, privacy, and confidentiality.

The first issue is to decide whether this represents (1) one engagement to examine three principles or (2) three engagements to examine one principle each. This decision can affect, among other matters, the engagement letter, the content and number of representation letters, and whether one report or multiple reports will be issued. In either case, the practitioner's report(s) should clearly communicate the scope and nature of the engagement(s).

Failure to Meet Criteria

If one or more relevant criteria have not been met, the practitioner cannot issue an unqualified report. Under AT section 101, when issuing a modified report, the practitioner should report directly on the subject matter rather than on the assertion.⁶

Different Examination Periods

There may be situations in which the entity requests that more than one principle be examined, but due to various reasons, the principles will have different reporting periods (for example, differences in the length of the reporting period or the date that the various reporting periods begin). Ideally, it would be more efficient for the practitioner to have such periods coincide. When different reporting periods exist, the practitioner may consider whether to issue separate or combined reports. Separate reports covering the separate principles are less complex to prepare than a combined report. If a combined report is issued, the different reporting periods would need to be detailed in the introductory and opinion paragraphs of the report to ensure that the different examination periods are highlighted.

Use of Third-Party Service Providers

The practitioner may encounter situations in which the entity under examination uses a third-party service provider to accomplish some of the trust services criteria. The AICPA and CICA *Effects of a Third-Party Service Provider in a WebTrust or Similar Engagement* provides applicable guidance for these situations and is available for download at www.webtrust.org.

Responsibility for Communicating Departures From the Criteria Related to Other Principles

During a trust services examination, information about departures from the criteria, such as noncompliance or control deficiencies related to principles and criteria that are not within the scope of the engagement may come to the practitioner's attention. For example, while engaged only to report on controls related to the security principle, a practitioner may become aware that the entity is not complying with its privacy policy as stated on its Web site (for example, it is disclosing personal information to selected third parties). Although the practitioner is not responsible for detecting information about departures from the criteria that are outside the scope of his or her examination, the practitioner may want to evaluate whether such information that comes to his or her attention is significant (that is, whether the effects of such departures could materially mislead users of the system).

If the practitioner determines that the effects of such departures are significant, the committee believes that the practitioner should communicate in writing to management. Management should be asked either to correct the

⁶ See AT section 101 paragraph .66.

control deficiency or noncompliance (in this case, cease providing the information to third parties) or to properly disclose their actual practices publicly so that users are aware of actual policies (in this case, the privacy statement would be amended to reflect the fact that they do provide information to third parties).

If the practitioner concludes that omission of this information would be significant and if management is unwilling to either correct the departure or disclose the information, the practitioner may consider withdrawing from the engagement.

Subsequent Events

Events or transactions sometimes occur subsequent to the point in time or period of time covered by the practitioner's report but prior to the date of the practitioner's report that have a material effect on the subject matter or assertion and therefore require adjustment or disclosure in the presentation of the subject matter or assertion. These occurrences are referred to as subsequent events. In performing an attest engagement, a practitioner should consider information about subsequent events that comes to his or her attention. Two types of subsequent events require consideration by the practitioner.

The first type consists of events that provide additional information with respect to conditions that existed at the point in time or during the period of time covered by the practitioner's report. This information should be used by the practitioner in considering whether the subject matter or assertion is presented in conformity with the criteria and may affect the presentation of the subject matter, the assertion, or the practitioner's report.

The second type consists of those events that provide information with respect to conditions that arose subsequent to the point in time or period of time covered by the practitioner's report that are of such a nature and significance that their disclosure is necessary to keep the subject matter from being misleading. This type of information will not normally affect the practitioner's report if the information is appropriately disclosed.

Although the practitioner has no responsibility to detect subsequent events, the practitioner should inquire of the responsible party (and his or her client if the client is not the responsible party) as to whether they are aware of any subsequent events, through the date of the practitioner's report, that would have a material effect on the subject matter or assertion.⁷ The representation letter ordinarily would include a representation concerning subsequent events.

The practitioner has no responsibility to keep informed of events subsequent to the date of his or her report; however, the practitioner may later become aware of conditions that existed at that date that might have affected the practitioner's report had he or she been aware of them. In such circumstances, the practitioner may wish to consider the guidance in AU-C section 560, *Subsequent Events and Subsequently Discovered Facts* (AICPA, *Professional Standards*).⁸ [Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Review Engagements

A review engagement performed in accordance with Statements on Standards for Attestation Engagements is a type of attestation engagement in which the practitioner reports on whether any information came to his or her attention

⁷ Certain attestation standards include requirements regarding the practitioner's consideration of subsequent events, for example, AT section 501 paragraphs .73-.76 and AT section 601 paragraphs .50-.52.

⁸ See AT section 101 paragraphs .95-.99.

on the basis of the work performed that indicates that the subject matter is not based on (or in conformity with) the criteria, or the assertion is not presented (or fairly stated) in all material respects based on the criteria. Such review engagements generally are limited to inquiry and analytical review procedures. Accordingly, the committee has determined that review engagements should not be performed when reporting on controls over a system in accordance with trust services principles and criteria.

Agreed-Upon Procedures Engagements

A client may request that a practitioner perform an agreed-upon procedures engagement related to the trust services principles and criteria. In such an engagement, the practitioner performs specified procedures agreed to by the specified parties,⁹ and reports his or her findings. Because the needs of the parties may vary widely, the nature, timing, and extent of the agreed-upon procedures may vary as well; consequently, the specified parties assume responsibility for the sufficiency of the procedures since they best understand their own needs. In an agreed-upon procedures engagement, the practitioner does not perform an examination of an assertion or subject matter or express an opinion about the assertion or subject matter. The practitioner's report on agreed-upon procedures is a presentation of procedures and findings.¹⁰ The use of an agreed-upon procedures report is restricted to the specified parties who agreed upon the procedures.

Illustrative Reports

The following are illustrative reports for trust services examination engagements. Illustrations 1, 2, and 3 are examples of reports in which the practitioner is reporting on management's assertion. Illustrations 4 and 5 are examples of reports in which the practitioner is reporting directly on the subject matter. The first paragraph of the practitioner's report will indicate whether the practitioner is reporting on management's assertion or directly on the subject matter.

The trust services principles and criteria for *system reliability* include availability, security, and processing integrity. There is also a fourth principle and set of criteria related to confidentiality that a practitioner may report on.

The trust services principles and criteria related to availability, processing integrity and confidentiality include criteria that refer to commitments the entity has made to customers. For those principles and criteria, the client may request that the practitioner (1) report on controls over commitments (in which case the report will make no special reference to commitments) or (2) report on controls over commitments *and* on whether the entity has complied with those commitments (in which case the report will make reference to the commitments, as shown in illustration 3).

A client may include a list of its controls over the system related to the principles and criteria being reported on. An illustrative report for that option is shown in illustration 5.

These reports are for illustrative purposes and should be modified in accordance with the applicable professional standards as the specific engagement facts and circumstances warrant.

⁹ The specified users and the practitioner agree upon the procedures to be performed by the practitioner.

¹⁰ See AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*), for guidance on agreed-upon procedures engagements.

Illustration 1—Trust Services Report on Management’s Assertion about the Effectiveness of Controls Related to Four Principles (Availability, Security, Process Integrity, and Confidentiality) (Period-of-Time Report)

Independent Practitioner’s Trust Services Report

To the management of ABC Company, Inc.:

We have examined management’s assertion that during the period [month, day, and year] through [month, day, and year], ABC Company, Inc. (ABC Company) maintained effective controls over the _____ [type or name of system] system based on the AICPA and CICA trust services availability, security, processing integrity, and confidentiality criteria to provide reasonable assurance that

- the system was available for operation and use, as committed or agreed;
- the system was protected against unauthorized access (both physical and logical);
- the system processing was complete, accurate, timely, and authorized; and
- information designated as confidential was protected by the system as committed or agreed

based on the AICPA and CICA trust services security, availability, processing integrity, and confidentiality criteria.

ABC Company’s management is responsible for this assertion. Our responsibility is to express an opinion based on our examination. Management’s description of the aspects of the _____ [type or name of system] system covered by its assertion is attached. We did not examine this description, and accordingly, we do not express an opinion on it.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of ABC Company’s relevant controls over the availability, security, processing integrity, and confidentiality of the _____ [type or name of system] system; (2) testing and evaluating the operating effectiveness of the controls; and (3) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria may be affected. For example, controls may not prevent or detect and correct error or fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, management’s assertion referred to above is fairly stated, in all material respects, based on the AICPA and CICA trust services security, availability, processing integrity, and confidentiality criteria.

Illustration 2—Trust Services Report on Management’s Assertion about the Effectiveness of Controls over System Reliability (Availability, Security, and Processing Integrity (Period-of-Time Report))

Independent Practitioner’s Trust Services Report on System Reliability

To the management of ABC Company, Inc.:

We have examined the assertion made by management of ABC Company, Inc. (ABC Company) about its controls over the reliability of the _____ [type or name of system] system during the period [month, day, year] through [month, day, year] based on the AICPA and CICA trust services availability, security, and processing integrity criteria for systems reliability. A reliable system is one that is capable of operating without material error, fault, or failure during a specified period in a specified environment. Management’s assertion is included in the accompanying document titled “ABC Company’s Assertion Regarding the Effectiveness of Its Controls Over the _____ [type or name of system] System” and states that:

During the period [month, day, year] through [month, day, year], ABC Company maintained effective controls over the availability, security and processing integrity of the _____ [type or name of system] system to provide reasonable assurance that

- the system was available for operation and use, as committed or agreed;
- the system was protected against unauthorized access (both physical and logical); and
- the system processing was complete, accurate, timely, and authorized

based on the AICPA and CICA trust services availability, security, and processing integrity criteria for systems reliability.

The attached system description of ABC Company’s _____ [type or name of system] system identifies the aspects of the _____ [type or name of system] system covered by the assertion.

ABC Company’s management is responsible for this assertion. Our responsibility is to express an opinion based on our examination. Management’s description of the aspects of the _____ [type or name of system] system covered by its assertion is attached. We did not examine this description, and accordingly, we do not express an opinion on it.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of ABC Company’s relevant controls over the availability, security, and processing integrity of the _____ [type or name of system] system; (2) testing and evaluating the operating effectiveness of the controls; and (3) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria may be affected. For example, controls may not prevent or detect and correct error or fraud, unauthorized access to systems and information, and failure to comply with internal and external policies or requirements. Also, the projection of any conclusions

based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, management's assertion referred to above is fairly stated in all material respects, based on the AICPA and CICA trust services availability, security, and processing integrity criteria for systems reliability.

Illustration 3—Trust Services Report on Management’s Assertion About the Effectiveness of Controls and Compliance With the Criteria for One Principle (Confidentiality) (Point-in-Time Report)

Independent Practitioner’s Trust Services Report

To the management of ABC Company, Inc.:

We have examined management’s assertion [*hot link to management’s assertion*] that as of [*month, day, year*] ABC Company, Inc. (ABC Company) maintained effective controls over the _____ [*type or name of system*] system to provide reasonable assurance that the _____ [*type or name of system*] system protected information designated as confidential, as committed or agreed upon and complied with its commitments regarding the protection of information designated as confidential [*hot link to management’s commitments*] based on the AICPA and CICA trust services confidentiality criteria.

ABC Company’s management is responsible for this assertion. Our responsibility is to express an opinion based on our examination. Management’s description of the aspects of the _____ [*type or name of system*] system covered by its assertion is attached. We did not examine this description, and accordingly, we do not express an opinion on it.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of the controls over the protection of information designated as confidential in ABC Company’s _____ [*type or name of system*] system; (2) testing and evaluating the operating effectiveness of those controls; (3) testing compliance with ABC Company’s commitments regarding the protection of information designated as confidential, and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria and its commitments may be affected. For example, controls may not prevent or detect and correct error or fraud, unauthorized access to systems and information, and failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, ABC Company’s management’s assertion referred to above is fairly stated, in all material respects, based on the AICPA and CICA trust services confidentiality criteria.

Illustration 4—Trust Services Report on System Reliability (Availability, Security, and Processing Integrity)—Reporting Directly on the Subject Matter (Period-of-Time Report)

Independent Practitioner’s Trust Services Report on System Reliability

To the management of ABC Company, Inc.:

We have examined the effectiveness of ABC Company, Inc.’s (ABC Company) controls over the reliability of its _____ [*type or name of system*] system during the period [*month, day, year*] through [*month, day, year*] based on the AICPA and CICA trust services availability, security, and processing integrity criteria for systems reliability. A reliable system is one that is capable of operating without material error, fault, or failure during a specified period in a specified environment. ABC Company’s management is responsible for maintaining the effectiveness of these controls. Our responsibility is to express an opinion based on our examination.

Management’s description of the aspects of the _____ [*type or name of system*] system covered by its assertion is attached. We did not examine this description, and accordingly, we do not express an opinion on it.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of ABC Company’s relevant controls over availability, security, and processing integrity; (2) testing and evaluating the operating effectiveness of the controls; and (3) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria may be affected. For example, controls may not prevent or detect and correct error or fraud, unauthorized access to systems and information, and failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, ABC Company maintained, in all material respects, effective controls over the reliability of ABC Company’s _____ [*type or name of system*] system to provide reasonable assurance that

- the system was available for operation and use, as committed or agreed;
- the system was protected against unauthorized access (both physical and logical); and
- the system processing was complete, accurate, timely, and authorized during the period [*month, day, year*] through [*month, day, year*],

based on the AICPA and CICA trust services availability, security, and processing integrity criteria for systems reliability.

Illustration 5—Trust Services Report on the Effectiveness of Controls Related to One Principle (Security)—Reporting Directly on the Subject Matter (Period-of-Time Report Including Schedule Describing Controls)

Independent Practitioner’s Trust Services Report

To the management of ABC Company, Inc.:

We have examined the effectiveness of ABC Company, Inc.’s (ABC Company) controls, described in schedule X, over the security of its _____ [type or name of system] system during the period [month, day, year] through [month, day, year] based on the AICPA and CICA trust services security criteria. ABC Company’s management is responsible for maintaining the effectiveness of these controls. Our responsibility is to express an opinion based on our examination.

Management’s description of the aspects of the _____ [type or name of system] system covered by its assertion is attached. We did not examine this description, and accordingly, we do not express an opinion on it.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of the ABC Company’s controls over the security of _____ [type or name of system] system; (2) testing and evaluating the operating effectiveness of those controls; and (3) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria may be affected. For example, controls may not prevent or detect and correct error or fraud, unauthorized access to systems and information, and failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, ABC Company maintained, in all material respects, effective controls, described in schedule X, over the security of ABC Company’s _____ [type or name of system] system to provide reasonable assurance that the ABC Company’s _____ [type or name of system] system was protected against unauthorized access (both physical and logical) during the period [month, day, year] through [month, day, year], based on the AICPA and CICA trust services security criteria.

Schedule X—Controls Over the Security of ABC Company's _____ [type or name of system] System Supporting the AICPA and CICA Trust Services Security Criteria

The system is protected against unauthorized access (both physical and logical).

1.0	Policies: The entity defines and documents its policies for the security of its system.	Controls
1.1	The entity's security policies are established and periodically reviewed and approved by a designated individual or group.	<p>The company's documented systems development and acquisition process includes procedures to identify and document authorized users of the system and their security requirements.</p> <p>User requirements are documented in service-level agreements or other documents.</p> <p>The security officer reviews security policies annually and submits proposed changes for the approval by the IT standards committee.</p>
1.2	<p>The entity's security policies include, but may not be limited to, the following matters:</p> <ul style="list-style-type: none"> <li data-bbox="242 777 557 869">a. Identifying and documenting the security requirements of authorized users. <li data-bbox="242 887 557 1100">b. Classifying data based on its criticality and sensitivity and that classification is used to define protection requirements, access right and access restrictions, and retention and destruction requirements. <li data-bbox="242 1117 489 1159">c. Assessing risks on a periodic basis <li data-bbox="242 1177 534 1218">d. Preventing unauthorized access. <li data-bbox="242 1236 557 1352">e. Adding new users, modifying the access levels of existing users, and removing users who no longer need access. <li data-bbox="242 1369 523 1433">f. Assigning responsibility and accountability for system security. <li data-bbox="242 1451 523 1538">g. Assigning responsibility and accountability for system changes and maintenance. 	The company's documented security policies contain the elements set out in criterion 1.2.

(continued)

- h.* Testing, evaluating, and authorizing system components before implementation.
 - i.* Addressing how complaints and requests relating to security issues are resolved.
 - j.* Identifying and mitigating security breaches and other incidents.
 - k.* Providing for training and other resources to support its system security policies.
 - l.* Providing for the handling of exceptions and situations not specifically addressed in its system security policies.
 - m.* Providing for the identification of and consistency with, applicable laws and regulations, defined commitments, service-level agreements, and other contractual requirements.
 - n.* Providing for sharing information with third parties.
- 1.3 Responsibility and accountability for the entity's system security policies, and changes and updates to those policies, are assigned.

Management has assigned responsibilities for the maintenance and enforcement of the company security policy to the CIO. Others on the executive committee assist in the review, update, and approval of the policy as outlined in the executive committee handbook.

Ownership and custody of significant information resources (for example, data, programs, and transactions) and responsibility for establishing and maintaining security over such resources is defined.

This schedule is for illustrative purposes only and does not contain all of the criteria for the security principle. When the practitioner is reporting on more than one principle, a similar format would be used to detail the appropriate criteria and controls. The practitioner is not bound by this presentation format and may use other alternative presentation styles.

Appendix D

Generally Accepted Privacy Principles

August 2009

Acknowledgments

The AICPA and Canadian Institute of Chartered Accountants (CICA) appreciate the contribution of the volunteers who devoted significant time and effort to this project. The institutes also acknowledge the support that the following organizations have provided to the development of *Generally Accepted Privacy Principles*:

- ISACA
- The Institute of Internal Auditors

Notice to Readers

This CPA and CA practitioner version is identical to *Generally Accepted Privacy Principles* with the exception of appendix B, “CPA and CA Practitioner Services Using Generally Accepted Privacy Principles,” and appendix C, “Illustrative Privacy Examination and Audit Reports.” These additional appendixes are intended primarily to assist CPAs and CAs in public practice in providing privacy services to their clients. Effective October 30, 2009.

Foreword

The AICPA and the Canadian Institute of Chartered Accountants (CICA) strongly believe that privacy is a business issue. Considering what organizations face when trying to address privacy issues, we quickly concluded that businesses did not have a comprehensive framework to manage their privacy risks effectively. The institutes decided that they could provide a significant contribution by developing a privacy framework that would address the needs of all of the parties affected by privacy requirements or expectations. Therefore, the institutes developed a privacy framework called AICPA and CICA *Generally Accepted Privacy Principles*. The institutes are making these principles and criteria widely available to all parties interested in addressing privacy issues.

These principles and criteria were developed and updated by volunteers who considered both current international privacy regulatory requirements and best practices. These principles and criteria were issued following the due process procedures of both institutes, which included exposure for public comment. The adoption of these principles and criteria is voluntary.

An underlying premise to these principles is that good privacy is good business. Good privacy practices are a key component of corporate governance and accountability. One of today’s key business imperatives is maintaining the privacy of personal information collected and held by an organization. As business systems and processes become increasingly complex and sophisticated, growing amounts of personal information are being collected. Because more data is being collected and held, most often in electronic format, personal information may be at risk to a variety of vulnerabilities, including loss, misuse, unauthorized access, and unauthorized disclosure. Those vulnerabilities raise concerns for organizations, governments, individuals, and the public in general.

For organizations operating in a multijurisdictional environment, managing privacy risk can be an even more significant challenge. Adherence to generally accepted privacy principles does not guarantee compliance with all laws and regulations to which an organization is subject. Organizations need to be aware of the significant privacy requirements in all of the jurisdictions in which they do business. Although this framework provides guidance on privacy in general, organizations should consult their own legal counsel to obtain advice and guidance on particular laws and regulations governing an organization's specific situation.

With these issues in mind, the AICPA and CICA developed *Generally Accepted Privacy Principles* to be used as an operational framework to help management address privacy in a manner that takes into consideration many local, national, or international requirements. The primary objective is to facilitate privacy compliance and effective privacy management. The secondary objective is to provide suitable criteria against which a privacy attestation engagement (usually referred to as a privacy audit) can be performed.

Generally Accepted Privacy Principles represents the AICPA and CICA contribution to aid organizations in maintaining the effective management of privacy risk, recognizing the needs of organizations, and reflecting the public interest. Additional history about the development and additional privacy resources can be found online at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx and www.cica.ca/privacy. *Generally Accepted Privacy Principles* can be downloaded from the AICPA and the CICA websites, at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx and www.cica.ca/privacy, respectively.

Because the privacy environment is constantly changing, *Generally Accepted Privacy Principles* will need to be revised from time to time; accordingly, please forward any comments about this document by email to the AICPA (GAPP@aicpa.org) or the CICA (privacy@cica.ca).

Privacy—An Introduction to Generally Accepted Privacy Principles

Introduction

Many organizations find challenges in managing privacy¹ on local, national, or international bases. Most are faced with a number of differing privacy laws and regulations whose requirements need to be operationalized.

Generally Accepted Privacy Principles (GAPP) has been developed from a business perspective, referencing some, but by no means all, significant local, national, and international privacy regulations. GAPP operationalizes complex privacy requirements into a single privacy objective that is supported by 10 privacy principles. Each principle is supported by objective, measurable criteria that form the basis for effective management of privacy risk and compliance in an organization. Illustrative policy requirements, communications, and controls, including monitoring controls, are provided as support for the criteria.

¹ The first occurrence of each word contained in the glossary is hyperlinked to the top of glossary.

GAPP can be used by any organization as part of its privacy program. GAPP has been developed to help management create an effective privacy program that addresses privacy risks and obligations, and business opportunities. It can also be a useful tool to boards and others charged with governance and providing oversight. This introduction includes a definition of privacy and an explanation of why privacy is a business issue and not solely a compliance issue. Also illustrated is how these principles can be applied to outsourcing scenarios and the potential types of privacy initiatives that can be undertaken for the benefit of organizations and their customers.

This introduction and the set of privacy principles and related criteria that follow will be useful to those who

- oversee and monitor privacy and security programs.
- implement and manage privacy in an organization.
- implement and manage security in an organization.
- oversee and manage risks and compliance in an organization.
- assess compliance and audit privacy and security programs.
- regulate privacy.

Why Privacy Is a Business Issue

Good privacy is good business. Good privacy practices are a key part of corporate governance and accountability. One of today's key business imperatives is maintaining the privacy of personal information. As business systems and processes become increasingly complex and sophisticated, organizations are collecting growing amounts of personal information. As a result, personal information is vulnerable to a variety of risks, including loss, misuse, unauthorized access, and unauthorized disclosure. Those vulnerabilities raise concerns for organizations, governments, and the public in general.

Organizations are trying to strike a balance between the proper collection and use of their customers' personal information. Governments are trying to protect the public interest and, at the same time, manage their cache of personal information gathered from citizens. Consumers are very concerned about their personal information, and many believe they have lost control of it. Furthermore, the public has a significant concern about identity theft and inappropriate access to personal information, especially financial and medical records, and information about children.

Individuals expect their privacy to be respected and their personal information to be protected by the organizations with which they do business. They are no longer willing to overlook an organization's failure to protect their privacy. Therefore, all businesses need to effectively address privacy as a risk management issue. The following are specific risks of having inadequate privacy policies and procedures:

- Damage to the organization's reputation, brand, or business relationships
- Legal liability and industry or regulatory sanctions
- Charges of deceptive business practices
- Customer or employee distrust
- Denial of consent by individuals to have their personal information used for business purposes
- Lost business and consequential reduction in revenue and market share

- Disruption of international business operations
- Liability resulting from identity theft

International Privacy Considerations

For organizations operating in more than one country, the management of their privacy risk can be a significant challenge.

For example, the global nature of the Internet and business means regulatory actions in one country may affect the rights and obligations of individual users and customers around the world. Many countries have laws regulating trans-border data flow, including the European Union's (EU) directives on data protection and privacy, with which an organization must comply if it wants to do business in those countries. Therefore, organizations need to comply with changing privacy requirements around the world. Further, different jurisdictions have different privacy philosophies, making international compliance a complex task. To illustrate this, some countries view personal information as belonging to the individual and take the position that the enterprise has a fiduciary-like relationship when collecting and maintaining such information. Alternatively, other countries view personal information as belonging to the enterprise that collects it.

In addition, organizations are challenged to try and stay up to date with the requirements for each country in which they do business. By adhering to a high global standard, such as those set out in this document, compliance with many regulations will be facilitated.

Even organizations with limited international exposure often face issues of compliance with privacy requirements in other countries. Many of these organizations are unsure how to address often stricter overseas regulations. This increases the risk that an organization inadvertently could commit a breach that becomes an example to be publicized by the offended host country.

Furthermore, many local jurisdictions (such as states or provinces) and certain industries, such as healthcare or banking, have specific requirements related to privacy.

Outsourcing and Privacy

Outsourcing increases the complexity for dealing with privacy. An organization may outsource a part of its business process and, with it, some responsibility for privacy; however, the organization cannot outsource its ultimate responsibility for privacy for its business processes. Complexity increases when the entity that performs the outsourced service is in a different country and may be subject to different privacy laws or perhaps no privacy requirements at all. In such circumstances, the organization that outsources a business process will need to ensure it manages its privacy responsibilities appropriately.

GAPP and its supporting criteria can assist an organization in completing assessments (including independent examinations) about the privacy policies, procedures, and practices of the third party providing the outsourced services.

The fact that these principles and criteria have global application can provide comfort to an outsourcer that privacy assessments can be undertaken using a consistent measurement based on internationally known fair information practices.

What Is Privacy?

Privacy Definition

Privacy is defined in Generally Accepted Privacy Principles as “the rights and obligations of individuals and organizations with respect to the collection, use, retention, disclosure, and disposal of personal information.”

Personal Information

Personal information (sometimes referred to as personally identifiable information) is information that is about, or can be related to, an identifiable individual. It includes any information that can be linked to an individual or used to directly or indirectly identify an individual. Individuals, for this purpose, include prospective, current, and former customers, employees, and others with whom the entity has a relationship. Most information collected by an organization about an individual is likely to be considered personal information if it can be attributed to an identified individual. Some examples of personal information are as follows:

- Name
- Home or e-mail address
- Identification number (for example, a Social Security or Social Insurance Number)
- Physical characteristics
- Consumer purchase history

Some personal information is considered sensitive. Some laws and regulations define the following to be sensitive personal information:

- Information on medical or health conditions
- Financial information
- Racial or ethnic origin
- Political opinions
- Religious or philosophical beliefs
- Trade union membership
- Sexual preferences
- Information related to offenses or criminal convictions

Sensitive personal information generally requires an extra level of protection and a higher duty of care. For example, some jurisdictions may require explicit consent rather than implicit consent for the collection and use of sensitive information.

Some information about or related to people cannot be associated with specific individuals. Such information is referred to as *nonpersonal information*. This includes statistical or summarized personal information for which the identity of the individual is unknown or linkage to the individual has been removed. In such cases, the individual’s identity cannot be determined from the information that remains because the information is deidentified or anonymized. Nonpersonal information ordinarily is not subject to privacy protection because it cannot be linked to an individual. However, some organizations may still have obligations over nonpersonal information due to other regulations and agreements (for example, clinical research and market research).

Privacy or Confidentiality?

Unlike personal information, which is often defined by law or regulation, no single definition of confidential information exists that is widely recognized. In the course of communicating and transacting business, partners often exchange information or data that one or the other party requires be maintained on a “need to know” basis. Examples of the kinds of information that may be subject to a confidentiality requirement include the following:

- Transaction details
- Engineering drawings
- Business plans
- Banking information about businesses
- Inventory availability
- Bid or ask prices
- Price lists
- Legal documents
- Revenue by client and industry

Also, unlike personal information, rights of access to confidential information to ensure its accuracy and completeness are not clearly defined. As a result, interpretations of what is considered to be confidential information can vary significantly from organization to organization and, in most cases, are driven by contractual arrangements. For additional information on criteria for confidentiality, refer to the AICPA and CICA *Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy* (see www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/TRUSTSERVICES/Pages/default.aspx or www.webtrust.org).

Introducing Generally Accepted Privacy Principles

GAPP is designed to assist management in creating an effective privacy program that addresses their privacy obligations, risks, and business opportunities.

The privacy principles and criteria are founded on key concepts from significant local, national, and international privacy laws, regulations, guidelines,² and good business practices. By using GAPP, organizations can proactively address the significant challenges that they face in establishing and managing their privacy programs and risks from a business perspective. GAPP also facilitates the management of privacy risk on a multijurisdictional basis.

² For example, the Organisation for Economic Co-operation and Development has issued Guidelines on the Protection of Privacy and Transborder Flows of Personal Data and the European Union has issued Directive on Data Privacy (Directive 95/46/EC). In addition, the United States has enacted the Gramm-Leach-Bliley Act, the Health Insurance Portability and Accountability Act, and the Children’s Online Privacy Protection Act. Canada has enacted the Personal Information Protection and Electronic Documents Act and Australia has enacted the Australian Privacy Act of 1988, as amended in 2001. A chart comparing these international privacy concepts with generally accepted privacy principles can be found online at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx. Compliance with this set of generally accepted privacy principles and criteria may not necessarily result in compliance with applicable privacy laws and regulations, and entities should seek appropriate legal advice regarding compliance with any laws and regulations.

Overall Privacy Objective

The privacy principles and criteria are founded on the following privacy objective.

Personal information is collected, used, retained, disclosed, and disposed of in conformity with the commitments in the entity's privacy notice and with criteria set forth in Generally Accepted Privacy Principles issued by the AICPA and CICA.

Generally Accepted Privacy Principles

The privacy principles are essential to the proper protection and management of personal information. They are based on internationally known fair information practices included in many privacy laws and regulations of various jurisdictions around the world and recognized good privacy practices.

The following are the 10 *generally accepted privacy principles*:

1. *Management.* The entity defines, documents, communicates, and assigns accountability for its privacy policies and procedures.
2. *Notice.* The entity provides notice about its privacy policies and procedures and identifies the purposes for which personal information is collected, used, retained, and disclosed.
3. *Choice and consent.* The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.
4. *Collection.* The entity collects personal information only for the purposes identified in the notice.
5. *Use, retention, and disposal.* The entity limits the use of personal information to the purposes identified in the notice and for which the individual has provided implicit or explicit consent. The entity retains personal information for only as long as necessary to fulfill the stated purposes or as required by law or regulations and thereafter appropriately disposes of such information.
6. *Access.* The entity provides individuals with access to their personal information for review and update.
7. *Disclosure to third parties.* The entity discloses personal information to third parties only for the purposes identified in the notice and with the implicit or explicit consent of the individual.
8. *Security for privacy.* The entity protects personal information against unauthorized access (both physical and logical).
9. *Quality.* The entity maintains accurate, complete, and relevant personal information for the purposes identified in the notice.
10. *Monitoring and enforcement.* The entity monitors compliance with its privacy policies and procedures and has procedures to address privacy related complaints and disputes.

For each of the 10 privacy principles, relevant, objective, complete, and measurable criteria have been specified to guide the development and evaluation of an entity's privacy policies, communications, and procedures and controls. *Privacy policies* are written statements that convey management's intent,

objectives, requirements, responsibilities, and standards. *Communications* refers to the organization's communication to individuals, internal personnel, and third parties about its privacy notice and its commitments therein and other relevant information. *Procedures and controls* are the other actions the organization takes to achieve the criteria.

Using GAPP

GAPP can be used by organizations for the following:

- Designing, implementing, and communicating privacy policy
- Establishing and managing privacy programs
- Monitoring and auditing privacy programs
- Measuring performance and benchmarking

Establishing and managing a privacy program involves the following activities:

Strategizing. Performing privacy strategic and business planning.

Diagnosing. Performing privacy gap and risk analyses.

Implementing. Developing, documenting, introducing, and institutionalizing the program's action plan, including establishing controls over personal information.

Sustaining and managing. Monitoring activities of a privacy program.

Auditing. Internal or external auditors evaluating the organization's privacy program.

The following table summarizes and illustrates how GAPP can be used by an organization to address these business activities.

<i>Activity</i>	<i>General Discussion</i>	<i>Potential Use of Generally Accepted Privacy Principles</i>
Strategizing	<p>Vision. An entity's strategy is concerned with its long-term direction and prosperity. The vision identifies the entity's culture and helps shape and determine how the entity will interact with its external environment, including customers, competitors, and legal, social, and ethical issues.</p> <p>Strategic Planning. This is an entity's overall master plan, encompassing its strategic direction. Its objective is to ensure that the entity's efforts are all headed in a common direction. The strategic plan identifies the entity's long-term goals and major issues for becoming privacy compliant.</p>	<p>Vision. Within an entity's privacy effort, establishing the vision helps the entity integrate preferences and prioritize goals.</p> <p>Strategic Planning. Within an entity's privacy effort, <i>Generally Accepted Privacy Principles</i> (GAPP) can be used to assist the organization in identifying significant components that need to be addressed.</p> <p>Resource Allocation. Using GAPP, the entity would identify the people working with and responsible for areas that might include systems management, privacy and security concerns, and stipulate</p>

<i>Activity</i>	<i>General Discussion</i>	<i>Potential Use of Generally Accepted Privacy Principles</i>
Diagnosing	<p>Resource Allocation. This step identifies the human, financial, and other resources allocated to achieve the goals and objectives set forth in the strategic plan or business plan.</p> <p>This stage, often referred to as the assessment phase, encompasses a thorough analysis of the entity's environment, identifying opportunities where weaknesses, vulnerability, and threats exist. The most common initial project for an organization is a diagnostic assessment. The purpose of such an assessment is to evaluate the entity against its privacy goals and objectives and determine to what extent the organization is achieving those goals and objectives.</p>	<p>the resourcing for their activities.</p> <p>Overall Strategy. A strategic document describes expected or intended future development. GAPP can assist an entity in clarifying plans for the systems under consideration or for the business's privacy objectives. The plan identifies the process to achieve goals and milestones. It also provides a mechanism to communicate critical implementation elements, including details on services, budgets, development costs, promotion, and privacy advertising.</p> <p>GAPP can assist the entity in understanding its high-level risks, opportunities, needs, privacy policy and practices, competitive pressures, and the requirements of the relevant laws and regulations to which the entity is subject.</p> <p>GAPP provides a legislative neutral benchmark to allow the entity to assess the current state of privacy against the desired state.</p>
Implementing	<p>At this point, an action plan is mobilized or a diagnostic recommendation is put into effect, or both. Implementing involves developing and documenting a privacy program and action plan and the execution of all planned and other tasks necessary to make the action plan operational. It includes defining who will perform what tasks, assigning responsibilities, and establishing schedules and milestones. This involves the planning and implementation of a series of planned projects to provide guidance, direction, methodology, and tools to the organization in developing its initiatives.</p>	<p>GAPP can assist the entity in meeting its implementation goals. At the completion of the implementation phase, the entity should have developed the following deliverables:</p> <ul style="list-style-type: none"> • Systems, procedures, and processes to address the privacy requirements • Updated privacy compliant forms, brochures, and contracts • Internal and external privacy awareness programs
Sustaining and managing	<p>Sustaining and managing involves monitoring the work to</p>	<p>The entity can use GAPP to develop appropriate reporting</p>

(continued)

<i>Activity</i>	<i>General Discussion</i>	<i>Potential Use of Generally Accepted Privacy Principles</i>
	identify how progress differs from the action plan in time to initiate corrective action. Monitoring refers to the management policies, processes, and supporting technology to ensure compliance with organizational privacy policies and procedures and the ability to exhibit due diligence.	criteria for monitoring requests for information, the sources used to compile the information and the information actually disclosed. It can also be used for determining validation procedures to ensure that the parties to whom the information was disclosed are entitled to receive that information.
Internal privacy audit	Internal auditors provide objective assurance and consulting services designed to add value and improve an entity's operations. They help an entity accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes.	Internal auditors can evaluate an entity's privacy program and controls using GAPP as a benchmark and provide useful information and reporting to management.
External privacy audit	External auditors, notably certified public accountants (CPAs) and chartered accountants (CAs), can perform attestation and assurance services. Generally, these services, whether performed on financial and nonfinancial information, build trust and confidence for individuals, management, customers, business partners, and other users.	An external auditor can evaluate an entity's privacy program and controls in accordance with GAPP and provide reports useful to individuals, management, customers, business partners, and other users.

Presentation of Generally Accepted Privacy Principles and Criteria

Under each principle, the criteria are presented in a three column format. The first column contains the measurement criteria. The second column contains illustrative controls and procedures, which are designed to provide examples and enhance the understanding of how the criteria might be applied. The illustrations are not intended to be comprehensive, nor are any of the illustrations required for an entity to have met the criteria. The third column contains additional considerations, including supplemental information such as good privacy practices and selected requirements of specific laws and regulations that may pertain to a certain industry or country.

Some of the criteria may not be directly applicable to some organizations or some processes. When a criterion is considered not applicable, the entity should consider justifying that decision to support future evaluation.

These principles and criteria provide a basis for designing, implementing, maintaining, evaluating, and auditing a privacy program to meet an entity's needs.

Generally Accepted Privacy Principles and Criteria Management

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.0	The entity defines, documents, communicates, and assigns accountability for its privacy policies and procedures.		
1.1	Policies and Communications		
1.1.0	Privacy Policies The entity defines and documents its privacy policies with respect to the following: a. Notice (See 2.1.0) b. Choice and consent (See 3.1.0) c. Collection (See 4.1.0) d. Use, retention, and disposal (See 5.1.0) e. Access (See 6.1.0) f. Disclosure to third parties (See 7.1.0) g. Security for privacy (See 8.1.0) h. Quality (See 9.1.0) i. Monitoring and enforcement (See 10.1.0)	Privacy policies are documented in writing and made readily available to internal personnel and third parties who need them.	
1.1.1	Communication to Internal Personnel Privacy policies and the consequences of noncompliance with such policies are communicated, at least annually, to the entity's internal personnel responsible for collecting, using, retaining, and disclosing personal information. Changes in privacy policies are communicated to such personnel shortly after the changes are approved.	The entity <ul style="list-style-type: none"> periodically communicates to internal personnel (for example, on a network or a website) relevant information about the entity's privacy policies. Changes to its privacy policies are communicated shortly after approval. requires internal personnel to confirm (initially and periodically) their understanding of the entity's privacy policies and their agreement to comply with them. 	Privacy policies (as used herein) include security policies relevant to the protection of personal information.

(continued)

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.1.2	<p>Responsibility and Accountability for Policies</p> <p>Responsibility and accountability are assigned to a person or group for developing, documenting, implementing, enforcing, monitoring, and updating the entity's privacy policies. The names of such person or group and their responsibilities are communicated to internal personnel.</p>	<p>The entity assigns responsibility for privacy policies to a designated person, such as a corporate privacy officer. (Those assigned responsibility for privacy policies may be different from those assigned for other policies, such as security).</p> <p>The responsibility, authority, and accountability of the designated person or group are clearly documented.</p> <p>Responsibilities include the following:</p> <ul style="list-style-type: none"> • Establishing with management the standards used to classify the sensitivity of personal information and to determine the level of protection required • Formulating and maintaining the entity's privacy policies • Monitoring and updating the entity's privacy policies • Delegating authority for enforcing the entity's privacy policies • Monitoring the degree of compliance and initiating action to improve the training or clarification of policies and practices <p>A committee of the board of directors includes privacy periodically in its regular review of overall corporate governance.</p>	<p>The individual identified as being accountable for privacy should be from within the entity.</p>

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.2	Procedures and Controls		
1.2.1	<p>Review and Approval</p> <p>Privacy policies and procedures, and changes thereto, are reviewed and approved by management.</p>	<p>Privacy policies and procedures are</p> <ul style="list-style-type: none"> • reviewed and approved by senior management or a management committee. • reviewed at least annually and updated as needed. 	
1.2.2	<p>Consistency of Privacy Policies and Procedures With Laws and Regulations</p> <p>Policies and procedures are reviewed and compared to the requirements of applicable laws and regulations at least annually and whenever changes to such laws and regulations are made. Privacy policies and procedures are revised to conform with the requirements of applicable laws and regulations.</p>	<p>Corporate counsel or the legal department</p> <ul style="list-style-type: none"> • determines which privacy laws and regulations are applicable in the jurisdictions in which the entity operates. • identifies other standards applicable to the entity. • reviews the entity's privacy policies and procedures to ensure they are consistent with the applicable laws, regulations, and appropriate standards. 	<p>In addition to legal and regulatory requirements, some entities may elect to comply with certain standards, such as those published by International Organization for Standardization (ISO), or may be required to comply with certain standards, such as those published by the payment card industry, as a condition of doing business. Entities may include such standards as part of this process.</p>
1.2.3	<p>Personal Information Identification and Classification</p> <p>The types of personal information and sensitive personal information and the related processes, systems, and third parties involved in the handling of such information are identified. Such information is covered by the entity's privacy and related security policies and procedures.</p>	<p>The entity has both an information classification policy and process, which include the following:</p> <ul style="list-style-type: none"> • A classification process, which identifies and classifies information into one or more of the following categories: <ul style="list-style-type: none"> — Business confidential — Personal information (sensitive and other personal information) — Business general — Public • Identifying processes, systems, and 	

(continued)

<i>Ref</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<p>third parties that handle personal information</p> <ul style="list-style-type: none"> • Specific security and privacy policies and procedures that apply to each category of information 	
1.2.4	<p>Risk Assessment A risk assessment process is used to establish a risk baseline and to, at least annually, identify new or changed risks to personal information and to develop and update responses to such risks.</p>	<p>A process is in place to periodically identify the risks to the entity's personal information. Such risks may be external (such as loss of information by vendors or failure to comply with regulatory requirements) or internal (such as e-mailing unprotected sensitive information). When new or changed risks are identified, the privacy risk assessment and the response strategies are updated.</p> <p>The process considers factors such as experience with privacy incident management, the complaint and dispute resolution process, and monitoring activities.</p>	<p>Ideally, the privacy risk assessment should be integrated with the security risk assessment and be a part of the entity's overall enterprise risk management program. The board or a committee of the board should provide oversight and review of the privacy risk assessment.</p>
1.2.5	<p>Consistency of Commitments With Privacy Policies and Procedures</p> <p>Internal personnel or advisers review contracts for consistency with privacy policies and procedures and address any inconsistencies.</p>	<p>Both management and the legal department review all contracts and service-level agreements for consistency with the entity's privacy policies and procedures.</p>	

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
1.2.6	<p>Infrastructure and Systems Management</p> <p>The potential privacy impact is assessed when new processes involving personal information are implemented, and when changes are made to such processes (including any such activities outsourced to third parties or contractors), and personal information continues to be protected in accordance with the privacy policies. For this purpose, processes involving personal information include the design, acquisition, development, implementation, configuration, modification and management of the following:</p> <ul style="list-style-type: none"> • Infrastructure • Systems • Applications • Websites • Procedures • Products and services • Data bases and information repositories • Mobile computing and other similar electronic devices <p>The use of personal information in process and system test and development is prohibited unless such information is anonymized or otherwise protected in accordance with the entity's privacy policies and procedures.</p>	<p>The following are used for addressing privacy impact:</p> <ul style="list-style-type: none"> • Management assesses the privacy impact of new and significantly changed products, services, business processes, and infrastructure. • The entity uses a documented systems development and change management process for all information systems and related technology (including manual procedures, application programs, technology infrastructure, organizational structure, and the responsibilities of users and systems personnel), used to collect, use, retain, disclose, and destroy personal information. • The entity assesses planned new systems and changes for their potential effect on privacy. • Changes to system components are tested to minimize the risk of any adverse effect on the protection of personal information. All test data are anonymized. A controlled test database is maintained for full regression testing to ensure that changes to one program do not adversely affect other programs that process personal information. 	<p>Some jurisdictions prohibit the use of personal information for test and development purposes unless it has been anonymized or otherwise protected to the same level required in its policies for production information.</p>

(continued)

<i>Ref.</i>	<i>Management Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		<ul style="list-style-type: none"> • Procedures ensure the maintenance of integrity and protection of personal information during migration from old to new or changed systems. • Documentation and approval by the privacy officer, security officer, business unit manager, and IT management are required before implementing the changes to systems and procedures that handle personal information, including those that may affect security. Emergency changes are required to maintain the same level of protection of personal information; however, they may be documented and approved on an after-the-fact basis. <p>The IT function maintains a listing of all software that processes personal information and the respective level, version, and patches that have been applied.</p> <p>Procedures exist to provide that only authorized, tested, and documented changes are made to the system.</p> <p>Where computerized systems are involved, appropriate procedures are followed, such as the use of separate development, test, and production libraries to ensure that access to personal information is appropriately restricted.</p> <p>Personnel responsible for initiating or</p>

1.2.11	<p>Changes in Regulatory and Business Requirements For each jurisdiction in which the entity operates, the effect on privacy requirements from changes in the following factors is identified and addressed:</p> <ul style="list-style-type: none"> • Legal and regulatory • Contracts, including service-level agreements • Industry requirements • Business operations and processes • People, roles, and responsibilities • Technology <p>Privacy policies and procedures are updated to reflect changes in requirements.</p>	<p>personal information or are responsible for protection of personal information.</p> <ul style="list-style-type: none"> • tailored to the employee's job responsibilities. • supplemented by external training and conferences. <p>Attendance at the entity's privacy training and awareness courses is monitored.</p> <p>Training and awareness courses are reviewed and updated to reflect current legislative, regulatory, industry, and entity policy and procedure requirements.</p> <p>The entity has an ongoing process in place to monitor, assess, and address the effect on privacy requirements from changes in the following:</p> <ul style="list-style-type: none"> • Legal and regulatory environments • Industry requirements (such as those for the Direct Marketing Association) • Contracts, including service-level agreements with third parties (changes that alter the privacy and security related clauses in contracts are reviewed and approved by the privacy officer or legal counsel before they are executed) • Business operations and processes • People assigned responsibility for privacy and security matters • Technology (prior to implementation) 	<p>Ideally, these procedures would be coordinated with the risk assessment process.</p> <p>The entity also should consider emerging and good practices, such as breach notification in jurisdictions where none is required.</p>

Notice

<i>Ref.</i>	<i>Notice Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
2.0	The entity provides notice about its privacy policies and procedures and identifies the purposes for which personal information is collected, used, retained, and disclosed.		
2.1	Policies and Communications		
2.1.0	Privacy Policies		
	The entity's privacy policies address providing notice to individuals.		
2.1.1	Communication to Individuals	<p>The entity's privacy notice</p> <ul style="list-style-type: none"> describes the personal information collected, the sources of such information, and purposes for which it is collected. indicates the purpose for collecting sensitive personal information and whether such purpose is part of a legal requirement. describes the consequences, if any, of not providing the requested information. indicates that certain information may be developed about individuals, such as buying patterns. may be provided in various ways (for example, in a face-to-face conversation, on a telephone interview, on an application form or questionnaire, or electronically). However, written notice is the preferred method. 	<p>Notice also may describe situations in which personal information will be disclosed, such as the following:</p> <ul style="list-style-type: none"> Certain processing for purposes of public security or defense Certain processing for purposes of public health or safety When allowed or required by law <p>The purpose described in the notice should be stated in such a manner that the individual can reasonably understand the purpose and how the personal information is to be used. Such purpose should be consistent with the business purpose of the entity and not overly broad.</p> <p>Consideration should be given to providing a summary level notice with links to more detailed sections of the policy.</p>
	<p>Notice is provided to individuals regarding the following privacy policies:</p> <ol style="list-style-type: none"> Purpose for collecting personal information Choice and consent (See 3.1.1) Collection (See 4.1.1) Use, retention, and disposal (See 5.1.1) Access (See 6.1.1) Disclosure to third parties (See 7.1.1) Security for privacy (See 8.1.1) Quality (See 9.1.1) Monitoring and enforcement (See 10.1.1) <p>If personal information is collected from sources other than the individual, such sources are described in the notice.</p>		

<i>Ref.</i>	<i>Notice Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
2.2	Procedures and Controls		
2.2.1	<p>Provision of Notice</p> <p>Notice is provided to the individual about the entity's privacy policies and procedures (a) at or before the time personal information is collected, or as soon as practical thereafter, (b) at or before the entity changes its privacy policies and procedures, or as soon as practical thereafter, or (c) before personal information is used for new purposes not previously identified.</p>	<p>The privacy notice is</p> <ul style="list-style-type: none"> • readily accessible and available when personal information is first collected from the individual. • provided in a timely manner (that is, at or before the time personal information is collected, or as soon as practical thereafter) to enable individuals to decide whether or not to submit personal information to the entity. • clearly dated to allow individuals to determine whether the notice has changed since the last time they read it or since the last time they submitted personal information to the entity. <p>In addition, the entity</p> <ul style="list-style-type: none"> • tracks previous iterations of the entity's privacy policies and procedures. • informs individuals of a change to a previously communicated privacy notice, for example, by posting the notification on the entity's website, by sending written notice via postal mail, or by sending an e-mail. • documents that changes to privacy policies and procedures were communicated to individuals. 	<p>See 3.2.2, "Consent for New Purposes and Uses."</p> <p>Some regulatory requirements indicate that a privacy notice is to be provided on a periodic basis, for example, annually in the Gramm-Leach-Bliley Act (GLBA).</p>
2.2.2	<p>Entities and Activities Covered</p> <p>An objective description of the entities and activities covered by</p>	<p>The privacy notice describes the particular entities, business segments, locations, and types of information covered, such as:</p>

<i>Ref</i>	<i>Notice Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	the privacy policies and procedures is included in the entity's privacy notice.	<ul style="list-style-type: none"> • Operating jurisdictions (legal and political) • Business segments and affiliates • Lines of business • Types of third parties (for example, delivery companies and other types of service providers) • Types of information (for example, information about customers and potential customers) • Sources of information (for example, mail order or online) <p>The entity informs individuals when they might assume they are covered by the entity's privacy policies but, in fact, are no longer covered (for example, linking to another website that is similar to the entity's, or using services on the entity's premises provided by third parties).</p>	
2.2.3	Clear and Conspicuous The entity's privacy notice is conspicuous and uses clear language.	<p>The privacy notice is</p> <ul style="list-style-type: none"> • in plain and simple language. • appropriately labeled, easy to see, and not in unusually small print. • linked to or displayed on the website at points of data collection. • available in the national languages used on the site or in languages required by law. 	<p>If multiple notices are used for different subsidiaries or segments of an entity, similar formats are encouraged to avoid consumer confusion and allow consumers to identify any differences.</p> <p>Some regulations may contain specific information that a notice must contain.</p> <p>Illustrative notices are often available for certain industries and types of collection, use, retention, and disclosure.</p>

Choice and Consent

<i>Ref.</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
3.0	The entity describes the choices available to the individual and obtains implicit or explicit consent with respect to the collection, use, and disclosure of personal information.		
3.1	Policies and Communications		
3.1.0	Privacy Policies		
	The entity's privacy policies address the choices available to individuals and the consent to be obtained.		
3.1.1	Communication to Individuals		
	Individuals are informed about (a) the choices available to them with respect to the collection, use, and disclosure of personal information, and (b) that implicit or explicit consent is required to collect, use, and disclose personal information, unless a law or regulation specifically requires or allows otherwise.	<p>The entity's privacy notice describes, in a clear and concise manner, the following:</p> <ul style="list-style-type: none"> • The choices available to the individual regarding the collection, use, and disclosure of personal information • The process an individual should follow to exercise these choices (for example, checking an opt out box to decline receiving marketing materials) • The ability of, and process for, an individual to change contact preferences • The consequences of failing to provide personal information required for a transaction or service <p>Individuals are advised of the following:</p> <ul style="list-style-type: none"> • Personal information not essential to the purposes identified in the privacy notice need not be provided. • Preferences may be changed, and consent may be withdrawn at a later 	<p>Some laws and regulations (such as Principle 11, "Limits on disclosure of personal information," section 1 of the Australian Privacy Act of 1988) provide specific exemptions for the entity not to obtain the individual's consent. Examples of such situations include the following:</p> <ul style="list-style-type: none"> • The record keeper believes, on reasonable grounds, that use of the information for that other purpose is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual concerned or another person. • Use of the information for that other purpose is required or authorized by or under law.

<i>Ref</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
		purpose or, if consent was withdrawn, not so used.	
3.2.3	<p>Explicit Consent for Sensitive Information</p> <p>Explicit consent is obtained directly from the individual when sensitive personal information is collected, used, or disclosed, unless a law or regulation specifically requires otherwise.</p>	<p>The entity collects sensitive information only if the individual provides explicit consent. <i>Explicit consent</i> requires that the individual affirmatively agree, through some action, to the use or disclosure of the sensitive information. Explicit consent is obtained directly from the individual and documented, for example, by requiring the individual to check a box or sign a form. This is sometimes referred to as opt in.</p>	<p>Canada's Personal Information Protection and Electronic Documents Act (PIPEDA), Schedule 1, clause 4.3.6, states that an organization should generally seek explicit consent when the information is likely to be considered sensitive.</p> <p>Many jurisdictions prohibit the collection of sensitive data, unless specifically allowed. For example, in the EU member state of Greece, Article 7 of Greece's "Law on the protection of individuals with regard to the processing of personal data" states, "The collection and processing of sensitive data is forbidden." However, a permit to collect and process sensitive data may be obtained.</p> <p>Some jurisdictions consider government-issued personal identifiers, for example, Social Security numbers or Social Insurance numbers, to be sensitive information.</p>
3.2.4	<p>Consent for Online Data Transfers To or From an Individual's Computer or Other Similar Electronic Devices</p> <p>Consent is obtained before personal</p>	<p>The entity requests customer permission to store, alter, or copy personal information (other than cookies) in the customer's computer or other similar electronic device.</p>	<p>Consideration should be given to prevent or detect the introduction of software that is designed to mine or extract information from a computer or other similar electronic device and therefore</p>

<i>Ref.</i>	<i>Choice and Consent Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
	information is transferred to or from an individual's computer or other similar device.	<p>If the customer has indicated to the entity that it does not want cookies, the entity has controls to ensure that cookies are not stored on the customer's computer or other similar electronic device.</p> <p>Entities will not download software that will transfer personal information without obtaining permission.</p>	may be used to extract personal information, for example, spyware.

Collection

<i>Ref.</i>	<i>Collection Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
4.0	The entity collects personal information only for the purposes identified in the notice.		
4.1	Policies and Communications		
4.1.0	Privacy Policies The entity's privacy policies address the collection of personal information.		Some jurisdictions, such as some countries in Europe, require entities that collect personal information to register with their regulatory body.
4.1.1	Communication to Individuals Individuals are informed that personal information is collected only for the purposes identified in the notice.	The entity's privacy notice discloses the types of personal information collected, the sources and methods used to collect personal information, and whether information is developed or acquired about individuals, such as buying patterns.	
4.1.2	Types of Personal Information Collected and Methods of Collection The types of personal information collected and the methods of collection, including the use of cookies or other	Types of personal information collected include the following: <ul style="list-style-type: none"> • Financial (for example, financial account information) • Health (for example, information about physical or 	Some jurisdictions, such as those in the EU, require that individuals have the opportunity to decline the use of cookies.

<i>Ref.</i>	<i>Disclosure to Third Parties Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
7.2.4	<p>Misuse of Personal Information by a Third Party The entity takes remedial action in response to misuse of personal information by a third party to whom the entity has transferred such information.</p>	<ul style="list-style-type: none"> • monitor that personal information is being provided to third parties only for uses specified in the privacy notice. <p>The entity</p> <ul style="list-style-type: none"> • reviews complaints to identify indications of any misuse of personal information by third parties. • responds to any knowledge of a third party using or disclosing personal information in variance with the entity's privacy policies and procedures or contractual arrangements. • mitigates, to the extent practicable, any harm caused by the use or disclosure of personal information by the third party in violation of the entity's privacy policies and procedures (for example, notify individuals affected, attempt to recover information disclosed to others, void affected numbers and reissue new numbers). • takes remedial action in the event that a third party misuses personal information (for example, contractual clauses address the ramification of misuse of personal information). 	

Security for Privacy

<i>Ref.</i>	<i>Security for Privacy Criteria</i>	<i>Illustrative Controls and Procedures</i>	<i>Additional Considerations</i>
8.0	The entity protects personal information against unauthorized access (both physical and logical).		
8.1	Policies and Communications		
8.1.0	Privacy Policies The entity's privacy policies (including any relevant security policies), address the security of personal information.	Privacy policies adequately address security measures to safeguard the privacy of personal information whether in electronic, paper, or other forms. Security measures are consistent with the sensitivity of the personal information.	Personal information in any location under control of the entity or deemed to be under control of the entity must be protected.
8.1.1	Communication to Individuals Individuals are informed that precautions are taken to protect personal information.	The entity's privacy notice describes the general types of security measures used to protect the individual's personal information, for example: <ul style="list-style-type: none"> • Employees are authorized to access personal information based on job responsibilities. • Authentication is used to prevent unauthorized access to personal information stored electronically. • Physical security is maintained over personal information stored in hard copy form, and encryption is used to prevent unauthorized access to personal information sent over the Internet. • Additional security safeguards are applied to sensitive information. 	Users, management, providers, and other parties should strive to develop and adopt good privacy practices and to promote conduct that recognizes security needs and respects the legitimate interests of others. Consideration should be given to disclosing in the privacy notice the security obligations of individuals, such as keeping user IDs and passwords confidential and reporting security compromises. Consideration should be given to limiting the disclosure of detailed security procedures so as not to compromise internal security.

		<p>personal information be reviewed and appropriately modified or terminated within 24 hours (or immediately in the case of employee termination). This is controlled by an automated process within the human resource system which produces a report of employee status changes, which requires supervisor action to avoid automatic termination of access. This is monitored by the security group which receives copies of these reports and the related supervisor actions.</p> <ul style="list-style-type: none"> • Policies state that confirmation of a privacy-related complaint is provided to the complainant within 72 hours, and if not resolved within 10 working days, then the issue is escalated to the CPO. The control is a log used to record privacy complaints, including complaint date, and subsequent activities through to resolution. The monitoring activity is the monthly review of such logs for consistency with this policy. 	

Appendix A—Glossary

affiliate. An entity that controls, is controlled by, or is under common control with another entity.

anonymize. The removal of any person-related information that could be used to identify a specific individual.

confidentiality. The protection of nonpersonal information and data from unauthorized disclosure.

consent. Agreement by the individual for the entity to collect, use, and disclose personal information in accordance with the privacy notice. Such agreement can be explicit or implied. *Explicit consent* is given orally, electronically, or in writing, is unequivocal and does not require any inference on the part of the entity seeking consent. *Implicit consent* may reasonably be inferred from the action or inaction of the individual such as not having *opted out*, or providing credit card information to complete a transaction. (see opt in and opt out).

cookies. Cookies are pieces of information generated by a Web server and stored in the user's computer, ready for future access. The information can then be used to identify the user when returning to the website, to personalize Web content, and suggest items of potential interest based on previous buying habits. Certain advertisers use tracking methods, including cookies, to analyze the patterns and paths through a site.

encryption. The process of transforming information to make it unreadable to anyone except those possessing special key (to decrypt).

entity. An organization that collects, uses, retains, and discloses personal information.

individual. The person about whom the personal information is being collected (sometimes referred to as the *data subject*).

internal personnel. Employees, contractors, agents, and others acting on behalf of the entity and its affiliates.

opt in. Personal information may not be collected, used, retained and disclosed by the entity without the explicit consent of the individual.

opt out. Implied consent exists for the entity to collect, use, retain, and disclose personal information unless the individual explicitly denies permission.

outsourcing. The use and handling of personal information by a third party that performs a business function for the entity.

personal information. Information that is or can be about or related to an identifiable individual.

personal information cycle. The collection, use, retention, disclosure, disposal, or anonymization of personal information.

policy. A written statement that communicates management's intent, objectives, requirements, responsibilities, and standards.

privacy. The rights and obligations of individuals and organizations with respect to the collection, use, retention, disclosure, and destruction of personal information.

privacy breach. A privacy breach occurs when personal information is collected, retained, accessed, used, or disclosed in ways that are not in accordance with the provisions of the enterprise's policies, applicable privacy laws, or regulations.

privacy program. The policies, communications, procedures, and controls in place to manage and protect personal information in accordance with business and compliance risks and requirements.

purpose. The reason personal information is collected by the entity.

redact. To delete or black out personal information from a document or file.

sensitive personal information. Personal information that requires an extra level of protection and a higher duty of care, for example, information on medical or health conditions, certain financial information, racial or ethnic origin, political opinions, religious or philosophical beliefs, trade union membership, sexual preferences, or information related to offenses or criminal convictions.

third party. An entity that is not affiliated with the entity that collects personal information or any affiliated entity not covered by the entity's privacy notice.

Web beacon. Web beacons, also known as Web bugs, are small strings of code that provide a method for delivering a graphic image on a Web page or in an e-mail message for the purpose of transferring data. Businesses use Web beacons for many purposes, including site traffic reporting, unique visitor counts, advertising and e-mail auditing and reporting, and personalization. For example, a Web beacon can gather a user's IP address, collect the referrer, and track the sites visited by users.

Appendix B—CPA and CA Practitioner Services Using Generally Accepted Privacy Principles

This appendix provides a high level overview of the services that CPAs and CAs in public practice (practitioners) can provide using *Generally Accepted Privacy Principles* (GAPP). Additional guidance for practitioners is available from both the AICPA and Canadian Institute of Chartered Accountants (CICA) (see www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/PRIVACY/Pages/default.aspx and www.cica.ca).

Privacy Advisory Engagements

Practitioners can provide a variety of advisory services to their clients, which include strategic, diagnostic, implementation, and sustaining and managing services using GAPP criteria. These services could include advising clients on system weaknesses, assessing risk, and recommending a course of action using GAPP criteria as a benchmark.

Practitioners in the United States providing such advisory services follow CS section 100 of Statement on Standards for Consulting Services, *Consulting Services: Definition and Standards* (AICPA, *Professional Standards*). No standards for Canadian practitioners exist in the CICA Handbook covering the performance of consulting services.

Privacy Attestation and Assurance Engagements

Practitioners also can use GAPP to provide attestation and assurance services to their clients, which typically result in a report for use by third parties. The nature of these services, the relevant professional standards, and the types of reports that may be issued for each are described subsequently.

Privacy Examination and Audit Engagements

Relevant U.S. standards for attestation engagements are contained in the Statements on Standards for Attestation Engagements. Relevant Canadian standards for assurance engagements are contained in Section 5025 of the CICA Handbook. Privacy attestation and assurance engagements are defined within the context of these standards. A practitioner is expected to comply with the requirements established by the relevant professional standards.

Examination and audit engagements are designed to provide a high, though not absolute, level of assurance on the subject matter or assertion. With that objective, the practitioner develops audit procedures that, in the practitioner's professional judgment, reduce to a low level the risk that the practitioner will reach an inappropriate conclusion. Illustrative privacy examination and audit reports are included in appendix C.

The following key concepts apply to privacy examination and audit engagements:

- Privacy examination and audit reports ordinarily cover all 10 principles. All of the relevant criteria for each principle need to be met during the period covered by the report to issue an unqualified report.^{4, 5}

⁴ See appendix C, "Illustrative Privacy Examination and Audit Reports."

⁵ In certain circumstances (such as a report on a third-party service provider), special purpose privacy reports covering some of the 10 principles could be issued. It is recommended that such reports contain language that indicates that the privacy principles not covered are essential for overall assurance of privacy and be "restricted use" reports.

- The work should be performed at the examination or equivalent level of assurance.
- The scope of the engagement can cover (1) either all personal information or only certain identified types of personal information, such as customer information or employee information, and (2) all business segments and locations for the entire entity or only certain identified segments of the business (retail operations, but not manufacturing operations or only operations originating on the entity's website or specified web domains) or geographic locations (such as only Canadian operations). In addition:
 - The privacy notice either should (1) be readily available to the users of the auditor's report and be clearly described in management's assertion and the report, or (2) accompany management's assertion and the auditor's report.
 - The scope of the engagement should generally be consistent with the description of the entities and activities covered in the privacy notice (see criterion 2.2.2). The scope often could be narrower, but ordinarily not broader, than that covered by the related privacy notice.
 - The scope of the engagement should cover all of the activities in the information cycle for the relevant personal information. These should include collection, use, retention, disclosure, disposal, or anonymization. Defining a business segment that does not include this entire cycle could be misleading to the user of the practitioner's report.
 - If the identified personal information included in the scope of the examination is commingled with other personal information not in the scope of the engagement, the scope of the engagement needs to cover controls over all of the information from the point of commingling forward.
 - The practitioner's report should ordinarily cover a period of time (not less than two months); however, the practitioner's initial report can be a point in time report.

Management's Assertion

Under AICPA attestation standards, in an examination engagement, the practitioner should ordinarily obtain a written assertion. If management will not provide the practitioner with a written assertion, the practitioner may still report on the subject matter; however, the form of the report will vary depending on the circumstances.⁶

Under AICPA standards, the practitioner may report on either management's assertion or the subject matter of the engagement. When the practitioner reports on the assertion, the assertion should accompany the practitioner's report, or the first paragraph of the report should contain a statement of the assertion.⁷ When the practitioner reports on the subject matter, the practitioner may want to request that management make an assertion available to the users of the practitioner's report.

Under CICA assurance standards, the practitioner may report on either management's assertion regarding the subject matter of the engagement, or directly

⁶ See paragraph .58 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*) for a description of a practitioner's options, if a written assertion is not obtained.

⁷ See paragraph .64 of AT section 101.

on the subject matter. When the practitioner reports on management's assertion, the assertion should accompany the practitioner's report. When the practitioner reports directly on the subject matter, the practitioner is not required to obtain a written assertion of management. However, when the practitioner has not obtained such assertion, the practitioner is required to establish by other means that management is responsible for the subject matter—this is fundamental to performing the engagement.

For a privacy examination or audit, it is believed that an assertion-based engagement is more appropriate than an engagement to report directly on the subject matter. By providing a publicly available assertion, management explicitly acknowledges its responsibility for the matters addressed in its assertion.

Privacy Review Engagements

A *review engagement* is a type of attestation or assurance engagement. However, the term *privacy review* is often misused to refer either to a privacy examination or to certain types of privacy advisory engagements, such as a privacy diagnostic engagement or an engagement to develop findings and recommendations related to privacy. To reduce the risk that either the practitioner or the client may misinterpret the needs or expectations of the other party, the practitioner should establish an understanding with the client regarding the specifics of services to be performed and type of report to be issued.

A review engagement, as defined in professional standards, is a type of attestation or assurance engagement in which the practitioner reports on whether any information came to his or her attention, on the basis of the work performed, that indicates that the subject matter is not based on (or in conformity with) the criteria, or the assertion is not presented (or fairly stated) in all material respects based on the criteria. The procedures performed to provide a basis for the practitioner's review engagement report generally are limited to inquiry, analytical review procedures, and discussion. In the view of the AICPA and CICA Privacy Task Force, these types of procedures and the limited assurance provided from a review engagement would not be adequate to meet the needs of most parties affected by privacy requirements and expectations when the reporting entity is expected to demonstrate compliance with generally accepted privacy principles and criteria. Accordingly, no guidance is provided on the performance of privacy review engagements.

Agreed-Upon (Specified Auditing) Procedures Engagements

In an agreed-upon or specified procedures engagement, the practitioner performs specified procedures, agreed to by the parties,⁸ and reports his or her findings. The practitioner does not perform an audit or review of an assertion or subject matter nor does the practitioner express an opinion or negative assurance about the assertion or subject matter.⁹ In this type of engagement, the practitioner's report is in the form of a description of procedures and

⁸ The specified users of the report and the practitioner agree upon the procedures to be performed by the practitioner.

⁹ In the United States, agreed-upon procedures engagements are performed under paragraph .15 of AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*). In Canada there are no general standards for agreed-upon procedures/specified procedures. A practitioner could, however, look to the guidance provided by the Canadian Institute of Chartered Accountants (CICA) handbook section 9100 that contains standards for performing Specified Procedures on Financial Information Other Than Financial Statements. In specified auditing procedures engagements, the practitioner is engaged to report to specific users the results of applying specified procedures. In applying such procedures, the practitioner does not express a conclusion concerning the subject matter because he or she does not

findings. Generally accepted privacy principles and criteria may be used in such engagements. This type of work would not lead to an examination or audit report, but rather to a report presenting the agreed-upon or specified procedures and the corresponding findings for each procedure. Agreed-upon or specified procedures could be undertaken to address a subset of an entity's system or a subset of the generally accepted privacy principles and criteria, or both. For example, an entity may request that a practitioner complete agreed-upon or specified procedures using selected criteria from generally accepted privacy principles and report the findings. In Canada, specified procedures engagements are permitted, although they are not considered to be assurance engagements under CICA Handbook section 5025.

Because users' needs may vary widely, the nature, timing, and extent of the agreed-upon and specified procedures may vary as well. Consequently, the specified users and the client assume responsibility for the sufficiency of the procedures since they best understand their own needs. The use of such a report is restricted to the specified parties who agreed upon the procedures.

Relationship Between Generally Accepted Privacy Principles and the Trust Services Principles and Criteria

Generally accepted privacy principles are part of the AICPA and CICA *Trust Services Principles and Criteria* that are based upon a common framework (that is, a core set of principles and criteria) to provide professional attestation or assurance and consulting or advisory services. The *Trust Services Principles and Criteria*¹⁰ were developed by volunteer task forces under the auspices of the AICPA and CICA. The other *trust services principles and criteria* are:

- *Security*. The system is protected against unauthorized access (both physical and logical).
- *Availability*. The system is available for operation and use as committed or agreed.
- *Processing integrity*. System processing is complete, accurate, timely, and authorized.
- *Confidentiality*. Information designated as confidential is protected as committed or agreed.

These are discussed more fully at www.aicpa.org/INTERESTAREAS/INFORMATIONTECHNOLOGY/RESOURCES/TRUSTSERVICES/Pages/default.aspx.

(footnote continued)

necessarily perform all of the procedures that, in the practitioner's judgment, would be necessary to provide a high level of assurance. Rather, the practitioner's report sets out the factual results of the procedures applied, including any exceptions found.

¹⁰ WebTrust and SysTrust are two specific attestation or assurance services offerings developed by the AICPA and the CICA that are based on the *Trust Services Principles and Criteria*. Practitioners must be licensed by the CICA to use either the WebTrust or SysTrust seals. When the privacy engagement incorporates an online segment and the entity has received an examination or audit report that does not include a qualification or scope limitation, an entity may choose to display a WebTrust Online Privacy seal. For more information on licensure and Online Privacy Engagements see www.webtrust.org.

Appendix C—Illustrative Privacy Examination and Audit Reports

The following appendix includes examples of examination and audit reports under AICPA or Canadian Institute of Chartered Accountants (CICA) professional reporting standards, respectively:

<i>Under AICPA Attestation Standards</i>	<i>Under CICA Assurance Standards</i>

Illustration 1—Reporting on Management’s Assertion Under AICPA Attestation Standards

Independent Practitioner’s Privacy Report

To the Management of ABC Company, Inc.:

We have examined ABC Company, Inc.’s (ABC Company) management assertion that, during the period Xxxx xx, 2009 through Yyyy yy, 2009, it:

- Maintained effective controls over the privacy of personal information collected in its _____ [*description of the entities and activities covered, for example “the mail-order catalog-sales operations”*] business (the Business) to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice related to the Business and with criteria set forth in Generally Accepted Privacy Principles, issued by the American Institute of Certified Public Accountants (AICPA) and the Canadian Institute of Chartered Accountants, and
- Complied with its commitments in its privacy notice, which is dated xxxx xx, 2009 and [is available at www.ABC-Company/privacy or accompanies this report].

This assertion is the responsibility of ABC Company’s management. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included (1) obtaining an understanding of ABC Company’s controls over the privacy of personal information, (2) testing and evaluating the operating effectiveness of the controls, (3) testing compliance with ABC Company’s commitments in its privacy notice, and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, ABC Company’s management assertion that, during the period Xxxx xx, 2009 through Yyyy yy, 2009, ABC Company:

- Maintained effective controls over the privacy of personal information collected in the Business to provide reasonable assurance that the personal information was collected, used, retained, disclosed and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in Generally Accepted Privacy Principles; and
- Complied with its commitments in its privacy notice referred to above, is, in all material respects, fairly stated.

OR

In our opinion, ABC Company's management assertion referred to above is fairly stated, in all material respects, in conformity with ABC Company's privacy notice referred to above and with criteria set forth in Generally Accepted Privacy Principles.

Because of the nature and inherent limitations of controls, ABC Company's ability to meet the aforementioned criteria and the commitments in its privacy notice may be affected. For example, fraud, unauthorized access to systems and information, and failure to comply with internal and external policies or requirements may not be prevented or detected. Also, the projection of any conclusions, based on our findings, to future periods is subject to the risk that any changes or future events may alter the validity of such conclusions.

During the period Xxxx xx, 2009 through Yyyy yy, 2009, ABC Company, in all material respects:

- Maintained effective controls over the privacy of personal information collected in our _____ [description of the entities and activities covered, for example "the mail-order catalog-sales operations"] business (the Business) to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with our commitments in our privacy notice related to the Business and with criteria set forth in Generally Accepted Privacy Principles, issued by the American Institute of Certified Public Accountants and the Canadian Institute of Chartered Accountants, and
- Complied with our commitments in our privacy notice, which is dated xxxx xx, 2009 and [is available at www.ABC-Company/privacy or accompanies this report].

Illustration 2—Reporting Directly on the Subject Matter Under AICPA Attestation Standards

Independent Practitioner's Privacy Report

To the Management of ABC Company, Inc.:

We have examined (1) the effectiveness of ABC Company, Inc.'s (ABC Company) controls over the personal information collected in its _____ [description of the entities and activities covered, for example "the mail-order catalog-sales operations"] business (the Business) to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in Generally Accepted Privacy Principles, issued by the American Institute of Certified Public Accountants (AICPA) and the Canadian Institute of Chartered Accountants, and (2) ABC Company's compliance with its commitments in its privacy notice, which is dated xxxx xx, 2009 and [is available at www.ABC-Company/privacy or accompanies this report], related to the Business during the period Xxxx xx, 2009 through Yyyy yy, 2009. ABC Company's management is responsible for maintaining the effectiveness of these controls and for

compliance with its commitments in its privacy notice. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the AICPA and, accordingly, included (1) obtaining an understanding of ABC Company's controls over the privacy of personal information, (2) testing and evaluating the operating effectiveness of the controls, (3) testing compliance with ABC Company's commitments in its privacy notice, and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, during the period Xxxx xx, 2009 through Yyyy yy, 2009, ABC Company, in all material respects (1) maintained effective controls over privacy of personal information collected in the Business to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in Generally Accepted Privacy Principles; and (2) complied with its commitments in its privacy notice referred to above.

Because of the nature and inherent limitations of controls, ABC Company's ability to meet the aforementioned criteria and the commitments in its privacy notice may be affected. For example, fraud, unauthorized access to systems and information, and failure to comply with internal or external policies or requirements may not be prevented or detected. Also, the projection of any conclusions, based on our findings, to future periods is subject to the risk that any changes or future events may alter the validity of such conclusions.

Illustration 3—Reporting on Management's Assertion Under CICA Assurance Standards

Auditor's Privacy Report

To the Management of ABC Company, Inc.:

We have audited ABC Company, Inc.'s (ABC Company) management assertion that, during the period Xxxx xx, 2009 through Yyyy yy, 2009, it:

- Maintained effective controls over the privacy of personal information collected in its _____ [description of the entities and activities covered, for example "the mail-order catalog-sales operations"] business (the Business) to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice related to the Business and with criteria set forth in Generally Accepted Privacy Principles, issued by the American Institute of Certified Public Accountants and the Canadian Institute of Chartered Accountants (CICA), and
- Complied with its commitments in its privacy notice, which is dated xxxx xx, 2009 and [is available at www.ABC-Company/privacy or accompanies this report].

This assertion is the responsibility of management. Our responsibility is to express an opinion based on our audit.

Our audit was conducted in accordance with standards for assurance engagements established by the CICA. Those standards require that we plan and perform our audit to obtain reasonable assurance as a basis for our opinion. Our audit included (1) obtaining an understanding of ABC Company's controls over the privacy of personal information, (2) testing and evaluating the operating effectiveness of the controls, (3) testing compliance with ABC Company's commitments in its privacy notice and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, ABC Company's management assertion that, during the period Xxxx xx, 2009 through Yyyy yy, 2009, ABC Company:

- Maintained effective controls over the privacy of personal information collected in the Business to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in Generally Accepted Privacy Principles; and
- Complied with its commitments in its privacy notice referred to above, is, in all material respects, fairly stated.

OR

In our opinion, ABC Company management's assertion referred to above is fairly stated, in all material respects, in conformity with ABC Company's privacy notice referred to above and with criteria set forth in Generally Accepted Privacy Principles.

Because of the nature and inherent limitations of controls, ABC Company's ability to meet the aforementioned criteria and the commitments in its privacy notice may be affected. For example, fraud, unauthorized access to systems and information, failure to comply with internal and external policies and requirements may not be prevented or detected. Also, the projection of any conclusions, based on our findings, to future periods is subject to the risk that any changes or future events may alter the validity of such conclusions.

Auditor’s Privacy Report

To the Management of ABC Company, Inc.:

We have audited (1) the effectiveness of ABC Company, Inc.’s (ABC Company) controls over the personal information collected in its _____ [*description of the entities and activities covered, for example “the mail-order catalog-sales operations”*] business (the Business) to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in Generally Accepted Privacy Principles, issued by the American Institute of Certified Public Accountants and the Canadian Institute of Chartered Accountants (CICA), and (2) ABC Company’s compliance with its commitments in its privacy notice, which is dated xxxx xx, 2009 and [is available at www.ABC-Company/privacy or accompanies this report], related to the Business during the period Xxxx xx, 2009 through Yyyy yy, 2009. ABC Company’s management is responsible for maintaining the effectiveness of these controls and for compliance with its commitments in its privacy notice. Our responsibility is to express an opinion based on our audit.

Our audit was conducted in accordance with standards for assurance engagements established by the CICA. Those standards require that we plan and perform our audit to obtain reasonable assurance as a basis for our opinion. Our audit included (1) obtaining an understanding of ABC Company’s controls over the privacy of personal information, (2) testing and evaluating the operating effectiveness of the controls, (3) testing compliance with ABC Company’s commitments in its privacy notice, and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, during the period Xxxx xx, 2009 through Yyyy yy, 2009, ABC Company, in all material respects (1) maintained effective controls over privacy of personal information collected in the Business to provide reasonable assurance that the personal information was collected, used, retained, disclosed, and disposed of in conformity with its commitments in its privacy notice and with criteria set forth in the Generally Accepted Privacy Principles; and (2) complied with its commitments in its privacy notice referred to above.

Because of the nature and inherent limitations of controls, ABC Company’s ability to meet the aforementioned criteria and the commitments in its privacy notice may be affected. For example, fraud, unauthorized access to systems and information, and failure to comply with internal or external policies or requirements may not be prevented or detected. Also, the projection of any conclusions,

based on our findings, to future periods is subject to the risk that any changes or future events may alter the validity of such conclusions.

Trust Services Principles and Criteria for Certification Authorities Version 2.0

April 2012

(To supersede the 2000 version of the *Trust Services Principles, Criteria, and Illustrations for WebTrust® for Certification Authorities* [Version 1.0])

Introduction

Introduction to Trust Service Principles and Criteria for Certification Authorities Version 2.0

.01 This document provides a framework for third party assurance providers to assess the adequacy and effectiveness of the controls employed by certification authorities (CAs). As a result of the technical nature of the activities involved in securing e-commerce transactions, this document also provides a brief overview of public key infrastructure (PKI) using cryptography and trusted third party concepts.

.02 This document replaces version 1.0 of the AICPA/Canadian Institute of Chartered Accountants (CICA) *Trust Services Principles, Criteria, and Illustrations for WebTrust® for Certification Authorities (WebTrust® Program for Certification Authorities v1)* that was issued in August 2000. Unlike version 1.0, which was intended to be used by licensed WebTrust®¹ practitioners only, this version is regarded as “open-source” and can be used in the conduct of any assurance engagement, internal or external, by any third party service provider. It also represents an effective benchmark for CAs to conduct self-assessments. The public accounting profession has continued to play its role, with an intent to increase consumer confidence in the application of PKI technology by establishing a basis for providing third party assurance to the assertions made by CAs.

.03 This document was developed by an AICPA/CICA Task Force using International Organization for Standardization (ISO) 21188, “Public key infrastructure for financial service—Practices and policy Framework,” and version 1.0 of the AICPA/CICA *WebTrust® Program for Certification Authorities*.

.04 Input and approval was also obtained from the Certification Authority Browser Forum (CA/Browser Forum; see www.cabforum.org) for the content and control activities contained in this framework. The CA/Browser Forum was formed among CAs and vendors of Internet browser software and other applications. This voluntary organization has worked collaboratively in defining guidelines and means of implementation for the Extended Validation (EV) Secure Sockets Layer (SSL) Certificate standard as a way of providing a heightened security for Internet transactions and creating a more intuitive method of displaying secure sites to Internet users.

¹ WebTrust® is an assurance services offering developed by the AICPA and Canadian Institute of Chartered Accountants (CICA) that is based on the Trust Services Principles and Criteria. Practitioners must be licensed by CICA to use these registered service marks. For more information on licensure, see www.webtrust.org.

.05 The principles and criteria for CAs are consistent with standards developed by the American National Standards Institute (ANSI), the International Organization for Standardization (ISO), and the Internet Engineering Task Force (IETF). The principles and criteria are also consistent with the practices established by the CA Browser Forum.

Importance of PKI

.06 PKI provides a means for *relying parties* (that is, recipients of certificates, who act in reliance on those certificates or digital signatures, or both, verified using those certificates) to know that another individual's or entity's public key actually belongs to that individual or entity. CA organizations or CA functions, or both, have been established to address this need.

.07 Cryptography is critical to establishing secure e-commerce; however, it has to be coupled with other secure protocols in order to provide a comprehensive security solution. Several cryptographic protocols require digital certificates (in effect, electronic credentials) issued by an independent trusted third party (the CA) to authenticate the transaction. CAs have assumed an increasingly important role in secure e-commerce. Although a large body of national, international, and proprietary standards and guidelines for the use of cryptography, the management of digital certificates, and the policies and practices of CAs exist, these standards have not been applied or implemented uniformly.

.08 This version is titled, "Trust Services Principles and Criteria for Certification Authorities Version 2.0." These principles and criteria are intended to address *user* (that is, subscriber and relying party) needs and concerns and are designed to benefit users and providers of CA e-commerce assurance services by providing a common body of knowledge that is communicated to such parties.

Overview

What Is a Public Key Infrastructure?

.09 With the expansion of e-commerce, PKI is growing in importance and will continue to be a critical enterprise security investment. PKI enables parties to an e-commerce transaction to identify one another by providing authentication with digital certificates and allows reliable business communications by providing confidentiality through the use of encryption and authentication data integrity and a reasonable basis for nonrepudiation through the use of digital signatures.

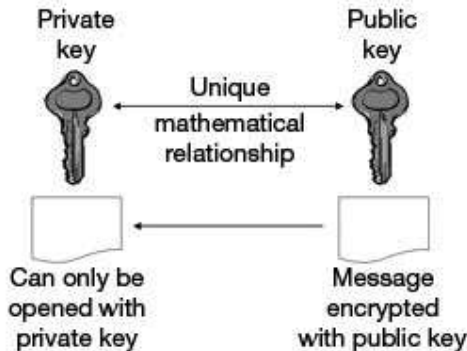

.10 PKI uses public and private key pairs—two mathematically related keys. Typically, one of the keys is made public by posting it on the Internet, for example, while the other remains private. Public key cryptography works in such a way that a message encrypted with the public key can only be decrypted with the private key and, conversely, a message signed with a private key can only be verified with the public key. This technology can be used in different ways to provide the four ingredients required for trust in e-commerce transactions, namely confidentiality, authentication, integrity, and nonrepudiation.

.11 Using PKI, a *subscriber* (that is, an end entity [or individual] whose public key is cryptographically bound to his or her identity in a digital certificate) has an asymmetric, cryptographic key pair (that is, a public key and a private key). The subscriber's private key must be kept secret, whereas the

public key may be made widely available, usually presented in the form of a digital certificate, to ensure that relying parties know with confidence the identity to which the public key belongs. Using public key cryptography, the subscriber could send a message signed with his or her private key. The signature can be validated by the message recipient using the subscriber's public key. The subscriber could also encrypt a message using the recipient's public key. The message can be decrypted only with the recipient's private key.

.12 A subscriber first obtains a public and private key pair (generated by the subscriber, or for the subscriber, as a service). The subscriber then goes through a registration process by submitting his or her public key to a certification authority or a registration authority (RA), which acts as an agent for the CA. The CA or RA verifies the identity of the subscriber in accordance with the CA's established business practices (that may be contained in a certification practice statement), and then issues a digital certificate. The certificate includes the subscriber's public key and identity information and is digitally signed by the CA, which binds the subscriber's identity to that public key. The CA also manages the subscriber's digital certificate through the *certificate life cycle* (that is, from registration through revocation or expiration). In some circumstances, it remains important to manage digital certificates even after expiry or revocation so that digital signatures on stored documents held past the revocation or expiry period can be validated at a later date.

.13 The following diagram illustrates the relationship between a subscriber's public and private keys and how they are used to secure messages sent to a relying party.

.14 A transaction submitted by a customer to an online merchant via the Internet can be encrypted with the merchant's public key and, therefore, can only be decrypted by that merchant using the merchant's private key, ensuring a level of confidentiality. Confidentiality can also be achieved through the use of SSL, Secure/Multipurpose Internet Mail Extensions (S/MIME), and other protocols, such as Secure Electronic Transaction (SET).

What Is a Digital Signature?

.15 Digital signatures can be used to provide authentication, integrity, and nonrepudiation. Generally speaking, if a customer sends a digitally signed message to a merchant, the customer's private key is used to generate the digital signature, and the customer's public key can be used by the merchant to verify the signature. The mathematical processes employed are somewhat

different depending on the kind of asymmetric, cryptographic algorithm employed. For example, the processes are slightly different for *reversible algorithms* (that is, those which can be readily used to support digital signatures as well as encryption), such as Rivest Shamir Adleman (RSA), and irreversible algorithms, such as the Digital Signature Algorithm (DSA).

.16 The following example illustrates the digital signature generation and verification process for a reversible asymmetric cryptographic algorithm (such as RSA). Suppose a customer wants to send a digitally signed message to a merchant. The customer runs the message through a *hash function* (that is, a mathematical function that converts a message into a fixed length block of data [the hash], in a fashion such that the hash uniquely reflects the message. In effect, it is the message's "fingerprint.") The customer then transforms the hash using the algorithm and the customer's private key to create the digital signature, which is appended to the message. A header is also appended to the message, indicating the merchant's email address, the sender's email address, and other information, such as the time the message is sent. The message header, the message itself, and the digital signature are then sent to the merchant. The customer can optionally send his or her public key certificate to the merchant in the message itself. All of this is usually done by the e-mail software in such a way that the process is transparent to the user.

.17 The following diagram illustrates the process of using a subscriber's key pair to ensure the integrity and authenticity of a message sent by the customer (subscriber) to a merchant.

.18 To determine whether the message came from the customer (that is, authentication) and to determine whether the message has not been modified (that is, integrity), the merchant validates the digital signature. To do so, the merchant must obtain the customer's public key certificate. If the customer did not send his or her public key certificate as part of the message, the merchant would typically obtain the customer's public key certificate from an online repository (maintained by the CA or another party acting as the agent of the CA or any other source even if unrelated to the CA). The merchant then validates that the customer's digital certificate (containing the customer's public key) was signed by a recognized CA to ensure that the binding between the public key and the customer represented in the certificate has not been altered. Next, the merchant extracts the public key from the certificate and uses that public key to transform the digital signature to reveal the original hash. The merchant then runs the message as received through the same hash

function to create a hash of the received message. To verify the digital signature, the merchant compares these two hashes. If they match, then the digital signature validates and the merchant knows that the message came from the customer, and it was not modified from the time the signature was made. If the hashes do not match, then the merchant knows that the message was either modified in transit, or the message was not signed with the customer's private key. As a result, the merchant cannot rely on the digital signature.

.19 Digital signatures can also be used to provide a basis for nonrepudiation so that the signer cannot readily deny having signed the message. For example, an online brokerage customer who purchases one thousand shares of stock using a digitally signed order via the Internet should have a difficult task if he or she later tries to deny (that is, repudiate) having authorized the purchase.

What Are the Differences Between Encryption Key Pairs and Signing Key Pairs?

.20 As stated earlier, establishing a reasonable basis for nonrepudiation requires that the private key used to create a digital signature (that is, the signing private key) be generated and stored securely under the sole control of the user. In the event a user forgets his or her password or loses, breaks, or destroys his or her signing private key, it is acceptable to generate a new signing key pair for use from that point forward with minimal impact to the subscriber. Previously signed documents can still be verified with the user's old signature verification public key. Documents subsequently signed with the user's new signing private key must be verified with the user's new signature verification public key.

.21 Extra care is required to secure the CA's signing private key, which is used for signing user certificates. The trustworthiness of all certificates issued by a CA depends on the CA's ability to protect its private signing key. CAs securely back up their private signing key(s) for business continuity purposes to allow the CA to continue to operate in the event that the CA's private signing key is accidentally destroyed (but not compromised) as a result of hardware failure, for example. Except for CA business continuity purposes, generally, no technical or business reasons exist to back up a private signing key.

.22 On the other hand, and as cited earlier, it is often desirable that a key pair used for encryption and decryption be securely backed up to ensure that encrypted data can be recovered when a user forgets his or her password or otherwise loses access to his or her decryption key. This is analogous to requiring that the combination to a safe be backed up in case the user forgets it or becomes incapacitated. As a result, a PKI typically requires two key pairs for each user: one key pair for encryption and decryption and a second key pair for signing and signature verification.

What Is a Certification Authority?

.23 In order for these technologies to enable parties to securely conduct e-commerce, one important question must be answered: In the digital world, how does one know that an individual's public key actually belongs to that individual? A *digital certificate*, which is an electronic document containing information about an individual and his or her public key, is the answer. This document is digitally signed by a trusted organization referred to as a CA. The basic premise is that the CA is vouching for the link between an individual's identity and his or her public key. The CA provides a level of assurance that the

public key contained in the certificate does, indeed, belong to the entity named in the certificate. The digital signature placed on the public key certificate by the CA provides the cryptographic binding between the entity's public key, the entity's name, and other information in the certificate, such as a validity period. For a relying party to determine whether the certificate was issued by a legitimate CA, the relying party must verify the issuing CA's signature on the certificate. The public keys of many common root CAs (as later defined) are preloaded into standard Web browser software (for example, Netscape Navigator or Microsoft Internet Explorer). This allows the relying party to verify the issuing CA's signature using the CA's public key to determine whether the certificate was issued by a trusted CA.

.24 The purpose of a CA is to manage the *certificate life cycle*, which includes generation and issuance, distribution, renewal and rekey, revocation, and suspension of certificates. The CA frequently delegates the initial registration of subscribers to RAs, which act as agents for the CA. In some cases, the CA may perform registration functions directly. The CA is also responsible for providing certificate status information through the issuance of certificate revocation lists (CRLs) or the maintenance of an online status-checking mechanism, or both. Typically, the CA posts the certificates and CRLs that it has issued to a repository (such as an online directory), which is accessible to relying parties.

What Is a Registration Authority?

.25 A *registration authority*, or RA, is an entity that is responsible for the identification and authentication of subscribers, but does not sign or issue certificates. In some cases, the CA performs the subscriber registration function internally. In other cases, the CA might delegate the RA function to external registration authorities (sometimes referred to as *local registration authorities* or LRAs) that may or may not be part of the same legal entity as the CA. In still other cases, a customer of a CA (for example, a company) may arrange with that CA to perform the RA function itself or use its agent.

.26 The initial registration process for a subscriber is as follows, though the steps may vary from CA to CA and will also depend upon the certificate policy under which the certificate is to be issued. The subscriber first generates his or her own public and private key pair. (In some implementations, a CA may generate the subscriber's key pair and securely deliver it to the subscriber, but this is normally done only for encryption key pairs, not signature key pairs.) Then, the subscriber produces proof of identity in accordance with the applicable certificate policy requirements and demonstrates that he or she holds the private key corresponding to the public key without disclosing the private key (typically by digitally signing a piece of data with the private key, with the subscriber's digital signature then verified by the CA). Once the association between a person and a public key is verified, the CA issues a certificate. The CA digitally signs each certificate that it issues with its private key to provide the means for establishing authenticity and integrity of the certificate.

.27 The CA then notifies the subscriber of certificate issuance and gives the subscriber an opportunity to review the contents of the certificate before it is made public. Assuming the subscriber approves the accuracy of the certificate, the subscriber will either publish the certificate or have the CA publish it and make it available to other users. A *repository* is an electronic certificate database that is available online. The repository may be maintained by the CA or a third party contracted for that purpose by the subscriber or by any other party. Subscribers may obtain other subscriber's certificates and certificate

status information from the repository. For example, if a subscriber's certificate was revoked, the repository would indicate that the subscriber's certificate has been revoked and should not be relied on. The ability to update the repository is typically retained by the CA. Subscribers and other relying parties would have read-only access to the repository. Because the certificates stored in the repository are digitally signed by the CA, they cannot be maliciously changed without detection, even if someone were to hack into the repository.

.28 The following diagram illustrates the relationship between the subscriber and the RA and CA functions.

What Is the Impact of an External RA?

.29 External registration authorities are required to comply with the relevant provisions of the CA's business practices disclosures, often documented in a certification practice statement and applicable certificate policy(s). In performing a WebTrust® Program for Certification Authorities engagement, the practitioner must consider how the CA handles the RA function and whether the RA function is within the scope of the examination. For example, a CA that provides CA services to several banks might delegate the subscriber registration function to RAs that are specifically designated functional groups within each bank. The functions performed by these specific groups would typically be outside the scope of the WebTrust® Program for Certification Authorities examination performed for the CA. In this case, management's assertion should specify those aspects of the registration process that are not handled by the CA. There may be scenarios, however, in which the CA exercises extensive monitoring controls (including on-site audit) over all aspects of the RA operations, and the CA is willing to assert to the effectiveness of the controls performed by the external RAs and include the RA operations in the examination. In these rare situations, the CA and the auditor need to agree in advance with this approach, including the extent and sufficiency of controls being exercised.

.30 External RAs could be examined and reported on separately from the CA using the relevant criteria contained in this *Trust Services Principles and Criteria for Certification Authorities Version 2.0*. Illustrative reports for these types of examinations will be the subject of future guidance.

What Is an Extended Validation Certificate?

.31 When a CA performs additional steps to authenticate the entity to which certificates are being issued, the certificates issued are differentiated and issued as extended validation certificates. These certificates provide even more assurance regarding the identity of the website owner.

.32 According to www.cabforum.org

Extended Validation SSL (EV SSL) Certificates build on the existing SSL certificate format, but provide an additional layer of protection in a strictly defined issuance process created to ensure that the certificate holder is who they claim to be. To ensure the ongoing integrity of the process, revocation measures are specified that allow for the quick and effective revocation of improperly issued or misused certificates. Leading Relying-Party Application Software Suppliers support EV SSL, which allows the browser to display the verified identity of the website owner to the user.²

What Is a Certification Practice Statement and a Certificate Policy?

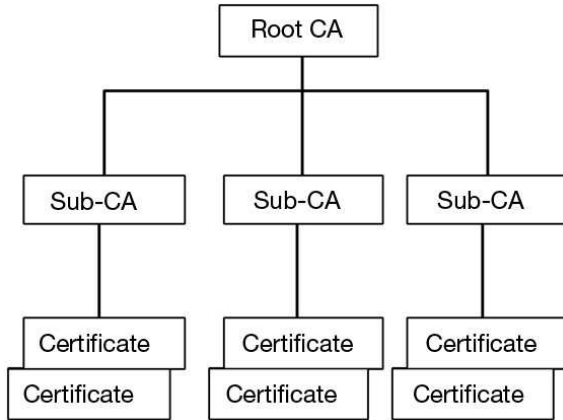

.33 A *certification practice statement* (CPS) is a statement of the practices that a CA employs in issuing and managing certificates. A *certificate policy* (CP) is a named set of rules that indicates the applicability of a certificate to a particular community or class of application, or both, with common security requirements. For example, a particular CP might indicate the applicability of a type of certificate to the authentication of electronic data interchange transactions for the trading of goods within a given price range.

What Are the Hierarchical and Cross-Certified CA Models?

.34 CAs may be linked using two basic architectures or a hybrid of the two: hierarchical and cross-certified (shared trust). In a hierarchical model, a highest level (or root) CA is deployed, and subordinate CAs may be set up for various business units, domains, or communities of interest. The *root CA* validates the subordinate CAs, which, in turn, issue certificates to lower tier CAs or directly to subscribers. Such a root CA typically has more stringent security requirements than a subordinate CA. Although it is difficult for an attacker to access the root CA (which, in some implementations, is only online in the rare event that it must issue, renew, or revoke subordinate CA certificates), one drawback to this model is that the root CA represents a single point of failure. In the hierarchical model, the root CA maintains the established “community of trust” by ensuring that each entity in the hierarchy conforms to a minimum set of practices. Adherence to the established policies may be tested through audits of the subordinate CAs and, in a number of cases, the RAs.

² See www.cabforum.org.

.35 The following diagram illustrates the structure and relationships between CAs and subscribers operating in a hierarchical model.

.36 In an alternative model, cross-certified CAs are built on a “peer-to-peer” model. Rather than deploying a common root CA, the cross-certification model shares trust among CAs known to one another. *Cross-certification* is a process in which two CAs certify the trustworthiness of the other’s certificates. If two CAs, CA1 and CA2, cross-certify, CA1 creates and digitally signs a certificate containing the public key of CA2 (and vice versa). Consequently, users in either CA domain are assured that each CA trusts the other and, therefore, subscribers in each domain can trust each other. Cross-certified CAs are not subject to the single point of failure in the hierarchical model. However, the network is only as strong as the weakest CA and requires continual policing. In the cross-certified model, to establish and maintain a community of trust, audits may be performed to ensure that each cross-certified CA conforms to a minimum set of practices as agreed upon by the members of the community of trust.

.37 The following diagram illustrates the structure and relationships between CAs and subscribers operating in a cross-certified (shared trust) model.

.38 In a hybrid model, both a hierarchical structure and cross-certification are employed. For example, two existing hierarchical communities of trust may want to cross-certify each other, such that members of each community can rely on the certificates issued by the other to conduct e-commerce.

What Is the Impact of Subordinate CAs?

.39 Depending on report users' needs, subordinate CAs may or may not be included in the scope of examination. It is important that the system description and assertion clearly articulate the hierarchy that is in scope.

What Are Some of the Business Issues Associated With CAs?

.40 Unless they are subject to governmental licensing and regulation, CAs may use different standards or procedures to verify the identity of persons to whom they issue certificates. Thus, a digital signature is only as reliable as the CA is trustworthy in performing its functions. Consequently, a relying party needs some way to gauge how much reliance it should place on a digital signature supported by a certificate issued by a particular CA.

.41 CA topology (for example, a hierarchical, cross-certified, or a hybrid model) is a developing issue. Which model is most appropriate depends on the particular business circumstances. Although it is important that public keys be certified, the issuance of nonstandard certificates can be a concern. For example, if the broadly recognized International Telecommunications Union-Telecommunication Standardization Sector's X.509 data format standard³ is not used, subscribers and relying parties may be unable to process such certificates. Implementing the cross-certified CA model (discussed previously) would also be very difficult. For these reasons, major entities, such as the U.S. and Canadian governments, are using, or plan to use, X.509 certificates for their internal and external activities.

Principles and Criteria for Certification Authorities

.42 In order to be understandable to the ultimate users (the subscriber and the relying party), the principles set out in the following sections have been developed with the relying party in mind and, as a result, are intended to be practical and nontechnical in nature.

CA Principles

CA Business Practices Disclosure

- .43 The certification authority (CA)
- discloses its business, key life cycle management, certificate life cycle management, and CA environmental control practices in its certification practice statement and
 - discloses its business, key life cycle management, certificate life cycle management, and CA environmental control policies in its certificate policy (if applicable).

³ International Telecommunications Union-Telecommunication Standardization Sector Recommendation X.509 (1997) was also standardized by the International Organization for Standardization (ISO) as ISO/IEC 9594-8.

.44 The CA maintains effective controls to provide reasonable assurance that

- the CA's certification practice statement is consistent with its certificate policy (if applicable), and
- the CA provides its services in accordance with its certificate policy (if applicable) and certification practice statement (CPS).

.45 The CA must disclose its key and certificate life cycle management business and information privacy practices. Information regarding the CA's business practices should be made available to all subscribers and all potential relying parties, typically by posting on its website. Such disclosure may be contained in a certificate policy (CP) or CPS, or both, or in other informative materials that are available to users (subscribers and relying parties).

Service Integrity

.46 The certification authority (CA) maintains effective controls to provide reasonable assurance that

- the integrity of keys and certificates it manages is established and protected throughout their life cycles;
- the subscriber information is properly authenticated (for the registration activities performed by ABC Certification Authority, Inc.); and
- subordinate CA certificate requests are accurate, authenticated, and approved.

.47 Effective key management controls and practices are essential to the trustworthiness of the public key infrastructure. Cryptographic key management controls and practices cover CA key generation, CA key storage, backup and recovery, CA public key distribution (especially when done in the form of self-signed root certificates), CA key escrow (if applicable), CA key usage, CA key destruction, CA key archival, the management of CA cryptographic hardware through its life cycle, and CA-provided subscriber key management services (if applicable). Strong key life cycle management controls are vital to guard against key compromise, which can damage the integrity of the public key infrastructure.

.48 The user certificate life cycle is at the core of the services provided by the CA. The CA establishes its standards and practices by which it will deliver services in its published certification practice statement and certificate policy. The user certificate life cycle includes the following:

- Registration (that is, the identification and authentication process related to binding the individual subscriber to the certificate)
- The renewal of certificates (if applicable)
- The rekey of certificates
- The revocation of certificates
- The suspension of certificates (if applicable)
- The timely publication of certificate status information (through certificate revocation lists or some form of online certificate status protocol)
- The management of integrated circuit cards (ICCs) holding private keys through their life cycle (if applicable)

.49 Effective controls over the registration process are essential because poor identification and authentication controls jeopardize the ability of subscribers and relying parties to rely on the certificates issued by the CA. Effective revocation procedures and timely publication of certificate status information are also critical elements because it is critical for subscribers and relying parties to know when they are unable to rely on certificates that have been issued by the CA.

CA Environmental Controls

.50 The certification authority (CA) maintains effective controls to provide reasonable assurance that

- logical and physical access to CA systems and data are restricted to authorized individuals;
- the continuity of key and certificate management operations is maintained; and
- CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity.

.51 The establishment and maintenance of a trustworthy CA environment is essential to the reliability of the CA's business processes. Without strong CA environmental controls, strong key and certificate life cycle management controls are severely diminished in value. CA environmental controls include certification practice statement and certificate policy management, security policy management, security management, asset classification and management, personnel security, physical and environmental security of the CA facility, operations management, system access management, systems development and maintenance, business continuity management, monitoring and compliance, and event journaling.

.52 The original CA Business Practices Disclosure criteria in version 1.0 were derived primarily from the IETF's Internet X.509 Public Key Infrastructure Certificate Policy and Certification Practices Framework—Request For Comments Draft (RFC 2527), which has been incorporated into Annex A of the draft ANSI X9.79 standard. *Trust Services Principles and Criteria for Certification Authorities Version 2.0* currently allows the CA to use RFC 2527, version 1.0 of the *WebTrust® Program for Certification Authorities Criteria*, or RFC 3647 that was issued in November 2003.⁴ For specific key and certificate life cycle management and CA environmental illustrative controls, in which the CA's implemented controls may vary depending on the CA's business practices, such illustrative controls refer to specifically required CA business practices disclosures included in principle 1 of the CA Business Practices Disclosure.

Intended Use of the Trust Services Principles and Criteria

.53 The *Trust Services Principles and Criteria for Certification Authorities* can be used as a control framework to assess the adequacy of the CA systems, policies, and procedures. It provides a basis for self-assessment for either development or maintaining strong PKI systems.

.54 Assessors and auditors can use the framework as a benchmark for performing an internal or independent assessment as an internal auditor or independent external auditor as supported by the CA/Browser Forum. For

⁴ In the event that a replacement for Request for Comments 3647 is issued at a future date, that version could also be used.

licensed WebTrust® auditors, additional support is provided online at www.webtrust.org.

Trust Service Principles and Criteria for Certification Authorities

1. CA Business Practices Disclosure

.55 The certification authority (CA)

- discloses its business, key life cycle management, certificate life cycle management, and CA environmental control practices in its certification practice statement;
- discloses its business, key life cycle management, certificate life cycle management, and CA environmental control policies in its certificate policy (if applicable); and
- provides services in accordance with its disclosed practices.

1.1 Certification Practice Statement

Criteria:

The certification authority (CA) discloses its business practices, including, but not limited to, the topics listed in RFC 3647, RFC 2527, or *WebTrust® Program for Certification Authorities v1 CA Business Practices Disclosure Criteria* (see appendix A) in its certification practice statement.

1.2 Certificate Policy (if applicable)

Criteria:

The certification authority discloses its business practices, including, but not limited to, the topics listed in RFC 3647, RFC 2527, or *WebTrust® Program for Certification Authorities v1* (see appendix A) in its certificate policy.

2. CA Business Practices Management

.56 The certification authority (CA) maintains effective controls to provide reasonable assurance that

- the CA's certification practice statement is consistent with its certificate policy (if applicable), and
- the CA provides its services in accordance with its certificate policy (if applicable) and certification practice statement.

2.1 Certificate Policy Management (if applicable)

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that its certificate policy management process is effective.

<i>Illustrative Controls:</i>	
	Certificate Policy Management
1	The policy authority (PA) has the responsibility of defining the business requirements and policies for using digital certificates and specifying them in a certificate policy (CP) and supporting agreements.
2	The PA has final authority and responsibility for specifying and approving CP(s).
3	CP(s) are approved by the PA in accordance with a defined review process, including responsibilities for maintaining and tracking changes to the CP(s).
4	A defined review process exists to assess that the CP(s) are capable of support by the controls specified in the certification practice statement.
5	The PA makes available the CPs supported by the CA to subscribers and relying parties.

2.2 Certification Practice Statement Management

<i>Criteria:</i>
The certification authority (CA) maintains controls to provide reasonable assurance that its certification practice statement management processes are effective.

<i>Illustrative Controls:</i>	
	Certification Practice Statement Management
1	The policy authority (PA) has final authority and responsibility for approving the CA's certification practice statement (CPS).
2	Responsibilities for maintaining the CPS have been formally assigned.
3	The CA's CPS is modified and approved in accordance with a defined review process.
4	The CA makes available its CPS to all appropriate parties.
5	Revisions to the CA's CPS are made available to appropriate parties.
6	The CA updates its CPS to reflect changes in the environment as they occur.

2.3 CP and CPS Consistency (if applicable)

<i>Criteria:</i>
The certification authority (CA) maintains controls to provide reasonable assurance that its certification practice statement (CPS) addresses the topics included in its certificate policy (CP).

Illustrative Controls:	
	CP and CPS Consistency
1	The policy authority (PA) is responsible for ensuring that the CA's control processes, as stated in a CPS or equivalent, fully comply with the requirements of the CP.
2	The CA addresses the requirements of the CP when developing its CPS.
3	The CA assesses the impact of proposed CPS changes to ensure that they are consistent with the CP.
4	A defined review process exists to ensure that CP(s) are supported by the CA's CPS.

3. CA Environmental Controls

.57 The certification authority (CA) maintains effective controls to provide reasonable assurance that

- logical and physical access to CA systems and data is restricted to authorized individuals;
- the continuity of key and certificate management operations is maintained; and
- CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity.

3.1 Security Management

Criteria:	
	The certification authority (CA) maintains controls to provide reasonable assurance that
	<ul style="list-style-type: none"> • security is planned, managed, and supported within the organization; • security risks are identified and managed; • the security of CA facilities, systems, and information assets accessed by third parties is maintained; and • the security of subscriber and relying party information is maintained when the responsibility for CA subfunctions has been outsourced to another organization or entity.

Illustrative Controls:	
	Information Security Policy
1	An information security policy document (that includes physical, personnel, procedural, and technical controls), is approved by management, published, and communicated to all employees.
2	The information security policy includes the following: <ol style="list-style-type: none"> a. A definition of information security, its overall objectives and scope, and the importance of security as an enabling mechanism for information sharing

(continued)

<i>Illustrative Controls:</i>	
	<ul style="list-style-type: none"> b. A statement of management intent, supporting the goals and principles of information security c. An explanation of the security policies, principles, standards, and compliance requirements of particular importance to the organization d. A definition of general and specific responsibilities for information security management, including reporting security incidents e. References to documentation, which supports the policy
3	A defined review process exists for maintaining the information security policy, including responsibilities and review dates.
Information Security Infrastructure	
4	Senior management or a high-level management information security committee, or both, have the responsibility to ensure there is clear direction and management support to manage risks effectively.
5	A management group or security committee exists to coordinate the implementation of information security controls and the management of risk.
6	Responsibilities for the protection of individual assets and for carrying out specific security processes are clearly defined.
7	A management authorization process for new information processing facilities exists and is followed.
Security of Third Party Access	
8	Procedures exist and are enforced to control physical and logical access to CA facilities and systems by third parties (for example, on-site contractors, trading partners, and joint ventures).
9	If a business need exists for the CA to allow third party access to CA facilities and systems, a risk assessment is performed to determine security implications and specific control requirements.
10	Arrangements involving third party access to CA facilities and systems are based on a formal contract containing necessary security requirements.
Outsourcing	
11	If the CA outsources the management and control of all or some of its information systems, networks, or desktop environments, the CA's security requirements are addressed in a contract agreed upon between the parties.
12	If the CA chooses to delegate a portion of the CA roles and respective functions to another party, the CA maintains responsibility for the completion of the outsourced functions and the definition and maintenance of a statement of its certification practice statement.

3.2 Asset Classification and Management

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that CA assets and subscriber and relying party information receive an appropriate level of protection based upon identified risks and in accordance with the CA's disclosed business practices.

Illustrative Controls:

1	Owners are identified for all CA assets and assigned responsibility for the protection of the assets.
2	Inventories of CA assets are maintained.
3	The CA has implemented information classification and associated protective controls for information based on business needs and the business impacts associated with such needs.
4	Information labeling and handling are performed in accordance with the CA's information classification scheme and documented procedures.

3.3 Personnel Security

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that personnel and employment practices enhance and support the trustworthiness of the CA's operations.

Illustrative Controls:

1	The CA employs personnel (that is, employees and contractors) who possess the relevant skills, knowledge, and experience required for the job function.
2	Security roles and responsibilities, as specified in the organization's security policy, are documented in job descriptions.
3	Trusted roles, on which the security of the CA's operation is dependent, are clearly identified. Trusted roles include, at a minimum, the following responsibilities: <ol style="list-style-type: none"> a. Overall responsibility for administering the implementation of the CA's security practices b. Approval of the generation, revocation, and suspension of certificates c. Installation, configuration, and maintenance of the CA systems d. Day-to-day operation of CA systems and system backup and recovery e. Viewing and maintenance of CA system archives and audit logs

(continued)

<i>Illustrative Controls:</i>	
	<p>f. Cryptographic key life cycle management functions (for example, key component custodians)</p> <p>g. CA systems development</p>
4	The CA's policies and procedures specify the background checks and clearance procedures required for trusted roles and nontrusted roles. As a minimum, verification checks on permanent staff are performed at the time of job application and periodically for those individuals undertaking trusted roles.
5	An individual's trusted status is approved prior to gaining access to systems and facilities or performing actions requiring trusted status.
6	CA employees and trusted roles sign a confidentiality (nondisclosure) agreement as a condition of employment.
7	Contractors who perform trusted roles are subject to at least the same background check and personnel management procedures as employees.
8	<p>Any contract arrangement between contractors and CAs allows for the provision of temporary contract personnel that explicitly allows the organization to take measures against contract staff who violate the organization's security policies. Protective measures may include</p> <p>a. bonding requirements on contract personnel;</p> <p>b. indemnification for damages due to contract personnel willful, harmful actions; and</p> <p>c. financial penalties.</p>
9	Periodic reviews occur to verify the continued trustworthiness of personnel involved in the activities related to key management and certificate management.
10	A formal disciplinary process exists and is followed for employees who have violated organizational security policies and procedures. The CA's policies and procedures specify the sanctions against personnel for unauthorized actions, unauthorized use of authority, and unauthorized use of systems.
11	Physical and logical access to CA facilities and systems is disabled upon termination of employment.
12	If required based on a risk assessment, duress alarms are provided for users who might be the target of coercion.
13	<p>All employees of the organization and, when relevant, third party contractors, receive appropriate training in organizational policies and procedures. The CA's policies and procedures specify the following:</p> <p>a. The training requirements and training procedures for each role</p> <p>b. Any retraining period and retraining procedures for each role</p>

3.4 Physical and Environmental Security

Criteria:	
The certification authority (CA) maintains controls to provide reasonable assurance that	
<ul style="list-style-type: none"> • physical access to CA facilities and equipment is limited to authorized individuals, protected through restricted security perimeters, and is operated under multiple person (at least dual custody) control; • CA facilities and equipment are protected from environmental hazards; • loss, damage, or compromise of assets and interruption to business activities are prevented; and • compromise of information and information processing facilities is prevented. 	

Illustrative Controls:	
	CA Facility Physical Security
1	Entry to the building or site containing the CA's certificate manufacturing facility is achieved only through a limited number of controlled access points.
2	All critical CA operations take place within a physically secure facility with at least four layers of security to access sensitive hardware or software. Such systems are physically separated from the organization's other systems so that only authorized employees of the CA can access them.
3	A manned reception area or other means to control physical access is in place to restrict access to the building or site housing CA operations to authorized personnel only.
4	Physical barriers are in place (for example, solid walls that extend from real floor to real ceiling) to prevent unauthorized entry and environmental contamination to the CAs certificate manufacturing facility.
5	Physical barriers are in place (for example, Faraday cage) to prevent electromagnetic radiation emissions for all root CA operations (for example, key generation and certification of CA certificates) as disclosed in certificate policy or certification practice statement, or both.
6	Fire doors on security perimeters around CA operational facilities are alarmed and conform to local fire regulations.
7	Intruder detection systems are installed and regularly tested to cover all external doors of the building housing the CA operational facilities.
8	CA operational facilities are physically locked and alarmed when unoccupied.
9	All personnel are required to wear visible identification. Employees are encouraged to challenge anyone not wearing visible identification.

(continued)

<i>Illustrative Controls:</i>	
10	Access to CA operational facilities is controlled and restricted to authorized persons through the use of multifactor authentication controls.
11	All personnel entering and leaving CA operational facilities are logged (that is, an audit trail of all access is securely maintained).
12	Entry, exit, and activities within CA facilities are monitored by cameras.
13	Visitors to CA facilities are supervised and their date and time of entry and departure recorded.
14	Third party support services personnel is granted restricted access to secure CA operational facilities only when required, and such access is authorized and accompanied.
15	Access rights to CA facilities are regularly reviewed and updated.
Equipment Security	
16	The CA maintains an equipment inventory.
17	Equipment is sited or protected to reduce the risks from environmental threats and hazards and opportunities for unauthorized access.
18	Equipment is protected from power failures and other electrical anomalies.
19	Power and telecommunications within the facility housing the CA operation, cabling carrying data, or supporting CA services is protected from interception or damage.
20	Equipment is maintained in accordance with the manufacturer's instructions or other documented procedures, or both.
21	All items of equipment containing storage media (fixed and removable disks) are checked to ensure that they do not contain sensitive data prior to their disposal. Storage media containing sensitive data is physically destroyed or securely overwritten prior to disposal or reused.
General Controls	
22	Sensitive or critical business information is locked away when not required and when the CA facility is vacated.
23	Procedures require that personal computers and workstations are logged off or protected by key locks, passwords, or other controls when not in use.
24	The movement of materials to and from the CA facility requires prior authorization.

3.5 Operations Management

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that

- the correct and secure operation of CA information processing facilities is ensured;
- the risk of CA systems failure is minimized;
- the integrity of CA systems and information is protected against viruses and malicious software;
- damage from security incidents and malfunctions is minimized through the use of incident reporting and response procedures; and
- media are securely handled to protect them from damage, theft, and unauthorized access.

Illustrative Controls:

Illustrative Controls:	
	Operational Procedures and Responsibilities
1	CA operating procedures are documented and maintained for each functional area.
2	Formal management responsibilities and procedures exist to control all changes to CA equipment, software, and operating procedures.
3	Duties and areas of responsibility are segregated in order to reduce opportunities for unauthorized modification or misuse of information or services.
4	Development and testing facilities are separated from operational facilities.
5	Prior to using external facilities management services, risks and related controls are identified, agreed upon with the contractor, and incorporated into the contract.
	System Planning and Acceptance
6	Capacity demands are monitored and projections of future capacity requirements made to ensure that adequate processing power and storage are available.
7	Acceptance criteria for new information systems, upgrades, and new versions are established and suitable tests of the system carried out prior to acceptance.
	Protection Against Viruses and Malicious Software
8	Detection and prevention controls to protect against viruses and malicious software are implemented. Employee awareness programs are in place.
	Incident Reporting and Response
9	A formal security incident reporting procedure exists, setting out the actions to be taken upon receipt of an incident report. This includes a definition and documentation of assigned responsibilities and escalation procedures. Any incidents are reported to the policy authority as a matter of urgency.

(continued)

<i>Illustrative Controls:</i>	
10	Users of CA systems are required to note and report observed or suspected security weaknesses in, or threats to, systems or services as they are detected.
11	Procedures exist and are followed for reporting hardware and software malfunctions.
12	Procedures exist and are followed to assess that corrective action is taken for reported incidents.
13	A formal problem management process exists that allows the types, volumes, and impacts of incidents and malfunctions to be documented, quantified, and monitored.
Media Handling and Security	
14	Procedures for the management of removable computer media require the following: <ul style="list-style-type: none"> a. If no longer required, the previous contents of any reusable media that are to be removed from the organization are erased or media is destroyed. b. Authorization is required for all media removed from the organization, and a record of all such removals to maintain an audit trail is kept. c. All media are stored in a safe, secure environment, in accordance with manufacturers' specifications.
15	Equipment containing storage media (that is, fixed hard disks) is checked to determine whether they contain any sensitive data prior to disposal or reuse. Storage devices containing sensitive information are physically destroyed or securely overwritten prior to disposal or reuse.
16	Procedures for the handling and storage of information exist and are followed in order to protect such information from unauthorized disclosure or misuse.
17	System documentation is protected from unauthorized access.

3.6 System Access Management

<i>Criteria:</i>
<p>The certification authority (CA) maintains controls to provide reasonable assurance that CA system access is limited to authorized individuals. Such controls provide reasonable assurance that</p> <ul style="list-style-type: none"> • operating system and database access is limited to authorized individuals with predetermined task privileges; • access to network segments housing CA systems is limited to authorized individuals, applications, and services; and • CA application use is limited to authorized individuals.

<i>Illustrative Controls:</i>	
	User Access Management
1	Business requirements for access control are defined and documented in an access control policy that includes at least the following: <ol style="list-style-type: none"> a. Roles and corresponding access permissions b. Identification and authentication process for each user c. Segregation of duties d. Number of persons required to perform specific CA operations (that is, m of n rule, where m represents the number of key shareholders required to perform an operation, and n represents the total number of key shares)
2	A formal user registration and deregistration procedure for access to CA information systems and services exists.
3	The allocation and use of privileges is restricted and controlled.
4	The allocation of passwords is controlled through a formal management process.
5	Access rights for users with trusted roles are reviewed at regular intervals and updated.
6	Users are required to follow defined policies and procedures in the selection and use of passwords.
7	Users are required to ensure that unattended equipment has appropriate protection.
	Network Access Control
8	CA employed personnel are provided direct access only to the services that they have been specifically authorized to use. The path from the user terminal to computer services is controlled.
9	Remote access to CA systems made by CA employees or external systems, if permitted, requires authentication.
10	Connections made by CA employees or CA systems to remote computer systems are authenticated.
11	Access to diagnostic ports is securely controlled.
12	Controls (for example, firewalls) are in place to protect the CA's internal network domain from any unauthorized access from any other domain.
13	Controls are in place to limit the network services (for example, HTTP, FTP, and so forth) available to authorized users in accordance with the CA's access control policies. The security attributes of all network services used by the CA organization are documented by the CA.
14	Routing controls are in place to ensure that computer connections and information flows do not breach the CA's access control policy.

(continued)

<i>Illustrative Controls:</i>	
15	The CA maintains local network components (for example, firewalls and routers) in a physically secure environment and audits their configurations periodically for compliance with the CA's configuration requirements.
16	Sensitive data is encrypted when exchanged over public or untrusted networks.
Operating System and Database Access Control	
17	Operating systems and databases are configured in accordance with the CA's system configuration standards and periodically reviewed and updated.
18	Operating system and database patches and updates are applied in a timely manner when deemed necessary based on a risk assessment.
19	Automatic terminal identification is used to authenticate connections to specific locations and to portable equipment.
20	Access to CA systems requires a secure logon process.
21	All CA personnel users have a unique identifier (user ID) for their personal and sole use so that activities can be traced to the responsible individual. When shared or group accounts are required, other monitoring controls are implemented to maintain individual accountability.
22	Uses of system utility programs are restricted to authorized personnel and tightly controlled.
23	Inactive terminals serving CA systems require reauthentication prior to use.
24	Restrictions on connection times are used to provide additional security for high risk applications.
25	Sensitive data is protected against disclosure to unauthorized users.
Application Access Control	
26	Access to information and application system functions is restricted in accordance with the CA's access control policy.
27	CA personnel are successfully identified and authenticated before using critical applications related to certificate management.
28	Sensitive systems (for example, root CA) require a dedicated (isolated) computing environment.

3.7 Systems Development and Maintenance

<i>Criteria:</i>
The certification authority (CA) maintains controls to provide reasonable assurance that CA systems development and maintenance activities are documented, tested, authorized, and properly implemented to maintain CA system integrity.

Illustrative Controls:	
1	Business requirements for new systems or enhancements to existing systems specify the control requirements.
2	Software testing and change control procedures exist and are followed for the implementation of software on operational systems, including scheduled software releases, modifications, and emergency software fixes.
3	Change control procedures exist and are followed for the hardware, network component, and system configuration changes.
4	Test data is protected and controlled.
5	Control is maintained over access to program source libraries.
6	Application systems are reviewed and tested when operating system changes occur.
7	The implementation of changes is strictly controlled by the use of formal change control procedures to minimize the risk of corruption of information systems.
8	Modifications to software packages are discouraged, and all changes are strictly controlled.
9	The purchase, use, and modification of software are controlled and checked to protect against possible covert channels and Trojan code. This includes the authentication of the source of the software. These controls apply equally to outsourced software development.

3.8 Business Continuity Management

Criteria:
<p>The certification authority (CA) maintains controls to provide reasonable assurance of continuity of operations in the event of a disaster. Such controls include, at a minimum</p> <ul style="list-style-type: none"> • the development and testing of a CA business continuity plan that includes a disaster recovery process for critical components of the CA system; • the storage of required cryptographic materials (that is, secure cryptographic device and activation materials) at an alternate location; • the storage of backups of systems, data, and configuration information at an alternate location; and • the availability of an alternate site, equipment, and connectivity to enable recovery. <p>The CA maintains controls to provide reasonable assurance that potential disruptions to subscribers and relying parties are minimized as a result of the cessation or degradation of the CA's services.</p>

Illustrative Controls:	
1	The CA has a managed process for developing and maintaining its business continuity plans. The CA has a business continuity planning strategy based on an appropriate risk assessment.

(continued)

<i>Illustrative Controls:</i>	
2	<p>The CA has a business continuity plan to maintain or restore the CA's operations in a timely manner following interruption to, or failure of, critical CA processes. The CA's business continuity plan addresses the following:</p> <ol style="list-style-type: none"> a. The conditions for activating the plans b. Emergency procedures c. Fallback procedures d. Resumption procedures e. A maintenance schedule for the plan f. Awareness and education requirements g. The responsibilities of the individuals h. Recovery time objective i. Regular testing of contingency plans
3	<p>The CA's business continuity plans include disaster recovery processes for all critical components of a CA system, including the hardware, software, and keys, in the event of a failure of one or more of these components. Specifically</p> <ol style="list-style-type: none"> a. cryptographic devices used for storage of backup CA private keys are securely stored at an off-site location in order for the CA to recover in the event of a disaster at the primary CA facility; and b. the requisite secret key shares or key components needed to use and manage the disaster recovery cryptographic devices are securely stored at an off-site location.
4	<p>Backup copies of essential business information are regularly taken. The security requirements of these copies are consistent with the controls for the information backed up.</p>
5	<p>The CA identifies and arranges for an alternate site where core public key infrastructure operations can be restored in the event of a disaster at the CA's primary site. Fallback equipment and backup media are sited at a safe distance to avoid damage from disaster at the main site.</p>
6	<p>The CA's business continuity plans include procedures for securing its facility to the extent possible during the period of time following a disaster and prior to restoring a secure environment either at the original or a remote site.</p>
7	<p>The CA's business continuity plans address the recovery procedures used if computing resources, software, or data are corrupted or suspected to be corrupted.</p>
8	<p>Business continuity plans are tested regularly to ensure that they are up to date and effective.</p>
9	<p>Business continuity plans define an acceptable system outage time, recovery time, and the average time between failures as disclosed in the certificate policy (CP) or certification practice statement (CPS), or both.</p>
10	<p>Business continuity plans are maintained by regular reviews and updates to ensure their continuing effectiveness.</p>

Illustrative Controls:

11	The CA maintains procedures for the termination, notification of affected entities, and for transferring relevant archived CA records to a custodian as disclosed in the CP or CPS, or both.
----	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

3.9 Monitoring and Compliance**Criteria:**

The certification authority (CA) maintains controls to provide reasonable assurance that

- it conforms with the relevant legal, regulatory, and contractual requirements;
- compliance with the CA's security policies and procedures is ensured;
- the effectiveness of the system audit process is maximized and interference to and from the system audit process is minimized; and
- unauthorized CA system usage is detected.

Illustrative Controls:

Compliance With Legal Requirements	
1	Relevant statutory, regulatory, and contractual requirements are explicitly defined and documented.
2	The CA has implemented procedures to comply with legal restrictions on the use of material in respect of intellectual property rights and on the use of proprietary software products.
3	Controls are in place to ensure compliance with national agreements, laws, regulations, or other instruments to control the access to, or use of, cryptographic hardware and software.
4	Procedures exist to ensure that personal information is protected in accordance with relevant legislation.
5	The information security policy addresses the following: <ol style="list-style-type: none"> a. The information that must be kept confidential by CA or registration authority b. The information that is not considered confidential c. The policy on release of information to law enforcement officials d. Information that can be revealed as part of civil discovery e. The conditions upon which information may be disclosed with the subscriber's consent f. Any other circumstances under which confidential information may be disclosed
6	CA records are protected from loss, unauthorized destruction, and falsification.
7	Management authorizes the use of information processing facilities, and controls are applied to prevent the misuse of such facilities.

(continued)

Illustrative Controls:	
	Review of Security Policy and Technical Compliance
8	Managers are responsible for ensuring that security procedures within their area of responsibility are carried out correctly.
9	The CA's operations are subject to regular review to ensure timely compliance with its certification practice statement.
10	CA systems are periodically checked for compliance with security implementation standards.
System Audit Process	
11	Audits of operational systems are planned and agreed to minimize the risk of disruptions to business processes.
12	Access to system audit tools is protected to prevent possible misuse or compromise.
Monitoring System Access and Use	
13	Procedures for monitoring the use of CA systems are established, which include the timely identification and follow up of unauthorized or suspicious activity. Alerting mechanisms are implemented to detect unauthorized access.

3.10 Audit Logging

Criteria:	
<p>The certification authority (CA) maintains controls to provide reasonable assurance that</p> <ul style="list-style-type: none"> • significant CA environmental, key management, and certificate management events are accurately and appropriately logged; • the confidentiality and integrity of current and archived audit logs are maintained; • audit logs are completely and confidentially archived in accordance with disclosed business practices; and • audit logs are reviewed periodically by authorized personnel. 	

Illustrative Controls:	
Audit Logs	
1	The CA generates automatic (electronic) and manual audit logs in accordance with the requirements of the certificate policy (CP) or certification practice statement (CPS).
2	<p>All journal entries include the following elements:</p> <ol style="list-style-type: none"> a. Date and time of the entry b. Serial or sequence number of entry (for automatic journal entries) c. Kind of entry d. Source of entry (for example, terminal, port, location, customer, and so forth) e. Identity of the entity making the journal entry

<i>Illustrative Controls:</i>	
	Events Logged
3	<p>The CA logs the following CA and subscriber (if applicable) key life cycle management related events:</p> <ul style="list-style-type: none"> a. CA key generation b. Installation of manual cryptographic keys and its outcome (with the identity of the operator) c. CA key backup d. CA key storage e. CA key recovery f. CA key escrow activities (if applicable) g. CA key usage h. CA key archival i. Withdrawal of keying material from service j. CA key destruction k. Identity of the entity authorizing a key management operation l. Identity of the entities handling any keying material (such as key components or keys stored in portable devices or media) m. Custody of keys and of devices or media holding keys n. Compromise of a private key
4	<p>The CA logs the following cryptographic device life cycle management related events:</p> <ul style="list-style-type: none"> a. Device receipt and installation b. Placing into or removing a device from storage c. Device activation and usage d. Device deinstallation e. Designation of a device for service and repair f. Device retirement
5	<p>If the CA provides subscriber key management services, the CA logs the following subscriber key life cycle management related events:</p> <ul style="list-style-type: none"> a. Key generation b. Key distribution (if applicable) c. Key backup (if applicable) d. Key escrow (if applicable) e. Key storage f. Key recovery (if applicable) g. Key archival (if applicable) h. Key destruction i. Identity of the entity authorizing a key management operation j. Key compromise

(continued)

<i>Illustrative Controls:</i>	
6	<p>The CA records (or requires that the registration authority [RA] record) the following certificate application information:</p> <ol style="list-style-type: none"> a. The method of identification applied, and information used to meet, subscriber requirements b. Record of unique identification data, numbers, or a combination thereof (for example, applicant's driver's license number) of identification documents, if applicable c. Storage location of copies of applications and identification documents d. Identity of entity accepting the application e. Method used to validate identification documents, if any f. Name of receiving CA or submitting RA, if applicable g. The subscriber's acceptance of the subscriber agreement h. When required under privacy legislation, the subscriber's consent to allow the CA to keep records containing personal data, pass this information to specified third parties, and publication of certificates
7	<p>The CA logs the following certificate life cycle management related events:</p> <ol style="list-style-type: none"> a. Receipt of requests for certificate(s), including initial certificate requests, renewal requests, and rekey requests b. Submissions of public keys for certification c. Change of affiliation of an entity d. Generation of certificates e. Distribution of the CA's public key f. Certificate revocation requests g. Certificate revocation h. Certificate suspension requests (if applicable) i. Certificate suspension and reactivation j. Generation and issuance of certificate revocation lists
8	<p>The CA logs the following security-sensitive events:</p> <ol style="list-style-type: none"> a. Security-sensitive files or records read or written, including the audit log itself b. Actions taken against security-sensitive data c. Security profile changes d. Use of identification and authentication mechanisms, both successful and unsuccessful (including multiple failed authentication attempts) e. System crashes, hardware failures, and other anomalies f. Actions taken by individuals in trusted roles, computer operators, system administrators, and system security officers g. Change of affiliation of an entity

<i>Illustrative Controls:</i>	
	<p><i>h.</i> Decisions to bypass encryption and authentication processes or procedures</p> <p><i>i.</i> Access to the CA system or any component thereof</p>
9	Audit logs do not record the private keys in any form (for example, plaintext or enciphered).
10	CA computer system clocks are synchronized for accurate recording as defined in the CP or CPS, or both, that specifies the accepted time source.
Audit Log Protection	
11	Current and archived audit logs are maintained in a form that prevents their modification, substitution, or unauthorized destruction.
12	Digital signatures are used to protect the integrity of audit logs, when applicable, or are required to satisfy legal requirements.
13	The private key used for signing audit logs is not used for any other purpose. This applies equally to a symmetric secret key used with a symmetric message authentication code (MAC) mechanism.
Audit Log Archival	
14	The CA archives audit log data on a periodic basis as disclosed in the CP or CPS, or both.
15	In addition to possible regulatory stipulation, a risk assessment is performed to determine the appropriate length of time for retention of archived audit logs.
16	The CA maintains archived audit logs at a secure off-site location for a predetermined period as determined by risk assessment and legal requirements.
Review of Audit Logs	
17	Current and archived audit logs are only retrieved by authorized individuals for valid business or security reasons.
18	Audit logs are reviewed periodically according to the practices established in the CPS. The review of current and archived audit logs include a validation of the audit logs' integrity and the timely identification and follow-up of unauthorized or suspicious activity.

4. CA Key Life Cycle Management Controls

.58 The certification authority (CA) maintains effective controls to provide reasonable assurance that the integrity of the keys and certificates it manages is established and protected throughout their life cycles.

4.1 CA Key Generation

Criteria:	
<p>The certification authority (CA) maintains controls to provide reasonable assurance that CA key pairs are generated in accordance with the CA's disclosed business practices and defined procedures specified within detailed key generation ceremony scripts.</p> <p>The CA's disclosed business practices include, but are not limited to, the following:</p> <ol style="list-style-type: none"> a. Generation of CA keys is undertaken in a physically secured environment (see section 3.4). b. Generation of CA keys is performed by personnel in trusted roles (see section 3.3) under the principles of multiple person control and split knowledge. c. Generation of CA keys occurs within cryptographic modules, meeting the applicable technical and business requirements as disclosed in the CA's certification practice statement (CPS). d. Generation of CA keys is witnessed by an independent party or videotaped, or both. e. CA key generation activities are logged. <p>The CA key generation script includes the following:</p> <ol style="list-style-type: none"> a. Definition of roles and participant responsibilities b. Approval for conduct of the key generation ceremony c. Cryptographic hardware and activation materials required for the ceremony d. Specific steps performed during the key generation ceremony e. Physical security requirements for the ceremony location f. Procedures for secure storage of cryptographic hardware and activation materials following the key generation ceremony g. Sign-off from participants and witnesses indicating whether the key generation ceremony was performed in accordance with the detailed key generation ceremony script h. Notation of any deviations from the key generation ceremony script 	

Illustrative Controls:	
	Generation of CA Keys Including Root CA Keys—General Requirements
1	Generation of CA keys occurs within a cryptographic module, meeting the applicable requirements of ISO 15782-1/FIPS 140-2 (or equivalent)/ANSI X9.66 and the business requirements in accordance with the CPS. Such cryptographic devices perform key generation using a random number generator or pseudo random number generator.
2	The CA generates its own key pair in the same cryptographic device in which it will be used, or the key pair is injected directly

<i>Illustrative Controls:</i>	
	from the device where it was generated into the device where it will be used.
3	<p>CA key generation generates keys that</p> <ol style="list-style-type: none"> a. use a key generation algorithm as disclosed within the CA's CP or CPS, or both. b. have a key length that is appropriate for the algorithm and for the validity period of the CA certificate as disclosed in the CA's CP or CPS, or both. The public key length to be certified by a CA is less than or equal to that of the CA's private signing key. c. take into account requirements on parent and subordinate CA key sizes and have a key size in accordance with the CA's CP or CPS, or both.
4	CA key generation ceremonies are independently witnessed by internal or external auditors.
Generation of CA Keys Including Root CA Keys—Script Requirements	
5	<p>The CA follows a CA key generation script for key generation ceremonies that includes the following:</p> <ol style="list-style-type: none"> a. Definition and assignment of participant roles and responsibilities b. Management approval for conduct of the key generation ceremony c. Specific cryptographic hardware, software, and other materials, including identifying information, for example, serial numbers d. Specific steps performed during the key generation ceremony <ol style="list-style-type: none"> i. Hardware preparation ii. Operating system installation iii. CA application installation and configuration iv. CA key generation v. CA key backup vi. CA certificate signing vii. CA system shutdown viii. Preparation of materials for storage e. Physical security requirements for the ceremony location (for example, barriers, access controls, and logging controls) f. Procedures for secure storage of cryptographic hardware and activation materials following the key generation ceremony (for example, detailing the allocation of materials between storage locations) g. Sign-off on the script or in a log from participants and witnesses, indicating whether the key generation ceremony was performed in accordance with the detailed key generation ceremony script h. Notation of any deviations from the key generation ceremony

(continued)

Illustrative Controls:	
	script (for example, documentation of steps taken to address any technical issues)
6	The integrity of the hardware and software used for key generation, and the interfaces to the hardware and software, is tested before production usage.

4.2 CA Key Storage, Backup, and Recovery

Criteria:
The certification authority (CA) maintains controls to provide reasonable assurance that CA private keys remain confidential and maintain their integrity. The CA's private keys are backed up, stored, and recovered by authorized personnel in trusted roles, using multiple person control in a physically secured environment.

Illustrative Controls:	
1	The CA's private (signing and confidentiality) keys are stored and used within a secure cryptographic device meeting the appropriate ISO 15408 protection profile or FIPS 140-2 level requirement based on a risk assessment and the business requirements of the CA and in accordance with the CA's certification practice statement and applicable certificate policy(s).
2	If the CA's private keys are not exported from a secure, cryptographic module, then the CA private key is generated, stored, and used within the same cryptographic module.
3	If the CA's private keys are exported from a secure, cryptographic module to secure storage for purposes of offline processing or backup and recovery, then they are exported within a secure key management scheme that may include any of the following: <ol style="list-style-type: none"> a. As cipher-text, using a key which is appropriately secured b. As encrypted key fragments, using multiple control and split knowledge and ownership c. In another secure cryptographic module, such as a key transportation device, using multiple control
4	Backup copies of the CA's private keys are subject to the same, or greater, level of security controls as keys currently in use. The recovery of the CA's keys is carried out in as secure a manner as the backup process, using multiperson control.

4.3 CA Public Key Distribution

Criteria:
The certification authority (CA) maintains controls to provide reasonable assurance that the integrity and authenticity of the CA public keys, and any associated parameters, are maintained during initial and subsequent distribution.

Illustrative Controls:	
1	For the root CA distribution process (that is, using a self-signed certificate), an out-of-band notification mechanism is employed. When a self-signed certificate is used for any CA, the CA provides a mechanism to verify the authenticity of the self-signed certificate (for example, publication of the certificate's fingerprint). For subsequent or subordinate CA public keys, or both, validation is completed by using a chaining method or similar process to link back to the trusted root certificate.
2	The initial distribution mechanism for the CA's public key is controlled and initially distributed within a certificate using one of the following methods: <ol style="list-style-type: none"> Machine readable media (for example, smart card, CD-ROM) from an authenticated source Embedding in an entity's cryptographic module Other secure means that ensure authenticity and integrity
3	The CA's public key is changed (rekeyed) periodically according to the requirements of the certification practice statement with advance notice provided to avoid disruption of the CA services.
4	The subsequent distribution mechanism for the CA's public key is controlled in accordance with the CA's disclosed business practices.
5	If an entity already has an authenticated copy of the CA's public key, a new CA public key is distributed using one of the following methods: <ol style="list-style-type: none"> Direct electronic transmission from the CA Placing into a remote cache or directory Loading into a cryptographic module Any of the methods used for initial distribution
6	The CA provides a mechanism for validating the authenticity and integrity of the CA's public keys.

4.4 CA Key Usage

Criteria:	
The certification authority (CA) maintains controls to provide reasonable assurance that CA keys are used only for their intended functions in their predetermined locations.	

Illustrative Controls:	
1	The activation of the CA private signing key is performed using multiparty control (that is, m of n) with a minimum value of m (for example, m greater than two for root CAs).

(continued)

<i>Illustrative Controls:</i>	
2	If necessary, based on a risk assessment, the activation of the CA private key is performed using multifactor authentication (for example, smart card and password, biometric and password, and so forth).
3	CA signing key(s) used for generating certificates or issuing revocation status information, or both, are not used for any other purpose.
4	The CA ceases to use a key pair at the end of the key pair's defined operational lifetime or when the compromise of the private key is known or suspected.
5	An annual review is required by the policy authority on key lengths to determine the appropriate key usage period with recommendations acted upon.

4.5 CA Key Archival and Destruction

<i>Criteria:</i>
<p>The certification authority (CA) maintains controls to provide reasonable assurance that</p> <ul style="list-style-type: none"> archived CA keys remain confidential and secured and are never put back into production, and CA keys are completely destroyed at the end of the key pair life cycle in accordance with the CA's disclosed business practices.

<i>Illustrative Controls:</i>	
	CA Key Archival
1	Archived CA keys are subject to the same, or greater, level of security controls as keys currently in use.
2	All archived CA keys are destroyed at the end of the archive period using dual control in a physically secure site.
3	Archived keys are only accessed when historical evidence requires validation. Control processes are required to ensure the integrity of the CA systems and the key sets.
4	Archived keys are recovered for the shortest possible time period technically permissible to meet business requirements.
5	Archived keys are periodically verified to ensure that they are properly destroyed at the end of the archive period.
	CA Key Destruction
6	The CA's private keys are not destroyed until the business purpose or application has ceased to have value or legal obligations have expired, as disclosed within the CA's certification practice statement (CPS).

Illustrative Controls:	
7	Authorization to destroy a CA private key and how the CA's private key is destroyed (for example, token surrender, token destruction, or key overwrite) are limited in accordance with the CA's CPS.
8	All copies and fragments of the CA's private key are destroyed at the end of the key pair life cycle in a manner such that the private key cannot be retrieved.
9	If a secure cryptographic device is accessible and known to be permanently removed from service, all CA private keys stored within the device that have ever been, or potentially could be, used for any cryptographic purpose are destroyed.
10	If a CA cryptographic device is being permanently removed from service, then any key contained within the device that has been used for any cryptographic purpose is erased from the device.
11	If a CA cryptographic device case is intended to provide tamper-evident characteristics and the device is being permanently removed from service, then the case is destroyed.

4.6 CA Key Compromise

Criteria:
The certification authority (CA) maintains controls to provide reasonable assurance that continuity of operations is maintained in the event of the compromise of the CA's private keys, and any certificates signed with the compromised keys are revoked and reissued.

Illustrative Controls:	
1	The CA's business continuity plans address the compromise, or suspected compromise, of a CA's private keys as a disaster.
2	Disaster recovery procedures include the revocation and reissuance of all certificates that were signed with that CA's private key in the event of the compromise, or suspected compromise, of a CA's private signing key.
3	The recovery procedures used if the CA's private key is compromised include the following actions: <ol style="list-style-type: none"> a. How secure key usage in the environment is reestablished b. How the CA's old public key is revoked c. How affected parties are notified (for example, impacted CAs, repositories, subscribers, and competitive video service providers) d. How the CA's new public key is provided to the end entities and relying parties, together with the mechanism for their authentication e. How the subscriber's public keys are recertified

(continued)

<i>Illustrative Controls:</i>	
4	In the event that the CA has to replace its root CA private key, procedures are in place for the secure and authenticated revocation of the following: <ol style="list-style-type: none"> a. The old CA root public key b. The set of all certificates (including any self-signed) issued by a root CA, or any CA, based on the compromised private key c. Any subordinate CA public keys and corresponding certificates that require recertification.
5	The CA's business continuity plan for key compromise addresses who is notified and what actions are taken with system software and hardware, symmetric and asymmetric keys, previously generated signatures, and encrypted data.

4.7 CA Cryptographic Hardware Life Cycle Management

<i>Criteria:</i>	
The certification authority (CA) maintains controls to provide reasonable assurance that	
<ul style="list-style-type: none"> • devices used for private key storage and recovery, and the interfaces to these devices, are tested before usage for integrity; • access to CA cryptographic hardware is limited to authorized personnel in trusted roles, using multiple person control; and • CA cryptographic hardware is functioning correctly. 	

<i>Illustrative Controls:</i>	
1	CA cryptographic hardware is sent from the manufacturer via registered mail (or equivalent) using tamper-evident packaging. Upon the receipt of CA cryptographic hardware from the manufacturer, authorized CA personnel inspects the tamper-evident packaging to determine whether the seal is intact.
2	Upon the receipt of CA cryptographic hardware from the manufacturer, acceptance testing and verification of firmware settings is performed. Upon the receipt of CA cryptographic hardware that has been serviced or repaired, acceptance testing and verification of firmware settings is performed.
3	To prevent tampering, CA cryptographic hardware is stored and used in a secure site, with access limited to authorized personnel having the following characteristics: <ol style="list-style-type: none"> a. Inventory control processes and procedures to manage the origination, arrival, condition, departure, and destination of each device b. Access control processes and procedures to limit physical access to authorized personnel c. Recording of all successful or failed access attempts to the CA facility and device storage mechanism (for example, a safe) in audit logs

Illustrative Controls:	
	<ul style="list-style-type: none"> d. Incident handling processes and procedures to handle abnormal events, security breaches, and investigation and reports e. Monitoring processes and procedures to verify the ongoing effectiveness of the controls
4	When not attached to the CA system, the CA cryptographic hardware is stored in a tamper-resistant container that is stored securely under multiple controls (that is, a safe).
5	<p>The handling of CA cryptographic hardware, including the following tasks, is performed in the presence of no less than two trusted employees:</p> <ul style="list-style-type: none"> a. Installation of CA cryptographic hardware b. Removal of CA cryptographic hardware from production c. Servicing or repair of CA cryptographic hardware (including installation of new hardware, firmware, or software) d. Disassembly and permanent removal from use
6	Devices used for private key storage and recovery, and the interfaces to these devices, are tested before usage for integrity.
7	Correct processing of CA cryptographic hardware is verified on a periodic basis.
8	Diagnostic support is provided during troubleshooting of CA cryptographic hardware in the presence of no less than two trusted employees.

4.8 CA Key Escrow (if applicable)

Criteria:
The certification authority (CA) maintains controls to provide reasonable assurance that escrowed CA private signing keys remain confidential.

Illustrative Controls:	
1	If a third party provides CA private key escrow services, a contract exists that outlines the liabilities and remedies between the parties.
2	If CA private signing keys are held in escrow, escrowed copies of the CA private signing keys have the same, or greater, level of security controls as keys currently in use.

5. Subscriber Key Life Cycle Management Controls

.59 The certification authority (CA) maintains effective controls to provide reasonable assurance that the integrity of the subscriber keys and certificates it manages is established and protected throughout their life cycles.

5.1 CA-Provided Subscriber Key Generation Services (if supported)

Criteria:	
<p>If the certification authority (CA) provides subscriber key management services, the CA maintains controls to provide reasonable assurance that</p> <ul style="list-style-type: none"> • subscriber keys generated by the CA (or registration authority [RA] or card bureau) are generated within a secure cryptographic device based on a risk assessment and the business requirements of the CA in accordance with the CA's disclosed business practices, and • subscriber keys generated by the CA (or RA or card bureau) are securely distributed to the subscriber by the CA (or RA or card bureau) in accordance with the CA's disclosed business practices. 	

Illustrative Controls:	
	CA- (or RA or Card Bureau) Provided Subscriber Key Generation
1	Subscriber key generation is performed within a secure cryptographic device, meeting the applicable ISO 15782-1/FIPS 140-2/ANSI X9.66 requirements based on a risk assessment and the business requirements of the CA and in accordance with the applicable certificate policy (CP). Such cryptographic devices perform subscriber key generation using a random number generator or pseudo random number generator as specified in the ANSI X9 or ISO standard ISO/IEC 18032.
2	Subscriber key generation performed by the CA (or RA or card bureau) uses a key generation algorithm, as specified in the CP.
3	Subscriber key generation performed by the CA (or RA) uses a prime number generator, as specified in an ANSI X9 or ISO standard.
4	Subscriber key generation performed by the CA (or RA or card bureau) results in key sizes in accordance with the CP.
5	Subscriber key generation performed by the CA (or RA) is performed by authorized personnel in accordance with the CA's certification practice statement.
6	When subscriber key generation is performed by the CA (or RA or card bureau), the CA (or RA or card bureau) securely (confidentially) delivers the subscriber key pair(s) generated by the CA (or RA or card bureau) to the subscriber in accordance with the CP.

5.2 CA-Provided Subscriber Key Storage and Recovery Services (if supported)

Criteria:	
<p>If the certification authority (CA) provides subscriber (confidentiality) key storage, recovery, or escrow services, the CA maintains controls to provide reasonable assurance that</p> <ul style="list-style-type: none"> • subscriber private keys stored by the CA remain confidential and maintain their integrity; • subscriber private keys archived and escrowed by the CA remain confidential; and • subscriber private keys stored by the CA are completely destroyed at the end of the key pair life cycle. 	

Illustrative Controls:	
CA-Provided Subscriber Key Storage, Backup, and Recovery	
1	Subscriber private keys stored by the CA (or registration authority [RA]) are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and requirements of the certificate policy (CP).
2	If the CA generates key pair(s) on behalf of a subscriber, the CA (or RA) ensures that the subscriber's private keys are not disclosed to any entity other than the owner (that is, the subscriber) of the keys.
3	If the CA (or RA) generates public and private signing key pair(s), it does not maintain a copy of any private signing key once the subscriber confirms receipt of that key.
4	If the CA (or RA) provides subscriber (confidentiality) key storage, backup, and recovery, subscriber private (confidentiality) key backup and recovery services are only performed by authorized personnel.
5	If the CA (or RA) provides subscriber key storage, backup, and recovery, controls exist to ensure that the integrity of the subscriber's private (confidentiality) key is maintained throughout its life cycle.
CA-Provided Subscriber Key Archival	
6	Subscriber private (confidentiality) keys archived by the CA are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and the requirements of the CP.
7	If the CA provides subscriber (confidentiality) key archival, all archived subscriber keys are destroyed at the end of the archive period.
CA-Provided Subscriber Key Destruction	
8	If the CA provides subscriber (confidentiality) key storage, authorization to destroy a subscriber's private key, and the means

(continued)

Illustrative Controls:	
	to destroy the subscriber’s private (confidentiality) key, (for example, key overwrite) is limited in accordance with the CP.
9	If the CA provides subscriber (confidentiality) key storage, all copies and fragments of the subscriber’s private key are destroyed at the end of the key pair life cycle.
CA-Provided Subscriber Key Escrow	
10	Subscriber private (confidentiality) keys escrowed by the CA are stored in encrypted form using a cryptographic algorithm and key length based on a risk assessment and the requirements of the CP.

5.3 Integrated Circuit Card Life Cycle Management (if supported)

Criteria:	
<p>If the certification authority (CA) (or registration authority [RA]) distributes subscriber key pairs and certificates using integrated circuit cards (ICCs), the CA (or RA) maintains controls to provide reasonable assurance that</p> <ul style="list-style-type: none"> • ICC procurement, preparation, and personalization are securely controlled by the CA (or RA or card bureau); • ICC application data file (ADF) preparation is securely controlled by the CA (or RA); • ICC usage is enabled by the CA (or RA or card bureau) prior to ICC issuance; • ICC deactivation and reactivation are securely controlled by the CA (or RA); • ICCs are securely stored and distributed by the CA (or RA or card bureau); • ICCs are securely replaced by the CA (or RA or card bureau); and • ICCs returned to the CA (or RA or card bureau) are securely terminated. 	

Illustrative Controls:	
ICC Procurement	
1	If the CA or RA engages a card bureau, then a formal contract exists between the relevant parties. Although card issuing functions may be delegated to third parties, the CA retains responsibility and liability for the ICCs.
2	ICCs are logically protected during transport between the card manufacturer and the card issuer through the use of a secret transport key or pass phrase.
3	ICCs issued to subscribers meet the appropriate ISO 15408 protection profile, ISO card standard (for example, ISO 7810, 7811 parts 1-5, 7813, 7816, 10202) or Federal Information Processing Standards (FIPS) 140-2 level requirement based on a risk assessment and the requirements of the certificate policy (CP).
4	The card bureau verifies the physical integrity of ICCs upon receipt from the card manufacturer.
5	ICCs are securely stored and under inventory control while under the control of the card issuer.

<i>Illustrative Controls:</i>	
	Card Preparation and Personalization
6	The CA (or RA), as the card issuer, controls ICC personalization (the loading of common data file [CDF] data and its related cryptographic keys).
7	Common data that identify the ICC, the card issuer, and the cardholder are stored by the card issuer in the ICC CDF. CDF activation is performed by the CA (or RA), as the card issuer, using a securely controlled process.
8	ICC preparation processes and procedures, including the following, exist and are followed: <ul style="list-style-type: none"> a. Loading of the card operating system b. Creation of logical data structures (card file system and card security domains) c. Loading of applications d. Logically protecting the ICC to prevent unauthorized modification of the card operating system, card file system, card security domains, and applications
9	ICC personalization processes and procedures, including the following, exist and are followed: <ul style="list-style-type: none"> a. The loading of identifying information onto the card b. Generation of subscriber key pair(s) in accordance with the CP c. Loading subscriber private key(s) onto the ICC (if generated outside the card) in encrypted form d. Loading subscriber certificate(s) onto the ICC e. Loading the CA and other certificates for the contractual environment onto the ICC f. Logically protecting the ICC from unauthorized access
10	The card bureau or CA (or RA) logs ICC preparation and personalization in an audit log.
11	An ICC is not issued unless the card has been prepared and personalized by the card bureau, the CA, or the RA.
12	An ICC is unusable unless in an activated or reactivated state.
	ICC Storage and Distribution
13	ICCs are securely stored prior to distribution.
14	Processes and procedures exist and are followed for the distribution, tracking, and accounting for the safe receipt of subscriber ICCs to subscribers.
15	ICC initial activation data (initializing personal identification number [PIN]) is securely communicated to the subscriber or, when applicable, to the subscriber using an out-of-band method. The subscriber is encouraged to change the initial activation data upon receipt to make the card active.
16	ICC distribution is logged by the card bureau or CA (or RA) in an audit log.

(continued)

<i>Illustrative Controls:</i>	
	Subscriber ICC Usage
17	The subscriber is provided with a mechanism that protects the access to the card data, including the private keys stored on the ICC during use by the subscriber (that is, PIN access control mechanism cardholder verification method).
18	The subscriber private keys on the ICC are not exported to an application to undertake cryptographic (that is, signing) functions.
19	The subscriber is required to use a mutual authentication mechanism for cryptographic application and card functions to ensure system integrity.
20	The subscriber is required to use an application that displays the message or the message's digest to the subscriber prior to signing message (or transaction) data. The subscriber ICC application produces audit logs of all uses of the ICC. This also includes all attempts in the private key owner verification process.
21	The ICC is used by the subscriber or, when applicable, the subscriber in accordance within the terms of the CP.
	ICC Deactivation and Reactivation
22	ADF deactivation can be performed only by the CA, as the application supplier.
23	CDF deactivation can be performed only by the CA, as the card issuer.
24	CDF reactivation is conducted under the control of the CA, as the card issuer.
25	ADF reactivation is conducted under the control of the CA, as the application supplier.
26	ADF deactivation, CDF deactivation, CDF reactivation, and ADF reactivation are logged.
	ICC Replacement
27	Processes and procedures exist and are followed for replacement of a subscriber's lost or damaged ICC.
28	In the event of card loss or damage, subscriber certificates are renewed or rekeyed in accordance with the CP (see clauses 6.2 and 6.3).
29	ICC replacement is logged by the card bureau or CA (or RA) in an audit log.
	ICC Termination
30	All ICCs returned to the ICC or CA (or RA) are deactivated or securely destroyed to prevent unauthorized use.
31	CDF termination is controlled by the CA, as the card issuer.
32	ICC termination is logged by the card bureau or CA (or RA) in an audit log.

5.4 Requirements for Subscriber Key Management

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that

- requirements for protection of subscriber keys are communicated to subscribers, and
- any subscriber key management tools provided by the CA support the requirements of the CA's business practices disclosure.

Illustrative Controls:

Subscriber Key Generation	
1	The certificate policy (CP) specifies the appropriate ISO 15782-1/ FIPS 140-2 level requirement for cryptographic modules used for subscriber key generation.
2	The CP specifies the key generation algorithm(s) that is used for subscriber key generation.
3	The CP specifies the acceptable key sizes for subscriber key generation.
Subscriber Key Storage, Backup, and Recovery	
4	The CA or registration authority (RA) provides, or makes available, the mechanisms to allow the subscriber to access (that is, private key owner verification method), manage, and control the usage of their private keys.
5	The CP specifies the private key protection requirements for stored subscriber private keys.
6	The CP states the circumstances and authority of when the subscriber's private key will be restored and the control processes.
7	The CP specifies the private key protection requirements for backup copies of subscriber private keys stored by the subscriber.
Subscriber Key Usage	
8	Subscriber agreements describe the required processes to be followed by the subscriber of any use of the cryptographic mechanism (for example, hardware security module [HSM] or integrated circuit card [ICC] and software application).
9	The CP specifies the acceptable uses for subscriber key pairs.
10	The CP specifies the requirements for subscriber key usage.
Subscriber Key Archival	
11	The CP specifies the private key protection requirements for archived subscriber private keys.
12	The CP specifies the requirements for destruction of archived subscriber keys at the end of the archive period.

(continued)

Illustrative Controls:	
	Subscriber Key Destruction
13	The CP specifies the means through which subscriber key destruction is performed.
14	The CP or certification practice statement specifies the requirements for destruction of all copies and fragments of the subscriber’s private key at the end of the key pair life cycle.
	Subscriber Cryptographic Hardware Life Cycle Management
15	If required, the CP specifies the requirements for use and handling of cryptographic hardware and subscriber authentication processes (and subsequent actions) when the cryptographic hardware is in other physical locations (that is, an HSM attached to a mainframe or remote server).
	Subscriber Key Compromise
16	The CP specifies the requirements for notification of the CA or RA in the event of subscriber key compromise.

6. Certificate Life Cycle Management Controls

.60 The certification authority (CA) maintains effective controls to provide reasonable assurance that subscriber information was properly authenticated (for the registration activities performed by ABC Certification Authority, Inc.).

6.1 Subscriber Registration

Criteria:	
	The certification authority (CA) maintains controls to provide reasonable assurance that
	<ul style="list-style-type: none"> • for authenticated certificates <ul style="list-style-type: none"> — subscribers are accurately identified in accordance with the CA’s disclosed business practices and — subscribers’ certificate requests are accurate, authorized, and complete. • for domain validated certificates <ul style="list-style-type: none"> — subscribers’ domain names are accurately validated in accordance with the CA’s disclosed business practices and — subscribers’ certificate requests are accurate and complete.

Illustrative Controls:	
	Identification and authentication
1	For authenticated certificates, the CA verifies or requires that the registration authority (RA) verify the credentials presented by a subscriber, as evidence of identity or authority, to perform a specific role in accordance with the requirements of the certificate policy (CP): <ul style="list-style-type: none"> a. For individual end entity certificates, the CA or registration authority (RA) verifies the identity of the person whose name is to be included in the subscriber distinguished name field of the certificate. An unauthenticated individual name is not included in the subscriber distinguished name field.

Illustrative Controls:	
	<p>b. For organizational certificates (including role based, server, network resource, code signing, and so forth), the CA or RA verifies the legal existence of the organization's name and the authority of the requesting party to be included in the organization attribute in the subscriber distinguished name field of the certificate. An unauthenticated organization name is not included in a certificate.</p> <p>c. For organizational certificates containing a domain name of an organization, the CA or RA verifies the organization's ownership, control, or right to use the domain name and the authority of the requesting party included in the common name attribute of the subscriber distinguished name field of the certificate. An unauthenticated domain name is not included in a certificate.</p>
2	For domain-validated certificates, the CA validates or requires that the RA validate (as determined by the CP) the organization's ownership, control, or right to use the domain name.
3	The CA or RA verifies the accuracy of the information included in the requesting entity's certificate request in accordance with the CP.
4	The CA or RA checks the certificate request for errors or omissions in accordance with the CP.
5	For end entity certificates, the CA uses the RA's public key contained in the requesting entity's certificate request to verify the signature on the certificate request submission.
6	The CA verifies the uniqueness of the subscriber's distinguished name within the boundaries or community defined by the CP.
7	Encryption and access controls are used to protect the confidentiality and integrity of registration data in transit and in storage.
8	At the point of registration (before certificate issuance), the RA or CA informs the subscriber of the terms and conditions regarding use of the certificate.
9	Before certificate issuance, the CA informs the subscriber of the terms and conditions regarding use of the certificate.
	Certificate Request
10	The CA requires that an entity requesting a certificate must prepare and submit the appropriate certificate request data (registration request) to an RA (or the CA) as specified in the CP.
11	<p>The CA requires that the requesting entity submit its public key in a self-signed message to the CA for certification. The CA requires that the requesting entity digitally sign the registration request using the private key that relates to the public key contained in the registration request in order to</p> <p>a. allow the detection of errors in the certificate application process and</p>

(continued)

Illustrative Controls:	
	b. prove possession of the companion private key for the public key being registered.
12	The certificate request is treated as acceptance of the terms of conditions by the requesting entity to use that certificate as described in the subscriber agreement.
13	The CA validates the identity of the RA authorized to issue registration requests under a specific CP.
14	The CA requires that RAs submit the requesting entity’s certificate request data to the CA in a message (certificate request) signed by the RA. The CA verifies the RA’s signature on the certificate request.
15	The CA requires that the RA secure that part of the certificate application process for which it (the RA) assumes responsibility in accordance with the CA’s certification practice statement (CPS).
16	The CA requires that RAs record their actions in an audit log.
17	The CA verifies the authenticity of the submission by the RA in accordance with the CA’s CPS.

6.2 Certificate Renewal (if supported)

Criteria:
The certificate authority (CA) maintains controls to provide reasonable assurance that certificate renewal requests are accurate, authorized, and complete.

Illustrative Controls:	
	Certificate Renewal Request
1	The certificate renewal request includes at least the subscriber’s distinguished name, the serial number of the certificate (or other information that identifies the certificate), and the requested validity period. (The CA will only renew certificates that were issued by the CA itself.)
2	The CA requires that the requesting entity digitally sign the certificate renewal request using the private key that relates to the public key contained in the requesting entity’s existing public key certificate.
3	The CA issues a new certificate using the subscriber’s previously certified public key, only if its cryptographic security is still sufficient for the new certificate’s intended lifetime, and no indications exist that the subscriber’s private key has been compromised.
4	For renewal of authenticated certificates, the CA or the registration authority (RA) processes the certificate renewal data

<i>Illustrative Controls:</i>	
	to verify the identity of the requesting entity and to identify the certificate to be renewed.
5	For domain-validated certificates, the CA or the RA processes the certificate renewal data to revalidate the domain in accordance with the requirements of the certificate policy (CP).
6	The CA or the RA validates the signature on the certificate renewal request.
7	The CA verifies the existence and validity of the certificate to be renewed. The CA does not renew certificates that have been revoked, expired, or suspended.
8	The CA or the RA verifies that the request, including the extension of the validity period, meets the requirements defined in the CP.
9	The CA requires that RAs submit the certificate renewal data to the CA in a message (certificate renewal request) signed by the RA.
10	The CA requires that the RA secures that part of the certificate renewal process for which it (the RA) assumes responsibility in accordance with the CP.
11	The CA requires that RAs record their actions in an audit log.
12	The CA verifies the authenticity of the submission by the RA.
13	The CA verifies the RA's signature on the certificate renewal request.
14	The CA checks the certificate renewal request for errors or omissions. This function may be delegated explicitly to the RA.
15	The CA or RA notifies subscribers prior to the expiration of their certificate of the need for renewal in accordance with the CP.
16	The CA issues a signed notification indicating that the certificate renewal has been successful.
17	The CA makes the new certificate available to the end entity in accordance with the CP.

6.3 Certificate Rekey

<i>Criteria:</i>
The certification authority (CA) maintains controls to provide reasonable assurance that certificate rekey requests, including requests following certificate revocation or expiration, are accurate, authorized, and complete.

<i>Illustrative Controls:</i>	
1	A certificate rekey request includes, at least, the subscriber's distinguished name, the serial number of the certificate, and the requested validity period to allow the CA or the registration authority (RA) to identify the certificate to rekey.
2	The CA requires that the requesting entity digitally sign, using the existing private key, the certificate rekey request containing the new public key.
3	For authenticated certificates, the CA or the RA processes the certificate rekey request to verify the identity of the requesting entity and identify the certificate to be rekeyed.
4	For domain-validated certificates, the CA or the RA processes the certificate rekey request to revalidate the domain in accordance with the requirements of the CP.
5	The CA or the RA validates the signature on the certificate rekey request.
6	The CA or the RA verifies the existence and validity of the certificate to be rekeyed.
7	The CA or the RA verifies that the certificate rekey request meets the requirements defined in the relevant CP.
8	If an external RA is used, the CA requires that RAs submit the entity's certificate rekey request to the CA in a message signed by the RA.
9	If an external RA is used, the CA requires that the RA secure that part of the certificate rekey process for which it (the RA) assumes responsibility.
10	If an external RA is used, the CA requires that external RAs record their actions in an audit log.
11	If an external RA is used, the CA verifies the RA's signature on the certificate rekey request.
12	The CA or the RA checks the certificate rekey request for errors or omissions.
13	The CA or RA notifies subscribers prior to the expiration of their certificate of the need for rekey.
14	Prior to the generation and issuance of rekeyed certificates, the CA or RA verifies the following: <ol style="list-style-type: none"> a. The signature on the certificate rekey data submission b. The existence and validity supporting the rekey request c. That the request meets the requirements defined in the CP

<i>Criteria:</i>
The certification authority (CA) maintains controls to provide reasonable assurance that certificate rekey requests following certificate revocation or expiration are accurate, authorized, and complete.

Illustrative Controls:	
1	Following the revocation or expiration of a subscriber's existing certificate, the subscriber is required to follow the CA's subscriber registration procedures to obtain a new certificate.

6.4 Certificate Issuance

Criteria:	
The certification authority (CA) maintains controls to provide reasonable assurance that certificates are generated and issued in accordance with the CA's disclosed business practices.	

Illustrative Controls:	
1	The CA generates certificates using certificate request data and manufactures the certificate as defined by the appropriate certificate profile in accordance with ISO 9594/X.509 and ISO 15782-1 formatting rules as disclosed within the certificate policy (CP).
2	Validity periods are set in the CP and are formatted in accordance with ISO 9594/X.509 and ISO 15782-1 as disclosed within the CP.
3	Extension fields are formatted in accordance with ISO 9594/X.509 and ISO 15782-1 as disclosed within the CP.
4	The CA signs the end entity's public key and other relevant information with the CA's private signing key.
5	The CA publishes the certificate after the certificate has been accepted by the requesting entity as disclosed in the CA's business practices.
6	When a registration authority (RA) is used, the CA notifies the RA when a certificate is issued to a subscriber for whom the RA submitted a certificate request.
7	Certificates are issued based on approved subscriber registration, certificate renewal, or certificate rekey requests in accordance with the CP.
8	The CA issues a signed notification to the RA when a certificate is issued to a subscriber for whom the RA submitted a certificate request.
9	The CA issues an out-of-band notification to the subscriber when a certificate is issued. When this notification includes initial activation data, then control processes ensure safe delivery to the subscriber.
10	Whether certificates expire, are revoked, or are suspended, copies of certificates are retained for the appropriate period of time specified in the CP.

6.5 Certificate Distribution

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that upon issuance, complete and accurate certificates are available to subscribers and relying parties in accordance with the CA's disclosed business practices.

Illustrative Controls:

1	The CA makes the certificates issued by the CA available to relevant parties using an established mechanism (for example, a repository, such as a directory) in accordance with the certificate policy.
2	Only authorized CA personnel administer the CA's repository or alternative distribution mechanism.
3	The performance of the CA's repository or alternative distribution mechanism is monitored and managed.
4	The integrity of the repository or alternative distribution mechanism is maintained and administered.
5	When required under privacy legislation, certificates are made available for retrieval only in those cases for which the subscriber's consent is obtained.

6.6 Certificate Revocation

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that certificates are revoked based on authorized and validated certificate revocation requests within the time frame in accordance with the CA's disclosed business practices.

Illustrative Controls:

1	The CA provides a means of rapid communication to facilitate the secure and authenticated revocation of the following: <ol style="list-style-type: none"> a. One or more certificates of one or more subscribers b. The set of all certificates issued by a CA based on a single public and private key pair used by a CA to generate certificates c. All certificates issued by a CA, regardless of the public and private key pair used
2	The CA verifies or requires that the registration authority (RA) verify the identity and authority of the entity requesting revocation of a certificate in accordance with the certificate policy (CP).

Illustrative Controls:	
3	If an external RA accepts revocation requests, the CA requires that the RA submit signed certificate revocation requests to the CA in an authenticated manner in accordance with the CP.
4	If an external RA accepts and forwards revocation requests to the CA, the CA provides a signed acknowledgement of the revocation request and confirmation of actions to the requesting RA.
5	The CA updates the certificate revocation list and other certificate status mechanisms in the time frames specified within the CP and in accordance with the format defined in ISO 9594/X.509 and ISO 15782-1.
6	The CA records all certificate revocation requests and their outcome in an audit log.
7	The CA or RA may provide an authenticated acknowledgement (signature or similar) of the revocation to the entity who perpetrated the revocation request.
8	When certificate renewal is supported and when a certificate is revoked, all valid instances of the certificate are also revoked and are not reinstated.
9	The subscriber of a revoked or suspended certificate is informed of the change of status of its certificate.

6.7 Certificate Suspension (if supported)

Criteria:
The certificate authority (CA) maintains controls to provide reasonable assurance that certificates are suspended based on authorized and validated certificate suspension requests within the time frame in accordance with the CA's disclosed business practices.

Illustrative Controls:	
1	The CA provides a means of rapid communication to facilitate the secure and authenticated suspension of the following: <ol style="list-style-type: none"> a. One or more certificates of one or more subscribers b. The set of all certificates issued by a CA based on a single public and private key pair used by a CA to generate certificates c. All certificates issued by a CA, regardless of the public and private key pair used
2	The CA verifies or requires that the external registration authority (RA) verify the identity and authority of the entity requesting suspension and reactivation of a certificate in accordance with the certificate policy (CP).
3	If an external RA accepts suspension requests, the RA submits signed certificate suspension requests to the CA in an authenticated manner in accordance with the CP.

(continued)

<i>Illustrative Controls:</i>	
4	The CA or RA notifies the subscriber in the event of a certificate suspension.
5	Certificate suspension requests are processed and validated in accordance with the requirements of the CP.
6	The CA updates the certificate revocation list (CRL) and other certificate status mechanisms upon certificate suspension. Changes in certificate status are completed in a time frame determined by the CP.
7	Certificates are suspended only for the allowable length of time in accordance with the CP.
8	Once a certificate suspension (hold) has been issued, the suspension is handled in one of the following three ways: <ol style="list-style-type: none"> a. An entry for the suspended certificate remains on the CRL with no further action. b. The CRL entry for the suspended certificate is replaced by a revocation entry for the same certificate. c. The suspended certificate is explicitly released and the entry removed from the CRL.
9	A certificate suspension (hold) entry remains on the CRL until the expiration of the underlying certificate or the expiration of the suspension, whichever is first.
10	The CA updates the CRL and other certificate status mechanisms upon the lifting of a certificate suspension in accordance with the CA's CP.
11	The CA verifies or requires that the external RA verify the identity and authority of the entity requesting that the suspension of a certificate be lifted.
12	Certificate suspensions, and the lifting of certificate suspensions, are recorded in an audit log.

6.8 Certificate Validation

Criteria:

The certification authority (CA) maintains controls to provide reasonable assurance that timely, complete, and accurate certificate status information (including certificate revocation lists [CRL] and other certificate status mechanisms) is made available to relevant entities (subscribers and relying parties or their agents) in accordance with the CA's disclosed business practices.

Illustrative Controls:

1	<p>The CA makes certificate status information available to relevant entities (relying parties or their agents) using an established mechanism in accordance with the certificate policy (CP). This is achieved using the following:</p> <p><i>a. Request Response Method.</i> A request signed by the relying party to the certificate status provider's responder. In turn, the certificate status provider's responder responds with the certificate status duly signed. (Online certificate status protocol [OCSP] is an example protocol using this method.)</p> <p><i>b. Delivery Method.</i> A CRL signed by the CA and published within the policy's time frame.</p>
	The following control procedures are applicable when CRLs are used:
2	The CA digitally signs each CRL that it issues so that entities can validate the integrity of the CRL and the date and time of issuance.
3	The CA issues CRLs at regular intervals, as specified in the CP, even if no changes have occurred since the last issuance.
4	At a minimum, a CRL entry identifying a revoked certificate remains on the CRL until the end of the certificate's validity period.
5	If certificate suspension is supported, a certificate suspension (hold) entry, with its original action date and expiration date, remains on the CRL until the normal expiration of the certificate or until the suspension is lifted.
6	CRLs are archived in accordance with the requirements of the CP, including the method of retrieval.
7	CAs include a monotonically increasing sequence number for each CRL issued by that CA.
8	The CRL contains entries for all revoked unexpired certificates issued by the CA.
9	Old CRLs are retained for the appropriate period of time specified in the CA's CP.

(continued)

<i>Illustrative Controls:</i>	
10	Whether certificates expire, are revoked, or are suspended, copies of certificates are retained for the appropriate period of time as disclosed in the CP.
	The following control procedures are applicable when online certificate status mechanisms (for example, OCSP) are used:
11	If an online certificate status collection method (for example, OCSP) is used, the CA requires that certificate status inquiries (for example, OCSP requests) contain all required data in accordance with the CP.
12	<p>Upon the receipt of a certificate status request (for example, an OCSP request) from a relying party or its agent, the CA returns a definitive response to the relying party or its agent if</p> <ol style="list-style-type: none"> the request message is well formed; the certificate status provider responder is configured to provide the requested service; the request contains the information (that is, certificate identity, for example, serial number, object identifier, and so forth) needed by the certificate status provider responder in accordance with the CP; and the certificate status provider's responder is able to locate the certificate and interpret its status. <p>When these conditions are met, the CA or certificate status provider produces a signed response message indicating the certificate's status in accordance with the CP. If any of the previous conditions are not met, then a status of unknown may be returned.</p>
13	All response messages are digitally signed and include all required data in accordance with the CP.

7. Subordinate CA Certificate Life Cycle Management Controls

.61 The certification authority (CA) maintains effective controls to provide reasonable assurance that subordinate CA certificate requests are accurate, authenticated, and approved.

7.1 Subordinate CA Certificate Life Cycle Management

Criteria:	
The parent certification authority (CA) maintains controls to provide reasonable assurance that	
<ul style="list-style-type: none"> • subordinate CA certificate requests are accurate, authenticated, and approved; • subordinate CA certificate replacement (renewal and rekey) requests are accurate, authorized, and complete; • new, renewed, and rekeyed subordinate CA certificates are generated and issued in accordance with the CA's disclosed business practices; • upon issuance, complete and accurate subordinate CA certificates are available to relevant entities (subscribers and relying parties) in accordance with the CA's disclosed business practices; • subordinate CA certificates are revoked based on authorized and validated certificate revocation requests; and • timely, complete, and accurate certificate status information (including certificate revocation lists [CRLs] and other certificate status mechanisms) is made available to any entity in accordance with the CA's disclosed business practices. 	

Illustrative Controls:	
Subordinate CA (sub-CA) Registration	
1	The parent certificate policy (CP) specifies the requirements for submission of sub-CA certification requests.
2	The parent CA authenticates the sub-CA certificate request in accordance with the parent's CP.
3	The parent CA performs an assessment of the sub-CA certificate applicant's compliance with the requirements of the parent CA's CP before approving a sub-CA certificate request or, alternatively, the sub-CA presents its certification practice statement for assessment.
Sub-CA Renewal	
4	When sub-CA certificate renewal is permitted, the parent CA's CP specifies the requirements for submission of sub-CA renewal requests.
5	When sub-CA certificate renewal is permitted, the parent CA authenticates the sub-CA certificate renewal request in accordance with the CA's CP.
Sub-CA Rekey	
6	The parent CA's CP specifies the requirements for submission of sub-CA rekey requests.
7	The parent CA authenticates the sub-CA certificate rekey request in accordance with the CP.

(continued)

<i>Illustrative Controls:</i>	
Sub-CA Certificate Issuance	
8	The parent CA generates certificates <ol style="list-style-type: none"> a. using the appropriate certificate profile in accordance with the CP and ISO 9594/X.509 and ISO 15782-1 formatting rules; b. with the validity periods formatted in accordance with ISO 9594/X.509, ISO 15782-1, and the CP; and c. when extensions are used, with extension fields formatted in accordance with ISO 9594/X.509, ISO 15782-1, and the CP.
9	The parent CA signs the sub-CA certificate with the parent CA's private signing key.
Sub-CA Certificate Distribution	
10	The parent CA makes sub-CA certificates available to relevant entities (for example, relying parties) using an established mechanism (for example, a repository, such as a directory) in accordance with the parent CA's CP.
Sub-CA Certificate Revocation	
11	The parent CA verifies the identity and authority of the entity requesting revocation of a sub-CA certificate in accordance with the parent CA's CP.
12	The parent CA updates the CRL and other sub-CA certificate status mechanisms upon certificate revocation in accordance with the parent CA's CP.
Sub-CA Certificate Status Information Processing	
13	The parent CA makes sub-CA certificate status information available to relying parties using an established mechanism (for example, CRL, online certificate status protocol, and so forth) in accordance with the parent CA's CP.

.62

Appendix A — RFC 3647, RFC 2527, and *WebTrust® Program for Certification Authorities v1 Business Practices*

A1. The certification authority maintains controls to provide reasonable assurance that its certificate policy and certification practice statement address the topics from RFC 3647, Internet X.509 Public Key Infrastructure Certificate Policy and Certification Practices Framework—Request For Comments Draft (RFC 2527), or *WebTrust® Program for Certification Authorities v1*, listed as follows.

Section 1 — RFC 3647

<i>Section No.</i>	<i>RFC 3647 Section</i>
1	Introduction
1.1	Overview
1.2	Document Name and Identification
1.3	PKI Participants
1.3.1	Certification Authorities
1.3.2	Registration Authorities
1.3.3	Subscribers
1.3.4	Relying Parties
1.3.5	Other Participants
1.4	Certificate Usage
1.4.1	Appropriate Certificate Uses
1.4.2	Prohibited Certificate Uses
1.5	Policy Administration
1.5.1	Organization Administering the Document
1.5.2	Contact Person
1.5.3	Person Determining CPS Suitability for the Policy
1.5.4	CPS Approval Procedures
1.6	Definitions and Acronyms
2	Publication and Repository Responsibilities
2.1	Repositories
2.2	Publication of Certification Information
2.3	Time or Frequency of Publication
2.4	Access Controls on Repositories
3	Identification and Authentication
3.1	Naming

(continued)

Section No.	<i>RFC 3647 Section</i>
3.1.1	Type of Names
3.1.2	Need for Names to be Meaningful
3.1.3	Anonymity or Pseudonymity of Subscribers
3.1.4	Rules for Interpreting Various Name Forms
3.1.5	Uniqueness of Names
3.1.6	Recognition, Authentication, and Role of Trademarks
3.2	Initial Identity Validation
3.2.1	Method to Prove Possession of Private Key
3.2.2	Authentication of Organization Identity
3.2.3	Authentication of Individual Identity
3.2.4	Non-Verified Subscriber Information
3.2.5	Validation of Authority
3.2.6	Criteria for Interoperation
3.3	Identification and Authentication for Rekey Requests
3.3.1	Identification and Authentication for Routine Rekey
3.3.2	Identification and Authentication for Rekey After Revocation
3.4	Identification and Authentication for Revocation Request
4	Certificate Life Cycle Operational Requirements
4.1	Certificate Application
4.1.1	Who Can Submit a Certificate Application
4.1.2	Enrollment Process and Responsibilities
4.2	Certificate Application Processing
4.2.1	Performing Identification and Authentication Functions
4.2.2	Approval or Rejection of Certificate Applications
4.2.3	Time to Process Certificate Applications
4.3	Certificate Issuance
4.3.1	CA Actions During Certificate Issuance
4.3.2	Notifications to Subscriber by the CA of Issuance of Certificate
4.4	Certificate Acceptance
4.4.1	Conduct Constituting Certificate Acceptance
4.4.2	Publication of the Certificate by the CA
4.4.3	Notification of Certificate Issuance by the CA to Other Entities
4.5	Key Pair and Certificate Usage
4.5.1	Subscriber Private Key and Certificate Usage
4.5.2	Relying Party Public Key and Certificate Usage
4.6	Certificate Renewal

Section No.	<i>RFC 3647 Section</i>
4.6.1	Circumstances for Certificate Renewal
4.6.2	Who May Request Renewal
4.6.3	Processing Certificate Renewal Requests
4.6.4	Notification of New Certificate Issuance to Subscriber
4.6.5	Conduct Constituting Acceptance of a Renewal Certificate
4.6.6	Publication of the Renewal Certificate by the CA
4.6.7	Notification of Certificate Issuance by the CA to Other Entities
4.7	Certificate Rekey
4.7.1	Circumstances for Certificate Rekey
4.7.2	Who May Request Certification of a New Public Key
4.7.3	Processing Certificate Rekeying Requests
4.7.4	Notification of New Certificate Issuance to Subscriber
4.7.5	Conduct Constituting Acceptance of a Rekeyed Certificate
4.7.6	Publication of the Rekeyed Certificate by the CA
4.7.7	Notification of Certificate Issuance by the CA to Other Entities
4.8	Certificate Modification
4.8.1	Circumstances for Certificate Modification
4.8.2	Who May Request Certificate Modification
4.8.3	Processing Certificate Modification Requests
4.8.4	Notification of New Certificate Issuance to Subscriber
4.8.5	Conduct Constituting Acceptance of Modified Certificate
4.8.6	Publication of the Modified Certificate by the CA
4.8.7	Notification of Certificate Issuance by the CA to Other Entities
4.9	Certificate Revocation and Suspension
4.9.1	Circumstances for Revocation
4.9.2	Who Can Request Revocation
4.9.3	Procedure for Revocation Request
4.9.4	Revocation Request Grace Period
4.9.5	Time Within Which CA Must Process the Revocation Request
4.9.6	Revocation Checking Requirements for Relying Parties
4.9.7	CRL Issuance Frequency
4.9.8	Maximum Latency for CRLs
4.9.9	Online Revocation/Status Checking Availability
4.9.10	Online Revocation Checking Requirements

Section 3 – WebTrust® Program for Certification Authorities v1

<i>No.</i>	<i>WebTrust® Program for Certification Authorities v1— Disclosures Criteria</i>
	General
1	Identification of each certificate policy (CP) and certification practice statement (CPS) for which the certification authority (CA) issues certificates
2	Community and applicability, including a description of the types of entities within the public key infrastructure (PKI) and the applicability of certificates issued by the CA
3	Contact details and administrative provisions, including the following: <ul style="list-style-type: none"> • Contact person • Identification of the policy authority • Street address • Version and effective date(s) of each CP and CPS
4	Any applicable provisions regarding apportionment of liability
5	Financial responsibility, including the following: <ul style="list-style-type: none"> • Indemnification by relying parties • Fiduciary relationships
6	Interpretation and enforcement, including the following: <ul style="list-style-type: none"> • Governing law • Severability, survival, merger, and notice • Dispute resolution procedures
7	Fees, including the following: <ul style="list-style-type: none"> • Certificate issuance or renewal fees • Certificate access fees • Revocation or status information access fees • Fees for other services, such as policy information • Refund policy
8	Publication and repository requirements, including the following: <ul style="list-style-type: none"> • Publication of CA information • Frequency of publication • Access controls

No.	<i>WebTrust® Program for Certification Authorities v1— Disclosures Criteria</i>
9	Compliance audit requirements, including the following: <ul style="list-style-type: none"> • Frequency of entity compliance audit • Auditor's relationship to the audited party • Topics covered by the audit • Actions taken as a result of deficiency • Communication of results
10	Description of the conditions for applicability of certificates issued by the CA that reference a specific CP, including the following: <ul style="list-style-type: none"> • Specific permitted uses for the certificates if such use is limited to specific applications • Limitations on the use of certificates if there are specified prohibited uses for such certificates
11	CA and/or registration authority (RA) obligations: <ul style="list-style-type: none"> • Notification of issuance of a certificate to the subscriber, who is the subject of the certificate being issued • Notification of issuance of a certificate to others than the subject of the certificate • Notification of revocation or suspension of a certificate to the subscriber whose certificate is being revoked or suspended • Notification of revocation or suspension of a certificate to others than the subject whose certificate is being revoked or suspended
12	RA obligations, including the following: <ul style="list-style-type: none"> • Identification and authentication of subscribers • Validation of revocation and suspension requests • Verification of subscriber renewal or rekey requests
13	Repository obligations, including timely publication of certificates and certificate revocation lists (CRLs)
14	Subscriber obligations, including the following: <ul style="list-style-type: none"> • Accuracy of representations in certificate application • Protection of the subscriber's private key • Restrictions on private key and certificate use • Notification upon private key compromise
15	Relying party obligations, including the following: <ul style="list-style-type: none"> • Purposes for which certificate is used • Digital signature verification responsibilities • Revocation and suspension checking responsibilities • Acknowledgment of applicable liability caps and warranties
16	Any applicable reliance or financial limits for certificate usage
Key Life Cycle Management	
17	CA key pair generation, including the following: <ul style="list-style-type: none"> • What key sizes are required • What key generation algorithm is required • Whether key generation is performed in hardware or software • What standards are required for the module used to generate the keys (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • For what purposes the key may be used • For what purposes usage of the key is restricted • The usage periods or active lifetimes for the CA public and private key, respectively

(continued)

No.	WebTrust® Program for Certification Authorities v1— Disclosures Criteria
18	CA private key protection, including the following: <ul style="list-style-type: none"> • What standards are required for the module used to store the CA private signature key (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • Whether the CA private key is maintained under <i>m</i> out of <i>n</i> multiperson control • Whether the CA private signature key is escrowed • Whether the CA private signing key is backed up • Whether the CA private and public signature keys are archived
19	Whether the CA provides subscriber key management services and a description of the services provided
20	CA public key distribution, including a description of how the CA's public key is provided securely to subscribers and relying parties
21	Key changeover, including a description of the procedures used to provide a new public key to a CA's users
22	Subscriber key pair generation (if the CA provides subscriber key pair generation services), including the following: <ul style="list-style-type: none"> • How the subscriber's private key is provided securely to the subscriber • What key sizes are required • What key generation algorithm is required • Whether key pair generation is performed in hardware or software • What standards are required for the module used to generate the keys (for example, the required ISO 15782-1/FIPS 140-1/ANSI X9.66 level of the module) • For what purposes the key may be used • For what purposes usage of the key is restricted
23	Subscriber private key protection (if the CA provides subscriber key management services), including the following: <ul style="list-style-type: none"> • Whether the subscriber's decryption private key is backed up • Whether the subscriber's decryption private key is archived • Under what conditions a subscriber's private key can be destroyed • Whether subscriber private decryption keys are escrowed by the CA
Certificate Life Cycle Management	
24	Whether certificate suspension is supported
25	Initial registration, including a description of the CA's requirements for the identification and authentication of subscribers and validation of certificate requests during entity registration or certificate issuance: <ul style="list-style-type: none"> • Types of names assigned to the subject and rules for interpreting various name forms • Whether names have to be meaningful or not • Whether names have to be unique • How name claim disputes are resolved • Recognition, authentication, and role of trademarks • If and how the subject must prove possession of the companion private key for the public key being provided for a certificate • How the subscriber's public key is provided securely to the CA for issuance of a certificate

No.	<i>WebTrust® Program for Certification Authorities v1— Disclosures Criteria</i>
	<ul style="list-style-type: none"> • Authentication requirements for organizational identity of subject • Authentication of individual identity • Required certificate request data • How the CA verifies the authority of the subscriber to request a certificate • How the CA verifies the accuracy of the information included in the subscriber's certificate request • Whether the CA checks certificate requests for errors or omissions
26	<p>Registration requirements when external registration authorities (RA) are used, including the CA's procedures for the following:</p> <ul style="list-style-type: none"> • Validating the identity of external registration authorities • Authorizing external registration authorities • Requirements for the external registration authority to secure that part of the certificate application, certificate renewal, and certificate rekey processes for which the RA assumes responsibility • How the CA verifies the authenticity of certificate request submissions received from an external RA
27	<p>Certificate renewal, including a description of the CA's procedures for the following:</p> <ul style="list-style-type: none"> • Notifying subscribers of the need for renewal • Identification and authentication • Renewal request verification
28	<p>Routine rekey, including a description of the identification and authentication and rekey request verification procedures</p>
29	<p>Rekey after revocation or expiration, including a description of the identification and authentication and rekey request verification procedures for rekey after the subject certificate has been revoked</p>
30	<p>Certificate issuance, including a description of the requirements regarding the following:</p> <ul style="list-style-type: none"> • Issuance of a certificate • Notification to the applicant of such issuance • Certificate format requirements • Validity period requirements • Extension field requirements (that is, what extension fields are honored and how they are to be populated)
31	<p>Certificate acceptance, including a description of the requirements regarding acceptance of an issued certificate and for consequent publication of certificates</p>
32	<p>Certificate distribution, including a description of the CA's established mechanism (for example, a repository such as a directory) for making available to relying parties the certificates and CRLs that it issues</p>
33	<p>Certificate revocation, including the following:</p> <ul style="list-style-type: none"> • Circumstances under which a certificate may or must be revoked • Identification and authentication procedures required for revocation requests

(continued)

No.	WebTrust® Program for Certification Authorities v1— Disclosures Criteria
	<ul style="list-style-type: none"> • Procedures used for initiation, authorization, and verification of certificate revocation requests • Revocation request grace period available to the subscriber • Any variations on the preceding stipulations in the event that the revocation is the result of private key compromise (as opposed to other reasons for revocation) • Procedures to provide a means of rapid communication to facilitate the secure and authenticated revocation of (1) one or more certificates of one or more entities; (2) the set of all certificates issued by a CA based on a single public and private key pair used by a CA to generate certificates; and (3) all certificates issued by a CA, regardless of the public and private key pair used • Procedures for notifying the subscriber upon revocation of the subscriber’s certificate • Whether the external RA is notified upon the revocation of a subscriber’s certificate for which the revocation request was processed by the external RA • How and when the subscriber’s certificate status information is updated upon certificate revocation
34	<p>Certificate suspension, including the following:</p> <ul style="list-style-type: none"> • Circumstances under which a certificate may or must be suspended • Identification and authentication procedures required for revocation requests • Procedures used for initiation, authorization, and verification of certificate suspension requests • How long the suspension may last • Circumstances under which the suspension of a certificate may or must be lifted • Authorization criteria to request the lifting of a certificate suspension • Any variations on the preceding stipulations if the suspension is the result of private key compromise (as opposed to other reasons for suspension) • Procedures to provide a means of rapid communication to facilitate the secure and authenticated suspension of (1) one or more certificates of one or more entities; (2) the set of all certificates issued by a CA based on a single public and private key pair used by a CA to generate certificates; and (3) all certificates issued by a CA, regardless of the public and private key pair used • Procedures for notifying the subscriber upon suspension of the subscriber’s certificate • Whether the external RA is notified upon the suspension of a subscriber’s certificate for which the suspension request was processed or submitted by the external RA • How and when the subscriber’s certificate status information is updated upon certificate suspension and the lifting of a certificate suspension
35	<p>Provision of certificate status information, including the following:</p> <ul style="list-style-type: none"> • What mechanism is used (CRLs, online certificate status protocol [OCSP], other) • If a CRL mechanism is used, the issuance frequency • Requirements on relying parties to check CRLs • Online revocation and status checking availability

No.	<i>WebTrust® Program for Certification Authorities v1— Disclosures Criteria</i>
	<ul style="list-style-type: none"> • Requirements on relying parties to perform online revocation and status checks • Other forms of revocation advertisements available • Requirements on relying parties to check other forms of revocation advertisements • Any variations on the previous stipulations when the suspension or revocation is the result of private key compromise (as opposed to other reasons for suspension or revocation) • The CA's requirements for archival and retention of CRLs or other certificate status information • Whether copies of all certificates issued (including all expired, revoked, or suspended certificates) are retained and disclosure of the retention period • If an online status mechanism is used (for example, OCSP), certificate status request content requirements • If an online status mechanism is used (for example, OCSP), definitive response message data content requirements • What key is used to digitally sign definitive response messages • Whether the CA signs error messages when returned in response to certificate status requests
36	<p>Certificate profile, including the following:</p> <ul style="list-style-type: none"> • Version number(s) supported • Certificate extensions populated and their criticality • Cryptographic algorithm object identifiers • Name forms (that is, naming hierarchy used to ensure that the certificate subject can be uniquely identified, if required) used for the CA, RA, and subscribers' names • Name constraints used and the name forms used in the name constraints • Applicable Certificate Policy Object Identifier(s) • Usage of the policy constraints extension • Policy qualifiers syntax and semantics • Processing semantics for the critical CP extension
37	<p>CRL profile, including the following:</p> <ul style="list-style-type: none"> • Version numbers supported for CRLs • CRL and CRL entry extensions populated and their criticality
38	<p>Integrated circuit card (ICC) life cycle management, including the following:</p> <ul style="list-style-type: none"> • Whether ICCs are issued by the CA (or RA) • If supported, a description of the CA's ICC life cycle management processes, including a description of the ICC distribution process
CA Environmental Controls	
39	<p>CPS and CP administration:</p> <ul style="list-style-type: none"> • CPS and CP change control procedures • Publication and notification policies • CPS and CP approval procedures
40	<p>CA termination, including a description of the CA's procedures for termination and for termination notification of a CA or RA, including the identity of the custodian of CA and RA archival records</p>

No.	<i>WebTrust® Program for Certification Authorities v1— Disclosures Criteria</i>
41	Confidentiality, including the following: <ul style="list-style-type: none"> • Applicable statutory or regulatory requirements to keep information confidential • Kinds of information to be kept confidential • Kinds of information not considered confidential • Disclosure of information concerning certificate revocation and suspension • Release to law enforcement officials • Release as part of civil discovery • Disclosure upon owner's request • Other information release circumstances
42	Intellectual property rights
43	Physical security controls, including the following: <ul style="list-style-type: none"> • Site location and construction • Physical access controls, including authentication controls to control and restrict access to CA facilities • Power and air conditioning • Water exposures • Fire prevention and protection • Media storage • Waste disposal • Off-site backup
44	Business continuity management controls, including the following: <ul style="list-style-type: none"> • Whether the CA has business continuity plans to maintain or restore the CA's business operations in a reasonably timely manner following interruption to, or failure of, critical business processes • Whether the CA's business continuity plans define an acceptable system outage and recovery time and disclosure of the defined time period(s) • How frequently backup copies of essential business information and software are taken • Proximity of recovery facilities to the CA's main site
45	Event logging, including the following: <ul style="list-style-type: none"> • How frequently the CA archives event journal data • How frequently event journals are reviewed

Appendix B — Illustrative Examples of Practitioner Reports

B1. This appendix presents four illustrative reports for WebTrust® for Certification Authorities engagements, which are performed under AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), using the Trust Services Criteria for Certification Authorities.

B2. Paragraph .09 of AT section 101 states that a practitioner may report on a written assertion or directly on the subject matter. Examples of both kinds of reports are included in this appendix.

Example 1 — Reporting on Management’s Assertion, Unqualified Opinion, All of the Trust Services Criteria for Certification Authorities Are Applicable

Report of Independent Accountant

To the Management of
ABC Certification Authority, Inc.:

We have examined the assertion by the management of ABC Certification Authority, Inc. (ABC-CA) [*link to management’s assertion*] that in providing its Certification Authority (CA) services at [*location*], ABC-CA, during the period [*date*] through [*date*], it

- disclosed its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its
 - Certification Practice Statement, and
 - Certificate Policy (if applicable)
- maintained effective controls to provide reasonable assurance that
 - ABC-CA’s Certification Practice Statement is consistent with its Certificate Policy (if applicable)
 - ABC-CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement
- maintained effective controls to provide reasonable assurance that
 - the integrity of keys and certificates it manages is established and protected throughout their life cycles;
 - the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles;
 - the Subscriber information is properly authenticated (for the registration activities performed by ABC-CA); and
 - subordinate CA certificate requests are accurate, authenticated, and approved
- maintained effective controls to provide reasonable assurance that
 - logical and physical access to CA systems and data is restricted to authorized individuals;
 - the continuity of key and certificate management operations is maintained; and

- CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

for the *[list CAs and roots that are subject to examination]*, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities* *[link to Trust Services Criteria for Certification Authorities]*.

ABC-CA's management is responsible for its assertion. Our responsibility is to express an opinion on management's assertion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants, and accordingly, included (1) obtaining an understanding of ABC-CA's key and certificate life cycle management business practices and its controls over key and certificate integrity, over the authenticity and privacy of subscriber and relying party information, over the continuity of key and certificate life cycle management operations, and over the development, maintenance, and operation of systems integrity; (2) selectively testing transactions executed in accordance with disclosed key and certificate life cycle management business practices; (3) testing and evaluating the operating effectiveness of the controls; and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

The relative effectiveness and significance of specific controls at ABC-CA and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Because of the nature and inherent limitations of controls, ABC-CA's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, for the period *[date]* through *[date]*, ABC-CA management's assertion, as set forth in the first paragraph, is fairly stated, in all material respects, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities*.

This report does not include any representation as to the quality of ABC-CA's services beyond those covered by the *Trust Services Criteria for Certification Authorities*, nor the suitability of any of ABC-CA's services for any customer's intended purpose.

Example 2 — Reporting on Management’s Assertion, Unqualified Opinion, Certification Authority Uses External Registration Authorities for Specific Subscriber Registration Activities as Disclosed in ABC-CA’s Business Practice Disclosures. Report Does Not Extend to the Controls Exercised by the External Registration Authorities

Report of Independent Accountant

To the Management of
ABC Certification Authority, Inc.:

We have examined the assertion by the management of ABC Certification Authority, Inc. (ABC-CA) [*link to management’s assertion*] that in providing its Certification Authority (CA) services at [*location*], ABC-CA, during the period [*date*] through [*date*], management of ABC-CA

- disclosed its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its
 - Certification Practice Statement and
 - Certificate Policy (if applicable)
- maintained effective controls to provide reasonable assurance that
 - ABC-CA’s Certification Practice Statement is consistent with its Certificate Policy (if applicable)
 - ABC-CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement
- maintained effective controls to provide reasonable assurance that
 - the integrity of keys and certificates it manages is established and protected throughout their life cycles;
 - the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles;
 - the Subscriber information is properly authenticated (for the registration activities performed by ABC-CA); and
 - subordinate CA certificate requests are accurate, authenticated, and approved
- maintained effective controls to provide reasonable assurance that
 - logical and physical access to CA systems and data is restricted to authorized individuals;
 - the continuity of key and certificate management operations is maintained; and
 - CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

for the [*list CAs and roots that are subject to examination*], based on the AICPA/CICA *Trust Services Criteria for Certification Authorities* [*link to Trust Services Criteria for Certification Authorities*].

ABC-CA’s management is responsible for its assertion. Our responsibility is to express an opinion on management’s assertion based on our examination.

ABC-CA makes use of external registration authorities for specific subscriber registration activities as disclosed in ABC-CA’s business practice disclosures.

Our examination did not extend to the controls exercised by the external registration authorities.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants, and accordingly, included (1) obtaining an understanding of ABC-CA's key and certificate life cycle management business practices and its controls over key and certificate integrity, over the authenticity and privacy of subscriber and relying party information, over the continuity of key and certificate life cycle management operations, and over the development, maintenance, and operation of systems integrity; (2) selectively testing transactions executed in accordance with disclosed key and certificate life cycle management business practices; (3) testing and evaluating the operating effectiveness of the controls; and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

The relative effectiveness and significance of specific controls at ABC-CA and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Because of the nature and inherent limitations of controls, ABC-CA's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, for the period [date] through [date], ABC-CA management's assertion, as set forth in the first paragraph, is fairly stated, in all material respects, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities*.

This report does not include any representation as to the quality of ABC-CA's services beyond those covered by the *Trust Services Criteria for Certification Authorities*, nor the suitability of any of ABC-CA's services for any customer's intended purpose.

Example 3 — Reporting on the Subject Matter, Unqualified Opinion, All of the Trust Services Criteria for Certification Authorities Are Applicable

Report of Independent Accountant

To the Management of
ABC Certification Authority, Inc.:

We have examined, for its [location], ABC Certification Authority, Ltd.'s (ABC-CA) disclosure of its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Controls on its website, the consistency of its Certification Practice Statement with its Certificate Policy (if applicable) and the provision of services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement and the effectiveness of its controls over key and certificate integrity, over the authenticity and privacy of subscriber and relying party information, over the continuity of key and certificate life cycle management operations, and over the development, maintenance, and operation of systems integrity for the [list CAs and roots that are subject to examination], during the period [date] through [date]. These disclosures and controls are the responsibility of the ABC-CA's management. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants, and accordingly, included (1) obtaining an understanding of ABC-CA's key and certificate life cycle management business practices and its controls over key and certificate integrity, over the authenticity and privacy of subscriber and relying party information, over the continuity of key and certificate life cycle management operations, and over the development, maintenance, and operation of systems integrity; (2) selectively testing transactions executed in accordance with disclosed key and certificate life cycle management business practices; (3) testing and evaluating the operating effectiveness of the controls; and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

The relative effectiveness and significance of specific controls at ABC-CA and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Because of the nature and inherent limitations of controls, ABC-CA's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, during the period [date] through [date], ABC-CA, in all material respects

- disclosed its Key and Certificate Life Cycle Management business practices and provided such services in accordance with its disclosed practices;

- maintained effective controls to provide reasonable assurance that ABC-CA's Certification Practice Statement is consistent with its Certificate Policy (if applicable) and that ABC-CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement;
- maintained effective controls to provide reasonable assurance that subscriber information was properly authenticated (for the registration activities performed by ABC-CA) and the integrity of keys and certificates it managed was established and protected throughout their life cycles; and
- maintained effective controls to provide reasonable assurance that subscriber and relying party information was restricted to authorized individuals and protected from uses not specified in the CA's business practices disclosure; the continuity of key and certificate life cycle management operations was maintained; and CA systems development, maintenance, and operations were properly authorized and performed to maintain CA systems integrity

based on the AICPA/CICA *Trust Services Criteria for Certification Authorities* [[link to Trust Services Criteria for Certification Authorities](#)].

This report does not include any representation as to the quality of ABC-CA's services beyond those covered by the *Trust Services Criteria for Certification Authorities*, nor the suitability of any of ABC-CA's services for any customer's intended purpose.

Example 4 — Reporting on Management’s Assertion With Respect to Reporting to Federal Authorities, (U.S. Federal Public Key Infrastructure Requirements and Bridge Certification A Scenarios) Unqualified Opinion, All of the Trust Services Criteria for Certification Authorities Are Applicable

Report of Independent Accountant

To the Management of
ABC Certification Authority, Inc.:

We have examined the assertion by the management of ABC Certification Authority, Inc. (ABC-CA) [*link to management’s assertion*] that in providing its Certification Authority (CA) services at [*location*], ABC-CA, during the period [*date*] through [*date*], management of ABC-CA

- disclosed its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its
 - ABC-CA Certificate Policy Version ## dated [*date*] [*link*] (ABC-CA CP) (including sections 1, 2, 3, 4, 5, 6, 7, 8, and 9)
 - ABC-CA Certification Practices Statement Version ## dated [*date*] [*link*]¹ (ABC-CA CPS⁹) that is consistent with the ABC-CA CP (including sections 1, 2, 3, 4, 5, 6, 7, 8 and 9)
 - (if applicable) Memorandum of Agreement dated [*date*] between the Federal PKI Policy Authority and ABC-CA (ABC-MOA) (including all [or specified] sections except ###)
- provided its CA services in accordance with its disclosed practices including
 - ABC-CA CP (including sections 1, 2, 3, 4, 5, 6, 7, 8, and 9)
 - ABC-CA CPS that is consistent with the ABC-CP (including sections 1, 2, 3, 4, 5, 6, 7, 8, and 9)
 - (if applicable) ABC-MOA (including all [or specified] sections)
- maintained effective controls to provide reasonable assurance that
 - the integrity of keys and certificates it manages is established and protected throughout their life cycles;
 - the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles;
 - the Subscriber information is properly authenticated (for the registration activities performed by ABC-CA); and
 - subordinate CA certificate requests are accurate, authenticated, and approved;
- maintained effective controls to provide reasonable assurance that
 - logical and physical access to CA systems and data is restricted to authorized individuals;
 - the continuity of key and certificate management operations is maintained; and

¹ Include the text (*restricted to ABC-CA Participants*) or similar language if the certification practice statement is not publicly disclosed.

- CA systems development, maintenance and operations are properly authorized and performed to maintain CA systems integrity

for the *[list CAs and roots that are subject to examination]*, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities* [\[link to Trust Services Principle for Certification Authorities Criteria\]](#).

ABC-CA's management is responsible for its assertion. Our responsibility is to express an opinion on management's assertion based on our examination.

Our examination, which commenced on *[date]* and ended on *[date field work ended]*, was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants, and accordingly, included (1) obtaining an understanding of ABC-CA's key and certificate life cycle management business practices and its controls over key and certificate integrity, over the authenticity and privacy of subscriber and relying party information, over the continuity of key and certificate life cycle management operations, and over the development, maintenance, and operation of systems integrity; (2) selectively testing transactions executed in accordance with disclosed key and certificate life cycle management business practices; (3) testing and evaluating the operating effectiveness of the controls; and (4) performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

The relative effectiveness and significance of specific controls at ABC-CA and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls, and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Because of the nature and inherent limitations of controls, ABC-CA's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, for the period *[date]* through *[date]*, ABC-CA management's assertion, as set forth in the first paragraph, is fairly stated, in all material respects, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities*.

This report does not include any representation as to the quality of ABC-CA's services beyond those covered by the *Trust Services Criteria for Certification Authorities*, nor the suitability of any of ABC-CA's services for any customer's intended purpose.

This report is intended solely for the information and use of ABC-CA and the Federal PKI Policy Authority and is not intended to be, and should not be, used by anyone other than ABC-CA and the Federal PKI Policy Authority.

Appendix C — Illustrative Examples of Management's Assertion

Example 1 — Assertion by Management of a Certification Authority, All of the Trust Services Criteria for Certification Authorities Are Applicable

Assertion by Management of ABC Certification Authority, Inc. Regarding Its Disclosure of Its Business Practices and Its Controls Over Its Certification Authority Operations During the Period [Date] Through [Date]

[Date]

ABC Certification Authority, Inc. operates as a Certification Authority (CA) known as ABC-CA. ABC-CA, as a Root CA [or as a subordinate CA of DEF Certification Authority, Inc.], provides the following certification authority services:

- Subscriber key management services
- Subscriber registration
- Certificate renewal
- Certificate rekey
- Certificate issuance
- Certificate distribution (using an online repository)
- Certificate revocation
- Certificate suspension
- Certificate status information processing (using an online repository)
- Integrated circuit card life cycle management

Management of ABC-CA is responsible for establishing and maintaining effective controls over its CA operations, including CA business practices disclosure [[link to CA Business Practices Disclosure](#)], service integrity (including key and certificate life cycle management controls), and CA environmental controls. These controls contain monitoring mechanisms, and actions are taken to correct deficiencies identified.

Controls have inherent limitations, including the possibility of human error and the circumvention or overriding of controls. Accordingly, even effective controls can provide only reasonable assurance with respect to ABC-CA's Certification Authority operations. Furthermore, because of changes in conditions, the effectiveness of controls may vary over time.

Management has assessed the controls over its CA operations. Based on that assessment, in ABC Certification Authority, Inc. (ABC-CA) Management's opinion, in providing its Certification Authority (CA) services at [location], ABC-CA, during the period [date] through [date]

- disclosed its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its
 - Certification Practice Statement and
 - Certificate Policy (if applicable)

- maintained effective controls to provide reasonable assurance that
 - ABC-CA's Certification Practice Statement is consistent with its Certificate Policy (if applicable)
 - ABC-CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement
- maintained effective controls to provide reasonable assurance that
 - the integrity of keys and certificates it manages is established and protected throughout their life cycles;
 - the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles;
 - the Subscriber information is properly authenticated (for the registration activities performed by ABC-CA); and
 - subordinate CA certificate requests are accurate, authenticated, and approved
- maintained effective controls to provide reasonable assurance that
 - logical and physical access to CA systems and data is restricted to authorized individuals;
 - the continuity of key and certificate management operations is maintained; and
 - CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

Example 2 — Assertion by Management of a Certification Authority, All of the Trust Services Criteria for Certification Authorities Are Applicable, Certification Authority Uses External Registration Authorities and Does Not Support Key Escrow, Certificate Renewal, Certificate Suspension, the Use of Integrated Circuit Cards, or the Provision of Subscriber Key Management Services)

Assertion by Management of ABC Certification Authority, Inc. Regarding Its Disclosure of Its Business Practices and Its Controls Over Its Certification Authority Operations During the Period [Date] through [Date]

[Date]

ABC Certification Authority, Inc. operates as a Certification Authority (CA) known as ABC-CA. ABC-CA, as a Root CA [or as a subordinate CA of DEF Certification Authority, Inc.], provides the following certification authority services:

- Certificate rekey
- Certificate issuance
- Certificate distribution (using an online repository)
- Certificate revocation
- Certificate status information processing (using an online repository)

ABC-CA makes use of external registration authorities for specific subscriber registration activities as disclosed in ABC-CA's business practice disclosures.

Management of ABC-CA is responsible for establishing and maintaining effective controls over its Certification Authority operations, including CA business practices disclosure [link to CA Business Practices Disclosure], service integrity (including key and certificate life cycle management controls), and CA environmental controls. These controls contain monitoring mechanisms, and actions are taken to correct deficiencies identified.

Controls have inherent limitations, including the possibility of human error and the circumvention or overriding of controls. Accordingly, even effective internal control can provide only reasonable assurance with respect to ABC-CA's Certification Authority operations. Furthermore, because of changes in conditions, the effectiveness of controls may vary over time.

Management has assessed the controls over its CA operations. Based on that assessment, to the best of our knowledge and belief, we confirm that in providing its Certification Authority (CA) services at [location], ABC-CA, during the period [date] through [date], ABC-CA

- disclosed its Business, Key Life Cycle Management, Certificate Life Cycle Management, and CA Environmental Control practices in its
 - Certification Practice Statement and
 - Certificate Policy (if applicable)
- maintained effective controls to provide reasonable assurance that
 - ABC-CA's Certification Practice Statement is consistent with its Certificate Policy (if applicable)

- ABC-CA provides its services in accordance with its Certificate Policy (if applicable) and Certification Practice Statement
- maintained effective controls to provide reasonable assurance that
 - the integrity of keys and certificates it manages is established and protected throughout their life cycles;
 - the integrity of subscriber keys and certificates it manages is established and protected throughout their life cycles;
 - the Subscriber information is properly authenticated (for the registration activities performed by ABC-CA); and
 - subordinate CA certificate requests are accurate, authenticated, and approved
- maintained effective controls to provide reasonable assurance that
 - logical and physical access to CA systems and data is restricted to authorized individuals;
 - the continuity of key and certificate management operations is maintained; and
 - CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

for the *[list CAs and roots that are subject to examination]*, in accordance with the AICPA/CICA *Trust Services Criteria for Certification Authorities* *[link to Trust Services Criteria for Certification Authorities]* including the following:

Appendix D – Illustrative Example of Management’s Representation

Example 1 – Management Representation Letter for a Certification Authority, All of the Trust Services Criteria for Certification Authorities Are Applicable

[Date]

[Name of CPA or Chartered Accountant firm] [Address]

Dear Members of the Firm:

Management confirms its understanding that your examination of our assertion related to ABC Certification Authority, Inc.’s (ABC-CA) business practices disclosure and controls over its Certification Authority operations during the period [date] through [date], was made for the purpose of expressing an opinion on whether our assertion is fairly presented, in all material respects, and that your opinion is based on criteria for effective controls as stated in our assertion document. We are responsible for our assertion. In connection with your examination, management of ABC-CA

- a. acknowledges its responsibility for establishing and maintaining effective controls over its Certification Authority (CA) operations at [location], including CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls.
- b. has performed an assessment and believes that ABC-CA’s CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls met the minimum requirement of the criteria described in our assertion document during the period [date] through [date].
- c. believes the stated criteria against which our assertion has been assessed are reasonable and appropriate.
- d. has disclosed to you that there are no significant deficiencies in the design or operation of the controls, which could adversely affect ABC-CA’s ability to comply with the control criteria related to ABC-CA’s CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls, consistent with our assertions.
- e. has made available to you all significant information and records related to our assertion.
- f. has responded fully to all inquiries made to us by you during your examination.
- g. has disclosed to you any changes occurring, or planned to occur, subsequent to [date field work ended], in controls or other factors that might significantly affect the controls, including any corrective actions taken by management with regard to significant deficiencies.

In management’s opinion, ABC-CA, in providing its Certification Authority (CA) services at [location], ABC-CA, during the period [date] through [date]

- disclosed its key and certificate life cycle management business practices and provided such services in accordance with its disclosed practices
- maintained effective controls to provide reasonable assurance that
 - subscriber information was properly authenticated (for the registration activities performed by ABC-CA) and
 - the integrity of keys and certificates it managed was established and protected throughout their life cycles
- maintained effective controls to provide reasonable assurance that
 - subscriber and relying party information was restricted to authorized individuals and protected from uses not specified in the CA's business practices disclosure;
 - the continuity of key and certificate life cycle management operations was maintained; and
 - CA systems development, maintenance, and operations were properly authorized and performed to maintain CA systems integrity

for the *[list CAs and roots that are subject to examination]*, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities* including the following:

Example 2 — Management Representation Letter for a Certification Authority That Uses External Registration Authorities and Does Not Support Key Escrow, Certificate Renewal, Certificate Suspension, Use of Integrated Circuit Cards, or Provision of Subscriber Key Management Services

[Date]

[Name of CPA or Chartered Accountant firm] [Address]

Dear Members of the Firm:

Management confirms its understanding that your examination of our assertion related to ABC Certification Authority, Inc.'s (ABC-CA) business practices disclosure and controls over its Certification Authority (CA) operations during the period [date] through [date], was to enable you to express an opinion on whether our assertion is fairly presented, in all material respects, based on the AICPA/CICA *Trust Services Criteria for Certification Authorities*, and that your opinion is based on criteria for effective controls as stated in our assertion document. ABC-CA makes use of external registration authorities for specific subscriber registration activities, as disclosed in ABC-CA's business practice disclosures. We are responsible for our assertion. In connection with your examination, management

- a. acknowledges its responsibility for establishing and maintaining effective controls over its CA operations, including CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls.
- b. has performed an assessment and believes that ABC-CA's CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls, met the minimum requirement of the criteria described in our assertion document during the period [date] through [date].
- c. believes the stated criteria against which our assertion has been assessed are reasonable and appropriate.
- d. has disclosed to you that there are no significant deficiencies in the design or operation of the controls, which could adversely affect the Company's ability to comply with the control criteria related to ABC-CA's CA business practices disclosure, service integrity (including key and certificate life cycle management controls), and CA environmental controls, consistent with the assertions of management.
- e. has made available to you all significant information and records related to our assertion.
- f. has responded fully to all inquiries made to us by you during your examination.
- g. has disclosed to you any changes occurring, or planned to occur, subsequent to [date], in controls or other factors that might significantly affect the controls, including any corrective actions taken by management with regard to significant deficiencies.

In management's opinion, ABC-CA, in providing its Certification Authority (CA) services at [location], ABC-CA, during the period [date] through [date]

- disclosed its key and certificate life cycle management business practices and provided such services in accordance with its disclosed practices

- maintained effective controls to provide reasonable assurance that
 - subscriber information was properly authenticated (for the registration activities performed by ABC-CA) and
 - the integrity of keys and certificates it managed was established and protected throughout their life cycles
- maintained effective controls to provide reasonable assurance that
 - subscriber and relying party information was restricted to authorized individuals and protected from uses not specified in the CA's business practices disclosure;
 - the continuity of key and certificate life cycle management operations was maintained; and
 - CA systems development, maintenance, and operations were properly authorized and performed to maintain CA systems integrity

Principles and Criteria for XBRL-Formatted Information

Notice to Readers

The *Principles and Criteria for XBRL-Formatted Information* present criteria established by the Assurance Services Executive Committee (ASEC) of the AICPA for use by preparers of XBRL-formatted information and practitioners when providing attestation or consulting services to evaluate XBRL-formatted information. ASEC, in establishing and developing these principles and criteria, followed due process procedures, including exposure of the proposed principles and criteria for public comment. Under BL section 360, *Committees* (AICPA, *Professional Standards*), ASEC has been designated as a senior committee and has been given authority to make public statements and publish measurement criteria without clearance from Council or the board of directors.

Background and Applicability

.01 The AICPA Assurance Services Executive Committee (ASEC) has developed a set of principles and criteria for preparers, reviewers, practitioners, and users of information formatted in eXtensible Business Reporting Language (XBRL) to use in evaluating the completeness of the XBRL files, evaluating the mapping of the source information, evaluating the consistency of the XBRL files with the source information, and evaluating the structure of the XBRL files (XBRL principles and criteria). XBRL is a global standard that provides unique electronically readable codes (tags) for each business reporting concept in financial statements or other business reports. (These reports are referred to as source information because they are the origin of the information that will be formatted.) The term *XBRL-formatted information* means information that has been represented using XBRL and included in one or more electronic files (commonly referred to as *tagged information*).

.02 This document presents the principles and related criteria to be used for evaluating XBRL-formatted information and provides the basis for ASEC's conclusions that the criteria are suitable. Regardless of who establishes or develops the criteria, the preparer (responsible party) is responsible for selecting the criteria and determining that such criteria are appropriate for his or her purposes. ASEC focused on areas that would require judgment, could not be automatically validated, and may have a significant impact on users of XBRL files (instance document and related files, including taxonomy extension schema, label linkbase, calculation linkbase, presentation linkbase, and definition linkbase documents). The XBRL principles and criteria have been developed for multijurisdictional use and are based on key concepts from best practices and significant local requirements. However, compliance with this set of principles and criteria may not necessarily result in compliance with the laws, regulations, or other requirements of an entity's reporting environment. The exhibit, "Application Guidance of the eXtensible Business Reporting Language Principles and Criteria for eXtensible Business Reporting Language Exhibits Submitted to the Securities Exchange Commission," of this document aligns certain requirements of the Securities and Exchange Commission (SEC)

rules¹ for preparing and submitting XBRL files that include financial statements, including the notes, and required schedules that are submitted to the SEC with the related XBRL principles and criteria herein. However, the XBRL principles and criteria are not intended to be complete for purposes of evaluating compliance with the SEC rules² and regulations; therefore, complying with these principles and criteria is not a sufficient basis for a preparer to assert that the entity has complied with all the SEC rules and regulations.

.03 The XBRL principles and criteria focus on the use of the XBRL 2.1 Specification for financial statement reporting and do not address all possible implementations of the XBRL standard. As a result, some options and features have not been addressed in this document. For example, the XBRL principles and criteria cover the more commonly used decimal attribute (used to convey the accuracy for a given amount) rather than the less common option of using the precision attribute. Similarly, some features addressed in this document may not be used in certain implementations.

Use of the Criteria

.04 The XBRL principles and criteria represent a means for assessing the quality of XBRL files and, therefore, provide a consistent basis for evaluating the completeness, mapping, consistency, and structure of the XBRL-formatted information. Prior to applying these XBRL principles and criteria, management needs to determine that the underlying source information to be tagged is complete and accurate and that it includes all required content and is prepared in conformity with its reporting framework (for example, U.S. generally accepted accounting principles). Therefore, the XBRL principles and criteria only relate to the XBRL-formatted information, not the underlying source information (for example, deficiencies in the underlying source information with respect to its reporting framework are not addressed by these principles and criteria).

.05 The XBRL principles and criteria were written in general terms with the intent of applying them across a variety of XBRL reporting environments. In addition to applying these XBRL principles and criteria, management may perform validation tests to determine whether the XBRL files will be accepted for submission (for example, will pass validation tests provided by the regulator or requesting party). The XBRL principles and criteria focus on areas that both require judgment by management in preparing the XBRL files and would likely have a significant effect on user decisions and, therefore, may not include all requirements of an entity's reporting environment. Management should comply with the XBRL principles and criteria taken as a whole. It would not be appropriate for management merely to assert compliance with individual principles and criteria. Notwithstanding, a preparer may be requested by a practitioner, in connection with services provided by the practitioner, to provide specific written representations with respect to certain principles or criteria.

.06 The process for preparing financial statements and other business reports and mapping the information to standardized XBRL taxonomies is complex and requires judgment. Knowledge of the XBRL language and specific

¹ The Securities and Exchange Commission (SEC) adopted final rules that require issuers to provide their financial statements, including the notes, and required schedules to the SEC and on their corporate websites in an interactive data format using eXtensible Business Reporting Language (XBRL) (Release Nos. 33-9002, 34-59324, and 39-2461; IC-28609; and File No. S7-11-08 issued January 30, 2009).

² Additional *EDGAR Filer Manual* requirements exist for XBRL-formatted information that are not included herein.

requirements for submitting XBRL-formatted information is needed to properly create XBRL files. For this reason, entities may use the criteria to evaluate the quality of their XBRL-formatted information. They also may decide to engage a CPA to provide attestation or consulting services related to their XBRL-formatted information.

CPA Services

.07 Attestation services under the AICPA's Statements on Standards for Attestation Engagements or the Public Company Accounting Oversight Board's interim attestation standards include examination, review,³ and agreed-upon procedures engagements. In the attestation standards, the CPA performing an attest engagement is known as a practitioner. Examples of attestation standards that may be applied to perform engagements related to XBRL-formatted information include AT section 101, *Attest Engagements*, and AT section 201, *Agreed-Upon Procedures Engagement* (AICPA, *Professional Standards*).

.08 In examination engagements, the practitioner provides a report that expresses an opinion (for example, the practitioner reports on whether the XBRL-formatted information meets the criteria for completeness, mapping, consistency, and structure in all material respects). The XBRL principles and criteria are not designed for measuring compliance with the laws, regulations, or other requirements related to an entity's XBRL reporting obligations. Accordingly, when conducting examination engagements, evaluation of compliance with these XBRL principles and criteria alone does not provide an adequate basis for determining that the entity has complied with all its XBRL reporting requirements. In order to make clear that the practitioner's report does not cover the entity's compliance with all its XBRL reporting requirements, the practitioner will ordinarily want to include additional explanatory language within his or her attest reports to emphasize that the practitioner is not forming a conclusion on whether the entity is in compliance with all its XBRL reporting requirements.

.09 In an agreed-upon procedures engagement, the practitioner does not express an opinion but, rather, performs procedures agreed upon by the specified parties and reports the findings in a report restricted to the use of those specified parties.

.10 Consulting services include developing findings, conclusions, and recommendations for client consideration and decision making. The practitioner does not express an opinion or form a conclusion about the reliability of the subject matter in these engagements. Clients may engage practitioners to perform various tasks using the XBRL principles and criteria, which may include providing observations and recommendations to management on its XBRL project management plan, implementation process, or supporting documentation prepared by the client, including comments on the client's mapping of its financial statements to the elements in the applicable taxonomy. Practitioners providing such services follow CS section 100, *Consulting Services: Definitions and Standards* (AICPA, *Professional Standards*).

³ Review engagements generally consist of the performance of inquiries and analytical procedures designed to provide a moderate level of assurance (that is, negative assurance). However, a practitioner ordinarily could not perform meaningful analytical procedures on information formatted in XBRL sufficient to achieve this level of assurance, and it is uncertain what other procedures could be identified that, when combined with inquiry procedures, could form the basis for a review engagement. Accordingly, the feasibility of a review engagement related to XBRL formatting is uncertain.

Suitability and Availability of Criteria

.11 The XBRL principles and criteria included herein address the completeness of the XBRL files, the mapping of the source information, the consistency of the XBRL files with the source information, and the structure of the XBRL files. These four attributes of XBRL-formatted information are known as *principles*, which are broad statements of objectives. The following four principles have been developed for use in evaluating the quality of XBRL-formatted information and should be applied in accordance with the requirements of the entity's reporting environment:⁴

- *Completeness of the XBRL files.* All required information is formatted at the required levels of detail, as defined by the entity's reporting environment. Only permitted information is included in the XBRL files.
- *Mapping of the source information.* The elements selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the requirements of the entity's reporting environment.
- *Consistency of the XBRL files with the source information.* All formatted information in the XBRL files is consistent with the source information and formatted in accordance with the requirements of the entity's reporting environment.
- *Structure of the XBRL files.* XBRL files are structured in accordance with the associated criteria.

.12 *Criteria* are benchmarks used to measure and present the subject matter and against which the practitioner evaluates the subject matter. AT section 101, *Attest Engagements*,⁵ in *AICPA Professional Standards* and *PCAOB Standards and Related Rules* states that suitable criteria must have each of the following attributes:

- *Objectivity.* Criteria should be free from bias.
- *Measurability.* Criteria should permit reasonably consistent measurements, qualitative or quantitative, of subject matter.
- *Completeness.* Criteria should be sufficiently complete so that those relevant factors that would alter a conclusion about subject matter are not omitted.
- *Relevance.* Criteria should be relevant to the subject matter.

.13 ASEC has concluded that the XBRL criteria have all the attributes of suitable criteria. In addition to being suitable, AT section 101 also indicates that the criteria must be available to users of the practitioner's report. The publication of the principles and criteria following exposure makes the criteria available to users.

Reporting Environment

.14 In an attest service in which a conclusion is expressed, a practitioner will report on compliance with all the principles and related criteria. In an

⁴ More information on the requirements of the entity's reporting environment is provided in paragraph .15.

⁵ This and all subsequent mentions of AT section 101 refer to AT section 101, *Attest Engagements*, in *AICPA Professional Standards* and *PCAOB Standards and Related Rules*.

agreed-upon procedures engagement, practitioners and specified parties agree on the procedures to be performed, and specified parties take responsibility for the sufficiency of those procedures for their purposes. In such an engagement, the procedures may not address all the principles and criteria.

.15 Several principles and criteria included herein refer to consistency with the requirements of the entity's reporting environment. The entity's reporting environment includes the requirements, rules, and regulations for which the entity provides the XBRL files (for example, securities regulators or tax authorities). It is beyond the scope of this document to include all applicable rules, regulations, and technical requirements related to the intended purpose of the XBRL submissions. Notwithstanding, preparers are responsible for identification of, and compliance with, all requirements of the entity's reporting environment in which XBRL files are submitted and may choose to request that a practitioner perform procedures with respect to such requirements.

XBRL-Related Principles and Criteria

.16 This section represents the principles and related criteria for XBRL-formatted information. The lettered statements represent the criteria related to each principle, and the lettered rows contained within the table in the exhibit of this document also correspond to the lettered criteria presented in this section.

Completeness of the XBRL Files

.17 All required information is formatted at the required levels of detail, as defined by the entity's reporting environment. Only permitted information⁶ is included in the XBRL files.

- a. All information that is required to be formatted, as defined by the entity's reporting environment, is formatted at the appropriate levels of detail in the XBRL files.
- b. The XBRL files contain only facts or presentation or calculation relationships that are included in the source information⁷ and other required or permitted information (such as document and entity information⁸) and contain only unused elements and linkbase information that are used intermittently unless otherwise prohibited.⁹

Mapping of the Source Information

.18 The elements¹⁰ selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the requirements of the entity's reporting environment.

⁶ In a case in which an entity elects to format permitted information in addition to the required information, preparers should consider to what level of detail to format such information so that it is not misleading to the user.

⁷ *Source information* is the original data set (which may be in electronic format) for which the information is to be formatted in XBRL files (for example, financial statements, including the notes, and required schedules; sustainability reports; or the "Risk/Return Summary" section of the mutual fund prospectuses).

⁸ Document and entity information includes information that may be outside the financial statements, such as public float or central index key.

⁹ The entity may carry forward unused elements or presentation, definition, or calculation relationships that are used intermittently (for example, elements or relationships reflected in annual financial statements but not used in quarterly financial statements).

¹⁰ Elements include line items and combinations of line items, domain members, and axes.

- c. Elements used in XBRL files, considering their attributes;¹¹ definitions (for example, documentation labels in the label linkbase); and references, are consistent with the corresponding business reporting concepts in the underlying source information.
- d. The most specific elements or dimensional combination of elements across the entire taxonomy whose attributes; definitions (for example, documentation labels in the label linkbase); and references are consistent with the corresponding business reporting concepts have been used.
- e. Use of selected elements is permitted (for example, the selected element is not deprecated).
- f. The same business reporting concepts appearing multiple times in the source information are formatted once using the same element or combination of elements throughout the XBRL files, when appropriate.¹²
- g. The same elements are used consistently to report the same business reporting concepts, including for each period for which such concepts appear in the underlying source information.¹³
- h. Extension elements are created only when both of the following conditions are met: no suitable elements exist in the selected taxonomy, and extensions are permitted by the entity's reporting environment.
- i. Definitions, if provided (for example, documentation labels in the label linkbase) for extension elements used in the instance document, are consistent with the source information.

Consistency of the XBRL Files With the Source Information

.19 All formatted information¹⁴ in the XBRL files is consistent with the source information and formatted in accordance with the requirements of the entity's reporting environment.

¹¹ The basic element attributes include (a) abstract; (b) data type (that is, whether the content is expected to conform to a certain type of content, such as block text, a monetary value, or other numeric value); (c) period type (that is, whether it is a point in time or a period of time); and (d) balance type (that is, whether it is normally a debit or credit).

¹² Exceptions exist when business reporting concepts will be formatted using different line item and member combinations or when the related guidance requires different elements to be used based on the level of granularity of the source data item being formatted (for example, in situations when concepts must use both dimensional and nondimensional approaches, such as Treasury stock presented on the balance sheet without dimensions and presented on the statement of stockholders equity with dimensions). The appropriate use of duplicate elements should be considered.

¹³ Although the source information may contain different values (for example, positive, negative, or zero) in one period as compared with another (for example, net income [loss]) or represent an ending balance in one period and the beginning balance in the next, the same element should be used in all periods presented. Notwithstanding, there may be certain situations when the taxonomy may include different elements to reflect positive and negative values (for example, certain elements relating to tax assets and liabilities in the US GAAP Taxonomy).

¹⁴ Formatted information includes data (for example, amounts, text, dates); contextual information (for example, monetary units); and relationships (for example, presentation order and calculations).

- j.* Formatted amounts in the XBRL files reflect the entire numbers of the corresponding business reporting concepts (that is, the XBRL amounts are not scaled¹⁵).
- k.* Formatted amounts have the appropriate signs based on the nature of the values in the source information, balance attributes, and definitions (documentation labels in the label linkbase) of the elements.
- l.* All text, dates, and uniform resource identifiers in the XBRL files are consistent with the underlying source information.
- m.* Extension elements included in the instance document of the XBRL files for monetary amounts include debit or credit balance attributes or documentation labels with an indication of the meaning of positive or negative values, when applicable, that are consistent with the nature of the business reporting concepts in the underlying source information.
- n.* The context periods¹⁶ are consistent with the source information (for example, second calendar quarter 2012 is expressed as “2012-04-01 to 2012-06-30”).
- o.* The decimal attribute values are consistent with the degree of accuracy of the amounts as represented in the source information (for example, 23.5 million is rounded to the hundred thousandths).
- p.* The units defined in the instance document are consistent with the measurements represented in the source information (for example, U.S. dollars are defined as “iso4217:USD,” as properly defined in XBRL Specification 2.1).
- q.* The entity identifier in the instance document properly represents the reporting entity (for example, the central index key) in accordance with the requirements of the entity’s reporting environment.
- r.* When text block information is used, its format and layout are consistent with the format and layout of the content in the source information.
- s.* When a presentation linkbase is used, the order and hierarchy (that is, arrangement of appropriate abstracts and line items) reflected in the presentation linkbase are consistent¹⁷ with the requirements of the entity’s reporting environment.
- t.* Labels are consistent¹⁸ with the captions or meanings in the source information, as applicable.

¹⁵ Amounts in financial statements are often presented in various formats (for example, rounded to millions) and may represent a different scale. However, amounts formatted in XBRL must be entered without such presentational formatting. For example, 23.5 million would be entered as 23500000, and 14.3 percent would be entered as .143.

¹⁶ Context periods for a roll-forward format use the same “instant” context for the beginning balance of the current period as for the ending balance of the previous period.

¹⁷ When using dimensions to format information, it may not be possible to present this information in the same order and hierarchy (for example, transposed or intermingled axes for line items and domain members may occur).

¹⁸ *Consistent* means the same as the captions in the source information, when required, or within the scope of variances otherwise permitted.

- u. Calculations reflected in the source information are included in the calculation linkbase in accordance with the requirements of the entity's reporting environment to the extent possible within the technical limitations¹⁹ of XBRL.

Structure of the XBRL Files

.20 XBRL files are structured²⁰ in accordance with the following listed criteria.

- v. Taxonomies, including versions, referenced in the XBRL files are permitted for the entity's reporting environment.
- w. Presentation groupings are consistent with the titles and order of the components of the underlying source information and in accordance with the requirements of the entity's reporting environment.
- x. The entity scheme for each context throughout the instance document is in accordance with the requirements of the entity's reporting environment.
- y. New table structures are only created when no suitable table structure exists in the applicable standard taxonomy's definition linkbase.
- z. The names of extension elements contain no prohibited information.
- aa. The XBRL files include all files required by the entity's reporting environment (for example, an instance, schemas, and linkbases).
- bb. The language of the information in the XBRL files uses a permitted (or required) language (for example, English).

Basis for Conclusions

Basis for Principles and Criteria Overview

.21 The quality of XBRL files is an important concern to users of these files. Errors in the XBRL files will have varying consequences. During the development of the XBRL principles and criteria, potential errors that could occur when preparing XBRL files were considered, and it is believed that the criteria address many of these errors. Further, the principles and criteria meet the requirements under AT section 101, as previously discussed in paragraphs .11–.13, and, thus, are considered to be suitable for a practitioner to perform an attestation engagement. An important component of producing high-quality XBRL files is to have a sound preparation process in place that includes controls (including adequate documentation and review procedures) designed both to comply with requirements of an entity's reporting environment and to prepare files in an appropriately consistent manner from period to period. It also is important to create the XBRL files in a manner so that they will be accepted upon submission. In some reporting environments, presubmission validation tests may be provided by the regulator and performed prior to submitting the XBRL files.

¹⁹ Due to the current limitations of XBRL, calculations cannot be performed across different contexts; accordingly, it is currently not possible to include such calculations in the XBRL files.

²⁰ It is beyond the scope of these principles and criteria to include all applicable rules, regulations, and technical requirements related to the intended purpose of the XBRL submissions. Notwithstanding, preparers are responsible for identification of, and compliance with, all the requirements of the entity's reporting environment in which XBRL files are submitted, and a preparer may choose to request that a practitioner perform procedures with respect to such requirements.

.22 It is critical that the underlying source information to be formatted is complete and accurate (that is, the underlying source information includes all required content and is prepared in conformity with its own criteria) in order for users to appropriately rely on the XBRL files.

.23 An analysis of the potential errors and effects on users resulted in the determination that the most important attributes of quality XBRL files are the completeness of the XBRL files, the mapping of the source information, the consistency of the XBRL files with the source information, and the structure of the XBRL files. These attributes have become the four principles by which to measure the quality of the XBRL files; the criteria were developed to achieve each of these principles.

Completeness of the XBRL Files

.24 It is important that entities format all the required information at the required levels of detail in their XBRL files. Missing information will result in incomplete reporting and will impact users' ability to access information. Additionally, when formatting information that is permitted but not required, entities should ascertain that the information is included in the source information and formatted at a level of detail that is not misleading to users. For example, the current SEC rules do not require dates included in a note to be individually formatted in the XBRL files. However, if an entity opts to format this information separately and formats some but not all the dates included in the note, users may question why certain information was not formatted.

Mapping of the Source Information

.25 Elements communicate the meaning of the information being reported; accordingly, selecting the most appropriate element (or combination of elements) is important because it will better enable users to properly analyze and compare disclosures among entities. Selecting the element from the appropriate taxonomy(ies) that best depicts the corresponding business reporting concept is required, except when extensions are necessary to differentiate information in order to effectively communicate with users of XBRL files. Incorrect element selections or inappropriate extensions will affect users' ability to access and compare the data among entities, thereby increasing the risk of inefficient and possibly inaccurate analyses.

Consistency of the XBRL Files With the Source Information

.26 The XBRL files must contain information that is consistent with the source information. Although the use of incorrect amounts and dates has obvious effects on the usefulness of data, other contextual information also is important. User analyses of the formatted amounts are affected by incorrect information, such as units of measure, decimals, sign values, and calculations. It is important that any extensions are appropriately created with the proper attributes because the attributes can change the meaning and value of a reported concept.

Structure of the XBRL Files

.27 It is essential to structure XBRL files in accordance with the requirements of the entity's reporting environment. Failure to comply with such requirements may prohibit those files from operating within the requesting party's system. For example, under the SEC's interactive data program for financial statements, files that do not comply with SEC requirements may not pass the SEC's validation process and will not be uploaded through the SEC's

Electronic Data-Gathering, Analysis, and Retrieval system. Other structural errors may cause XBRL files to be materially inconsistent with the HTML version of the source information or not usable by other XBRL software applications. It is beyond the scope of this document to include all applicable rules, regulations, and technical requirements related to the intended purpose of the XBRL submissions. Notwithstanding, preparers are responsible for identification of, and compliance with, all requirements of the entity's reporting environment in which XBRL files are submitted and may choose to request that a practitioner perform procedures with respect to such requirements.

Glossary

- abstract.** An attribute of an element to primarily indicate that the element is used only in a hierarchy to group related elements together or to provide headings in a rendering. An abstract element cannot be used to tag data in an instance document.
- attribute.** A property of an element that indicates the kind of data that can be tagged to the concept, such as its data type, period type, and whether the element is abstract.
- axis (pl. axes).** An instance document contains facts; an axis (and domain member) differentiates facts, and each axis represents a way the facts may be classified. For example, revenue for a period might be reported along a business unit axis, country axis, product axis, and so forth.
- balance type.** An attribute of a monetary item type designated as debit or credit; a designation, should be the natural or most expected balance of the element—credit or debit—and, thus, indicates how calculation relationships involving the element may be assigned a weight attribute (–1 or 1), as well as how numbers should be entered into the instance document.
- calculation linkbase.** A taxonomy file that defines weighted summation, aggregating relationships between numeric items expressed as parent-child hierarchies.
- caption.** Explanatory text provided to describe facts presented in a report.
- context.** Entity- and report-specific information (reporting period, segment information, and so forth) required by eXtensible Business Reporting Language (XBRL) that allows tagged data to be understood in relation to other information.
- decimal.** Fact attribute used to express the number of decimal places to which numbers have been rounded.
- deprecated element.** An element within a taxonomy that has been declared not to be used in instance documents for various reasons (for example, superseded, redundant, or incorrect).
- domain.** An element that represents an entire set of other elements that are used to further describe line items; the domain and its members are used to classify facts along the axis of a table. For example, “Arkansas” could be a domain member in the domain “States” and would be used to classify elements, such as revenues and assets, in Arkansas as distinct from other states. When a fact does not have any domain member specified, that means it applies to the entire domain.
- domain member.** An element representing one of the classifications within a domain. A domain member categorizes the information to which it is applied.
- element.** An XBRL component, such as a line item, domain member, and dimension (a dimension is called an axis in the US GAAP Taxonomy). The representation of a business reporting concept, including line items in the face of the financial statements, important narrative disclosures, and rows and columns in tables are all examples of elements in a taxonomy. The terms *concept*, *element*, and *tag* (noun) are often used interchangeably in XBRL.

- element definition.** A description of a reporting concept, most commonly a documentation label in the label linkbase.
- extension element.** An element that is created in an extension taxonomy to define business reporting concepts that have not previously been defined in a standard taxonomy.
- extension taxonomy.** A taxonomy in which users can add additional entity-specific elements and indicate additional relationships to a standard taxonomy in order to define business reporting concepts or element relationships and aspects (presentation, calculation, labels, and so forth) to reflect their own unique reporting characteristics.
- fact.** The occurrence of an amount or other information tagged in an instance document by a taxonomy element or combination of elements.
- formatted information.** Information represented using XBRL and included in one or more electronic files. Commonly referred to as tagged data or structured data.
- hierarchy.** An organizational treelike structure to present relationships between elements (such as order and indentation of elements in linkbases).
- instance or instance document.** A file that contains business reporting information and represents a collection of business facts and report-specific information using elements from one or more XBRL taxonomies.
- label.** Name or description for an element for presentation purposes; under the SEC mandate, for example, each element has, at a minimum, a standard label in U.S. English (such as, cash and cash equivalents) and is unique across the taxonomy.
- label type.** A distinguishing name for each distinct label indicating the circumstances in which it should be used; each is given a separate defining role to use in different presentation situations (for example, beginning, ending, and so forth).
- line item.** Elements that conventionally appear on the vertical axis (rows) of a table or columnar presentation. Line items represent the primary business reporting concepts of tagged data in the instance document.
- linkbase.** A taxonomy file that contains additional defining information and relationships for taxonomy elements. The primary taxonomy linkbases in XBRL are calculation, definition, label, presentation, and reference.
- mapping.** Process of identifying the elements that correspond to lines, columns, and tables in the source information to elements in the taxonomy.
- name.** An attribute that uniquely identifies an element in a schema.
- namespace.** Every element is associated with a universal resource identifier that may identify the organization that maintains the taxonomy. In the 2012 US GAAP Financial Reporting Taxonomy, namespaces start with *http://xbrl.fasb.org/us-gaap/2012*.
- negated label.** A negated label is a special label type that can be referenced in the presentation linkbase. A negated label role is a convention used to indicate that the sign for a tagged amount should be reversed when presented in a rendering.

- nil.** An attribute of an element that, when marked as “true” in an instance document, reflects a concept tagged without a value.
- period type.** An attribute of an element that reflects whether it is reported as a point in time (an instant) or period of time (duration).
- presentation linkbase.** A taxonomy file that defines presentation order of elements in the taxonomy. The presentation linkbase also suggests which label type should be used at each point of presentation.
- render or rendering.** To process an instance document into a layout that facilitates readability and understanding of its contents.
- scaling.** A process that automatically adjusts numeric data to present a specific format, thus saving time of entering zeros during the entry or creation process. The XBRL specification does not support the scaling of numeric values (all values must be reported in their entirety); however, it is a feature commonly found in instance document creation software.
- segment.** Tag that allows additional information to be included in the context of an instance document; this information captures segment information, such as an entity’s business units, type of debt, and type of other income.
- sign value.** Denotes whether a numeric fact in an instance has an implied positive (no sign) or a negative (–) value.
- source information.** The information (which may be in electronic format) that is to be formatted in XBRL files (for example, financial statements, including the notes, and required schedules; sustainability reports; or the “Risk/Return Summary” section of the mutual fund prospectuses).
- table.** Generally, a presentation of rows and columns also known as a hypercube. In the presentation linkbase, an element that organizes a set of axes and set of line items to indicate that each fact of one of the line items could be further characterized along one or more of its axes. For example, if a line item is “Sales,” and an axis is “Scenario,” this means that an instance document could have facts that are either for an unspecified scenario or a specific scenario, such as “forecast.”
- tag (noun).** The terms *element* and *tag* are often used interchangeably in XBRL. The tag is the structure that brings together the content being tagged with the associated element from the taxonomy and additional attributes to related contexts, units, and other information.
- tag (verb).** To apply tags to business reporting concepts.
- taxonomy(ies).** Electronic “dictionary” of elements used to report business data, their definitions, and interrelationships.
- type or data type.** Attribute that defines type (for example, monetary, string, share, decimal) of data that an element represents.
- unit of measure.** The units in which numeric items have been measured, such as U.S. dollars (iso4217:USD); shares (xbrli:shares); euros (iso4217:EUR); or compound units, such as U.S. dollars per share.
- validation.** Process of checking that instance documents and taxonomies correctly meet the rules of the XBRL specification and certain requirements of the entity’s reporting environment.

XBRL files. Electronic files that may include the instance document, taxonomy extension schema, label linkbase, calculation linkbase, presentation linkbase, and definition linkbase documents (or other linkbases)

XBRL footnote link. Additional information that is attached to an element used to tag information in superscript footnotes.

Exhibit — Application Guidance of the eXtensible Business Reporting Language Principles and Criteria for eXtensible Business Reporting Language Exhibits Submitted to the Securities and Exchange Commission

The Securities and Exchange Commission (SEC) issued a release adopting final rules, *Interactive Data to Improve Financial Reporting* (SEC rules¹), that requires issuers to submit their financial statements, including the notes, and required schedules to the SEC and to post them on their corporate websites in an interactive data format using eXtensible Business Reporting Language (XBRL). The SEC rules do not require auditor involvement on the XBRL files; however, issuers may obtain third-party services voluntarily.

This exhibit aligns certain SEC requirements for XBRL exhibits submitted to the SEC with the related XBRL principles and criteria applicable to XBRL files that include financial statements, including the notes, and required schedules that are submitted to the SEC under the SEC rules. Accordingly, the term “entity’s reporting environment” has been replaced with the “SEC’s requirements” throughout this exhibit in order to make it specific to SEC filers. The XBRL principles and criteria are not designed for measuring compliance with the SEC rules and regulations. Additional *EDGAR Filer Manual* (EFM) requirements exist for XBRL-formatted information that are not included herein. For example, the SEC requirements include certain requirements that are checked in an automated manner by using the Electronic Data-Gathering, Analysis, and Retrieval XBRL validation process. Therefore, compliance with this set of principles and criteria does not result in compliance with all SEC requirements. Accordingly, when conducting examination engagements, evaluation of compliance with these XBRL principles and criteria alone does not provide an adequate basis for determining that the entity has complied with all the SEC’s XBRL reporting requirements. In order to make clear that the practitioner’s report does not cover the entity’s compliance with all the SEC’s XBRL reporting requirements, the practitioner will ordinarily want to include additional explanatory language within his or her attest reports to emphasize that the practitioner is not forming a conclusion on whether the entity is in compliance with all the SEC’s XBRL reporting requirements.

The letters in the following table correspond to the XBRL criteria that were included in the “XBRL-Related Principles and Criteria” section of this document, and the numbers associated with certain lettered criteria relate to specific requirements under the SEC rules. The table also provides references to relevant guidance (for example, EFM section or other source) that are applicable to the principles. Additionally, some of the SEC requirements may be applicable to multiple principles. This table identifies secondary principles to which these requirements may also apply (C=Completeness, M=Mapping, CO=Consistency, and S=Structure).

¹ Release Nos. 33-9002, 34-59324, and 39-2461; IC-28609; and File No. S7-11-08 issued January 30, 2009.

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
	Completeness of the XBRL Files—All required information is formatted at the required levels of detail, as defined by the SEC's requirements. Only permitted information³ is included in the XBRL files.					
A	All information that is required to be formatted, as defined by the SEC's requirements, is formatted at the appropriate levels of detail in the XBRL files.		X			
A(1)	All information (including parenthetical information) on the face of the financial statements in the source information ⁴ is formatted in the XBRL files, including facts that represent zero or do not have amounts.	6.6.12, 6.6.14, Staff Observations November 2010	X			
A(2)	All required document and entity information (DEI) is formatted in the XBRL files.	6.5.20, 6.5.21, 6.5.26, 6.6.7, 6.6.8, 6.6.9, 6.6.10	X			
A(3)	Each complete note and required schedule under Regulation S-X are formatted separately using a text block element.	6.6.16	X		X	

² The numbered references in this column refer to sections of the *EDGAR Filer Manual* (EFM). Other references include the Securities and Exchange Commission (SEC) Division of Corporation Finance's Compliance and Disclosure Interpretations (C&DIs), staff interpretations and frequently asked questions from the SEC Office of Interactive Disclosure (OID), and the OID's *Staff Observations From Review of Interactive Data Financial Statements (from November 1, 2010)*. These documents are available on the SEC's website. Because the EFM is updated frequently, filers should check the SEC's website at <http://xbrl.sec.gov> for the most current version.

³ In a case in which an entity elects to format permitted information in addition to the required information, preparers should consider to what level of detail to format such information so that is not misleading to the user.

⁴ Source information, for purposes of submission to the SEC, is the electronic or paper-based financial statements, including the notes; required schedules under Regulation S-X; and document and entity information (DEI) (which includes document type, document period end date, registrant name, central index key [CIK], fiscal year-end date, public float, fiscal year, fiscal period, filer category, and reporting status, as well as an indication of whether an amendment flag exists [if so, include an amendment description], whether the filer is not required to file reports, and whether the filer is a well-known seasoned issuer).

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
A(4)	Each significant accounting policy (whether included in the accounting policies note or elsewhere within the notes to the financial statements) is formatted separately using a text block ⁵ element.	6.6.19, C&DI 146.15	X		X	
A(5)	Each table within each note is formatted separately using a text block element.	6.6.20	X		X	
A(6)	Each amount ⁶ disclosed in the notes and required schedules under Regulation S-X (including amounts written as words) is formatted separately.	6.6.22, 6.6.23, C&DI 146.16	X		X	
A(7)	Each amount included in the superscript footnotes is formatted separately.	6.6.22, 6.6.39	X		X	
A(8)	Text that is shown on the face of the financial statements at the bottom of the page or bottom of a table preceded by a superscript is formatted using XBRL footnote links. ⁷	6.6.39, 6.6.40	X		X	
B	The XBRL files contain only facts or presentation or calculation relationships that are included in the source information and other required or permitted information (such as DEI ⁸ required by the SEC) and contain only unused elements and linkbase information that are used intermittently unless otherwise prohibited. ⁹	6.6.17	X			

(continued)

⁵ The US GAAP Taxonomy has adopted a convention for distinguishing between text block elements intended for use in tagging accounting policies, tables, and disclosures.

⁶ Not all amounts are required to be formatted (for example, no need to format 2 in 2 percent milk) (see C&DI 146.16, located on the SEC's website, for additional examples).

⁷ The EFM only requires this for the face of the financial statements.

⁸ DEI includes information that may be outside the financial statements, such as public float and CIK.

⁹ The entity may carry forward unused elements or presentation, definition, or calculation relationships that are used intermittently (for example, elements or relationships reflected in annual financial statements [Form 10-K] but not used in quarterly financial statements [Form 10-Q]).

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
	Mapping of the Source Information—The elements¹⁰ selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the SEC's requirements.					
C	Elements used in XBRL files, considering their attributes; ¹¹ definitions (for example, documentation labels in the label linkbase); and references, are consistent with the corresponding business reporting concepts in the underlying source information.	6.6.23, 6.6.24, 6.6.25, 6.6.26 6.6.27, 6.6.29, 6.8.12, 6.8.13, Staff Observations November 2010		X	X	
C(1)	Headings in the source information are represented as abstract elements.	6.8.8, 6.13.3		X	X	
D	The most specific elements or dimensional combination of elements across the entire taxonomy whose attributes; definitions (for example, documentation labels in the label linkbase); and references are consistent with the corresponding business reporting concepts have been used.	6.6.5, 6.6.7, 6.6.8, FAQ E.17		X	X	
D(1)	Certain elements required for use by the SEC (for example, DEI elements or elements for reporting consolidating entities) have been used, if applicable.	6.5.20, 6.5.21, 6.6.5, 6.6.7, 6.6.8, FAQ E.17		X	X	
E	Use of selected elements is permitted (for example, the selected element is not deprecated).	Staff Observations November 2010		X		

¹⁰ Elements include line items and combinations of line items, domain members, and axes.

¹¹ The basic element attributes include (a) abstract; (b) data type (that is, whether the content is expected to conform to a certain type of content, such as block text, a monetary value, or other numeric value); (c) period type (that is, whether it is a point in time or a period of time); and (d) balance type (that is, whether it is normally a debit or credit). The balance attribute is currently not a primary consideration in selecting elements in the SEC program.

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
F	The same business reporting concepts appearing multiple times in the source information are formatted once using the same elements or combination of elements throughout the XBRL files, when appropriate. ¹²	6.5.7, 6.5.8, 6.5.9, 6.5.12		X		
G	The same elements are used consistently to report the same business reporting concepts, including for each period for which such concepts appear in the underlying source information. ¹³	6.6.13, 6.8.10		X		
H	Extension elements are created only when both of the following conditions are met: no suitable elements exist in the selected taxonomy, and extensions are permitted in accordance with the SEC's rules.	6.8.4, 6.8.16, 6.8.17, 6.8.18, 6.8.20, 6.8.21, 6.8.23, 6.10.5, Staff Observations November 2010		X		
I	Definitions, if provided (for example, documentation labels in the label linkbase) for extension elements used in the instance document, are consistent with the source information.			X		

(continued)

¹² Exceptions exist when business reporting concepts will be formatted using different line item and member combinations or when the related guidance requires different elements to be used based on the level of granularity of the source data item being formatted (for example, in situations when concepts must use both dimensional and nondimensional approaches, such as Treasury stock presented on the balance sheet without dimensions and presented on the statement of stockholders equity with dimensions). The appropriate use of duplicate elements should be considered, and redundantly formatted facts should be eliminated.

¹³ Although the source information may contain different values (for example, positive, negative, or zero) in one period as compared with another (for example, net income [loss]) or represent an ending balance in one period and the beginning balance in the next, the same element should be used in all periods presented. Notwithstanding, there may be certain situations when the taxonomy may include different elements to reflect positive and negative values (for example, certain elements relating to tax assets and tax liabilities in the US GAAP Taxonomy).

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
	Consistency of the XBRL Files With the Source Information—All formatted information¹⁴ in the XBRL files is consistent with the source information and formatted in accordance with the SEC's requirements.					
J	Formatted amounts in the XBRL files reflect the entire numbers of the corresponding business reporting concepts (that is, the XBRL amounts are not scaled ¹⁵).	6.6.31, 6.6.32			X	
K	Formatted amounts have the appropriate signs based on the nature of the values in the source information, balance attributes, and definitions (documentation labels in the label linkbase) of the elements.	6.6.30, Staff Observations November 2010			X	
L	All text, dates, and uniform resource identifiers in the XBRL files are consistent with the underlying source information.	Reg. S-T §232.405(c)			X	
L(1)	Nil attribute ¹⁶ is used only to convey business reporting concepts reported that have no amounts associated but are not zero (for example, commitments and contingencies).	6.6.15			X	

¹⁴ Formatted information includes data (for example, amounts, text, dates); contextual information (for example, monetary units); and relationships (for example, presentation order and calculations).

¹⁵ Amounts in financial statements are often presented in various formats (for example, rounded to millions) and may represent a different scale. However, amounts formatted in XBRL must be entered without such presentational formatting. For example, 23.5 million would be entered as 23500000, and 14.3 percent would be entered as .143.

¹⁶ Nil attribute is used only to convey business reporting concepts that have no amounts, text, dates, or uniform resource identifiers in the source information, but the elements are used in the instance document and presentation.

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
M	Extension elements included in the instance document of the XBRL files for monetary amounts include debit or credit balance attributes or documentation labels with an indication of the meaning of positive or negative values, when applicable, that are consistent with the nature of the business reporting concepts in the underlying source information.	6.11.5, Staff Observations November 2010			X	
M(1)	Extension elements included in the XBRL files for monetary amounts of balance sheet or income statement concepts include balance attributes (debit or credit) that are consistent with the nature of the underlying source information.	6.8.11, Staff Observations November 2010			X	X
N	The context periods ¹⁷ are consistent with the source information (for example, second calendar quarter 2012 is expressed as “2012-04-01 to 2012-06-30”).	6.5.9, 6.5.19, 6.11.7, FAQ E.19, Staff Observations November 2010			X	
N(1)	The required DEI elements use the Required Context. ¹⁸	6.5.20			X	
O	The decimal attribute values are consistent with the degree of accuracy of the amounts as represented in the source information (for example, 23.5 million is rounded to the hundred thousandths).	6.6.32			X	

(continued)

¹⁷ Context periods for a roll-forward format use the same “instant” context for the beginning balance of the current period as for the ending balance of the previous period.

¹⁸ The *Required Context* is defined in the EFM as the context when the dates cover the reporting period, and no segment or scenario information (that is, dimensional information) is included.

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
P	The units defined in the instance document are consistent with the measurements represented in the source information (for example, U.S. dollars are defined as “iso4217: USD,” as properly defined in XBRL Specification 2.1).	6.5.35, 6.6.35			X	
Q	The entity identifier in the instance document properly represents the reporting entity (for example, central index key [CIK]) in accordance with the SEC’s requirements.				X	
Q(1)	Only one CIK code is used throughout the XBRL files.	6.5.2			X	
R	The format and layout of the text block information are consistent ¹⁹ with the format and layout of the content in the source information.	6.6.16			X	X
S	The order and hierarchy (that is, arrangement of appropriate abstracts and line items) reflected in the presentation linkbase are consistent ²⁰ with the SEC’s requirements.	6.8.8, 6.12.3, 6.13.3			X	X
T	Labels ²¹ are consistent ²² with the captions or meanings in the source information, as applicable.	6.11.1, 6.11.2			X	
T(1)	The appropriate label roles (in the label linkbase) are specified in presentation groupings and are consistent with the source information, as applicable. For example, negated labels are used to reverse the sign of numeric values for presentation purposes.	6.11.4, 6.11.6, 6.11.7			X	X

¹⁹ The EFM requires the same format and layout in text blocks as the underlying source information.

²⁰ When using dimensions to format information, it may not be possible to present this information in the same order and hierarchy (for example, transposed or intermingled axes for line items and domain members may occur).

²¹ Labels in the label linkbase for the SEC program must be the same as the captions in the source information, including parenthetical information.

²² *Consistent* means the same as the captions in the source information, when required, or within the scope of variances otherwise permitted.

		<i>EFM (V.20 or Guidance Reference²³)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
U	Calculations reflected in the source information are included in the calculation linkbase in accordance with the SEC's requirements to the extent possible within the technical limitations ²³ of XBRL.	6.6.33, 6.15.2			X	X
	Structure of the XBRL Files—XBRL files are structured²⁴ in accordance with the following listed criteria.					
V	Taxonomies, including versions, referenced in the XBRL files are permitted by the SEC's requirements.	6.3.9		X	X	X
W	Presentation groupings are consistent with the titles and order of the components of the underlying source information and in accordance with the SEC's requirements.	6.7.12, FAQ B.12				X
W(1)	Separate note presentation groupings (base sets) are created for each required level (I, II, III, and IV) and ordered in accordance with the SEC's requirements.	6.7.12, FAQ B.12			X	X
W(2)	Titles of presentation groupings are in accordance with the SEC's formatting requirements.	6.7.12, FAQ B.12			X	X
X	The entity scheme (for example, www.sec.gov/CIK) for each context throughout the instance document is in accordance with the SEC's requirements.	6.5.1, 6.5.2, 6.5.3, FAQ E.17				X
Y	New table structures are only created when no suitable table structure exists in the applicable standard taxonomy's definition linkbase.	FAQ E.16, Staff Observations November 2010				X

(continued)

²³ Due to the current limitations of XBRL, calculations cannot be performed across different contexts; accordingly, it is currently not possible to include such calculations in the XBRL files.

²⁴ It is beyond the scope of these principles and criteria to include all applicable rules, regulations, and technical requirements related to the intended purpose of the XBRL submissions. Notwithstanding, preparers are responsible for identification of, and compliance with, all the SEC's requirements, and a preparer may choose to request that a practitioner perform procedures with respect to such requirements.

		<i>EFM (V.20 or Guidance Reference²)</i>	<i>C</i>	<i>M</i>	<i>CO</i>	<i>S</i>
Z	The names of extension elements contain no prohibited information.					X
Z(1)	The names of extension elements (excluding domain members) do not include company- or period-specific information.	6.8.6				X
AA	The XBRL files include all files required by the SEC (for example, an instance, schemas, and linkbases).	6.3.2				X
BB	The language of the information in the XBRL files uses a permitted (or required) language (for example, English).					X
BB(1)	Elements must include fact values and labels expressed in U.S. English.	6.5.14, 6.10.1				X

STATEMENT OF POSITION ACCOUNTING

Introduction

As explained in the “Special Note About Financial Accounting Standards Board *Accounting Standards Codification*TM” section of this publication, Financial Accounting Standards Board (FASB) *Accounting Standards Codification*TM (ASC) codified thousands of nongovernmental accounting pronouncements (including those of the FASB, EITF, and the AICPA) into FASB ASC, which reduces the generally accepted accounting principles (GAAP) hierarchy to two levels: one that is authoritative (in FASB ASC) and one that is not (not in FASB ASC). FASB ASC codifies all AICPA accounting SOPs. This guidance becomes nonauthoritative on July 1, 2009, in its native form, but we have included it here for archive purposes. The authoritative source of this guidance beginning July 1, 2009 is FASB ASC.

Although AICPA Statement of Position (SOP) 98-2, *Accounting for Costs of Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include Fund Raising*, was codified for nongovernmental entities as FASB ASC 958-720, it remains authoritative in its native form for governmental entities. Governmental Accounting Standards Board (GASB) Statement No. 55, *The Hierarchy of Generally Accepted Accounting Principles for State and Local Governments*, identifies AICPA Statements of Positions that have specifically been made applicable to state and local governmental entities by the AICPA and cleared by GASB as sources of established accounting principles in category *b* of the GAAP hierarchy for state and local governmental entities. GASB previously made this SOP, as originally issued, applicable to governmental entities; as such, it is still authoritative for those entities. The SOP is presented here for application by governmental entities as authoritative guidance permitted by GASB.

Statements of Position of the Accounting Standards Division present the conclusions of the Accounting Standards Executive Committee, which is the senior technical body of the AICPA authorized to speak for the Institute in the areas of financial accounting and reporting.

Section 10,730

Statement of Position 98-2 Accounting for Costs of Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include Fund Raising

March 11, 1998

NOTE

Statements of Position on accounting issues present the conclusions of at least two-thirds of the Accounting Standards Executive Committee, which is the senior technical body of the Institute authorized to speak for the Institute in the areas of financial accounting and reporting. AU section 411, *The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles*, identifies AICPA Statements of Position that have been cleared by either the Financial Accounting Standards Board (for financial statements of nongovernmental entities) or the Governmental Accounting Standards Board (for financial statements of state and local governmental entities), as sources of established accounting principles in category b of the hierarchy of generally accepted accounting principles that it establishes. AICPA members should consider the accounting principles in this Statement of Position if a different accounting treatment of a transaction or event is not specified by a pronouncement covered by Rule 203 of the AICPA Code of Professional Conduct. In such circumstances, the accounting treatment specified by this Statement of Position should be used, or the member should be prepared to justify a conclusion that another treatment better presents the substance of the transaction in the circumstances.

Summary

This Statement of Position (SOP) applies to all nongovernmental not-for-profit organizations (NPOs) and all state and local governmental entities that solicit contributions.

This SOP requires—

- If the criteria of purpose, audience, and content as defined in this SOP are met, the costs of joint activities that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function.
- If any of the criteria of purpose, audience, and content are not met, all costs of the activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising.

- Certain financial statement disclosures if joint costs are allocated.
- Some commonly used and acceptable allocation methods are described and illustrated although no methods are prescribed or prohibited.

This SOP amends existing guidance in AICPA Audit and Accounting Guides *Health Care Organizations*, *Not-for-Profit Organizations* (which was issued in August 1996 and supersedes SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, because the provisions of SOP 87-2 are incorporated into the Guide), and *Audits of State and Local Governmental Units*.*

This SOP is effective for financial statements for years beginning on or after December 15, 1998. Earlier application is encouraged in fiscal years for which financial statements have not been issued. If comparative financial statements are presented, retroactive application is permitted but not required.

Foreword

The accounting guidance contained in this document has been cleared by the Financial Accounting Standards Board (FASB) and the Governmental Accounting Standards Board (GASB). The procedure for clearing accounting guidance in documents issued by the Accounting Standards Executive Committee (AcSEC) involves the FASB and the GASB reviewing and discussing in public board meetings (1) a prospectus for a project to develop a document, (2) a proposed exposure draft that has been approved by at least ten of AcSEC's fifteen members, and (3) a proposed final document that has been approved by at least ten of AcSEC's fifteen members. The document is cleared if at least five of the seven FASB members and three of the five GASB members do not object to AcSEC undertaking the project, issuing the proposed exposure draft or, after considering the input received by AcSEC as a result of the issuance of the exposure draft, issuing the final document.†

The criteria applied by the FASB and the GASB in their review of proposed projects and proposed documents include the following:

1. The proposal does not conflict with current or proposed accounting requirements, unless it is a limited circumstance, usually in specialized industry accounting, and the proposal adequately justifies the departure.
2. The proposal will result in an improvement in practice.
3. The AICPA demonstrates the need for the proposal.
4. The benefits of the proposal are expected to exceed the costs of applying it.

* The AICPA Audit and Accounting Guide *State and Local Governments* supersedes the 1994 AICPA Audit and Accounting Guide *Audits of State and Local Governmental Units* and subsequent editions of that Guide with conforming changes made by the AICPA staff. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this Statement of Position (SOP) to state and local governments. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of the AICPA Audit and Accounting Guide *State and Local Governments*.]

† This document was cleared prior to July 1, 1997. In July 1997, the GASB increased to seven members. Documents considered by the GASB after July 1, 1997 are cleared if at least four of the seven GASB members do not object. [Footnote renumbered, June 2004, to reflect conforming changes necessary due to the issuance of the AICPA Audit and Accounting Guide *State and Local Governments*.]

In many situations, prior to clearance, the FASB and the GASB will propose suggestions, many of which are included in the documents.

Introduction

.01 Some nongovernmental not-for-profit organizations (NPOs) and some state and local governmental entities,¹ such as governmental colleges and universities and governmental health care providers, solicit support through a variety of **fund-raising activities**.² These **activities** include direct mail, telephone solicitation, door-to-door canvassing, telethons, special events, and others. Sometimes fund-raising activities are conducted with activities related to other functions, such as **program activities** or supporting services, such as **management and general activities**.³ Sometimes fund-raising activities include components that would otherwise be associated with program or supporting services, but in fact support fund raising.

.02 External users of financial statements—including contributors, creditors, accreditation agencies, and regulators—want assurance that fund-raising costs, as well as program costs and management and general costs, are stated fairly.

.03 In 1987, the AICPA issued Statement of Position (SOP) 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*.⁴ SOP 87-2 required that all circumstances concerning informational materials and activities that include a fund-raising appeal be considered in accounting for **joint costs** of those materials and activities and that certain criteria be applied

¹ This Statement of Position (SOP) uses the term *entity* to refer to both nongovernmental not-for-profit organizations (NPOs) and state and local governments.

² Terms that appear in the Glossary [paragraph .30] are set in **boldface type** the first time they appear.

³ The functional classifications of fund raising, program, and management and general are discussed throughout this SOP for purposes of illustrating how the guidance in this SOP would be applied by entities that use those functional classifications. Some entities have a functional structure that does not include fund raising, program, or management and general, or that includes other functional classifications, such as **membership development**. This SOP is not intended to require reporting the functional classifications of fund raising, program, and management and general. In circumstances in which entities that have a functional structure that includes other functional classifications conduct joint activities, all costs of those joint activities should be charged to fund raising (or the category in which fund raising is reported—see the following two parenthetical sentences), unless the purpose, audience, and content of those joint activities are appropriate for achieving those other functions. (An example of an entity that reports fund raising in a category other than fund raising is a state and local governmental entity applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8. As discussed in paragraph D.5 of this SOP [paragraph .24], those entities are required to report fund raising as part of the “institutional support” function. See also footnote ** to paragraph D.5.) [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34 and No. 35.]

⁴ In August 1996, the AICPA issued the Audit and Accounting Guide *Not-for-Profit Organizations*. The Guide supersedes SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, because the provisions of SOP 87-2 are incorporated into paragraphs 13.36 to 13.45 of *Not-for-Profit Organizations*. *Not-for-Profit Organizations* applies to all nongovernmental NPOs other than those required to follow the Audit and Accounting Guide *Health Care Organizations*. The discussion in this SOP of SOP 87-2 refers to both SOP 87-2 and the guidance included in paragraphs 13.36 to 13.45 of *Not-for-Profit Organizations*. Also, SOP 87-2 was not applicable to entities that are within the scope of Governmental Accounting Standards Board (GASB) Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*.

in determining whether joint costs of those materials and activities should be charged to fund raising or allocated to program or management and general. Those criteria include requiring verifiable indications of the reasons for conducting the activity, such as the content, audience, and action, if any, requested of the participant, as well as other corroborating evidence. Further, SOP 87-2 required that all joint costs of those materials and activities be charged to fund raising unless the appeal is designed to motivate its audience to action other than providing financial support to the organization.

.04 The provisions of SOP 87-2 have been difficult to implement and have been applied inconsistently in practice. (Appendix B [paragraph .22], “Background,” discusses this further.)

.05 This SOP establishes financial accounting standards for accounting for **costs of joint activities**. In addition, this SOP requires financial statement disclosures about the nature of the activities for which joint costs have been allocated and the amounts of joint costs. Appendix F [paragraph .26] provides explanations and illustrations of some acceptable allocation methods.

Scope

.06 This SOP applies to all nongovernmental NPOs and all state and local governmental entities that solicit **contributions**.

Conclusions

Accounting for Joint Activities

.07 If the criteria of purpose, audience, and content are met, the costs of a **joint activity** that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function. If any of the criteria are not met, all costs of the joint activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising.

Purpose

.08 The purpose criterion is met if the purpose of the joint activity includes accomplishing program or management and general functions. (Paragraphs .09 and .10 provide guidance that should be considered in determining whether the purpose criterion is met. Paragraph .09 provides guidance pertaining to program functions only. Paragraph .10 provides guidance pertaining to both program and management and general functions.)

.09 *Program functions.* To accomplish program functions, the activity should call for specific action by the audience that will **help accomplish the entity’s mission**. For purposes of applying the guidance in this SOP, the following are examples of activities that do and do not call for specific action by the audience that will help accomplish the entity’s mission:

- An entity’s mission includes improving individuals’ physical health. For that entity, motivating the audience to take specific action that will improve their physical health is a call for specific action by the audience that will help accomplish the entity’s mission. An example of an activity that motivates the audience to take specific action that will improve their physical health is sending the audience a brochure that urges them to stop smoking and suggests specific methods, instructions, references, and resources that may be used to stop smoking.
- An entity’s mission includes educating individuals in areas other than the causes, conditions, needs, or concerns that the entity’s programs are designed to address (referred to hereafter in this SOP as “causes”). For that entity, educating the audience in areas other than causes or motivating the audience to otherwise engage in specific activities that will educate them in areas other than causes is a call for specific action by the audience that will help accomplish the entity’s mission. Examples of entities whose mission includes educating individuals in areas other than causes are universities and possibly other entities. An example of an activity motivating individuals to engage in education in areas other than causes is a university inviting individuals to attend a lecture or class in which the individuals will learn about the solar system.
- Educating the audience about causes or motivating the audience to otherwise engage in specific activities that will educate them about causes is not a call for specific action by the audience that will help accomplish the entity’s mission. Such activities are considered in support of fund raising. (However, some educational activities that might otherwise be considered as educating the audience about causes may implicitly call for specific action by the audience that will help accomplish the entity’s mission. For example, activities that educate the audience about environmental problems caused by not recycling implicitly call for that audience to increase recycling. If the need for and benefits of the specific action are clearly evident from the educational message, the message is considered to include an implicit call for specific action by the audience that will help accomplish the entity’s mission.)
- Asking the audience to make contributions is not a call for specific action by the audience that will help accomplish the entity’s mission.

If the activity calls for specific action by the audience that will help accomplish the entity’s mission, the guidance in paragraph .10 should also be considered in determining whether the purpose criterion is met.

.10 Program and management and general functions. The following factors should be considered, in the order in which they are listed,⁵ to determine whether the purpose criterion is met:

- a. **Whether compensation or fees for performing the activity are based on contributions raised.** The purpose criterion is not met if a majority of compensation or fees for any party’s performance of any component

⁵ In considering the guidance in paragraph .10, the factor in paragraph .10a (the compensation or fees test) is the preeminent guidance. If the factor in paragraph .10a is not determinative, the factor in paragraph .10b (whether a similar program or management and general activity is conducted separately and on a similar or greater scale) should be considered. If the factor in paragraph .10b is not determinative, the factor in paragraph .10c (other evidence) should be considered.

of the discrete joint activity varies based on contributions raised for that discrete joint activity.^{6,7}

b. *Whether a similar program or management and general activity is conducted separately and on a similar or greater scale.* The purpose criterion is met if either of the following two conditions is met:

(1) *Condition 1:*

- The program component of the joint activity calls for specific action by the recipient that will help accomplish the entity's mission and
- A similar program component is conducted without the fund-raising component using the same **medium** and on a scale that is similar to or greater than the scale on which it is conducted with the fund raising.⁸

(2) *Condition 2:*

A management and general activity that is similar to the management and general component of the joint activity being accounted for is conducted without the fund-raising component using the same medium and on a scale that is similar to or greater than the scale on which it is conducted with the fund raising.

If the purpose criterion is met based on the factor in paragraph .10b, the factor in paragraph .10c should not be considered.

c. *Other evidence.* If the factors in paragraph .10a or .10b do not determine whether the purpose criterion is met, other evidence may determine whether the criterion is met. All available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, the purpose criterion is met.

.11 The following are examples of indicators that provide evidence for determining whether the purpose criterion is met:

a. Evidence that the purpose criterion may be met includes—

- *Measuring program results and accomplishments of the activity.* The facts may indicate that the purpose criterion is met if the entity measures program results and accomplishments of the activity (other than measuring the extent to which the public was educated about causes).

⁶ Some compensation contracts provide that compensation for performing the activity is based on a factor other than contributions raised, but not to exceed a specified portion of contributions raised. For example, a contract may provide that compensation for performing the activity is \$10 per contact hour, but not to exceed 60 percent of contributions raised. In such circumstances, compensation is not considered based on amounts raised, unless the stated maximum percentage is met. In circumstances in which it is not yet known whether the stated maximum percentage is met, compensation is not considered based on amounts raised, unless it is probable that the stated maximum percentage will be met.

⁷ The *compensation or fees test* is a negative test in that it either (a) results in failing the purpose criterion or (b) is not determinative of whether the purpose criterion is met. Therefore, if the activity fails the purpose criterion based on this factor (the compensation or fees test), the activity fails the purpose criterion and the factor in paragraph .10b should not be considered. If the purpose criterion is not failed based on this factor, this factor is not determinative of whether the purpose criterion is met and the factor in paragraph .10b should be considered.

⁸ Determining the scale on which an activity is conducted may be a subjective determination. Factors to consider in determining the scale on which an activity is conducted may include dollars spent, the size of the audience reached, and the degree to which the characteristics of the audience are similar to the characteristics of the audience of the activity being evaluated.

- *Medium.* The facts may indicate that the purpose criterion is met if the program component of the joint activity calls for specific action by the recipient that will help accomplish the entity's mission and if the entity conducts the program component without a significant fund-raising component in a different medium. Also, the facts may indicate that the purpose criterion is met if the entity conducts the management and general component of the joint activity without a significant fund-raising component in a different medium.
- b. Evidence that the purpose criterion may not be met includes—
- *Evaluation or compensation.* The facts may indicate that the purpose criterion is not met if (a) the evaluation of any party's performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity or (b) some, but less than a majority, of compensation or fees for any party's performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity.
- c. Evidence that the purpose criterion may be either met or not met includes—
- *Evaluation of measured results of the activity.* The entity may have a process to evaluate measured program results and accomplishments of the activity (other than measuring the extent to which the public was educated about causes). If the entity has such a process, in evaluating the effectiveness of the joint activity, the entity may place significantly greater weight on the activity's effectiveness in accomplishing program goals or may place significantly greater weight on the activity's effectiveness in raising contributions. The former may indicate that the purpose criterion is met. The latter may indicate that the purpose criterion is not met.
 - *Qualifications.* The qualifications and duties of those performing the joint activity should be considered.
 - If a third party, such as a consultant or contractor, performs part or all of the joint activity, such as producing brochures or making telephone calls, the third party's experience and the range of services provided to the entity should be considered in determining whether the third party is performing fund-raising, program (other than educating the public about causes), or management and general activities on behalf of the entity.
 - If the entity's employees perform part or all of the joint activity, the full range of their job duties should be considered in determining whether those employees are performing fund-raising, program (other than educating the public about causes), or management and general activities on behalf of the entity. For example, (a) employees who are not members of the fund-raising department and (b) employees who are members of the fund-raising department but who perform non-fund-raising activities are more likely to perform activities that include program or management

and general functions than are employees who otherwise devote significant time to fund raising.

- *Tangible evidence of intent.* Tangible evidence indicating the intended purpose of the joint activity should be considered. Examples of such tangible evidence include
 - The entity's written mission statement, as stated in its fund-raising activities, bylaws, or annual report.
 - Minutes of board of directors', committees', or other meetings.
 - Restrictions imposed by donors (who are not related parties) on gifts intended to fund the joint activity.
 - Long-range plans or operating policies.
 - Written instructions to other entities, such as script writers, consultants, or list brokers, concerning the purpose of the joint activity, audience to be targeted, or method of conducting the joint activity.
 - Internal management memoranda.

Audience

.12 A rebuttable presumption exists that the audience criterion is not met if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute to the entity. That presumption can be overcome if the audience is also selected for one or more of the reasons in paragraph .13a, .13b, or .13c. In determining whether that presumption is overcome, entities should consider the extent to which the audience is selected based on its ability or likelihood to contribute to the entity and contrast that with the extent to which it is selected for one or more of the reasons in paragraph .13a, .13b, or .13c. For example, if the audience's ability or likelihood to contribute is a significant factor in its selection and it has a need for the action related to the program component of the joint activity, but having that need is an insignificant factor in its selection, the presumption would not be overcome.

.13 In circumstances in which the audience includes no prior donors and is not otherwise selected based on its ability or likelihood to contribute to the entity, the audience criterion is met if the audience is selected for one or more of the following reasons:

- a. The audience's need to use or reasonable potential for use of the specific action called for by the program component of the joint activity
- b. The audience's ability to take specific action to assist the entity in meeting the goals of the program component of the joint activity
- c. The entity is required to direct the management and general component of the joint activity to the particular audience or the audience has reasonable potential for use of the management and general component

Content

.14 The content criterion is met if the joint activity supports program or management and general functions, as follows:

- a. *Program.* The joint activity calls for specific action by the recipient that will help accomplish the entity's mission. If the need for and benefits of the action are not clearly evident, information describing the action and explaining the need for and benefits of the action is provided.

- b. Management and general.* The joint activity fulfills one or more of the entity's management and general responsibilities through a component of the joint activity.⁹

.15 Information identifying and describing the entity, causes, or how the contributions provided will be used is considered in support of fund raising.

Allocation Methods

.16 The cost allocation methodology used should be rational and systematic, it should result in an allocation of joint costs that is reasonable, and it should be applied consistently given similar facts and circumstances.

Incidental Activities

.17 Some fund-raising activities conducted in conjunction with program or management and general activities are incidental to such program or management and general activities. For example, an entity may conduct a fund-raising activity by including a generic message, "Contributions to Organization X may be sent to [address]" on a small area of a message that would otherwise be considered a program or management and general activity based on its purpose, audience, and content. That fund-raising activity likely would be considered incidental to the program or management and general activity being conducted. Similarly, entities may conduct program or management and general activities in conjunction with fund-raising activities that are incidental to such fund-raising activities. For example, an entity may conduct a program activity by including a generic program message such as "Continue to pray for [a particular cause]" on a small area of a message that would otherwise be considered fund raising based on its purpose, audience, and content. That program activity would likely be considered incidental to the fund-raising activity being conducted. Similarly, an entity may conduct a management and general activity by including a brief management and general message—"We recently changed our phone number. Our new number is 123-4567"—on a small area of a message that would otherwise be considered a program or fund-raising activity based on its purpose, audience, and content. That management and general activity would likely be considered incidental to the program or fund-raising activity being conducted. In circumstances in which a fund-raising, program, or management and general activity is conducted in conjunction with another activity and is incidental to that other activity, and the conditions in this SOP for allocation are met, joint costs are permitted but not required to be allocated and may therefore be charged to the functional classification related to the activity that is not the incidental activity. However, in circumstances in which the program or management and general activities are incidental to the fund-raising activities, it is unlikely that the conditions required by this SOP to permit allocation of joint costs would be met.

Disclosures

.18 Entities that allocate joint costs should disclose the following in the notes to their financial statements:

- a.* The types of activities for which joint costs have been incurred
- b.* A statement that such costs have been allocated

⁹ Some states or other regulatory bodies require that certain disclosures be included when soliciting contributions. For purposes of applying the guidance in this SOP, communications that include such required disclosures are considered fund-raising activities and are not considered management and general activities.

- c. The total amount allocated during the period and the portion allocated to each functional expense category
- .19 This SOP encourages, but does not require, that the amount of joint costs for each kind of joint activity be disclosed, if practical.

Effective Date

.20 This SOP is effective for financial statements for years beginning on or after December 15, 1998. Earlier application is encouraged in fiscal years for which financial statements have not been issued. If comparative financial statements are presented, retroactive application is permitted but not required.

<p>The provisions of this Statement of Position need not be applied to immaterial items.</p>

Appendix A

Accounting for Joint Activities¹⁰

¹⁰ **Note:** This flowchart summarizes certain guidance in this SOP and is not intended as a substitute for the SOP.

Appendix B

Background

B.1. As stated in paragraph .04, the provisions of Statement of Position (SOP) 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, have been difficult to implement and applied inconsistently in practice. That difficulty has been due in part to the following:

- The second sentence of paragraph 1 of SOP 87-2 stated that “some of the costs incurred by such organizations are clearly identifiable with fundraising, such as the cost of fund-raising consulting services.” It is unclear whether activities that would otherwise be considered program activities should be characterized as program activities if they are performed or overseen by professional fund raisers. Also, it is unclear whether activities would be reported differently (for example, as program rather than fund raising) depending on whether the fund-raising consultant is compensated by a predetermined fee or by some other method, such as a percentage of contributions raised.
- SOP 87-2 was unclear about whether allocation of costs to fund-raising expense is required if the activity for which the costs were incurred would not have been undertaken without the fund-raising component.
- SOP 87-2 defined joint costs through examples, and it is therefore unclear what kinds of costs were covered by SOP 87-2. For example, it is unclear whether salaries and indirect costs can be joint costs.
- Some believe the guidance in SOP 87-2 was inadequate to determine whether joint activities, such as those that request contributions and also list the warning signs of a disease, are designed to motivate their audiences to action other than to provide contributions to the entity. It is unclear what attributes the targeted audience should possess in order to conclude that a program function is being conducted.

B.2. In 1992, the Accounting Standards Executive Committee (AcSEC) undertook a project to supersede SOP 87-2, to provide clearer guidance than that provided by SOP 87-2, as well as to provide guidance that would improve on the guidance in SOP 87-2. In September 1993, AcSEC released an exposure draft of a proposed SOP, *Accounting for Costs of Materials and Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include a Fund-Raising Appeal*, for public comment. AcSEC received more than 300 comment letters on the exposure draft. AcSEC redeliberated the issues based on the comments received.

B.3. In 1996, after redeliberating the issues based on the comments received and making certain revisions to the draft SOP, AcSEC conducted a field test of the draft SOP. The objectives of the field test were to determine whether the provisions of the draft SOP were sufficiently clear and definitive to generate consistent and comparable application of the SOP. Based on the field test results, AcSEC concluded that the provisions of the draft SOP, with certain revisions, were sufficiently clear and definitive to generate consistent and comparable application of the SOP.

B.4. Some respondents who commented on the exposure draft, as well as some interested parties who followed the project through its due process subsequent to the exposure draft, commented that the SOP should be reexposed for public comment. Reasons cited include:

- Approximately three years had passed between the end of the comment period and AcSEC's decision to issue the SOP.
- AcSEC made significant revisions to the SOP subsequent to releasing the exposure draft for comment.

Considering whether a proposed standard should be reexposed for public comment is inherently a subjective process. Factors that AcSEC considered include—

- The significance of changes made to the exposure draft and whether those changes result in guidance that the public did not have an opportunity to consider.
- Whether the scope was revised in such a way that affected entities did not have an opportunity to comment.
- New information about or changes in the nature of the transactions being considered, practice, or other factors.

AcSEC believes that the length of time between exposure and final issuance is not pertinent to whether the SOP should be reexposed for public comment.

B.5. Based on consideration of the factors identified, AcSEC believes that the SOP should not be reexposed for public comment. AcSEC notes that although the SOP has been revised based on comments received on the exposure draft, those revisions do not change the overall model in the SOP. Those revisions were made primarily to clarify the SOP and improve its operationality. Further, AcSEC believes that the project received a high level of attention from interested parties. AcSEC provided working drafts to interested parties and those parties provided input throughout the process, up to and including the Financial Accounting Standard Board's and the Governmental Accounting Standards Board's clearance of the SOP for issuance.

B.6. Appendix C [paragraph .23] discusses the key issues in the exposure draft and comments received on those issues, as well as the basis for AcSEC's conclusions on those and certain other issues.

Appendix C

Basis for Conclusions

C.1. This section discusses considerations that were deemed significant by members of the Accounting Standards Executive Committee (AcSEC) in reaching the conclusions in this Statement of Position (SOP). It includes reasons for accepting certain views and rejecting others. Individual AcSEC members gave greater weight to some factors than to others.

Overall Framework

C.2. This SOP uses the model in SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, as a starting point and clarifies guidance that was unclear, provides more detailed guidance, revises some guidance, and expands the scope of costs covered to include all costs of joint activities. The model established by SOP 87-2 was to account for joint costs as fund raising unless an entity could demonstrate that a program or management and general function had been conducted. SOP 87-2 used verifiable indications of the reasons for conducting the activity, such as content, audience, the action requested, if any, and other corroborating evidence as a basis for determining whether a program or management and general function had been conducted.

C.3. On an overall basis, the majority of respondents who commented on the September 1993 exposure draft of a proposed SOP, *Accounting for Costs of Materials and Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include a Fund-Raising Appeal*, opposed it, for various reasons, including the following:

- The guidance in SOP 87-2 is operational, results in sound financial reporting, and should be retained.
- The guidance in SOP 87-2 should be retained but clarified.
- The guidance proposed in the exposure draft should be revised. (Some commented that it overstates fund raising; others commented that it understates fund raising.)

C.4. AcSEC concluded that it supports the model in the exposure draft, subject to certain revisions. AcSEC believes that this SOP provides clear, detailed accounting guidance that, when applied, will increase comparability of financial statements. Those statements will also include more meaningful disclosures without incurring increased costs.

C.5. Some respondents commented that the model in the exposure draft would adversely affect entities both financially and operationally. Various reasons were given, including the following:

- It would inhibit the ability of entities, particularly small entities and entities that raise contributions through direct solicitations, to generate the necessary revenue to perform their program services.
- Most entities would not meet the criteria in this SOP for reporting costs of joint activities as program or management and general, because they must combine their mission statements, public informa-

tion and education, and fund-raising appeals due to a lack of resources. Some noted that this may result in unsatisfactory ratings from public watchdog groups.

AcSEC did not find these arguments compelling. This SOP provides accounting guidance; it provides no guidance concerning how entities should undertake their activities. Also, this SOP does not prohibit allocation merely because activities carrying out different functions are combined. In fact, this SOP provides guidance for reporting costs as program or management and general in circumstances in which those activities are combined with fund-raising. Moreover, actions taken by financial statement users are not the direct result of the requirements of this SOP. Rather, those actions may result from more relevant and useful information on which to base decisions.

C.6. Some respondents commented that the exposure draft is biased toward reporting expenses as fund raising. AcSEC believes that determining whether the costs of joint activities should be classified as program, management and general, or fund raising sometimes is difficult, and such distinctions sometimes are subject to a high degree of judgment. AcSEC believes that external financial statement users focus on and have perceptions about amounts reported as program, management and general, and fund raising. That focus and those perceptions provide incentives for entities to report expenses as program or management and general rather than fund raising. Therefore, in circumstances in which joint activities are conducted, a presumption exists that expenses should be reported as fund raising rather than as program or management and general. The criteria in this SOP provide guidance for entities to overcome that presumption.

Accounting for Joint Activities

C.7. This SOP requires that if any of the criteria of purpose, audience, and content are not met, all costs of the activity should be reported as fund raising, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, subject to the exception in the following sentence. Costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund raising. (This SOP expands on the model established by SOP 87-2 by including all costs of joint activities other than costs of goods or services provided in exchange transactions, rather than merely joint costs.) AcSEC believes that the criteria of purpose, audience, and content are each relevant in determining whether a joint activity should be reported as fund raising, program, or management and general because each provides significant evidence about the benefits expected to be obtained by undertaking the activity.

C.8. Some respondents commented that reporting costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity as fund raising is misleading and that the scope of the SOP should include only joint costs of joint activities. Some commented that reporting costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity as fund raising conflicts with Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 117, *Financial Statements of Not-for-Profit Organizations*, which defines fund raising, program, and management and general and requires not-for-profit organizations (NPOs) to report information about expenses using those functional classifications.

C.9. AcSEC believes that the purpose for which costs other than joint costs are incurred may be fund raising, program, or management and general, depending on the context in which they are used in the activity undertaken. For example, a program-related pamphlet may be sent to an audience in need of the program. In that context, the pamphlet is used for program purposes. However, in order to demonstrate to potential donors that the entity's programs are worthwhile, that same pamphlet may be sent to an audience that is likely to contribute, but that has no need or reasonable potential for use of the program. In that context, the pamphlet is used for fund raising. AcSEC believes this broader scope will result in more comparability and more meaningful financial reporting by covering all costs of activities that include fund raising and by assigning those costs to the function for which they are incurred, consistent with the guidance in Statement No. 117.

C.10. AcSEC believes that costs of goods or services provided in exchange transactions should not be charged to fund raising because those costs are incurred in exchange for revenues other than contributions.

Criteria of Purpose, Audience, and Content

Call For Action

C.11. The definition of *program* in FASB Statement No. 117 includes public education. As noted in paragraph C.6, AcSEC believes that in circumstances in which joint activities are conducted, a presumption exists that expenses should be reported as fund raising rather than as program or management and general. AcSEC believes that in order to overcome that presumption, it is not enough that (a) the purpose of the activity include educating the public about causes, (b) the audience has a need or reasonable potential for use of any educational component of the activity pertaining to causes, or (c) the audience has the ability to assist the entity in meeting the goals of the program component of the activity by becoming educated about causes. Therefore, AcSEC concluded that for purposes of this SOP, in order to conclude that the criteria of purpose, audience, and content are met program activities are required to call for specific action by the recipient (other than becoming educated about causes) that will help accomplish the entity's mission. As discussed in paragraph .09, in certain circumstances educational activities may call for specific action by the recipient that will help accomplish the entity's mission.

Purpose

C.12. AcSEC believes meeting the purpose criterion demonstrates that the purpose of the activity includes accomplishing program or management and general functions. Inherent in the notion of a joint activity is that the activity has elements of more than one function. Accordingly, the purpose criterion provides guidance for determining whether the purpose of the activity includes accomplishing program or management and general functions in addition to fund raising.

Compensation and Evaluation Tests

C.13. The exposure draft proposed that all costs of the joint activity should be charged to fund raising if (a) substantially all compensation or fees for performing the activity are based on amounts raised or (b) the evaluation of the party performing the activity is based on amounts raised. Some respondents

commented that basing the method of compensation or evaluating the performance of the party performing the activity based on contributions raised should not lead to the conclusion that all costs of the activity should be charged to fund raising. Others commented that the method of compensation is unrelated to whether the purpose criterion is met. The reasons given included the following:

- It is counterintuitive to imply that those performing multipurpose activities that include fund raising would not be compensated or evaluated based on amounts raised.
- Such guidance would create a bias toward entities that use employees to raise contributions and against entities that hire professional fund raisers and public relations firms and is therefore not neutral.

Some respondents gave examples of circumstances in which substantially all compensation is based on contributions raised and asserted that the activity was nevertheless a program activity. In each of those examples, AcSEC considered all the facts presented and concluded that the activity was fund raising.

C.14. AcSEC continues to support the spirit of the proposed guidance, because AcSEC believes that basing a majority of compensation on funds raised is persuasive evidence that the activity is a fund-raising activity. Nevertheless, AcSEC believes that the proposed guidance was unclear and would be difficult to implement, primarily because of the broad definition of “based on contributions raised” included in the glossary of the exposure draft. In connection with that issue, AcSEC was concerned that any joint activities performed by a fund-raising department or by individuals whose duties include fund raising, such as executive officers of small NPOs who are employed based on their ability to raise contributions, would be required to be reported as fund raising because the compensation of the parties performing those activities is based on amounts raised. Also, AcSEC had concerns that it would be difficult to determine whether fixed contract amounts were negotiated based on expected contributions. Therefore, AcSEC concluded that the compensation test should be revised to provide that the purpose criterion is not met if a majority of compensation or fees for any party’s performance of any component of the discrete joint activity varies based on contributions raised for that discrete joint activity. AcSEC believes that guidance is sound and is operational.

C.15. AcSEC believes that the guidance in paragraph .10a is not biased against entities that hire professional fund raisers, because it applies to the entity’s employees as well as professional fund raisers. For example, if a majority of an employee’s compensation or fees for performing a component of a discrete joint activity varies based on contributions raised for that discrete joint activity, the purpose criterion is not met.

Similar Function-Similar Medium Test

C.16. Some respondents misinterpreted the exposure draft as providing that, in order to meet the purpose criterion, the program or management and general activity must be conducted without the fund-raising component, using the same medium and on a scale that is similar to or greater than the program or management and general component of the activity being accounted for. That was not a requirement proposed by the exposure draft. The exposure draft proposed that meeting that condition would result in meeting the purpose criterion. Failing the criterion merely leads to consideration of other evidence, such as the indicators in paragraph .11. AcSEC has revised the SOP to state this more clearly.

Other Evidence

C.17. The compensation test and the similar function-similar medium test may not always be determinative because the attributes that they consider may not be present. Therefore, this SOP includes indicators that should be considered in circumstances in which the compensation test and the similar function-similar medium test are not determinative. The nature of those indicators is such that they may be present in varying degrees. Therefore, all available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, the purpose criterion is met.

Audience

C.18. The exposure draft proposed that if the audience for the materials or activities is selected principally on its ability or likelihood to contribute, the audience criterion is not met and all the costs of the activity should be charged to fund raising. Further, the exposure draft proposed that if the audience is selected principally based on its need for the program or because it can assist the entity in meeting its program goals other than by financial support provided to the entity, the audience criterion is met. Some respondents commented that that audience criterion is too narrow, because it is based on the principal reason for selecting the audience. They asserted that for some activities no principal reason exists for selecting an audience; entities select the audience for those activities for multiple reasons, such as both the audience's ability to contribute and its ability to help meet program goals. Some commented that for some activities, entities select audiences that have provided past financial support because, by providing financial support, those audiences have expressed an interest in the program.

C.19. AcSEC believes that meeting the audience criterion should demonstrate that the audience is selected because it is a suitable audience for accomplishing the activity's program or management and general functions. Therefore, the reasons for selecting the audience should be consistent with the program or management and general content of the activity. However, AcSEC believes it is inherent in the notion of joint activities that the activity has elements of more than one function, including fund raising, and acknowledges that it may be difficult to determine the principal reason for selecting the audience. Accordingly, AcSEC concluded that if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute, a rebuttable presumption should exist that the audience was selected to raise funds. AcSEC believes that the reasons for selecting the audience that can overcome that presumption, which are included in paragraph .13 of this SOP, demonstrate that the audience is selected because it is a suitable audience for accomplishing the activity's program or management and general functions based on the program or management and general content of the activity.

Content

C.20. AcSEC believes that meeting the content criterion demonstrates that the content of the activity supports program or management and general functions. AcSEC believes that accounting guidance should not impose value judgments about whether the entity's mission, programs, and responsibilities are worthwhile. Therefore, whether the content criterion is met depends on the relationship of the content to the entity's mission, programs, and management and general responsibilities.

C.21. Paragraph .14 provides that, to meet the content criterion, program activities should call for specific action by the recipient that will help accom-

plish the entity's mission. The exposure draft proposed that slogans, general calls to prayer, and general calls to protest do not meet the content criterion; some respondents disagreed. AcSEC concluded that this SOP should be silent concerning whether slogans, general calls to prayer, and general calls to protest are calls to action that meet the content criterion. AcSEC believes that determining whether those items are calls to action that meet the content criterion requires judgments based on the particular facts and circumstances.

C.22. Some respondents commented that educating the public about causes without calling for specific action should satisfy the content criterion. They noted that this is particularly relevant for NPOs subject to Internal Revenue Code (IRC) Section 501(c)4, because those NPOs are involved in legislative reform. Also, some noted that it may be the entity's mission or goal to educate the public about causes. They believe that, in those cases, the NPO's program is to educate the public about causes without necessarily calling for specific action by the recipient.

C.23. As discussed in paragraph C.11, AcSEC concluded that education that does not motivate the audience to action is in fact done in support of fund raising. However, this SOP acknowledges that some educational messages motivate the audience to specific action, and those messages meet the content criterion. AcSEC believes that that provision will result in the activities of some NPOs subject to IRC Section 501(c)4 (and some other entities, whose mission or goal is to educate the public) meeting the content criterion.

C.24. Paragraph .13c provides that one way that the audience criterion is met is if the entity is required to direct the management and general component of the activity to the particular audience. Further, as discussed in paragraph D.13, in *Discussion of Conclusions*, an audience that includes prior donors and is selected because the entity is required to send them certain information to comply with requirements of the Internal Revenue Service (IRS) is an example of an audience that is selected because the entity is required to direct the management and general component of the activity to that audience. Paragraph .14b provides that one way that the content criterion is met is if the activity fulfills one or more of the entity's management and general responsibilities through a component of the joint activity. However, footnote 9 to paragraph .14b provides that disclosures made when soliciting contributions to comply with requirements of states or other regulatory bodies are considered fund-raising activities, and are not considered management and general activities. AcSEC considered whether it is inconsistent to conclude both that (a) activities conducted to comply with requirements of regulatory bodies concerning contributions that have been received are management and general activities, and that (b) activities conducted to comply with requirements of regulatory bodies concerning soliciting contributions are fund-raising activities. AcSEC believes that those provisions are not inconsistent. AcSEC believes there is a distinction between (a) requirements that must be met as a result of receiving contributions and (b) requirements that must be met in order to solicit contributions. AcSEC believes that activities that are undertaken as a result of receiving contributions are management and general activities while activities that are undertaken in order to solicit contributions are fund-raising activities.

Incidental Activities

C.25. Many entities conduct fund-raising activities in conjunction with program or management and general activities that are incidental to such pro-

gram or management and general activities. Similarly, entities may conduct program or management and general activities in conjunction with fund-raising activities that are incidental to such fund-raising activities. Such efforts may be a practical and efficient means for entities to conduct activities, although the principal purpose of the activity may be to fulfill either fund-raising, program, or management and general functions. The exposure draft proposed that incidental activities need not be considered in applying this SOP. Some respondents disagreed with that guidance, while others commented that it was confusing. AcSEC continues to support that guidance. AcSEC believes that guidance is necessary to avoid requiring complex allocations in circumstances in which the criteria of purpose, audience, and content are met but the activity is overwhelmingly either fund raising, program, or management and general.

Allocation Methods

C.26. Respondents had various comments concerning allocation methods, including the following:

- The SOP should focus on allocation methods rather than on circumstances in which entities should allocate.
- The SOP should prescribe allocation methods.
- The approach taken in the SOP—discussing, rather than requiring or prohibiting allocation methods—is sound.
- Certain allocation methods should be prohibited.
- The SOP should set maximum allocation percentages.

AcSEC believes that no particular allocation method or methods are necessarily more desirable than other methods in all circumstances. Therefore, this SOP neither prescribes nor prohibits any particular allocation methods. AcSEC believes entities should apply the allocation methods that result in the most reasonable cost allocations for their activities. Appendix F [paragraph .26] of this SOP illustrates several allocation methods, any one of which may result in a reasonable or unreasonable allocation of costs in particular circumstances. The methods illustrated are not the only acceptable methods. However, AcSEC believes that the methods illustrated in this SOP are among those most likely to result in meaningful cost allocations.

C.27. Accounting Principles Board (APB) Opinion No. 20, *Accounting Changes*, states in paragraph 7 that “the term *accounting principle* includes ‘not only accounting principles and practices but also the methods of applying them.’” APB Opinion 20 also states in paragraphs 15 and 16 that

. . . In the preparation of financial statements there is a presumption that an accounting principle once adopted should not be changed in accounting for events and transactions of a similar type . . . The presumption that an entity should not change an accounting principle may be overcome only if the enterprise justifies the use of an alternative acceptable accounting principle [*allocation method*] on the basis that it is preferable.

A change in cost allocation methodology may be a change in accounting principle for entities covered by this SOP. Accordingly, paragraph .16 of this SOP provides that the cost allocation methodology used should be applied consistently, given similar facts and circumstances.

Disclosures

C.28. Respondents made various comments concerning the required and encouraged disclosures, including recommendations for additional disclosures and recommendations that certain disclosures be deleted. AcSEC was not persuaded that the costs of the other disclosures recommended by respondents are justified by their benefits. AcSEC believes that, with the exception of one disclosure, the disclosures prescribed by the exposure draft provide relevant information about the kinds of activities for which joint costs have been incurred and the manner in which those costs are reported in the financial statements. In considering disclosures proposed by the exposure draft about the allocation method, AcSEC observed that there are no requirements to disclose methods of allocating other expenses and questioned the utility of disclosing the allocation method in this circumstance. AcSEC concluded that the requirement to disclose the allocation method should be deleted.

C.29. Paragraph .19 encourages, but does not require, certain disclosures. AcSEC believes those disclosures provide useful information but that they should be encouraged rather than required because the costs of making them may not be justified by the benefits in all cases.

Effective Date

C.30. Some respondents commented that the effective date should be deferred. AcSEC believes that the accounting systems required to implement this SOP are already in place and that implementation should be relatively straightforward. However, AcSEC acknowledges that some entities may change their operations based on the reporting that would result from this SOP. Therefore, AcSEC concluded that this SOP should be effective for financial statements for years beginning on or after December 15, 1998.

Cost-Benefit

C.31. Some respondents commented that the guidance would increase record keeping costs. AcSEC believes that implementing this SOP will not significantly increase record keeping costs, which are primarily the costs of documenting reasons for undertaking joint activities. Further, AcSEC believes that the costs of making the disclosures required by this SOP should be minimal, because entities should already have the information that is required to be disclosed. AcSEC believes that implementing this SOP will result in more relevant, meaningful, and comparable financial reporting and that the cost of implementing this SOP will be justified by its benefits.

Appendix D

Discussion of Conclusions

Scope

D.1. This Statement of Position (SOP) applies only to costs of joint activities. It does not address allocations of costs in other circumstances.

Reporting Models and Related Requirements

D.2. Paragraph 26 of Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 117, *Financial Statements of Not-for-Profit Organizations*, specifies that a statement of activities or notes to the financial statements should provide information about expenses reported by their functional classification, such as major classes of program services and supporting activities. Paragraph 13.34 of the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*, provides that the financial statements of not-for-profit organizations (NPOs) should disclose the total fund-raising expenses. [Revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

D.3. Governmental Accounting Standards Board (GASB) Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*, provides that governmental entities should not change their accounting and financial reporting to apply the provisions of FASB Statements No. 116, *Accounting for Contributions Received and Contributions Made*, and No. 117. GASB Statement No. 29 permits governmental entities that have applied the accounting and financial reporting principles in SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*, or in the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* (modified by all applicable FASB pronouncements issued through November 30, 1989, and by most applicable GASB pronouncements) to continue to do so, pending GASB pronouncements on the accounting and financial reporting model for governmental entities. Alternatively, those governmental entities are permitted to change to the current governmental financial reporting model.[‡]

D.4. GASB Statement No. 15, *Governmental College and University Accounting and Financial Reporting Models*, requires governmental colleges and universities to use one of two accounting and financial reporting models. One model, referred to as the “AICPA College Guide Model,” encompasses the accounting and financial reporting guidance in the 1973 AICPA Industry

[‡] GASB Statement No. 34, *Basic Financial Statements—and Management’s Discussion and Analysis—for State and Local Governments*, supersedes the provisions of GASB Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*, relating to the use of the AICPA Not-for-Profit model. See GASB Statement No. 34, including paragraph 147. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this SOP to state and local governments. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statement No. 34.]

Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8, *Financial Accounting and Reporting by Colleges and Universities*, and as modified by applicable FASB pronouncements issued through November 30, 1989, and all applicable GASB pronouncements. (The other model, referred to as the “Governmental Model,” is based on the pronouncements of the National Council on Governmental Accounting [NCGA] and the GASB.)¹¹

D.5. For state and local governmental entities, some are required to report expenses by function using the functional classifications of program, management and general, and fund raising. Other state and local governmental entities that report expenses or expenditures by function have a functional structure that does not include fund raising, program, or management and general. Still other state and local governmental entities do not report expenses or expenditures by function. Examples of those various reporting requirements are as follows:[#]

- Entities applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations*, as well as those that follow SOP 78-10 and that receive significant amounts of contributions from the public, are required to report separately the costs of the fund-raising, program, and management and general functions.
- Entities applying the accounting and financial reporting principles in the AICPA Industry Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8, are required to report fund raising as part of the “institutional support” function.

D.6. As discussed in footnote 3 to paragraph .01 of this SOP, this SOP is not intended to require reporting the functional classifications of fund raising, program, and management and general. Rather, those functional classifications are discussed throughout this SOP for purposes of illustrating how the guidance in this SOP would be applied by entities that use those functional classifications. Entities that do not use the functional classifications of fund raising, program, and management and general should apply the guidance in this SOP for purposes of accounting for joint activities, using their reporting model. For example, some entities may conduct membership-development activities. As discussed in the Glossary [paragraph .30] of this SOP, if there are no significant benefits or duties connected with membership, the substance of the membership-development activities may, in fact, be fund raising. In such circumstances, the costs of those activities should be charged to fund raising. To the extent that member benefits are received, membership is an exchange transaction. In circumstances in which membership development is in part soliciting revenues from exchange transactions and in part soliciting contributions and the purpose, audience, and content of the activity are appropriate for achieving membership development, joint costs should be allocated between fund raising and the exchange transaction.

¹¹ GASB Statement No. 35, *Basic Financial Statements—and Management’s Discussion and Analysis—for Public Colleges and Universities*, supersedes GASB Statement No. 15, *Governmental College and University Accounting and Financial Reporting Models*. See GASB Statements No. 34 and No. 35. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this SOP to governmental (public) colleges and universities. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statement No. 35.]

[#] This discussion is no longer applicable. See footnotes ‡ and || in paragraphs D.3 and D.4, respectively. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34 and No. 35.]

Assigning Costs of Joint Activities

D.7. Paragraph .07 provides: “If the criteria of purpose, audience, and content are met, the costs of a joint activity that are identifiable with a particular function should be charged to that function and joint costs should be allocated between fund raising and the appropriate program or management and general function. If any of the criteria are not met, all costs of the joint activity should be reported as fund-raising costs, including costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity. . . .” For example, if the criteria are met, the costs of materials that accomplish program goals and that are unrelated to fund raising, such as the costs of a program-related pamphlet included in a joint activity, should be charged to program, while joint costs, such as postage, should be allocated between fund raising and program. However, if the pamphlet is used in fund-raising packets and the criteria are not met, the costs of the pamphlets used in the fund-raising packets, as well as the joint costs, should be charged to fund raising. (If some pamphlets are used in program activities that include no fund raising, the cost of the pamphlets used in those separate program activities that include no fund raising should be charged to program.)

Educational Activities

D.8. Some entities have missions that include educating the public (students) in areas other than causes. Paragraph .09 provides that, for those entities, educating the audience in areas other than causes or motivating the audience to engage in specific activities, such as attending a lecture or class, that will educate them in areas other than causes is considered a call for specific action by the recipients that will help accomplish the entity’s mission. Educating the audience about causes or motivating the audience to engage in specific activities that will educate them about causes without educating them in other subjects is not considered a call for specific action by the audience that will help accomplish the entity’s mission. An example of a lecture or class that will educate students in an area other than causes is a lecture on the nesting habits of the bald eagle, given by the Save the Bald Eagle Society, an NPO whose mission is to save the bald eagle from extinction and educate the public about the bald eagle. An example of a lecture or class that will address particular causes is a lecture by the Bald Eagle Society on the potential extinction of bald eagles and the need to raise contributions to prevent their extinction. For purposes of applying the guidance in this SOP, motivating the audience to attend a lecture on the nesting habits of the bald eagle is a call for specific action that will help accomplish the entity’s mission. If the lecture merely addresses the potential extinction of bald eagles and the need to raise contributions to prevent their extinction, without addressing the nesting habits of the bald eagle, motivating the audience to attend the lecture is not considered a call for specific action by the recipient that will help accomplish the entity’s mission.

D.9. AcSEC notes that most transactions in which a student attends a lecture or class are exchange transactions and are not joint activities. Such transactions are joint activities only if the activity includes fund raising.

Audience

D.10. Paragraph .12 provides that a rebuttable presumption exists that the audience criterion is not met if the audience includes prior donors or is otherwise selected based on its ability or likelihood to contribute to the entity. That presumption can be overcome if the audience is also selected for the program or management and general reasons specified in paragraph .13. Further, paragraph .12 provides

that in determining whether that presumption is overcome, entities should consider the extent to which the audience is selected based on its ability or likelihood to contribute to the entity and contrast that with the extent to which it is selected for the reasons that may overcome that presumption. Some organizations conduct joint activities that are special events, such as symposia, dinners, dances, and theater parties, in which the attendee receives a direct benefit (for example, a meal or theater ticket) and for which the admission price includes a contribution. For example, it may cost \$500 to attend a dinner with a fair value of \$50. In that case, the audience is required to make a \$450 contribution in order to attend. In circumstances in which the audience is required to make a contribution to participate in a joint activity, such as attending a special event, the audience's ability or likelihood to contribute is a significant factor in its selection. Therefore, in circumstances in which the audience is required to make a contribution to participate in a joint activity, the extent to which the audience is selected for the program or management and general reasons in paragraph .13 must be overwhelmingly significant in order to rebut the presumption that the audience criterion is not met.

D.11. The source of the names and the characteristics of the audience should be considered in determining the reason for selecting the audience. Some entities use lists compiled by others to reach new audiences. The source of such lists may indicate the purpose or purposes for which they were selected. For example, lists acquired from entities with similar or related programs are more likely to meet the audience criterion than are lists acquired from entities with dissimilar or unrelated programs. Also, the characteristics of those on the lists may indicate the purpose or purposes for which they were selected. For example, a list based on a consumer profile of those who buy environmentally friendly products may be useful to an entity whose mission addresses environmental concerns and could therefore indicate that the audience was selected for its ability to take action to assist the entity in meeting program goals. However, a list based on net worth would indicate that the audience was selected based on its ability or likelihood to contribute, unless there was a correlation between net worth and the program or management and general components of the activity.

D.12. Some audiences may be selected because they have an interest in or affinity to the program. For example, homeowners may have an interest in the homeless because they are sympathetic to the plight of the homeless. Nevertheless, including homeowners in the audience of a program activity to provide services to the homeless would not meet the audience criterion, because they do not have a need or reasonable potential for use of services to the homeless.

D.13. Paragraph .13c provides that the audience criterion is met if the entity is required to direct the management and general component of the joint activity to the particular audience or the audience has reasonable potential for use of the management and general component. An example of a joint activity in which the audience is selected because the entity is required to direct the management and general component of the joint activity to the particular audience is an activity in which the entity sends a written acknowledgment or other information to comply with requirements of the Internal Revenue Service to prior donors and includes a request for contributions. An example of a joint activity in which the audience is selected because the audience has reasonable potential for use of the management and general component is an activity in which the entity sends its annual report to prior donors and includes a request for contributions.

Content

D.14. Paragraph .14 provides that, to meet the content criterion, program activities should call for specific action by the recipient that will help accomplish the entity's mission. As discussed in the Glossary [paragraph .30], the action should benefit the recipient or society. Examples of actions that benefit the recipient (such as by improving the recipient's physical, mental, emotional, or spiritual health and well-being) or society (such as by addressing societal problems) include the following:

- a. Actions that benefit the recipient:
 - *Stop smoking.* Specific methods, instructions, references, and resources should be suggested.
 - *Do not use alcohol or drugs.* Specific methods, instructions, references, and resources should be suggested.
- b. Actions that benefit society:
 - *Write or call.* The party to communicate with and the subject matter to be communicated should be specified.
 - *Complete and return the enclosed questionnaire.* The results of the questionnaire should help the entity achieve its mission. For example, if the entity discards the questionnaire, it does not help the entity achieve its mission.
 - *Boycott.* The particular product or company to be boycotted should be specified.

D.15. Paragraph .14b provides that to meet the content criterion, management and general functions are required to fulfill one or more of the entity's management and general responsibilities through a component of the joint activity. Some states or other regulatory bodies require that certain disclosures be included when soliciting contributions. Paragraph .14, footnote 9, of this SOP provides that for purposes of applying the guidance in this SOP, communications that include such required disclosures are considered fund-raising activities and are not considered management and general activities. Some examples of such disclosures include the following:

- Information filed with the attorney general concerning this charitable solicitation may be obtained from the attorney general of [*the state*] by calling 123-4567. Registration with the attorney general does not imply endorsement.
- A copy of the registration and financial information may be obtained from the Division of Consumer Services by calling toll-free, within [*the state*], 1-800-123-4567. Registration does not imply endorsement, approval, or recommendation by [*the state*].
- Information about the cost of postage and copying, and other information required to be filed under [*the state*] law, can be obtained by calling 123-4567.
- The organization's latest annual report can be obtained by calling 123-4567.

Allocation Methods

D.16. Paragraph .16 of this SOP states, "The cost allocation methodology used should be rational and systematic, it should result in an allocation of joint

costs that is reasonable, and it should be applied consistently given similar facts and circumstances.” The allocation of joint costs should be based on the degree to which costs were incurred for the functions to which the costs are allocated (that is, program, management and general, or fund raising). For purposes of determining whether the allocation methodology for a particular joint activity should be consistent with methodologies used for other particular joint activities, facts and circumstances that may be considered include factors related to the content and relative costs of the components of the activity. The audience should not be considered in determining whether the facts and circumstances are similar for purposes of determining whether the allocation methodology for a particular joint activity should be consistent with methodologies used for other particular joint activities.

Practicability of Measuring Joint Costs

D.17. The Glossary [paragraph .30] of this SOP includes a definition of joint costs. Some costs, such as utilities, rent, and insurance, commonly referred to as indirect costs, may be joint costs. For example, the telephone bill for a department that, among other things, prepares materials that include both fund-raising and program components may commonly be referred to as an indirect cost. Such telephone bills may also be joint costs. However, for some entities, it is impracticable to measure and allocate the portion of the costs that are joint costs. Considerations about which joint costs should be measured and allocated, such as considerations about materiality and the costs and benefits of developing and providing the information, are the same as considerations about cost allocations in other circumstances.

Appendix E

Illustrations of Applying the Criteria of Purpose, Audience, and Content to Determine Whether a Program or Management and General Activity Has Been Conducted

Illustration 1

Facts

E.1. Entity A's mission is to prevent drug abuse. Entity A's annual report states that one of its objectives in fulfilling that mission is to assist parents in preventing their children from abusing drugs.

E.2. Entity A mails informational materials to the parents of all junior high school students explaining the prevalence and dangers of drug abuse. The materials encourage parents to counsel children about the dangers of drug abuse and inform them about how to detect drug abuse. The mailing includes a request for contributions. Entity A conducts other activities informing the public about the dangers of drug abuse and encouraging parents to counsel their children about drug abuse that do not include requests for contributions and that are conducted in different media. Entity A's executive director is involved in the development of the informational materials as well as the request for contributions. The executive director's annual compensation includes a significant bonus if total annual contributions exceed a predetermined amount.

Conclusion

E.3. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.4. The activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse and informing them about how to detect drug abuse) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. (Although Entity A's executive director's annual compensation varies based on annual contributions, the executive director's compensation does not vary based on contributions raised for this discrete joint activity.) Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) the program component of this activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse) that will help accomplish the entity's mission, and it otherwise conducts the program activity in this illustration without a request for contributions, and (b) performing such programs helps accomplish Entity A's mission. (Note that had Entity A conducted the activity using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions, the purpose criterion would have been met under paragraph .10*b*.)

E.5. The audience criterion is met because the audience (parents of junior high school students) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.6. The content criterion is met because the activity calls for specific action by the recipient (encouraging parents to counsel children about the dangers of drug abuse and informing them about how to detect drug abuse) that will help accomplish the entity's mission (assisting parents in preventing their children from abusing drugs), and it explains the need for and benefits of the action (the prevalence and dangers of drug abuse).

Illustration 2

Facts

E.7. Entity B's mission is to reduce the incidence of illness from ABC disease, which afflicts a broad segment of the population. One of Entity B's objectives in fulfilling that mission is to inform the public about the effects and early warning signs of the disease and specific action that should be taken to prevent the disease.

E.8. Entity B maintains a list of its prior donors and sends them donor renewal mailings. The mailings include messages about the effects and early warning signs of the disease and specific action that should be taken to prevent it. That information is also sent to a similar-sized audience but without the request for contributions. Also, Entity B believes that recent donors are more likely to contribute than nondonors or donors who have not contributed recently. Prior donors are deleted from the mailing list if they have not contributed to Entity B recently, and new donors are added to the list. There is no evidence of a correlation between recent contributions and participation in the program component of the activity. Also, the prior donors' need to use or reasonable potential for use of the messages about the effects and early warning signs of the disease and specific action that should be taken to prevent it is an insignificant factor in their selection.

Conclusion

E.9. The purpose and content criteria are met. The audience criterion is not met.¹¹ All costs, including those that might otherwise be considered program or management and general costs if they had been incurred in a different activity, should be charged to fund raising.

E.10. The activity calls for specific action by the recipient (action that should be taken to prevent ABC disease) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (a) the program component of the activity calls for specific action by the recipient that will help accomplish the entity's mission (to reduce the incidence of illness from the disease), and (b) the program is also

¹¹ Paragraph .07 of this SOP provides that all costs of joint activities, except for costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should be charged to fund raising if any of the criteria of purpose, audience, or content are not met. Accordingly, if one or more criteria are not met, the other criteria need not be considered. However, the illustrations in this Appendix provide conclusions about whether each of the criteria would be met in circumstances in which one or more criteria are not met in order to provide further guidance.

conducted using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions (a similar mailing is done without the request for contributions, to a similar-sized audience).

E.11. The audience criterion is not met. The rebuttable presumption that the audience criterion is not met because the audience includes prior donors is not overcome in this illustration. Although the audience has a need to use or reasonable potential for use of the program component, that was an insignificant factor in its selection.

E.12. The content criterion is met because the activity calls for specific action by the recipient (actions to prevent ABC disease) that will help accomplish the entity's mission (to reduce the incidence of ABC disease), and it explains the need for and benefits of the action (to prevent ABC disease).

Illustration 3

Facts

E.13. Entity C's mission is to reduce the incidence of illness from ABC disease, which afflicts a broad segment of the population. One of Entity C's objectives in fulfilling that mission is to increase governmental funding for research about ABC disease.

E.14. Entity C maintains a list of its prior donors and its employees call them on the telephone reminding them of the effects of ABC disease, asking for contributions, and encouraging them to contact their elected officials to urge increased governmental funding for research about ABC disease. The callers are educated about ABC, do not otherwise perform fund-raising functions, and are not compensated or evaluated based on contributions raised. Entity C's research indicates that recent donors are likely to contact their elected officials about such funding while nonrecent donors are not. Prior donors are deleted from the calling list if they have not contributed to Entity C recently, and new donors are added to the list.

Conclusion

E.15. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.16. The activity calls for specific action by the recipient (contacting elected officials concerning funding for research about ABC disease) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10a or .10b is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) the qualifications and duties of the personnel performing the activity indicate that it is a program activity (the callers are educated about ABC and do not otherwise perform fund-raising functions), (b) the method of compensation for performing the activity does not indicate that it is a fund-raising activity (the employees are not compensated or evaluated based on contributions raised), and (c) performing such programs helps accomplish Entity C's mission.

E.17. The audience criterion is met because the audience (recent donors) is selected based on its ability to assist Entity C in meeting the goals of the program component of the activity (recent donors are likely to contact their elected officials about such funding while nonrecent donors are not).

E.18. The content criterion is met because the activity calls for specific action by the recipient (contacting elected officials concerning funding for research about ABC disease) that will help accomplish the entity's mission (to reduce the incidence of ABC disease), and it explains the need for and benefits of the action (to prevent ABC disease).

Illustration 4

Facts

E.19. Entity D's mission is to improve the quality of life for senior citizens. One of Entity D's objectives included in that mission is to increase the physical activity of senior citizens. One of Entity D's programs to attain that objective is to send representatives to speak to groups about the importance of exercise and to conduct exercise classes.

E.20. Entity D mails a brochure on the importance of exercise that encourages exercise in later years to residents over the age of sixty-five in three zip code areas. The last two pages of the four-page brochure include a perforated contribution remittance form on which Entity D explains its program and makes an appeal for contributions. The content of the first two pages of the brochure is primarily educational; it explains how seniors can undertake a self-supervised exercise program and encourages them to undertake such a program. In addition, Entity D includes a second brochure on various exercise techniques that can be used by those undertaking an exercise program.

E.21. The brochures are distributed to educate people in this age group about the importance of exercising, to help them exercise properly, and to raise contributions for Entity D. These objectives are documented in a letter to the public relations firm that developed the brochures. The audience is selected based on age, without regard to ability to contribute. Entity D believes that most of the recipients would benefit from the information about exercise.

Conclusion

E.22. The purpose, audience, and content criteria are met, and the joint costs should be allocated. (Note that the costs of the second brochure should be charged to program because all the costs of the brochure are identifiable with the program function.)

E.23. The activity calls for specific action by the recipient (exercising) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10a or .10b is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) performing such programs helps accomplish Entity D's mission, and (b) the objectives of the program are documented in a letter to the public relations firm that developed the brochure.

E.24. The audience criterion is met because the audience (residents over sixty-five in certain zip codes) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.25. The content criterion is met because the activity calls for specific action by the recipient (exercising) that will help accomplish the entity's mission

(increasing the physical activity of senior citizens), and the need for and benefits of the action are clearly evident (explains the importance of exercising).

Illustration 5

Facts

E.26. The facts are the same as those in Illustration 4, except that Entity E employs a fund-raising consultant to develop the first brochure and pays that consultant 30 percent of contributions raised.

Conclusion

E.27. The content and audience criteria are met. The purpose criterion is not met, however, because a majority of compensation or fees for the fund-raising consultant varies based on contributions raised for this discrete joint activity (the fund-raising consultant is paid 30 percent of contributions raised). All costs should be charged to fund raising, including the costs of the second brochure and any other costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity.

Illustration 6

Facts

E.28. Entity F's mission is to protect the environment. One of Entity F's objectives included in that mission is to take action that will increase the portion of waste recycled by the public.

E.29. Entity F conducts a door-to-door canvass of a community that recycles a low portion of its waste. The purpose of the activity is to help increase recycling by educating the community about environmental problems created by not recycling, and to raise contributions. Based on the information communicated by the canvassers, the need for and benefits of the action are clearly evident. The ability or likelihood of the residents to contribute is not a basis for communities selected, and all neighborhoods in the geographic area are covered if their recycling falls below a predetermined rate. The canvassers are selected from individuals who are well-informed about the organization's environmental concerns and programs and who previously participated as volunteers in program activities such as answering environmental questions directed to the organization and developing program activities designed to influence legislators to take actions addressing those concerns. The canvassers have not previously participated in fund-raising activities.

Conclusion

E.30. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.31. The activity calls for specific action by the recipient (implicitly—to help increase recycling) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) the qualifications and duties of the personnel performing the activity indicate that it is a program activity (the canvassers are selected from individuals who are well-informed about the organization's environmental concerns and programs and who previously participated as volunteers in program activities

such as answering environmental questions directed to the organization and developing program activities designed to influence legislators to take actions addressing those concerns), and (b) performing such programs helps accomplish Entity F's mission (to protect the environment).

E.32. The audience criterion is met because the audience (neighborhoods whose recycling falls below a predetermined rate) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.33. The content criterion is met because the activity calls for specific action by the recipient (implicitly—to help increase recycling) that will help accomplish the entity's mission (to protect the environment), and the need for and benefits of the action are clearly evident (increased recycling will help alleviate environmental problems).

Illustration 7

Facts

E.34. Entity G's mission is to provide summer camps for economically disadvantaged youths. Educating the families of ineligible youths about the camps is not one of the program objectives included in that mission.

E.35. Entity G conducts a door-to-door solicitation campaign for its camp programs. In the campaign, volunteers with canisters visit homes in middle-class neighborhoods to collect contributions. Entity G believes that people in those neighborhoods would not need the camp's programs but may contribute. The volunteers explain the camp's programs, including why the disadvantaged children benefit from the program, and distribute leaflets to the residents regardless of whether they contribute to the camp. The leaflets describe the camp, its activities, who can attend, and the benefits to attendees. Requests for contributions are not included in the leaflets.

Conclusion

E.36. The purpose, audience, and content criteria are not met. All costs should be charged to fund raising.

E.37. The activity does not include a call for specific action because it only educates the audience about causes (describing the camp, its activities, who can attend, and the benefits to attendees). Therefore, the purpose criterion is not met.

E.38. The audience criterion is not met, because the audience is selected based on its ability or likelihood to contribute, rather than based on (a) its need to use or reasonable potential for use of the action called for by the program component, or (b) its ability to take action to assist the entity in meeting the goals of the program component of the activity. (Entity G believes that people in those neighborhoods would not need the camp's programs but may contribute.)

E.39. The content criterion is not met because the activity does not call for specific action by the recipient. (The content educates the audience about causes that the program is designed to address without calling for specific action.)

Illustration 8

Facts

E.40. Entity H's mission is to educate the public about lifesaving techniques in order to increase the number of lives saved. One of Entity H's objec-

tives in fulfilling that mission, as stated in the minutes of the board's meetings, is to produce and show television broadcasts including information about lifesaving techniques.

E.41. Entity H conducts an annual national telethon to raise contributions and to reach the American public with lifesaving educational messages, such as summary instructions concerning dealing with certain life-threatening situations. Based on the information communicated by the messages, the need for and benefits of the action are clearly evident. The broadcast includes segments describing Entity H's services. Entity H broadcasts the telethon to the entire country, not merely to areas selected on the basis of giving potential or prior fund raising results. Also, Entity H uses national television broadcasts devoted entirely to lifesaving educational messages to conduct program activities without fund raising.

Conclusion

E.42. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.43. The activity calls for specific action by the recipient (implicitly—to save lives) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (a) the program component of the activity calls for specific action by the recipient that will help accomplish Entity H's mission (to save lives by educating the public), and (b) a similar program activity is conducted without the fund raising using the same medium and on a scale that is similar to or greater than the scale on which it is conducted with the appeal (Entity H uses national television broadcasts devoted entirely to lifesaving educational messages to conduct program activities without fund raising).

E.44. The audience criterion is met because the audience (a broad segment of the population) is selected based on its need to use or reasonable potential for use of the action called for by the program activity.

E.45. The content criterion is met because the activity calls for specific action by the recipient (implicitly—to save lives) that will help accomplish the entity's mission (to save lives by educating the public), and the need for and benefits of the action are clearly evident (saving lives is desirable).

Illustration 9

Facts

E.46. Entity I's mission is to provide food, clothing, and medical care to children in developing countries.

E.47. Entity I conducts television broadcasts in the United States that describe its programs, show the needy children, and end with appeals for contributions. Entity I's operating policies and internal management memoranda state that these programs are designed to educate the public about the needs of children in developing countries and to raise contributions. The employees producing the programs are trained in audiovisual production and are familiar with Entity I's programs. Also, the executive producer is paid \$25,000 for this activity, with a \$5,000 bonus if the activity raises over \$1,000,000.

Conclusion

E.48. The purpose, audience, and content criteria are not met. All costs should be charged to fund raising.

E.49. The activity does not include a call for specific action because it only educates the audience about causes (describing its programs and showing the needy children). Therefore, the purpose criterion is not met. (Also, note that if the factor in paragraph .10*a* were considered, it would not be determinative of whether the purpose criterion is met. Although the executive producer will be paid \$5,000 if the activity raises over \$1,000,000, that amount would not be a majority of the executive producer's total compensation for this activity, because \$5,000 would not be a majority of the executive producer's total compensation of \$30,000 for this activity. Also, note that if other evidence, such as the indicators in paragraph .11, were considered, the purpose criterion would not be met based on the other evidence. Although the qualifications and duties of the personnel performing the activity indicate that the employees producing the program are familiar with Entity I's programs, the facts that some, but less than a majority, of the executive producer's compensation varies based on contributions raised, and that the operating policies and internal management memoranda state that these programs are designed to educate the public about the needs of children in developing countries [with no call for specific action by recipients] and to raise contributions, indicate that the purpose is fund raising.)

E.50. The audience criterion is not met because the audience is selected based on its ability or likelihood to contribute, rather than based on (a) its need to use or reasonable potential for use of the action called for by the program component, or (b) its ability to take action to assist the entity in meeting the goals of the program component of the activity. (The audience is a broad segment of the population of a country that is not in need of or has no reasonable potential for use of the program activity.)

E.51. The content criterion is not met because the activity does not call for specific action by the recipient that will help accomplish the entity's mission. (The content educates the audience about the causes without calling for specific action.)

Illustration 10

Facts

E.52. Entity J is a university that distributes its annual report, which includes reports on mission accomplishments, to those who have made significant contributions over the previous year, its board of trustees, and its employees. The annual report is primarily prepared by management and general personnel, such as the accounting department and executive staff. The activity is coordinated by the public relations department. Internal management memoranda indicate that the purpose of the annual report is to report on how management discharged its stewardship responsibilities, including the university's overall performance, goals, financial position, cash flows, and results of operations. Included in the package containing the annual report are requests for contributions and donor reply cards.

Conclusion

E.53. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.54. The activity has elements of management and general functions. Therefore, no call for specific action is required. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be

considered. The purpose criterion is met based on the other evidence, because (a) the employees performing the activity are not members of the fund-raising department and perform other non-fund-raising activities and (b) internal management memoranda indicate that the purpose of the annual report is to fulfill one of the university's management and general responsibilities.

E.55. The audience criterion is met because the audience is selected based on its reasonable potential for use of the management and general component. Although the activity is directed primarily at those who have previously made significant contributions, the audience was selected based on its presumed interest in Entity J's annual report (prior donors who have made significant contributions are likely to have an interest in matters discussed in the annual report).

E.56. The content criterion is met because the activity (distributing annual reports) fulfills one of the entity's management and general responsibilities (reporting concerning management's fulfillment of its stewardship function).

Illustration 11

Facts

E.57. Entity K is an NPO. In accordance with internal management memoranda documenting its policies requiring it to comply with Internal Revenue Service (IRS) regulations, it mails prior donors who have made quid pro quo payments in excess of \$75 documentation required by the IRS. The documentation is included on a perforated piece of paper. The information above the perforation line pertains to the documentation required by the IRS. The information below the perforation line includes a request for contributions and may be used as a donor reply card.

Conclusion

E.58. The purpose, audience, and content criteria are met, and the joint costs should be allocated. (Note that the costs of the information below the perforation line are identifiable with fund raising and therefore should be charged to fund raising.)

E.59. The activity has elements of management and general functions. Therefore, no call for specific action is required. Neither of the factors in paragraph .10a or .10b is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because internal management memoranda indicate that the purpose of the activity is to fulfill one of Entity K's management and general responsibilities.

E.60. The audience criterion is met because the entity is required to direct the management and general component of the activity to the particular audience. Although the activity is directed at those who have previously contributed, the audience was selected based on its need for the documentation.

E.61. The content criterion is met because the activity (sending documentation required by the IRS) fulfills one of the entity's management and general responsibilities (complying with IRS regulations).

Illustration 12

Facts

E.62. Entity L is an animal rights organization. It mails a package of material to individuals included in lists rented from various environmental and

other organizations that support causes that Entity L believes are congruent with its own. In addition to donor response cards and return envelopes, the package includes (a) materials urging recipients to contact their legislators and urge the legislators to support legislation to protect those rights, and (b) postcards addressed to legislators urging support for legislation restricting the use of animal testing for cosmetic products. The mail campaign is part of an overall strategy that includes magazine advertisements and the distribution of similar materials at various community events, some of which are undertaken without fund-raising appeals. The advertising and community events reach audiences similar in size and demographics to the audience reached by the mailing.

Conclusion

E.63. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.64. The activity calls for specific action by the recipient (mailing postcards to legislators urging support for legislation restricting the use of animal testing for cosmetic products) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10a or .10b is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) the program component of this activity calls for specific action by the recipient that will help accomplish the entity's mission, and it otherwise conducts the program activity in this illustration without a request for contributions, and (b) performing such programs helps accomplish Entity L's mission.

E.65. The audience criterion is met because the audience (individuals included in lists rented from various environmental and other organizations that support causes that Entity L believes are congruent with its own) is selected based on its ability to take action to assist the entity in meeting the goals of the program component of the activity.

E.66. The content criterion is met because the activity calls for specific action by the recipient (mailing postcards to legislators urging support for legislation restricting the use of animal testing for cosmetic products) that will help accomplish the entity's mission (to protect animal rights), and the need for and benefits of the action are clearly evident (to protect animal rights).

Illustration 13

Facts

E.67. Entity M is a performing arts organization whose mission is to make the arts available to residents in its area. Entity M charges a fee for attending performances and sends advertisements, including subscription forms, for the performances to residents in its area. These advertisements include a return envelope with a request for contributions. Entity M evaluates the effectiveness of the advertising based on the number of subscriptions sold as well as contributions received. In performing that evaluation, Entity M places more weight on the number of subscriptions sold than on the contributions received. Also, Entity M advertises the performances on local television and radio without a request for contributions but on a smaller scale than the mail advertising.

Conclusion

E.68. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.69. The activity calls for specific action by the recipient (attending the performances) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10*a* or .10*b* is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) the entity measures program results and accomplishments of the joint activity and in evaluating the effectiveness of the activity, the entity places significantly greater weight on the activity's effectiveness in accomplishing program goals than on the activity's effectiveness in raising contributions (Entity M evaluates the effectiveness of the advertising based on the number of subscriptions sold as well as contributions received and places more weight on the number of subscriptions sold than on the contributions received), (b) it otherwise conducts the program activity without a request for contributions, and (c) performing such programs helps accomplish Entity M's mission (to make the arts available to residents in its area).

E.70. The audience criterion is met because the audience (a broad segment of the population in Entity M's area) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.71. The content criterion is met because the activity calls for specific action by the recipient (attending the performances) that will help accomplish the entity's mission (making the arts available to area residents), and the need for and benefits of the action are clearly evident (attending the performance is a positive cultural experience). (Note that the purchase of subscriptions is an exchange transaction and, therefore, is not a contribution.)

Illustration 14**Facts**

E.72. Entity N is a university whose mission is to educate the public (students) in various academic pursuits. Entity N's political science department holds a special lecture series in which prominent world leaders speak about current events. The speakers command relatively high fees and, in order to cover costs and make a modest profit, the university sets a relatively expensive fee to attend. However, the tickets are priced at the fair value of the lecture and no portion of the ticket purchase price is a contribution. Entity N advertises the lectures by sending invitations to prior attendees and to prior donors who have contributed significant amounts, and by placing advertisements in local newspapers read by the general public. At some of the lectures, including the lecture being considered in this illustration, deans and other faculty members of Entity N solicit significant contributions from attendees. Other lectures in the series are conducted on a scale similar to the scale of the lecture in this illustration without requesting contributions. Entity N's records indicate that historically 75 percent of the attendees have attended prior lectures. Of the 75 percent who have attended prior lectures, 15 percent have made prior contributions to Entity N. Of the 15 percent who have made prior contributions to Entity N, 5 percent have made contributions in response to solicitations made at the events. (Therefore, one-half of one percent of attendees make contribu-

tions in response to solicitations made at the events. However, those contributions are significant.) Overall, the audience's ability or likelihood to contribute is an insignificant factor in its selection. Entity N evaluates the effectiveness of the activity based on the number of tickets sold, as well as contributions received. In performing that evaluation, Entity N places more weight on the number of tickets sold than on the contributions received.

Conclusion

E.73. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.74. The activity calls for specific action by the recipient (attending the lecture) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (a) the program component of the activity calls for specific action by the recipient that will help accomplish the entity's mission (educating the public [students] in various academic pursuits), and (b) the program is also conducted using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions (other lectures in the series are conducted on a scale similar to the scale of the lecture in this illustration without requesting contributions).

E.75. The audience criterion is met. The rebuttable presumption that the audience criterion is not met because the audience includes prior donors is overcome in this illustration because the audience (those who have shown prior interest in the lecture series, prior donors, a broad segment of the population in Entity N's area, and those attending the lecture) is also selected for its reasonable potential for use of the program component (attending the lecture). Although the audience may make significant contributions, that was an insignificant factor in its selection.

E.76. The content criterion is met because the activity calls for specific action by the recipient (attending the lecture) that will help accomplish the entity's mission (educating the public [students] in various academic pursuits), and the need for and benefits of the action are clearly evident (attending the lecture is a positive educational experience). (Note that the purchase of the tickets is an exchange transaction and, therefore, is not a contribution. As discussed in paragraph .07 of this SOP, costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event, should not be reported as fund raising.¹²)

Illustration 15

Facts

E.77. Entity O is a university whose mission is to educate the public (students) in various academic pursuits. Entity O's political science department holds a special lecture series in which prominent world leaders speak about current events. Admission is priced at \$250, which is above the \$50 fair value of the lecture and, therefore, \$200 of the admission price is a contribution. Therefore, the audience's likelihood to contribute to the entity is a significant factor in its selection. Entity O advertises the lectures by sending invitations

¹² Paragraphs 13.21–13.26 of the Audit and Accounting Guide *Not-for-Profit Organizations* provide guidance concerning reporting special events. [Footnote revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

to prior attendees and to prior donors who have contributed significant amounts, and by placing advertisements in local newspapers read by the general public. Entity O presents similar lectures that are priced at the fair value of those lectures.

Conclusion

E.78. The purpose and content criteria are met. The audience criterion is not met. All costs, including those that might otherwise be considered program or management and general costs if they had been incurred in a different activity, except for the costs of the direct donor benefit (the lecture), should be charged to fund raising.

E.79. The activity calls for specific action by the recipient (attending the lecture) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (a) the program component of the activity calls for specific action by the recipient that will help accomplish the entity's mission (educating the public [students] in various academic pursuits), and (b) the program is also conducted using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions (other lectures in the series are conducted on a scale similar to the scale of the lecture in this illustration without including a contribution in the admission price.)

E.80. The audience criterion is not met. The rebuttable presumption that the audience criterion is not met because the audience is selected based on its likelihood to contribute to the entity is not overcome in this illustration. The fact that the \$250 admission price includes a \$200 contribution leads to the conclusion that the audience's ability or likelihood to contribute is an overwhelmingly significant factor in its selection, whereas there is no evidence that the extent to which the audience is selected for its need to use or reasonable potential for use of the action called for by the program component (attending the lecture) is overwhelmingly significant.

E.81. The content criterion is met because the activity calls for specific action by the recipient (attending the lecture) that will help accomplish the entity's mission (educating the public [students] in various academic pursuits), and the need for and benefits of the action are clearly evident (attending the lecture is a positive educational experience). (Note that the purchase of the tickets is an exchange transaction and, therefore, is not a contribution. As discussed in paragraph .07 of this SOP, costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event, should not be reported as fund raising.¹³)

Illustration 16

Facts

E.82. Entity P's mission is to reduce the incidence of illness from ABC disease, which primarily afflicts people over sixty-five years of age. One of Entity P's objectives in fulfilling that mission is to have all persons over sixty-five screened for ABC disease.

E.83. Entity P rents space at events attended primarily by people over sixty-five years of age and conducts free screening for ABC disease. Entity P's

¹³ Paragraphs 13.21–13.26 of the Audit and Accounting Guide *Not-for-Profit Organizations* provide guidance concerning reporting special events. [Footnote revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

employees, who are educated about ABC disease and screening procedures and do not otherwise perform fund-raising functions, educate interested parties about the effects of ABC disease and the ease and benefits of screening for it. Entity P also solicits contributions at the events. The effectiveness of the activity is evaluated primarily based on how many screening tests are performed, and only minimally based on contributions raised. The employees are not compensated or evaluated based on contributions raised.

Conclusion

E.84. The purpose, audience, and content criteria are met, and the joint costs should be allocated.

E.85. The activity calls for specific action by the recipient (being screened for ABC disease) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. Neither of the factors in paragraph .10a or .10b is determinative of whether the purpose criterion is met. Therefore, other evidence, such as the indicators in paragraph .11, should be considered. The purpose criterion is met based on the other evidence, because (a) a process exists to evaluate measured program results and accomplishments and in evaluating the effectiveness of the joint activity, the entity places significantly greater weight on the activity's effectiveness in accomplishing program goals than on the activity's effectiveness in raising contributions (Entity P evaluates the effectiveness of the activity based on the number of screening tests conducted as well as contributions received and places more weight on the number of tests conducted than on the contributions received); (b) the qualifications and duties of the personnel performing the activity indicate that it is a program activity (the employees are educated about ABC disease and the testing procedures and do not otherwise perform fund-raising functions); (c) the method of compensation for performing the activity does not indicate that it is a fund-raising activity (the employees are not compensated or evaluated based on contributions raised); and (d) performing such programs helps accomplish Entity P's mission (to prevent ABC disease).

E.86. The audience criterion is met because the audience (people over sixty-five years of age) is selected based on its need to use or reasonable potential for use of the action called for by the program component.

E.87. The content criterion is met because the activity calls for specific action by the recipient (being screened for ABC disease) that will help accomplish the entity's mission (to reduce the incidence of ABC disease), and it explains the need for and benefits of the action (to prevent ABC disease).

Illustration 17

Facts

E.88. Entity Q's mission is to provide cultural and educational television programming to residents in its area. Entity Q owns a public television station and holds a membership drive in which it solicits new members. The drive is conducted by station employees and consists of solicitations that are shown during long breaks between the station's regularly scheduled programs. Entity Q's internal management memoranda state that these drives are designed to raise contributions. Entity Q evaluates the effectiveness of the activity based on the amount of contributions received. Entity Q shows the programs on a

similar scale, without the request for contributions. The audience is members of the general public who watch the programs shown during the drive. Station member benefits are given to those who contribute and consist of tokens of appreciation with a nominal value.

Conclusion

E.89. The purpose, audience, and content criteria are met, and the joint costs should be allocated. (Note that there would be few, if any, joint costs. Costs associated with the fund-raising activities, such as costs of airtime, would be separately identifiable from costs of the program activities, such as licensing costs for a particular television program. Also, note that because no significant benefits or duties are associated with membership, member dues are contributions. Therefore, the substance of the membership-development activities is, in fact, fund raising.)

E.90. The activity calls for specific action by the recipient (watching the television program) that will help accomplish the entity's mission. Therefore, the guidance in paragraph .10 should be considered. The purpose criterion is met because (a) the program component of the activity calls for specific action by the recipient that will help accomplish the entity's mission, and (b) the program is also conducted using the same medium on a scale that is similar to or greater than the scale on which it is conducted with the request for contributions (Entity Q shows the television programs on a similar scale, without the request for contributions).

E.91. The audience criterion is met. The rebuttable presumption that the audience criterion is not met because the audience is selected based on its likelihood to contribute is overcome in this illustration because the audience (members of the general public who watch the television programs shown during the drive) is also selected for its reasonable potential for use of the program component (watching the television programs). Although the audience may make contributions, that was an insignificant factor in its selection.

E.92. The content criterion is met because the activity calls for specific action by the recipient (watching the television programs) that will help accomplish the entity's mission (providing cultural and educational television programming to residents in its area), and the need for and benefits of the action are clearly evident (watching the programs is a positive cultural and educational experience).

Appendix F

Illustrations of Allocation Methods

F.1. Some commonly used cost allocation methods follow.

Physical Units Method

F.2. Joint costs are allocated to materials and activities in proportion to the number of units of output that can be attributed to each of the materials and activities. Examples of units of output are lines, square inches, and physical content measures. This method assumes that the benefits received by the fund-raising, program, or management and general component of the materials or activity from the joint costs incurred are directly proportional to the lines, square inches, or other physical output measures attributed to each component of the activity. This method may result in an unreasonable allocation of joint costs if the units of output, for example, line counts, do not reflect the degree to which costs are incurred for the joint activity. Use of the physical units method may also result in an unreasonable allocation if the physical units cannot be clearly ascribed to fund raising, program, or management and general. For example, direct mail and telephone solicitations sometimes include content that is not identifiable with fund raising, program, or management and general; or the physical units of such content are inseparable.

Illustration

F.3. Assume a direct mail campaign is used to conduct programs of the entity and to solicit contributions to support the entity and its programs. Further, assume that the appeal meets the criteria for allocation of joint costs to more than one function.

F.4. The letter and reply card include a total of one hundred lines. Forty-five lines pertain to program because they include a call for action by the recipient that will help accomplish the entity's mission, while fifty-five lines pertain to the fund-raising appeal. Accordingly, 45 percent of the costs are allocated to program and 55 percent to fund-raising.

Relative Direct Cost Method

F.5. Joint costs are allocated to each of the components on the basis of their respective direct costs. Direct costs are those costs that are incurred in connection with the multipurpose materials or activity and that are specifically identifiable with a function (program, fund raising, or management and general). This method may result in an unreasonable allocation of joint costs if the joint costs of the materials and activity are not incurred in approximately the same proportion and for the same reasons as the direct costs of the materials and activity. For example, if a relatively costly booklet informing the reader about the entity's mission (including a call for action by the recipient that will help accomplish the entity's mission) is included with a relatively inexpensive fund-raising letter, the allocation of joint costs based on the cost of these pieces may be unreasonable, particularly if the booklet and letter weigh approximately the same and therefore contribute equally to the postage costs.

Illustration

F.6. The costs of a direct mail campaign that can be specifically identified with program services are the costs of separate program materials and a postcard which calls for specific action by the recipient that will help accomplish the entity's mission. They total \$20,000. The direct costs of the fund-raising component of the direct mail campaign consist of the costs to develop and produce the fund-raising letter. They total \$80,000. Joint costs associated with the direct mail campaign total \$40,000 and would be allocated as follows under the relative direct cost method:

Program	$\$20,000/\$100,000 \times \$40,000 = \$8,000$
Fund raising	$\$80,000/\$100,000 \times \$40,000 = \$32,000$

Stand-Alone Joint-Cost-Allocation Method

F.7. Joint costs are allocated to each component of the activity based on a ratio that uses estimates of costs of items included in joint costs that would have been incurred had the components been conducted independently. The numerator of the ratio is the cost (of items included in joint costs) of conducting a single component independently; the denominator is the cost (of items included in joint costs) of conducting all components independently. This method assumes that efforts for each component in the stand-alone situation are proportionate to the efforts actually undertaken in the joint cost situation. This method may result in an unreasonable allocation because it ignores the effect of each function, which is performed jointly with other functions, on other such functions. For example, the programmatic impact of a direct mail campaign or a telemarketing phone message may be significantly lessened when performed in conjunction with a fund-raising appeal.

Illustration

F.8. Assume that the joint costs associated with a direct mail campaign including both program and fund-raising components are the costs of stationery, postage, and envelopes at a total of \$100,000. The costs of stationery, postage, and envelopes to produce and distribute each component separately would have been \$90,000 for the program component and \$70,000 for the fund-raising component. Under the stand-alone joint-cost-allocation method, the \$100,000 in joint costs would be allocated as follows: $\$90,000/\$160,000 \times \$100,000 = \$56,250$ to program services and $\$70,000/\$160,000 \times \$100,000 = \$43,750$ to fund raising.

Appendix G

Illustrations of Disclosures

G.1. The disclosures discussed in paragraphs .18 and .19 are illustrated below. Alternative 1 reports the required and encouraged information in narrative format. Alternative 2 reports that information in tabular format, as well as information concerning joint costs incurred for each kind of activity by functional classification, which is neither required nor encouraged, but which is not prohibited.

Alternative 1

Note X. Allocation of Joint Costs

In 19XX, the organization conducted activities that included requests for contributions, as well as program and management and general components. Those activities included direct mail campaigns, special events, and a telethon. The costs of conducting those activities included a total of \$310,000 of joint costs, which are not specifically attributable to particular components of the activities (joint costs). [**Note to reader:** *The following sentence is encouraged but not required.*] Joint costs for each kind of activity were \$50,000, \$150,000, and \$110,000 respectively. These joint costs were allocated as follows:

Fund raising	\$180,000
Program A	80,000
Program B	40,000
Management and general	10,000
Total	<u>\$310,000</u>

Alternative 2

Note X. Allocation of Joint Costs

In 19XX, the organization conducted activities that included appeals for contributions and incurred joint costs of \$310,000. These activities included direct mail campaigns, special events, and a telethon. Joint costs were allocated as follows:

	<u>Direct Mail</u>	<u>Special Events</u>	<u>Telethon</u>	<u>Total</u>
Fund raising	\$40,000	\$50,000	\$90,000	\$180,000
Program A	10,000	65,000	5,000	80,000
Program B		25,000	15,000	40,000
Management and general		10,000		10,000
Total	<u>\$50,000</u>	<u>\$150,000</u>	<u>\$110,000</u>	<u>\$310,000</u>

[**Note to reader:** *Shading is used to highlight information that is neither required nor encouraged, but which is not prohibited. However, entities may prefer to disclose it. Disclosing the total joint costs for each kind of activity (\$50,000, \$150,000, and \$110,000) is encouraged but not required.*]

Appendix H

Contrast of Guidance in This SOP With the Guidance in SOP 87-2^{14,**}

This SOP

Applies to all entities that solicit contributions, including state and local governments.

Covers *all* costs of joint activities. (Costs that otherwise might be considered program or management and general costs if they had been incurred in a different activity, except for costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event [for example, a meal], should be charged to fund raising unless the criteria in the SOP are met.)

Criteria of purpose, audience, and content should all be met in order to charge costs of the activity to program or management and general.

SOP 87-2

Applied to entities that follow the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* or SOP 78-10. (SOP 87-2 was not applicable to entities that are within the scope of Governmental Accounting Standards Board Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*.)

Covers only joint costs of joint activities.

Unclear concerning whether all criteria should be met in order to charge costs of the activity to program or management and general.

(continued)

¹⁴ In August 1996, the AICPA issued the Audit and Accounting Guide *Not-for-Profit Organizations*, which superseded SOP 87-2, *Accounting for Joint Costs of Informational Materials and Activities of Not-for-Profit Organizations That Include a Fund-Raising Appeal*, because the guidance in SOP 87-2 is incorporated into paragraphs 13.36 to 13.45 of the Guide. Also, *Not-for-Profit Organizations* superseded the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* and SOP 78-10. *Not-for-Profit Organizations* applies to all nongovernmental not-for-profit organizations other than those required to follow the Audit and Accounting Guide *Health Care Organizations*. Therefore, incorporating the guidance in SOP 87-2 into *Not-for-Profit Organizations* broadened the scope of the guidance previously included in SOP 87-2 to all not-for-profit organizations other than those required to follow *Health Care Organizations*. The discussion in this SOP of SOP 87-2 refers to both SOP 87-2 and the guidance included in paragraphs 13.36 to 13.45 of *Not-for-Profit Organizations*, except that the guidance in *Not-for-Profit Organizations* applies to all not-for-profit organizations other than those required to follow *Health Care Organizations*.

** See footnotes ‡ and †† in paragraphs D.3 and D.4, respectively. [Footnote revised, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34 and No. 35.]

This SOP

Neither prescribes nor prohibits any allocation methods. Includes a discussion to help users determine whether an allocation is reasonable, and provides some illustrations.

Requires note disclosures about the types of activities for which joint costs have been incurred, amounts allocated during the period, and amounts allocated to each functional expense or expenditure category.

SOP 87-2

Neither prescribes nor prohibits any allocation methods. No illustrations are provided.

Requires less extensive note disclosures: total amount allocated during the period and amounts allocated to each functional expense category.

Appendix I

Effects on Other Guidance

I.1. For nongovernmental organizations, this Statement of Position (SOP) amends the AICPA Audit and Accounting Guide *Health Care Organizations* and paragraphs 13.35 to 13.44 of the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*. [Revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

I.2. Also, this SOP amends the AICPA Audit and Accounting Guide *Not-for-Profit Organizations* to clarify that costs of goods or services provided in exchange transactions that are part of joint activities, such as costs of direct donor benefits of a special event (for example, a meal), should not be reported as fund-raising. In particular, paragraphs 13.21, 13.23, and 13.24 of *Not-for-Profit Organizations* are amended as follows:

13.21 Some organizations conduct joint activities⁹ that are special events, including special social and educational events (such as symposia, dinners, dances, and theater parties) in which the attendee receives a direct benefit (for example, a meal or theater ticket). FASB Statement No. 117 requires the reporting of the gross amounts of revenues and expenses from special events and other fund-raising activities that are ongoing major or central activities, but permits (but does not require) reporting net amounts if the receipts and related costs result from special events that are peripheral or incidental activities.

⁹ See footnote 1.

13.23 For example, assume that an organization has a special event that is an ongoing and major activity with a ticket price of \$100. Assume that the activity does not meet the audience criterion in SOP 98-2, *Accounting for Costs of Activities of Not-for-Profit Organizations and State and Local Governmental Entities That Include Fund Raising*, and, therefore, all costs of the activity, other than the direct donor benefits, should be reported as fund raising. The event includes a dinner that costs the organization \$25 and that has a fair value of \$30. (Chapter 5, “Contributions Received and Agency Transactions,” of this Guide, discusses the appropriate reporting if the meal or other items of value are donated to the organization for resale.) In addition, the organization incurs other direct costs of the event in connection with promoting and conducting the event, including incremental direct costs incurred in transactions with independent third parties and the payroll and payroll-related costs for the activities of employees who are directly associated with, and devote time to, the event. Those other direct costs, which include (a) \$5 that otherwise might be considered management and general costs if they had been incurred in a different activity, and (b) fund-raising costs of \$10, are unrelated to the direct benefits to donors and, accordingly, should not be included as costs of benefits to donors. In addition, the organization has the following transactions, which are unrelated to the special event: unrestricted contributions of \$200, program expenses of \$60, management and general expenses of \$20, and fund-raising expenses of \$20.

13.24 Some ways in which the organization could display the results of the special event as part of its statement of activities are illustrated as follows:

Statements of Position

Illustration 1

Changes in unrestricted net assets:		
Contributions		\$200
Special event revenue	100	
Less: Costs of direct benefits to donors	<u>(25)</u>	
Net revenues from special events		<u>75</u>
Contributions and net revenues from special events		275
Other expenses:		
Program		60
Management and general		20
Fund raising		<u>35</u>
Total other expenses		<u>115</u>
Increase in unrestricted net assets		<u>\$160</u>

Illustration 2

Changes in unrestricted net assets:		
Revenues:		
Contributions		\$200
Special event revenue		<u>100</u>
Total revenues		300
Expenses:		
Program		60
Costs of direct benefits to donors		25
Management and general		20
Fund raising		<u>35</u>
Total expenses		<u>140</u>
Increase in unrestricted net assets		<u>\$160</u>

Illustration 3

Changes in unrestricted net asset:		
Contributions		\$270
Dinner sales		30
Less: Costs of direct benefits to donors		<u>(25)</u>
Gross profit on special events		<u>5</u>
Contributions and net revenues from special events		275
Other expenses:		
Program		60
Management and general		20
Fund raising		<u>35</u>
Total other expenses		<u>115</u>
Increase in unrestricted net assets		<u>\$160</u>

[Revised, June 2004, to reflect conforming changes necessary due to conforming changes made to the AICPA Audit and Accounting Guide *Not-for-Profit Organizations*.]

I.3. For governmental entities that have applied the accounting and financial reporting principles in SOP 78-10, *Accounting Principles and Reporting Practices for Certain Nonprofit Organizations*, or the AICPA Industry Audit Guide *Audits of Voluntary Health and Welfare Organizations* (modified by all applicable Financial Accounting Standards Board [FASB] pronouncements issued through November 30, 1989, and by most applicable Governmental Accounting Standards Board [GASB] pronouncements) in conformity with GASB Statement No. 29, *The Use of Not-for-Profit Accounting and Financial Reporting Principles by Governmental Entities*, this SOP amends the principles—based on SOP 78-10 and *Audits of Voluntary Health and Welfare Organizations*, as modified—that those entities apply. For governmental entities that have applied the accounting and financial reporting principles in the 1973 AICPA Industry Audit Guide *Audits of Colleges and Universities*, as amended by SOP 74-8, *Financial Accounting and Reporting by Colleges and Universities*, and as modified by applicable FASB pronouncements issued through November 30, 1989, and all applicable GASB pronouncements in conformity with GASB Statement No. 15, *Governmental College and University Accounting and Financial Reporting Models*, this SOP amends the principles—based on *Audits of Colleges and Universities*, as amended and modified—that those entities apply. For other governmental organizations, this SOP amends the Audit and Accounting Guide *Audits of State and Local Governmental Units*.^{††}

^{††} See footnotes ‡ and || in paragraphs D.3 and D.4, respectively. Also, the AICPA Audit and Accounting Guide *State and Local Governments* supersedes the 1994 AICPA Audit and Accounting Guide *Audits of State and Local Governmental Units* and subsequent editions of that Guide with conforming changes made by the AICPA staff. The AICPA Audit and Accounting Guide *State and Local Governments* provides guidance on the application of this SOP to state and local governments. [Footnote added, June 2004, to reflect conforming changes necessary due to the issuance of GASB Statements No. 34, No. 35, and the AICPA Audit and Accounting Guide *Audits of State and Local Governmental Units*.]

Glossary

Activities. Activities are efforts to accomplish specific objectives. Some activities include producing and distributing materials. For example, if an entity undertakes a mass mailing that includes a letter and a pamphlet, producing and distributing the letter and pamphlet are part of the activity. Other activities may include no materials, such as an annual dinner or a radio commercial.

Compensation or fees. Reciprocal transfers of cash or other assets in exchange for services performed.

Contributions. Contributions are unconditional transfers of cash or other assets to an entity or a settlement or cancellation of its liabilities in a voluntary nonreciprocal transfer by another entity acting other than as an owner.

Costs of joint activities. Costs of joint activities are costs incurred for a joint activity. Costs of joint activities may include joint costs and costs other than joint costs. Costs other than joint costs are costs that are identifiable with a particular function, such as fund raising, program, management and general, and cost of sales. For example, some costs incurred for printing, paper, professional fees, and salaries to produce donor cards are not joint costs, although they may be incurred in connection with conducting joint activities.

Fund-raising activities. Fund-raising activities are activities undertaken to induce potential donors to contribute money, securities, services, materials, facilities, other assets, or time. They include publicizing and conducting fund-raising campaigns; maintaining donor mailing lists; conducting special fund-raising events; preparing and distributing fund-raising manuals, instructions, and other materials; and conducting other activities involved with soliciting contributions from individuals, foundations, governments, and others.

Help accomplish the entity's mission. Actions that help accomplish the entity's mission are actions that either benefit the recipient (such as by improving the recipient's physical, mental, emotional, or spiritual health and well-being) or benefit society (by addressing societal problems).

Joint activity. A joint activity is an activity that is part of the fund-raising function and has elements of one or more other functions, such as program, management and general, membership development, or any other functional category used by the entity.

Joint costs. Joint costs are the costs of conducting joint activities that are not identifiable with a particular component of the activity. For example, the cost of postage for a letter that includes both fund-raising and program components is a joint cost. Joint costs may include the costs of salaries, contract labor, consultants, professional fees, paper, printing, postage, event advertising, telephones, airtime, and facility rentals.

Management and general activities. Management and general activities are those that are not identifiable with a single program, fund-raising activity, or membership-development activity but that are indispensable to the conduct of those activities and to an organization's existence. They

include oversight, business management, general recordkeeping, budgeting, financing, soliciting revenue from exchange transactions, such as government contracts and related administrative activities, and all management and administration except for direct conduct of program services or fund-raising activities. Disseminating information to inform the public of the organization's "stewardship" of contributed funds, announcements concerning appointments, and the annual report, among other activities, are management and general activities, as are soliciting funds other than contributions, including exchange transactions (whether program-related or not).

Medium. A medium is a means of mass communication, such as direct mail, direct response advertising, or television.

Membership-development activities. Membership-development activities include soliciting for prospective members and membership dues, membership relations, and similar activities. If there are no significant benefits or duties connected with membership, however, the substance of membership-development activities may, in fact, be fund-raising.

Program activities. Program activities are the activities that result in goods or services being distributed to beneficiaries, customers, or members that fulfill the purposes or mission for which the organization exists. Those services are the major purpose for and the major output of the organization and often relate to several major programs. For example, a large university may have programs for student instruction, research, and patient care, among others. Similarly, a health and welfare organization may have programs for health and family services, research, disaster relief, and public education, among others.

Issues Papers of the Accounting Standards Division

Issues Papers of the AICPA's Accounting Standards Division are developed primarily to identify financial accounting and reporting issues the division believes need to be addressed or clarified by the Financial Accounting Standards Board. Issues Papers present neutral discussions of the issues identified, including reviews of pertinent existing literature, current practice, and relevant research, as well as arguments on alternative solutions. Issues Papers normally include advisory conclusions that represent the views of at least a majority of the Institute's Accounting Standards Executive Committee.

Issues Papers do not establish standards of financial accounting enforceable under Rule 203 of the Institute's Code of Professional Conduct.

<u>Title</u>	<u>Date Issued</u>
Accounting for Termination Indemnities (superseded by FASB Statement No. 88, <i>Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits</i>)	12/12/78
Accounting for Changes in Estimates	12/15/78

STATEMENT OF POSITION AUDITING AND ATTESTATION

Introduction

Auditing and Attestation Statements of Position (SOPs) are issued to achieve one or more of several objectives: to revise, clarify, or supplement guidance in previously issued Audit and Accounting Guides; to describe and provide implementation guidance for specific types of audit and attestation engagements; or to provide guidance on specialized areas in audit and attestation engagements.

Auditing SOPs

An auditing SOP is recognized as an interpretive publication as defined in AU-C section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards* (AICPA, *Professional Standards*). Interpretive publications are recommendations on the application of generally accepted auditing standards (GAAS) in specific circumstances, including engagements for entities in specialized industries.

An interpretive publication is issued under the authority of the AICPA Auditing Standards Board (ASB) after all ASB members have been provided an opportunity to consider and comment on whether the proposed interpretive publication is consistent with GAAS. The members of the ASB have found this SOP to be consistent with existing GAAS.

Although interpretive publications are not auditing standards, AU-C section 200 requires the auditor to consider applicable interpretive publications in planning and performing the audit because interpretive publications are relevant to the proper application of GAAS in specific circumstances. If the auditor does not apply the auditing guidance in an applicable interpretive publication, the auditor should document how the requirements of GAAS were complied with in the circumstances addressed by such auditing guidance.

Attestation SOPs

An attestation SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of Statements on Standards for Attestation Engagements (SSAEs) in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the ASB. The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Section 14,250

Statement of Position 92-8 Auditing Property/Casualty Insurance Entities' Statutory Financial Statements—Applying Certain Requirements of the NAIC Annual Statement Instructions

October, 1992

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Insurance Companies Committee to provide guidance regarding the audit of property/casualty insurance entities' statutory financial statements in applying certain requirements of the National Association of Insurance Commissioners' Annual Statement Instructions.

This SOP is recognized as an interpretive publication as defined in AU-C section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards* (AICPA, *Professional Standards*). Interpretive publications are recommendations on the application of generally accepted auditing standards (GAAS) in specific circumstances, including engagements for entities in specialized industries.

An interpretive publication is issued under the authority of the AICPA Auditing Standards Board (ASB) after all ASB members have been provided an opportunity to consider and comment on whether the proposed interpretive publication is consistent with GAAS. The members of the ASB have found this SOP to be consistent with existing GAAS.

Although interpretive publications are not auditing standards, AU-C section 200 requires the auditor to consider applicable interpretive publications in planning and performing the audit because interpretive publications are relevant to the proper application of GAAS in specific circumstances. If the auditor does not apply the auditing guidance in an applicable interpretive publication, the auditor should document how the requirements of GAAS were complied with in the circumstances addressed by such auditing guidance.

Applicability

.01 This statement of position (SOP) provides guidance on the impact of certain requirements of the National Association of Insurance Commissioners' (NAIC's) Annual Statement Instructions—Property and Casualty on the auditor's procedures in the audit of statutory financial statements of property/casualty insurance entities.

Introduction

.02 The NAIC's Annual Statement Instructions direct property/casualty insurers to require their independent certified public accountants to subject the current Schedule P-Part 1 (excluding those amounts related to bulk and incurred-but-not-reported [IBNR] reserves and claim counts) to the auditing

procedures applied in the audit of the current statutory financial statements to determine whether Schedule P-Part 1 is fairly stated in all material respects in relation to the basic statutory financial statements taken as a whole. Schedule P-Part 1 includes Part 1-Summary and Part 1A-1R.

.03 Although no separate report on Schedule P-Part 1 is required by the NAIC, the provisions of AU-C section 725, *Supplementary Information in Relation to the Financial Statements as a Whole* (AICPA, *Professional Standards*), and the provisions of this SOP apply when information in Schedule P-Part 1 is subjected to auditing procedures applied in the audit of the basic statutory financial statements. The requirements of this SOP do not preclude an auditor from issuing a report similar to those illustrated in paragraph .A17 of AU-C section 725. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Auditing Procedures

.04 Certain of the information in Schedule P-Part 1 is typically subjected to auditing procedures applied in the audit of the basic statutory financial statements (for example, premiums earned and losses paid). Other information not directly related to the basic statutory financial statements is also presented (for example, lines of business classifications for immaterial lines). Although such information may not have been subjected to auditing procedures applied in the audit of the basic statutory financial statements in all instances, such information may have been derived from accounting records that have been tested by the auditor.

.05 Paragraph .A5 of AU-C section 725 states that although an auditor has no obligation to apply auditing procedures to supplementary information presented outside the basic financial statements, the auditor may choose to modify or redirect certain of the procedures to be applied in the audit of the basic financial statements so that the auditor may express an opinion on the supplementary information in relation to the financial statements as a whole. [Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.06 Chapter 4, “The Loss Reserving and Claims Cycle,” of the AICPA Audit and Accounting Guide *Property and Liability Insurance Entities* (the guide), addresses auditing the claims data base, and is applicable when applying auditing procedures to the information presented in Schedule P-Part 1. Chapter 4 also provides a comprehensive discussion of auditing loss reserves and the claims cycle. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.07 As stated in chapter 4 of the guide, because claim data and characteristics such as dates and types of loss can significantly influence reserve estimation, the auditor should test the completeness, accuracy, and classification of the claim loss data during the audit of the statutory financial statements. In extending those procedures to Schedule P-Part 1, the auditor should determine that

- a. The data presented on Schedule P-Part 1 is properly reconciled to the statistical records of the company.

- b. Changes between the prior-year and current-year Schedule P-Part 1 are properly reconciled to the current-year audited statutory financial statements.
- c. The source of the data for the auditing procedures applied to the claim loss and loss adjustment expense data during the current calendar year (for example, tests of payments on claims for all accident years that were paid during the current calendar year) is the same as (or reconciles to) the statistical records that support the data presented on Schedule P-Part 1.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.08 If, as a result of the procedures performed during the audit of the statutory financial statements, the auditor concludes, on the basis of facts known to the auditor, that Schedule P-Part 1 is materially misstated in relation to the basic financial statements as a whole, the auditor should communicate to the company's management and the opining actuary that Schedule P-Part 1 is not fairly stated and should describe the misstatement. If the company will not agree to revise Schedule P-Part 1, the auditor should issue a report on Schedule P-Part 1 and should include a description of the misstatement in that report. (The auditor should refer to AU-C section 725 when a report will be issued.) The auditor should consider the impact of a misstatement in Schedule P-Part 1 on the auditor's report on the statutory financial statements. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Effective Date

.09 This SOP is effective for audits of statutory-basis financial statements of property/casualty insurance entities for periods ending after December 15, 1992.

Section 14,350

Statement of Position 99-1 Guidance to Practitioners in Conducting and Reporting on an Agreed-Upon Procedures Engagement to Assist Management in Evaluating the Effectiveness of Its Corporate Compliance Program

May 21, 1999

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Health Care Pilot Task Force of the AICPA Auditing Standards Board (ASB) to provide guidance regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to agreed-upon procedures attestation engagements performed to assist a health care provider in evaluating the effectiveness of its corporate compliance program consistent with the requirements of a Corporate Integrity Agreement entered into with the Office of Inspector General of the U.S. Department of Health and Human Services.

This SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of SSAEs in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the ASB. The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Summary

This Statement of Position (SOP) provides guidance to practitioners in conducting and reporting on an agreed-upon procedures engagement performed pursuant to the AICPA Statements on Standards for Attestation Engagements (SSAEs) to assist a health care provider in evaluating the effectiveness of its corporate compliance program consistent with the requirements of a Corporate Integrity Agreement (CIA) entered into with the Office of Inspector General (OIG) of the U.S. Department of Health and Human Services. CIAs are specific to the entity involved; consequently, users of this SOP should be familiar with the specific requirements of the entity's CIA.

Introduction and Background

.01 Within the past several years, the health care industry has experienced a significant increase in the number and magnitude of allegations of fraud and abuse involving federal health care programs (for example, Medicare and Medicaid) and private health care insurance. These allegations have

triggered regulatory scrutiny, litigation, significant monetary settlements, and negative publicity related to—among other things—coding and billing practices, patient referrals, cost reporting, quality of care, and clinical practices. Typically, as part of the global resolution of these allegations, the entity enters into a CIA with the OIG of the U.S. Department of Health and Human Services. Such agreements require that management annually report on its compliance with the terms of the CIA and that there be an assessment of the entity's compliance with the CIA. This assessment includes a billing analysis, which may be performed by an independent review organization (such as a practitioner or consultant) or the provider (if permitted by the OIG), and an agreed-upon procedures engagement.

.02 This SOP provides guidance to practitioners in conducting and reporting on an agreed-upon procedures engagement performed pursuant to the AICPA Statements on Standards for Attestation Engagements to assist an entity in evaluating the effectiveness of its corporate compliance program consistent with the requirements of a CIA.¹ The terms of a CIA are unique to the entity; consequently, users of this SOP need to be familiar with the actual CIA and its requirements.

.03 This SOP applies to agreed-upon procedures engagements to assist in evaluating an entity's compliance for a specified period. Such engagements should follow the AICPA attestation standards, including AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*), and the applicable sections of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), and AT section 601, *Compliance Attestation* (AICPA, *Professional Standards*). The engagement should be conducted in accordance with standards established by the AICPA, including the criteria set forth in this SOP. However, this SOP is not intended to provide all the required criteria set forth in individual CIAs, nor all the applicable standards established by the AICPA. Additionally, the SOP contains some guidance that may be applied in evaluating an organization's corporate compliance program, even though the program was not imposed by a CIA.

Overview of a Typical Corporate Integrity Agreement

.04 A CIA is an agreement between a health care provider and the OIG in conjunction with a global settlement of a fraud investigation. Such an agreement typically seeks to establish a compliance program within the health care provider (for example, hospital, clinical lab, physician group) that will promote compliance with the requirements of Medicare, Medicaid, and all other federal health care programs.

.05 CIAs are case-specific. Their terms are tailored to address the organizational and operating deficiencies related to providing and billing for health care services that have been identified by the OIG, the entity, or others. Detailed compliance requirements are imposed as a condition for continued participation in federal health care programs. A sample CIA, provided by the OIG and

¹ The practitioner also might be engaged to assist in other areas beyond an agreed-upon procedures engagement such as providing consulting services in connection with evaluating the company's billing practices, policies, and procedures as required by the CIA or in implementing, assessing, and reporting on voluntarily adopted compliance programs. In addition, the practitioner may assist in preparing an entity's self-disclosure reports to federal health agencies related to billing errors and other compliance matters. Similarly, practitioners may be involved in an entity's preparation of government-required (but not CIA-imposed) compliance reporting (for example, contract requirements for Medicare part C) beyond an agreed-upon procedures engagement.

intended to identify potential requirements, is included in appendix A [paragraph .32], “Sample Corporate Integrity Agreement Between the Office of Inspector General of the Department of Health and Human Services and [Provider].” Typical agreements cover five years and require the entity to address the following areas:

- Appointment of a compliance officer and establishment of a compliance committee
- Establishment of a code of conduct
- Establishment of policies and procedures regarding the compliance program
- Development of an information and education program as to the CIA requirements, compliance program and code of conduct
- Annual assessment of billing policies, procedures, and practices
- Establishment of a confidential disclosure program
- Prohibition of employment of excluded or convicted persons
- Notification to OIG of investigation or legal proceedings
- Reporting of credible evidence of misconduct
- Notifications to OIG of new provider locations
- Provision of implementation and annual reports
- Proper notification and submission of required reports
- Granting of OIG access to documents and individuals to conduct assessments
- Documentation of record retention requirements
- Awareness of disclosure criteria
- Agreement to comply with certain default provisions, penalties, and remedies
- Review of rights as to dispute resolution
- Review of effective and binding agreement clauses

Conditions for Engagement Performance

.06 A practitioner may perform an agreed-upon procedures engagement related to management’s compliance with a CIA if all of the conditions specified in AT sections 201 and 601 are met.

.07 As discussed more fully in the AT sections identified in paragraph .06, management’s assertions as to its compliance must be capable of evaluation against reasonable criteria that either have been established by a recognized body or are stated in or attached to the practitioner’s report in a sufficiently clear and comprehensive manner. Generally, to avoid confusion, management’s assertions, which are based on the specific terms of its CIA, should be attached to the practitioner’s report. If the entity is not required to have a CIA, management may develop its assertions using the model CIA. A sample based on the model CIA, which is not meant to be all-inclusive, is included as appendix B (paragraph .33), “Sample Statement of Management’s Assertions.” [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Establishing an Understanding With the Client

.08 The practitioner should document the understanding in the working papers, preferably through a written communication with the client, such as an engagement letter. Appendix C [paragraph .34], “Sample Engagement Letter,” contains a sample engagement letter that may be used for this kind of engagement.

Responsibilities of Specified Parties

.09 AT section 201 identifies the users of an agreed-upon procedures report as specified parties. The specified parties to the agreed upon procedures report described in this SOP typically would be the management of the health care provider and the OIG. Management is responsible for ensuring that the entity complies with the requirements of the CIA. That responsibility encompasses (a) identifying applicable compliance requirements, (b) establishing and maintaining internal control policies and procedures to provide reasonable assurance that the entity complies with those requirements, (c) evaluating and monitoring the entity’s compliance, and (d) preparing reports that satisfy legal, regulatory, or contractual requirements. Management’s evaluation may include documentation such as accounting or statistical data, policy manuals, accounting manuals, narrative memoranda, procedural write-ups, flowcharts, completed questionnaires, internal auditors’ reports, and other special studies or analyses. The form and extent of documentation will vary depending on the nature of the compliance requirements and the size and complexity of the entity. Management may engage the practitioner to gather information to assist it in evaluating the entity’s compliance. Regardless of the procedures performed by the practitioner, management must accept responsibility for its assertions and must not base such assertions solely on the practitioner’s procedures. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.10 The specified parties are responsible for the sufficiency (nature, timing, and extent) of the agreed-upon procedures because they best understand their own needs. The specified parties assume the risk that such procedures might be insufficient for their purposes. In addition, the specified parties assume the risk that they might misunderstand or otherwise inappropriately use findings properly reported by the practitioner. Use of an agreed-upon procedures report is restricted to the specified parties. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Practitioner’s Responsibilities

.11 The objective of the practitioner’s agreed-upon procedures is to present specific findings to assist the specified parties in evaluating an entity’s compliance with the requirements specified in the CIA. (See appendix D [paragraph .35], “Sample Procedures.”) [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.12 The practitioner’s procedures generally may be as limited or extensive as the specified parties desire, as long as the specified parties agree upon the procedures performed or to be performed and take responsibility for the sufficiency of the agreed-upon procedures for their purposes. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.13 To satisfy the requirements that the practitioner and the specified parties agree upon the procedures performed or to be performed and that the specified parties take responsibility for the sufficiency of the agreed-upon procedures for their purposes, ordinarily the practitioner should communicate directly with and obtain affirmative acknowledgment from each of the specified parties. For the purposes of these engagements, an effective way to obtain this agreement ordinarily is to distribute a draft of the report, detailing the procedures, that is expected to be issued to the OIG with a request for any comments it may have. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.14 To avoid possible misunderstandings, the practitioner should circulate the draft with a legend stating that these are the procedures expected to be performed, and unless informed otherwise, the practitioner assumes that there are no additional procedures that he or she is expected to perform. A legend such as the following might be used.

This draft is furnished solely for the purpose of indicating the form of report that we would expect to be able to furnish pursuant to the request by Management of [Provider] for our performance of limited procedures relating to [Provider's] compliance with the Corporate Integrity Agreement with the Office of Inspector General (OIG) of the U.S. Department of Health and Human Services. Based on our discussions with [Provider], it is our understanding that the procedures outlined in this draft report are those we are expected to follow. Unless informed otherwise within ninety (90) days of this transmittal, we shall assume that there are no additional procedures that we are expected to follow. The text of the definitive report will depend, of course, on the results of the procedures.

Involvement of a Specialist²

.15 The practitioner's education and experience enable him or her to be knowledgeable about business matters in general, but he or she is not expected to have the expertise of a person trained for or qualified to engage in the practice of another profession or occupation. In certain circumstances, it may be appropriate to involve a specialist to assist the practitioner in the performance of one or more procedures. The following are examples:

- An attorney might provide assistance concerning the application of laws, regulations, or rules to a client's situation.
- A medical specialist might provide assistance in understanding the characteristics of diagnosis codes documented in patient medical records.

.16 The practitioner and the specified parties should agree to the involvement of a specialist in assisting a practitioner in the performance of an agreed-upon procedures engagement. This agreement may be reached when obtaining agreement on the procedures performed or to be performed and acknowledgment of responsibility for the sufficiency of the procedures, as discussed previously. The practitioner's report should describe the nature of the assistance provided by the specialist. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

² A *specialist* is a person (or firm) possessing special skill or knowledge in a particular field other than the attest function. As used herein, a specialist does not include a person employed by the practitioner's firm who participates in the attestation engagement.

.17 A practitioner may agree to apply procedures to the report or work product of a specialist that does not constitute assistance by the specialist to the practitioner in an agreed-upon procedures engagement. For example, the practitioner may make reference to information contained in a report of a specialist in describing an agreed-upon procedure. However, it is inappropriate for the practitioner to agree to merely read the specialist's report solely to describe or repeat the findings, or to take responsibility for all or a portion of any procedures performed by a specialist or the specialist's work product.

Internal Auditors and Other Personnel³

.18 The agreed-upon procedures to be enumerated or referred to in the practitioner's report are to be performed entirely by the practitioner except as discussed in paragraphs .16–.18 of this SOP. However, internal auditors or other personnel may prepare schedules, accumulate data, perform an internal assessment of management's compliance, or provide other information for the practitioner's use in performing the agreed-upon procedures.

.19 A practitioner may agree to perform procedures on information documented in the working papers of internal auditors. For example, the practitioner may agree to

- repeat all or some of the procedures.
- determine whether the internal auditors' working papers contain documentation of procedures performed and whether the findings documented in the working papers are presented in a report by the internal auditors.

.20 However, it is inappropriate for the practitioner to

- agree to merely read the internal auditor's report solely to describe or repeat its findings.
- take responsibility for all or a portion of any procedures performed by internal auditors by reporting those findings as the practitioner's own.
- report in any manner that implies shared responsibility for the procedures with the internal auditors.

Planning the Engagement

.21 Planning an agreed-upon procedures engagement involves working with the specified parties to develop an overall strategy for the expected conduct and scope of the engagement. To develop such a strategy, practitioners should have adequate technical training and proficiency in the attestation standards and have adequate knowledge in health care regulatory matters to enable them to sufficiently understand the events, transactions, and practices that, in their judgment, have a significant effect on the presentation of the assertions. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

³ AU-C section 610, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements* (AICPA, *Professional Standards*), does not apply to agreed-upon procedures engagements. [Footnote revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Documentation

.22 The practitioner should prepare and maintain attest documentation, the form and content of which should be designed to meet the circumstances of the particular attest engagement. Attest documentation is the principal record of attest procedures applied, information obtained, and conclusions or findings reached by the practitioner in the engagement. The quantity, type, and content of attest documentation are matters of the practitioner's professional judgment and are discussed in paragraphs .100–.103 of AT section 101. Paragraphs .104–.107 of AT section 101 present further requirements and guidance regarding attest documentation. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 Concern over access to the practitioner's documentation might cause some clients to inquire about documentation requirements. In situations where the practitioner is requested to not maintain copies of certain client documentation, or to not prepare and maintain documentation similar to client documents, the practitioner may refer to Interpretation No. 1, "The Effect of an Inability to Obtain Audit Evidence Relating to Income Tax Accruals," of AU-C section 500, *Audit Evidence* (AICPA, *Professional Standards*, AU-C sec. 9500 par. .01–.22), for guidance. See Interpretation No. 4, "Providing Access to or Copies of Attest Documentation to a Regulator," of AT section 101 (AICPA, *Professional Standards*, AT sec. 9101 par. .43–.46), for guidance related to providing access to or copies of attest documentation to a regulator in connection with work performed on an attestation engagement. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Management's Representations

.24 The practitioner should obtain written representation from management on various matters including the following:

- a. Acknowledging management's responsibility for complying with the CIA
- b. Acknowledging management's responsibility for establishing and maintaining effective internal control over compliance
- c. Stating that management has performed an evaluation of the entity's compliance with CIA-specified requirements
- d. Stating management's assertions about the entity's compliance with all aspects of the CIA, including the specific issues that gave rise to the CIA^{4,5}

⁴ Footnote 21 in paragraph .100 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), indicates that attest documentation may also be referred to as working papers. [Footnote added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

⁵ Depending on the circumstances, representations in the following areas might be appropriate.

- Violations or possible violations of laws or regulations, such as those related to the Medicare and Medicaid antifraud and abuse statutes
- Compliance of third-party billings with applicable coding guidelines (for example, ICD-9-CM, CPT) and laws and regulations (including medical necessity, proper approvals, and proper rendering of care)
- Proper filing of all required Medicare, Medicaid, and similar reports under the applicable reimbursement rules and regulations (including nature of costs—allowable, patient-related, properly allocated, in accordance with applicable rules and regulations, properly adjusted to

- e. Stating that management has disclosed to the practitioner all known noncompliance with the CIA
- f. Stating that management has made available all documentation relating to compliance with the CIA
- g. Stating management's interpretation of any compliance requirements that have varying interpretations
- h. Stating that management has disclosed any communication from regulatory agencies, internal auditors, legal counsel, and other parties concerning matters regarding the design, implementation, and monitoring of the policies and procedures in place, including communication received between the end of the reporting period and the date of the practitioner's report (the date of signature)
- i. Stating that management has disclosed any known noncompliance occurring subsequent to the end of the reporting period
- j. Describing any related material fraud or abuse, other fraud, abuse or illegal acts that, whether or not material, involve management or other employees who have a significant role in the entity's design, implementation, and monitoring of the policies and procedures in place upon which compliance is based
- k. Stating that management has disclosed to the practitioners, orally or in writing, information about past noncompliance issues covered in the settlement agreement that gave rise to the CIA and the related corrective measures taken to support compliance in those areas

Management's refusal to furnish all appropriate written representations constitutes a limitation on the scope of the engagement sufficient to require withdrawal from the engagement.⁶

Reporting Considerations

.25 A practitioner should present the results of applying agreed-upon procedures to the specific subject matter in the form of findings. The practitioner should not provide negative assurance about whether the assertion is fairly stated in accordance with established or stated criteria. For example, the practitioner should not include a statement that "nothing came to my attention that caused me to believe that the assertion is not fairly stated in accordance with (established or stated) criteria."

.26 The practitioner should report all findings from the application of the agreed-upon procedures. The concept of materiality does not apply to findings to be reported in an agreed-upon procedures engagement unless the definition of materiality is agreed to by the specified parties. Any agreed-upon materiality limits should be described in the practitioner's report. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.27 The practitioner has no obligation to perform procedures beyond the agreed-upon procedures. However, if noncompliance related to management's

(footnote continued)

reflect prior audit adjustments) and adequacy of disclosures (including disputed costs) [Footnote renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

⁶ See paragraph .62 of AT section 101. [Footnote added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

assertion comes to the practitioner's attention by other means, such information ordinarily should be included in his or her report.

.28 The practitioner may become aware of noncompliance related to management's assertion that occurs subsequent to the reporting period but before the date of the practitioner's report. The practitioner should consider including information regarding such noncompliance in his or her report. However, the practitioner has no responsibility to perform procedures to detect such noncompliance other than obtaining management's representation about noncompliance in the subsequent period.

.29 The practitioner should follow the reporting guidance in AT section 201. A sample report is included in appendix E (paragraph .36), "Sample Report."

.30 Evaluating compliance with certain requirements may require interpretation of the laws, regulations, rules, contracts, or other agreements that establish those requirements. In such situations, the practitioner should consider whether he or she is provided with the reasonable criteria required to evaluate an assertion under the third general attestation standard. If these interpretations are significant, the practitioner may include a paragraph stating the description and the source of interpretations made by the entity's management. An example of such a paragraph, which should precede the procedures and findings paragraph(s), follows:

We have been informed that, under [*name of entity's*] interpretation of [*identify the compliance requirement*], [*explain the nature and source of the relevant interpretation*].

.31 The date of completion of the agreed-upon procedures should be used as the date of the practitioner's report.

Appendix A — Sample Corporate Integrity Agreement Between the Office of Inspector General of the Department of Health and Human Services and [Provider]

I. Preamble

[Provider] (“[Provider]”) hereby enters into this Corporate Integrity Agreement (“CIA”) with the Office of Inspector General (“OIG”) of the United States Department of Health and Human Services (“HHS”) to ensure compliance by its employees with the requirements of Medicare, Medicaid and all other Federal health care programs (as defined in 42 U.S.C. 1320a-7b(f)) (hereinafter collectively referred to as the “Federal health care programs”). [Provider’s] compliance with the terms and conditions in this CIA shall constitute an element of [Provider’s] present responsibility with regard to participation in the Federal health care programs. Contemporaneously with this CIA, [Provider] is entering into a Settlement Agreement with the United States, and this CIA is incorporated by reference into the Settlement Agreement.

II. Term of the CIA

The period of the compliance obligations assumed by [Provider] under this CIA shall be 5 years from the effective date of this CIA (unless otherwise specified). The effective date of this CIA will be the date on which the final signatory of this CIA executes this CIA (the “effective date”).*

III. Corporate Integrity Obligations

[Provider] shall establish a compliance program that includes the following elements:

A. Compliance Officer

Within ninety (90) days after the effective date of this CIA, [Provider] shall appoint an individual to serve as Compliance Officer, who shall be responsible for developing and implementing policies, procedures, and practices designed to ensure compliance with the requirements set forth in this CIA and with the requirements of the Federal health care programs. The Compliance Officer shall be a member of senior management of [Provider], shall make regular (at least quarterly) reports regarding compliance matters directly to the CEO and/or to the Board of Directors of [Provider] and shall be authorized to report to the Board of Directors at any time. The Compliance Officer shall be responsible for monitoring the day-to-day activities engaged in by [Provider] to further its compliance objectives as well as any reporting obligations created under this CIA. In the event a new Compliance Officer is appointed during the term of this CIA, [Provider] shall notify the OIG, in writing, within fifteen (15) days of such a change.

[Provider] shall also appoint a Compliance Committee within ninety (90) days after the effective date of this CIA. The Compliance Committee shall, at a minimum, include the Compliance Officer and any other appropriate officers as necessary to meet the requirements of

* Source: Office of the Inspector General of the United States Department of Health and Human Services.

this CIA within the provider's corporate structure (e.g., senior executives of each major department, such as billing, clinical, human resources, audit, and operations). The Compliance Officer shall chair the Compliance Committee and the Committee shall support the Compliance Officer in fulfilling his/her responsibilities.

B. Written Standards

1. *Code of Conduct.* Within ninety (90) days of the effective date of this CIA, [Provider] shall establish a Code of Conduct. The Code of Conduct shall be distributed to all employees within ninety (90) days of the effective date of this CIA. [Provider] shall make the promotion of, and adherence to, the Code of Conduct an element in evaluating the performance of managers, supervisors, and all other employees. The Code of Conduct shall, at a minimum, set forth:
 - a. [Provider's] commitment to full compliance with all statutes, regulations, and guidelines applicable to Federal health care programs, including its commitment to prepare and submit accurate billings consistent with Federal health care program regulations and procedures or instructions otherwise communicated by the Health Care Financing Administration ("HCFA") (or other appropriate regulatory agencies) and/or its agents;
 - b. [Provider's] requirement that all of its employees shall be expected to comply with all statutes, regulations, and guidelines applicable to Federal health care programs and with [Provider's] own policies and procedures (including the requirements of this CIA);
 - c. the requirement that all of [Provider's] employees shall be expected to report suspected violations of any statute, regulation, or guideline applicable to Federal health care programs or with [Provider's] own policies and procedures;
 - d. the possible consequences to both [Provider] and to any employee of failure to comply with all statutes, regulations, and guidelines applicable to Federal health care programs and with [Provider's] own policies and procedures or of failure to report such non-compliance; and
 - e. the right of all employees to use the confidential disclosure program, as well as [Provider's] commitment to confidentiality and non-retaliation with respect to disclosures.

Within ninety (90) days of the effective date of the CIA, each employee shall certify, in writing, that he or she has received, read, understands, and will abide by [Provider's] Code of Conduct. New employees shall receive the Code of Conduct and shall complete the required certification within two (2) weeks after the commencement of their employment or within ninety (90) days of the effective date of the CIA, whichever is later.

[Provider] will annually review the Code of Conduct and will make any necessary revisions. These revisions shall be distributed within thirty (30) days of initiating such a change. Employees shall certify on an annual basis that they have received, read, understand and will abide by the Code of Conduct.

2. *Policies and Procedures.* Within ninety (90) days of the effective date of this CIA, [Provider] shall develop and initiate implementation of written Policies and Procedures regarding the operation of [Provider's] compliance program and its compliance with all federal and state health care statutes, regulations, and guidelines, including the requirements of the Federal health care programs. At a minimum, the Policies and Procedures shall specifically address [insert language relevant to allegations in the case]. In addition, the Policies and Procedures shall include disciplinary guidelines and methods for employees to make disclosures or otherwise report on compliance issues to [Provider] management through the Confidential Disclosure Program required by section III.E. [Provider] shall assess and update as necessary the Policies and Procedures at least annually and more frequently, as appropriate. A summary of the Policies and Procedures will be provided to OIG in the Implementation Report. The Policies and Procedures will be available to OIG upon request.

Within ninety (90) days of the effective date of the CIA, the relevant portions of the Policies and Procedures shall be distributed to all appropriate employees. Compliance staff or supervisors should be available to explain any and all policies and procedures.

C. Training and Education

1. *General Training.* Within ninety (90) days of the effective date of this CIA, [Provider] shall provide at least two (2) hours of training to each employee. This general training shall explain [Provider's]:
 - a. Corporate Integrity Agreement requirements;
 - b. Compliance Program (including the Policies and Procedures as they pertain to general compliance issues); and
 - c. Code of Conduct.

These training materials shall be made available to the OIG, upon request.

New employees shall receive the general training described above within thirty (30) days of the beginning of their employment or within ninety (90) days after the effective date of this CIA, whichever is later. Each year, every employee shall receive such general training on an annual basis.

2. *Specific Training.* Within ninety (90) days of the effective date of this CIA, each employee who is involved directly or indirectly in the delivery of patient care and/or in the preparation or submission of claims for reimbursement for such care (including, but not limited to, coding and billing) for any Federal health care programs shall receive at least [insert number of training hours] hours of training in addition to the general training required above. This training shall include a discussion of:
 - a. the submission of accurate bills for services rendered to Medicare and/or Medicaid patients;
 - b. policies, procedures and other requirements applicable to the documentation of medical records;
 - c. the personal obligation of each individual involved in the billing process to ensure that such billings are accurate;

- d. applicable reimbursement rules and statutes;
- e. the legal sanctions for improper billings; and
- f. examples of proper and improper billing practices.

These training materials shall be made available to OIG, upon request. Persons providing the training must be knowledgeable about the subject area.

Affected new employees shall receive this training within thirty (30) days of the beginning of their employment or within ninety (90) days of the effective date of this CIA, whichever is later. If a new employee has any responsibility for the delivery of patient care, the preparation or submission of claims and/or the assignment of procedure codes prior to completing this specific training, a [Provider] employee who has completed the substantive training shall review all of the untrained person's work regarding the assignment of billing codes.

Each year, every employee shall receive such specific training on an annual basis.

3. *Certification.* Each employee shall certify, in writing, that he or she has attended the required training. The certification shall specify the type of training received and the date received. The Compliance Officer shall retain the certifications, along with specific course materials. These shall be made available to OIG upon request.

D. Review Procedures

[Provider] shall retain an entity, such as an accounting, auditing or consulting firm (hereinafter "Independent Review Organization"), to perform review procedures to assist [Provider] in assessing the adequacy of its billing and compliance practices pursuant to this CIA. This shall be an annual requirement and shall cover a twelve (12) month period. The Independent Review Organization must have expertise in the billing, coding, reporting and other requirements of the Federal health care programs from which [Provider] seeks reimbursement. The Independent Review Organization must be retained to conduct the assessment of the first year within ninety (90) days of the effective date of this CIA. For purposes of complying with this review procedures requirement, the OIG at its discretion, may permit the [Provider] to utilize internal auditors to perform the review(s). In such case, the [Provider] will engage the Independent Review Organization to verify the propriety of the internal auditors' methods and accuracy of their results. The [Provider] will request the Independent Review Organization to produce a report on its findings which report shall be included in the Annual Report to the OIG.

The Independent Review Organization (or the [Provider], if permitted by the OIG, as set forth above) will conduct two separate engagements. One will be an analysis of [Provider's] billing to the Federal health care programs to assist the [Provider] and OIG in determining compliance with all applicable statutes, regulations, and directives/guidance ("billing engagement"). The second engagement will assist the [Provider] and OIG in determining whether [Provider] is in compliance with this CIA ("compliance engagement").

1. *Billing Engagement.* The billing engagement shall consist of a review of a statistically valid sample of claims for the relevant

period. The sample size shall be determined through the use of a probe sample.¹ At a minimum, the full sample must be within a ninety (90) percent confidence level and a precision of twenty-five (25) percent. The probe sample must contain at least thirty (30) sample units and cannot be used as part of the full sample. Both the probe sample and the sample must be selected through random numbers. [Provider] shall use OIG's Office of Audit Services Statistical Sampling Software, also known as "RAT-STATS", which is available through the Internet at <https://oig.hhs.gov/compliance/rat-stats/index.asp>.

Each annual billing engagement analysis shall include the following components in its methodology:

- a. **Billing Engagement Objective:** Provide a statement stating clearly the objective intended to be achieved by the billing engagement and the procedure or combination of procedures that will be applied to achieve the objective.
- b. **Billing Engagement Population:** Identify the population, which is the group about which information is needed. Explain the methodology used to develop the population and provide the basis for this determination.
- c. **Sources of Data:** Provide a full description of the source of the information upon which the billing engagement conclusions will be based, including the legal or other standards applied, documents relied upon, payment data, and/or any contractual obligations.
- d. **Sampling Unit:** Define the sampling unit, which is any of the designated elements that comprise the population of interest.
- e. **Sampling Frame:** Identify the sampling frame, which is the totality of the sampling units from which the sample will be selected.

As part of the billing engagement:

- a. Inquire of management as to the procedures and controls affecting the billing process subject to the annual assessment as specified in the CIA. Document that aspect of the billing process (e.g., flow of documents, processing activities), and those controls that will be tested in the sample. The documentation may consist of flow charts, excerpts from policies and procedures manuals, control questionnaires, etc.
 - b. Report the sample results, including the overall error rate and the nature of the errors found (e.g., no documentation, inadequate documentation, assignment of incorrect code).
 - c. Document findings related to [Provider's] procedures to correct inaccurate billings and codings to the Federal health care programs and findings regarding the steps [Provider] is taking to bring its operations into compliance or to correct problems identified by the audit.
2. **Agreed-upon Procedures or Compliance Engagement.** An Independent Review Organization (or the [Provider], if permitted by the OIG) shall also conduct an agreed-upon procedures or compliance

¹ Probe sample is defined as a small, random preliminary sample.

engagement, which shall assist the users in determining whether [Provider's] program, policies, procedures, and operations comply with the terms of this CIA. This engagement shall include a section by section analysis of the requirements of this CIA.

A complete copy of the Independent Review Organization's billing and agreed-upon procedures or compliance engagement shall be included in each of [Provider's] Annual Reports to OIG.

3. *Disclosure of Overpayments and Material Deficiencies.* If, as a result of these engagements, [Provider] or the Independent Review Organization identifies any billing, coding or other policies, procedures and/or practices that result in an overpayment, [Provider] shall notify the payor (e.g., Medicare fiscal intermediary or carrier) within 30 days of discovering the deficiency or overpayment and take remedial steps within 60 days of discovery (or such additional time as may be agreed to by the payor) to correct the problem, including preventing the deficiency from recurring. The notice to the payor shall include:
 - a. a statement that the refund is being made pursuant to this CIA;
 - b. a description of the complete circumstances surrounding the overpayment;
 - c. the methodology by which the overpayment was determined;
 - d. the amount of the overpayment;
 - e. any claim-specific information used to determine the overpayment (e.g., beneficiary health insurance number, claim number, service date, and payment date);
 - f. the cost reporting period; and
 - g. the provider identification number under which the repayment is being made.

If [Provider] determines an overpayment represents a material deficiency, contemporaneous with [Provider's] notification to the payor as provided above, [Provider] shall also notify OIG of:

- a. a complete description of the material deficiency;
- b. amount of overpayment due to the material deficiency;
- c. [Provider's] action(s) to correct and prevent such material deficiency from recurring;
- d. the payor's name, address, and contact person where the overpayment was sent;
- e. the date of the check and identification number (or electronic transaction number) on which the overpayment was repaid.

For purposes of this CIA, an "overpayment" shall mean the amount of money the provider has received in excess of the amount due and payable under the Federal health care programs' statutes, regulations or program directives, including carrier and intermediary instructions.

For purposes of this CIA, a "material deficiency" shall mean anything that involves: (i) a substantial overpayment or improper payment relating to the Medicare and/or Medicaid programs; (ii)

conduct or policies that clearly violate the Medicare and/or Medicaid statute, regulations or directives issued by HCFA and/or its agents; or (iii) serious quality of care implications for federal health care beneficiaries or recipients. A material deficiency may be the result of an isolated event or a series of occurrences.

4. *Verification/Validation.* In the event that the OIG determines that it is necessary to conduct an independent review to determine whether or the extent to which [Provider] is complying with its obligations under this CIA, [Provider] agrees to pay for the reasonable cost of any such review or engagement by the OIG or any of its designated agents.

E. Confidential Disclosure Program

Within ninety (90) days after the effective date of this CIA, [Provider] shall establish a Confidential Disclosure Program, which must include measures (e.g., a toll-free compliance telephone line) to enable employees, contractors, agents or other individuals to disclose, to the Compliance Officer or some other person who is not in the reporting individual's chain of command, any identified issues or questions associated with [Provider's] policies, practices or procedures with respect to the Federal health care program, believed by the individual to be inappropriate. [Provider] shall publicize the existence of the hotline (e.g., e-mail to employees or post hotline number in prominent common areas).

The Confidential Disclosure Program shall emphasize a non-retaliation, non-retaliation policy, and shall include a reporting mechanism for anonymous, confidential communication. Upon receipt of a complaint, the Compliance Officer (or designee) shall gather the information in such a way as to elicit all relevant information from the individual reporting the alleged misconduct. The Compliance Officer (or designee) shall make a preliminary good faith inquiry into the allegations set forth in every disclosure to ensure that he or she has obtained all of the information necessary to determine whether a further review should be conducted. For any disclosure that is sufficiently specific so that it reasonably: (1) permits a determination of the appropriateness of the alleged improper practice, and (2) provides an opportunity for taking corrective action, [Provider] shall conduct an internal review of the allegations set forth in such a disclosure and ensure that proper follow-up is conducted.

The Compliance Officer shall maintain a confidential disclosure log, which shall include a record and summary of each allegation received, the status of the respective investigations, and any corrective action taken in response to the investigation.

F. Ineligible Persons

[Provider] shall not hire or engage as contractors any "Ineligible Person." For purposes of this CIA, an "Ineligible Person" shall be any individual or entity who: (i) is currently excluded, suspended, debarred or otherwise ineligible to participate in the Federal health care programs; or (ii) has been convicted of a criminal offense related to the provision of health care items or services and has not been reinstated in the Federal health care programs after a period of exclusion, suspension, debarment, or ineligibility.

Within ninety (90) days of the effective date of this CIA, [Provider] will review its list of current employees and contractors against the General Services Administration's List of Parties Excluded from Federal Programs (available through the Internet at www.arnet.gov/epl) and the HHS/OIG Cumulative Sanction Report (available through the Internet at www.dhhs.gov/progorg/oig) to ensure that it is not currently employing or contracting with any Ineligible Person. Thereafter, [Provider] will review the list once semi-annually to ensure that no current employees or contractors are or have become Ineligible Persons.

To prevent hiring or contracting with any Ineligible Person, [Provider] shall screen all prospective employees and prospective contractors prior to engaging their services by (i) requiring applicants to disclose whether they are Ineligible Persons, and (ii) reviewing the General Services Administration's List of Parties Excluded from Federal Programs (available through the Internet at www.arnet.gov/epl) and the HHS/OIG Cumulative Sanction Report (available through the Internet at www.dhhs.gov/progorg/oig).

If [Provider] has notice that an employee or agent is charged with a criminal offense related to any Federal health care program, or is suspended or proposed for exclusion during his or her employment or contract with [Provider], within 10 days of receiving such notice [Provider] will remove such employee from responsibility for, or involvement with, [Provider's] business operations related to the Federal health care programs until the resolution of such criminal action, suspension, or proposed exclusion. If [Provider] has notice that an employee or agent has become an Ineligible Person, [Provider] will remove such person from responsibility for, or involvement with, [Provider's] business operations related to the Federal health care programs and shall remove such person from any position for which the person's salary or the items or services rendered, ordered, or prescribed by the person are paid in whole or in part, directly or indirectly, by Federal health care programs or otherwise with Federal funds at least until such time as the person is reinstated into participation in the Federal health care programs.

G. Notification of Proceedings

Within thirty (30) days of discovery, [Provider] shall notify OIG, in writing, of any ongoing investigation or legal proceeding conducted or brought by a governmental entity or its agents involving an allegation that [Provider] has committed a crime or has engaged in fraudulent activities or any other knowing misconduct. This notification shall include a description of the allegation, the identity of the investigating or prosecuting agency, and the status of such investigation or legal proceeding. [Provider] shall also provide written notice to OIG within thirty (30) days of the resolution of the matter, and shall provide OIG with a description of the findings and/or results of the proceedings, if any.

H. Reporting

1. *Credible evidence of misconduct.* If [Provider] discovers credible evidence of misconduct from any source and, after reasonable inquiry, has reason to believe that the misconduct may violate criminal, civil, or administrative law concerning [Provider's] practices relating to the Federal health care programs, then [Provider] shall promptly report the probable violation of law to OIG. Defendants shall make this disclosure as soon as practicable, but, not later than thirty (30) days

after becoming aware of the existence of the probable violation. The [Provider's] report to OIG shall include:

- a. the findings concerning the probable violation, including the nature and extent of the probable violation;
- b. [Provider's] actions to correct such probable violation; and
- c. any further steps it plans to take to address such probable violation and prevent it from recurring.

To the extent the misconduct involves an overpayment, the report shall include the information listed in section III.D.3 regarding material deficiencies.

2. *Inappropriate Billing.* If [Provider] discovers inappropriate or incorrect billing through means other than the Independent Review Organization's engagement, the provider shall follow procedures in section III.D.3 regarding overpayments and material deficiencies.

IV. New Locations

In the event that [Provider] purchases or establishes new business units after the effective date of this CIA, [Provider] shall notify OIG of this fact within thirty (30) days of the date of purchase or establishment. This notification shall include the location of the new operation(s), phone number, fax number, Federal health care program provider number(s) (if any), and the corresponding payor(s) (contractor specific) that has issued each provider number. All employees at such locations shall be subject to the requirements in this CIA that apply to new employees (e.g., completing certifications and undergoing training).

V. Implementation and Annual Reports

A. Implementation Report

Within one hundred and twenty (120) days after the effective date of this CIA, [Provider] shall submit a written report to OIG summarizing the status of its implementation of the requirements of this CIA. This Implementation Report shall include:

1. the name, address, phone number and position description of the Compliance Officer required by section III.A;
2. the names and positions of the members of the Compliance Committee required by section III.A;
3. a copy of [Provider's] Code of Conduct required by section III.B.1;
4. the summary of the Policies and Procedures required by section III.B.2;
5. a description of the training programs required by section III.C including a description of the targeted audiences and a schedule of when the training sessions were held;
6. a certification by the Compliance Officer that:
 - a. the Policies and Procedures required by section III.B have been developed, are being implemented, and have been distributed to all pertinent employees;

- b. all employees have completed the Code of Conduct certification required by section III.B.1; and
 - c. all employees have completed the training and executed the certification required by section III.C;
7. a description of the confidential disclosure program required by section III.E;
 8. the identity of the Independent Review Organization(s) and the proposed start and completion date of the first audit; and
 9. a summary of personnel actions taken pursuant to section III.F.

B. Annual Reports

[*Provider*] shall submit to OIG an Annual Report with respect to the status and findings of [*Provider's*] compliance activities. The Annual Reports shall include:

1. any change in the identity or position description of the Compliance Officer and/or members of the Compliance Committee described in section III.A;
2. a certification by the Compliance Officer that:
 - a. all employees have completed the annual Code of Conduct certification required by section III.B.1; and
 - b. all employees have completed the training and executed the certification required by section III.C;
3. notification of any changes or amendments to the Policies and Procedures required by section III.B and the reasons for such changes (e.g., change in contractor policy);
4. a complete copy of the report prepared pursuant to the Independent Review Organization's billing and compliance engagement, including a copy of the methodology used;
5. [*Provider's*] response/corrective action plan to any issues raised by the Independent Review Organization;
6. a summary of material deficiencies reported throughout the course of the previous twelve (12) months pursuant to III.D.3 and III.H;
7. a report of the aggregate overpayments that have been returned to the Federal health care programs that were discovered as a direct or indirect result of implementing this CIA. Overpayment amounts should be broken down into the following categories: Medicare, Medicaid (report each applicable state separately) and other Federal health care programs;
8. a copy of the confidential disclosure log required by section III.E;
9. a description of any personnel action (other than hiring) taken by [*Provider*] as a result of the obligations in section III.F;
10. a summary describing any ongoing investigation or legal proceeding conducted or brought by a government entity involving an allegation that [*Provider*] has committed a crime or has engaged in fraudulent activities, which have been reported pursuant to section III.G. The statement shall include a description of the allegation, the identity of the investigating or prosecuting agency, and the status of such investigation, legal proceeding or requests for information;

11. a corrective action plan to address the probable violations of law identified in section III.H; and
12. a listing of all of the [Provider's] locations (including locations and mailing addresses), the corresponding name under which each location is doing business, the corresponding phone numbers and fax numbers, each location's Federal health care program provider identification number(s) and the payor (specific contractor) that issued each provider identification number.

The first Annual Report shall be received by the OIG no later than one year and thirty (30) days after the effective date of this CIA. Subsequent Annual Reports shall be submitted no later than the anniversary date of the due date of the first Annual Report.

C. *Certifications*

The Implementation Report and Annual Reports shall include a certification by the Compliance Officer under penalty of perjury, that: (1) [Provider] is in compliance with all of the requirements of this CIA, to the best of his or her knowledge; and (2) the Compliance Officer has reviewed the Report and has made reasonable inquiry regarding its content and believes that, upon such inquiry, the information is accurate and truthful.

VI. Notifications and Submission of Reports

Unless otherwise stated in writing subsequent to the effective date of this CIA, all notifications and reports required under this CIA shall be submitted to the entities listed below:

OIG:

Civil Recoveries Branch—Compliance Unit
Office of Counsel to the Inspector General
Office of Inspector General
U.S. Department of Health and Human Services
Cohen Building, Room 5527
330 Independence Avenue, SW
Washington, DC 20201
Phone 202-619-2078; Fax 202-205-0604

[Provider]:

[Address and Telephone number of Provider's Compliance Contact]

VII. OIG Inspection, Audit and Review Rights

In addition to any other rights OIG may have by statute, regulation, or contract, OIG or its duly authorized representative(s), may examine [Provider's] books, records, and other documents and supporting materials for the purpose of verifying and evaluating: (a) [Provider's] compliance with the terms of this CIA; and (b) [Provider's] compliance with the requirements of the Federal health care programs in which it participates. The documentation described above shall be made available by [Provider] to OIG or its duly authorized representative(s) at all reasonable times for inspection, audit or reproduction. Furthermore, for purposes of this provision, OIG or its duly authorized representative(s) may interview any of [Provider's] employees who consent to be interviewed at the employee's place of business during normal business hours or at such other place and time as may be mutually agreed upon between the employee and OIG. [Provider] agrees to assist OIG in contacting and arranging interviews with such employees upon

OIG's request. [Provider's] employees may elect to be interviewed with or without a representative of [Provider] present.

VIII. Document and Record Retention

[Provider] shall maintain for inspection all documents and records relating to reimbursement from the Federal health care programs or to compliance with this CIA one year longer than the term of this CIA (or longer if otherwise required by law).

IX. Disclosures

Subject to HHS's Freedom of Information Act ("FOIA") procedures, set forth in 45 C.F.R. Part 5, the OIG shall make a reasonable effort to notify [Provider] prior to any release by OIG of information submitted by [Provider] pursuant to its obligations under this CIA and identified upon submission by [Provider] as trade secrets, commercial or financial information and privileged and confidential under the FOIA rules. [Provider] shall refrain from identifying any information as trade secrets, commercial or financial information and privileged and confidential that does not meet the criteria for exemption from disclosure under FOIA.

X. Breach and Default Provisions

[Provider] is expected to fully and timely comply with all of the obligations herein throughout the term of this CIA or other time frames herein agreed to.

A. Stipulated Penalties for Failure to Comply with Certain Obligations

As a contractual remedy, [Provider] and OIG hereby agree that failure to comply with certain obligations set forth in this CIA may lead to the imposition of the following monetary penalties (hereinafter referred to as "Stipulated Penalties") in accordance with the following provisions.

1. A Stipulated Penalty of \$2,500 (which shall begin to accrue on the day after the date the obligation became due) for each day, beginning 120 days after the effective date of this CIA and concluding at the end of the term of this CIA, [Provider] fails to have in place any of the following:
 - a. a Compliance Officer;
 - b. a Compliance Committee;
 - c. a written Code of Conduct;
 - d. written Policies and Procedures;
 - e. a training program; and
 - f. a Confidential Disclosure Program;
2. A Stipulated Penalty of \$2,500 (which shall begin to accrue on the day after the date the obligation became due) for each day [Provider] fails to meet any of the deadlines to submit the Implementation Report or the Annual Reports to the OIG.
3. A Stipulated Penalty of \$2,000 (which shall begin to accrue on the date the failure to comply began) for each day [Provider]:
 - a. hires or contracts with an Ineligible Person after that person has been listed by a federal agency as excluded, debarred, suspended or otherwise ineligible for participation in the Medicare, Medicaid or any other Federal health care program

- (as defined in 42 U.S.C. 1320a7b(f)). This Stipulated Penalty shall not be demanded for any time period if [Provider] can demonstrate that it did not discover the person's exclusion or other ineligibility after making a reasonable inquiry (as described in section III.F) as to the status of the person;
- b. employs or contracts with an Ineligible Person and that person: (i) has responsibility for, or involvement with, [Provider's] business operations related to the Federal health care programs or (ii) is in a position for which the person's salary or the items or services rendered, ordered, or prescribed by the person are paid in whole or in part, directly or indirectly, by the Federal health care programs or otherwise with Federal funds (this Stipulated Penalty shall not be demanded for any time period during which [Provider] can demonstrate that it did not discover the person's exclusion or other ineligibility after making a reasonable inquiry (as described in III.F) as to the status of the person);
 - c. employs or contracts with a person who: (i) has been charged with a criminal offense related to any Federal health care program, or (ii) is suspended or proposed for exclusion, and that person has responsibility for, or involvement with, [Provider's] business operations related to the Federal health care programs (this Stipulated Penalty shall not be demanded for any time period before 10 days after [Provider] received notice of the relevant matter or after the resolution of the matter).
4. A Stipulated Penalty of \$1,500 (which shall begin to accrue on the date the [Provider] fails to grant access) for each day [Provider] fails to grant access to the information or documentation as required in section V of this CIA.
 5. A Stipulated Penalty of \$1,000 (which shall begin to accrue ten (10) days after the date that OIG provides notice to [Provider] of the failure to comply) for each day [Provider] fails to comply fully and adequately with any obligation of this CIA. In its notice to [Provider], the OIG shall state the specific grounds for its determination that the [Provider] has failed to comply fully and adequately with the CIA obligation(s) at issue.

B. Payment of Stipulated Penalties

1. *Demand Letter.* Upon a finding that [Provider] has failed to comply with any of the obligations described in section X.A and determining that Stipulated Penalties are appropriate, OIG shall notify [Provider] by personal service or certified mail of (a) [Provider's] failure to comply; and (b) the OIG's exercise of its contractual right to demand payment of the Stipulated Penalties (this notification is hereinafter referred to as the "Demand Letter").

Within fifteen (15) days of the date of the Demand Letter, [Provider] shall either (a) cure the breach to the OIG's satisfaction and pay the applicable stipulated penalties, or (b) request a hearing before an HHS administrative law judge ("ALJ") to dispute the OIG's determination of noncompliance, pursuant to the agreed-upon provisions set forth below in section X.D. In the event [Provider] elects to request an ALJ hearing, the Stipulated Penalties shall continue to accrue until [Provider] cures, to the OIG's satisfaction, the alleged breach in dispute. Failure to respond to

the Demand Letter in one of these two manners within the allowed time period shall be considered a material breach of this CIA and shall be grounds for exclusion under section X.C.

2. *Timely Written Requests for Extensions.* [Provider] may submit a timely written request for an extension of time to perform any act or file any notification or report required by this CIA. Notwithstanding any other provision in this section, if OIG grants the timely written request with respect to an act, notification, or report, Stipulated Penalties for failure to perform the act or file the notification or report shall not begin to accrue until one day after [Provider] fails to meet the revised deadline as agreed to by the OIG-approved extension. Notwithstanding any other provision in this section, if OIG denies such a timely written request, Stipulated Penalties for failure to perform the act or file the notification or report shall not begin to accrue until two (2) business days after [Provider] receives OIG's written denial of such request. A "timely written request" is defined as a request in writing received by OIG at least five (5) business days prior to the date by which any act is due to be performed or any notification or report is due to be filed.
3. *Form of Payment.* Payment of the Stipulated Penalties shall be made by certified or cashier's check, payable to "Secretary of the Department of Health and Human Services," and submitted to OIG at the address set forth in section VI.
4. *Independence from Material Breach Determination.* Except as otherwise noted, these provisions for payment of Stipulated Penalties shall not affect or otherwise set a standard for the OIG's determination that [Provider] has materially breached this CIA, which decision shall be made at the OIG's discretion and governed by the provisions in section X.C, below.

C. Exclusion for Material Breach of this CIA

1. *Notice of Material Breach and Intent to Exclude.* The parties agree that a material breach of this CIA by [Provider] constitutes an independent basis for [Provider's] exclusion from participation in the Federal health care programs (as defined in 42 U.S.C. 1320a7b(f)). Upon a determination by OIG that [Provider] has materially breached this CIA and that exclusion should be imposed, the OIG shall notify [Provider] by certified mail of (a) [Provider's] material breach; and (b) OIG's intent to exercise its contractual right to impose exclusion (this notification is hereinafter referred to as the "Notice of Material Breach and Intent to Exclude").
2. *Opportunity to Cure.* [Provider] shall have thirty-five (35) days from the date of the Notice of Material Breach and Intent to Exclude Letter to demonstrate to the OIG's satisfaction that:
 - a. [Provider] is in full compliance with this CIA;
 - b. the alleged material breach has been cured; or
 - c. the alleged material breach cannot be cured within the 35-day period, but that: (i) [Provider] has begun to take action to cure the material breach, (ii) [Provider] is pursuing such action with due diligence, and (iii) [Provider] has provided to OIG a reasonable timetable for curing the material breach.

3. *Exclusion Letter.* If at the conclusion of the thirty-five (35) day period, [Provider] fails to satisfy the requirements of section X.C.2, OIG may exclude [Provider] from participation in the Federal health care programs. OIG will notify [Provider] in writing of its determination to exclude [Provider] (this letter shall be referred to hereinafter as the “Exclusion Letter”). Subject to the Dispute Resolution provisions in section X.D, below, the exclusion shall go into effect thirty (30) days after the date of the Exclusion Letter. The exclusion shall have national effect and will also apply to all other federal procurement and non-procurement programs. If [Provider] is excluded under the provisions of this CIA, [Provider] may seek reinstatement pursuant to the provisions at 42 C.F.R. §§1001.3001–3004.
4. *Material Breach.* A material breach of this CIA means:
 - a. a failure by [Provider] to report a material deficiency, take corrective action and pay the appropriate refunds, as provided in section III.D;
 - b. repeated or flagrant violations of the obligations under this CIA, including, but not limited to, the obligations addressed in section X.A of this CIA;
 - c. a failure to respond to a Demand Letter concerning the payment of Stipulated Penalties in accordance with section X.B above; or
 - d. a failure to retain and use an Independent Review Organization for review purposes in accordance with section III.D.

D. Dispute Resolution

1. *Review Rights.* Upon the OIG’s delivery to [Provider] of its Demand Letter or of its Exclusion Letter, and as an agreed-upon contractual remedy for the resolution of disputes arising under the obligation of this CIA, [Provider] shall be afforded certain review rights comparable to the ones that are provided in 42 U.S.C. §§1320a7(f) and 42 C.F.R. §1005 as if they applied to the Stipulated Penalties or exclusion sought pursuant to this CIA. Specifically, the OIG’s determination to demand payment of Stipulated Penalties or to seek exclusion shall be subject to review by an ALJ and, in the event of an appeal, the Departmental Appeals Board (“DAB”), in a manner consistent with the provisions in 42 C.F.R. §§1005.2–.21. Notwithstanding the language in 42 C.F.R. §1005.2(c), the request for a hearing involving stipulated penalties shall be made within fifteen (15) days of the date of the Demand Letter and the request for a hearing involving exclusion shall be made within thirty (30) days of the date of the Exclusion Letter.
2. *Stipulated Penalties Review.* Notwithstanding any provision of Title 42 of the United States Code or Chapter 42 of the Code of Federal Regulations, the only issues in a proceeding for stipulated penalties under this CIA shall be (a) whether [Provider] was in full and timely compliance with the obligations of this CIA for which the OIG demands payment; and (b) the period of noncompliance. [Provider] shall have the burden of proving its full and timely compliance and the steps taken to cure the noncompliance, if any. If the ALJ finds for the OIG with regard to a finding of a breach of this CIA and orders [Provider] to pay Stipulated Penalties, such

Stipulated Penalties shall become due and payable twenty (20) days after the ALJ issues such a decision notwithstanding that [Provider] may request review of the ALJ decision by the DAB.

3. *Exclusion Review.* Notwithstanding any provision of Title 42 of the United States Code or Chapter 42 of the Code of Federal Regulations, the only issues in a proceeding for exclusion based on a material breach of this CIA shall be (a) whether [Provider] was in material breach of this CIA; (b) whether such breach was continuing on the date of the Exclusion Letter; and (c) the alleged material breach cannot be cured within the 35-day period, but that (i) [Provider] has begun to take action to cure the material breach, (ii) [Provider] is pursuing such action with due diligence, and (iii) [Provider] has provided to OIG a reasonable timetable for curing the material breach.

For purposes of the exclusion herein, exclusion shall take effect only after an ALJ decision that is favorable to the OIG. [Provider's] election of its contractual right to appeal to the DAB shall not abrogate the OIG's authority to exclude [Provider] upon the issuance of the ALJ's decision. If the ALJ sustains the determination of the OIG and determines that exclusion is authorized, such exclusion shall take effect twenty (20) days after the ALJ issues such a decision, notwithstanding that [Provider] may request review of the ALJ decision by the DAB.

4. *Finality of Decision.* The review by an ALJ or DAB provided for above shall not be considered to be an appeal right arising under any statutes or regulations. Consequently, the parties to this CIA agree that the DAB's decision (or the ALJ's decision if not appealed) shall be considered final for all purposes under this CIA and [Provider] agrees to waive any right it may have to appeal the decision administratively, judicially or otherwise seek review by any court or other adjudicative forum.

XI. Effective and Binding Agreement

Consistent with the provisions in the Settlement Agreement pursuant to which this CIA is entered, and into which this CIA is incorporated, [Provider] and OIG agree as follows:

- a. This CIA shall be binding on the successors, assigns and transferees of [Provider];
- b. This CIA shall become final and binding on the date the final signature is obtained on the CIA;
- c. Any modifications to this CIA shall be made with the prior written consent of the parties to this CIA; and
- d. The undersigned [Provider] signatories represent and warrant that they are authorized to execute this CIA. The undersigned OIG signatory represents that he is signing this CIA in his official capacity and that he is authorized to execute this CIA.

Appendix B

Sample Statement of Management's Assertions

[Date]

In connection with the Corporate Integrity Agreement (CIA) entered into with the Office of the Inspector General of the United States Department of Health and Human Services dated [date], we make the following assertions, which are true to the best of our knowledge and belief.

Governance

Within 90 days of the date of the CIA, we—

1. Established a Compliance Committee, which meets at least monthly and requires a quorum to meet.
2. Appointed to our Compliance Committee members who include at a minimum those individuals specified in the CIA.
3. Delegated to the Compliance Committee the authority to implement and monitor the CIA, as evidenced by the organization chart or the Compliance Committee's charter.
4. Appointed a compliance officer, who reports directly to the individual specified in the CIA.

We appointed a compliance officer who—

1. Has sufficient staff and resources to carry out his or her responsibilities.
2. Actively participates in compliance training.
3. Has authority to conduct full and complete internal investigations without restriction.
4. Periodically revises the compliance program to meet changing circumstances and risks.

Billing Practices, Policies, and Procedures

Although no system of internal controls can provide absolute assurance that all bills comply in all respects with Medicare, Medicaid, and other federal health care program guidelines, we are not aware of any material weaknesses in our billing practices, policies, and procedures. Billings to third-party payors comply in all material respects with applicable coding principles and laws and regulations (including those dealing with Medicare and Medicaid antifraud and abuse) and only reflect charges for goods and services that were medically necessary, properly approved by regulatory bodies (e.g., the Food and Drug Administration), if required and properly rendered. [Insert other assertions as necessary to address matters covered in the CIA.] Any Medicare, Medicaid, and other federal health program billing deficiencies that we identified have been properly reported to the applicable payor within 60 days of discovery of the deficiency.

Corporate Integrity Policy

1. Our policy was developed and implemented within [number] days of execution of the CIA.
2. The policy addresses the Company's commitment to preparation and submission of accurate billings consistent with the standards set forth

in federal health care program statutes, regulations, procedures and guidelines or as otherwise communicated by Health Care Financing Administration (HCFA), its agents or any other agency engaged in the administration of the applicable federal health care program.

3. The policy addressed the specific issues that gave rise to the settlement, as well as other risk areas identified by the OIG in published Fraud Alerts issued through [date].
4. Further details on the development and implementation of our policy were provided to the OIG in our letter dated [date].
5. Our policy was distributed to all employees, physicians and independent contractors involved in submitting or preparing requests for reimbursement.
6. We have prominently displayed a copy of our policy on the Company's premises.

Information and Education Program

As discussed more fully in our letter to the OIG dated [date], we conducted an Information and Education Program within [number] days of the CIA. The Information and Education Program requires that each officer, employee, agent and contractor charged with administering federal health care programs (including, but not limited to billers, coders, nurses, physicians, medical records, hospital administration and other individuals directly involved in billing federal health care programs) receive at least [number] hours of training.

The training provided to employees involved in billing, coding, and/or charge capture consisted of instructions on submitting accurate bills, the personal obligations of each individual to ensure billings are accurate, the nature of company-imposed disciplinary actions on individuals who violate company policies and/or laws and regulations, applicable federal health care program rules, legal sanctions against the company for submission of false or fraudulent information, and how to report potential abuses or fraud. The training material addresses those issues underlying our settlement with the OIG.

The experience of the trainers is consistent with the topics presented.

Confidential Disclosure Program

Our Confidential Disclosure Program—

1. Was established within [number] days of the CIA.
2. Enables any employee to disclose any practices or billing procedures relating to federal health care programs.
3. Provides a toll-free telephone line maintained by the Company, which Company representatives have indicated is maintained twenty-four hours a day, seven days a week, for the purpose of making any disclosures regarding compliance with the Company's Compliance Program, the obligations in the CIA, and Company's overall compliance with federal and state standards.
4. Includes policies requiring the review of any disclosures to permit a determination of the appropriateness of the billing practice alleged to be involved and any corrective action to be taken to ensure that proper follow-up is conducted.
5. A detailed summary of the communications (including the number of disclosures by employees and the dates of such disclosures) concerning billing practices reported as, and found to be, inappropriate under the Confidential Disclosure Program, and the results of any internal

review and the follow-up on such disclosures are summarized in Attachment [title] to our Annual Report.

Excluded Individuals or Entities

Company policy—

1. Prohibits the employment of or contracting with an individual or entity that is listed by a federal agency as convicted of abuse or excluded, suspended or otherwise ineligible for participation in federal health care programs.
2. Includes a process to make an inquiry into the status of any potential employee or independent contractor.
3. Provides for an annual review of the status of all existing employees and contractors to verify whether any individual had been suspended or excluded or charged with a criminal offense relating to the provision of federal health care services.

We are not aware of any individuals employed in contravention of the prohibitions in the CIA.

Record Retention

Our record retention policy is consistent with the requirements of the CIA.

Appendix C

Sample Engagement Letter

The following is an illustration of a sample engagement letter that may be used for this kind of engagement.

[CPA Firm Letterhead]

[Client's Name and Address]

Dear _____:

This will confirm our understanding of the arrangements for our performance of certain agreed-upon procedures in connection with management's compliance with the terms of the Corporate Integrity Agreement (CIA) with the Office of Inspector General (OIG) of the U.S. Department of Health and Human Services (HHS) dated [date of CIA] for the period ending [date].

We will perform those procedures enumerated in the attachment to this letter. Our responsibility is to carry out these procedures and report our findings. We will conduct our engagement in accordance with standards established by the American Institute of Certified Public Accountants. Our planned procedures were agreed to by management and will be communicated to the OIG for its review and are based on the terms specified in the CIA. The sufficiency of these procedures is solely the responsibility of the specified parties to the report. Consequently, it is understood that we make no representation regarding the sufficiency of the procedures described in the attachment for the purpose for which this report has been requested or for any other purpose.

Management is responsible for the Company's compliance with all applicable laws, regulations, and contracts and agreements, including the CIA. Management also is responsible for the design, implementation, and monitoring of the policies and procedures upon which compliance is based.

Our engagement to perform agreed-upon procedures is substantially less in scope than an examination, the objective of which is the expression of an opinion on management's compliance with the CIA. Accordingly, we will not express such an opinion or any other form of assurance thereon.¹

Working papers that are prepared in connection with this engagement are the property of the independent accountant. The working papers are prepared for the purpose of providing the principal support for the independent accountant's report. At the completion of our work, we expect to issue an agreed-upon procedures report in the attached form.

¹ The independent accountant may wish to include an understanding with the client about any limitation or other arrangements regarding liability of the practitioner or the client in the engagement letter. For example, the following might be included in the letter:

Our maximum liability relating to services rendered under this letter (regardless of form of action, whether in contract, negligence or otherwise) shall be limited to the charges paid to us for the portion of the services or work products giving rise to liability. We will not be liable for consequential or punitive damages (including lost profits or savings) even if aware of their possible existence.

You will indemnify us against any damage or expense that may result from any third-party claim relating to our services or any use by you of any work product, and you will reimburse us for all expenses (including counsel fees) as incurred by us in connection with any such claim, except to the extent such claim (i) is finally determined to have resulted from our gross negligence or willful misconduct or (ii) is covered by any of the preceding indemnities.

If, however, we are not able to complete all of the specified procedures, we will so advise you. At that time, we will discuss with you the form of communication, if any, that you desire for our findings. We will ask you to confirm your request in writing at that time. If you request that we delay issuance of our report until corrective action is taken that will result in compliance with all aspects of the CIA, we will do so only at your written request. Our working papers will be retained in accordance with our firm's working paper retention policy.

The distribution of the independent accountant's report will be restricted to the governing board and management of the Company and the OIG.

Our fees will be billed as work progresses and are based on the amount of time required at various levels of responsibility plus actual out-of-pocket expenses. Invoices are payable upon presentation. We will notify you immediately of any circumstances we encounter that could significantly affect our initial estimate of total fees.

We agree that to the extent required by law, we will allow the Comptroller General of the United States, HHS, and their duly authorized representatives to have access to this engagement letter and our documents and records to the extent necessary to verify the nature and amount of costs of the services provided to the Company, until the expiration of four years after we have concluded providing services to the Company that are performed pursuant to this Engagement Letter. In the event the Comptroller General, HHS, or their duly authorized representatives request such records, we agree to notify the Company of such request as soon as practicable.

In the event we are requested or authorized by the Company or are required by government regulation, subpoena, or other legal process to produce our documents or our personnel as witnesses with respect to our engagements for the Company, the Company will, so long as we are not a party to the proceeding in which the information is sought, reimburse us for our professional time and expenses, as well as the fees and expenses of our counsel, incurred in responding to such requests.

If this letter correctly expresses your understanding of this engagement, please sign the enclosed copy where indicated and return it to us. We appreciate the opportunity to serve you.

Sincerely, _____

<i>Procedure</i>	<i>Findings</i>
Governance	
<ol style="list-style-type: none"> 1. We read the Company's corporate minutes and organization chart and ascertained that, within [number] days of the date of the Corporate Integrity Agreement (CIA), the Company— <ol style="list-style-type: none"> a. Established a Compliance Committee, which is to meet meets at least monthly and requires a quorum to meet. b. Appointed to its Compliance Committee members who include, at a minimum, those individuals specified in the CIA. c. Delegated to the Compliance Committee the authority to implement and monitor the CIA, as evidenced by the organization chart or the Compliance Committee's charter. d. Appointed a compliance officer who reports directly to the individual specified in the CIA. 2. We interviewed the compliance officer and were informed that, in his or her opinion, the Compliance Officer— <ol style="list-style-type: none"> a. Has sufficient staff and resources to carry out his or her responsibilities. b. Actively participates in compliance training. c. Has the authority to conduct full and complete internal investigations without restriction. d. Periodically revises the compliance program to meet changing circumstances and risks. 3. We read the OIG notification letter as specified in the CIA and noted that the appropriate official signed the letter, that it was addressed to the OIG, that it covered items (a) through (d) in Step 1, and that it was dated within [number of] days of the execution of the CIA. 	
Billing Practices, Policies, and Procedures	
<p><i>The practitioner might be engaged to provide consulting services in connection with the evaluation of the company's billing practices, policies, and procedures. If so, generally no agreed-upon procedures would be performed relating to this area.</i></p> <p><i>Alternatively, if the procedures relating to the Company's billing practices, policies, and procedures are performed by others such as the Company's internal audit staff, the practitioner performs Steps 4 through 9.</i></p>	
<ol style="list-style-type: none"> 4. We read the compliance work plan and noted the following: 	

Procedure**Findings**

-
- a. The work plan's stated objectives include the determination that billings are accurate and complete, for services rendered that have been deemed by medical specialists as being necessary, and are submitted in accordance with federal program guidelines.
- b. The work plan sampling methodology sets confidence levels consistent with those defined in the CIA.
- c. The work plan identifies risk areas, as defined in the CIA (if applicable), and specifies testing procedures by risk area.
- d. The work plan specifies that samples are taken in risk areas (if applicable) identified by the CIA.
- e. The work plan includes testing procedures, which the practitioner should modify as required by the CIA, for the following risks areas (if applicable) identified in the CIA:
- (1) Clinical documentation, as follows:
 - (i) No documentation of service
 - (ii) Insufficient documentation of service
 - (iii) Improper diagnosis or treatment plan giving rise to the provision of a medically unnecessary service or treatment
 - (iv) Service or treatment does not conform medically with the documented diagnosis or treatment plan
 - (v) Services incorrectly coded
 - (2) Billing and coding, as follows:
 - (i) Noncovered or unallowable service
 - (ii) Duplicate payment
 - (iii) DRG window error
 - (iv) Unbundling
 - (v) Utilization
 - (vi) Medicare credit balances
- [*Note to Practitioner:* Modify the preceding list as required by the CIA.]
5. We selected [*quantity*] probe samples performed by the independent review organization for the following risk areas [*list risk areas tested*]. For the probe samples selected, we noted that the—
- a. Sample patient billing files were randomly selected.
 - b. Sample size reflected confidence levels specified in the CIA.

(continued)

Procedure**Findings**

-
- c. Sample plan describes how missing items (if any) would be treated.
 - d. Patient billing files tested were pulled per the listing of random numbers and all patient billing files were accounted for in the working papers.
 - e. Work plans for the specific sample described the risk areas (if applicable) being tested and the testing approach/procedures.
 - f. Working papers noted the completion of each work plan step.
 - g. Working papers contained a summary of findings for the sample.
6. We reperformed the work plan steps [*list of specific steps performed*] for the sample patient billing files. The reperformance of work plan steps related to the medical review of the sample patient billing files was performed by the following individuals [*note the professional qualifications of individuals without listing names*]. Any exceptions between our findings and the Company's are summarized in the Attachment to this report.
 7. We read the summary findings of all internal compliance reviews that the Company's Internal Audit department indicated it had performed for the Company and noted that all material billing deficiencies [*specify material threshold as defined by the Company*] noted therein were discussed in written communications addressed to the appropriate payor (for example, Medicare Part B carrier) and were dated within 60 days from the time the deficiency occurred.¹
 8. We inquired of [*individual*] as to whether the Company took remedial steps within [*number of*] days (or such additional time as agreed to by the payor) to correct all material billing deficiencies noted in Step 7. We were informed that such remedial steps had been taken.
 9. By reading applicable correspondence, we noted that any material billing deficiencies noted in Step 7 were communicated to the OIG, including specific findings relative to the deficiency, the Company's actions taken to correct the deficiency, and any further steps the Company plans to take to prevent any similar deficiencies from recurring.

Corporate Integrity Policy

10. We read the Company's Corporate Integrity Policy and noted the following.

¹ The CIA provides its own legal definition of a "material deficiency." Determination of whether a billing or other act meets this definition is normally beyond the auditor's professional competence and may have to await final determination by a court of law. Accordingly, to avoid confusion, a working definition different from that provided in the CIA (e.g., a specified dollar threshold) may be necessary.

Procedure**Findings**

-
- a. The policy was developed and implemented within *[number of]* days of execution of the CIA.
 - b. The policy addressed the Company's commitment to preparation and submission of accurate billings consistent with the standards set forth in federal health care program statutes, regulations, procedures, and guidelines or as otherwise communicated by HCFA, its agents, or any other agency engaged in the administration of the applicable federal health care program.
 - c. The policy addressed the specific issues that gave rise to the settlement, as well as other risk areas identified by the OIG in published Fraud Alerts issued through *[agency]*.
 - d. Correspondence addressed to the OIG covered the development and implementation of the policy.
 - e. Documentation indicating that the policy was distributed to all employees, physicians, and independent contractors involved in submitting or preparing requests for reimbursement.
 - f. The prominent display of a copy of the policy on the Company's premises.
11. We selected a sample of ten employees (involved in submitting and preparing requests for reimbursement) and examined written confirmation in the employee's personnel file indicating receipt of a copy of the Corporate Integrity Policy.

Information and Education Program

12. We read the Company's Information and Education Program and noted the following.
- a. The Information and Education Program agenda was dated within *[number of]* days of execution of the CIA.
 - b. Correspondence covering the development and implementation of the Information and Education Program was addressed to the OIG.
 - c. The Information and Education Program requires that each officer, employee, agent, and contractor charged with administering federal health care programs (including, but not limited to billers, coders, nurses, physicians, medical records, hospital administration and other individuals directly involved in billing federal health care programs) receive at least *[number of]* hours of training.

(continued)

Procedure**Findings**

-
13. We selected a sample of ten employees involved in billing, coding and/or charge capture and examined sign-in logs of the training classes and noted that each had signed indicating that they had received at least *[number of]* hours of training as specified in the Information and Education Program. We also reviewed tests and surveys completed by each of the ten trained employees noting evidence that they were completed.
 14. We inquired as to the training of individuals not present during the regularly scheduled training programs and were informed that each such individual is trained either individually or in a separate make-up session. We inquired as to the names of individuals not initially present and selected one such individual and examined that individual's post-training test and survey for completion.
 15. We read the course agenda and noted that the training provided to employees involved in billing, coding, and/or charge capture consisted of instructions on submitting accurate bills, the personal obligations of each individual to ensure billings are accurate, the nature of company-imposed disciplinary actions on individuals who violate company policies and/or laws and regulations applicable to federal health care program rules, legal sanctions against the company for submission of false or fraudulent information, and how to report potential abuses or fraud. We also noted that the training material addressed the following issues which gave rise to the settlement *[practitioner list]*.
 16. We inquired of the Corporate Compliance Officer as to the qualifications and experience of the trainers and were informed that, in the Corporate Compliance Officer's opinion, they were consistent with the topics presented.
 17. We noted that the Company's draft Annual Report to the OIG dated *[date]* addresses certification of training.

Confidential Disclosure Program

18. We read documentation of the Company's Confidential Disclosure Program and noted that it—
 - a. Includes the printed effective date that was within *[number of]* days of execution of the CIA.
 - b. Consists of a confidential disclosure program enabling any employee to disclose any practices or billing procedures relating to federal health care programs.

Procedure**Findings**

- c. Provides a toll-free telephone line maintained by the Company, which Company representatives have indicated is maintained twenty-four hours a day, seven days a week, for the purpose of making any disclosures regarding compliance with the Company's Compliance Program, the obligations in the CIA, and Company's overall compliance with federal and state standards.
 - d. Includes policies requiring the review of any disclosures to permit a determination of the appropriateness of the billing practice alleged to be involved and any corrective action to be taken to ensure that proper follow-up is conducted.
- 19. We made five test calls to the toll free telephone line (hotline) and noted the following.
 - a. Each call was captured in the hotline logs and reported with all other incoming calls.
 - b. Anonymity is not discouraged.
- 20. We noted that the Company included in its draft Annual Report addressed to OIG dated [date] a detailed summary of the communications (including the number of disclosures by employees and the dates of such disclosures) concerning billing practices reported as, and found to be, inappropriate under the Confidential Disclosure Program, and the results of any internal review and the follow-up on such disclosures.
- 21. We observed the display of the Company's Confidential Disclosure Program, including notice of the availability of its hotline, on the Company's premises.

Excluded Individuals or Entities

- 22. We read the Company's written policy relating to dealing with excluded or convicted persons or entities and noted that the policy—
 - a. Prohibits the hiring of or contracting with an individual or entity that is listed by a federal agency as convicted of abuse or excluded, suspended, or otherwise ineligible for participation in federal health care programs.
 - b. Includes a process to make an inquiry into the status of any potential employee or independent contractor.
 - c. Provides for a semi-annual review of the status of all existing employees and contractors to verify whether any individual had been suspended or excluded or charged with a criminal offense relating to the provision of federal health care services.

(continued)

Procedure**Findings**

-
23. We selected a sample of ten employees hired over the course of the test period as defined in the CIA and examined support in the employee's personnel file documenting inquiries made into the status of the employee, including documentation of comparison to the *[source specified in the CIA]*.
24. We performed the following procedures related to the Company's semi-annual review of employee status.
- a. Read documentation of the semi-annual review as evidence that a review was performed.
 - b. Selected and reviewed the lesser of ten or all exceptions and determined that such employees were removed from responsibility for or involvement with Provider business operations related to the Federal health care programs.
 - c. Examined a notification letter addressed to the OIG and dated within 30 days of the employee's removal from employment.
 - d. Inquired of *[officer]* as to whether he or she was aware of any individuals employed in contravention of the prohibitions in the CIA. If so, we further noted that *[indicate specific procedures]* to confirm that such situation was cured within 30 days by *[indicate how situation was cured]*.

Annual Report

25. We read the Company's draft Annual Report dated *[date]* and determined that it included the following items, to be modified as appropriate, by the practitioner:
- a. Compliance Program Charter and organization chart
 - b. Amendments to policies
 - c. Detailed descriptions of reviews and audits
 - d. Summary of hotline communications
 - e. Summary of annual review of employees
 - f. Cross-referencing to items noted in the CIA

Record Retention

26. We read the Company's record retention policy and noted that it was consistent with the requirements as outlined in the CIA.

.36

Appendix E

Sample Report

Independent Accountant's Report

[Date]

[Sample Health Care Provider]

Office of Inspector General of the U.S. Department of Health and Human Services

We have performed the procedures enumerated in the Attachment, which were agreed to by Sample Health Care Provider (Company) and the Office of Inspector General (OIG) of the U.S. Department of Health and Human Services, solely to assist the users in evaluating management's assertion about [name of entity's] compliance with the Corporate Integrity Agreement (CIA) with the OIG dated [date of CIA] for the [period] ending [date], which is included as Attachment A to this report. This agreed-upon procedures engagement was performed in accordance with standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of the specified users of the report. Consequently, we make no representation regarding the sufficiency of the procedures described in Attachment B either for the purpose for which this report has been requested or for any other purpose.

We were not engaged to and did not perform an examination, the objective of which would be the expression of an opinion on management's compliance with the CIA. Accordingly, we do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of the Compliance Committee and management of the Company and the OIG, and is not intended to be and should not be used by anyone other than those specified parties.

[Include as Attachments the CIA and the summary that enumerates procedures and findings.]

Section 14,360**Statement of Position 00-1 Auditing Health Care Third-Party Revenues and Related Receivables**

March 10, 2000

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Health Care Third-Party Revenue Recognition Task Force of the AICPA Auditing Standards Board (ASB) to provide guidance regarding auditing financial statement assertions about third-party revenues and related receivables of health care entities. This SOP is recognized as an interpretive publication as defined in AU-C section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards (AICPA, Professional Standards)*. Interpretive publications are recommendations on the application of generally accepted auditing standards (GAAS) in specific circumstances, including engagements for entities in specialized industries.

An interpretive publication is issued under the authority of the ASB after all ASB members have been provided an opportunity to consider and comment on whether the proposed interpretive publication is consistent with GAAS. The members of the ASB have found this SOP to be consistent with existing GAAS.

Although interpretive publications are not auditing standards, AU-C section 200 requires the auditor to consider applicable interpretive publications in planning and performing the audit because interpretive publications are relevant to the proper application of GAAS in specific circumstances. If the auditor does not apply the auditing guidance in an applicable interpretive publication, the auditor should document how the requirements of GAAS were complied with in the circumstances addressed by such auditing guidance.

Summary

This Statement of Position (SOP) provides guidance to auditors regarding uncertainties inherent in health care third-party revenue recognition. It discusses auditing matters related to testing third-party revenues and related receivables, and provides guidance regarding the sufficiency and appropriateness of audit evidence and reporting on financial statements, prepared in accordance with generally accepted accounting principles (GAAP), of health care entities exposed to material uncertainties. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Introduction and Background

.01 Most health care providers participate in payment programs that pay less than full charges for services rendered. For example, some cost-based programs retrospectively determine the final amounts reimbursable for services rendered to their beneficiaries based on allowable costs. With increasing frequency, even non-cost-based programs (such as the Medicare Prospective Payment System)

have become subject to retrospective adjustments (for example, billing denials and coding changes). Often, such adjustments are not known for a considerable period of time after the related services were rendered.

.02 The lengthy period of time between rendering services and reaching final settlement, compounded further by the complexities and ambiguities of reimbursement regulations, makes it difficult to estimate the net patient service revenue associated with these programs. This situation has been compounded due to the frequency of changes in federal program guidelines.

.03 Financial Accounting Standards Board (FASB) *Accounting Standards Codification* (ASC) 954-605-45-2 states, in part, that “service revenue shall be reported net of contractual and other adjustments in the statement of operations, including patient service revenue.” As a result, patient receivables, including amounts due from third-party payors, are also reported net of expected contractual and other adjustments. However, amounts ultimately realizable will not be known until some future date, which may be several years after the period in which the services were rendered. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.04 This SOP provides guidance to auditors regarding uncertainties inherent in health care third-party revenue recognition. It discusses auditing matters related to testing third-party revenue and related receivables, including the effects of settlements (both cost-based and non-cost-based third-party payment programs), and provides guidance regarding the sufficiency and appropriateness of audit evidence and reporting on financial statements of health care entities exposed to material uncertainties. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Scope and Applicability

.05 This SOP applies to audits of health care entities falling within the scope of the AICPA Audit and Accounting Guide *Health Care Entities* (the guide). Its provisions are effective for audits of periods ending on or after June 30, 2000. Early application of the provisions of this SOP is permitted.

Third-Party Revenues and Related Receivables—Inherent Uncertainties

.06 Health care entities need to estimate amounts that ultimately will be realizable in order for revenues to be fairly stated in accordance with GAAP. The basis for such estimates may range from relatively straightforward calculations using information that is readily available to highly complex judgments based on assumptions about future decisions.

.07 Entities doing business with governmental payors (for example, Medicare and Medicaid) are subject to risks unique to the government-contracting environment that are hard to anticipate and quantify and that may vary from entity to entity. For example

- a health care entity’s revenues may be subject to adjustment as a result of examination by government agencies or contractors. The audit process and the resolution of significant related matters (including disputes based on differing interpretations of the regulations) often are not finalized until several years after the services were rendered.
- different fiscal intermediaries (entities that contract with the federal government to assist in the administration of the Medicare program) may interpret governmental regulations differently.

- differing opinions on a patient's principal medical diagnosis, including the appropriate sequencing of codes used to submit claims for payment, can have a significant effect on the payment amount.¹
- otherwise valid claims may be determined to be nonallowable after the fact due to differing opinions on medical necessity.
- claims for services rendered may be nonallowable if they are later determined to have been based on inappropriate referrals.²
- governmental agencies may make changes in program interpretations, requirements, or "conditions of participation," some of which may have implications for amounts previously estimated.

.08 Such factors often result in retrospective adjustments to interim payments. Reasonable estimates of such adjustments are central to the third-party revenue recognition process in health care, in order to avoid recognizing revenue that the provider will not ultimately realize. The delay between rendering services and reaching final settlement, as well as the complexities and ambiguities of billing and reimbursement regulations, makes it difficult to estimate net realizable third-party revenues.

Management's Responsibilities

.09 Management and, when appropriate, those charged with governance are responsible for the preparation and fair presentation of its financial statements in accordance with GAAP as well as for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error. Despite the inherent uncertainties, management is responsible for estimating the amounts recorded in the financial statements and making the required disclosures in accordance with GAAP, based on management's analysis of existing conditions. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.10 Management's assertions regarding proper valuation of its revenues and receivables are embodied in the financial statements. Management is responsible for recognizing revenues when their realization is reasonably assured. As a result, management makes a reasonable estimate of amounts that ultimately will be realized, considering—among other things—adjustments associated with regulatory reviews, audits, billing reviews, investigations, or other proceedings. Estimates that are significant to management's assertions about revenue include the provision for third-party payor contractual adjustments and allowances. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

¹ Historically, the Health Care Financing Administration contracted with Peer Review Organizations to validate the appropriateness of admissions and the clinical coding from which reimbursement was determined. Such reviews were typically performed within ninety days of the claim submission date. However, the government has modified its policies with respect to such reviews and now analyzes coding errors through other means, including in conjunction with investigations conducted by the Office of the Inspector General of the U. S. Department of Health and Human Services.

² Effective January 1, 1995, the Limitation on Certain Physician Referrals law prohibited physicians from referring Medicare and Medicaid patients to health care entities with which they had a financial relationship for the furnishing of designated health services. Implementing regulations have not yet been adopted as of the date of this publication.

.11 Management also is responsible for preparing and certifying cost reports submitted to federal and state government agencies in support of claims for payment for services rendered to government program beneficiaries.

The Auditor's Responsibilities

.12 The auditor's responsibility is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, thereby enabling the auditor to express an opinion on whether the financial statements are presented fairly, in all material respects, in accordance with an applicable financial reporting framework. Reasonable assurance is obtained when the auditor has obtained sufficient appropriate audit evidence to reduce audit risk (that is, the risk that the auditor expresses an inappropriate opinion when the financial statements are materially misstated) to an acceptably low level. In developing an opinion, the auditor should conclude whether the auditor has obtained reasonable assurance, which includes considering whether, among other matters,

- sufficient appropriate audit evidence has been obtained.
- uncorrected misstatements are material, individually or in aggregate.
- the financial statements are prepared and fairly presented, in all material respects, in accordance with GAAP.[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.13 Current industry conditions, as well as specific matters affecting the entity,³ provide relevant information when planning the audit. Among a number of procedures, the auditor's procedures may include an analysis of historical results (for example, prior fiscal intermediary audit adjustments and comparisons with industry benchmarks and norms) that enable the auditor to better assess the risk of material misstatements in the current period. When there are heightened risks, the auditor should perform audit procedures that respond to those risks, for example, more extensive tests covering the current period. Exhibit 10-1 of the guide includes examples of procedures auditors may perform. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of the 2012 edition of the Audit and Accounting Guide *Health Care Entities*.]

.14 With respect to auditing third-party revenues, a relevant consideration in addition to the usual revenue recognition considerations, is whether ultimately realizable amounts are known or will be presently known, or whether those amounts are uncertain because they are dependent on some other future, prospective actions or confirming events. For example, under a typical fee-for-service contract with a commercial payor, if the provider has performed a service for a covered individual, the revenue to which the provider is entitled should be determinable at the time the service is rendered. On the other hand, if the service was provided under a cost-based government contract, the revenue ultimately collectible may not be known until certain future events occur (for example, a cost report has been submitted and finalized after desk review or audit). In this case, management estimates the effect of such potential

³ Risk factors, including ones related to legislative and regulatory matters, are discussed annually in the AICPA Audit Risk Alert *Health Care Industry Developments*.

future adjustments. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.15 As stated previously, management is responsible for preparing the estimates contained in the financial statements. The auditor should evaluate the sufficiency and appropriateness of the evidence supporting those estimates, including the facts supporting management's judgments, and the judgments made based on conditions existing at the time of the audit. The fact that net revenues recorded at the time services are rendered differ materially from amounts that ultimately are realized does not necessarily mean the audit was not properly planned or carried out. Similarly, the fact that future events may differ materially from management's assumptions or estimates does not necessarily mean that management's estimates were not valid or the auditor did not follow generally accepted auditing standards as described in this SOP with respect to auditing estimates. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Audit Evidence

.16 The measurement of estimates is inherently uncertain and depends on the outcome of future events. AU-C section 540, *Auditing Accounting Estimates, Including Fair Value Accounting Estimates, and Related Disclosures* (AICPA, *Professional Standards*), and AU-C section 705, *Modifications to the Opinion in the Independent Auditor's Report* (AICPA, *Professional Standards*), provide guidance to the auditor when the ultimate outcome of uncertainties cannot be expected to exist at the time of the audit because the outcome and related audit evidence are prospective. In the current health care environment, conclusive evidence concerning amounts ultimately realizable cannot be expected to exist at the time of the financial statement audit because the uncertainty associated with future program audits, administrative reviews, billing reviews, regulatory investigations, or other actions will not be resolved until sometime in the future. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.17 The fact that information related to the effects of future program audits, administrative reviews, regulatory investigations, or other actions does not exist does not lead to a conclusion that the evidence supporting management's assertions is not sufficient to support management's estimates. Rather, the auditor's professional judgment regarding the sufficiency of the audit evidence is based on the audit evidence that is, or should be, available. If, after considering the existing conditions and available evidence, the auditor concludes that sufficient appropriate audit evidence supports management's assertions about the nature of a matter involving an uncertainty (in this example, the valuation of revenues and receivables), and their presentation or disclosure in the financial statements, an unmodified opinion ordinarily is appropriate. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.18 The inability to obtain sufficient appropriate audit evidence that the auditor needs to conclude that the financial statements as a whole are free from material misstatement would require the auditor to express a qualified opinion or to disclaim an opinion because of a scope limitation. For example, if an entity has conducted an internal evaluation (for example, of coding or other billing matters) under attorney-client privilege and management and its legal counsel refuse to respond to the auditor's inquiries and the auditor determines the

information is necessary, and the auditor concludes that the possible effects on the financial statements of undetected misstatements, if any, could be material but not pervasive, the auditor would express a qualified opinion for a scope limitation. If the auditor concludes that the possible effects on the financial statements of undetected misstatements, if any, could be both material and pervasive, the auditor would disclaim an opinion. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.19 The accuracy of management's assumptions will not be known until future events occur. In evaluating the accuracy of those assumptions, the entity's historical experience in making past estimates and the auditor's experience in the industry are relevant. For certain matters, the best evidence available to the auditor (particularly as it relates to clinical and legal interpretations) may be the representations of management and its legal counsel, as well as information obtained through reviewing correspondence from regulatory agencies. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.20 Pursuant to AU-C section 580, *Written Representations* (AICPA, *Professional Standards*), the auditor should request management to provide written representations that all instances of identified or suspected noncompliance with laws and regulations whose effects should be considered by management when preparing financial statements have been disclosed to the auditor. Examples of specific representations include the following:

- Receivables
 - Adequate consideration has been given to, and appropriate provision made for, estimated adjustments to revenue, such as for denied claims and changes to home health resource group, resource utilization group, ambulatory payment classification, and diagnosis-related group assignments.
 - Recorded valuation allowances are necessary, appropriate, and properly supported.
 - All peer review organizations, fiscal intermediary, and third-party payor reports and information have been made available.
- Cost reports filed with third parties
 - All required Medicare, Medicaid, and similar reports have been properly filed.
 - Management is responsible for the accuracy and propriety of all filed cost reports.
 - All costs reflected on such reports are appropriate and allowable under applicable reimbursement rules and regulations and are patient-related and properly allocated to applicable payors.
 - The employed reimbursement methodologies and principles are in accordance with applicable rules and regulations.
 - Adequate consideration has been given to, and appropriate provision made for, audit adjustments by intermediaries, third-party payors, or other regulatory agencies.

- All items required to be disclosed, including disputed costs that are being claimed to establish a basis for a subsequent appeal, have been fully disclosed in the cost report.
- Recorded third-party settlements include differences between filed (and to be filed) cost reports and calculated settlements, which are necessary based on historical experience or new or ambiguous regulations that may be subject to differing interpretations. Although management believes that the entity is entitled to all amounts claimed on the cost reports, management also believes the amounts of these differences are appropriate.
- Contingencies
 - No violations or possible violations of laws or regulations exist, such as those related to Medicare and Medicaid antifraud and abuse statutes, in any jurisdiction, whose effects are considered for disclosure in the financial statements or as a basis for recording a loss contingency other than those disclosed or accrued in the financial statements. This is including, but not limited to, the anti-kickback statute of the Medicare and Medicaid Patient and Program Protection Act of 1987, limitations on certain physician referrals (the Stark law), and the False Claims Act.
 - Billings to third-party payors comply in all material respects with applicable coding guidelines (for example, ICD-9-CM and CPT-4) and laws and regulations (including those dealing with Medicare and Medicaid antifraud and abuse), and billings reflect only charges for goods and services that were medically necessary; properly approved by regulatory bodies (for example, the Food and Drug Administration), if required; and properly rendered.
 - There have been no internal or external investigations relating to compliance with applicable laws and regulations, including investigations in progress, that would have an effect on the amounts reported in the financial statements or on the disclosure in the notes to the financial statements.
 - There have been no oral or written communications from regulatory agencies, governmental representatives, employees, or others concerning investigations or allegations of noncompliance with laws and regulations in any jurisdiction, including those related to Medicare and Medicaid antifraud and abuse statutes; deficiencies in financial reporting practices; or other matters that could have a material adverse effect on the financial statements.
 - Adequate consideration has been given to, and appropriate provision made for, a continuing care retirement community's obligation to provide future services and the use of facilities to current residents.
 - Adequate consideration has been given to, and appropriate provision made for, a prepaid health care provider's obligation to provide future health services.
 - Guarantees, whether written or oral, under which the health care entity is contingently liable, including guarantee contracts and indemnification agreements pursuant to FASB ASC 460, *Guarantees*, have been properly recorded or disclosed in the (consolidated) financial statements.

The auditor of the health care entity also might obtain specific representations, if applicable, of the following items that are unique or pervasive in the health care industry:

- The health care entity is in compliance with the provisions of Internal Revenue Code (IRC) Section 501(c)(3) and is exempt from federal income tax under IRC Section 501(a), as evidenced by a determination letter, and from state income tax.
- Information returns (Form 990) have been filed on a timely basis.
- Provision has been made, when material, for estimated retroactive adjustments by third-party payors under reimbursement agreements.
- The health care organization is in compliance with bond indentures or other debt instruments.
- For each of its outstanding bond issues, the health care entity is in compliance with postissuance requirements, as specified in the IRC, including, but not limited to, the areas of arbitrage and private business use.
- Pending changes in the organizational structure, financing arrangements, or other matters that could have a material effect on the financial statements of the entity are properly disclosed.
- The health care entity is in compliance with contractual agreements, grants, and donor restrictions.
- The health care entity has maintained an appropriate composition of net assets in amounts needed to comply with all donor restrictions.
- The internal controls over the receipt and recording of received contributions are adequate.
- The allocation of expenses reported in the notes to the financial statements is reasonable based on the health care entity's current operations.
- The health care entity has properly classified equity securities with readily determinable fair values and all debt securities as either trading or other-than-trading securities and reported these investments at fair value.
- The health care entity has reported to its risk management department all known asserted and unasserted claims and incidents. Adequate and reasonable provision has been made for losses related to asserted and unasserted malpractice, health insurance, worker's compensation, and any other claims.
- The health care entity is (or is not) subject to the requirements of Office of Management and Budget Circular A-133, *Audits of States, Local Governments and Non-Profit Organizations*, or Title 45 U.S. Code of Federal Regulations Part 74.26 because it expended (or did not expend) more than \$500,000 in federal awards during the year.
- The health care entity has classified net assets as unrestricted, temporarily restricted, or permanently restricted based on its assessment of the donor's intention, as specified in original donor correspondence, when available. When not available, the entity used other corroborating evidential matter, including minutes of the board, accounting records, and financial statements. To the extent that it was unable to review original donor correspondence to determine the amount of the original gift and donor additions, its determination of such amount was based on its best estimate considering the relevant facts and circumstances. Amounts classified as temporarily restricted are subject to donor-imposed purpose or time restrictions that precluded the health

care entity from expending such amounts or recognizing such amounts as unrestricted as of the balance sheet date. Amounts classified as permanently restricted are subject to donor-imposed or statutory restrictions that require these amounts to be held in perpetuity. In addition, the health care entity has classified appreciation and income related to such donations in accordance with relevant donor or statutory restrictions. Losses on investments of a donor-restricted endowment fund have been classified in accordance with FASB ASC 958-205-45. Reclassifications between net asset classes are proper.

[Revised, December 2012, to reflect conforming changes necessary due to the issuance of the 2012 edition of the Audit and Accounting Guide *Health Care Entities* and SAS Nos. 122–126.]

.21 Management’s refusal to furnish written representations constitutes a limitation on the scope of the audit. Such refusal is often sufficient to preclude an unmodified opinion and may cause an auditor to disclaim an opinion or withdraw from the engagement. However, based on the nature of the representations not obtained or the circumstances of the refusal, the auditor may conclude that a qualified opinion is appropriate. [Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Potential Departures From GAAP Related to Estimates and Uncertainties

.22 The auditor also is responsible for determining whether financial statement assertions and disclosures related to accounting estimates have been presented in accordance with GAAP. Departures from GAAP related to accounting estimates generally fall into one of the following categories:

- Unreasonable accounting estimates
- Inappropriate accounting principles
- Inadequate disclosure

Therefore, in order to render an opinion, the auditor’s responsibility is to evaluate the reasonableness of management’s estimates based on present circumstances and to determine that estimates are reported in accordance with GAAP and adequately disclosed. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 As discussed in AU-C section 500, *Audit Evidence* (AICPA, *Professional Standards*), the objective of the auditor is to design and perform audit procedures that enable the auditor to obtain sufficient appropriate audit evidence to be able to draw reasonable conclusions on which to base the auditor’s opinion. As discussed previously, exhibit 10-1 of the guide provides a number of sample procedures that the auditor may perform in auditing an entity’s patient revenues and accounts receivable, including those derived from third-party payors. For example, the guide notes that the auditor might “test the reasonableness of settlement amounts, including specific and unallocated reserves, in light of the involved payors, the nature of the payment mechanism, the risks associated with future audits, and other relevant factors.”⁴ [Revised, September 2008, to reflect conforming changes necessary due to the issuance of SAS No. 105. Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012,

⁴ See paragraphs .25–.28.

to reflect conforming changes necessary due to the issuance of the 2012 edition of the Audit and Accounting Guide *Health Care Entities* and SAS Nos. 122–126.]

Unreasonable Accounting Estimates

.24 The basis for management's assumptions regarding the nature of future adjustments and calculations as to the effects of such adjustments are relevant factors when evaluating the reasonableness of management's estimates.⁵ The auditor cannot determine with certainty whether such estimates are right or wrong, because the accuracy of management's assumptions cannot be confirmed until future events occur. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.25 Paragraph .08c of AU-C section 540 requires the auditor to obtain an understanding of how management makes the accounting estimates, including the assumptions underlying the accounting estimates to provide a basis for the assessment of the risks of material misstatement for accounting estimates. Based on the assessed risks of material misstatement, the auditor should determine, in accordance with paragraph .12 of AU-C section 540,

- a. whether management has appropriately applied the requirements of the applicable financial reporting framework relevant to the accounting estimate and
- b. whether the methods for making the accounting estimates are appropriate and have been applied consistently and whether changes from the prior period, if any, in accounting estimates or the method for making them are appropriate in the circumstances.

In responding to the assessed risks of material misstatement, as required by AU-C section 330, *Performing Audit Procedures in Response to Assessed Risks and Evaluating the Audit Evidence Obtained* (AICPA, *Professional Standards*), the auditor should undertake one or more of the following, in accordance with paragraph .13 of AU-C section 540, taking into account the nature of the accounting estimate:

- a. Determine whether events occurring up to the date of the auditor's report provide audit evidence regarding the accounting estimate.
- b. Test how management made the accounting estimate and the data on which it is based. In doing so, the auditor should evaluate whether
 - i. the method of measurement used is appropriate in the circumstances,
 - ii. the assumptions used by management are reasonable in light of the measurement objectives of the applicable financial reporting framework, and
 - iii. the data on which the estimate is based is sufficiently reliable for the auditor's purposes.
- c. Test the operating effectiveness of the controls over how management made the accounting estimate, together with appropriate substantive procedures.
- d. Develop a point estimate or range to evaluate management's point estimate. For this purpose
 - i. if the auditor uses assumptions or methods that differ from management's, the auditor should obtain an understanding of management's assumptions or methods sufficient to establish that the auditor's point estimate or range takes into account relevant

⁵ The lack of such analyses may call into question the reasonableness of recorded amounts.

variables and to evaluate any significant differences from management's point estimate.

- ii. if the auditor concludes that it is appropriate to use a range, the auditor should narrow the range, based on audit evidence available, until all outcomes within the range are considered reasonable.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.26 The auditor should evaluate, based on the audit evidence, whether the accounting estimates in the financial statements are either reasonable in the context of the applicable financial reporting framework or are misstated. Based on the audit evidence obtained, the auditor may conclude that the evidence points to an accounting estimate that differs from management's point estimate. When the audit evidence supports a point estimate, the difference between the auditor's point estimate and management's point estimate constitutes a misstatement. When the auditor has concluded that using the auditor's range provides sufficient appropriate audit evidence, a management point estimate that lies outside the auditor's range would not be supported by audit evidence. In such cases, the misstatement is no less than the difference between management's point estimate and the nearest point of the auditor's range. (Paragraph .A122 of AU-C section 540). When management has changed an accounting estimate, or the method in making it, from the prior period based on a subjective assessment that there has been a change in circumstances, the auditor may conclude, based on the audit evidence, that the accounting estimate is misstated as a result of an arbitrary change by management or may regard it as an indicator of possible management bias (Paragraph .A123 of AU-C section 540). [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.27 Approaches and estimates will vary from entity to entity. Some entities with significant prior experience may attempt to quantify the effects of individual potential intermediary or other governmental (for example, the Office of Inspector General and the Department of Justice) or private payor adjustments, basing their estimates on very detailed calculations and assumptions regarding potential future adjustments. Some may prepare cost report⁶ analyses to estimate the effect of potential adjustments. Others may base their estimates on an analysis of potential adjustments in the aggregate, in light of the payors involved; the nature of the payment mechanism; the risks associated with future audits; and other relevant factors. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.28 One of the key factors in evaluating the estimate is the historical experience of the entity (for example, the aggregate amount of prior cost-report adjustments and previous regulatory settlements) as well as the risk of potential future adjustments. The fact that an entity currently is not subject to

⁶ Medicare cost reimbursement is based on the application of highly complex technical rules, some of which are ambiguous and subject to different interpretations even among Medicare's fiscal intermediaries. It is not uncommon for fiscal intermediaries to reduce claims for reimbursement that were based on management's good faith interpretations of pertinent laws and regulations. Additionally, the Provider Reimbursement Review Board or the courts may be required to resolve controversies regarding the application of certain rules. To avoid recognizing revenues before their realization is reasonably assured, providers estimate the effects of such potential adjustments. This is occasionally done by preparing a cost report based on alternative assumptions to help estimate contractual allowances required by generally accepted accounting principles. The existence of reserves or a reserve cost report does not by itself mean that a cost report was incorrectly or fraudulently filed.

a governmental investigation does not mean that a recorded valuation allowance for potential billing adjustments is not warranted. Nor do these emerging industry trends necessarily indicate that an accrual for a specific entity is warranted. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.29 In evaluating valuation allowances, the auditor may consider the entity's historical experience and potential future adjustments in the aggregate. For example, assume that over the past few years after final cost report audits were completed, a hospital's adjustments averaged 3 percent to 5 percent of total filed reimbursable costs. Additionally, the hospital is subject to potential billing adjustments, including errors (for example, violations of the three-day window, discharge and transfer issues, and coding errors). Even though specific incidents are not known, it may be reasonable for the hospital to estimate and accrue a valuation allowance for such potential future retrospective adjustments, both cost-based and non-cost-based. Based on this and other information obtained, the auditor may conclude that a valuation allowance for the year under audit of 3 percent to 5 percent of reimbursable costs plus additional amounts for potential non-cost-based program billing errors is reasonable.

.30 Amounts that ultimately will be realized by an entity are dependent on a number of factors, many of which may be unknown at the time the estimate is first made. Further, even if two entities had exactly the same clinical and coding experience, amounts that each might realize could vary materially due to factors outside of their control (for example, differing application of payment rules by fiscal intermediaries, legal interpretations of courts, local enforcement initiatives, timeliness of reviews, and quality of documentation). As a result, because estimates are a matter of judgment and their ultimate accuracy depends on the outcome of future events, different entities in seemingly similar circumstances may develop materially different estimates. The auditor may conclude that both estimates are reasonable in light of the differing assumptions.

Inappropriate Accounting Principles

.31 As previously stated, the auditor also is responsible for determining whether financial statement assertions and disclosures related to accounting estimates are presented in accordance with GAAP. When the financial statements are materially affected by a departure from GAAP, the auditor should express a qualified or adverse opinion in accordance with AU-C section 705. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.32 Valuation allowances should be recorded so that revenues are not recognized until the revenues are realizable. Valuation allowances are not established based on the provisions of FASB ASC 450, *Contingencies*. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.33 Indicators of possible measurement bias related to valuation allowances include

- valuation allowances that are not associated with any particular program, issue, or time period (for example, cost-report year or year the service was rendered).
- distorted earnings trends over time (for example, building up specific or unallocated valuation allowances in profitable years and drawing them down in unprofitable years).

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Inadequate Disclosure

.34 If the auditor concludes that a matter involving a risk or an uncertainty is not adequately disclosed in the financial statements in accordance with GAAP, the auditor should express a qualified or adverse opinion in accordance with AU-C section 705. FASB ASC 275-10-50 provides guidance on the information that reporting entities should disclose regarding risks and uncertainties existing as of the date of the financial statements. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.35 In the health care environment, it is almost always at least reasonably possible that estimates regarding third-party payments could change in the near term as a result of one or more future confirming events (for example, regulatory actions reflecting local or national audit or enforcement initiatives). For most entities with significant third-party revenues, the effect of the change could be material to the financial statements. Where material exposure exists, the uncertainty regarding revenue realization should be disclosed in the notes to the financial statements. Because representations from legal counsel are often key audit evidence in evaluating the reasonableness of management's estimates of potential future adjustments, the inability of an attorney to form an opinion on matters about which he or she has been consulted may be indicative of an uncertainty that should be specifically disclosed in the financial statements. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.36 Differences between original estimates and subsequent revisions might arise due to final settlements, ongoing audits and investigations, or passage of time in relation to the statute of limitations. FASB ASC 954-605 requires that these differences be included in the statement of operations in the period in which the revisions are made and disclosed. Such differences are not treated as prior period adjustments unless they meet the criteria for prior period adjustments as set forth in FASB ASC 250-10-45. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.37 Disclosures such as the following may be appropriate:

General Hospital (the Hospital) is a (not-for-profit, for-profit, or governmental hospital or health care system) located in (City, State). The Hospital provides health care services primarily to residents of the region.

Net patient service revenue is reported at estimated net realizable amounts from patients, third-party payors, and others for services rendered and includes estimated retroactive revenue adjustments due to future audits, reviews, and investigations. Retroactive adjustments are considered in the recognition of revenue on an estimated basis in the period the related services are rendered, and such amounts are adjusted in future periods as adjustments become known or as years are no longer subject to such audits, reviews, and investigations.

Revenue from the Medicare and Medicaid programs accounted for approximately 40 percent and 10 percent, respectively, of the Hospital's net patient revenue for the year ended 1999. Laws and regulations governing the Medicare and Medicaid programs are extremely complex and subject to interpretation. As a result, there is at least a reasonable possibility that recorded estimates will change by a material amount in the near term. The 1999 net patient service revenue increased approximately \$10,000,000 due

31,444

Statements of Position

to removal of allowances previously estimated that are no longer necessary as a result of final settlements and years that are no longer subject to audits, reviews, and investigations. The 1998 net patient service revenue decreased approximately \$8,000,000 due to prior-year retroactive adjustments in excess of amounts previously estimated.

Appendix — Other Considerations Related to Government Investigations

In recent years, the federal government and many states have aggressively increased enforcement efforts under Medicare and Medicaid anti-fraud and abuse legislation. Broadening regulatory and legal interpretations have significantly increased the risk of penalties for providers; for example, broad interpretations of “false claims” laws are exposing ordinary billing mistakes to scrutiny and penalty consideration. In such circumstances, evaluating the adequacy of accruals for or disclosure of the potential effects of noncompliance with laws and regulations in the financial statements of health care entities is a matter that is likely to require a high level of professional judgment.

As previously discussed in this Statement of Position, the far-reaching nature of alleged fraud and abuse violations creates an uncertainty with respect to the valuation of revenues, because future allegations of noncompliance with laws and regulations could, if proven, result in a subsequent reduction of revenues. In addition, management makes provisions in the financial statements and disclosures for any contingent liabilities associated with fines and penalties due to violations of such laws. Financial Accounting Standards Board *Accounting Standards Codification* 450, *Contingencies*, provides guidance in evaluating contingent liabilities, such as fines and penalties under applicable laws and regulations. Estimates of potential fines and penalties are not accrued unless their payment is probable and reasonably estimable.

The auditor’s expertise is in accounting and auditing matters rather than operational, clinical, or legal matters. Accordingly, the auditor’s procedures focus on areas that normally are subject to internal control relevant to financial reporting. However, the further that suspected noncompliance with laws and regulations is removed from the events and transactions ordinarily reflected in the financial statements, the less likely the auditor is to become aware of the suspected noncompliance, to recognize its possible noncompliance with laws and regulations, and to evaluate the effect on the financial statements. For example, determining whether a service was medically necessary, obtained through a legally appropriate referral, properly performed (including using only approved devices, rendered in a quality manner), adequately supervised, accurately documented and classified, or rendered and billed by nonsanctioned individuals typically is not within the auditor’s professional expertise. As a result, an audit in accordance with generally accepted auditing standards (GAAS) is not designed to detect such matters.

Further, because of the inherent limitations of an audit, an audit conducted in accordance with GAAS provides no assurance that all instances of noncompliance with laws and regulations will be detected.¹

Nor does an audit under GAAS include providing any assurance on an entity’s billings or cost report. In fact, cost reports typically are not prepared and submitted until after the financial statement audit has been completed.

Certain audit procedures, although not specifically designed to detect noncompliance with laws and regulations, may bring possible noncompliance with laws and regulations to an auditor’s attention. When suspected noncompliance is detected, the auditor’s responsibilities are addressed in AU-C section 250, *Consideration of*

¹ Even when auditors undertake a special engagement designed to attest to compliance with certain provisions of laws, regulations, contracts, and grants (for example, an audit in accordance with Office of Management and Budget Circular A-133), the auditor’s procedures do not extend to testing compliance with laws and regulations related to Medicare and Medicaid fraud and abuse.

Laws and Regulations in an Audit of Financial Statements (AICPA, *Professional Standards*). Disclosure of noncompliance with laws and regulations to parties other than the client's senior management and its audit committee or board of directors is not ordinarily part of the auditor's responsibility, and such disclosure would be precluded by the auditor's ethical or legal obligation of confidentiality, unless the matter affects the auditor's opinion on the financial statements.² [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

² Paragraph .A28 of AU-C section 250, *Consideration of Laws and Regulations in an Audit of Financial Statements* (AICPA, *Professional Standards*), discusses circumstances in which a duty to notify parties outside the entity of identified or suspected noncompliance with laws and regulations may exist. [Footnote revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

Section 14,370

Statement of Position 01-3 Performing Agreed-Upon Procedures Engagements That Address Internal Control Over Derivative Transactions as Required by the New York State Insurance Law

June 15, 2001

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Reporting on Internal Control Over Derivative Transactions at Insurance Entities Task Force of the AICPA Auditing Standards Board (ASB) to provide guidance regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to agreed-upon procedures engagements performed to comply with the requirements of Section 1410 (b)(5) of the New York State Insurance Law, as amended (the law), which addresses the assessment of internal control over derivative transactions as defined in Section 1401(a) of the law, and Section 178.5 of Regulation No. 163.

This SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of SSAEs in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the ASB. The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Introduction and Background

.01 In 1999 and 2000, the New York State Insurance Department (the department) issued regulations to implement the New York Derivative Law (the law) which amends Article 14 of the State of New York Insurance Law, effective July 1, 1999. The law establishes certain requirements for domestic life insurers, domestic property and casualty insurers, domestic reciprocal insurers, domestic mortgage guaranty insurers, domestic cooperative property and casualty insurance corporations, and domestic financial guaranty insurers. Foreign insurers engaging in derivative transactions and derivative instruments are subject to and required to comply with all of the provisions of the law. However, a foreign insurer may enter into other derivative transactions provided the insurer meets certain conditions of its domestic state law. In this document, an insurer covered by the law is referred to as an *insurance company*.

.02 The requirements of the law include the following:

- Approval by the board of directors, or a similar body, of derivative transactions
- Submission of a derivative use plan (the DUP) to the Department
- Assessment by an independent certified public accountant (CPA) of the insurance company's internal control over derivative transactions

.03 In addition to the law, the Department also established Regulation No. 163, "Derivative Transactions" (11 NYCRR 178) (the Regulation), which provides guidance in implementing the law. Section 178.5 of Regulation No. 163 states the following.

As set forth in section 1410 (b)(5) of the Insurance Law, an insurer engaging in derivative transactions shall be required to include, as part of the evaluation of accounting procedures and internal controls required to be filed pursuant to section 307 of the Insurance Law, a statement describing the assessment by the independent certified public accountant of the internal controls relative to derivative transactions. The purpose of this part of the evaluation is to assess the adequacy of the internal controls relative to the derivative transactions being conducted by the insurer. Such an assessment shall be made whether or not the derivative transactions are material in relation to the insurer's financial statements. The independent certified public accountant shall issue a report regarding internal controls relative to derivative transactions, whether or not deficiencies in internal controls would lead to a "reportable condition," as that term is used in auditing standards adhered to by certified public accountants. An assessment in the form of an "agreed upon procedures engagement" or an "attestation engagement," as those terms are used in auditing standards adhered to by certified public accountants, may be used to meet this requirement. If an "agreed upon procedures engagement" is performed, the procedures used shall be those that management and the independent certified public accountant determine are appropriate to meet the purpose of the assessment as set forth above.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[.04-.05] [Paragraphs deleted, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.06 An agreed-upon procedures engagement or other attestation engagement may be used to satisfy the requirements of the law. However, this Statement of Position (SOP) only describes an agreed-upon procedures engagement. It does not address any other attestation engagements that might be performed, such as an examination-level attestation engagement. For guidance on performing such other attestation engagements, see AT section 101, *Attest Engagements* (AICPA, *Professional Standards*). [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Applicability

.07 This SOP was developed to provide practitioners with guidance on performing agreed-upon procedures engagements that address an insurance company's internal control over derivative transactions to meet the requirements of the law. The engagement described in this SOP is designed only to satisfy the requirements of the law. The procedures, as set forth in this SOP, are not necessarily appropriate for use in any other engagement. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.08 Although the Department has indicated that an agreed-upon procedures engagement pursuant to this SOP can be used to satisfy the requirements for an assessment of internal control over derivative transactions, the Department has not agreed to the sufficiency of the procedures included in this SOP for their purposes.

The Law

Definition of a Derivative

.09 Article 14 of the law defines a derivative instrument as including caps, collars, floors, forwards, futures, options, swaps, swaptions, and warrants.

.10 The following definitions are included in the law and are applicable when performing the agreed-upon procedures engagement described in this SOP.

Cap—An agreement obligating the seller to make payments to the buyer with each payment based on the amount by which a reference price or level or the performance or value of one or more underlying interests exceeds a predetermined number, sometimes called the strike rate or strike price.

Collar—An agreement to receive payments as the buyer of an option, cap, or floor and to make payments as the seller of a different option, cap, or floor.

Floor—An agreement obligating the seller to make payments to the buyer in which each payment is based on the amount by which a predetermined number, sometimes called the floor rate or price, exceeds a reference price, level, performance, or value of one or more underlying interests.

Forward—An agreement (other than a future) to make or take delivery in the future of one or more underlying interests, or effect a cash settlement, based on the actual or expected price, level, performance, or value of such underlying interests, but shall not mean or include spot transactions effected within customary settlement periods, when-issued purchases, or other similar cash market transactions.

Future—An agreement traded on a futures exchange, to make or take delivery of, or effect a cash settlement based on the actual or expected price, level, performance, or value of one or more underlying interests.

Option—An agreement giving the buyer the right to buy or receive (a *call option*), sell or deliver (a *put option*), enter into, extend or terminate, or effect a cash settlement based on the actual or expected price, spread, level, performance, or value of one or more underlying interests.

Swap—An agreement to exchange or to net payments at one or more times based on the actual or expected price, yield, level, performance, or value of one or more underlying interests.

Swaption—An option to purchase or sell a swap at a given price and time or at a series of prices and times. A swaption does not mean a swap with an embedded option.

Warrant—An instrument that gives the holder the right to purchase or sell the underlying interest at a given price and time or at a series of prices and times outlined in the warrant agreement.

.11 Article 14 of the law permits an insurance company to enter into *replication transactions* provided that certain conditions set forth in the law are met. A replication transaction is defined in the law as follows.

A derivative transaction or combination of derivative transactions effected either separately or in conjunction with cash market investments included in the insurer's investment portfolio in order to replicate the investment characteristic of another authorized transaction, investment or instrument and/or operate as a substitute for cash market transactions. A derivative transaction entered into by the insurer as a hedging transaction or income generation transaction authorized pursuant to this section [of the law] shall not be considered a replication transaction.

Derivative Use Plan

.12 An insurance company entering into derivative transactions must file a DUP with the Department. The DUP generally should include the following items:¹

- A certified copy of the authorization by the insurer's board of directors, or other similar body, to file the DUP, which should include authorization of derivative transactions and an assurance that individuals responsible for derivative transactions, processes, and controls have the necessary experience and knowledge
- A section on management oversight standards including a discussion of the following:
 - Limits on identified risks
 - Controls over the nature and amount of identified risks
 - Processes for identifying such risks
 - Processes for documenting, monitoring, and reporting risk exposure
 - Internal audit and review processes that ensure integrity of the overall risk management process
 - Quarterly reporting to the board of directors
 - The establishment of risk tolerance levels
 - Management's measurement and monitoring against those levels

¹ Reference should be made to the law and the Regulation for specific details and exact requirements.

- A section on internal control and reporting including a discussion of the following:
 - The existence of controls over the valuation and effectiveness of derivative instruments
 - Credit risk management
 - The adequacy of professional personnel
 - Technical expertise and systems
 - Management reporting
 - The review and legal enforceability of derivative contracts between parties
- A section on documentation and reporting requirements which shall for each derivative transaction document the following:
 - The purpose of the transaction
 - The assets or liabilities to which the transaction relates
 - The specific derivative instrument used
 - For over-the-counter (OTC) transactions, the name of the counterparty and counterparty exposure amount
 - For exchange traded transactions, the name of the exchange and the name of the firm handling the trade
- Written guidelines to be followed in engaging in derivative transactions. The guidelines should include or address the following:
 - The type, maturity, and diversification of derivative instruments
 - The limitation on counterparty exposures, including limitations based on credit ratings
 - The limitations on the use of derivatives
 - Asset and liability management practices with respect to derivative transactions
 - The liquidity needs and the insurance company's capital and surplus as it relates to the DUP
 - The policy objectives of management specific enough to outline permissible derivative strategies
 - The relationship of the strategies to the insurer's operations
 - How the strategies relate to the insurer's risk
 - A requirement that management establish and execute management oversight standards as required by the law
 - A requirement that management establish and execute internal control and reporting standards as required by the law
 - A requirement that management establish and execute documentation and reporting standards as required by the law
- Guidelines for the insurer's determination of acceptable levels of basis risk, credit risk, foreign currency risk, interest rate risk, market risk, operational risk, and option risk
- A requirement that the board of directors and senior management comply with risk oversight functions and adhere to laws, rules, regulations, prescribed practices, or ethical standards

Related Professional Standards

AT Section 201, *Agreed-Upon Procedures Engagements*

.13 Agreed-upon procedures engagements performed to meet the requirements of the law are to be performed in accordance with AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*). As described in paragraph .03 of AT section 201, an agreed-upon procedures engagement is one in which a practitioner is engaged by a client to issue a report of findings based on specific procedures performed on the subject matter. Not all of the provisions of AT section 201 are discussed herein. Rather, this SOP includes guidance to assist practitioners in the application of selected aspects of AT section 201.

.14 Paragraph .06 of AT section 201 (states, in part, that the practitioner may perform an agreed-upon procedures engagement provided that, “...(c) the practitioner and the specified parties agree upon the procedures performed or to be performed by the practitioner; and (d) the specified parties take responsibility for the sufficiency of the agreed-upon procedures for their purposes.”

.15 As previously stated, Regulation No. 163 states that an agreed-upon procedures engagement may be used to meet the requirement for an independent CPA’s assessment of internal control over derivative transactions. When performing an agreed-upon procedures engagement under this SOP, practitioners should not eliminate any of the procedures presented in appendix B, “Agreed-Upon Procedures for Testing Internal Control Over Derivative Transactions” (paragraph .37), of this SOP or reduce the extent of the tests. The Department or the insurance company may request that additional procedures be performed and the practitioner may agree to perform such procedures. In those circumstances, it would be expected that the additional procedures would be performed in the context of a separate agreed-upon procedures engagement.

.16 As previously noted, the Department has not agreed to the sufficiency of the procedures included in this SOP for their purposes. *Therefore, the Department should not be named as a specified party to the agreed-upon procedures report, and the use of a practitioner’s agreed-upon procedures report, issued in accordance with this SOP, should be restricted to the board of directors and management of the insurance company.* Although the Department is not a specified party, footnote 15 of AT section 101 states the following, in part:

... a regulatory agency as part of its oversight responsibility for an entity may require access to restricted-use reports in which they are not named as a specified party.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

AU-C section 501, *Audit Evidence—Specific Considerations for Selected Items*

.17 AU-C section 501, *Audit Evidence—Specific Considerations for Selected Items* (AICPA, *Professional Standards*), addresses specific considerations by the auditor in obtaining sufficient appropriate audit evidence, in accordance with AU-C section 330, *Performing Audit Procedures in Response to Assessed Risks and Evaluating the Audit Evidence Obtained* (AICPA, *Professional Standards*), AU-C section 500, *Audit Evidence* (AICPA, *Professional Standards*), and other relevant AU-C sections in AICPA *Professional Standards*, regarding the

valuation of investments in securities and derivative instruments. A practitioner performing the agreed-upon procedures engagement described in this SOP may find it helpful to consider the guidance in paragraphs .01–.10 of AU-C section 501 and the related Audit Guide *Special Considerations in Auditing Financial Instruments*. AU-C section 620, *Using the Work of an Auditor's Specialist* (AICPA, *Professional Standards*), addresses the auditor's responsibilities related to using the work of an individual or organization possessing expertise in a field other than accounting or auditing to assist the auditor in obtaining sufficient appropriate audit evidence. A practitioner should consider the guidance in AU-C section 620 when the practitioner plans to use the work of a specialist in securities and derivative instruments to perform the agreed-upon procedures described in this SOP. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.18 The procedures in this SOP are not designed to meet the requirements of generally accepted auditing standards for an audit of the financial statements of an entity that engages in derivative transactions. In addition, performing the audit procedures described in AU-C section 501 would not meet the requirements of this SOP. [Revised, December 2012, to reflect conforming changes necessary due to the issuance of SAS Nos. 122–126.]

.19 In an audit of financial statements, the auditor may determine that he or she will not perform procedures related to derivative transactions because they are not material to the financial statements. There is no requirement to perform the procedures described in this SOP when performing an audit of financial statements. In contrast, the law requires that an assessment of internal control be performed whether or not the derivative transactions are material to the insurer's financial statements. Accordingly, a decision not to perform procedures related to derivative transactions in an audit of financial statements, because of immateriality, would not alleviate the requirement to perform the agreed-upon procedures engagement described herein.

Procedures to Be Performed

.20 The agreed-upon procedures to be performed are directed toward tests of controls over derivative transactions that occurred during the period covered by the practitioner's report. Any projection of the practitioner's findings to the future is subject to the risk that because of change, the controls may no longer be in existence, suitably designed, or operating effectively. Also, the potential effectiveness of controls over derivative transactions is subject to inherent limitations and, accordingly, errors or fraud may occur and not be detected.

.21 The procedures to be performed in the agreed-upon procedures engagement described in this SOP are presented in appendix B (paragraph .37). The procedures have been designed so that the findings resulting from the application of the procedures can be recorded in a tabular format. The three options available to the practitioner for expressing the findings for each procedure are *No Exception*, *Exception*, or *N/A* (not applicable). If a procedure is not applicable to a particular insurance company, the procedure should be marked *N/A* rather than deleted from the report. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.22 Section 1 of appendix B (paragraph .37) of this SOP is applicable to all insurance companies that enter into derivative transactions. Therefore, the

procedures in section 1 are to be performed in all engagements performed in accordance with this SOP. Sections 2–10 of appendix B (paragraph .37) of this SOP each address a specific type of derivative. The procedures in those sections are to be performed only if the insurance company entered into derivative transactions of the type covered by the section. Sections that address types of derivatives not used by the insurance company should not be attached to the agreed-upon procedures report.

.23 If any portion of a procedure results in an exception, the findings for that entire procedure should be recorded as an exception and described in the section “Description of Exceptions If Any,” at the end of each section. The practitioner should provide a brief factual explanation for each exception that will enable the specified parties to understand the nature of the findings resulting in the exception. If management informs the practitioner that the condition giving rise to the exception was corrected by the date of the practitioner’s report, the practitioner’s explanation of the exception may include that information; for example, “Management has advised us that the condition resulting in the exception was corrected on Month X, 20XX. We have performed no procedures with respect to management’s assertion.”

.24 A practitioner may perform significant portions of the agreed-upon procedures engagement before the end of the period covered by the report. If, during that time, the practitioner identifies conditions that result in an exception in one or more agreed-upon procedures, he or she should report the exception in the findings section of the agreed-upon procedures report, even if management corrects the condition prior to the end of the period.

.25 The law requires the insurance company to provide the Department with a statement describing the independent CPA’s assessment of the insurance company’s internal control over derivative transactions. It also requires the insurance company to include a description of any remedial actions taken or proposed to be taken to correct any deficiencies identified by the independent CPA.

.26 Paragraph .40 of AT section 201 states the following.

The practitioner need not perform procedures beyond the agreed-upon procedures. However, in connection with the application of agreed-upon procedures, if matters come to the practitioner’s attention by other means that significantly contradict the subject matter (or written assertion related thereto) referred to in the practitioner’s report, the practitioner should include this matter in his or her report. For example, if during the course of applying agreed-upon procedures regarding an entity’s internal control, the practitioner becomes aware of a material weakness by means other than performance of the agreed-upon procedures, the practitioner should include this matter in his or her report.

.27 A practitioner has no obligation to perform procedures beyond the agreed-upon procedures included in appendix B (paragraph .37) of this SOP. However, if information indicating a weakness in internal control over derivative transactions comes to the practitioner’s attention by other means, such information should be included in the practitioner’s report. This would apply to conditions or events occurring during the subsequent-events period (subsequent to the period covered by the practitioner’s report but prior to the date of the practitioner’s report) that either contradict the findings in the report or that would have resulted in the reporting of an exception by the practitioner if that condition or event had existed during the period covered by the report. However, the practitioner has no responsibility to perform any procedure to detect such conditions or events.

Establishing an Understanding With the Client

.28 In accordance with paragraph .10 of AT section 201, the practitioner should establish an understanding with the client regarding the services to be performed. Such an understanding reduces the risk that the client may misinterpret the objectives and limitations of an agreed-upon procedures engagement performed to meet the regulatory requirements of the law. Such an understanding also reduces the risk that the client will misunderstand its responsibilities and the responsibilities of the practitioner. The practitioner should document the understanding in the working papers, preferably through a written communication with the client (an *engagement letter*). The communication should be addressed to the client. Matters that might be included in such an understanding are the following:

- A statement confirming that an agreed-upon procedures engagement is to be performed to meet the requirements of Section 1410(b)(5) of the law
- A statement identifying the procedures to be performed as those set forth in this SOP
- A statement identifying the client as the specified party to the agreed-upon procedures report
- A statement acknowledging the client's responsibility for the sufficiency of the procedures in the SOP
- A statement acknowledging that the practitioner makes no representation regarding the sufficiency of the procedures in the SOP
- A statement describing the responsibilities of the practitioner, including but not limited to the responsibility to perform the agreed-upon procedures and to provide the client with a report, and the circumstances under which the practitioner may decline to issue a report
- A statement indicating that the engagement will be conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants (AICPA)
- A statement indicating that an agreed-upon procedures engagement does not constitute an examination, the objective of which would be the expression of an opinion on the internal control over derivative transactions, and that if an examination were performed, other matters might come to the practitioner's attention
- A statement indicating that the practitioner will not express an opinion or any other form of assurance
- A statement describing the client's responsibility to comply with the law and the client's responsibility for the design and operation of effective internal control over derivative transactions
- A statement describing the client's responsibility for providing accurate and complete information to the practitioner
- A statement indicating that the practitioner has no responsibility for the completeness or accuracy of the information provided to the practitioner
- A statement restricting the use of the report to the client
- A statement describing any arrangements to involve a specialist

Management Representations

.29 Although AT section 201 does not require a practitioner to obtain a representation letter from management in an agreed-upon procedures engagement, when performing the engagement described in this SOP, it is recommended that the practitioner obtain such a letter signed by the appropriate members of management, including the highest ranking officer responsible for internal control over derivative transactions. Management's refusal to furnish written representations that the practitioner has determined to be appropriate for the engagement constitutes a limitation on the performance of the engagement that requires either modification of the report or withdrawal from the engagement. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.30 The representations that a practitioner deems appropriate will depend on the specific nature of the engagement; however, they generally include the following representations from management:

- A statement acknowledging responsibility for establishing and maintaining effective internal control over derivative transactions
- A statement that there have been no errors or fraud that might indicate a weakness in the internal control over derivative transactions
- A statement that management has disclosed to the practitioner all significant deficiencies in the design or operation of the internal control over derivative transactions
- A statement that management has disclosed to the practitioner any communications from regulatory agencies, internal auditors, and other practitioners or consultants relating to the internal control over derivative transactions
- A statement that management has made available to the practitioner all information they believe is relevant to the internal control over derivative transactions
- A statement that management has responded fully to all inquiries made by the practitioner during the engagement
- A statement that no events have occurred subsequent to the date as of which the procedures were applied that would require adjustment to or modification to responses to the agreed-upon procedures

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.31 An illustrative representation letter is presented in appendix C, "Illustrative Management Representation Letter" (paragraph .38), of this SOP. For additional information regarding management's representations in an agreed-upon procedures engagement, see paragraphs .37–.39 of AT section 201.

Restriction on the Performance of Procedures

.32 As previously stated, a practitioner should not agree to do either of the following.

- a. Eliminate any of the procedures presented in appendix B (paragraph .37) of this SOP, unless a section is not applicable because the insurance company did not enter into derivative transactions addressed by the section.
- b. Reduce the extent of the tests in an applicable section.

.33 If circumstances impose restrictions on the performance of the agreed-upon procedures presented in appendix B (paragraph .37) of this SOP, the practitioner should describe the restriction(s) in his or her report or withdraw from the engagement.

Dating the Report

.34 The date of completion of the agreed-upon procedures should be used as the date of the practitioner's report.

Effective Date

.35 This SOP is effective upon issuance and is applicable only to agreed-upon procedures engagements that address internal control over derivative transactions required by the law.

Appendix A — Illustrative Agreed-Upon Procedures Report

The following is an illustrative agreed-upon procedures report based on the guidance in AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*).

Independent Accountant's Report on Applying Agreed-Upon Procedures

To the Management of ABC Insurance Company:

We have performed the applicable procedures enumerated in the American Institute of Certified Public Accountants' Statement of Position (SOP), 01-3, *Performing Agreed-Upon Procedures Engagements That Address Internal Control Over Derivative Transactions as Required by the New York State Insurance Law*, which were agreed to by ABC Insurance Company, solely to assist you in complying with the requirements of Section 1410 (b)(5) of the New York State Insurance Law, as amended (the law), which addresses the assessment of internal control over derivative transactions as defined in Section 1401(a) of the law, and Section 178.5 of Regulation No. 163 during the year ended December 31, 20XX. Management of ABC Insurance Company is responsible for maintaining effective internal control over derivative transactions. This agreed-upon procedures engagement was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of ABC Insurance Company. Consequently, we make no representation regarding the sufficiency of the procedures described in the attached appendix either for the purpose for which this report has been requested or for any other purpose.

The procedures performed and the findings are included in the attached appendix.

We were not engaged to and did not conduct an examination, the objective of which would be the expression of an opinion on the internal control over derivative transactions of ABC Insurance Company for the year ended December 31, 20XX. Accordingly, we do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of the management and Board of Directors of ABC Insurance Company and is not intended to be and should not be used by anyone other than these specified parties.

[Date]

Appendix B — Agreed-Upon Procedures for Testing Internal Control Over Derivative Transactions

The following table lists the types of derivative transactions permitted by the New York Derivative Law (the law). We inquired of management of the insurance company as to whether the insurance company used the type of derivative addressed by each section, and marked the column entitled “Is the Section Applicable?” either *Yes* or *No* based on management’s response to the inquiry. For each type of derivative with a *Yes* response, we performed the procedures in the applicable section and attached the section to the report. For each type of derivative with a *No* response, we did not perform procedures nor did we attach the applicable section to the report. We compared the types of derivative reported by the insurance company in its “Schedule of Derivative Transactions” included in the Annual Statement with the types of derivatives listed in the following table and found that the types of derivatives included in the schedule were marked *Yes* in the table.

Attachments to the Report

Section 1 – All Derivative Types

Findings

Procedures

<u><i>No</i></u>			
<u><i>Exception</i></u>	<u><i>Exception</i></u>		<u><i>N/A</i></u>

The following procedures were performed to test controls applicable to all derivative transactions. The procedures were applied to the internal control over derivative transactions in existence during the year ended December 31, 20XX

Documentation of Controls, Policies, and Procedures

1. Read the insurance company’s derivative use plan (DUP), amendments thereto, and its documentation of controls, policies, and procedures that describe internal control over derivative transactions and found that the DUP and the documentation of controls, policies, and procedures include a description of controls that address the following:
 - a. Systems or processes for the periodic valuation of derivative transactions including mechanisms for compensating for any lack of independence in valuing derivative positions (Valuation)
 - b. Systems or processes for determining whether a derivative instrument used for hedging or replication has been effective (Effectiveness)
 - c. Credit risk management systems or processes for over-the-counter (OTC) derivative transactions that measure credit risk exposure using the counterparty exposure amount and policies for the establishment of collateral arrangements with counterparties (Credit Risk Management)

d. Management assessment of the adequacy and technical expertise of personnel associated with derivative transactions and systems to implement and control investment practices involving derivatives (Professional Competence)	_____	_____	_____
e. Systems or processes for regular reports to management, segregation of duties, and internal review procedures (Reporting)	_____	_____	_____
f. Procedures for conducting initial and ongoing legal reviews of derivative transactions including assessments of contract enforceability (Legal Reviews)	_____	_____	_____

Nontransaction-Specific Procedures

2. Read the minutes of meetings of the board of directors and found an indication that the board of directors of the insurance company approved the DUP and any amendments thereto.	_____	_____	_____
3. Inquired of management as to whether the DUP and any amendments thereto were approved by the New York State Insurance Department and was advised that the DUP and any amendments thereto were approved.	_____	_____	_____
4. Read the minutes of meetings of the board of directors and found an indication that the board of directors of the insurance company approved the commitment of financial resources determined by management to be sufficient to accomplish the objectives of the insurance company's DUP.	_____	_____	_____

(continued)

Findings

Procedures

No
Exception Exception N/A

This procedure does not provide an assessment of or assurance about the adequacy of the resources determined by management to be sufficient to accomplish the objectives of the DUP.

In performing the following procedures, the practitioner frequently will find that management has designated and will have in place limits, controls, or procedures that are more restrictive than those approved for use in the DUP

5. For the year ended December 31, 20XX, inquired of management and was advised that—

a. There was monitoring of derivative transactions by a control staff, such as internal audit or other internal review group, that is independent of derivatives trading activities.

b. There were procedures in place for derivative personnel to obtain, prior to exceeding limits prescribed by management, at least oral approval from members of senior management who are independent of derivatives trading activities.

c. There were procedures in place for senior management to address excesses related to management-established limits and divergences from management-approved derivative strategies, and that such management has authority to grant exceptions to derivatives limits.

d. There were procedures in place requiring that management be informed when limits prescribed in the DUP were exceeded and for management to approve corrective action(s) in such circumstances.

<u>Procedures</u>	<u>Findings</u>		
	<u>No Exception</u>	<u>Exception</u>	<u>N/A</u>
e. There were procedures in place for the accurate transmittal of derivatives positions to the risk measurement systems when management had implemented risk management systems.	_____	_____	_____
f. There were procedures in place for the performance of appropriate reconciliations to ensure data integrity across the full range of derivatives, including any new or existing derivatives that may be monitored apart from the main processing networks.	_____	_____	_____
g. There were procedures in place for risk managers and senior management to define constraints on derivative activities to ensure compliance with the DUP and to justify excesses with respect to specified management limits.	_____	_____	_____
h. There were procedures in place for senior management, an independent group, or an individual that management designated to perform at least an annual assessment of the identified controls and financial results of the derivative activities to determine that controls were effectively implemented and that the insurance company's business objectives and strategies were achieved.	_____	_____	_____
i. There were procedures in place for a review of limits in the context of changes in strategy, risk tolerance of the insurance company, and market conditions.	_____	_____	_____

Reporting to the Board of Directors or Committee Thereof

The law contains provisions regarding management oversight of derivative and replication transactions.

- | | | | | |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------|-------|
| 6. | Read the minutes of the board of directors meetings or committees thereof and found an indication that the board of directors or committee thereof received, at least quarterly, a report regarding derivative and replication transactions. | _____ | _____ | _____ |
| 7. | Read one quarterly report referred to in procedure 6 and found that the report contained— | | | |
| | a. A list, or appropriate summaries, of the following: | | | |
| | (1) Derivative transactions during the period | _____ | _____ | _____ |
| | (2) Derivative transactions outstanding at the end of the period | _____ | _____ | _____ |
| | (3) Unrealized gains or losses on open derivative positions | _____ | _____ | _____ |
| | (4) Derivative transactions closed during the period | _____ | _____ | _____ |
| | b. A summary of the performance of the derivatives in comparison to the objective of the derivative transactions | _____ | _____ | _____ |
| | c. An evaluation of the risks and benefits of the derivative transactions | _____ | _____ | _____ |
| | d. A summary of the amount, type, and performance of replication transactions | _____ | _____ | _____ |

Findings

Procedures

No
Exception Exception N/A

- 8. If the report referred to in the preceding procedure was received, reviewed, and approved by a committee of the board of directors, read the minutes of the board of directors meeting and found an indication that a report of such committee was reviewed at the next board of directors meeting.

- 9. Read the board of directors minutes and found an indication that the board of directors received a report during the year describing the level of knowledge and experience of individuals conducting, monitoring, controlling, and auditing derivative and replication transactions.

Derivative and Replication Limitations

The law contains limits on hedging and replication transactions. An insurance company may enter into hedging or replication transactions if, as a result of and after giving effect to the transaction, the derivative investments and replication investments do not exceed certain specified percentages of admitted assets. The following procedures were performed using one analysis per quarter prepared by the insurance company to monitor compliance with the limitations.

- 10. Obtained and read the insurance company’s analysis used to test limitations on investments in derivatives and replication transactions and found that the amounts shown in the analysis indicated that—
 - a. The aggregate statement value of options, swaptions, caps, floors, and warrants purchased was not in excess of seven and one-half percent of the insurance company’s admitted assets, per the last annual statement.

(continued)

Findings

<u>Procedures</u>	<u>No</u> <u>Exception</u>	<u>Exception</u>	<u>N/A</u>
b. The aggregate statement value of options, swaptions, caps, and floors written was not in excess of three percent of admitted assets.	_____	_____	_____
c. The aggregate potential exposure of collars, swaps, forwards, and futures entered into and options, swaptions, caps, and floors written was not in excess of six and one-half percent of admitted assets.	_____	_____	_____
d. The aggregate statement value of all assets being replicated did not exceed ten percent of the insurance company's admitted assets.	_____	_____	_____
e. The extent of derivative transactions did not exceed the insurance company's internal limitations or that any excess had been specifically authorized by management.	_____	_____	_____
11. Inquired of the preparer of the analysis read in procedure 10 and was advised that the analysis excluded transactions entered into to hedge the currency risk of investments denominated in a currency other than United States dollars.	_____	_____	_____
12. Obtained and read the insurance company's analysis used to test limitations on counterparty exposure, as defined in section 178.3 (e) of the Regulation, and found that the report indicated that—			
a. The counterparty exposure under one or more derivative transactions for any single counterparty, other than a "qualified counterparty," was not in excess of one percent of the insurance company's admitted assets.	_____	_____	_____

Findings

Procedures

No
Exception Exception N/A

b. The counterparty exposure under one or more derivative transactions for all counterparties, other than qualified counterparties, was not in excess of three percent of the insurance company’s admitted assets.

13. If the insurance company required collateral arrangements with the counterparties, obtained and read the insurance company’s analysis used to monitor the adequacy of the collateral held in accordance with the terms of the arrangement and found that the amount of the collateral held as shown on the analysis was equal to or in excess of the amount to be held.

Description of Exceptions if Any

Procedure Number

Description of Exception

Section 2—Cap Contracts

Findings

Procedures

No
Exception Exception N/A

Performed the following procedures on selected cap contracts to test internal control over cap transactions. Selected five percent of each type of cap transaction (that is, purchases [premium disbursements], sales [premium receipts], and closeouts [closings and settlements of the position]), with the selections distributed throughout the year. If five percent of a given type of transaction exceeded 40, the number of items selected for that type of transaction was limited to 40. If five percent of a type of transaction resulted in less than four items, selected four or fewer items that represented all the transactions of that type.

Reporting

- | | | | |

Effectiveness of Caps Used As Hedges and in Replication Transactions

- 27. Read the insurance company's documentation of effectiveness and found that the insurance company evaluated the effectiveness of the cap as a hedge or replication in accordance with the policies regarding effectiveness.
- 28. If the cap was no longer effective as a hedge or replication, compared the action taken by the insurance company with the action required by the accounting policies and procedures and found that the action taken was consistent with the accounting policy.

Legal Review

- 29. Read documentation indicating that the legal department reviewed the cap agreement to assess contract compliance with the DUP and enforceability.
- 30. Read documentation indicating that the legal department updated its assessment of agreement enforceability at least annually.

Valuation

- 31. Obtained the insurance company's policies and procedures for valuing caps and found that the insurance company determined the fair value of the cap in accordance with the policy described in the insurance company's procedures for the valuation of caps.
- 32. Read documentation supporting the fair value of the cap and found that the fair value was either (a) obtained from an independent source, (b) checked against an independent source, or (c) calculated internally by an authorized person.

Section 3—Collar Contracts

Findings

Procedures

No
Exception Exception N/A

Performed the following procedures on selected collar contracts to test internal control over collar transactions. Selected five percent of each type of collar transaction (that is, executions [entering into a collar transaction in which the net position at inception may result in either no cash outlay, cash received, or cash disbursed] and closeouts [closings and settlements of the position]), with the selections distributed throughout the year. If five percent of a given type of transaction exceeded 40, the number of items selected for that type of transaction was limited to 40. If five percent of a type of transaction resulted in less than four items, selected four or fewer items that represented all the transactions of that type.

Reporting

1. Read the insurance company’s derivative use plan (DUP) and any amendments thereto and found that the DUP permits the insurance company to enter into collar contracts. _____

2. For each collar selected for testing, read management’s documentation describing the intended use of the collar and performed the following procedures, as applicable. _____

For collars used as a hedge—

3. Determined that the documentation described the following:

a. The risk hedged _____

b. How the hedge was consistent with the overall risk management strategy _____

c. How the collar was expected to be effective in offsetting the exposure _____

Section 5—Forward Contracts

Findings

Procedures

No
Exception Exception N/A

Performed the following procedures on selected forward contracts to test internal control over forward transactions. Selected five percent of each type of forward transaction, with the selections distributed throughout the year. These are, (1) forward contracts entered into to make delivery, (2) forward contracts entered into to take delivery, (3) forward contracts settled by making delivery, (4) forward contracts settled by taking delivery, (5) forward contracts settled by cash. If five percent of a given type of transaction exceeded 40, the number of items selected for that type of transaction was limited to 40. If five percent of a type of transaction resulted in less than four items, selected four or fewer items that represented all of the transactions of that type.

Reporting

1. Read the insurance company’s derivative use plan (DUP) and any amendments thereto and found that the DUP permits the insurance company to enter into forward contracts.

2. For each forward selected for testing, read management’s documentation describing the intended use of the forward and performed the following procedures, as applicable.

For forward contracts used as a hedge—

3. Determined that the documentation describes the following:

a. The risk hedged

b. How the hedge was consistent with the overall risk management strategy

<u>Procedures</u>	<u>Findings</u>

Exception Exception N/A

22. Using the list of authorized traders obtained in procedure 12, compared the name of the individual who had custody or access to the swaption agreement with the names of individuals authorized to execute swaption agreements and found that the name was not on the list.

23. Compared information regarding the swaption, such as type of derivative, notional amount, and fair value, with the comparable information included in the report to the board of directors or appropriate committee thereof and found them to be in agreement.

24. If the swaption should have been included in the monitoring analysis separately tested in procedure 10 within section 1, "All Derivative Types," compared information regarding the swaption, such as type of derivative, notional amount, and fair value, with the comparable information in the monitoring analysis and found them to be in agreement.

Effectiveness of Swaptions Used As Hedges and in Replication Transactions

25. Read the insurance company's documentation of effectiveness and found that the insurance company evaluated the effectiveness of the swaption as a hedge or replication in accordance with the policies regarding effectiveness.

26. If the swaption was no longer effective as a hedge or replication, compared the action taken by the insurance company with the action required by the accounting policies and procedures and found that the action taken was consistent with the accounting policy.

Findings

Procedures

No
Exception Exception N/A

Legal Review

27. Read documentation indicating that the legal department reviewed the swaption agreement to assess contract compliance with the DUP and enforceability.

28. Read documentation indicating that the legal department updated its assessment of the enforceability of the swaption agreement at least annually.

Valuation

29. Obtained the insurance company's policies and procedures for valuing swaptions and found that the insurance company determined the fair value of the swaption in accordance with the policy described in the insurance company's procedures for valuation of swaptions.

30. Read documentation supporting the fair value of the swaption and found that the fair value was either (a) obtained from an independent source, (b) checked against an independent source, or (c) calculated internally by an authorized individual.

Appendix C — Illustrative Management Representation Letter

[Responsible Party's Letterhead]

[Date]

[CPA Firm's Name and Address]

In connection with your engagement to apply the agreed-upon procedures enumerated in the American Institute of Certified Public Accountants' Statement of Position 01-03, *Performing Agreed-Upon Procedures Engagements that Address Internal Control Over Derivative Transactions as Required by the New York State Insurance Law*, which were agreed to by management of ABC Insurance Company, solely to assist us in complying with the requirements of Section 1410 (b)(5) of the New York State Insurance Law, as amended (the law), which addresses the assessment of internal control over derivative transactions as defined in Section 1401 (a) of the law and Section 178.5 of Regulation No. 163 during the year ended December 31, 20XX, we confirm, to the best of our knowledge and belief, the following representations made to you during your engagement:

1. We are responsible for establishing and maintaining effective internal control over derivative transactions in accordance with the law.
2. During the year ended December 31, 20XX, the internal control over derivative transactions was functioning in accordance with the policies and procedures set forth in the Company's derivative use plan (DUP) and related accounting policies and procedures. There have been no errors or fraud that would indicate a weakness in the internal control over derivative transactions.
3. We have disclosed to you all significant deficiencies in the design or operation of the internal control over derivative transactions that would adversely affect the Company's ability to function in accordance with the Company's DUP.
4. There have been no communications from regulatory agencies, internal auditors, or other practitioners or consultants relating to the internal control over derivative transactions, including communications received between December 31, 20XX and the date of this letter.
5. We have made available to you all information that we believe is relevant to the internal control over derivative transactions.
6. We have responded fully to all inquiries made to us by you during the engagement.

To the best of our knowledge and belief, no events have occurred subsequent to December 31, 20XX and through the date of this letter that would require adjustment to or modification of the findings of the agreed-upon procedures.

Section 14,390

Statement of Position 02-1 Performing Agreed-Upon Procedures Engagements That Address Annual Claims Prompt Payment Reports as Required by the New Jersey Administrative Code

May 23, 2002

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA New Jersey Annual Claims Prompt Payment Reports Task Force of the AICPA Auditing Standards Board (ASB) to provide guidance regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to agreed-upon procedures engagements performed to comply with the requirements of New Jersey Administrative Code, Title 11, Chapter 22, Subchapter 1 (NJAC 11:22-1 or the Code), which establishes Department of Banking and Insurance (department) standards for the payment of claims relating to health benefits plans and dental plans and contains requirements for carriers to file certain reports with the department relating to the timeliness of claims payments and the reasons for denial and late payment of claims in a format prescribed by the department. The department has approved the use of the agreed-upon procedures outlined in this SOP to comply with the reporting requirements of the Code.

This SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of SSAEs in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the ASB. The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Introduction and Background

.01 New Jersey Administrative Code, Title 11, Chapter 22, Subchapter 1 (NJAC 11:22-1 or the Code), establishes Department of Banking and Insurance (department) standards for the payment of claims relating to health benefits plans and dental plans and contains requirements for carriers to file certain reports with the department relating to the timeliness of claims payments and the reasons for denial and late payment of claims in a format prescribed by the department.

.02 NJAC 11:22-1 applies to any insurance company, health service corporation, medical service corporation, hospital service corporation, health

maintenance organization, dental service corporation, and dental plan organization that issues health benefits plans or dental plans in the state of New Jersey and to any agent, employee, or other representative of such entity that processes claims for such entity.

.03 Among other things, the Code requires carriers to report:

- Quarterly to the department on the timeliness of claims payments in the format set forth in Appendix A (claims payment exhibit report) of NJAC 11:22-1, and
- Quarterly and annually on late payments of claims and the reasons for any denials (claims prompt payment report) in the format set forth in Appendix B of NJAC 11:22-1.

.04 Furthermore, the Code requires that the annual claims prompt payment report, which is due to be filed with the department on or before March 31, pursuant to NJAC 11:22-1.9(a), be accompanied by the report of a private auditing firm, which may be a Certified Public Accountant (CPA) or a firm of CPAs. However, for calendar year 2001, the report of the private auditing firm may be filed with the department on or before July 1, 2002. The department has specified, in Bulletin No. 02-07, that the work shall be conducted, and the report shall be prepared, in accordance with agreed-upon procedures acceptable to the department.

Applicability

.05 This Statement of Position (SOP) was developed to provide practitioners with guidance on performing agreed-upon procedures engagements that address annual claims prompt payment reports as required by the New Jersey Administrative Code. The engagement described in this SOP is designed only to satisfy the requirements of the Code. The procedures, as set forth in this SOP, are not necessarily appropriate for use in any other engagement. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

The Code

Definitions

.06 The following definitions are reprinted from the Code and are applicable when performing the agreed-upon procedures engagement described in this SOP.

Agent—Any entity, including a subsidiary of a carrier, or an organized delivery system as defined by N.J.S.A. 17:48H-1, with which a carrier has contracted to perform claims processing or claims payment services.

Carrier—An insurance company, health service corporation, hospital service corporation, medical service corporation or health maintenance organization authorized to issue health benefits plans in this State and a dental service corporation or dental plan organization authorized to issue dental plans in this State.

Claim—A request by a covered person, a participating health care provider, or a nonparticipating health care provider who has received an assignment of benefits from the covered person, for payment relating to health care services or supplies or dental services or supplies covered under a health benefits plan or dental plan issued by a carrier.

Clean claim—

1. The claim is for a service or supply covered by the health benefits plan or dental plan;
2. The claim is submitted with all the information requested by the carrier on the claim form or in other instructions distributed to the provider or covered person;
3. The person to whom the service or supply was provided was covered by the carrier's health benefits or dental plan on the date of service;
4. The carrier does not reasonably believe that the claim has been submitted fraudulently; and
5. The claim does not require special treatment. For the purposes of this subchapter, special treatment means that unusual claim processing is required to determine whether a service or supply is covered, such as claims involving experimental treatments or newly approved medications. The circumstances requiring special treatment should be documented in the claim file.

*Covered person—*A person on whose behalf a carrier offering the plan is obligated to pay benefits or provide services pursuant to the health benefits or dental plan.

*Covered service or supply—*A service or supply provided to a covered person under a health benefits or dental plan for which the carrier is obligated to pay benefits or provides services or supplies.

*Dental plan—*A benefits plan which pays dental expense benefits or provides dental services and supplies and is delivered or issued for delivery in this State by or through any carrier in this State.

*Department—*The Department of Banking and Insurance.

*Health benefits plan—*A benefits plan that pays hospital and medical expense benefits or provides hospital and medical services, and is delivered or issued for delivery in this State by or through a carrier. Health benefits plan includes, but is not limited to, Medicare supplement coverage and risk contracts to the extent not otherwise prohibited by Federal law. For the purposes of this chapter, health benefits plan shall not include the following plans, policies or contracts: accident only, credit, disability, long-term care, CHAMPUS supplement coverage, coverage arising out of a workers' compensation or similar law, automobile medical payment insurance, personal injury protection insurance issued pursuant to P.L. 1972, c.70 (N.J.S.A. 39:6A-1 et seq.) or hospital confinement indemnity coverage.

*Health care provider or provider—*An individual or entity which, acting within the scope of its license or certification, provides a covered service or supply as defined by the health benefits or dental plan. Health care provider includes, but is not limited to, a physician, dentist and other health care professional licensed pursuant to Title 45 of the Revised Statutes and a hospital and other health care facilities licensed pursuant to Title 26 of the Revised Statutes.

Reporting Requirements

.07 The Code requires a carrier and its agent to remit payment of clean claims pursuant to specified time frames. The Code further requires that if a carrier or its agent denies or disputes a claim, in full or in part, the carrier or

its agent must, within a specified time frame, notify both the covered person when he or she will have increased responsibility for payment, and the provider, of the basis for its decision to deny or dispute the claim.

.08 The Code requires a carrier to report to the department quarterly on the timeliness of claims payments in the format prescribed in NJAC 11:22-1, Appendix A, "New Jersey Claims Payment Exhibit." This quarterly report is not required to be subjected to an agreed-upon procedures engagement, nor is an annual claims payment exhibit report required to be filed with the department.

.09 The Code also requires a carrier to report to the department on a quarterly and annual basis on the late payment of claims and the reasons for denial of claims in the format prescribed in NJAC 11:22-1, Appendix B, "Quarterly (Annual) Claims Prompt Payment Report." The Code requires that the annual claims prompt payment report be accompanied by a report of a private auditing firm, which may be a CPA or a firm of CPAs.

.10 The department has indicated, in Bulletin No. 02-07, that an agreed-upon procedures engagement pursuant to this SOP may be used to satisfy the requirement that an annual claims prompt payment report be accompanied by the report of a private auditing firm. Furthermore, in Bulletin No. 02-12, issued in May 2002, the department has indicated that it agrees to the sufficiency of the procedures included in this SOP for its purposes.

Related Professional Standards

AT Section 201, *Agreed-Upon Procedures Engagements*

.11 Agreed-upon procedures engagements performed to meet the requirements of the Code are to be performed in accordance with AT section 201, *Agreed-Upon Procedures Engagements (AICPA, Professional Standards)*. As described in paragraph .03 of AT section 201, an agreed-upon procedures engagement is one in which a practitioner is engaged by a client to issue a report of findings based on specific procedures performed on the subject matter. Not all of the provisions of AT section 201 are discussed herein. Rather, this SOP includes guidance to assist practitioners in the application of selected aspects of AT section 201.

.12 Paragraph .06 of AT section 201 states, in part, that the practitioner may perform an agreed-upon procedures engagement provided that, "...*(c)* the practitioner and the specified parties agree upon the procedures performed or to be performed by the practitioner; and *(d)* the specified parties take responsibility for the sufficiency of the agreed-upon procedures for their purposes."

.13 As previously stated, Bulletin No. 02-07 from the department states that an agreed-upon procedures engagement may be used to meet the requirement for an independent private auditing firm to report on the annual claims prompt payment reports as required by the New Jersey Administrative Code. Furthermore, the department has approved the use of the agreed-upon procedures outlined in this SOP to comply with the reporting requirements of the Code. Accordingly, practitioners should not eliminate any of the procedures presented in appendix B (paragraph .28), "Agreed-Upon Procedures That Address Annual Claims Prompt Payment Reports as Required by the New Jersey Administrative Code," of this SOP or reduce the extent of the tests. The department or the carrier may request that additional procedures be performed

and the practitioner may agree to perform such procedures. In those circumstances, it would be expected that the additional procedures would be performed in the context of a separate agreed-upon procedures engagement.

Procedures to Be Performed

.14 The agreed-upon procedures to be performed are applied to the carrier's annual claims prompt payment report, which reports on the late payment of claims and reasons for denial of claims in the format prescribed in NJAC 11:22-1, Appendix B.

.15 The procedures to be performed in the agreed-upon procedures engagement described in this SOP are presented in appendix B (paragraph .28) of this SOP. The procedures have been designed so that the findings resulting from the application of the procedures can be recorded in a tabular format. The three options available to the practitioner for expressing the findings for each procedure are *No Exception*, *Exception*, or *N/A* (not applicable). If a procedure is not applicable to a particular carrier, the procedure should be marked *N/A* rather than deleted from the report. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.16 If any portion of a procedure results in an exception, the findings for that entire procedure should be recorded as an exception and described in the section "Description of Exceptions If Any." The practitioner should provide a brief factual explanation for each exception that will enable the specified parties to understand the nature of the findings resulting in the exception. If management informs the practitioner that the condition giving rise to the exception was corrected by the date of the practitioner's report, the practitioner's explanation of the exception may include that information; for example, "Management has advised us that the condition resulting in the exception was corrected on Month X, 20XX. We have performed no procedures with respect to management's assertion."

.17 A practitioner may perform significant portions of the agreed-upon procedures engagement before the end of the period covered by the report. If, during that time, the practitioner identifies conditions that result in an exception in one or more agreed-upon procedures, he or she should report the exception in the findings section of the agreed-upon procedures report, even if management corrects the condition prior to the end of the period.

.18 Paragraph .40 of AT section 201 states the following:

The practitioner need not perform procedures beyond the agreed-upon procedures. However, in connection with the application of agreed-upon procedures, if matters come to the practitioner's attention by other means that significantly contradict the subject matter (or written assertion related thereto) referred to in the practitioner's report, the practitioner should include this matter in his or her report. For example, if, during the course of applying agreed-upon procedures regarding an entity's internal control, the practitioner becomes aware of a material weakness by means other than performance of the agreed-upon procedure, the practitioner should include this matter in his or her report.

.19 A practitioner has no obligation to perform procedures beyond the agreed-upon procedures included in appendix B (paragraph .28) of this SOP. However, if information that contradicts the information in the carrier's annual claims prompt payment report comes to the practitioner's attention by other means, such information should be included in the practitioner's report. This

also would apply to conditions or events occurring during the subsequent-events period (subsequent to the period covered by the practitioner's report but prior to the date of the practitioner's report) that either contradict the findings in the report or that would have resulted in the reporting of an exception by the practitioner if that condition or event had existed during the period covered by the report. However, the practitioner has no responsibility to perform any procedure to detect such conditions or events.

Establishing an Understanding With the Client

.20 In accordance with paragraph .10 of AT section 201, the practitioner should establish an understanding with the client regarding the services to be performed. Such an understanding reduces the risk that the client may misinterpret the objectives and limitations of an agreed-upon procedures engagement performed to meet the regulatory requirements of the Code. Such an understanding also reduces the risk that the client will misunderstand its responsibilities and the responsibilities of the practitioner. The practitioner should document the understanding in the working papers, preferably through a written communication with the client (an engagement letter). The communication should be addressed to the client. Matters that might be included in such an understanding are the following:

- A statement confirming that an agreed-upon procedures engagement is to be performed to meet the requirements of NJAC 11:22-1
- A statement identifying the procedures to be performed as those set forth in SOP 02-1, *Performing Agreed-Upon Procedures Engagements That Address Annual Claims Prompt Payment Reports as Required by the New Jersey Administrative Code*
- A statement identifying the client and the department as the specified parties to the agreed-upon procedures report
- A statement acknowledging the client's responsibility for the sufficiency of the procedures in the SOP and referring to Bulletin No. 02-12, which acknowledges the department's responsibility for the sufficiency of the procedures in the SOP
- A statement acknowledging that the practitioner makes no representation regarding the sufficiency of the procedures in the SOP
- A statement describing the responsibilities of the practitioner, including but not limited to the responsibility to perform the agreed-upon procedures and to provide the client with a report, and the circumstances under which the practitioner may decline to issue a report
- A statement indicating that the engagement will be conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants (AICPA)
- A statement indicating that an agreed-upon procedures engagement does not constitute an examination, the objective of which would be the expression of an opinion on the carrier's compliance with the requirements of NJAC 11:22-1, and that if an examination were performed, other matters might come to the practitioner's attention
- A statement indicating that the practitioner will not express an opinion or any other form of assurance

- A statement describing the client's responsibility to comply with the requirements of NJAC 11:22-1 and the client's responsibility for the information in the carrier's annual claims prompt payment report
- A statement describing the client's responsibility for providing accurate and complete information to the practitioner
- A statement indicating that the practitioner has no responsibility for the completeness or accuracy of the information provided to the practitioner
- A statement restricting the use of the report to the client and the department
- A statement describing any arrangements to involve a specialist

Management Representations

.21 Although AT section 201 does not require a practitioner to obtain a representation letter from management in an agreed-upon procedures engagement, when performing the engagement described in this SOP, it is recommended that the practitioner obtain such a letter, and that it generally be signed by the appropriate members of management including the highest-ranking officer responsible for the carrier's compliance with the requirements of NJAC 11:22-1. Management's refusal to furnish written representations that the practitioner has determined to be appropriate for the engagement constitutes a limitation on the performance of the engagement that requires either modification of the report or withdrawal from the engagement. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.22 The representations that a practitioner deems appropriate will depend on the specific nature of the engagement; however, they ordinarily include the following representations from management:

- A statement acknowledging responsibility for compliance with the requirements of NJAC 11:22-1 and responsibility for the information in the carrier's annual claims prompt payment report
- A statement that there have been no errors or fraud that might indicate that the carrier is not in compliance with the requirements of NJAC 11:22-1 and that there are no known matters (or that management has disclosed to the practitioner all known matters) that contradict the information in the carrier's annual claims prompt payment report
- A statement that management has disclosed to the practitioner any communications from regulatory agencies relating to the carrier's annual claims prompt payment report
- A statement that management has made available to the practitioner all information it believes is relevant to the carrier's annual claims prompt payment report
- A statement that management has responded fully to all inquiries made by the practitioner during the engagement
- A statement that no events have occurred subsequent to the date as of which the procedures were applied that would require modification of the findings of the agreed-upon procedures

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 An illustrative representation letter is presented in appendix C (paragraph .29), “Illustrative Management Representation Letter,” of this SOP. For additional information regarding management’s written representations in an agreed-upon procedures engagement, see paragraphs .37–.39 of AT section 201.

Restriction on the Performance of Procedures

.24 As previously stated, a practitioner should not agree to eliminate any of the procedures presented in appendix B (paragraph .28) of this SOP. If circumstances impose restrictions on the performance of the agreed-upon procedures, the practitioner should attempt to obtain agreement from the specified users for modification of the agreed-upon procedures presented in appendix B (paragraph .28) of this SOP. When such agreement cannot be obtained, the practitioner should describe the restriction(s) on the performance of procedures in his or her report or withdraw from the engagement.

Dating the Report

.25 The date of completion of the agreed-upon procedures should be used as the date of the practitioner’s report.

Effective Date

.26 This SOP is effective upon issuance and is applicable only to agreed-upon procedures engagements that report on annual claims prompt payment reports as required by the NJAC.

Appendix A — Illustrative Agreed-Upon Procedures Report

The following is an illustrative agreed-upon procedures report based on the guidance in AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*).

Independent Accountant's Report on Applying Agreed-Upon Procedures

To the Management of ABC Carrier:

We have performed the applicable procedures enumerated in the American Institute of Certified Public Accountants' Statement of Position (SOP) 02-1, *Performing Agreed-Upon Procedures Engagements That Address Annual Claims Prompt Payment Reports as Required by the New Jersey Administrative Code*, which were agreed to by ABC Carrier and the New Jersey Department of Banking and Insurance (the department), solely to assist you in complying with the reporting requirements of New Jersey Administrative Code, Title 11, Chapter 22, Subchapter 1.9 (NJAC 11:22-1.9) for Appendix B 20XX Annual Report (Exhibit I) for the year ended December 31, 20XX. Management of ABC Carrier is responsible for compliance with the requirements of NJAC 11:22-1. This agreed-upon procedures engagement was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of ABC Carrier and the department. Consequently, we make no representation regarding the sufficiency of the procedures described in the attached Appendix either for the purpose for which this report has been requested or for any other purpose.

The procedures performed and the findings are included in the attached Appendix.

We were not engaged to and did not conduct an examination, the objective of which would be the expression of an opinion on ABC Carrier's compliance with the requirements of NJAC 11:22-1 for the year ended December 31, 20XX. Accordingly, we do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of the management of ABC Carrier and the State of New Jersey Department of Banking and Insurance, and is not intended to be and should not be used by anyone other than these specified parties.

<p>4. If a selected claim was denied, compared denial reason indicated in ABC Carrier’s claims system records to supporting documentation used by management to prepare the Annual New Jersey Prompt Payment Report</p>	<p>_____</p>	<p>_____</p>	<p>_____</p>

<u>Procedures</u>	<u>Findings</u>		
	<u>No Exception</u>	<u>Exception</u>	<u>N/A</u>
5. If a selected claim is a "clean claim," as defined in NJAC 11:22-1.2, and as determined by ABC Carrier, recalculated the amount of interest paid on the selected claim in accordance with the requirements of NJAC 11:22-1.5	_____	_____	_____
We selected 10 claims from ABC Carrier's primary claims system, with the selections distributed throughout the year, and for each item selected, traced the selected claims covered under New Jersey contracts to the supporting documentation used by management to prepare the Annual New Jersey Prompt Payment Report.	_____	_____	_____
We proved the arithmetic accuracy of ABC Carrier's 20XX Appendix B annual claims prompt payment report.	_____	_____	_____

Description of Exceptions if Any

Appendix C — Illustrative Management Representation Letter

[ABC Carrier's Letterhead]

[Date]

[CPA Firm's Name and Address]

In connection with your engagement to apply the agreed-upon procedures enumerated in the American Institute of Certified Public Accountants' Statement of Position (SOP) 02-1, *Performing Agreed-Upon Procedures Engagements That Address Annual Claims Prompt Payment Reports as Required by the New Jersey Administrative Code*, which were agreed to by ABC Carrier and the New Jersey Department of Banking and Insurance, solely to assist us in complying with the requirements of New Jersey Administrative Code, Title 11, Chapter 22, Subchapter 1 (NJAC 11:22-1.9), for Appendix B 20XX Annual Report (Exhibit I) for the period from January 1, 20XX through December 31, 20XX, we confirm, to the best of our knowledge and belief, the following representations made to you during your engagement:

1. We are responsible for compliance with the requirements of NJAC 11:22-1 and for the information in ABC Carrier's annual claims prompt payment report.
2. During the year ended December 31, 20XX, there have been no errors or fraud that would indicate that ABC Carrier is not in compliance with the requirements of NJAC 11:22-1.
3. We have disclosed to you all known matters contradicting the information in ABC Carrier's annual claims prompt payment report.
4. There have been no communications from regulatory agencies relating to ABC Carrier's annual claims prompt payment report, including communications received between December 31, 20XX, and the date of this letter.
5. We have made available to you all information that we believe is relevant to ABC Carrier's annual claims prompt payment report.
6. We have responded fully to all inquiries made to us by you during the engagement.

To the best of our knowledge and belief, no events have occurred subsequent to December 31, 20XX, and through the date of this letter that would require adjustment to or modification of the findings of the agreed-upon procedures.

Section 14,410

Statement of Position 04-1 Auditing the Statement of Social Insurance

November 22, 2004

NOTICE TO READERS

This AICPA Statement of Position (SOP) is currently undergoing significant revision by a task force of the Auditing Standards Board to

- reflect the provisions of Statement of Federal Financial Accounting Standards (SFFAS) 36, *Reporting Comprehensive Long-Term Fiscal Projections for the U.S. Government*, which requires that a financial projection be presented as required supplemental information in the consolidated financial report of the U.S. Government for years 2010, 2011, and 2012, after which time the financial projection becomes a basic financial statement;
- reflect the requirements and guidance in AT section 301, *Financial Forecasts and Projections* (AICPA, *Professional Standards*); and
- expand the scope of the SOP to include the projection required by SFFAS 36 and perhaps other long-term projections.

As part of this revision, the task force is also reflecting the conforming changes necessary due to the issuance of Statement on Auditing Standards Nos. 122–126. The revisions to this SOP will be reflected in a subsequent update of *AICPA Technical Practice Aids*.

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Social Insurance Task Force to provide guidance regarding the audits of statements of social insurance prepared in accordance with the standards of the Federal Accounting Standards Advisory Board (FASAB). Audits of federal government agencies are also governed by *Government Auditing Standards* (the Yellow Book) and applicable Office of Management and Budget (OMB) guidance.

This SOP is recognized as an interpretive publication as defined in AU-C section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards* (AICPA, *Professional Standards*). Interpretive publications are recommendations on the application of generally accepted auditing standards (GAAS) in specific circumstances, including engagements for entities in specialized industries.

An interpretive publication is issued under the authority of the AICPA Auditing Standards Board (ASB) after all ASB members have been provided an opportunity to consider and comment on whether the proposed interpretive publication is consistent with GAAS. The members of the ASB have found this SOP to be consistent with existing GAAS.

Although interpretive publications are not auditing standards, AU-C section 200 requires the auditor to consider applicable interpretive publications in planning and performing the audit because interpretive publications are relevant to the proper application of GAAS in specific circumstances. If the auditor does not apply the auditing guidance in an applicable interpretive publication, the auditor should document how the requirements of GAAS were complied with in the circumstances addressed by such auditing guidance.

Introduction

.01 The Federal Accounting Standards Advisory Board (FASAB) establishes accounting standards for reporting information about the following social insurance programs:

- a. Old-Age Survivors and Disability Insurance (OASDI or Social Security)
- b. Medicare ([Hospital Insurance [HI] and Medicare Supplementary Medical Insurance [SMI])
- c. Railroad Retirement benefits
- d. Black Lung benefits
- e. Unemployment Insurance

.02 FASAB standards require the financial statements of the federal agencies responsible for the Social Security, Medicare, Railroad Retirement, and Black Lung programs and the financial statements of the federal government-wide entity to present a statement of social insurance as a basic financial statement. FASAB standards require these agencies and the government-wide entity to report:

- a. The estimated present value of the income to be received from or on behalf of the following groups during a projection¹ period sufficient to illustrate the long-term sustainability of the social insurance programs:
 - (1) Current participants who have not yet attained retirement age
 - (2) Current participants who have attained retirement age
 - (3) Individuals expected to become participants
- b. The estimated present value of the benefit payments to be made during that same period to or on behalf of the groups listed in item *a*
- c. The estimated net present value of the cash flows during the projection period (the income described in item *a* over the expenditures described in item *b*, or the expenditures described in item *b* over the income described in item *a*)
- d. In notes to the statement of social insurance:
 - (1) The accumulated excess of all past cash receipts, including interest on investments, over all past cash disbursements within the social insurance program represented by the fund balance at the valuation date
 - (2) An explanation of how the net present value referred to in item *c* is calculated for the closed group² (Paragraph 27(3)(i) of Statement

¹ The AICPA Guide *Prospective Financial Information* (guide) defines the term *projection* and differentiates it from the term *forecast*. In this Statement of Position (SOP), the term *projection* is used in its generic sense, as it is used in standards issued by the Financial Accounting Standards Advisory Board (FASAB) and the federal agencies that administer social insurance programs. The use of the term *projection* in this SOP is not intended to suggest that information presented in the statement of social insurance is a projection as defined in the guide or that the provisions of the guide would apply to the audit of the statement of social insurance.

² The *closed group* is defined as those persons who, as of a valuation date, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

of Federal Financial Accounting Standards [SFFAS] No. 17, *Accounting for Social Insurance*, identifies the information to be included in this explanation.)

- (3) Comparative financial information for items *a*, *b*, *c*, and *d(1)* for the current year and for each of the four preceding years
- (4) The significant assumptions used in preparing the estimates

.03 The income, expenditures, and net present value of cash flows recognized in the statement of social insurance differ from traditional concepts of income and expenditures for retirement and health benefit programs. Financial reporting for social insurance programs includes estimates of income and expenditures not only for current program participants but also for individuals expected to become participants in social insurance programs in the future. In paragraphs 26–28 of the basis for conclusions section of SFFAS No. 25, *Reclassification of Stewardship Responsibilities and Eliminating the Current Services Assessment*, FASAB acknowledges this difference and explains why the recognition of such amounts is essential to the fair presentation of federal financial statements:

26. The Board believes that the SOSI [statement of social insurance] should be treated as a basic financial statement because it is essential to fair presentation and is important to achieve the objectives of federal financial reporting. The related stewardship objectives include helping users to assess the impact on the country of the Government’s activities, determine whether the Government’s financial position improved or deteriorated over the period, and predict whether future budgetary resources will likely be sufficient to sustain public services and meet obligations as they come due. In that regard, the multi-trillion dollar obligations associated with Social Insurance over the next 75 years could significantly exceed the largest liabilities currently recognized in the U.S. Government Balance Sheet.

27. The Board acknowledges that there is great uncertainty inherent in long term projections, but believes that if the uncertainty is suitably disclosed—as is required by SFFAS 17—it need not preclude designating the information as a basic financial statement, essential for fair presentation in conformity with GAAP...

28. Even within the context of historical financial reporting, the Board notes that accrual-basis “historical” financial statements include many measurements that involve assumptions about the future. The distinction between reporting on the financial effects of events that have occurred and the effects of future events depends, obviously, upon the definition of the event. The information required by SFFAS 17 reports on the financial effects of existing law and demographic conditions and assumptions, just as the pension obligation at a point in time is based on existing conditions. In that sense, Social Insurance information can be viewed as reflecting events that have occurred and, therefore, as “historical.”

Applicability

.04 This Statement of Position (SOP) provides guidance to auditors in auditing the statement of social insurance for the following social insurance programs:

- a. Old-Age Survivors and Disability Insurance (OASDI or Social Security)
- b. Medicare (Hospital Insurance [HI] and Medicare Supplementary Medical Insurance [SMI])
- c. Railroad Retirement benefits
- d. Black Lung benefits

As permitted by AU section 543, *Part of Audit Performed by Other Independent Auditors* (AICPA, *Professional Standards*), a principal auditor may fulfill the requirements of this SOP by using work that other independent auditors have performed in conformity with the provisions of this SOP. For example, for the OASDI program, the auditor of the federal government-wide financial statements may use the work and report of the auditor of the Social Security Administration's statement of social insurance.

Management's Responsibilities

.05 The agency's management (management) is responsible for preparing the statement of social insurance and the estimates underlying it in conformity with generally accepted accounting principles. In doing so, management must determine its best estimate³ of the economic and demographic conditions that will exist in the future. Because estimates in the statement of social insurance are based on subjective as well as objective factors, management must use judgment to estimate amounts included in the statement of social insurance. Management's judgment ordinarily is based on its knowledge and experience about past and current events and its assumptions about conditions it expects to exist. Management is responsible for the accuracy and completeness of the statement of social insurance.

Preparing Social Insurance Estimates

.06 Management is responsible for preparing the estimates underlying the statement of social insurance. That process ordinarily consists of:

- a. Identifying the relevant factors that may affect the estimates
- b. Developing assumptions that represent management's best estimate of circumstances and events with respect to the relevant factors
- c. Accumulating relevant, sufficient, and reliable data on which to base the estimates
- d. Determining the estimated amounts based on assumptions and other relevant factors

³ Paragraph 25 of FASAB Statement of Federal Financial Accounting Standards (SFFAS) No. 17, *Accounting for Social Insurance*, states, in part, "The projections and estimates used should be based on the entity's best estimates of demographic and economic assumptions, taking each factor individually and incorporating future changes mandated by current law." Certain agencies prepare social insurance information using assumptions prepared by a board of trustees. Auditors should consider such assumptions to represent the agency's "best estimates" if the trustees have characterized them as such, and agency management has determined them to be reasonable. With respect to these assumptions, the auditor should perform audit procedures that are consistent with the guidance in paragraphs .09-.35 of this SOP.

- e. Determining that the estimates are presented in conformity with generally accepted accounting principles and that disclosure is adequate

Conceptual Model

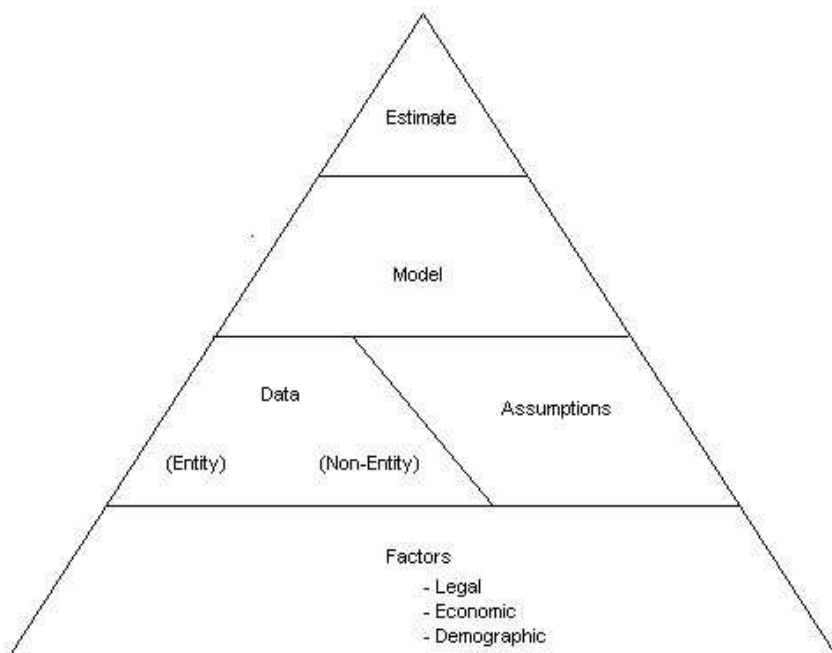

Figure 1: Elements of the Process of Developing Social Insurance Estimates

.07 Figure 1, “Elements of the Process of Developing Social Insurance Estimates,” is a conceptual model depicting the elements of the process that results in the statement of social insurance. It is not intended to depict the⁴ actual process used by an organization to develop the statement of social insurance. With the assistance of internal and external specialists, management considers, identifies, and documents factors, assumptions, and data that serve as input to a model for developing estimates. The factors, data, assumptions, and models used to develop the statement of social insurance are closely interrelated and may not be separable. Following are definitions of the terms used in figure 1:

- a. *Factors.* The elements or variables that affect income or expenditures for a program and for which data must be gathered and assumptions must be generated, for example, legal, economic, and demographic factors. An example of a factor is the number of individuals reaching age 65 in a specific year.

⁴ Office of Management and Budget (OMB) Circular No. A-123, *Management Accountability and Control*, section II, “Establishing Management Controls,” states, in part, “...documentation for transactions, management controls, and other significant events must be clear and readily available for examination.”

- b. *Assumptions.* Expectations about what will happen in the future. An example of an assumption is that there will be a 1 percent increase in the number of women working outside the home in each of the next five years. An assumption is expressed as a value or direction assigned to a factor.
- c. *Data.* Organized factual information used for analysis or to make decisions. An example is census data and classifications of that data, such as the population classified by sex or age. Data may be developed within the entity that prepares the statement of social insurance or it may come from sources outside the entity.
- d. *Models.* Methods or formulas for mathematically expressing how the assumptions and data relate to each other. For example, a model might indicate that a 1 percent decline in the birth rate in a given year will result in a 0.2 percent decrease in social insurance income and benefit payments 10 years later. A model is a set of coded instructions, rules, or procedures used to perform a desired sequence of events or to obtain a result. Typically, models are developed by using various computer applications.
- e. *Estimates.* The amounts or valuations that result after processing the factors, data, and assumptions in a model. These estimates will be used in preparing the statement of social insurance.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Designing and Implementing Internal Control Related to Estimates

.08 Controls that are designed and implemented in a manner consistent with Standards for Internal Control in the Federal Government issued by the Government Accountability Office help ensure the accuracy and completeness of the statement of social insurance. An entity's internal control may reduce the likelihood of material misstatements of financial statement assertions involving estimates. Among the aspects of internal control that are relevant to the process of developing estimates are the following:

- a. Management communication of the need for proper estimates
- b. Accumulation of relevant, sufficient, and reliable data on which to base accounting estimates
- c. Preparation of the estimates by qualified personnel
- d. Adequate review and approval of the estimates by appropriate levels of authority, for example:
 - (1) Review of the sources of the relevant factors
 - (2) Review of the process used to develop assumptions
 - (3) Review of the reasonableness of the assumptions and resulting estimates
 - (4) Consideration of the need to use the work of specialists
 - (5) Consideration of changes in previously established methods for developing estimates
- e. Comparison of prior estimates with actual subsequent results to assess the reliability of the process and models used to develop the estimates

- f. Appropriate general and application controls related to computer-based models used in the calculation of estimates included in the statement of social insurance

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

The Auditor's Responsibility

.09 Paragraph .10 of AU section 342, *Auditing Accounting Estimates*, states that the auditor should obtain an understanding of how management developed the estimate. Based on that understanding, the auditor should use one or a combination of the following approaches to evaluate the reasonableness of an estimate:

- a. Review and test the process used by management to develop the estimate.
- b. Develop an independent expectation of the estimate to corroborate the reasonableness of management's estimate.
- c. Review subsequent events or transactions occurring prior to the date of the auditor's report.

In auditing the statement of social insurance, if controls over the estimation process are effective, the most practicable and efficient approach may be to review and test the process used by management. However, if the auditor finds that controls over the estimation process are ineffective, the auditor should consider whether it is practicable to:

- Develop an independent expectation of the estimate, or portions of the estimate, to corroborate management's estimate
- or
- Obtain sufficient appropriate audit evidence from outside the audited agency's process that would support the assertions in the statement of social insurance.

If it is not practicable to mitigate the effects of the ineffective controls through substantive procedures such as these, the auditor's report on the statement of social insurance should be modified. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.10 The auditor's objective when auditing the statement of social insurance is to obtain sufficient appropriate audit evidence to provide reasonable assurance that:

- a. The estimates presented in the statement of social insurance are reasonable in the circumstances.
- b. The statement of social insurance is presented fairly, in all material respects, in conformity with generally accepted accounting principles, including adequate disclosure.

Paragraphs .11-.43 of this SOP describe how the auditor achieves this objective. As discussed in footnote 9 of paragraph .19, if the auditor does not possess the level of competence in actuarial science to qualify as an actuary, it is necessary for the auditor to obtain the services of an independent actuary⁵ to

⁵ The actuary can either be under contract with the audit firm or employed by the audit firm. In either case, the actuary performing services for the audit firm would need to meet the independence standards of generally accepted governmental auditing standards (GAGAS),

assist the auditor in planning and performing auditing procedures. Generally, the auditor will need the assistance of an independent actuary in performing various procedures during all phases of the audit and related to all elements of the estimates. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining an Understanding of the Entity and Its Environment, Including Its Internal Control

.11 AU section 314, *Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement*, requires the auditor to obtain a sufficient understanding of the entity and its environment, including its internal control, to assess the risk of material misstatement of the financial statements whether due to error or fraud, and to design the nature, timing, and extent of further audit procedures. [Paragraph added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.12 The procedures the auditor performs to obtain the required understanding are known as *risk assessment procedures*. In an audit of the statement of social insurance, the auditor's risk assessment procedures should include

- a. obtaining knowledge about the agency and its environment including the following matters:
 - (1) The agency's program and its operations including relevant laws and regulations governing the program that have a direct and material effect on the statement of social insurance (paragraphs .13–.14)
 - (2) The agency's process for developing, evaluating, and incorporating estimates in the statement of social insurance (paragraph .15)
 - (3) The work performed by the agency's actuary (paragraphs .16–.20)
 - (4) The work performed and findings reported by any external review groups that have been commissioned by the agency, an appropriate advisory board, or the trustees⁶ (paragraph .21).
- b. considering materiality (paragraphs .22–.23).
- c. obtaining an understanding of the agency's internal control as it relates to the preparation of the statement of social insurance (paragraphs .24–.27).

(footnote continued)

which are applicable to audits of statements of social insurance. For example, for actuaries under contract with the audit firm, the auditor should determine whether the actuary's firm is independent of the agency being audited and then assess the actuary's ability to impartially perform the work and report results. In conducting this assessment, the auditor should provide the actuary with the GAGAS independence requirements and obtain representations from the actuary regarding his or her independence from the audited entity. For actuaries employed by the audit firm, the independence requirements are the same as those for auditors. Paragraphs 3.06–.18 of chapter 3, "General Standards," *Government Auditing Standards: 2003 Revision* (GAO-03-673G) describe applicable independence requirements.

⁶ Certain social insurance programs are overseen by a board of trustees. For example, the Social Security Act establishes a board of trustees to oversee the financial operations of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund. The board is composed of six members, four of whom serve automatically by virtue of their positions in the federal government: the Secretary of the Treasury (the managing trustee), the Secretary of Labor, the Secretary of Health and Human Services, and the Commissioner of Social Security. The other two members are appointed by the President and confirmed by the Senate to serve as public representatives.

- d. assessing the risk of material misstatement of the financial statements (paragraphs .28–.29).⁷
- e. performing further audit procedures (paragraphs .30–.35).

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining Knowledge About the Agency's Program and Its Operations

.13 Relevant knowledge about the program and its operations includes the following:

- a. The nature of the program's activities
- b. The source of its funding
- c. Who the beneficiaries are

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.14 An important aspect of the program and its operations are the laws and regulations governing the program that may have a direct and material effect on amounts reported as social insurance income and expenditures. To obtain the laws and regulations governing the operation of the social insurance program, the auditor may request them from agency management. Through inquiry of management, the auditor may obtain information about

- a. the laws and regulations that significantly affect the determination of amounts included in the statement of social insurance and
- b. how management has given effect to changes in laws and to new regulations published in final form in determining future social insurance income and expenditures.

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining Knowledge About the Agency's Process for Developing, Evaluating, and Incorporating Estimates in the Statement of Social Insurance

.15 The auditor should obtain knowledge about the agency's process for developing, evaluating, and incorporating estimates in the statement of social insurance. Procedures the auditor may perform to obtain that knowledge include the following:

- a. Making inquiries of management; individuals responsible for initiating, processing, or recording estimates; and internal and external specialists with expertise in relevant subject matter, such as actuarial science, economics, and law.
- b. Reading entity or nonentity documents and records used to prepare the statement of social insurance, as well as the agency's documentation of the process for preparing the statement of social insurance.

⁷ The auditor generally would conclude that inherent risk is high for assertions about estimates in the statement of social insurance because of the complexity of such estimates and the need for significant judgment in preparing them. Other factors that may affect inherent risk in auditing the statement of social insurance include the political climate surrounding social insurance programs, budget limitations, and economic conditions.

- c. Observing entity activities and operations used to prepare the statement of social insurance, such as transferring data from a tabulation report to a computerized application.

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining Knowledge About the Work Performed by the Agency's Actuary

.16 Information presented in the statement of social insurance ordinarily is determined on the basis of an actuarial valuation of the program performed or reviewed by the agency's actuary, using data received from sources inside and outside the agency, and actuarial techniques. Paragraph .12 of AU section 336, *Using the Work of a Specialist*, states the following:

The auditor should (a) obtain an understanding of the methods and assumptions used by the specialist, (b) make appropriate tests of data provided to the specialist, taking into account the auditor's assessment of control risk, and (c) evaluate whether the specialist's findings support the related assertions in the financial statements.

[Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.17 The auditor's qualifications do not encompass actuarial science or the complexities of probability and longevity associated with social insurance income and expenditures. The auditor may have a general awareness and understanding of actuarial concepts and practices; however, he or she does not purport to act in the capacity of an actuary. The auditor, therefore, should follow the guidance in AU section 336 to obtain assurance regarding the work of an actuary on such matters as program income and benefit payments. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.18 An audit of the statement of social insurance requires cooperation and coordination between the auditor and the actuary. The auditor uses the work of the actuary as an audit procedure to obtain sufficient appropriate audit evidence; the auditor does not merely rely on the report of an actuary. Although the appropriateness and reasonableness of the methods and assumptions used, as well as their application, are within the expertise of the actuary, the auditor does not divide responsibility with the actuary for his or her opinion on the financial statements taken as a whole. Thus, the auditor should satisfy himself or herself as to the professional qualifications and reputation of the actuary as well as the actuary's objectivity, and should obtain an understanding of the actuary's methods and assumptions, test data provided to the actuary, and consider whether the actuary's findings support the related representations in the financial statements. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.19 If the actuary who has prepared or reviewed the actuarial valuation of the social insurance program was engaged by the agency administering that program, it is necessary for the auditor to obtain the services of an independent actuary⁸ to assist the auditor in performing auditing procedures that assess the agency actuary's methods, assumptions, and estimates, and aid the auditor in determining whether the agency actuary's findings are not unreasonable in the

⁸ See footnote 5.

circumstances.⁹ *Government Auditing Standards*, which are applicable to audits of statements of social insurance, provide independence requirements and examples of personal, external, and organizational impairments to independence. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.20 The auditor should document (a) the specific audit procedures that were performed with the assistance of an independent actuary, and the related findings and conclusions, (b) the relationship between the procedures performed with the assistance of an independent actuary and the auditor's assessments of audit risk and materiality, and (c) all other significant matters related to the objectives and scope of the independent actuary's work, including any limitations on the independent actuary's procedures. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining Knowledge About the Work Performed by External Review Groups

.21 In some cases, the agency responsible for the preparation of the statement of social insurance or the program's trustees may commission the services of an external review group comprising technical experts in relevant fields to review the factors, assumptions, data, estimates, and models used to prepare the statement of social insurance. In many instances, individuals assigned to perform these reviews are recognized authorities in their respective fields of study. Because of the nature of these external review groups and the qualifications of the individuals typically assigned to them, information about the work performed by the external review group, how its findings are communicated to the agency, and how the agency has responded to these findings are relevant to an audit of the statement of social insurance.¹⁰ See paragraph A-18c of the appendix of this SOP, entitled "Illustrative Controls and Audit Procedures," for examples of inquiries the auditor may make of management to obtain knowledge about the work performed by external review groups. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Considering Materiality

.22 The auditor's determination of materiality is a matter of professional judgment and is influenced by the auditor's perception of the needs of users of financial statements. Materiality judgments are made in light of surrounding circumstances and necessarily involve both quantitative and qualitative considerations. Auditors should design audit procedures to obtain reasonable assurance of detecting misstatements that, either individually or when aggregated with other misstatements, could be material to the financial statements

⁹ Although paragraph .11 of AU section 336, *Using the Work of a Specialist*, does not preclude the auditor from using the work of a specialist who is related to the client, because of the significance of the estimates of income and expenditures to the statement of social insurance, and the complexity and subjectivity involved in developing such estimates, auditing estimates in the statement of social insurance requires the use of an outside actuary, that is, an actuary who is not employed or managed by the agency. If the auditor has the requisite knowledge and experience in actuarial science, the auditor may serve as the actuary. If the auditor does not possess the level of competence in actuarial science to qualify as an actuary, the auditor should use the work of an independent outside actuary.

¹⁰ Although reviews by external review groups may not be conducted annually, in auditing the statement of social insurance the auditor should obtain and review the most recent report of such external review groups.

taken as a whole. Auditors should exercise due professional care when setting the materiality base, carefully assessing the information gained from risk assessment procedures and the needs of users of the financial statements. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.23 For certain federal agencies, amounts reported in the statement of social insurance may vary significantly from the amounts reported in the other basic financial statements, or may differ significantly on a qualitative basis. In such cases, it may not be appropriate to establish a single materiality threshold for the entire set of financial statements. Instead, the auditor should consider using a separate materiality level when planning and performing the audit of the statement of social insurance and related disclosures. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining an Understanding of the Agency's Internal Control

.24 AU section 314 defines internal control as a process—effected by those charged with governance, an entity's board of directors, management, and other personnel—designed to provide reasonable assurance regarding the achievement of the entity's objectives with regard to (a) reliability of financial reporting, (b) effectiveness and efficiency of operations, and (c) compliance with applicable laws and regulations. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.25 In auditing the statement of social insurance, the auditor should obtain a sufficient understanding of the agency's internal control by performing risk assessment procedures to evaluate the design of the agency's controls relevant to an audit of the statement of social insurance and to determine whether those controls have been implemented. The auditor should use this knowledge to

- a. identify types of potential misstatements.
- b. consider factors that affect the risks of material misstatement.
- c. design tests of controls, when applicable, and substantive procedures.

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[.26] [Paragraph renumbered and deleted, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.27 Internal control consists of the following five interrelated components:

- a. *Control environment* sets the tone of an organization, influencing the control consciousness of its people. It is the foundation for all other components of internal control, providing discipline and structure.
- b. Entity's *risk assessment* is the entity's identification and analysis of relevant risks to achievement of its objectives, forming a basis for determining how the risks should be managed.
- c. *Information and communication systems* support the identification, capture, and exchange of information in a form and time frame that enable people to carry out their responsibilities.
- d. *Control activities* are the policies and procedures that help ensure that management directives are carried out.

- e. *Monitoring* is a process that assesses the quality of internal control performance over time.

Ordinarily, controls that are relevant to an audit pertain to the entity's objective of preparing financial statements that are fairly presented in conformity with generally accepted accounting principles. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Assessing the Risks of Material Misstatement

.28 Using the information gained from the auditor's risk assessment procedures, the auditor should identify and assess the risks of material misstatement for assertions in the statement of social insurance. [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.29 The risk of material misstatement of estimates ordinarily varies with the complexity and subjectivity of the process, the availability and reliability of the relevant data, the number and significance of assumptions that are made, and the degree of uncertainty associated with the assumptions. [Paragraph added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Performing Further Audit Procedures

.30 The auditor should design further audit procedures, including tests of the operating effectiveness of controls, where relevant or necessary, and substantive procedures, whose nature, timing, and extent are responsive to the assessed risks of material misstatement at both the financial statement and the relevant assertion level. [Paragraph added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[.31] [Paragraph renumbered and deleted, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.32 AU section 318, *Performing Audit Procedures in Response to Assessed Risks and Evaluating the Audit Evidence Obtained*, states that the auditor should perform tests of controls when the auditor's risk assessment includes an expectation of the operating effectiveness of controls or when substantive procedures alone do not provide sufficient appropriate audit evidence at the relevant assertion level. However, when auditing the statement of social insurance, the complexity and subjectivity of the estimates, the volume of data involved, and the importance of controls ordinarily would make performing only substantive tests an ineffective strategy.¹¹ [Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[.33] [Paragraph renumbered and deleted, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

[.34] [Paragraph renumbered and deleted, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.35 As indicated in paragraph .09 of this SOP, in evaluating the reasonableness of the estimates in the statement of social insurance, the auditor

¹¹ OMB Bulletin No. 01-02 states that "For those internal controls that have been properly designed and placed in operation, the auditor shall perform sufficient tests to support a low assessed level of control risk."

primarily reviews and tests the process used by management. The appendix of this SOP contains examples of

- a. procedures the auditor performs to obtain knowledge about the agency's process for developing, evaluating, and incorporating estimates in the statement of social insurance.
- b. controls that are relevant to an agency's preparation of the statement of social insurance. (The auditor should obtain an understanding of the design of such controls and determine whether they have been placed in operation.)
- c. procedures the auditor performs to test controls, assess control risk, and test assertions in the statement of social insurance.

[Paragraph added, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Testing the Work of the Agency's Actuary

.36 When auditing estimates and considering the related factors, assumptions, data, and models, the auditor should obtain the services of an actuary in accordance with AU section 336.¹² [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.37 With respect to the actuarial present value of amounts reported in the statement of social insurance, the auditor, in following the guidance in AU section 336, should

- a. read the agency actuary's actuarial report.
- b. evaluate the professional qualifications, competence, and objectivity of the agency's actuary. Examples of factors that should be considered are the actuary's membership in a recognized professional organization and the opinion of other actuaries, whom the auditor knows to be qualified, regarding the actuary's professional qualifications.
- c. obtain an understanding of the actuary's objectives, scope of work, methods, and assumptions, and their consistency of application. The Actuarial Standards Board establishes Actuarial Standards of Practice (ASOPs) that identify what the actuary should consider, document, and disclose when performing an actuarial assignment. The auditor may consult the ASOPs in obtaining an understanding of the methods and assumptions used in the valuation of the social insurance program.¹³ Management, not the actuary, is responsible for the assumptions made and methods used.
- d. test the reliability and completeness of the data provided by the agency and used by the actuary in the actuarial valuation. (See paragraphs A-11–A-14 in the appendix to this SOP.) For example, laws or regulations governing program operations can affect the determination of the data or methods to be used in the actuarial calculations. In testing the reliability and completeness of the data, the auditor may inquire as to whether the actuarial valuation considers all pertinent provisions of laws and regulations governing program operations, including any changes in laws or regulations affecting the actuarial calculations since the date of the latest statement of social insurance. In the event

¹² See footnote 9.

¹³ Relevant standards include Actuarial Standards of Practice No. 21, *The Actuary's Responsibility to the Auditor*, No. 23, *Data Quality*, and No. 32, *Social Insurance*.

that data provided to the actuary are significantly incomplete, the auditor may inquire of the actuary about the treatment of the incomplete data and determine whether the method used by the actuary to give effect to the missing data in his or her valuation is reasonable in the circumstances.

- e. assess the nature and significance of any reservations concerning assumptions or data that the actuary has stated in his or her report.

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Testing the Fund Balance

.38 Paragraph 27(3)(h) of SFFAS No. 17 requires the agency to report “the accumulated excess of all past cash receipts, including interest on investments, over all past cash disbursements within the social insurance program represented by the fund balance at the valuation date.” As noted in paragraph 26 of SFFAS No. 17, the valuation date for the statement of social insurance may differ from the valuation date for the other financial statements. Accordingly, the auditor should conduct appropriate testing of the accumulated cash receipts over the accumulated cash disbursements, as of the social insurance valuation date. The nature and extent of testing is a matter of professional judgment. Examples of procedures the auditor may perform are confirmation testing or roll-forward testing. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Obtaining Management’s Representations

.39 AU section 333, *Management Representations*, requires the auditor to obtain a representation letter from management confirming representations given to the auditor during the engagement, for example, a representation regarding the completeness of the information provided to the auditor. In an audit of the statement of social insurance, the representation letter should include, as applicable, the following representations:

- a. The actuarial assumptions and methods used to measure amounts in the statement of social insurance for financial accounting and disclosure purposes represent management’s best estimates regarding future events based on demographic and economic assumptions, and future changes mandated by law.
- b. There were no material omissions from the data provided to the agency’s actuary for the purpose of determining the actuarial present value of the estimated future income to be received, and estimated future expenditures to be paid during a projection period sufficient to illustrate the long-term sustainability of the [*name of the social insurance program*] as of [*dates of statements of social insurance presented*].
- c. Management is responsible for the assumptions and methods used in the preparation of the statement of social insurance. Management of the agency agrees with the actuarial methods and assumptions used by the agency’s actuary and has no knowledge or belief that would make such methods or assumptions inappropriate in the circumstances. Management did not give any instructions, nor cause any instructions to be given to the agency’s actuary with respect to values or amounts derived, and is not aware of any matters that have affected the objectivity of the agency’s actuary. Management believes that the

actuarial assumptions and methods used to measure amounts in the statement of social insurance for financial accounting purposes are appropriate in the circumstances.

- d. The statement of social insurance covers a projection period sufficient to illustrate long-term sustainability of the social insurance program.
- e. Management has provided the auditor with all the reports developed by external review groups appointed by the agency or the program's trustees related to estimates in the statement of social insurance.
- f. The following matters relating to the statement of social insurance have been disclosed properly in the notes to the financial statements:
 - (1) The accumulated excess of all past cash receipts, including interest on investments, over all past cash disbursements within the social insurance program represented by the fund balance at the valuation date
 - (2) An explanation of how the net present value is calculated for the closed group¹⁴ (Paragraph 27(3)(i) of SFFAS No. 17 identifies the information to be included in this explanation.)
 - (3) Comparative financial information for the items in paragraphs .02a, .02b, .02c, and .02d(1) of this SOP, for the current year and for each of the four preceding years
 - (4) Significant assumptions used in preparing the estimates
- g. There have been no changes in [or, Changes in the following have been properly recorded or disclosed in the financial statements]:
 - (1) The actuarial methods or assumptions used to calculate amounts recorded or disclosed in the financial statements between the valuation dates (that is, January 1, 20X8, and January 1, 20X7) or changes in the method of collecting data.
 - (2) The actuarial methods or assumptions used to calculate amounts recorded or disclosed in the financial statements between the valuation date and the financial reporting date (that is, January 1, 20X8, and September 30, 20X8) or changes in the method of collecting data.
- h. There have been no changes in [or, Changes in the following have been properly recorded or disclosed in the financial statements]:
 - (1) Laws and regulations affecting social insurance program income and benefits between the valuation dates (January 1, 20X8, and January 1, 20X7).
 - (2) Laws and regulations affecting social insurance program income and benefits between the valuation date and the financial reporting date (that is, January 1, 20X8, and September 30, 20X8).
- i. Accounting estimates applicable to the financial information of the agency included in the statement of social insurance are based on management's best estimate, after considering past and current events and assumptions about future events.

[Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

¹⁴ The *closed group* is defined as those persons who, as of a valuation date, are participants in a social insurance program as beneficiaries, covered workers, or payers of earmarked taxes or premiums.

Reporting

.40 Because FASAB has defined the statement of social insurance as a basic financial statement, the auditor should report on it as a part of his or her report on the other basic financial statements. In addition to following the requirements of AU section 508, *Reports on Audited Financial Statements*, the auditor's report on a federal agency's financial statements that present a statement of social insurance should include the following elements:

- a. An opinion as to whether the statement of social insurance presents fairly, in all material respects, the financial condition¹⁵ of the agency's social insurance program(s) as of the valuation date in conformity with generally accepted accounting principles.
- b. An explanatory paragraph following the opinion paragraph, describing that (i) the statement of social insurance presents the actuarial present value of the agency's estimated future income to be received from or on behalf of the participants and estimated future expenditures to be paid to or on behalf of participants during a projection period sufficient to illustrate long-term sustainability of the social insurance program; (ii) in preparing the statement of social insurance, management considers and selects assumptions and data that it believes provide a reasonable basis for the assertions in the statement; and (iii) because of the large number of factors that affect the statement of social insurance and the fact that future events and circumstances cannot be known with certainty, there will be differences between the estimates in the statement of social insurance and the actual results, and those differences may be material.
- c. Reference to any standards or regulations in addition to generally accepted auditing standards, such as *Government Auditing Standards*, that apply to audits of federal financial statements and any additional elements of the auditor's report that those standards or regulations require.

[Paragraph renumbered and revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.41 The following is an illustrative auditor's report for a statement of social insurance.

¹⁵ In Statement of Federal Financial Accounting Concepts No. 1, *Objectives of Federal Financial Reporting*, the FASAB articulates a concept of *financial condition*, as distinct from *financial position*. Financial condition is broader and more forward-looking than financial position. Presenting information on financial condition is consistent with FASAB's financial reporting objective of stewardship. In illustrating how the stewardship objective aligns with the needs of users of federal financial statements, FASAB observes that,

All users need information on earmarked revenues recorded in trust funds. They want to know, for example, whether the Social Security Trust funds are likely, in the foreseeable future, to need infusions of new taxes to pay benefits. Citizens need to know the implications of investing trust fund revenues in government securities.

In reporting the actuarial present value of the estimated future income to be received, estimated future expenditures to be paid, and excess of income over expenditures during a projection period sufficient to illustrate the long-term sustainability of an agency's social insurance programs, and in disclosing in the notes to the financial statements comparative financial information for the five most recent years, the statement of social insurance presents the financial condition of the programs. Thus, in reporting on the statement of social insurance, the auditor refers to the financial condition of the agency's social insurance programs.

Independent Auditor's Report¹⁶

We have audited the accompanying consolidated balance sheets of XYZ Social Insurance Agency, as of September 30, 20X8 and 20X7, the related consolidated statements of net cost, of changes in net position and of financing; the combined statements of budgetary resources for the years then ended; and statements of social insurance as of January 1, 20X8, 20X7, 20X6, 20X5, and 20X4.¹⁷ These financial statements are the responsibility of XYZ Social Insurance Agency's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and Office of Management and Budget (OMB) Bulletin No. 01-02, *Audit Requirements for Federal Financial Statements*. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to previously present fairly, in all material respects, the financial position of XYZ Social Insurance Agency as of September 30, 20X8 and 20X7; its net cost of operations; changes in net position, budgetary resources, and financing for the year then ended; and the financial condition of its social insurance programs as of January 1, 20X8, 20X7, 20X6, 20X5, and 20X4, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note X to the financial statements, the statements of social insurance present the actuarial present value of the Agency's estimated future income to be received from or on behalf of the participants and estimated future expenditures to be paid to or on behalf of participants during a projection period sufficient to illustrate long-term sustainability of the social insurance program. In preparing the statements of social insurance, management considers and selects assumptions and data that it believes provide a reasonable basis for the assertions in the statements. However, because of the large number of factors that affect the statement of social insurance and the fact that future events and circumstances cannot be known with certainty, there will be differences between the estimates in the statement of social insurance and the actual results, and those differences may be material.

Accounting principles generally accepted in the United States of America require that Management's Discussion and Analysis (MD&A) and the Required Supplementary Information (RSI) be presented to supplement the basic financial statements. Such information, although not a part of the

¹⁶ Paragraphs .65-.74 of AU section 508, *Reports on Audited Financial Statements*, provide guidance on reporting on comparative financial statements, including guidance on reporting when there has been a change in auditors.

¹⁷ The auditor's report on the statement of social insurance covers a period of five years (see paragraph 27(3)(j) of SFFAS No. 17); whereas, the auditor's report on the other financial statements covers a period of two years. In the first year's audit of the statement of social insurance, the auditor would only express an opinion on one year; in year two, the auditor would express an opinion on two years, and so on, until all five years were covered.

basic financial statements, is required by the Federal Accounting Standards Advisory Board who considers it to be an essential part of financial reporting for placing the financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the MD&A and RSI in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the MD&A and RSI because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

In accordance with *Government Auditing Standards*, we have also issued a report dated [report date] on our consideration of the agency's internal control and a report dated [report date] on its compliance with laws and regulations. Those reports are an integral part of an audit performed in accordance with *Government Auditing Standards* and should be read in conjunction with this report in considering the results of our audit.

[Signature]

[Date]

[Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120.]

.42 The statement of social insurance does not articulate with the other basic financial statements. For that reason, the portion of the auditor's report that addresses the statement of social insurance ordinarily will not affect the auditor's report on the balance sheet or the statements of net costs, changes in net position, financing, or budgetary resources. The following illustrates a report in which the auditor disclaims an opinion on the statement of social insurance but expresses an unqualified opinion on the other financial statements.

Independent Auditor's Report

We have audited the accompanying consolidated balance sheets of XYZ Social Insurance Agency, as of September 30, 20X8 and 20X7, the related consolidated statements of net cost, of changes in net position and of financing, and the combined statements of budgetary resources for the years then ended, and we were engaged to audit the statements of social insurance as of January 1, 20X8, 20X7, 20X6, 20X5, and 20X4. These financial statements are the responsibility of XYZ Social Insurance Agency's management. Our responsibility is to express an opinion on these financial statements based on our audits.

Except as explained in the following paragraph, we conducted our audits in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and Office of Management and Budget Bulletin No. 01-02, *Audit Requirements for Federal Financial Statements*. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An

audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

[Insert paragraph describing limitation on scope of the audits of the statements of social insurance.]

Because of the matter discussed in the preceding paragraph, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion on the statements of social insurance as of January 1, 20X8, 20X7, 20X6, 20X5, and 20X4.

In our opinion, the financial statements referred to previously present fairly, in all material respects, the financial position of XYZ Social Insurance Agency as of September 30, 20X8 and 20X7, its net cost of operations, changes in net position, budgetary resources, and financing for the year then ended in conformity with accounting principles generally accepted in the United States of America.

[Omit explanatory paragraph required by paragraph .40(b) of this SOP.]

[Modify the paragraph reporting on Management's Discussion and Analysis and Required Supplementary Information for the effects of the scope limitations regarding the statement of social insurance on that information, considering the guidance in AU section 550, Other Information in Documents Containing Audited Financial Statements, AU section 551, Supplementary Information in Relation to the Financial Statements as a Whole, and AU section 552, Reporting on Condensed Financial Statements and Selected Financial Data.]

[Reference to reports on internal control and compliance with laws and regulations in accordance with the Government Auditing Standards is the same as in the illustration in paragraph .41 of this SOP.]

[Signature]

[Date]

[Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120.]

.43 If the agency that operates a social insurance program issues financial statements that purport to present financial position, net cost of operations, changes in net position, budgetary resources, and financing for the years then ended, but omits the related statements of social insurance, the auditor ordinarily will conclude that the omission requires qualification of the auditor's opinion in the following manner:

Independent Auditor's Report

We have audited the accompanying consolidated balance sheets of XYZ Social Insurance Agency, as of September 30, 20X8 and 20X7, the related consolidated statements of net cost, of changes in net position and of financing, and the combined statements of budgetary resources for the years then ended. These financial statements are the responsibility of XYZ Social Insurance Agency's management. Our responsibility is to express an opinion on these financial statements based on our audits.

[Same second paragraph as the standard report]

The agency declined to present statements of social insurance as of January 1, 20X8, 20X7, 20X6, 20X5, and 20X4. Presentation of such statements describing the financial condition of its social insurance programs is required by accounting principles generally accepted in the United States of America.

In our opinion, except that the omission of the statements of social insurance results in an incomplete presentation as explained in the preceding paragraph, the financial statements referred to previously present fairly, in all material respects, the financial position of XYZ Social Insurance Agency as of September 30, 20X8 and 20X7; its net cost of operations; and changes in net position, budgetary resources, and financing for the year then ended in conformity with accounting principles generally accepted in the United States of America.

[Omit explanatory paragraph required by paragraph .40(b) of this SOP.]

[Modify, in accordance with the guidance in paragraph .09 of AU section 558, Required Supplementary Information, the paragraph regarding Management's Discussion and Analysis and the Required Supplementary Information (RSI) for the omission of the RSI.]

[Reference to reports on internal control and compliance with laws and regulations in accordance with Government Auditing Standards is the same as in the illustration in paragraph .41 of this SOP.]

[Signature]

[Date]

[Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature. Revised, December 2010, to reflect conforming changes necessary due to the issuance of SAS Nos. 118–120.]

Effective Date and Transition

.44 This SOP is effective for audits of statements of social insurance for periods beginning after September 30, 2005. SFFAS No. 17 (subparagraph 27(3)(a-h)) requires disclosure of the information for the current year and for each of the four preceding years. Comparative information in the statement of social insurance that has not been audited should be marked as unaudited. Earlier implementation of the provisions of this SOP is permitted. [Paragraph renumbered, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Appendix

Illustrative Controls and Audit Procedures

A-1. This appendix contains examples of:

- a. Procedures the auditor performs to obtain knowledge about the agency's process for developing, evaluating, and incorporating estimates in the statement of social insurance
- b. Controls that are relevant to the agency's preparation of the statement of social insurance (The auditor should obtain an understanding of the design of such controls and determine whether they have been implemented.)
- c. Procedures the auditor performs to tests controls and assertions in the statement of social insurance

A-2. The appendix is divided into the following five sections:

- a. Factors (paragraphs A-3–A-5)
- b. Assumptions (paragraphs A-6–A-10)
- c. Data (paragraphs A-11–A-14)
- d. Models (paragraphs A-15–A-17)
- e. Estimates (paragraphs A-18–A-20)

Each of these sections includes examples of the items described in paragraph A-1. The procedures and controls included in this appendix are illustrative and do not represent a complete list of procedures and controls.

Factors

A-3. In evaluating the reasonableness of an accounting estimate, the auditor ordinarily concentrates on key factors that are significant to the estimate, sensitive to variation, deviations from historical patterns, and subjective and susceptible to misstatement and bias. The following are examples of procedures the auditor performs to obtain knowledge about how the agency generates, evaluates, selects, and reviews factors to be included in estimates in the statement of social insurance:

- a. Identifying the individuals involved in generating, evaluating, selecting, and reviewing factors to be included in estimates in the statement of social insurance
- b. Determining how factors affecting social insurance estimates are generated, evaluated, selected, and reviewed, and how that process is documented¹
- c. Reading documentation of the process for generating, evaluating, selecting, and reviewing estimates to be included in the statement of social insurance

A-4. The auditor should obtain a sufficient understanding of the entity's internal control by performing risk assessment procedures to evaluate

¹ Office of Management and Budget (OMB) Circular No. A-123, *Management and Accountability Control*, and No. A-127, *Financial Management Systems*, outline documentation requirements for manual and automated financial related transactions and systems.

the design of controls relevant to an audit of financial statements and to determine whether they have been implemented. The following are examples of controls related to factors:

- a. Management's process for monitoring the environment to determine the effect that change in the environment (for example, legal, political, health, immigration) might have on the factors considered
- b. Procedures to prevent or detect and correct the inadvertent omission of factors that should be considered in developing the estimate (an example of such a control would be comparing factors considered and selected in the current period with those of prior periods)
- c. Hiring procedures to ensure that individuals responsible for generating, evaluating, selecting, and reviewing factors have the appropriate education and experience

A-5. The following are examples of procedures the auditor performs to test controls and financial statement assertions related to factors:

- a. Reviewing documentation of the factors considered in developing the estimate
- b. Evaluating whether the factors that have been considered are relevant and sufficient for the purpose of preparing the statement of social insurance
- c. Considering whether there are additional key factors that management has not addressed

Assumptions

A-6. In evaluating the reasonableness of an accounting estimate, the auditor ordinarily concentrates on assumptions that are significant to the accounting estimate, sensitive to variation, deviations from historical patterns, and subjective and susceptible to misstatement and bias.

A-7. The following are examples of matters the auditor inquires about in discussions with management and other knowledgeable personnel to determine how the agency generates, evaluates, selects, and reviews assumptions to be included in estimates in the statement of social insurance:

- a. The source of the assumptions for significant estimates²
- b. How the assumptions underlying the estimates are documented

² For some agencies, the assumptions are established by an external board of trustees and provided to the agency. For example, for the Social Security program, the Social Security Act establishes a board of trustees to oversee the financial operations of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund. The board is composed of six members, four of whom serve automatically by virtue of their positions in the federal government. They are the Secretary of the Treasury (the managing trustee), the Secretary of Labor, the Secretary of Health and Human Services, and the Commissioner of Social Security. The other two members are appointed by the President and confirmed by the Senate to serve as public representatives. In such circumstances, the auditor's procedures generally would focus on testing the work performed by the agency's actuary in reviewing the assumptions developed by the board of trustees. The agency's actuary reports on whether (a) the techniques and methodology used to evaluate the financial and actuarial status of the program is based upon sound principles of actuarial practice and are generally accepted within the actuarial profession; and (b) the assumptions used and the resulting actuarial estimates are, individually and in the aggregate, reasonable for the purpose of evaluating the financial and actuarial status of the trust funds, taking into consideration the past experience and future expectations for the population, the economy, and the program.

- c. The process for determining the best estimate (for example, intermediate) assumptions (possible outcomes)
 - d. How management considers and determines the effect that variation in the underlying assumptions will have on the estimates
- A-8.** The following are examples of controls related to assumptions:
- a. The agency's documentation of the process used to generate, evaluate, select, and review assumptions
 - b. How management monitors the environment for possible changes that might affect the assumptions used to develop estimates, for example, the need to consider alternative assumptions
 - c. Comparing assumptions made in the current period with those of prior periods and reconciling differences
 - d. Hiring procedures to ensure that personnel have the appropriate education and experience to meet job description requirements
- A-9.** The following are examples of procedures the auditor performs to test controls and financial statement assertions related to assumptions:
- a. Identifying the assumptions used and evaluating the reasonableness of those assumptions
 - b. Determining whether data and other related information support the assumptions
 - c. Evaluating whether interrelated assumptions are consistent with each other
 - d. Comparing assumptions made by the entity to the range of assumptions made by entities in other industries, for example, insurance companies, financial institutions, or other government agencies, and evaluating the implications of significant differences
 - e. Considering whether there are alternative assumptions about the factors
 - f. Evaluating whether the assumptions selected are consistent with supporting data, relevant historical data, and industry data
 - g. Reviewing available documentation of the assumptions used in developing the estimates
 - h. Evaluating whether facts and informed judgment about past and future events or circumstances support the underlying assumptions
 - i. Evaluating whether any of the significant assumptions are so subjective that no reasonably objective basis could exist to support the use of the assumption
 - j. Inquiring of program managers regarding the reasonableness of assumptions that are related to the manager's realm of responsibility
 - k. Evaluating whether the assumptions appear to be complete, that is, whether assumptions have been developed for each key factor
 - l. Considering whether the assumptions appear to be relatively objective, that is, are not unduly optimistic or pessimistic
 - m. Evaluating whether the assumptions are consistent with the laws and regulations governing the program

- n. Evaluating whether the assumptions, individually and in the aggregate, make sense in the context of the statement of social insurance taken as a whole
 - o. Evaluating whether significant assumptions are appropriately disclosed in the statement of social insurance
- A-10.** Assumptions that have no material effect on the statement of social insurance may not have to be individually evaluated; however, the aggregate effect of individually insignificant assumptions should be considered in making an overall evaluation of whether the assumptions underlying the reported amounts are reasonable.

Data

- A-11.** The following are examples of matters the auditor inquires about in discussions with management and other knowledgeable personnel, and reads about in agency documentation to determine how the agency generates, evaluates, selects, and reviews data to be included in estimates in the statement of social insurance:
- a. The source of the data for significant estimates and whether the data are developed internally or by outside parties
 - b. How data are collected, maintained, processed, and updated
 - c. How the data underlying the estimates are documented
- A-12.** The following are examples of controls related to data:
- a. Controls over the accuracy and completeness of internally prepared data, for example, review of the data for reasonableness and consistency with other data, and general and application controls over the data such as edit checks and batch totals
 - b. Controls that prevent or detect and correct errors in the collection, maintenance, processing, and updating of the data, for example, manual controls to ensure that data are accurately entered and uploaded to a computerized system
 - c. Controls over the reliability of external sources of data, for example, confirming and verifying data by tracing and agreeing it to census information in reports prepared by the United States Census Bureau
 - d. Procedures to identify and document authorized users of the system and to restrict access to the system, for example, the use of unique user passwords and periodic changes to those passwords
 - e. Preparation and review of a risk assessment on a regular basis or when a significant change occurs in either the internal or external physical environment
 - f. Preventive maintenance agreements or procedures for key system hardware components
 - g. On a regular basis, backing up software and data that are stored offsite
 - h. Restricting access to utility programs that can read, add, change, or delete data or programs to authorized individuals
 - i. Establishing procedures to ensure that original source documents are retained or are reproducible by the agency for an adequate amount of time to facilitate the retrieval or reconstruction of data

A-13. The following are examples of procedures the auditor performs to test controls and financial statement assertions related to data:

- a. Evaluating whether the data used to develop the estimates are relevant, reliable, and sufficient for the purpose
- b. Identifying the source of the data, that is, whether the data were developed by the agency or by an outside entity
- c. Reviewing documentation of the data used to develop estimates
- d. Determining whether data used to develop estimates are consistent with supporting data, historical data, and other related information. An example would be determining whether a positive or negative correlation exists between sets of data if such a correlation would be expected to exist
- e. Evaluating the accuracy and completeness of internally prepared data
- f. Tracing and agreeing internally prepared data to system output reports generated by the agency

A-14. In determining the extent of the procedures to be performed on data obtained from an external source, a factor to consider is whether the data are widely disseminated and used, or whether the data were developed for limited use. An example of data that are widely disseminated and used is a report prepared by the U.S. Census Bureau. For such data, the auditor may trace and agree the information to reports prepared by the U.S. Census Bureau. If management has made adjustments to data obtained from a widely disseminated and used external source, the auditor should evaluate:

- a. Management's reason for adjusting the data
- b. The accuracy and completeness of the adjustments to the externally obtained data
- c. Management's documentation supporting the adjustment

For data meant for limited use, all other factors being equal, the auditor should confirm or otherwise verify data obtained from other federal agencies and other external sources that were used in the actuarial valuation. If management has made adjustments to data developed for limited use, the auditor should evaluate:

- a. Management's reason for adjusting the data
- b. The accuracy and completeness of the adjustments to the externally obtained data
- c. Management's documentation supporting the adjustment

Models

A-15. The following are examples of procedures the auditor performs to obtain knowledge about how the agency generates, evaluates, selects, and reviews models used to develop estimates included in the statement of social insurance:

- a. Inquiring of management and other knowledgeable personnel about how they design or select the model used for the development of estimates and how they document that model

- b. Inquiring of management and other knowledgeable personnel about how they determine the effect that variations in the underlying assumptions have on the estimates
- A-16.** The following are examples of controls related to models:
- a. General and application controls related to the model, such as controls over input to the model and processing of that input
 - b. Controls that prevent or detect and correct errors in the development and processing of the model
 - c. Controls that prevent or detect and correct unauthorized access or changes to the model, for example, an access control table that is a component of the system and prohibits unauthorized users from accessing and changing the model. An example of a detective control is an audit log that tracks any changes made to the model
 - d. Controls designed to ensure that the information contained in the statement of social insurance and related disclosures conforms to generally accepted accounting principles
 - e. Designating responsibility for significant information resources within the agency (for example, data and programs) and establishing and maintaining security over such resources
 - f. Comparing existing system security features to documented system security requirements
 - g. Assigning responsibility to individuals in a manner that ensures that no single individual has the authority to read, add, change, or delete information without an independent review of that activity
 - h. Subjecting hardware and software acquisitions and implementations to extensive testing prior to acceptance in production
- A-17.** The following are examples of procedures the auditor performs to test controls and financial statement assertions related to models:
- a. Reviewing documentation that describes the instructions, rules, or procedures used in the model to calculate estimates
 - b. Reperforming calculations used in the model to translate the assumptions, data, and factors into the estimate
 - c. Reviewing management's documentation of its sensitivity analysis and considering whether the results are consistent with the auditor's expectations
 - d. If available, comparing the results of the model with the results of models used by other organizations for reasonableness

Estimates

- A-18.** The following are examples of matters the auditor inquires about in discussions with management and other knowledgeable personnel to determine how the agency generates, evaluates, selects, and reviews estimates to be included in the statement of social insurance:
- a. How management obtains the expertise to develop and evaluate estimates in the statement of social insurance, including hiring procedures, professional development activities, and procedures for engaging outside specialists
 - b. Who has final authority for reviewing and approving estimates

- c. The work performed by external review groups, their findings, and how those findings are used by the agency, for example:
 - (1) The scope and timing of the work performed by external review groups
 - (2) The composition of external review groups and the qualifications of the members
 - (3) Whether the external review groups are independent of the agency
 - (4) Whether the external review groups issued formal reports including findings or recommendations

A-19. The following are examples of controls related to estimates:

- a. Procedures related to the review and implementation of recommendations developed by external review groups
- b. General and application controls related to estimates, such as evidence of supervisory and management review of estimates and supporting documentation
- c. Controls intended to ensure that the information contained in the statement of social insurance and related notes conforms to Federal Accounting Standards Advisory Board (FASAB) guidance
- d. Controls related to the supervision of individuals who develop estimates, and the review of those estimates and supporting documentation
- e. Controls to regularly verify that personnel developing estimates are qualified to perform those tasks based on their education, training, and experience, as required

A-20. The following are examples of procedures the auditor performs to test controls and financial statement assertions related to estimates:

- a. Developing a trend analysis in which one period is compared to the next period
- b. Determining whether the information in the statement of social insurance, including related disclosure, is supported by sufficient, competent evidential matter
- c. Comparing the estimated future expenditures predicted by the actuarial model to actual expenditures for the previous fiscal year
- d. Evaluating the reasonableness of the time period covered by the statement of social insurance. FASAB standards require that the statement of social insurance cover a projection period sufficient to illustrate long-term sustainability of the social insurance program

Section 14,430

Statement of Position 07-2 Attestation Engagements That Address Specified Compliance Control Objectives and Related Controls at Entities That Provide Services to Investment Companies, Investment Advisers, or Other Service Providers

October 15, 2007

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA Chief Compliance Officers Task Force of the AICPA Auditing Standards Board (ASB) to provide guidance regarding the application of Statements on Standards for Attestation Engagements (SSAEs) primarily to examination engagements in which a practitioner reports on the suitability of the design and operating effectiveness of a service provider's controls in achieving specified compliance control objectives. Examples of the service providers addressed by this SOP are investment advisers, custodians, transfer agents, administrators, and principal underwriters that provide services to investment companies (including business development companies), investment advisers, or other service providers (user organizations). A practitioner's report on the suitability of the design and operating effectiveness of a service provider's controls in achieving specified compliance control objectives is used primarily by user organizations because aspects of a user organization's compliance or internal control over compliance with laws, regulations, and rules may be affected by or include controls at service providers.

This SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of SSAEs in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the ASB. The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Introduction and Background

.01 In December 2003, the Securities and Exchange Commission (SEC) adopted Rule 38a-1 under the Investment Company Act of 1940 and Rule 206(4)-7 under the Investment Advisers Act of 1940. The rules were adopted to protect investors by ensuring that (a) each investment company registered with the SEC under the Investment Company Act of 1940, and each business

development company¹ (collectively, funds) has an internal program to enhance compliance with federal securities laws² and (b) each investment adviser registered with the SEC has an internal program to enhance compliance with the Investment Advisers Act of 1940, including SEC rules issued thereunder.

.02 Many operations of funds and, in some instances, operations of investment advisers are carried out by entities that provide services to the funds or investment advisers. In this Statement of Position (SOP), such entities are termed *service providers*. Service providers have their own compliance policies and procedures that may affect or be part of a fund's or investment adviser's compliance or internal control over compliance with federal securities laws, individual statutes or provisions thereof, or corresponding SEC rules (*federal securities laws or elements thereof*).³ Rule 38a-1 requires each fund to adopt and implement written policies and procedures reasonably designed to prevent violation of federal securities laws by the fund or any of the following service providers named in the rule: investment advisers, principal underwriters, administrators, and transfer agents. Accordingly, a fund's compliance policies and procedures provide for oversight of the compliance procedures performed by the named service providers. Further, Rule 206(4)-7 requires an investment adviser to adopt and implement written policies and procedures reasonably designed to prevent violation by the investment adviser and its supervised persons of the Investment Advisers Act of 1940 and SEC rules issued thereunder. In this SOP, the term *service providers* refers to the service providers named in Rule 38a-1 as well as other service providers, such as custodians. The term *user organization* generally refers to a fund or investment adviser that uses the services of a service provider. In some instances, a single entity may be a service provider *and* a user organization. For example, Administrator A, in its capacity as a service provider to a fund, may be responsible for monitoring whether the fund's registration statement filed with the SEC complies with SEC disclosure requirements, but may subcontract that function to Administrator B that specializes in that area. In this situation, Administrator A is also a user organization because it uses the services of Administrator B. In this SOP, Administrator B is referred to as a *subservice provider*. In applying the guidance in this SOP, a subservice provider is considered a service provider.

.03 Among other provisions, the rules mentioned in paragraph .01 require funds and investment advisers to

- adopt and implement written policies and procedures⁴ reasonably designed to prevent violation of, in the case of funds, federal securities laws and, in the case of investment advisers, the Investment Advisers Act of 1940, including SEC rules issued thereunder.

¹ A business development company is a closed-end investment company that, among other requirements, has elected to be subject to the provisions of certain sections of the Investment Company Act of 1940.

² Rule 38a-1 defines *federal securities laws* to include the Securities Act of 1933, the Securities Exchange Act of 1934, the Sarbanes-Oxley Act of 2002, the Investment Company Act of 1940, the Investment Advisers Act of 1940, Title V of the Gramm-Leach-Bliley Act, any rules adopted by the Securities and Exchange Commission (SEC) under any of these statutes, the Bank Secrecy Act as it applies to funds, and any rules adopted thereunder by the SEC or the Department of the Treasury.

³ In this Statement of Position (SOP), *federal securities laws or elements thereof* is defined as federal securities laws (see footnote 2), individual statutes or provisions thereof, or corresponding SEC rules.

⁴ Rule 38a-1 and Rule 206(4)-7 use the term *policies and procedures* to refer to the principles and activities an entity adopts and implements to prevent violation of federal securities laws or elements thereof. In this SOP, the term *controls* is used to refer to the policies and procedures an entity adopts and implements to achieve specified compliance control objectives.

- review those policies and procedures at least annually for their adequacy and the effectiveness of their implementation.⁵
- designate a chief compliance officer (CCO) to be responsible for administering the policies and procedures (for funds, the CCO must report directly to the fund's board of directors).

.04 SEC Release Nos. IC-26299 and IA-2204 adopting the rules note that it may be impractical for a fund or its CCO to directly review all of its named service providers' policies and procedures, particularly if one or more of the service providers are not affiliated with the fund. In these circumstances, the SEC considers the fund to have satisfied the requirements of Rule 38a-1 if the fund's board of directors, in evaluating whether to approve the service provider's compliance program, uses a "third-party report" on the service provider's policies and procedures.⁶ In the United States fund industry, in connection with the audit of a fund's financial statements, a number of service providers are accustomed to engaging an independent auditor to report on the suitability of the design and operating effectiveness of controls at the service provider that may be relevant to the fund's internal control over financial reporting. These engagements are performed under AT section 801, *Reporting on Controls at a Service Organization* (AICPA, *Professional Standards*), and reports issued thereunder are used by the funds' independent auditor when auditing the fund's financial statements. Similarly, since the adoption of the rules in December 2003, service providers have received requests from funds and investment advisers for information and assurance regarding the suitability of the design and operating effectiveness of the service provider's controls in achieving compliance control objectives. Also, in some circumstances, subservice providers (service providers that provide services to other service providers, for example, a service organization that reports fund share balances and transactions of retirement plan participants, in aggregate, to a fund's transfer agent and maintains records thereof) have received similar requests from service providers. Such information assists funds and investment advisers in fulfilling their responsibilities to perform an annual review of specified compliance activities and assists service providers and subservice providers in their consideration of their own controls. [Revised, August 2011, to reflect conforming changes necessary due to the issuance of SSAE No. 16.]

.05 Specific information about the rules is provided in "Compliance Programs of Investment Companies and Investment Advisers," which can be accessed at the United States SEC website at www.sec.gov/rules/final/ia-2204.htm. The following is a table that briefly summarizes significant provisions of the rules. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

⁵ The annual review requirement is imposed upon the fund or investment adviser. Specifically, the rules do not require the fund or adviser to engage an independent accountant to attest to management's annual review or to perform a separate evaluation of any aspect of the fund's or investment adviser's compliance policies and procedures. Further, the rules do not require that the annual review employ a specific framework or methodology for evaluating the effectiveness of a fund's or investment adviser's compliance policies and procedures. Lastly, there is no requirement that annual or other compliance reports prepared by chief compliance officers of funds or investment advisers be filed with the SEC; however, the SEC may request such reports in connection with their inspection and examination programs of funds and investment advisers or in other circumstances.

⁶ The SEC release states that the third party report must describe the service provider's compliance program as it relates to the types of services provided to the fund, discuss the types of compliance risks material to the fund, and assess the adequacy of the service provider's compliance controls. Information produced as a result of an engagement covered by this SOP may be used by the fund, in part, to meet these provisions. The report must be provided to the fund no less frequently than annually.

SEC Rule and (Section Number)	Rule 38a-1 (§17 CFR 270.38a-1)	Rule 206(4)-7 (§17 CFR 275.206(4)-7) and Amendments to Rule 204-2 (§17 CFR 275.204-2)
Applicable entity	Investment companies and business development companies (funds) must:	Investment advisers must:
Nature of the policies and procedures to be adopted and implemented	Adopt and implement written policies and procedures reasonably designed to prevent violation of federal securities laws by the fund, including policies and procedures that provide for oversight of compliance by each investment adviser, principal underwriter, administrator, and transfer agent (named service providers) of the fund.	Adopt and implement written policies and procedures reasonably designed to prevent violation, by the investment adviser and persons supervised by the investment adviser, of the Investment Advisers Act of 1940 and the SEC rules issued thereunder.
Board approval of policies and procedures	Obtain approval by the fund's board of directors of the fund's policies and procedures and those of each of the named service providers.	
Annual review of policies and procedures	Review, no less frequently than annually, (1) the adequacy of the policies and procedures of the fund and each of the named service providers and (2) the effectiveness of their implementation.	Review, no less frequently than annually, (1) the adequacy of the policies and procedures established pursuant to the rule and (2) the effectiveness of their implementation.
Individual responsible for administering policies and procedures	Designate an individual to be the fund's chief compliance officer (CCO), responsible for administering the policies and procedures adopted under paragraph (a) (1) of the rule. The designation and compensation of the CCO must be approved by the fund's board of directors, and the CCO may be removed only by action and approval of the fund's board of directors.	Designate an individual (who is a supervised person) to be the adviser's CCO, responsible for administering the policies and procedures that are adopted under paragraph (a) of the rule.

SEC Rule and (Section Number)	Rule 38a-1 (§17 CFR 270.38a-1)	Rule 206(4)-7 (§17 CFR 275.206(4)-7) and Amendments to Rule 204-2 (§17 CFR 275.204-2)
Applicable entity	Investment companies and business development companies (funds) must:	Investment advisers must:
Report to the board of directors	<p>The CCO must provide a written report to the fund’s board of directors, no less frequently than annually, that addresses at a minimum:</p> <ul style="list-style-type: none"> • The operation of the fund’s policies and procedures and those of each of the named service providers, any material changes made to those policies and procedures since the last report, and any material changes to the policies and procedures recommended as a result of the annual review. • Each <i>material compliance matter</i>⁷ that occurred since the date of the last report. <p>After the initial report, subsequent CCO reports are expected to cover the period since the date of the last report.</p>	

Objective of the Examination Engagement

.06 Because federal securities laws encompass a significantly comprehensive set of obligations and responsibilities, the compliance control objectives presented by management of the service provider ordinarily would not include all conceivable compliance control objectives related to federal securities laws or elements thereof. Also, although Rule 38a-1 requires a fund’s CCO to include in the fund’s annual compliance report information concerning any material compliance matter(s) that occurred during the relevant period, the objective of the examination engagement described in paragraphs .01–.33 of this SOP is not to identify and report any material compliance matter(s) that may have existed at the service provider during the period covered by the practitioner’s report. Rather, the objective of the examination engagement described in paragraphs

⁷ SEC Rule 38a-1 defines a *material compliance matter* as any compliance matter about which the fund’s board of directors would reasonably need to know to oversee fund compliance and that involves, without limitation, (a) a violation of federal securities laws (as defined in Rule 38a-1) by the fund, its investment adviser, principal underwriter, administrator, or transfer agent (or officers, directors, employees, or agents thereof); (b) a violation of the policies and procedures of the fund, its investment adviser, principal underwriter, administrator, or transfer agent; or (c) a weakness in the design or implementation of the policies and procedures of the fund, its investment adviser, principal underwriter, administrator, or transfer agent.

.01–.33 of this SOP is for the practitioner to report on the suitability of the design (at the end of a specified period) and the operating effectiveness (during the specified period) of the service provider’s controls in achieving the compliance control objectives specified by management of the service provider.

.07 AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), allows a practitioner to report on either management’s assertion or on the subject matter to which it relates.⁸ Paragraph .64 of AT section 101 indicates that when the practitioner reports on an assertion, the assertion should either be (a) bound with or accompany the practitioner’s report or (b) clearly stated in the practitioner’s report. In view of the intended use of the information produced in connection with examination engagements covered by this SOP, practitioners are strongly encouraged to report on management’s assertion rather than on the subject matter to ensure that management’s assertion will be available to users of the report.

Subject Matter of the Examination Engagement

.08 The examination engagement described in paragraphs .01–.33 of this SOP should be performed in accordance with AT section 101. AT section 101 enables a practitioner to design an engagement and report on subject matter (or an assertion thereon) other than financial statements. The subject matter of the engagement described in paragraphs .01–.33 of this SOP is the suitability of the design and operating effectiveness of a service provider’s controls directed at achieving specified compliance control objectives. Use of the practitioner’s examination report is restricted to the CCOs, management, boards of directors, and independent auditors of the service provider and of the entities that use the services of the service provider because these users would be expected to have the requisite knowledge and familiarity with the service provider’s organization to understand the context of the examination report. [Revised, June 2009, to reflect conforming changes due to the issuance of recent authoritative literature.]

Management’s Responsibilities

.09 In an examination engagement in which the practitioner reports on the suitability of the design and operating effectiveness of controls to achieve specified compliance control objectives, management of the service provider is responsible for

- a. specifying compliance control objectives and related controls that are relevant to the services provided to user organizations and their internal control over compliance with federal securities laws or elements thereof.
- b. preparing and providing the practitioner with a written description of the specified compliance control objectives and related controls referred to in paragraph .09a (see appendix A-4 [paragraph .41] of this SOP, “Illustrative Service Provider’s Description of Specified Compliance Control Objectives and Related Controls”). If applicable, the

⁸ When conditions exist that individually or in combination result in one or more material misstatements or deviations from the criteria, to most effectively communicate with the reader of the report, the practitioner should ordinarily express his or her conclusion directly on the subject matter, not on the assertion.

written description should include the applicable information described in paragraphs .16–.17 of this SOP concerning compliance control objectives and related controls of subservice providers.

- c. preparing and providing the practitioner with a written assertion regarding the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives⁹ (see appendix A-3 (paragraph .40) of this SOP for an illustrative management assertion). The criteria management use in evaluating the suitability of the design and operating effectiveness of the controls included in management's description and in making its assertion are the specified compliance control objectives.
- d. identifying and presenting a list of user control considerations if the application of controls by user organizations is necessary to achieve the specified compliance control objectives. In certain circumstances, a service provided by a service provider may be designed with the assumption that certain controls will be implemented by user organizations. For example, the service may be designed with the assumption that user organizations will have controls in place for authorizing transactions before they are sent to the service provider for processing. If such user controls are required to achieve the stated compliance control objectives, the service provider should describe them either in its written description or in a separate list accompanying the description.
- e. preparing and providing the practitioner with a representation letter that ordinarily includes the items listed in paragraph .26a–j of this SOP.

Criteria

.10 Paragraph .23 of AT section 101 states, in part, that “The practitioner must have reason to believe that the subject matter is capable of evaluation against criteria that are suitable....” Paragraph .24 of AT section 101, in turn, indicates that suitable criteria must have each of the following attributes: objectivity, measurability, completeness, and relevance. In the examination engagement covered by this SOP, the criteria to be used to evaluate the suitability of the design and operating effectiveness of the controls are the specified compliance control objectives. The practitioner should consider whether the language used by management to describe the specified compliance control objectives included in the written description is sufficiently precise to permit people having competence in and using the same measurement criterion to ordinarily obtain materially similar measurements (paragraph .29 of AT section 101). Consequently, practitioners should not perform an engagement covered by this SOP if the criteria are so subjective or vague that reasonably consistent measurements, qualitative or quantitative, of the subject matter cannot ordinarily be obtained. For example, the following compliance control objective ordinarily would be too subjective for evaluation:

Advertising and sales literature is frequently and properly reviewed.

The following revision of this control objective improves its objectivity and measurability:

⁹ Paragraph .09 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), states that a practitioner should ordinarily obtain a written assertion in an examination engagement, whether reporting on the subject matter or reporting on a written assertion.

At the end of each quarter, advertising and sales literature is reviewed by the service provider's compliance officer for conformity with the service provider's written policies.

Furthermore, although this SOP does not require all service providers to present identical compliance control objectives for similar business activities or services (for example, transfer agency and fund administration) included in the scope of the attestation engagement, compliance control objectives or elements thereof that pertain to those business activities or services and are relevant to user organizations should not be omitted if management of the service provider or the practitioner becomes aware of deficiencies in the suitability of the design or operating effectiveness of controls that would prevent the achievement of such objectives. See also related guidance in paragraphs .12*b* and .21–.22 of this SOP. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Reference to Laws, Regulations, and Rules

.11 The written description of specified compliance control objectives and related controls prepared by management of the service provider should not include general or broad references¹⁰ to federal securities laws or elements thereof that might imply that the specified compliance control objectives completely address or directly correspond to such laws or elements thereof. Such references may mislead user organizations and others because most laws, regulations, and rules contain numerous and detailed provisions, all of which may not be addressed by the compliance control objectives and related controls. Management of the service provider may, however, include a citation from such federal securities laws or elements thereof within the specified compliance control objective, in the written description, if the citation is sufficiently specific. An example is a citation containing the specific section or subsection of the law, regulation, or rule corresponding to the specified compliance control objective as in "For money market mutual funds, investments are monitored on a weekly basis for compliance with the portfolio maturity and quality provisions of SEC Rule 2a-7c.2 and 2a-7c.3, respectively."

Practitioner's Responsibilities

.12 For the practitioner to express an opinion on the suitability of the design¹¹ and operating effectiveness of a service provider's controls in achieving specified compliance control objectives, the practitioner should

- a. obtain an understanding of the nature of the services provided by the service provider to user organizations and determine whether the specified compliance control objectives included in management's description are relevant to the services provided. Methods for obtaining an understanding of the services provided include
 - reading representative contracts between the service provider and user organizations, marketing or other material provided to user

¹⁰ For example, the written description should not include a table that aligns the specified compliance control objectives with generally or broadly described federal securities laws or elements thereof. Such a presentation could cause readers to incorrectly conclude that the specified control objectives address all provisions of the federal securities laws or elements thereof referenced in the table.

¹¹ A control is suitably designed if individually, or in combination with other controls, it is likely to prevent or detect errors that could result in the nonachievement of specified compliance control objectives when the described controls are complied with satisfactorily.

- organizations, reports developed by internal auditors, and correspondence to and from regulatory authorities; and
- making inquiries of management and other service provider personnel.
- b. obtain a written description prepared by management of the service provider of the specified compliance control objectives and related controls that are relevant to the services provided to user organizations and their internal control over compliance with federal securities laws or elements thereof (see appendix A-4 (paragraph .41) of this SOP, “Illustrative Service Provider’s Description of Specified Compliance Control Objectives and Related Controls”). If the practitioner concludes that the description is materially misstated or misleading in the circumstances, the practitioner should inform the service provider’s management and request that the description be amended. If management refuses to amend the description in a manner that addresses the practitioner’s concerns, the practitioner should consider withdrawing from the engagement.
 - c. consider the linkage between the controls and the specified compliance control objectives and the ability of the controls to prevent or detect errors related to the specified compliance control objectives.
 - d. obtain sufficient appropriate evidence regarding the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives. Procedures to obtain evidence regarding the suitability of the design and implementation of relevant controls may include inquiry of appropriate service provider personnel, observation of the application of specific controls, inspection of documents and reports, and tracing transactions relevant to the subject matter of the engagement through the service provider’s applicable information and communication systems. Inquiry alone is not sufficient to evaluate the design of a control relevant to an examination engagement and to determine whether it has been implemented. In testing the operating effectiveness of controls, the practitioner should obtain evidence about how the controls were applied at relevant times during the period under examination, the consistency with which they were applied, and by whom or what means they were applied. Tests of the operating effectiveness of controls ordinarily include the same types of procedures used to evaluate the design and implementation of controls, and may also include reperformance of the application of the control by the practitioner. Since inquiry alone is not sufficient, the practitioner should use a combination of procedures to obtain sufficient appropriate evidence regarding the operating effectiveness of controls.
 - e. ordinarily, obtain a written assertion prepared by management of the service provider regarding the suitability of the design and operating effectiveness of the service provider’s controls in achieving the specified compliance control objectives (see appendix A-3 [paragraph .40] of this SOP for an illustrative management assertion). As noted in paragraph .07 of this SOP, to ensure that management’s assertion will be available to users of the report, practitioners are strongly encouraged to report on management’s written assertion rather than on the subject matter, except when a deficiency or deficiencies in controls exist that, individually or in combination, result in the nonachievement of one or more specified compliance control objectives.

- f. obtain a representation letter from management that ordinarily would include the items in paragraph .26a-j of this SOP.

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.13 Ordinarily, for the examination engagement described in this SOP, the relevant aspects of a service provider's internal control over compliance pertaining to its control environment, risk assessment, and monitoring would not be presented in the form of compliance control objectives; however, management of the service provider is not precluded from doing so. The practitioner should perform tests of the relevant aspects of the service provider's control environment, risk assessment, and monitoring that relate to the services provided and should assess their effectiveness in establishing, enhancing, or mitigating the effectiveness of specific controls. If there are weaknesses in relevant aspects of the control environment, risk assessment, and monitoring the practitioner should consider an appropriate response. For example, modifying his or her procedures to obtain more persuasive evidence about the operating effectiveness of the controls and whether the specified compliance control objectives have been achieved. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Matters Addressed by the Compliance Control Objectives

.14 As noted in paragraph .06, because federal securities laws encompass a significantly comprehensive set of obligations and responsibilities, management's description ordinarily would not include all conceivable compliance control objectives related to federal securities laws or elements thereof.

.15 Unless the compliance control objectives have been designated by an outside party, such as a regulatory authority or a user group, management of the service provider is responsible for specifying the compliance control objectives and related controls that are the subject of the engagement. In establishing the compliance control objectives and related controls, management of the service provider should consider

- a. the nature of the services provided to user organizations.
- b. the service provider's contractual obligations to user organizations.
- c. the information and assurance needs of user organizations, including the relevancy of the compliance control objectives and related controls to the services provided to user organizations and their internal control over compliance with federal securities laws or elements thereof.¹²

Further, when circumstances permit, discussions between management of the service provider and user organizations are advisable in determining the compliance control objectives intended to address the needs of user organizations.

.16 Service providers may have contractual or other arrangements with one or more subservice providers or other parties that perform administrative, computer operations, transaction processing, recordkeeping, or other activities on their behalf. In these circumstances, management of the service provider determines whether the subservice provider's relevant control objectives and related controls are to be included or excluded from its written description of

¹² See SEC Release Nos. IC-26299 and IA-2204 adopting Rules 38a-1 and 206(4)-7, respectively (Section IIA., *Adoption and Implementation of Policies and Procedures*).

specified compliance control objectives and related controls. Although the inclusive method provides more information to user organizations, it may not be appropriate or feasible in many or all instances. In determining which approach to use, management of the service provider should consider (a) the nature and extent of information about the subservice provider from which user organizations would derive benefit, (b) the degree of responsibility management would assume by including information about the subservice organization in its description and accompanying written assertion, and (c) the practical difficulties entailed in implementing the inclusive method. Whether the subservice provider's relevant control objectives and related controls are included or excluded from the written description, the description should include a brief statement of the functions and nature of the services performed by the subservice provider. Ordinarily, disclosure of the identity of the subservice provider is not required. If, however, management of the service provider determines that the identity of the subservice provider would be relevant to user organizations, the name of the subservice provider may be included in the written description provided that there are no prohibitions against doing so, by contract or otherwise, and any necessary approvals have been obtained by the service provider. Also, when included, the written description should clearly differentiate between controls of the service provider and controls of the subservice provider.

.17 If the subservice provider's relevant compliance control objectives and related controls are excluded, management of the service provider should state in the written description that the subservice provider's compliance control objectives and related controls are omitted from the description and, unless achievement of the compliance control objectives depends on controls at the subservice provider, that the compliance control objectives included in the written description include only those objectives that the service provider's controls are intended to achieve. Reporting guidance for situations in which the service provider excludes the subservice provider's compliance control objectives and related controls from the service provider's written description is presented in paragraph .31 of this SOP.

.18 As noted in paragraph .13, ordinarily in the examination engagement described in this SOP, the relevant aspects of a service provider's internal control pertaining to its control environment, risk assessment, and monitoring would not be presented in the form of compliance control objectives; however, management of the service provider is not precluded from presenting those aspects in the form of compliance control objectives.

Evaluating Deficiencies in Controls

.19 Paragraph .24 of AT section 101 states, in part, that criteria are the standards or benchmarks against which the practitioner evaluates the subject matter. In this SOP, the criteria used by the practitioner to evaluate the suitability of the design and operating effectiveness of the controls included in management's description are the specified compliance control objectives. The practitioner should evaluate the results of the procedures he or she performed to obtain sufficient appropriate evidence about the suitability of the design and operating effectiveness of the controls and determine the significance of any identified deficiencies in controls, individually and in combination, to the achievement of the specified compliance control objectives. A deficiency in design exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if it

operates as designed, the control objective would not always be met. A deficiency in operation exists when a properly designed control does not operate as designed or when the person performing the control does not possess the necessary authority or qualifications to perform the control effectively. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

.20 The following are examples of factors that are relevant in evaluating the significance of identified deficiencies in controls:

- The existence of effective compensating controls that have been tested and evaluated and limit the severity of the deficiency
- The significance of the control(s) to achieving the compliance control objective
- The existence of multiple deficiencies in controls that, in combination, may be significant to the achievement of a compliance control objective, even if the deficiencies are individually insignificant to the achievement of the compliance control objective

The practitioner may conclude that the specified compliance control objective has been achieved even if a deficiency or deficiencies in controls have been identified. However, if, after performing his or her procedures, the practitioner concludes that the specified compliance control objective was not achieved, the practitioner should modify his or her report. See paragraph .29 of this SOP for related reporting guidance.

User Organizations Affected by a Service Provider's Noncompliance With Federal Securities Laws or Elements Thereof

.21 In the course of performing procedures at a service provider, a practitioner may become aware of a matter or matters constituting noncompliance with federal securities laws or elements thereof (including material compliance matters) that occurred during the period covered by the practitioner's report and relate to business activities or services included in the scope of the attestation engagement. Unless the instance(s) of noncompliance are clearly inconsequential, the practitioner should obtain an understanding of

- the nature of the noncompliance matter(s),
- the cause(s) of such,
- the period during which the noncompliance matter(s) existed or occurred, and
- the nature of any remediation activities taken to subsequently achieve compliance or the status of any remediation activities the service provider plans to take to achieve compliance.

.22 Further, the practitioner should determine whether information about the noncompliance matter(s) has been communicated to affected user organizations. If management of the service provider has not communicated this information and is unwilling to do so, and the practitioner believes the nature of the noncompliance matter(s) could be significant to user organizations, the practitioner should inform management and those charged with governance of the service provider of the circumstances. If management and those charged with governance of the service provider do not respond in an appropriate manner, the practitioner should consider withdrawing from the engagement.

The practitioner generally is not required to confirm with the user organizations that the service provider has communicated such information. If the user organizations have been notified in writing, the practitioner may request a copy from the service provider of the written communication. In all cases, judgment should be used by the practitioner in considering the effect, if any, of all information obtained about the noncompliance matter(s) on (a) the written assertion provided by management of the service provider regarding the suitability of the design and operating effectiveness of controls in achieving the specified compliance control objectives; and (b) the practitioner's procedures and report. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Management Assertion

.23 Paragraph .08 of AT section 101 defines an assertion as any declaration or set of declarations about whether the subject matter is based on or in conformity with the criteria selected. Paragraph .09 of AT section 101 provides the practitioner with additional information about a written assertion. For the examination engagement described in this SOP, whether reporting directly on the subject matter or on the assertion, the practitioner should ordinarily obtain a written assertion from management of the service provider regarding the suitability of the design and operating effectiveness of the service provider's controls in achieving the specified compliance control objectives. Appendix A-3 (paragraph .40) of this SOP contains an illustrative management assertion.

.24 Management's assertion regarding the suitability of the design and operating effectiveness of the controls should specify the "as of" date and period covered by management's assertion. The determination of an appropriate period is at the discretion of management; however, to be useful to user organizations, the assertion and related practitioner's report ordinarily covers a minimum reporting period of six months. The following are examples of factors that are relevant in establishing the reporting period:

- The anticipated needs of users of the report
- The degree and frequency of changes in the service provider's controls related to the specified compliance control objectives
- The period needed to provide sufficient and appropriate evidence regarding the operating effectiveness of the controls

[Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Management Representations

.25 Paragraphs .59–.60 of AT section 101 state, in part:

59. During an attest engagement, the responsible party makes many representations to the practitioner, both oral and written, in response to specific inquiries or through the presentation of subject matter or an assertion. Such representations from the responsible party are part of the evidential matter the practitioner obtains.

60. Written representations from the responsible party ordinarily confirm representations explicitly or implicitly given to the practitioner, indicate and document the continuing appropriateness of such representations, and reduce the possibility of misunderstanding concerning the matters that are the subject of the representations. Accordingly, in an examination or a

review engagement, a practitioner should consider obtaining a representation letter from the responsible party.

.26 The representations that a practitioner considers appropriate generally will depend on the subject matter and circumstances of the engagement. In addition to obtaining management's written assertion about the suitability of the design and operating effectiveness of the service provider's controls in achieving the specified compliance control objectives, the practitioner ordinarily would obtain the following written representations from management of the service provider in connection with the examination engagement described in paragraphs .01–.33 of this SOP:

- a. A statement acknowledging management's responsibility for
 - the subject matter of the examination engagement; namely, the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives.
 - selecting the criteria used and determining the appropriateness of such criteria for its purposes, including selecting and presenting compliance control objectives that are relevant to the services provided to user organizations and their internal control over compliance with federal securities laws or elements thereof (practitioners may wish to include in the representation letter the definition of the term *federal securities laws or elements thereof* found in footnotes 2 and 3 of this SOP).
 - its description of specified compliance control objectives and related controls.
 - its written assertion about the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives.
 - establishing and maintaining compliance and effective internal control over compliance with federal securities laws or elements thereof as they relate to the scope of the examination engagement, including establishing and maintaining controls that are suitably designed and operating effectively to achieve the specified compliance control objectives.
- b. A statement that management has disclosed to the practitioner all deficiencies of which it is aware in the design or operation of the service provider's internal control over compliance with federal securities laws or elements thereof, related to the scope of the attestation engagement, that existed during the period covered by the practitioner's report, including those for which management believes the cost of corrective action may exceed the benefits
- c. A statement that management has disclosed to the practitioner any significant changes in the service provider's controls related to the scope of the attestation engagement made since the service provider's last examination
- d. A statement that management has disclosed to the practitioner any instances of which it is aware of the service provider's noncompliance with federal securities laws or elements thereof, related to the scope of the attestation engagement, that existed during the period covered by the practitioner's report and that may affect one or more user organizations

- e. A statement that management has disclosed to the practitioner all instances of which it is aware when the service provider's controls have not operated with sufficient effectiveness during the period covered by the practitioner's report to achieve the specified compliance control objectives
- f. A statement that management has disclosed to the practitioner all known matters contradicting the assertion and any communications from attorneys, regulatory agencies, internal auditors, consultants, other practitioners, or third parties related to the service provider's compliance, or internal control over compliance, with federal securities laws or elements thereof during the period covered by the practitioner's report that may affect one or more user organizations
- g. A statement that management has made available to the practitioner all records and other information it believes are relevant to the service provider's compliance, or internal control over compliance, with federal securities laws or elements thereof, related to the scope of the attestation engagement and the period covered by the practitioner's report
- h. A statement that management has responded fully to all inquiries made by the practitioner during the engagement
- i. A statement that management has disclosed all events of which it is aware that occurred subsequent to the period being reported on that would have a material effect on the subject matter (or management's assertion) to which the practitioner's report relates
- j. Statements regarding other matters the practitioner deems appropriate for inclusion in management's representations to the practitioner

.27 If management refuses to furnish all the written representations that the practitioner deems necessary, the practitioner should consider the effects of such a refusal on his or her ability to express an opinion about the subject matter or assertion. If the practitioner believes that the representations are necessary to obtain sufficient appropriate evidence to express an opinion, management's refusal to furnish such evidence in the form of written representations constitutes a limitation on the scope of an examination sufficient to preclude an unqualified opinion and is ordinarily sufficient to cause the practitioner to disclaim an opinion or withdraw from an examination engagement. However, based on the nature of the representations not obtained or the circumstances of the refusal, the practitioner may conclude, in an examination engagement, that a qualified opinion is appropriate. Further, the practitioner should consider the effects of the refusal on his or her ability to rely on other representations made by management of the service provider. [Revised, June 2009, to reflect conforming changes necessary due to the issuance of recent authoritative literature.]

Reporting

.28 Appendix A-1 (paragraph .38) of this SOP contains an illustrative practitioner's examination report on an assertion by management of a service provider regarding specified compliance control objectives and related controls. The illustrative report includes the required elements of a practitioner's unqualified report on an assertion that are listed in paragraph .86 of AT section 101. Paragraph .85 of AT section 101 presents the required elements of a practitioner's unqualified report on subject matter, and appendix A, "Examination Reports," of AT section 101 presents additional illustrative examination reports.

.29 Paragraph .19 of this SOP notes that criteria are the standards or benchmarks against which a practitioner evaluates the subject matter, and in this SOP, the criteria for evaluating the suitability of the design and operating effectiveness of the controls are the specified compliance control objectives. If, after performing the procedures described in paragraphs .12–.13 and .19–.22 of this SOP, the practitioner concludes that the controls were not suitably designed or operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives were achieved, the practitioner should modify his or her report and include a brief factual description that will enable users of the report to understand the nature of the deficiency or deficiencies in controls. The matter or matters pertaining to the suitability of the design or operating effectiveness of controls and giving rise to a qualified or adverse opinion in a report on the examination engagement described in this SOP should be referred to as a deficiency or deficiencies. Further, paragraph .66 of AT section 101 states, in part, that “...if conditions exist that, individually or in combination, result in one or more material misstatements or deviations from the criteria, the practitioner should modify the report and, to most effectively communicate with the reader of the report, should ordinarily express his or her conclusion directly on the subject matter, not on the assertion.” Appendix B (paragraph .42) of this SOP contains an illustrative practitioner’s examination report containing a qualified opinion on a service provider’s controls in achieving the specified compliance control objectives. In that illustrative report, the practitioner reports on the subject matter rather than on the assertion.

.30 As noted in paragraph .72 of AT section 101, a practitioner may have reservations about the engagement (for example, a restriction on the scope of the engagement), the subject matter, and, if applicable, the assertion. When a practitioner has such reservations, he or she should exercise professional judgment in determining the significance of those reservations and the type of report to be issued. Paragraphs .71–.74 and .76–.77 of AT section 101 provide guidance in this area.

.31 If a subservice provider’s compliance control objectives and related controls are excluded from the service provider’s written description of specified compliance control objectives and related controls (see paragraph .17 of this SOP), the scope paragraph of the practitioner’s report should be modified to

- refer to the disclosure in the written description regarding the service provider’s use of a subservice provider and the functions and nature of the services performed by the subservice provider.
- state that the subservice provider’s compliance control objectives and related controls are omitted from the written description and that the practitioner’s examination did not extend to controls of the subservice provider.

Appendix A-2 (paragraph .39) of this SOP contains an illustrative practitioner’s examination report on a service provider’s specified compliance control objectives and related controls when the service provider uses a subservice provider and the subservice provider’s control objectives and related controls are excluded from the description.

.32 As noted in paragraph .17, situations may arise in which the service provider specifies compliance control objectives whose achievement depends on controls at a subservice provider. In those circumstances, if the service provider has excluded the subservice provider’s controls from the written description, the practitioner should modify the scope and opinion paragraphs of his or her

report to include the phrase “and subservice providers applied the controls contemplated in the design of the service provider’s controls.”

.33 A practitioner may perform significant portions of the engagement before the end of the period covered by the report. If during that time the practitioner identifies compliance control objectives that have not been achieved, he or she should include a description of the condition in his or her report, even if management corrects the condition prior to the end of the period.

Agreed-Upon Procedures

.34 A practitioner may also perform agreed-upon procedures related to compliance control objectives and related controls. Such engagements are performed in accordance with AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*). In these engagements, the parties to the engagement (specified parties) and the practitioner agree upon the procedures to be performed. The practitioner performs these procedures and reports his or her findings. The specified parties assume responsibility for the sufficiency of the procedures because they best understand their own needs. In an agreed-upon procedures engagement, the practitioner does not perform an examination or review of an assertion or subject matter or express an opinion or negative assurance about the assertion or subject matter. The practitioner’s report on agreed-upon procedures is in the form of procedures and findings. An illustrative agreed-upon procedures report is presented in appendix E (paragraph .45) of this SOP. Use of an agreed-upon procedures report is restricted to the specified parties that agree upon the procedures and accept responsibility for the sufficiency of the procedures for their purposes.

.35 In accordance with paragraph .10 of AT section 201, a practitioner should establish an understanding with the client regarding the services to be performed. Such an understanding reduces the risk that the client may misinterpret the objectives and limitations of an agreed-upon procedures engagement and also reduces the risk that the client will misunderstand its responsibilities and the responsibilities of the practitioner. Paragraph .46 of AT section 101 provides further guidance on establishing an understanding with a client in an attestation engagement.

.36 Paragraph .36 of AT section 201 enables a practitioner, after considering certain matters, to add a nonparticipant party as a specified party. If the practitioner agrees to add a specified party, he or she should obtain affirmative acknowledgement, normally in writing, from that party agreeing to the procedures performed and taking responsibility for the sufficiency of the procedures.

Effective Date

.37 This SOP is effective upon issuance.

Appendix A-1 — Illustrative Practitioner’s Examination Report on a Service Provider’s Assertion Regarding Specified Compliance Control Objectives and Related Controls

Note: The compliance control objectives and related controls referenced in the following illustrative practitioner’s report are examples only and should not be viewed as representative of or a complete description of the compliance control objectives or related controls a service provider might be expected to (1) establish and implement to meet any contractual responsibilities to funds or any other clients, (2) monitor for investment compliance, or (3) include in its description of specified compliance control objectives and related controls in an examination engagement covered by this Statement of Position (SOP). Additionally, there may be other areas of responsibility (beyond investment compliance) that a service provider might assume on behalf of funds or any other clients that might result in the inclusion and presentation of different or additional compliance control objectives and related controls for engagements covered by this SOP.

Report of Independent Accountants

To the Management of XYZ Service Provider:

[Introductory paragraph]

We have examined the assertion made by the management of XYZ Service Provider pertaining to controls over investment compliance that XYZ Service Provider performs for user organizations. Management’s assertion is included in the accompanying document titled, “Management’s Assertion Regarding XYZ Service Provider’s Specified Compliance Control Objectives and Related Controls” and states that:

- The controls described in the accompanying document titled, “XYZ Service Provider’s Description of Specified Compliance Control Objectives and Related Controls” (management’s description), were suitably designed as of December 31, 20X1 to provide reasonable assurance that the compliance control objectives established by management and described therein would be achieved, if those controls were complied with satisfactorily *[and user organizations applied the controls contemplated in the design of XYZ Service Provider’s controls¹]*; and
- The controls described in management’s description were operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives described therein were achieved during the period from January 1, 20X1 to December 31, 20X1.

Management of XYZ Service Provider is responsible for its assertion. Our responsibility is to express an opinion on management’s assertion based on our examination.

¹ Refer to user controls only in situations in which the application of controls by the user organizations is necessary to achieve specified control objectives. Otherwise omit this reference.

[Scope paragraph]

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of and evaluating the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives, and examining, on a test basis, evidence supporting management's assertion and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

We were not engaged to perform and did not perform an examination of XYZ Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws, as that term is defined by Securities and Exchange Commission (SEC) Rule 38a-1 under the Investment Company Act of 1940 ("Federal Securities Laws"). We also were not engaged to perform and did not perform an examination of XYZ Service Provider's compliance with its contractual obligations to its clients during the period from January 1, 20X1 to December 31, 20X1.

Our examination was limited to examining, for the purposes described above, management's assertion about the specified compliance control objectives and related controls included in management's description and did not consider any other compliance control objectives or controls that may be relevant to XYZ Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws. Further, the relative effectiveness and significance of specific controls at XYZ Service Provider, and their effect on user organizations' compliance or internal control over compliance with Federal Securities Laws are dependent on their interaction with the controls and other factors present at individual user organizations. We have performed no procedures to evaluate the effectiveness of such controls or such other factors at individual user organizations.

The compliance control objectives and related controls set forth in management's description have been provided to enable user organizations, when performing their annual compliance reviews as required by SEC Rule 38a-1 under the Investment Company Act of 1940, to consider such information along with information about their own compliance or internal control over compliance with Federal Securities Laws, and any other relevant information.

[Inherent limitations paragraph]

Management's description is as of December 31, 20X1. Any projection of such information to the future is subject to the risk that, because of change, the description may no longer portray the system or controls in existence. The potential effectiveness of controls in achieving the specified compliance control objectives established by XYZ Service Provider is subject to inherent limitations and, accordingly, lack of compliance with controls and instances of errors or fraud may occur and not be detected. Furthermore, the projection of any evaluations, based on our findings, to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with such controls may deteriorate, or changes made to the system or controls, or the failure to make needed changes to the system or controls, may alter the validity of such evaluations.

Statements of Position

[Opinion paragraph]

In our opinion, management's assertion referred to above is fairly stated, in all material respects, based on the specified compliance control objectives set forth in management's description.

[Restricted use paragraph]

This report is intended solely for the information and use of chief compliance officers, management, boards of directors, and the independent auditors of XYZ Service Provider and of the entities that use the services of XYZ Service Provider, and is not intended to be and should not be used by anyone other than these specified parties.

Appendix A-2 — Illustrative Practitioner’s Examination Report on a Service Provider’s Assertion Regarding Specified Compliance Control Objectives and Related Controls When the Service Provider Uses a Subservice Provider and the Subservice Provider’s Control Objectives and Related Controls are Excluded From the Description and the Scope of the Practitioner’s Engagement

Note: The compliance control objectives and related controls referenced in the following illustrative practitioner’s report are examples only and should not be viewed as representative of or a complete description of the compliance control objectives or related controls a service provider might be expected to (1) establish and implement to meet any contractual responsibilities to funds or any other clients (2) monitor for investment compliance, or (3) include in its description of specified compliance control objectives and related controls in an examination engagement covered by this Statement of Position (SOP). Additionally, there may be other areas of responsibility (beyond investment compliance) that a service provider might assume on behalf of funds or any other clients that might result in the inclusion and presentation of different or additional compliance control objectives and related controls for engagements covered by this SOP.

Report of Independent Accountants

To the Management of XYZ Service Provider:

[Introductory paragraph]

We have examined the assertion made by the management of XYZ Service Provider pertaining to controls over investment compliance that XYZ Service Provider performs for user organizations. Management’s assertion is included in the accompanying document titled, “Management’s Assertion Regarding XYZ Service Provider’s Specified Compliance Control Objectives and Related Controls” and states that:

- The controls described in the accompanying document, “XYZ Service Provider’s Description of Specified Compliance Control Objectives and Related Controls” (management’s description), were suitably designed as of December 31, 20X1 to provide reasonable assurance that the compliance control objectives established by management and described therein would be achieved, if those controls were complied with satisfactorily *[and user organizations applied the controls contemplated in the design of XYZ Service Provider’s controls]*¹:
- The controls described in management’s description were operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives described therein were

¹ Refer to user controls only in situations in which the application of controls by the user organizations is necessary to achieve the specified control objectives. Otherwise omit this reference. Also, if the application of controls by the subservice provider is necessary to achieve the specified compliance control objectives, and the subservice provider’s controls are excluded from the description, the practitioner’s report should be modified to include the phrase, “and the subservice provider applied the controls contemplated in the design of XYZ Service Provider’s controls.”

achieved during the period from January 1, 20X1 to December 31, 20X1.

As stated in management's description, XYZ Service Provider uses a computer processing service provider for all of its computerized application processing. Management's description includes only those compliance control objectives and related controls of XYZ Service Provider, and does not include compliance control objectives and related controls of the computer processing service provider. Our examination did not extend to controls of the computer processing service provider.

Management of XYZ Service Provider is responsible for its assertion. Our responsibility is to express an opinion on management's assertion based on our examination.

[Scope paragraph]

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of and evaluating the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives; and examining, on a test basis, evidence supporting management's assertion and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

We were not engaged to perform and did not perform an examination of XYZ Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws, as that term is defined by Securities and Exchange Commission (SEC) Rule 38a-1 under the Investment Company Act of 1940 ("Federal Securities Laws"). We also were not engaged to perform and did not perform an examination of XYZ Service Provider's compliance with its contractual obligations to its clients during the period from January 1, 20X1 to December 31, 20X1.

Our examination was limited to examining, for the purposes described above, management's assertion about the specified compliance control objectives and related controls included in management's description and did not consider any other compliance control objectives or controls that may be relevant to XYZ Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws. Further, the relative effectiveness and significance of specific controls at XYZ Service Provider, and their effect on user organizations' compliance or internal control over compliance with Federal Securities Laws are dependent on their interaction with the controls and other factors present at individual user organizations and at subservice providers. We have performed no procedures to evaluate the effectiveness of such controls or such other factors at individual user organizations or at subservice providers.

The compliance control objectives and related controls set forth in management's description have been provided to enable user organizations, when performing their annual compliance reviews as required by SEC Rule 38a-1 under the Investment Company Act of 1940, to consider such information along with information about their own compliance or internal control over compliance with Federal Securities Laws, and any other relevant information.

[Inherent limitations paragraph]

Management's description is as of December 31, 20X1. Any projection of such information to the future is subject to the risk that, because of change, the description may no longer portray the system or controls in existence. The potential effectiveness of controls in achieving the specified compliance control

objectives established by XYZ Service Provider is subject to inherent limitations and, accordingly, lack of compliance with controls and instances of errors or fraud may occur and not be detected. Furthermore, the projection of any evaluations, based on our findings, to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with such controls may deteriorate, or changes made to the system or controls, or the failure to make needed changes to the system or controls, may alter the validity of such evaluations.

[Opinion paragraph]

In our opinion, management's assertion referred to above is fairly stated, in all material respects, based on the specified compliance control objectives set forth in management's description.

[Restricted use paragraph]

This report is intended solely for the information and use of chief compliance officers, management, boards of directors, and the independent auditors of XYZ Service Provider and of the entities that use the services of XYZ Service Provider, and is not intended to be and should not be used by anyone other than these specified parties.

Appendix A-3 — Illustrative Management Assertion Regarding a Service Provider’s Specified Compliance Control Objectives and Related Controls

Management’s Assertion Regarding XYZ Service Provider’s Specified Compliance Control Objectives and Related Controls

XYZ Service Provider provides certain investment compliance services to funds (user organizations). XYZ Service Provider’s description of specified compliance control objectives and related controls is presented in the accompanying document, “XYZ Service Provider’s Description of Specified Compliance Control Objectives and Related Controls” (management’s description). We, as members of management of XYZ Service Provider, are responsible for the description as well as for the suitability of the design and operating effectiveness of those controls.

Management’s description is provided to enable user organizations, when performing their annual compliance review as required by Securities and Exchange Commission (SEC) Rule 38a-1 under the Investment Company Act of 1940, to consider such information, along with information about their own compliance and internal control over compliance with Federal Securities Laws, as that term is defined in Rule 38a-1, and any other relevant information. We have evaluated the suitability of the design and operating effectiveness of these controls in achieving the compliance control objectives included in management’s description during the period from January 1, 20X1 through December 31, 20X1. The criteria against which the controls were evaluated are the specified compliance control objectives included in management’s description. Based on our evaluation, we assert that:

- The controls included in management’s description were suitably designed as of December 31, 20X1 to provide reasonable assurance that the compliance control objectives described therein would be achieved, if those controls were complied with satisfactorily [*and user organizations applied the controls contemplated in the design of XYZ Service Provider’s controls*¹].
- The controls set forth in management’s description were operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives, included in management’s description, were achieved during the period from January 1, 20X1 to December 31, 20X1.

By: _____

By: _____

[*Signature, name, and title of appropriate official*]

¹ Refer to user controls only in situations in which the application of controls by the user organizations is necessary to achieve the specified control objectives. Otherwise omit the reference. Also, if the application of controls by a subservice provider is necessary to achieve the specified compliance control objectives, and the subservice provider’s controls are excluded from the description, the practitioner’s report should be modified to include the phrase, “and the subservice provider applied the controls contemplated in the design of XYZ Service Provider’s controls.”

Appendix A-4 — Illustrative Service Provider’s Description of Specified Compliance Control Objectives and Related Controls

XYZ Service Provider’s Description of Specified Compliance Control Objectives and Related Controls

Note: The following is an illustration of a description of investment compliance control objectives and related controls for an investment adviser (XYZ Service Provider) performing investment compliance-related services for funds.¹ This illustration is presented solely to provide an example of control objectives and related controls pertaining to investment-compliance related services and should not be viewed as representative of or a complete set of compliance control objectives or related controls that a service provider might be expected to (1) perform in these circumstances or similar circumstances, (2) establish and implement to meet any contractual responsibilities to funds or any other clients, or (3) include in its written description of specified compliance control objectives and related controls in an examination engagement covered by this Statement of Position (SOP). Additionally, there may be other areas of responsibility (beyond investment compliance) that a service provider might assume on behalf of funds or any other clients that might result in the inclusion and presentation of different or additional compliance control objectives and related controls for engagements covered by this SOP.

Monitoring Compliance with Fund Investment Guidelines and Restrictions

[XYZ Service Provider uses a computer processing service provider for all of its computerized application processing.² The accompanying description includes only those compliance control objectives and related controls of XYZ Service Provider, and does not include compliance control objectives and related controls of the computer processing service provider.]

Control Objective 1: Controls provide reasonable assurance that securities trades for the fund and the fund’s securities holdings comply with investment guidelines and restrictions included in the fund’s investment advisory agreement, prospectus, and statement of additional information.

Controls:

1. Before any securities trading commences for a fund (a) XYZ Service Provider’s trading desk representative enters information (coding) in the fund’s securities trading order entry and compliance (STOEC) module to reflect all investment guidelines and restrictions included in the documents identified in Control Objective 1, and (b) a supervisor in XYZ Service Provider’s fund services department compares, for completeness and accuracy, the information (coding) entered in the

¹ In this illustration, the investment adviser performs investment compliance-related services in addition to investment advisory services for funds. In other situations, investment compliance-related services may be performed, in whole or in part, by one or more other service providers or subservice providers.

² If the service provider uses a subservice provider, management’s description should include a brief statement of the functions and nature of the services performed by the subservice provider. In addition, the description should indicate whether the subservice provider’s compliance control objectives and related controls are included in or excluded from the description. See paragraphs .16–.17 of the Statement of Position for additional information about the information to be included in this disclosure.

fund's STOEC module to the corresponding information included in the source documents referred to in Control Objective 1. Any discrepancies that appear to be the result of data entry errors (for example, entering the number 50% when the prospectus states 5%) are corrected upon identification by XYZ Service Provider. Any other discrepancies related to differences in interpretation or uncertainty about the meaning of information in the source documents, are communicated to the fund's treasurer or chief compliance officer for research, clarification, and resolution. Any subsequent changes to the original information (coding) entered by XYZ Service Provider must be approved by the fund's treasurer or chief compliance officer.

2. On a daily basis, a report of all deletions, modifications, and additions made to investment guidelines and restrictions in the fund's STOEC module is reviewed by a supervisor in XYZ Service Provider's fund services department. The supervisor compares each change made to a written authorization to effect the change submitted by the fund's treasurer or chief compliance officer.
3. Annually, a supervisor in XYZ Service Provider's fund services department compares, for completeness and accuracy, the current information (coding) in each fund's STOEC module to the corresponding source documents referred to in the Control Objective.
4. For all securities trades for which the functionality of a fund's STOEC module identifies an apparent or possible noncompliant securities trade order, the order is 'pending' until the fund's treasurer or chief compliance officer reviews the circumstances of the requested trade and determines whether it is permissible. If permissible, the 'pending' trade is released for processing upon written approval by either the fund's treasurer or chief compliance officer. If not permissible, the trade is cancelled. On the basis prescribed in the fund's compliance policies and procedures (daily, weekly, monthly, or quarterly), members of the compliance staff of XYZ Service Provider review reports generated by the STOEC module to ascertain that no violations of the fund's investment guidelines and restrictions have occurred. Any violations are researched, and XYZ Service Provider's compliance staff ascertains that corrective actions were approved by the fund's treasurer or chief compliance officer, and effected.

Control Objective 2: Controls provide reasonable assurance that the dollar-weighted average portfolio maturities (WAPM) of money market funds do not exceed 90 days, as required by Securities and Exchange Commission (SEC) Rule 2a-7.

Controls:

1. For each new security purchased, a trade department analyst at XYZ Service Provider compares the terms entered in the trade system to the corresponding information in the documentation of the security purchase, including the date used for the WAPM calculation (for example, interest-rate reset date or maturity date).
2. On a quarterly basis, XYZ Service Provider's compliance staff verifies that the computation logic in its securities accounting system (SAS), which affects the calculation of the funds' WAPM, is consistent with applicable provisions of SEC Rule 2a-7 and regulatory guidance issued.

3. On a daily basis, using reports and information produced by the SAS, XYZ Service Provider's compliance staff determines whether any of the funds' WAPM exceeds 75 days. If so, the compliance staff alerts the portfolio manager so that this information can be taken into account by the portfolio manager when making prospective investment management decisions for the fund. If a fund's WAPM exceeds 80 days, the compliance staff also alerts the fund's treasurer.
4. On a daily basis, using reports and information produced by the SAS, XYZ Service Provider's compliance staff identifies changes of 3 days or more in any fund's WAPM from the fund's prior day WAPM, and researches the fund's investing activities sufficiently to identify the reason for the change and whether there is a reasonable basis for the change. The results of the research are documented and provided to a compliance department manager for his or her written review and approval.

Appendix B — Illustrative Practitioner’s Examination Report Containing a Qualified Opinion on the Suitability of the Design and Operating Effectiveness of a Service Provider’s Controls in Achieving Specified Compliance Control Objectives

Paragraph .66 of AT section 101 (AICPA, Professional Standards) states, in part, “If conditions exist that individually or in combination result in one or more material misstatements or deviations from the criteria, the practitioner should modify the report and, to most effectively communicate with the reader of the report, should ordinarily express his or her conclusion directly on the subject matter, not on the assertion.” The following illustrative practitioner’s report relates to an examination engagement in which the practitioner identified a control deficiency in the operating effectiveness of the service provider’s controls; accordingly, the practitioner reports on the subject matter, rather than on the assertion. Also, in an explanatory paragraph preceding the opinion paragraph, the practitioner describes the matters giving rise to the qualification. In this engagement, the practitioner has concluded that the deficiency in controls is not sufficiently pervasive to warrant an adverse opinion.

Report of Independent Accountants

To the Management of ABC Service Provider:

[Introductory paragraph]

We have examined whether the controls described in the accompanying document, “ABC Service Provider’s Description of Specified Compliance Control Objectives and Related Controls” (management’s description), were:

- Suitably designed, as of December 31, 20X1, to provide reasonable assurance that the specified compliance control objectives established by management of ABC Service Provider and described therein would be achieved, if those controls were complied with satisfactorily; *[and user organizations applied the controls contemplated in the design of ABC Service Provider’s controls¹]*; and
- Operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives described therein were achieved during the period from January 1, 20X1 to December 31, 20X1.

Management of ABC Service Provider is responsible for the suitability of the design and operating effectiveness of these controls in achieving the specified compliance control objectives. Our responsibility is to express an opinion based on our examination.

¹ Refer to user controls only in situations in which the application of controls by the user organizations is necessary to achieve the specified control objectives. Otherwise omit this reference.

[Scope paragraph]

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included examining on a test basis, evidence supporting the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

We were not engaged to perform and did not perform an examination of ABC Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws, as that term is defined by Securities and Exchange Commission (SEC) Rule 38a-1, under the Investment Company Act of 1940 ("Federal Securities Laws"). We also were not engaged to perform and did not perform an examination of ABC Service Provider's compliance with its contractual obligations to its clients during the period from January 1, 20X1 to December 31, 20X1.

Our examination was limited to examining, for the purposes described above, the suitability of the design and operating effectiveness of the controls in achieving the specified compliance control objectives included in management's description and did not consider any other compliance control objectives or controls that may be relevant to ABC Service Provider's or user organizations' compliance or internal control over compliance with Federal Securities Laws. Further, the relative effectiveness and significance of specific controls at ABC Service Provider, and their effect on user organizations' compliance or internal control over compliance with Federal Securities Laws are dependent on their interaction with the controls and other factors present at individual user organizations. We have performed no procedures to evaluate the effectiveness of such controls or such other factors at individual user organizations.

The compliance control objectives and related controls set forth in management's description have been provided to enable user organizations, when performing their annual compliance reviews as required by SEC Rule 38a-1 under the Investment Company Act of 1940, to consider such information along with information about their own compliance or internal control over compliance with Federal Securities Laws, and any other relevant information.

[Inherent limitations paragraph]

Management's description is as of December 31, 20X1. Any projection of such information to the future is subject to the risk that, because of change, the description may no longer portray the system or controls in existence. The potential effectiveness of controls in achieving the specified compliance control objectives established by ABC Service Provider is subject to inherent limitations and, accordingly, lack of compliance with controls and instances of errors or fraud may occur and not be detected. Furthermore, the projection of any evaluations, based on our findings, to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with such controls may deteriorate, or changes made to the system or controls, or the failure to make needed changes to the system or controls, may alter the validity of such evaluations.

[Explanatory paragraph]

Management of ABC Service Provider has included in its description a control requiring that the manager of the advertising and sales department review and approve performance data used in ABC Service Provider's advertising and sales

literature prior to its release to the public. Our tests of operating effectiveness noted that the manager of the advertising and sales department did not review and approve the aforementioned performance data prior to its release to the public. The manager's failure to perform this control is a deficiency in the operating effectiveness of the service provider's controls that resulted in the nonachievement of the compliance control objective included in management's description: "Performance data used in advertising and sales literature are accurate and approved before release to the public."

[Opinion paragraph]

In our opinion ABC Service Provider's controls were suitably designed at December 31, 20X1 to provide reasonable assurance that the specified compliance control objectives, as described in management's description, would be achieved, if those controls were complied with satisfactorily *[and user organizations applied the controls contemplated in the design of ABC Service Provider's controls²]*. Also, in our opinion, except for the deficiency described in the preceding paragraph, ABC Service Provider's controls were operating with sufficient effectiveness to provide reasonable assurance that the specified compliance control objectives were achieved during the period from January 1, 20X1 through December 31, 20X1, based on the specified compliance control objectives set forth in management's description.³

[Restricted use paragraph]

This report is intended solely for the information and use of chief compliance officers, management, boards of directors, and the independent auditors of ABC Service Provider and of the entities that use the services of ABC Service Provider, and is not intended to be and should not be used by anyone other than these specified parties.

[Signature of Independent Accountant]

March 31, 20X2

² Refer to user controls only in situations in which the application of controls by the user organizations is necessary to achieve the specified control objectives. Otherwise omit this reference.

³ In instances in which a control is not suitably designed, the phrase "except for the deficiency described in the preceding paragraph" would be inserted in the first sentence of the opinion paragraph, which relates to the suitability of the design of controls.

Appendix C — Additional Illustrative Compliance Control Objectives

Note: The following are additional illustrative compliance control objectives pertaining to various services service providers might provide. These illustrative compliance control objectives are only examples and should not be viewed as representative of or a complete set or description of compliance control objectives that a service provider might be expected to (1) establish and implement to meet any contractual responsibilities to funds or any other clients, (2) monitor for achievement, or (3) include in its description of specified compliance control objectives and related controls in an attestation engagement covered by this Statement of Position (SOP). Additionally, there may be other areas of responsibility (beyond those listed below) that a service provider might assume on behalf of funds or any other clients that might result in the inclusion and presentation of different or additional compliance control objectives and related controls for engagements covered by this SOP.

Fund Advertising and Sales Literature

Controls provide reasonable assurance that:

1. Advertising and sales literature is reviewed for compliance with the service provider's established policies and is timely submitted to the National Association of Securities Dealers (NASD) for approval
2. Comments from the NASD on advertising and sales literature are reviewed and timely reflected in advertising and sales literature as required
3. Performance data used in advertising and sales literature are accurate and approved before release
4. Expiring advertisement and sales literature is identified and updated or disposed of before the expiration date
5. Regulatory changes are monitored and reflected in current and future advertising and sales literature

Valuation of Client Assets or Investments

Controls provide reasonable assurance that:

1. Securities price information is received from authorized sources in accordance with client instructions and is entered completely and accurately into the portfolio accounting system
2. Foreign exchange rates are received from authorized sources in accordance with client instructions and are entered completely and accurately into the portfolio accounting system
3. Securities that do not have readily determinable market values (for example, those valued at fair value in good faith), including international equity securities whose values are determined by adjusting the closing price on the foreign securities exchange, are valued according to consistently applied policies and procedures established by the service provider's client

4. For registered money-market-fund securities valued at amortized cost, valuation is monitored for compliance with the “mark-to-market” provision of Securities and Exchange Commission (SEC) Rule 2a-7 and deviations in excess of established thresholds are reported in accordance with client instructions

Privacy

Controls provide reasonable assurance that:

1. The use of and access to nonpublic client information is restricted to authorized personnel
2. Customers of the fund are provided with a notice of privacy policies at the time they become a customer and in the event of a change to the privacy policy
3. Access to and use of material nonpublic information is restricted to authorized personnel
4. At least annually, employees are provided with written policies related to material nonpublic information and instruction about those policies
5. Customer information is disclosed only to authorized third parties

Transfer Agency

Controls provide reasonable assurance that:

1. As required by policies and procedures, the identity of any person seeking to open an account with the fund is verified by examining specified documents and other information and maintaining records of the information used to verify the person’s identity
2. Cash equivalents under \$10,000 are monitored and tracked for a rolling 12-month period; Internal Revenue Service (IRS) Form 8300 is filed, and the shareholder is notified as required by the IRS
3. Certificate redemption requests are processed in a timely manner and archived in a secure manner for subsequent inquiry
4. Missing, lost, stolen, or counterfeit certificate notifications are processed in a timely manner, and Form X-17F-1A is filed with the Securities Information Center within the required number of business days
5. Transfer agent employees are fingerprinted and the related records are maintained for the required time period
6. Shareholder financial-related transactions are priced using the appropriate net asset value per share
7. Dividends are processed completely and accurately; dividend distributions are reconciled between the fund’s general ledger and the shareholder accounting system; and any exceptions are researched and resolved by the next reporting period
8. Signature guarantees pertaining to shareholder transactions are reviewed upon presentment; rejected signature guarantees are communicated to the compliance department for tracking

Investment Compliance

Controls provide reasonable assurance that on a weekly basis:

1. Securities holdings are monitored for compliance with prospectus guidelines

Attestation Engagements That Address Compliance Control 31,813

2. Securities holdings are monitored to ensure that the portfolio meets a 15 percent liquidity standard
3. Securities of money market funds are monitored for compliance with the portfolio maturity and credit quality provisions of SEC Rules 2a-7c.2 and 2a-7c.3, respectively

Appendix D — Matters Identified in Securities and Exchange Commission Release Nos. IC-26299 and IA-2204 Adopting Rules 38a-1 and 206(4)-7 Pertaining to Compliance Policies and Procedures of Funds and Investment Advisers

As described in paragraph .15 of this Statement of Position (SOP), when management of the service provider establishes the compliance control objectives and related controls that are the subject of the engagement, it should consider, among other things, the compliance matters identified in Securities and Exchange Commission (SEC) Release Nos. IC-26299 and IA-2204 adopting Rule 38a-1 under the Investment Company Act of 1940 and Rule 206(4)-7 under the Investment Advisers Act of 1940, respectively. The SEC Release indicates that the SEC expects the policies and procedures of funds and their advisers to, at a minimum, address the following specified areas if those areas are relevant to the services the entity provides:

- Portfolio management processes, including allocation of investment opportunities among clients, and consistency of portfolios with clients' investment objectives, disclosures by the adviser, and applicable regulatory restrictions
- Trading practices, including procedures by which the adviser satisfies its best execution obligation, uses client brokerage to obtain research and other services (soft dollar arrangements), and allocates aggregated trades among clients
- Proprietary trading of the adviser and personal trading activities of supervised persons
- Accuracy of disclosures made to investors, clients, and regulators, including account statements and advertisements
- Safeguarding of client assets from conversion or inappropriate use by advisory personnel
- Accurate creation of required records and their maintenance in a manner that secures them from unauthorized alteration or use and protects them from untimely destruction
- Marketing advisory services, including the use of solicitors
- Processes to value client holdings and assess fees based on those valuations
- Safeguards for the privacy protection of client records and information
- Business continuity plans

Additional matters that the SEC expects funds (or their service providers) to address are listed in paragraph .02. This SOP does not require that a service provider's compliance control objectives address all of the relevant areas identified in the SEC Release; however, the areas listed in this paragraph and in paragraph .02 comprise matters that, if relevant in the circumstances, should

be considered by management of the service provider in determining compliance control objectives to be included in the scope of the attestation engagement.

The following is a summary of the additional areas, identified in the SEC Release, for which a fund or its service providers would be expected to have policies and procedures.

Pricing of portfolio securities and fund shares. The Investment Company Act of 1940 requires funds to sell and redeem their shares at prices based on their current net asset value, to pay redemption proceeds promptly, and, when market quotations are readily available, to calculate net asset values using the market value of the portfolio securities. If a market quotation is not readily available, the fund should use the fair value of the security, as determined in good faith by the fund's board. Further, Rule 38a-1 requires funds to adopt policies and procedures requiring the fund to monitor for circumstances that may necessitate the use of fair value prices, establish criteria for determining when market quotations are no longer reliable for a particular portfolio security, provide a methodology or methodologies by which the fund determines the current fair value of the portfolio security, and regularly review the appropriateness and accuracy of the method used in valuing securities and make any necessary adjustments.

Processing of fund shares. Pursuant to SEC rules, an investor submitting a purchase order or redemption request must receive the price next calculated after receipt of the purchase order or redemption request. A fund must have procedures in place that segregate investor orders received before the fund prices its shares (which will receive that day's price) from those that were received after the fund prices its shares (which will receive the following day's price). Rule 38a-1 requires funds to approve and periodically review the policies and procedures of transfer agents. Funds should also take affirmative steps to protect themselves and their shareholders against late trading by obtaining assurances that those policies and procedures are effectively administered.

Identification of affiliated persons. To prevent self-dealing and overreaching by persons in a position to take advantage of the fund, the Investment Company Act of 1940 prohibits funds from entering into certain transactions with affiliated persons. Funds should have policies and procedures in place to identify these persons and to prevent unlawful transactions with them.

Protection of nonpublic information. The federal securities laws prohibit insider trading, and section 204A of the Investment Advisers Act of 1940 requires investment advisers (including advisers to funds) to establish, maintain, and enforce policies and procedures designed to prevent the adviser or any of its associated persons from misusing material, nonpublic information. Fund advisers should incorporate their section 204A policies into the policies required by Rule 38a-1. A fund's compliance policies and procedures should also address other potential misuses of nonpublic information, including the disclosure to third parties of material information about the fund's portfolio, its trading strategies or pending transactions, and the purchase or sale of fund shares by advisory personnel based on material, nonpublic information about the fund's portfolio.

Compliance with fund governance requirements. Fund boards are responsible for, among other things, approving the fund's advisory contracts, underwriting agreements, and distribution plans. The Investment Company Act of 1940 requires that fund boards be elected by fund shareholders and that a certain percentage of the board be "independent directors." To rely on many of the SEC's exemptive rules, independent directors must constitute a majority of the

board, must be selected and nominated by other independent directors, and, if they hire legal counsel, must hire independent legal counsel. A fund's policies and procedures should be designed to guard against, among other things, an improperly constituted board, the failure of the board to properly consider matters entrusted to it, and the failure of the board to request and consider information required by the Investment Company Act of 1940 from the fund adviser and other service providers.

Market timing. Under Rule 38a-1, a fund must have procedures reasonably designed to ensure compliance with its disclosed policies regarding market timing. Market timing is the excessive short-term trading of mutual fund shares that may be harmful to the fund. These procedures should provide for monitoring of shareholder trades or flows of money in and out of the funds in order to detect market timing activity, and for consistent enforcement of the fund's policies regarding market timing. If the fund permits any waivers of those policies, the procedures should be reasonably designed to prevent waivers that would harm the fund or its shareholders or subordinate the interests of the fund or its shareholders to those of the adviser or any other affiliated person or associated person of the adviser. Fund boards are strongly urged by the SEC to require fund advisers, or other persons authorized to waive market timing policies, to report to the board at least quarterly all waivers granted so that the board can determine whether the waivers were proper. Many funds' prospectuses already disclose market timing policies, and failure to adhere to those disclosed policies violates the antifraud provisions of the federal securities laws. Moreover, a fund adviser who waives or disregards those policies for the benefit of itself or a third party has breached its fiduciary responsibilities to the fund.

Appendix E — Illustrative Practitioner’s Agreed-Upon Procedures Report

The following is an illustrative agreed-upon procedures report for procedures performed at a service provider.

Independent Accountant’s Report on Applying Agreed-Upon Procedures

To the Management of XYZ Service Provider:

We have performed the procedures enumerated in Attachment X which were agreed to by XYZ Service Provider, solely to assist you in evaluating XYZ Service Provider’s internal control over compliance during the year ended December 31, 20X1. Management of XYZ Service Provider is responsible for maintaining effective internal control over compliance with federal securities laws, regulations, and related SEC rules. This agreed-upon procedures engagement was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of XYZ Service Provider. Consequently, we make no representation regarding the sufficiency of the procedures described in Attachment X either for the purpose for which this report has been requested or for any other purpose.

The procedures performed and the findings are included in Attachment X.

We were not engaged to and did not conduct an examination, the objective of which would be the expression of an opinion on internal control over compliance by XYZ Service Provider for the year ended December 31, 20X1. Accordingly, we do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of XYZ Service Provider and is not intended to be and should not be used by anyone other than this specified party.¹

Section 14,450

Statement of Position 12-1 — Reporting Pursuant to the Global Investment Performance Standards

October 2012

NOTE

This Statement of Position (SOP) is an interpretative publication, and it represents the recommendations of the AICPA's Investment Performance Standards Task Force regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to engagements to report pursuant to Global Investment Performance Standards. The Auditing Standards Board (ASB) has found the recommendations in this SOP to be consistent with existing standards covered by Rule 202, *Compliance With Standards* (AICPA, *Professional Standards*, ET sec. 202 par. .01), of the AICPA Code of Professional Conduct.

Interpretative publications are not as authoritative as a pronouncement of the ASB; however, if a practitioner does not apply the attestation guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions addressed by this SOP.

Introduction and Background

.01 To promote fair representation, full disclosure, and greater comparability of investment performance, the CFA Institute developed the Global Investment Performance Standards (GIPS® standards).¹ Although compliance with the GIPS standards is voluntary, an investment management firm's claim of compliance with the GIPS standards gives current and potential clients more confidence in the integrity of the performance presentations and the general practices of a compliant firm.

.02 All references to the GIPS standards in this Statement of Position (SOP) refer to the 2010 edition of the GIPS standards. The GIPS standards specify that they include any updates, guidance statements, interpretations, questions and answers, and clarifications published by the CFA Institute and the GIPS Executive Committee, all of which are available at www.gipsstandards.org, as well as in the *GIPS Handbook*.

.03 The GIPS standards recommend that investment management firms obtain independent third-party verification. *Verification* is a process in which an independent third party, referred to as a verifier, assesses whether (a) the firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis, and (b) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification is intended to provide a firm and its existing and prospective clients with greater confidence in the firm's claim of compliance with the GIPS standards. Verification does not provide absolute assurance that a firm is in compliance with the GIPS standards.

¹ For information on the appropriate use of the Global Investment Performance Standards registered trademark, see the CFA Institute website at www.cfainstitute.org.

.04 In addition to verification, a firm may choose to have a verifier perform a specifically focused performance examination of any of the firm's composites and their associated compliant presentations. A *compliant presentation* is defined as a presentation for a composite that contains all the information required by the GIPS standards and that may also include additional or supplemental information. The GIPS standards permit a report on the performance examination of a composite and its associated compliant presentation to be issued only if a verification report has also been issued.

.05 A verifier may or may not be a CPA. A CPA in the practice of public accounting hired to perform a verification or performance examination is referred to in this SOP as a practitioner.

Scope

.06 This SOP provides guidance to practitioners for engagements to examine and report on aspects of a firm's claim of compliance with the GIPS standards (a verification). It also provides guidance on engagements to examine and report on any of the firm's composites and their associated compliant presentations (a performance examination). Practitioners are required to perform such engagements pursuant to AT section 101, *Attest Engagements* (AICPA, *Professional Standards*).

.07 Although a verification consists of examining aspects of a firm's compliance with the GIPS standards and the design of certain policies and procedures, a verification is not a compliance attestation engagement or an internal controls attestation engagement as governed by AT section 601, *Compliance Attestation*, and AT section 801, *Reporting on Controls at a Service Organization* (AICPA, *Professional Standards*), respectively.

.08 This SOP supersedes SOP 06-1, *Reporting Pursuant to the Global Investment Performance Standards*. This SOP also supersedes paragraphs 11.37–42 of chapter 11, "Independent Auditor's Reports and Client Representations," of the AICPA Audit and Accounting Guide *Investment Companies* (as of May 1, 2012).

Overview of the GIPS Standards

Compliance With the GIPS Standards

.09 The GIPS standards establish both requirements and recommendations for firms to follow when calculating and presenting investment performance. Adherence to the recommendations of the GIPS standards is encouraged. The GIPS standards use the term *must* to indicate requirements and the term *should* to indicate recommendations. AT section 101 uses the terms *must*, *is required*, or *should* to indicate requirements and *may* to indicate recommendations. To avoid confusion, this SOP uses the terms *is required* or *must* to indicate requirements of AT section 101 or the GIPS standards.

.10 The GIPS standards require an entity to define itself as a firm. For a firm to claim compliance with the GIPS standards, the firm must meet all the requirements of the GIPS standards on a firmwide basis. Firms are prohibited from claiming compliance "except for ..." or making any other statements that may indicate partial compliance with the GIPS standards.

.11 The GIPS standards provide *suitable criteria*, as defined in AT section 101, for verifications and performance examinations. The criteria are available

to *users*, as defined in AT section 101, as they are posted to www.gipsstandards.org. The GIPS standards require verifiers to use the criteria set forth therein. Consequently, practitioners who perform a verification or performance examination pursuant to the GIPS standards are required to understand the GIPS standards, including interpretative guidance.

.12 Practitioners are required to be independent of the firm, in accordance with the AICPA Code of Professional Conduct and the *GIPS Guidance Statement on Verifier Independence*.

Verification

- .13 A verification tests whether the
- firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis.
 - firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards.

The GIPS standards specify procedures that practitioners are required to perform for a verification, as well as recommendations and guidance (see chapter IV of the GIPS standards, the *GIPS Guidance Statement on Verification*, and the *GIPS Guidance Statement on Verifier Independence*).

.14 According to the GIPS standards, when a firm has obtained a verification report, the firm may state that it is verified. This statement may or may not be accompanied by a presentation of performance history for a specific composite. A verification, however, does not imply that the verifiers have examined the accuracy of the performance results of any specific composite presentation that may accompany the verification report (see paragraph .39).

Performance Examination

.15 In addition to a verification, a firm may choose to have a verifier conduct a performance examination. The GIPS standards specify procedures that practitioners are required to perform for a performance examination and also include recommendations and guidance (see the *GIPS Guidance Statement on Performance Examinations*). A verification is required to be performed prior to, or concurrent with, any performance examination. A firm is not permitted to state that a particular composite and its associated compliant presentation have been independently examined with respect to the GIPS standards unless the firm has also obtained a firmwide verification report covering the periods of the performance examination. Firms cannot state that a particular composite and its associated compliant presentation have been GIPS verified or make any claim to that effect.

Verification and Performance Examination Engagements

Engagement Objectives

.16 Practitioners are required to conduct verifications and performance examinations in accordance with attestation standards established by the AICPA. In addition, the GIPS standards specify that these engagements must be conducted in accordance with the procedures required in the GIPS standards. This SOP is not intended to provide all the required and recommended procedures set forth in the GIPS standards or all the applicable attestation standards established by the AICPA.

.17 For a verification, the practitioner's objective is to express an opinion on whether, in all material respects, the

- a. firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis.
- b. firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards.

.18 For a performance examination of a specific composite, the practitioner's objective is to express an opinion on whether, in all material respects, the firm has

- a. constructed the composite and calculated the composite performance in compliance with the GIPS standards.
- b. prepared and presented the composite presentation in compliance with the GIPS standards.

A firm that has met the requirements of the GIPS standards with regard to a specific composite presentation is considered to have prepared and presented that composite presentation in compliance with the GIPS standards.

Planning the Engagement

.19 Paragraph .44 of AT section 101 specifies that planning an attest engagement involves developing an overall strategy for the expected conduct and scope of the engagement. To develop such a strategy, practitioners need to have sufficient knowledge to enable them to adequately understand the events, transactions, and practices that, in their judgment, have a significant effect on the subject matter or assertions. Such knowledge includes a sufficient understanding of the investment management industry and the GIPS standards, AICPA interpretive guidance, and applicable laws and regulations regarding the calculation and presentation of investment performance. The GIPS standards also address qualifications for verifiers.

Establishing an Understanding With the Client

.20 The practitioner is required to establish an understanding with the client regarding the services to be performed to reduce the risk that either the practitioner or client may misinterpret the needs or expectations of the other party. The understanding is required to include the objectives of the engagement, management's responsibilities, the practitioner's responsibilities, limitations of the engagement, and any limitations on the use of the practitioner's name and report. The understanding may include a statement that if the client intends to use the practitioner's report(s) or refer to the practitioner in connection with any sales or advertising literature, the client will provide a draft of such literature to the practitioner for his or her review and comment prior to issuance.

.21 The practitioner is required to document the understanding in the working papers, preferably through a written communication with the client, such as an engagement letter (see appendix A, "Example Engagement Letter — Verification and Performance Examination," of this SOP for an example engagement letter).

Obtaining Sufficient Evidence

.22 In conducting an attest examination, the practitioner's objective is to accumulate sufficient evidence to restrict attestation risk² to a level that is, in the practitioner's professional judgment, appropriately low for the high level of assurance that may be inferred by his or her report. A practitioner is required to select from all available procedures (that is, procedures that assess inherent and control risk and that restrict detection risk) any combination that can mitigate attestation risk to such an appropriately low level.

.23 When conducting an attest examination, the practitioner is required to consider the following presumptions, bearing in mind they are not mutually exclusive and may be subject to important exceptions:

- Evidence obtained from independent sources outside an entity provides greater assurance about the subject matter or assertion than evidence secured solely from within the entity.
- Information obtained from the practitioner's direct personal knowledge (such as through physical examination, observation, computation, operating tests, or inspection) is more persuasive than information obtained indirectly.
- The more effective the controls over the subject matter, the more assurance they provide about the subject matter or assertion.

.24 As noted previously, the GIPS standards specify procedures that practitioners are required to perform for a verification and performance examination of one or more specific composites and their associated compliant presentations, as well as recommendations and guidance (see chapter IV of the GIPS standards, the *GIPS Guidance Statement on Verification*, the *GIPS Guidance Statement on Performance Examinations*, and the *GIPS Guidance Statement on Verifier Independence*). A practitioner may perform other procedures in addition to those specified in the GIPS standards. Regardless of the scope of the engagement, the practitioner is required to obtain sufficient evidence to provide a reasonable basis for the opinion expressed in the report.

.25 The GIPS standards permit the use of a sampling methodology when performing verification or performance examination procedures. The practitioner may find it helpful to consider the guidance in the AICPA Audit Guide *Audit Sampling* when performing procedures that involve the use of sampling.

.26 The GIPS standards specify that a verifier must understand the firm's policies and procedures for establishing and maintaining compliance with all the applicable requirements and adopted recommendations of the GIPS standards, evaluate whether all applicable policies are properly included and adequately documented, and then test the firm's compliance with the established policies and procedures.

.27 When a performance examination of one or more composites and their associated presentations is conducted subsequent to, not concurrent with, a verification, the practitioner is required to update the practitioner's understanding of the firm's policies and procedures and inquire about any other changes that may affect the planning and conduct of the performance examination. In addition, the practitioner is required to follow the preperformance examination procedures required by the GIPS standards.

² See footnote 9 in paragraph 45 of AT section 101, *Attest Engagement* (AICPA, *Professional Standards*), for the definition of *attestation risk*.

.28 The GIPS standards require that firms initially claiming compliance with the GIPS standards report, at a minimum, 5 years of investment performance for each composite presented (or performance since inception of the composite or firm if the period since inception is less than 5 years). After the initial presentation of GIPS-compliant performance, the firm must add an additional year of performance until the firm presents a 10-year GIPS-compliant performance record. Thereafter, at a minimum, a 10-year GIPS-compliant performance record must be presented.

.29 The initial minimum period for which verifications can be performed is one year of the firm's presented performance or from firm inception date to period-end if less than one year. Subsequent verifications may cover any additional time periods, with annual updates being common and quarterly updates also performed. After the initial verification or performance examination is complete, it is industry practice to append subsequent verification or performance examination periods to the initial period. For example, if an initial performance examination was completed on a firm from January 1, 2006, to December 31, 2010, the following year's performance examination period would cover from January 1, 2006, to December 31, 2011. Documentation for each annual engagement is required to indicate the procedures performed supporting the consideration of prior period opinions. Such procedures may include inquiries and evaluation of the implication of the findings of current year's procedures for prior periods.

.30 During a verification or performance examination, the practitioner is required to consider information about subsequent events and subsequently discovered facts that come to his or her attention. Such subsequent events and subsequently discovered facts include circumstances and events that affect prior period-compliant presentations. Errors in prior period-compliant presentations would be assessed in accordance with the firm's error correction policies. If a correction is required by the firm's error correction policy, and the firm does not correct the error, the practitioner is required to consider the implications for the performance examination and, if applicable, the related verification. If the firm corrects, or has corrected, a prior period-compliant presentation, the practitioner would perform appropriate testing of material revisions to previously reported information, including disclosures, regarding the changes and would consider the implications on the practitioner's ability to issue his or her report (see paragraph .34).

Representation Letter

.31 The GIPS standards specify that the verifier must obtain a representation letter from the firm before issuing an opinion on a verification or performance examination. The representations for a verification and performance examination(s) can be included in one letter. Appropriate parties to sign the representation letter are responsible persons with an appropriate level of authority (for example, chief executive officer, chief financial officer, chief compliance officer, or chief investment officer).

.32 The GIPS standards include a listing of required representations, as well as a listing of other representations that are typically included, for both verifications and performance examinations. The GIPS standards require that the representation letter include, among other representations, confirmation that policies and procedures used in establishing and maintaining compliance with the GIPS standards are as described in the firm's policies and procedures documents and have been consistently applied throughout the period(s). The representation letter must also include confirmation that the firm complies

with the GIPS standards for the period(s) and any other relevant representations made to the practitioner during the engagement. Because the practitioner is concerned with events occurring up to the date of the practitioner's report, the written representations are dated as of the date of the practitioner's report.

.33 Appendix B, "Example Representation Letter," of this SOP contains an example representation letter that includes required and recommended management representations. Management's refusal to furnish all appropriate written representations constitutes noncompliance with the GIPS standards that would preclude the practitioner from rendering an opinion (see paragraph .34).

Reporting

.34 The GIPS standards do not permit the issuance of a report with a qualified or an adverse opinion or a disclaimer of opinion for either a verification or performance examination. After conducting the procedures for a verification or performance examination, the practitioner may conclude that

- a. the records of the firm cannot support a verification or performance examination, or
- b. the firm is not in compliance with the GIPS standards, including situations in which the composite presentation does not comply with the GIPS standards.

In such situations, the GIPS standards specify that the practitioner must issue a statement to the firm clarifying why it was not possible to issue a verification or performance examination report.

.35 When a performance examination report cannot be issued, the GIPS standards require the practitioner and firm to consider the impact of the practitioner's inability to provide the performance examination report on the investment management firm's claim of compliance with the GIPS standards.

.36 AT section 101 permits the practitioner to report either on the assertions or directly on the subject matter to which the assertions relate. According to AT section 101, when the practitioner is reporting on management's assertion, the practitioner's examination report is required to include an identification of the assertion and responsible party. When the assertion does not accompany the practitioner's report, the first paragraph of the report is required to contain a statement of the assertion. The illustrative reports in appendix C, "Illustrative Attest Report: Verification (Reporting Directly on the Subject Matter)," and appendix D, "Illustrative Attest Reports: Verification and Performance Examination (Reporting Directly on the Subject Matter)," of this SOP present examples of reporting directly on the subject matter because that is industry practice.

.37 The first standard of reporting in AT section 101 specifies that "the practitioner must identify the subject matter or the assertion being reported on and state the character of the engagement in the report." Accordingly, for engagements covered by this SOP, the practitioner is required to clearly indicate in the report whether a verification, performance examination, or both have been performed. The GIPS standards require that the report state the period(s) covered.

.38 Appendix C of this SOP presents an illustrative report for a verification. Appendix D of this SOP presents illustrative reports for a verification and performance examination.

.39 The GIPS standards require that the verification report include a statement indicating that verification does not ensure the accuracy of any specific composite presentation (see the verification report in appendix C of this SOP). This disclaimer of opinion is an acknowledgement of the fact that the practitioner cannot control whether the verification report may accompany a composite presentation distributed by the firm, even though no performance examination was conducted.

.40 The GIPS standards specify that the compliant presentation for the specified composite(s) that is (are) the subject of a performance examination report must be included in, or attached to, the performance examination report. The practitioner may request that the firm's composite presentation for an examined composite disclose that publically available benchmark returns have not been examined by the practitioner to avoid the implication that the practitioner is providing assurance on the development of the benchmark. The practitioner also should add a paragraph to a performance examination report disclaiming an opinion on composite presentations included or attached for any periods that were not examined by the practitioner or stating that the report does not relate to any composite presentations other than those identified in the report.

.41 When a firm has changed verifiers, and prior periods presented were subject to verification or performance examination by another verifier, the firm may request that the practitioner refer to all verified or examined periods in his or her report. A practitioner may decide to refer to the report(s) of a predecessor verifier. The successor practitioner would consider the appropriateness of referring to reports on verifications or performance examinations conducted by other verifiers in the specific circumstances. If the successor practitioner decides to refer to the report(s) of the predecessor verifier, the report would be modified appropriately. Appendix E, "Illustrative Attest Report: Successor Practitioner Report — Verification and Performance Examination," of this SOP contains an example of a successor practitioner's report referring to the predecessor verifier's performance examination report.

Other Information

.42 When other information is included in a document containing a composite compliant presentation or presentations and the practitioner's performance examination report thereon to which the practitioner, at the firm's request, devotes attention, the practitioner's responsibility with respect to other information in such a document does not extend beyond the information identified in his or her report, and the practitioner has no obligation to perform any procedures to corroborate any other information contained in the document. However, the practitioner is required to read the other information not covered by the practitioner's report and consider whether it or the manner of its presentation is materially inconsistent with the information appearing in the practitioner's report. If the practitioner believes the other information is materially inconsistent with the information appearing in the practitioner's report, the practitioner is required to request the firm to revise the other information. If the other information is not revised to eliminate the material inconsistency, the practitioner may conclude that it is necessary to withdraw the report and may wish to seek legal advice.

.43 If, while reading the other information, as required in paragraph .42, the practitioner becomes aware of information that he or she believes is a material misstatement of fact that is not a material inconsistency, as described in paragraph .42, the practitioner is required to discuss the matter with the

firm. In connection with this discussion, the practitioner is required to consider that he or she may not have the expertise to assess the validity of the statement, there may be no standards by which to assess its presentation, and there may be valid differences of judgment or opinion. If the practitioner concludes there is a valid basis for concern, the practitioner is required to propose that the client consult with some other party whose advice may be useful, such as the entity's legal counsel. If, after discussing the matter, the practitioner concludes that a material misstatement of fact remains, the action taken will depend on the practitioner's judgment in the circumstances. The practitioner is required to consider steps such as notifying in writing the client's management and, when appropriate, those charged with governance of his or her views concerning the information and consulting legal counsel about further action appropriate in the circumstances.

Effective Date

.44 This SOP is effective upon issuance.

Appendix A — Example Engagement Letter — Verification and Performance Examination

The following is an illustration of an example engagement letter that may be used for this kind of engagement.

[Practitioner Letterhead]

[Client's Name and Address]

Dear _____:

This will confirm our understanding of the arrangements for our examination of whether (1) Investment Firm (the Firm) has complied with all the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0; this is referred to as a verification under the GIPS standards. *[When also conducting a performance examination, add: We have also been engaged to conduct an examination (referred to as a performance examination under the GIPS standards) of [specify composites] and their associated compliant presentations for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards.]*

Our examination will be conducted in accordance with the attestation standards established by the American Institute of Certified Public Accountants and criteria set forth in the GIPS standards. Our responsibility is to express an opinion based on our examination. Our examination will include examining, on a test basis, evidence about the Firm's compliance with the previously mentioned requirements; evaluating the design of the Firm's policies and procedures previously referred to; and performing the procedures for a verification required by the GIPS standards and such other procedures as we considered necessary in the circumstances.

The Firm's management is responsible for

- selecting the GIPS standards as the criteria against which we will evaluate its compliance and for determining that the GIPS standards are appropriate criteria for its purposes.
- compliance with all applicable laws, regulations, contracts, and agreements, including the GIPS standards.
- the design, implementation, and monitoring of the policies and procedures upon which compliance is based.
- making available to us all records and related information relevant to your examination.
- providing a signed representation letter at the completion of our examination.¹

If conditions not now anticipated preclude us from performing our examination procedures and issuing a report, as contemplated by the preceding

¹ The independent practitioner may wish to include in the engagement letter an understanding with the Firm about any limitation or other arrangements regarding liability of the practitioner or Firm.

paragraph, we will advise you promptly and take such action as we deem appropriate.

Working papers that are prepared in connection with this engagement are our property. The working papers are prepared for the purpose of providing principal support for our report(s).

As you are aware, there are inherent limitations in the examination process, including, for example, selective testing and the possibility that collusion or forgery may preclude the detection of material errors, fraud, and illegal acts.

Our fees will be billed as work progresses and are based on the amount of time required at various levels of responsibility plus actual out-of-pocket expenses. Invoices are payable upon presentation. We will notify you immediately of any circumstances we encounter that could significantly affect our initial estimate of total fees. The quoted fees assume that you will provide an accumulation of data for the period to be tested and that the records provided to us are clear, concise, and accurate.

In the event we are requested or authorized by management or required by government regulation, subpoena, or other legal process to produce our documents or personnel as witnesses with respect to our engagement, the Firm will reimburse us for our professional time and expenses, as well as any fees and expenses of our counsel, incurred in responding to such requests.

If the Firm intends to use our report in whole or part or refer to [*name of practitioner*] in connection with any sales or advertising literature, a draft of such literature will be provided to us for review and comment prior to issuance.

Either party may terminate this agreement at will.

If these arrangements are acceptable, please sign one copy of this letter and return it to us. We appreciate the opportunity to serve you.

Very truly yours,

[*Name of Practitioner*]

Accepted and agreed to:

[*Client Representative's Signature*]

[*Title*]

[*Date*]

Appendix B — Example Representation Letter

[Date]

[Name of Practitioner]

We are providing this letter in connection with your examination of whether (1) Investment Firm (the Firm) has complied with all the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0. [When also conducting a performance examination, add: (3) constructed the [specify composite(s)] and calculated the [specify composite(s)] performance for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards; and (4) prepared and presented the compliant presentation(s) for [specify composite(s)] for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards.]

We confirm, to the best of our knowledge and belief, the following representations made to you during your examination(s):

1. We are responsible for (a) compliance with all the composite construction requirements of the GIPS standards on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (b) the design of the Firm's policies and procedures to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0. We further confirm that we are responsible for the selection of the GIPS standards as the criteria against which you are evaluating our compliance and for determining that the GIPS standards are appropriate criteria for our purposes.
2. We assert to you that (a) we have complied with all the composite construction requirements of the GIPS standards on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0; (b) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0; and (c) the Firm's policies and procedures are as described in the firm's GIPS policies and procedures documents and have been consistently applied for the periods from January 1, 20X1, to December 31, 20Y0.
3. We assert that we are in compliance with the GIPS standards on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and we are not aware of any matters contradicting the assertions nor have we received any communications from the CFA Institute or regulatory agencies concerning (a) noncompliance with the GIPS standards or our assertions with regard thereto or (b) noncompliance with any other criteria relevant to investment performance.
4. We have [no knowledge of] [disclosed to you all information that we are aware of regarding] (a) fraud or alleged fraud involving management or employees who have significant roles in the Firm's policies and procedures relating to compliance with the GIPS standards or (b) fraud or alleged fraud involving others that could have a material effect on the Firm's compliance with the GIPS standards.

5. We have made available to you all records relevant to your examination.
6. There are no violations or possible violations of laws or regulations, including the Investment Advisers Act of 1940 (*if applicable*), whose effects should be considered for disclosure in your report or in the composite compliant presentations.
7. We acknowledge responsibility for maintaining sufficient books and records, as required by the GIPS standards and/or applicable regulatory requirements, and we have maintained such records to comply with those requirements.
8. We are not aware of any events that occurred subsequent to the period being reported on and through the date of this letter that would have a material effect on the outcome of the examination.

When also conducting a performance examination, add:

9. We assert that we have constructed [*specify composite(s)*] and calculated the composite performance for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards; and that [*refer to accompanying composite compliant presentation(s)*] of [*specify composite(s)*] for the periods from January 1, 20X1, to December 31, 20Y0, is prepared and presented in compliance with the GIPS standards.

Independent Accountant's Verification Report

Investment Firm
10 Main Street
Anytown, USA

We have examined whether (1) Investment Firm (the Firm) has complied with all the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0. The Firm's management is responsible for compliance with the GIPS standards and the design of its policies and procedures. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included examining, on a test basis, evidence about the Firm's compliance with the previously mentioned requirements; evaluating the design of the Firm's policies and procedures previously referred to; and performing the procedures for a verification required by the GIPS standards and such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, in all material respects

- the Firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0; and
- the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0.

We have not been engaged to examine and did not examine any presentations of the Firm's composites for any period, including any presentations that may accompany this report, and accordingly, we express no opinion on any such performance.¹

September 1, 20Y1

¹ If the verifier has issued a separate performance examination report concurrently, it may insert the following instead: "This report does not relate to any composite presentation of the Firm that may accompany this report, and accordingly, we express no opinion on any such performance."

Appendix D — Illustrative Attest Reports: Verification and Performance Examination (Reporting Directly on the Subject Matter)

Example 1 — Verification and Performance Examination Report

Independent Accountant's Verification and Performance Examination Report

Investment Firm
10 Main Street
Anytown, USA

We have examined whether (1) Investment Firm (the Firm) has complied with all the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0. We have also examined the accompanying [*refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the periods from January 1, 20X1, to December 31, 20Y0. The Firm's management is responsible for compliance with the GIPS standards and the design of its policies and procedures and for the [*refer to accompanying composite compliant presentation*]. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included examining, on a test basis, evidence about the Firm's compliance with the previously mentioned requirements; evaluating the design of the Firm's policies and procedures previously referred to; examining, on a test basis, evidence supporting the accompanying composite compliant presentation; and performing the procedures for a verification and performance examination required by the GIPS standards and such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, in all material respects,

- the Firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0; and
- the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0.

Also, in our opinion, in all material respects, the Firm has

- constructed the XYZ Composite and calculated the XYZ Composite performance for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards; and
- prepared and presented the [*refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards.

31,916

Statements of Position

This report does not contain an opinion on accuracy of any composite presentation of the Firm other than the [*refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the periods from January 1, 20X1, to December 31, 20Y0.

[*Signature*]

20X9	10.6	9.5	13.0			51	3.5	549	1,114
20Y0	2.7	1.7	0.4	7.1	7.4	54	2.5	575	1,236

Investment Firm (the Firm) claims compliance with the Global Investment Performance Standards (GIPS® standards) and has prepared and presented this report in compliance with the GIPS standards. The Firm has been independently verified for the periods from January 1, 20X1, to December 31, 20Y0. The verification report is available upon request. Verification assesses whether (1) the Firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

Notes:

1. The Firm is a balanced portfolio investment manager that invests solely in U.S. securities. The Firm is defined as an independent investment management firm that is not affiliated with any parent organization. Firm policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.
2. The composite includes all institutional balanced portfolios that invest in large-cap U.S. equities and investment-grade bonds with the goal of providing long-term capital growth and steady income from a well-diversified strategy. Although the strategy allows for equity exposure ranging between 50 percent and 70 percent, the typical allocation is between 55 percent and 65 percent. The account minimum for the composite is \$5 million.
3. The custom benchmark is 60 percent YYY U.S. Equity Index and 40 percent ZZZ U.S. Aggregate Bond Index. The benchmark is rebalanced monthly.
4. Valuations are computed and performance reported in U.S. dollars.
5. Gross-of-fees returns are presented before management and custodial fees but after all trading expenses. Composite and benchmark returns are presented net of nonreclaimable withholding taxes. Net-of-fees returns are calculated by deducting the highest fee of 0.083 percent from the monthly gross composite return. The management fee schedule is as follows: 1 percent on the first \$25 million and 0.60 percent thereafter.
6. This composite was created in February 20X1. A complete list of composite descriptions is available upon request.
7. Internal dispersion is calculated using the equal-weighted standard deviation of annual gross returns of those portfolios that were included in the composite for the entire year.
8. The 3-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The standard deviation is not presented for 20X1 to 20X9 because monthly composite and benchmark returns were not available and is not required for periods prior to 20Y0.

Example 2 — Performance Examination Report With a Reference to a Separate Verification Report

Independent Accountant's Performance Examination Report

Investment Firm
10 Main Street
Anytown, USA

We have examined the accompanying¹ [*refer to accompanying composite compliant presentations*] of Investment Firm's (the Firm's) ABC and XYZ Composites for the periods from January 1, 20X1, to December 31, 20Y0. The Firm's management is responsible for these compliant presentations. Our responsibility is to express an opinion based on our examination. We previously conducted an examination (also referred to as a verification) of whether (1) the Firm has complied with all the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the periods from January 1, 20X1, to December 31, 20Y0, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 20Y0; our report dated August 7, 20Y1, with respect thereto is attached.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included examining, on a test basis, evidence supporting the accompanying composite compliant presentations and performing the procedures for a performance examination required by the GIPS standards and such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, in all material respects, the Firm has

- constructed the Firm's ABC and XYZ Composites and calculated the composite performance for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards; and
- prepared and presented the [*refer to accompanying composite compliant presentations*] of the Firm's ABC and XYZ Composites for the periods from January 1, 20X1, to December 31, 20Y0, in compliance with the GIPS standards.

This report does not attest to the accuracy of any composite presentation of the Firm other than the Firm's ABC and XYZ Composites.

¹ See example 1A for an illustrative composite-compliant presentation that would accompany the report.

Appendix E — Illustrative Attest Report: Successor Practitioner Report — Verification and Performance Examination

Reporting Directly on the Subject Matter (Verification and Performance Examination Report) in Successor Practitioner's Report When the Predecessor Verifier's Report Is Not Presented

Independent Accountant's Verification and Performance Examination Report

Investment Firm
10 Main Street
Anytown, USA

We have examined whether (1) Investment Firm (the Firm) has complied with the composite construction requirements of the Global Investment Performance Standards (GIPS® standards) on a firmwide basis for the period from January 1, 2011, to December 31, 2011, and (2) the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 2011. We have also examined the accompanying [*refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the period from January 1, 2011, to December 31, 2011. The Firm's management is responsible for compliance with the GIPS standards and the design of its policies and procedures and for the [*refer to accompanying composite compliant presentation*]. Our responsibility is to express an opinion based on our examination. [*Refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the periods from January 1, 2002, to December 31, 2010, was examined by other independent verifiers, whose report is dated August 27, 2011.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included examining, on a test basis, evidence about the Firm's compliance with the previously mentioned requirements; evaluating the design of the Firm's policies and procedures previously referred to; examining, on a test basis, evidence supporting the accompanying composite compliant presentation; and performing the procedures for a verification and performance examination required by the GIPS standards and such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

In our opinion, in all material respects

- the Firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis for the period from January 1, 2011, to December 31, 2011; and
- the Firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards as of December 31, 2011.

Also, in our opinion, in all material respects, the Firm has

- constructed the Firm's XYZ Composite and calculated the composite performance for the period from January 1, 2011, to December 31, 2011, in compliance with the GIPS standards; and

- prepared and presented the [*refer to accompanying composite compliant presentation*] of the Firm's XYZ Composite for the period from January 1, 2011, to December 31, 2011, in compliance with the GIPS standards.¹

We have not been engaged to examine and did not examine the Firm's XYZ Composite for any period prior to January 1, 2011, as shown in the accompanying [*refer to the accompanying composite compliant presentation*], and accordingly, we express no opinion on any such performance.

This report does not attest to the accuracy of any composite presentation of the Firm other than the Firm's XYZ Composite.

Section 14,460

Statement of Position 13-1 — Attest Engagements on Greenhouse Gas Emissions Information

April 2013

NOTE

This Statement of Position (SOP) is an interpretative publication, and it represents the recommendations of the AICPA's Sustainability Task Force regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to attest engagements on greenhouse gas emissions information. The Auditing Standards Board (ASB) has found the recommendations in this SOP to be consistent with existing standards covered by Rule 202, *Compliance With Standards* (AICPA, *Professional Standards*, ET sec. 202 par. .01), of the AICPA Code of Professional Conduct.

Interpretative publications are not as authoritative as a pronouncement of the ASB; however, if a practitioner does not apply the attestation guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions addressed by this SOP.

Introduction

.01 Certain atmospheric gases (carbon dioxide, methane, nitrous oxide, water vapor, and others) are called greenhouse gases (GHGs) because they are believed to contribute to the retention of outgoing energy, trapping heat somewhat like the glass panels of a greenhouse. For the purposes of GHG emissions reporting, GHGs include carbon dioxide and any other gases required by the applicable criteria to be included in the GHG emissions schedules, such as

- methane (CH₄);
- nitrous oxide (N₂O);
- perfluorocarbons (PFCs);
- hydrofluorocarbons (HFCs); and
- sulphur hexafluoride (SF₆).

.02 Gases other than carbon dioxide are often expressed in terms of carbon dioxide equivalents (CO₂-e). Due to a number of global and national initiatives to reduce GHG emissions, many entities are quantifying their GHG emissions for internal management purposes, and many are also preparing a GHG emissions schedule

- as part of a regulatory disclosure regime.
- as part of an emissions trading program.
- to inform investors and others on a voluntary basis. Voluntary disclosures may be, for example, published as a stand-alone document, included as part of a broader sustainability report or in an entity's annual report, or made to support inclusion in a public carbon registry.

.03 Entities may also participate in *emission reduction*¹ projects to reduce the emission of GHGs, such as by setting emission limits or modifying the emission source. Emission reduction is measured in relation to a *baseline*. Emission reductions may be registered and traded (that is, purchased and sold). Paragraphs .29–.30 describe the attributes to be met by an emission reduction for it to be registered or traded, and paragraph .45 provides examples of GHG emission reduction projects.

GHG Reporting in the United States

.04 Voluntary reporting programs in which some U.S. companies participate include the following:

- The Carbon Disclosure Project (CDP), an organization based in the United Kingdom that works with shareholders and corporations to encourage them to disclose their GHG emissions. The CDP scores entities based on factors such as the extent to which a company measures its carbon emissions, the frequency and relevance of its disclosure to key corporate stakeholders, and whether the company engages a third party to verify emissions data to promote greater confidence and use of the data. Entities with sufficiently high scores are listed in the Carbon Disclosure Leadership Index (CDLI).
- The Climate Registry (www.theclimateregistry.org) is a nonprofit collaboration among North American states, provinces, territories, and Native Sovereign Nations that sets standards to calculate, verify, and publicly report GHG emissions into a single registry.

Certain industries and jurisdictions require GHG emissions reporting but may not require attestation services.

.05 Reasons that entities report GHG emissions and request attestation services related to GHG emissions include the following:

- To participate in GHG emissions reductions programs.
- To respond to shareholder resolutions calling for companies to report and have their corporate social responsibility or GHG emissions information verified by a third party.
- To demonstrate responsible corporate behavior.
- The desire to be listed in the CDLI.
- To satisfy requests from customers regarding information about GHG emissions within their supply chain. For example, in October 2009, Section 13 of Executive Order 13514, Federal Leadership in Environmental, Energy, and Economic Performance, directed the U.S. General Services Administration (GSA) with the Department of Defense and the Environmental Protection Agency to assess the feasibility of requiring federal suppliers to provide GHG emissions data to the government. In August 2010, GSA launched the Federal Supplier Greenhouse Gas Emissions Inventory Pilot, a three-year program in which small businesses are required to develop annual GHG emissions inventories through September 2013. The program's purpose is to assess the benefits and challenges experienced by small businesses when completing a GHG emissions inventory.

¹ Terms defined in the glossary are italicized the first time they appear in this statement of position.

Terms and Definitions Used by Registries and Regulatory Frameworks

.06 Appendix A, “Glossary,” in this statement of position (SOP) contains a glossary of common terms relating to GHG engagements. Different registries and regulatory frameworks may use different terms and definitions for similar services. A *validation* is a service that would provide assurance on the feasibility of the design of an emission reduction project, usually before inception of the project; an entity would typically engage an engineering or a consulting firm to provide such a service. This SOP does not provide guidance on validation standards. A *verification* is the objective and independent assessment of whether the reported GHG emissions properly reflect the GHG impact of the entity in conformance with preestablished GHG accounting and reporting standards. Various GHG registries and regulatory frameworks may not define these terms in exactly the same way; thus, the practitioner should obtain the official definitions of such terms under the registry or regulatory framework relevant to the engagement. However, practitioners should not use terms such as *validation* or *verification* in their attest reports on GHG emissions regardless of whether the registry or regulatory framework uses such terms because AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), requires the terms *examination* or *review* to be used to describe such engagements.

Scope of This SOP

.07 This SOP provides guidance for practitioners performing

- an examination or
- a review

of a GHG emissions statement containing either

- a schedule with the subject matter or
- an assertion

relating to information about an entity’s GHG emissions, such as

- a GHG *inventory* (an entity’s emissions of GHGs for a specified period, typically, a year or a series of years, or a baseline *GHG inventory*), or
- a GHG emission reduction in connection with
 - the recording of the reduction with a registry or
 - a trade of that reduction or *credit*.

Such engagements should be performed pursuant to AT section 101. This SOP provides guidance on the application of AT section 101 to GHG emissions attest engagements. This SOP is not intended to provide all the guidance set forth in the applicable standards established by the AICPA. This SOP supersedes SOP 03-2, *Attest Engagements on Greenhouse Gas Emissions Information*.

.08 In an examination engagement of a GHG emissions statement, the practitioner chooses a combination of attestation procedures, which can include inspection, observation, confirmation, recalculation, reperformance, analytical procedures, and inquiry. In a review engagement, the types of procedures performed generally are limited to inquiries and analytical procedures (see paragraph .59 for further description of review procedures). Determining the attestation procedures to be performed on a particular engagement is a matter of professional judgment. Because GHG emissions reporting covers a wide

range of circumstances, the nature, timing, and extent of procedures are likely to vary considerably from engagement to engagement.

.09 Unless otherwise stated, the matters discussed in this SOP apply to both examination and review engagements. Because a review engagement is substantially less in scope than an examination, the procedures the practitioner will perform in a review engagement will vary in nature and extent from those performed in an examination engagement. Paragraphs .59 and .64 describe in tabular form procedures that are relevant to an examination or review engagement. Procedures that would ordinarily be performed in both an examination and a review are shown in one column across a row. Similar procedures are shown in separate columns in a row, and when a procedure is not ordinarily performed in a review engagement, the review column in that row has been deliberately left blank. Although some procedures are shown only for examination engagements, they may nonetheless be appropriate in review engagements in circumstances in which procedures, in addition to inquiry and analytical procedures, are determined to be necessary by the practitioner.

Engagement Acceptance Considerations

.10 The following are examples of matters addressed in AT section 101 that are relevant to a practitioner's decision about whether to accept an engagement:

- Independence (see paragraphs .11–.12).
- Whether the practitioner has adequate technical knowledge of the subject matter to perform the engagement, including evaluation of the work of any specialists involved in the engagement (see paragraphs .13–.19).
- Whether the practitioner will be performing a sufficient portion of the engagement to assume overall responsibility (see paragraphs .20 and .54).
- Considerations in selecting and using the work of a specialist, when applicable (see paragraphs .21–.23).
- Existence of suitable criteria (see paragraphs .24–.30).
- Materiality considerations (see paragraph .31).
- Expectations of users of the GHG inventory or reduction information and the practitioner's report thereon.
- Whether the entity is likely to have adequate information systems and controls to provide reliable GHG information.
- Whether sufficient evidence is likely to exist, including when the entity has changed measurement methods for GHG emissions from one period to the next (see paragraphs .33 and .66).
- The scope of the entity's GHG inventory (see paragraphs .34–.35 for a discussion of *boundaries* and paragraphs .36–.38 for a discussion of direct and indirect emissions for a GHG inventory).
- Availability of historical data. If the practitioner is engaged to perform the attest service at a date considerably later than the base year, there is a risk that historical data for the base year may not be available (see paragraph .39 for a discussion of baselines).

Independence

.11 The practitioner performing an attest engagement is required to be *independent* pursuant to Rule 101, *Independence* (AICPA, *Professional Standards*, ET sec. 101 par. .01), of the Code of Professional Conduct.

.12 Certain GHG registries and regulatory frameworks set rules that prohibit professionals who provide attest services on GHG emissions statements from providing other services to the entity for a period of time. For example, a GHG framework or registry may set independence requirements that specifically prohibit a practitioner who has performed certain services for an entity from also providing a verification (that is, an examination or review) of an entity's GHG emissions statement for a certain period of time. Such independence requirements, which may be beyond those of the AICPA, or other limitations on the scope of services set by the relevant framework or registry may preclude the practitioner from performing an attestation engagement that is acceptable under such GHG framework or to such registry.

Adequate Knowledge of Subject Matter and Use of a Specialist

.13 Paragraph .02 of AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*), states that "the engagement must be performed by a practitioner having adequate knowledge of the subject matter." Paragraph .22 of AT section 101 states that "this knowledge requirement may be met, in part, through the use of one or more specialists on a particular attest engagement if the practitioner has sufficient knowledge of the subject matter (a) to communicate to the specialist the objectives of the work and (b) to evaluate the specialist's work to determine if the objectives were achieved." Relevant considerations in determining whether to accept an attest engagement on a GHG emissions statement include whether the practitioner's involvement in the engagement and understanding of the subject matter are sufficient to enable the practitioner to discharge his or her responsibilities. The practitioner may involve internal specialists as part of the engagement team or engage external specialists to assist the team. The practitioner should accept an attest engagement on a GHG emissions statement only if the practitioner is satisfied that the engagement team, along with a practitioner's external specialist, collectively possesses the necessary professional competencies to perform the GHG emissions engagement.

.14 Professional competencies necessary to perform a GHG emissions engagement may include

- understanding emissions trading programs and related market mechanisms, when relevant.
- understanding who the intended users of the information in the entity's GHG emissions statement are and how they are likely to use that information.
- knowledge of applicable laws and regulations, if any, that affect how the entity should report its emissions or impose a limit on the entity's emissions.
- GHG quantification and measurement methodologies, including the associated scientific and measurement uncertainties, and alternative methodologies available.
- knowledge of the applicable criteria, including, for example

- identifying appropriate *emissions factors*.
- identifying those aspects of the criteria (see paragraphs .24–.28) that call for significant or sensitive estimates to be made or for the application of considerable judgment.
- methods used for determining organizational boundaries (that is, the entities whose emissions are to be included in the GHG emissions statement).
- which emissions reductions are permitted to be included in the entity's GHG emissions statement.

.15 In most attest engagements on GHG emissions, the nature of the entity's operations, emissions, or the emissions measurement methodology in general requires specialized skill or technical knowledge in a particular field other than accounting or auditing, such as environmental engineering. The practitioner should possess adequate technical knowledge of the subject matter to understand how GHG emissions information might be misstated and to design procedures to respond to the risks of material misstatement. A practitioner may obtain adequate knowledge of the subject matter through formal or continuing education, including self-study, or through practical experience. When determining whether the practitioner has adequate technical knowledge, the practitioner should read the criteria selected by the *responsible party* (defined as the person or persons, either as individuals or representatives of the entity, responsible for the subject matter)² to understand what is involved in the measurements.

.16 Particular areas of expertise that may be relevant in such cases include the following:

- Information systems expertise
 - Understanding how emissions information is generated, including how data is initiated, recorded, processed, corrected as necessary, and reported in the GHG emissions statement.
- Scientific and engineering expertise
 - Mapping the flow of materials through a production process and the accompanying processes that create emissions, including identifying the relevant points at which source data is gathered. This may be particularly important when considering whether the entity's identification of emissions sources is complete.
 - Analyzing chemical and physical relationships between inputs, processes, and outputs and relationships between emissions and other variables. The capacity to understand and analyze these relationships will often be important when designing analytical procedures.
 - Identifying the effect of uncertainty on the measurement of GHG emissions.
 - Knowledge of the quality control policies and procedures implemented at testing laboratories, whether internal or external.
 - Experience with specific industries and related emissions creation and removal processes. Creation and removal procedures for scope 1 emissions quantification (see paragraph .36) vary greatly depending on the industries and processes involved (for

² Paragraph .11 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*).

example, the nature of electrolytic processes in aluminum production, combustion processes in the production of electricity using fossil fuels, and chemical processes in cement production are all different).

- The operation of physical sensors and other quantification methods and the selection of appropriate emissions factors.

.17 If the entity is a service entity whose GHG emissions are limited to the use of purchased electricity and natural gas or oil, the practitioner may be able to use published factors to convert the electricity, gas, or oil used to GHGs emitted to obtain evidence about how the entity calculated its emissions. Under those circumstances, the practitioner may not need to use a specialist, provided that the practitioner possesses sufficient technical knowledge regarding the published factors, including an understanding of the nature of each factor and the distinctions between alternatives. If the entity has significant industrial operations with numerous sources of emissions, however, it is more likely that the practitioner will need to use a specialist.

.18 If specialized skills are needed to supplement the practitioner's technical knowledge, the practitioner should seek the assistance of a professional possessing such skills, who may be either a member of the engagement team or an outside professional. The practitioner should possess adequate technical knowledge to direct, supervise, and review the specialist's work in the former situation and understand and evaluate the specialist's work in the latter situation.

.19 When the responsible party employs a specialist to develop evidence that is used to support the assertion or presentation, the practitioner should evaluate whether the practitioner or another member of the engagement team possesses adequate technical knowledge to understand and evaluate the specialist's work or whether the practitioner should seek assistance from an external specialist. The practitioner may find it helpful to consider the provisions of AU-C section 500, *Audit Evidence (AICPA, Professional Standards)*, when evaluating the competence, capabilities, and objectivity of the responsible party's specialist.

.20 When using the work of an external specialist, the practitioner should consider the nature and magnitude of the specialist's work in relation to the overall engagement to determine whether the practitioner will be performing a sufficient portion of the engagement to assume overall responsibility.

Considerations When Selecting and Using the Work of a Specialist

.21 Considerations when selecting a specialist include the following:

- The specialist's expertise and competence in the subject matter
- The relevance of the specialist's expertise to the practitioner's objectives in the attest engagement
- The objectivity of the specialist
- The nature and extent of the anticipated use of the specialist

.22 Examples of matters that may require the practitioner to consider using the work of a specialist or having a specialist participate in the GHG engagement include

- reviewing the quality of client-provided data (for example, appropriateness and accuracy).
- evaluation of the reasonableness of emission factors, such as
 - whether it is necessary or appropriate to use a derived emissions factor versus a published emissions factor.
 - the population and selection of appropriate published emissions factors.
 - assessment of the methodology used to calculate the specific GHG emissions (see paragraphs .33 and .66).
- reviewing the work of the responsible party's specialist (for example, to assess whether the assumptions underlying the methodology are reasonable).

.23 Regardless of whether the specialist is employed by the practitioner's firm or an external specialist is engaged by the practitioner, the practitioner should follow the guidance in this SOP and may find it helpful to consider the provisions of AU-C section 620, *Using the Work of an Auditor's Specialist* (AICPA, *Professional Standards*). When the practitioner considers using the work of a specialist engaged by the responsible party, the practitioner should follow the guidance contained in this SOP and may find it helpful to consider the provisions of AU-C section 500, including evaluating the relationship of the specialist to the responsible party.

Criteria

.24 AT section 101 states that in order for the engagement to be performed, the practitioner must have reason to believe that the subject matter is capable of evaluation against criteria that are suitable and available to users.

.25 Criteria that are established or developed by groups composed of experts that follow due process procedures, including exposure of the proposed criteria for public comment, ordinarily should be considered suitable.

.26 Frameworks establishing criteria for GHG emissions statements usually include measurement, presentation, and disclosure considerations. Different industries, regulatory organizations, or organizations acting in a standard-setting role may have developed guidance on measurement relevant to an industry, regulated group, or GHG emissions in general. Alternatively, an entity may develop its own criteria for measurement of emissions.

.27 The practitioner should consider whether criteria selected by the responsible party are suitable (see paragraphs .23–.32 of AT section 101 for guidance on suitability of criteria). For guidance on the availability of criteria, see paragraphs .33–.34 of AT section 101.

.28 Most entities will need to select a framework and refine the application of measurement criteria, perhaps using software tools for measuring emissions in specific industries or using certain industrial processes, such as cement production or aluminum smelting. The practitioner should review the entity's measurement protocol and consider whether the entity's measurement methods are appropriate. See appendix B, "Sources for GHG Emission Protocols and Calculation Tools."

Attributes to Be Met by GHG Emission Reductions

.29 Various registries and GHG emissions trading programs have specified attributes to be met by an emission reduction for it to be registered or traded. Common attributes are identified and described in the following list; however, definitions may vary by trading program. In the context of a specific registry or emissions trading program, additional requirements to be met by the emission reduction may exist:

- a. *Ownership.* In many cases, ownership is clear. Examples of such cases include efficiency upgrades at a manufacturing facility or fuel-switching at a power plant. However, for some project types, particularly those with renewable energy and demand-side management projects that offset or displace fossil-fuel emissions, demonstrating ownership can be challenging. Ownership of the reductions may be open to dispute because the reductions do not occur on the site of the project but, rather, on the site of a fossil-fueled facility whose power was displaced. These are known as *indirect emission reductions* because the reductions occur at facilities other than the one where the project has been undertaken. The possibility that the direct source of emissions would claim title to the same reductions claimed by the project developer or that the joint venture partners would claim title to the same reductions of their joint venture (referred to as *double-counting*) represents a risk that buyers prefer to avoid. It is possible that multiple claimants, such as the owner of the emitting source, technology vendors, and the entity installing the technology, could claim ownership of these reductions.
- b. *Real.* An emission reduction is real if it is a reduction in actual emissions that results from a specific and identifiable action or undertaking that is not a mere change in activity level (for example, due to typical business fluctuations) and net of any leakage to a third party or jurisdiction. *Leakage* occurs when an emission reduction project causes emissions to increase beyond the project's boundaries. Entities entering into an emission reduction project typically must demonstrate that the emission reduction will not cause emissions to increase beyond the project's boundaries.
- c. *Quantifiable or measurable.* An emission reduction is quantifiable or measurable if the total amount of the reduction can be determined, and the reduction is calculated in an accurate and replicable manner.
- d. *Surplus.* An emission reduction is surplus if the reduction is not otherwise required of a source by current regulations or a voluntary commitment to reduce emissions to a specified level.
- e. *Establishment of a credible emissions baseline.* Many programs measure emission reductions by comparing a credible emissions baseline without the project to the emissions baseline with the project. A reduction quantity is not meaningful unless it is compared with a credible baseline (that is, a baseline compiled in accordance with the current protocol, using the same boundaries and scope).
- f. *Unique.* Credits should be created and registered only once from a specific reduction activity and time.

.30 Some registries or emissions trading programs may have a requirement for *additionality*. Environmental additionality requires that the emission reductions achieved by the project would not have occurred in the absence of the project (the reduction must be additional to any required reductions; that

is, if the entity has taken on a cap, the reduction must be additional to the cap). A credible emission baseline is crucial for an entity to demonstrate additionality. Various GHG registries and regulatory frameworks may not define additionality and the terms referred to in paragraph .29 in exactly the same way; thus, the practitioner should obtain the official definitions of such terms under the registry or regulatory framework relevant to the engagement.

Materiality

.31 Paragraph .67 of AT section 101 addresses materiality in attestation engagements. Also, the applicable GHG registry or voluntary or regulatory framework may set specific materiality limits. If a GHG registry or framework sets specific materiality requirements that are more stringent than those of AT section 101, before accepting the engagement the practitioner should consider whether it is possible to meet such requirements.

Uncertainty in the Measurement of GHG Emissions

.32 The term *uncertainty* as used in the field of GHG emissions refers to variability in the measurement of GHG emissions rather than the term *uncertainty* as defined in the auditing literature. Uncertainty in GHG emissions estimates can be due to a variety of factors. Examples of matters that may create or increase uncertainty in GHG emissions estimates include the following:

- Use of factors that are poorly researched or uncertain (for example, factors for CH₄ and N₂O from combustion processes)
- Use of average case factors not perfectly matched to specific and varying circumstances (for example, miles per gallon, average kgCO₂/MWh generated)
- Deliberate estimation to compensate for missing data (for example, nonreporting facilities or missing fuel bills)
- Assumptions that simplify calculation of emissions from highly complex processes
- Imprecise measurement of emissions-producing activity (for example, miles traveled in airplanes or rental vehicles, hours per year specific equipment is used)
- Insufficient frequency of measurement to account for natural variability
- Poor calibration of measuring instruments

Consistency

.33 Measurement of the GHG inventory requires consistent application of measurement methods. If the entity has changed measurement methods from one period to the next, the practitioner should consider the implications on the engagement (for example, whether it is essential that the same methods be used because either comparative information is presented or a reduction is being calculated and, if so, whether the entity has restated the prior period's results using the same measurement method as the current period). (See paragraphs .39, .66, and .72.)

Boundaries

.34 Determining which operations owned or controlled by the entity to include in the entity's GHG emissions statement is known as "determining the entity's organizational boundary." In some cases, laws and regulations define the boundaries of the entity for reporting GHG emissions for regulatory purposes. In other cases, the applicable criteria may allow a choice between different methods for determining the entity's organizational boundary (for example, the criteria may allow a choice between an approach that aligns the entity's GHG emissions reporting with its financial statements and another approach that treats, for example, joint ventures or associates differently). Determining the entity's organizational boundary may require the analysis of complex organizational structures such as joint ventures, partnerships, and trusts and complex or unusual contractual relationships. For example, a facility may be owned by one party, operated by another, and process materials solely for another party.

.35 Determining the entity's organizational boundary is different from what some criteria describe as determining the entity's "operational boundary." The operational boundary relates to which categories of scope 1, 2, and 3 emissions will be included in the GHG emissions statement and is determined after setting the organizational boundary. Leakage may affect the choice of operational boundaries. When planning the engagement, the practitioner should obtain an understanding of the boundaries that have been set by the entity and the potential for leakage. If leakage has occurred, the entity may account for it by adjusting its baseline or by changing its boundaries.

Scopes for Reporting GHG Emissions: Direct and Indirect Emissions

.36 Reporting GHG emissions and emission reductions may encompass one or more of the following three scopes of emissions:

- a. Scope 1: *Direct GHG Emissions*. Emissions from sources that are owned or controlled by the entity. These are emissions associated with the following:
 - Stationary combustion from fuel burned in the entity's stationary equipment, such as boilers, incinerators, engines, and flares
 - Mobile combustion from fuel burned in the entity's transport devices, such as trucks, trains, airplanes and boats
 - Process emissions from physical or chemical processes, such as cement manufacturing, petrochemical processing, and aluminum smelting
 - Fugitive emissions, which are intentional and unintentional releases, such as equipment leaks from joints and seals and emissions from wastewater treatment, pits, and cooling towers
- b. Scope 2: *Indirect GHG Emissions From the Generation of Imported or Purchased Electricity, Heat, or Steam*. Emissions that are a consequence of the activities of the entity, but which occur at sources that are owned or controlled by another entity. Scope 2 emissions are associated with energy that is transferred to, and consumed by, the entity.

- c. Scope 3: *Other Indirect Emissions*, including the following:
- Employee business travel
 - Outsourced activities, contract manufacturing, and franchises
 - Transportation by the vendor or contractor of, for example, materials, products, waste, and employees
 - Emissions from product use and end of life
 - Employee commuting
 - Production of imported materials

.37 The practitioner should determine whether the proposed scope of the engagement is appropriate and whether it covers one or more of the following:

- a. Direct GHG emissions
- b. Indirect GHG emissions associated with the generation of imported or purchased electricity, heat, or steam
- c. Other indirect emissions

.38 Some reporting programs may classify these emissions sources differently than those noted in paragraph .36. The practitioner should evaluate the potential for double-counting of emissions and reductions, especially in instances of indirect emissions and shared ownership or control. If the practitioner has been engaged to report on an entity's indirect emissions, especially those emissions for a supplier not under the direct control of the entity, the practitioner should consider whether he or she can obtain a written assertion from the responsible party and obtain sufficient evidence to form a conclusion. The practitioner also should consider the availability or existence of data for emitting sources not under the direct control of the entity.

Baselines

.39 A *baseline* is the amount of the entity's emissions for a specified base year against which any future changes in emissions are evaluated. Management should recalculate the baseline, however, for changes in scope and boundaries, subsequent acquisitions, and sales or closing of emitting sources. If the practitioner is engaged to perform the attest service at a date considerably later than the base year, there may be differences in the quality of the data and consistency of methodology between the base year and the current year.

Objective of the Engagement

GHG Inventory

.40 The criteria selected are used by the entity to measure and present and by the practitioner to evaluate the specific subject matter of the attestation engagement. It is anticipated that appropriate disclosures will be included in the presentation, not just the quantity of GHG emissions for a period of time. The presentation may include, or be accompanied by, other information that is not subject to the practitioner's engagement, such as the discussion of the responsible party's commitment and strategy, projections, and targets related to its GHG emissions. Therefore, the form of the conclusion will vary depending upon the information presented under the selected criteria on which the practitioner is engaged to report.

.41 The practitioner's objective for an examination of GHG emissions information typically is to express an opinion about whether

- a. the entity's schedule of GHG emissions is presented, in all material respects, in conformity with the criteria selected by the responsible party (see paragraphs .24–.28), or
- b. the responsible party's written assertion about the schedule of GHG emissions is fairly stated, in all material respects, based on the criteria selected by the responsible party.

.42 The practitioner's objective for a review of GHG emissions information typically is to express a conclusion, based on the work performed, about whether any information came to the practitioner's attention that indicates that

- a. the entity's schedule of GHG emissions is not presented, in all material respects, in conformity with the criteria selected by the responsible party, or
- b. the responsible party's written assertion about the schedule of GHG emissions is not fairly stated, in all material respects, based on the criteria selected by the responsible party.

GHG Emission Reduction Information

.43 The practitioner's objective in an examination of GHG emission reduction information typically is to express an opinion about whether

- a. the entity's GHG emission reduction information related to a specific project or on an entity-wide basis is presented, in all material respects, in conformity with the criteria selected by the responsible party, or
- b. the responsible party's written assertion about the GHG emission reduction information related to a specific project or on an entity-wide basis is fairly stated, in all material respects, based on the criteria selected by the responsible party.

.44 The practitioner's objective in a review of GHG emission reduction information is to express a conclusion, based on the work performed, about whether any information came to the practitioner's attention that indicates that

- a. the entity's GHG emission reduction information related to a specific project or on an entity-wide basis is not presented, in all material respects, in conformity with the criteria selected by the responsible party, or
- b. the responsible party's written assertion about the GHG emission reduction information related to a specific project or on an entity-wide basis is not fairly stated, in all material respects, based on the criteria selected by the responsible party.

Examples of GHG Emission Reduction Projects

.45 Examples of GHG emission reduction projects include, but are not limited to, the following:

- Use of renewable energy systems, such as wind, solar, and other low emission technologies, in place of higher emission technologies
- Change in processes to increase energy efficiency, such as the installation and use of more energy-efficient equipment

- Carbon sequestration: no-till farming; agricultural grass and tree plantings
- Change from more GHG-intensive fuels to less GHG-intensive fuels (for example, from coal to natural gas or nuclear power)
- Recovery and use of agricultural and landfill methane
- Improvement in the fuel efficiency of vehicle fleets
- Reduction in venting or flaring on offshore oil production platforms (installation of zero flare systems; rapid response to unplanned events)
- Cessation of operations at noneconomical plants and transfer of production to more efficient plants
- Demand-side management projects

Prerequisite for Engagements Related to GHG Emission Reduction Information

.46 As a prerequisite to performing an examination or review of GHG emission reduction information, the practitioner should obtain sufficient evidence about the entity's GHG emissions for the period in which the project took effect to provide a reasonable basis for the conclusion that is expressed in the practitioner's report on the GHG emission reduction information.

.47 In some cases, one practitioner has reported on an entity's GHG inventory, but another practitioner is engaged to report on the entity's GHG emission reduction information. When the practitioner engaged to report on the GHG emission reduction information is deciding whether he or she may rely on the work of the other practitioner, the practitioner may find it helpful to consider the provisions of AU-C section 600, *Special Considerations—Audits of Group Financial Statements (Including the Work of Component Auditors)* (AICPA, *Professional Standards*). Other important considerations in this situation are the level of assurance obtained by the other practitioner and the consistency of the assumptions and methods used to measure the GHG emission reduction with those used to measure the GHG inventory reported on by the other practitioner. (See paragraphs .33 and .66).

.48 Members of professions other than public accounting are subject to their own professional requirements; those requirements may differ from those of the public accounting profession. When a non-CPA has provided verification services (see paragraph .06) with respect to an entity's GHG inventory and the practitioner is engaged to examine or review an entity's GHG reduction, the practitioner should perform procedures to obtain sufficient evidence with respect to the entity's GHG inventory as part of performing the attest engagement to report on the entity's GHG emission reduction (for example, evaluating the appropriateness of the methodology and any emission factors used and whether the base year emissions were adjusted if needed). The practitioner may find it helpful to consider certain aspects of the specialist's work in accordance with AU-C section 620.

Written Assertion by the Responsible Party

.49 A written assertion by a responsible party may be presented to a practitioner in a number of ways, such as in a narrative description, within a schedule, or as part of a representation letter appropriately identifying what is being presented and the point in time or period of time covered. An example of a written assertion on a GHG inventory is as follows:

XYZ Company asserts that its schedule of GHG emissions for the year ended December 31, 20XX, is presented in conformity with *[identify criteria selected by the responsible party]*.

An example of a written assertion on a GHG emission reduction project is as follows:

XYZ Company reduced GHG emissions in connection with project ABC by 50,000 tons of CO₂ equivalents for the year ended December 31, 20XX, from its GHG emissions in the prior year, based on *[identify criteria selected by the responsible party]*.

Engagement Performance

Agreement on Engagement Terms

.50 The practitioner should establish an understanding with the client regarding the services to be performed. The understanding should include the objectives of the engagement, management's responsibilities, the practitioner's responsibilities, and the limitations of the engagement. The practitioner should document the understanding in the working papers, preferably through a written communication with the client, such as an engagement letter.

Planning the Engagement

.51 Relevant information about obtaining an understanding and other considerations when planning an examination or review engagement typically includes the following:

- Applicable to GHG inventories and reductions
 - The nature of the entity's business and whether the entity has operations, and, therefore, GHG emission sources, in multiple locations and the types of GHG emissions produced
 - The business purpose or reason behind emissions measurements or emission reductions
 - The oversight of, and responsibility for, emissions information within the entity
 - The organizational and operational boundaries used for the emissions inventory
 - Whether there have been any mergers, acquisitions, divestitures, sales of emitting sources, or outsourcing of functions with significant emissions that may require adjustment of the entity's baseline
 - Whether all significant sources of emissions have been identified by the entity
 - The potential for double-counting of emissions and, if applicable, reductions
 - When applicable, any regulatory framework(s) (for example, state- or country-specific regulations, *permits*, or operating licenses governing emissions where the entity has operations) or any requirements relevant to a voluntary commitment to register or reduce GHG emissions

- How GHG emissions have been calculated and reported, including emissions factors and their justification, and any assumptions on which estimates are based
- The protocols that were used for measurement of emissions and whether they were used in a consistent manner throughout the entity over the period under examination or review
- Whether there is a need to use the work of a specialist
- Whether the entity's internal audit function is relevant to the engagement
- Whether to obtain a legal letter (legal letters are generally not obtained in a review engagement)
- Applicable to GHG reductions only
 - The type(s) of emission reduction(s) (for instance, a switch in fuel type or change in production process) (see paragraph .33).
 - Whether the emitting entity is required by a registry or regulatory framework to engage an outside specialist to evaluate the scientific or engineering basis for the proposed reduction project (sometimes referred to as a *validation*). Those rules may further specify that the party evaluating the science cannot be the same party as the verifier. When applicable, whether another reputable party has evaluated the science and found it to be acceptable and the implications of findings in the report.
 - Whether there are any ownership issues relating to the GHG emission reduction credits to be sold. (For example, in the case of a landfill, the seller may own the landfill or have ownership rights over the emission reduction by virtue of a contract.)

Consideration of Internal Control Over Gathering and Reporting GHG Emissions Data

.52 Paragraph .52c of AT section 101 states “the more effective the controls over the subject matter, the more assurance they provide about the subject matter or the assertion.” For an examination engagement, obtaining an understanding of internal control over gathering and reporting GHG emissions data, including *data assembly* and data retention, assists the practitioner in assessing control risk and planning the engagement. Relevant matters to understand regarding internal control include the following components of the entity's internal control:

- a. The control environment.
- b. The information system, including the related business processes, and communication of emissions-reporting roles and responsibilities and significant matters relating to emissions reporting.
- c. The entity's risk assessment process related to gathering, processing, and reporting GHG emissions data.
- d. Control activities relevant to the engagement. An attest engagement does not require an understanding of all the control activities related to each significant type of emission and disclosure in the GHG emissions schedule or to every assertion relevant to them.
- e. Monitoring of controls

.53 For a review engagement, obtaining an understanding of the entity's internal control over gathering and reporting GHG emissions data, including data assembly and data retention, may assist the practitioner with

- a. identifying types of potential misstatements in the GHG emissions statement, including types of omissions, and considering the likelihood of their occurrence.
- b. selecting the inquiries and analytical procedures, and other procedures if necessary, that will provide a basis for reporting whether any information causes the practitioner to believe
 - i. the entity's GHG emissions statement is not presented, in all material respects, in conformity with the criteria selected by the responsible party, or
 - ii. the responsible party's written assertion about the GHG emissions statement is not fairly stated, in all material respects, based on the criteria selected by the responsible party.

Part of Attest Engagement Performed by Other Practitioners

.54 If another practitioner is reporting on the GHG emissions information for a subsidiary of the entity, that practitioner also should follow the guidance in this SOP. The practitioner who is engaged to report on the entity as a whole should consider whether the practitioner for the subsidiary has the skill and knowledge required to conduct the engagement. AU-C section 600 provides guidance on the professional judgments the auditor makes when deciding whether the auditor may serve as group engagement partner and use the work and reports of component auditors who have audited the financial statements of one or more subsidiaries, divisions, branches, components, or investments included in the financial statements presented. The practitioner who is engaged to report on the entity as a whole may find that guidance helpful when performing an attest engagement on GHG emissions, and another practitioner is reporting on the GHG emissions of a subsidiary or other component of the client entity. Other relevant information for the practitioner reporting on the subsidiary is whether the subsidiary is using the same protocol, scope of reporting, and boundaries as the parent entity.

Attestation Risk

.55 *Attestation risk* is the risk that the practitioner may unknowingly fail to appropriately modify his or her attest report on the subject matter or assertion that is materially misstated. It consists of (a) the risk (consisting of *inherent risk* and *control risk*) that the subject matter or assertion contains deviations or misstatements that could be material and (b) the risk that the practitioner will not detect such deviations or misstatements (*detection risk*).

.56 Examples of causes of possible misstatements of GHG inventory or GHG emission reduction information include the following:

- Human error in calculations
- Use of incorrect emissions factors
- Omission from the inventory of emissions from one or more emitting sources
- Omission from the inventory of one or more GHG emissions (for example, omission of methane emissions)

- Failure to properly account for leakage (for example, when the entity has outsourced a major function that accounted for a significant part of its GHG emissions baseline but has not adjusted its baseline to reflect such change)
- Failure to appropriately adjust the baseline for events such as sales or acquisitions of emitting sources
- Existence of one or more significant deficiencies in the entity's internal control over reporting of emissions information
- Double counting of an emission source within the entity

Obtaining Sufficient Evidence

.57 When conducting an examination engagement, the practitioner should accumulate sufficient evidence to restrict attestation risk to a level that is, in the practitioner's professional judgment, appropriately low for the high level of assurance that may be imparted by his or her report. A practitioner should select from all available procedures—that is, procedures that assess inherent and control risk and restrict detection risk—any combination that can restrict attestation risk to such an appropriately low level. (See paragraph .54 of AT section 101.)

.58 In a review engagement, the objective is to accumulate sufficient evidence to restrict attestation risk to a moderate level. To accomplish this, the types of procedures performed generally are limited to inquiries and analytical procedures (rather than also including search and verification procedures). Nevertheless, there will be circumstances in which inquiry and analytical procedures (a) cannot be performed, (b) are deemed less efficient than other procedures, or (c) yield evidence indicating that the subject matter or assertion may be incomplete or inaccurate. In the first circumstance, the practitioner should perform other procedures that he or she believes can provide him or her with a level of assurance equivalent to that which inquiries and analytical procedures would have provided. In the second circumstance, the practitioner may perform other procedures that he or she believes would be more efficient to provide him or her with a level of assurance equivalent to that which inquiries and analytical procedures would provide. In the third circumstance, the practitioner should perform additional procedures.

.59 The procedures listed in the following table may be performed, among others, in an examination or review engagement of a GHG inventory or an emission reduction to restrict attestation risk to an appropriate level for the engagement:

<i>Examination</i>	<i>Review</i>
<i>a.</i> Obtaining evidence about how emissions were calculated and any underlying methodologies, emission factors, and assumptions used.	<i>a.</i> Inquiring about how emissions were calculated and any underlying methodologies, emission factors, and assumptions used.
<i>b.</i> Evaluating the appropriateness of techniques used to calculate the emissions or emission reduction, including how completeness and uncertainty are addressed in those calculations (see paragraphs .61–.63).	

<i>Examination</i>	<i>Review</i>
c. Determining whether there have been any changes in the protocol(s) used to calculate emissions and, when applicable, determine whether a subsidiary uses the same protocol.	c. Inquiring about whether there have been any changes in the protocol(s) used to calculate emissions and, when applicable, about whether a subsidiary uses the same protocol.
<p>d. Conducting site visits as considered appropriate. To obtain adequate coverage of total emissions, particularly in an examination, the practitioner may decide that it is appropriate to perform procedures on location at a selection of facilities. Factors that may be relevant to such a decision include</p> <ul style="list-style-type: none"> • the nature of emissions at different facilities. • the number and size of facilities and their contribution to the entity's overall emissions. • whether facilities use different processes or processes using different technologies. When this is the case, it may be appropriate to perform procedures on location at a selection of facilities using different processes or technologies. • the methods used at different facilities to gather emissions information. • the experience of relevant staff at different facilities. • varying the selection of facilities over time. 	
e. Determining whether there have been any changes in baselines, such as sales or acquisitions of operational facilities or subsidiaries.	e. Inquiring about whether there have been any changes in baselines, such as sales or acquisitions of operational facilities or subsidiaries.
f. When applicable, obtaining information about the frequency of meter readings and calibration and maintenance of meters.	f. When applicable, inquiring about the frequency of meter readings and calibration and maintenance of meters.
g. Reading relevant contracts.	
h. Tracing information to supporting documents.	
i. Inquiring about the existence of fraud or illegal acts or suspected fraud or illegal acts affecting the entity involving (1) management, (2) employees who have significant roles in the entity's processes and procedures relating to measurements of emissions in conformity with the criteria specified previously, or (3) others when the fraud or illegal acts could have a material effect on measurements of emissions in conformity with the selected criteria.	

(continued)

<i>Examination</i>	<i>Review</i>
<p><i>j.</i> Inquiring about the nature of significant judgments and estimates made by management and any uncertainties regarding measurements; considering management's process for, and internal control over, developing those estimates; inquiring about key factors and assumptions underlying those estimates; and evaluating the reasonableness thereof.</p>	
<p><i>k.</i> When applicable, tracing emissions factors used to recognized sources.</p>	<p><i>k.</i> When applicable, inquiring about the source of emissions factors.</p>
<p><i>l.</i> Determining whether emissions factors have been properly applied and whether the underlying assumptions are documented and have a reasonable basis.</p>	<p><i>l.</i> Inquiring about whether emissions factors have been properly applied and whether the underlying assumptions are documented and have a reasonable basis.</p>
<p><i>m.</i> Performing analytical procedures (for example, change in amounts from the previous year, fluctuations in amounts during the present year, and variation from an independent expectation developed by the practitioner).</p>	
<p><i>n.</i> When applicable, comparing emission data to records of number of units sold or produced for the period.</p>	<p><i>n.</i> When applicable, performing analytical comparisons of emission data to number of units sold or produced for the period.</p>
<p><i>o.</i> When applicable, confirming details of the transaction(s) (for example, quantity of methane sold or purchased) with the other party to the transaction.</p>	
<p><i>p.</i> Inquiring about whether there have been any changes in production levels (lower emissions due to a drop in production level might not be permanent) and obtaining evidence supporting production levels.</p>	<p><i>p.</i> Inquiring about whether there have been any changes in production levels (lower emissions due to a drop in production level might not be permanent).</p>
<p><i>q.</i> Inquiring about whether there have been any communications from regulators concerning emission levels or noncompliance with permits or regulatory programs.</p>	

<i>Examination</i>	<i>Review</i>
r. Obtaining supporting evidence for any emission reduction credits that are banked, purchased from, or sold to a third party (such information may be included in a public report on a GHG inventory).	r. Inquiring about any emission reduction credits that are banked, purchased from, or sold to a third party (such information may be included in a public report on a GHG inventory).
s. Obtaining and reading environmental (or Environmental, Health and Safety [EH&S]) internal audit reports and minutes of audit committee meetings (or other relevant board committees to which the environmental or EH&S internal auditors report).	s. Inquiring about relevant information in environmental or EH&S internal audit reports and minutes of audit committee meetings (or other relevant board committees to which the environmental or EH&S internal auditors report).
t. Inquiring about whether there have been any subsequent events that would affect the subject matter or the assertion (see paragraph .66).	
u. Obtaining a legal letter when considered appropriate (for example, to address [1] noncompliance with regulatory programs [emissions exceed permitted amount], [2] ownership of credits, or [3] the existence of any unasserted claims).	
v. Obtaining written representations from management.	

.60 In a review engagement, the practitioner ordinarily is not required to corroborate management’s responses to inquiries with other evidence; however, the practitioner should consider the reasonableness and consistency of management’s responses in light of the results of other review procedures and the practitioner’s knowledge of the entity’s business and the industry in which it operates and, as noted in paragraph .58, the practitioner may need to perform additional procedures.

Techniques to Calculate Emissions and Reductions

.61 Reductions are calculated by comparing the amount of emissions from one period to another. For entities reporting on a facility basis, this will usually be calculated annually. For entities reporting on a project basis, the period may vary depending on the nature of the project.

.62 Measurement techniques include, but are not limited to, the use of mass balance equations, emissions factors, stack tests, and direct measurement of emissions, including continuous emission monitors.

.63 For reductions calculated in comparison to a base year, adjustments are evaluated to the base year based on structural changes with the entity’s organization and changes in ownership or control of the emitting source(s), or

both. (Mergers, acquisitions, sales of emitting sources, outsourcing of certain functions, and entering into joint ventures would likely require adjustment of the baseline.) Note that adjustments of the baseline based on organic growth or decline are generally not appropriate.

Procedures Specific to GHG Emission Reduction Engagements

.64 In addition to the procedures described in paragraph .59, procedures that may be relevant, among others, in an examination or review engagement of GHG emission reduction information are included in the following table:

<i>Examination</i>	<i>Review</i>
a. Obtaining evidence of significant changes in the production process, switches from one fuel type to another, or other changes resulting in the emission reduction.	a. Making inquiries about whether there have been any significant changes in the production process, switches from one fuel type to another, or other changes resulting in the emission reduction.
b. Evaluating techniques used by the entity to calculate the emission reduction (see paragraphs .61–.63).	
c. Inquiring about the reason or business purpose for the reduction and considering the possible implications with respect thereto. Consider obtaining from management a written representation regarding the reason for the reduction project (see paragraph .30 on additionality).	
d. Inquiring about whether there are any permits applicable to the facility and, if so, examine the permit for factors that may have a bearing on the reduction project (for example, reductions that meet other requirements cannot be transferred); obtaining a management representation specific to permits.	d. Inquiring about whether there are any permits applicable to the facility and, if so, about how they might bear on the reduction project (for example, reductions that meet other requirements cannot be transferred); consider obtaining a management representation specific to permits.
e. When applicable, reading reports prepared by the seller for purposes other than the sale of the GHG emission reduction credits (for example, an emission report filed with a regulatory agency) and checking for consistency of information related to the sale.	
f. Agreeing or confirming details of GHG emission reduction credits with the relevant GHG registry.	f. If information is publicly available, comparing detail of GHG emission reduction credits with the relevant GHG registry.

Consideration of Subsequent Events

.65 Events or transactions sometimes occur subsequent to the point in time or period of time of the subject matter being tested, but before the date of the practitioner's report, that have a material effect on the subject matter and, therefore, require adjustment or disclosure in the presentation of the subject matter or the assertion. These occurrences are referred to as *subsequent events*. When performing an attest engagement, the practitioner should consider information about subsequent events that comes to his or her attention. Although the practitioner has no responsibility to detect subsequent events, the practitioner should inquire of the responsible party (and his or her client, if the client is not the responsible party) about whether they are aware of any subsequent events through the date of the practitioner's report that would have a material effect on the subject matter or the assertion. If the practitioner has decided to obtain a representation letter from the responsible party, the letter ordinarily would include a representation concerning subsequent events. (Paragraphs .95–.99 of AT section 101 provide additional guidance on the consideration of subsequent events in an attest engagement.) Types of events that may represent a subsequent event in the context of an attest engagement on GHG emissions include the following:

- Changes in baseline emissions due to events such as acquisition or disposition of facilities, change in number of shifts at a facility, or change in production levels
- Destruction of the facility to which an emission reduction relates
- In the case of a GHG emission reduction, unplanned or accidental release of sequestered carbon
- Investigations or regulatory actions related to emissions

Adequacy of Disclosure

.66 The practitioner is required by AT section 101 to consider the adequacy of disclosure of material matters. (See paragraphs .70 and .76–.77 of AT section 101.) Examples of matters that may be material include

- changes in the entity's boundaries or emissions calculation methodologies.
- mergers, divestitures, acquisitions, or closures.
- uncertainties in the measurement of GHG emissions (see paragraph .32).

Representation Letter

.67 In an examination or review engagement, the practitioner should consider obtaining a representation letter from the responsible party. Written representations from the responsible party ordinarily confirm representations explicitly or implicitly given to the practitioner, indicate and document the continuing appropriateness of such representations, and reduce the possibility of misunderstanding concerning the matters that are the subject of the representations. Examples of matters that might appear in such a representation letter include the following:

- a. Management's (responsible party's) assertion about the subject matter based on the criteria selected

- b.* A statement acknowledging responsibility for the subject matter and, when applicable, the assertion
- c.* A statement acknowledging responsibility for selecting the criteria, when applicable
- d.* A statement acknowledging responsibility for determining that such criteria are appropriate for its purposes, when the responsible party is the client
- e.* A statement acknowledging ownership of the emissions or emission reductions
- f.* A statement that all known matters contradicting the assertion or presentation and any communication from regulatory agencies affecting the subject matter or the assertion have been disclosed to the practitioner
- g.* A statement regarding the absence of undisclosed or unrecorded emission sources
- h.* A statement that knowledge of illegal acts, fraud, or suspected illegal acts or fraud affecting the entity involving (i) management, (ii) employees who have significant roles in the entity's processes and procedures relating to measurements of emissions in conformity with the criteria specified previously, or (iii) others when the illegal acts or fraud could have a material effect on measurements of emissions in conformity with the selected criteria has been disclosed to the practitioner
- i.* A statement that management (responsible party) has disclosed to the practitioner all significant deficiencies in the design or operation of internal control over its GHG inventory
- j.* A statement regarding the availability of all records relevant to the subject matter
- k.* A statement that management (responsible party) has responded fully to all inquiries made by the practitioner during the engagement
- l.* A statement that any known events subsequent to the period (or point in time) of the subject matter being reported on that would have a material effect on the subject matter (or, if applicable, the assertion) have been disclosed to the practitioner
- m.* Other matters as the practitioner deems appropriate
- n.* Relevant to an emission reduction, a statement regarding the business purpose of the emission reduction project
- o.* Relevant to an emission reduction, a statement that the reduction is both real and additional to any requirements

Appendix C, "Illustrative Management Representation Letter," includes an illustrative management representation letter.

.68 When the client is not the responsible party, the practitioner should consider obtaining a letter of written representations from the client as part of the attest engagement. Examples of matters that might appear in such a representation letter include the following:

- a.* A statement regarding whether the client is aware of any matters that might contradict the subject matter or the assertion
- b.* A statement that all known events subsequent to the period (or point in time) of the subject matter being reported on that would have a

material effect on the subject matter (or, if applicable, the assertion) have been disclosed to the practitioner

- c. A statement acknowledging the client's responsibility for selecting the criteria, when applicable
- d. A statement acknowledging the client's responsibility for determining that such criteria are appropriate for its purposes
- e. Other matters as the practitioner deems appropriate

.69 If the responsible party or the client refuses to furnish all written representations that the practitioner deems necessary, a scope limitation exists, and the practitioner should consider the effects of such a refusal on his or her ability to issue a conclusion about the subject matter. In an examination, if the practitioner believes that the representation letter is necessary to obtain sufficient evidence to issue a report, the responsible party's or the client's refusal to furnish such evidence in the form of written representations is sufficient to preclude an unqualified opinion and is ordinarily sufficient to cause the practitioner to disclaim an opinion or withdraw from an examination engagement. However, based on the nature of the representations not obtained or the circumstances of the refusal, the practitioner may conclude, in an examination engagement, that a qualified opinion is appropriate. Further, the practitioner should consider the effects of the refusal on his or her ability to rely on other representations. When a scope limitation exists in a review engagement, the practitioner should withdraw from the engagement. (See paragraph .75 of AT section 101.)

Reporting

.70 AT section 101 permits the practitioner to report either on the written assertion or directly on the subject matter to which the assertion relates. However, as stated in paragraph .66 of AT section 101, if conditions exist that, individually or in combination, result in one or more material misstatements or deviations from the criteria, the practitioner should modify the report and, to most effectively communicate with the readers of the report, should ordinarily express his or her conclusion directly on the subject matter, not on the assertion.

.71 The report may contain a paragraph emphasizing measurement uncertainties, such as the following:

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

.72 When the measurement methods, and the application thereof, have not been consistent from period to period, the practitioner should consider whether to modify the practitioner's report. The form of the modification depends on the circumstances (for example, whether the presentation or management's assertion appropriately disclose those facts or whether prior periods, if presented or used in the calculation of a reduction, are restated). If the responsible party (that is, in most cases, the client) does not appropriately restate the baseline and prior period(s) inventory for a material change, the practitioner should include an explanatory paragraph in the practitioner's report describing the lack of consistency and should express a qualified or adverse opinion in an

examination report or a modified conclusion in a review report due to a departure from the criteria. If the responsible party does appropriately restate, the practitioner should consider including an explanatory paragraph (following the opinion or conclusion paragraph) in his or her report that refers to the change in the measurement methods or application.

.73 When the practitioner is engaged to report on GHG emissions of one or more particular locations or subsidiaries or on reductions related to one or more specific projects, the report may include a paragraph stating that the practitioner was not engaged to examine or review the entity-wide emissions or reductions and, accordingly, the practitioner is not expressing any form of conclusion on such entity-wide information.

.74 When the trading program or GHG registry contains specific materiality requirements that are more stringent than those of AT section 101, the practitioner may include a reference to those requirements in the attest report.

.75 AT section 101 requires the report on an attest engagement to contain a statement of management's responsibility for the subject matter or the assertion. The statement of management's responsibility may also address management's responsibility for selecting and adhering to the criteria used.

.76 Illustrative reports for the following are included in the appendixes noted:

- Appendix D, "Illustrative Examination Reports on GHG Emissions Information": Examination of an entity's GHG emissions information for a period of time
- Appendix E, "Illustrative Examination Reports on GHG Emission Reduction Information": Examination of an entity's GHG emission reduction information
- Appendix F, "Illustrative Review Reports on GHG Emissions Information": Review of an entity's GHG emissions information for a period of time
- Appendix G, "Illustrative Review Reports on GHG Emission Reduction Information": Review of an entity's GHG emission reduction information

.77 The practitioner, in his or her attest report, may refer to the report of another practitioner under the following circumstances:

- When reporting on an attest engagement on GHG emissions and another practitioner has reported on the GHG emissions of a subsidiary or other component of the client entity
- When reporting on an attest engagement on an emission reduction and another practitioner has reported on the entity's GHG inventory for the prior period

See example 3 in appendix D and appendix F in this SOP, respectively, for an example examination and review report that refers to the report of another practitioner.

.78 The practitioner reporting on the emission reduction would only be able to make reference to the report of the practitioner reporting on the GHG inventory information if both practitioners are reporting at the same level of assurance on emissions information for the same emission source(s) addressed by the reduction project. For example, in an emission reduction engagement

- if practitioner A reported on an examination of GHG inventory for Plant X for which practitioner B is reporting on an examination of the emission reduction, practitioner B may divide responsibility by referring to the work of practitioner A in his or her report. However, if practitioner A reported on an examination of the company's GHG inventory for its nationwide operations taken as a whole, practitioner B, who is reporting only on an examination of the reduction project at Plant X, would need to perform sufficient additional procedures on the GHG inventory at Plant X and would not refer to the work of practitioner A in his or her report.
- if practitioner A reported on a review of GHG inventory for Plant X for which practitioner B is reporting on an examination of the emission reduction, practitioner B would need to perform sufficient additional procedures on the GHG inventory at Plant X and should not refer to the work of practitioner A in his or her report.

Attest Documentation

.79 Paragraphs .100–.107 of AT section 101 set documentation requirements. The practitioner should be aware that the GHG registry or regulatory program relevant to the attest engagement may have set additional documentation requirements for those providing assurance on GHG emissions inventories or reductions (sometimes referred to as *verifiers*).

Effective Date

.80 This SOP is effective for reports on GHG emissions information issued on or after September 15, 2013. Early implementation is permitted.

Appendix A — Glossary

additionality. A project is *additional* if it would not have happened but for the incentive provided by the credit trading program (for example, Clean Development Mechanism [CDM] or Joint Implementation [JI]). The Kyoto Protocol specifies that only projects that provide emission reductions that are *additional* to any that would occur in the absence of the project activity shall be awarded certified emission reductions (CERs) in the case of CDM projects or emission reduction units (ERUs) in the case of JI projects. This is often referred to as *environmental additionality*. *Financial additionality* is the notion that a project is made commercially viable through its ability to generate value in the form of certified emission reductions. Various greenhouse gas (GHG) registries or regulatory frameworks may define these terms differently.

allowance. The unit of trade under a trading system. In a closed trading system, trading of allowances is permitted only between parties subject to the program or regulatory system. Allowances grant the holder the right to emit a specific quantity (for example, one ton) of emissions once. The total quantity of allowances issued by regulators dictates the total quantity of emissions possible under the system. Allowances are typically granted to emitters by governmental entities or agencies either for free or for a fee. At the end of each compliance period, each source must surrender sufficient allowances to cover its emissions during that period. In an open trading system, trades can be made between parties within the system and parties outside the system.

baseline. The amount of the entity's emissions for a specified base year against which any future changes in emissions are evaluated. Emission reductions targets are often expressed as a percent reduction from the baseline emission level.

boundaries. There are two types of boundaries: organizational and operational. When accounting for GHG emissions from partially owned entities, it is important to draw clear organizational boundaries, which should be consistent with the organizational boundaries that have been drawn up for financial reporting purposes. After the entity has determined its organizational boundaries in terms of the entities it owns or controls, it must then set operational boundaries with respect to direct and indirect emissions. The World Resources Institute/ World Business Council for Sustainable Development (WRI/WBCSD) Greenhouse Gas Protocol provides additional guidance on setting organizational and operational boundaries with respect to GHG emissions.

closed trading system. In a closed trading system, trading of allowances is permitted only between parties subject to the program or regulatory system. See also **open trading system**.

credit. The term *credit* is used in a number of contexts, most commonly in relation to emission reductions that have been achieved in excess of the required amount for one of the following:

- The Kyoto Protocol's JI, also known as ERUs
- The Kyoto Protocol's CDM, specifically known as CERs
- The Kyoto-related and voluntary trading programs

data assembly. The process the entity uses to “roll-up” individual site or process level information to a facility- or corporate-level report. For example, the entity may choose to have a manufacturing unit report only the number of widgets it produced each year and have corporate-level environmental staff apply the appropriate emission factors to calculate the resultant emissions. Alternatively, the entity may choose to have all calculations done at the operational level and assign only quality control responsibilities to the corporate staff.

direct GHG emissions. Direct GHG emissions, or scope 1 emissions, are emissions from sources that are owned or controlled by the entity. These are emissions associated with the following:

- Stationary combustion from fuel burned in the entity’s stationary equipment, such as boilers, incinerators, engines, and flares
- Mobile combustion from fuel burned in the entity’s transport devices, such as trucks, trains, airplanes, and boats
- Process emissions from physical or chemical processes, such as cement manufacturing, petrochemical processing, and aluminum smelting
- Fugitive emissions, which are intentional and unintentional releases, such as equipment leaks from joints and seals and emissions from wastewater treatment, pits, and cooling towers

emissions factor. A mathematical factor or ratio for converting the measure of an activity (for example, liters of fuel consumed, kilometers travelled, the number of animals in husbandry, or tons of product produced) into an estimate of the quantity of GHGs associated with that activity.

emission reduction. The process by which an entity reduces its emissions of GHGs as compared to a baseline.

GHG inventory. An entity’s GHG emissions for a specified period, typically a year or a series of years, is referred to as its GHG inventory. See also **baseline**.

indirect GHG emissions. Indirect emissions, or scope 2 reporting under the WRI/WBCSD Greenhouse Gas Protocol, represent emissions from the generation of imported or purchased electricity, heat, or steam. Other indirect emissions, or scope 3 reporting under the GHG Protocol, include the following:

- Employee business travel
- Outsourced activities, contract manufacturing, and franchises
- Transportation by the vendor or contractor of, for example, materials, products, waste, and employees
- Emissions from product use and end of life
- Employee commuting
- Production of imported materials

inventory. See **GHG inventory**.

leakage. Leakage occurs when an emission reduction project causes emissions to increase beyond the project’s boundaries. Entities entering into an emission reduction project typically must demonstrate that the emission reduction will not cause emissions to increase beyond the project’s boundaries.

offset. Offsets are created when a source makes voluntary, permanent emission reductions that are in surplus to any required reductions. Entities that create offsets can trade them to other entities to cover growth or relocation. Regulators may be required to approve each trade. Regulators normally require a portion of the offsets to be retired to ensure an overall reduction in emissions. Offsets are an open system (an open system is one in which trades can be made between parties within the system and parties outside the system). One offset is an emission reduction that a pollution source has achieved in excess of permitted levels or required reductions, or both. The excess amount is the credit and can be sold on the market.

open trading system. In an open trading system, trades can be made between parties within the system and parties outside the system. See also **closed trading system**.

permits. Certificates of operation that allow holders to operate a facility provided they do not exceed a specified rate (kilograms/tons per day). Permits are often designated as an upper limit. Because few systems operate at 100 percent of capacity at all times, actual emissions are usually a fraction of the theoretical upper limit of allowed emissions. However, as new permits become harder to obtain, existing operations are motivated to increase their level of operations under their existing permits (for example, by adding a second shift, thereby legally increasing the overall quantity of emissions). **Allowances** are transferable, whereas the permit itself is attached to a specific installation or site.

uncertainty. As used in the field of GHG emissions, uncertainty refers to uncertainty in the measurement of GHG emissions that arises from imprecise measurement methods and factors.

validation. The process used to ensure that a given project, if implemented, can achieve the projected reduction results. The entity may validate the feasibility of the design of an emission reduction project internally, or the entity may engage an outside party (typically an engineering or a consulting firm) to perform the validation.

verification. The objective and independent assessment of whether the reported GHG inventory properly reflects the GHG impact of the entity in conformance with preestablished GHG accounting and reporting standards. Some registries define *verification* as the process used to ensure that a given participant's GHG inventory (either the baseline or the annual result) has met a minimum quality standard and complied with a specific registry's procedures and protocols for calculating and reporting GHG emissions.

verified emission reductions. Verified emission reductions are created, in the absence of government rules, by project-based activities that are defined by the buyer and seller and verified by a third party.

Emissions Trading Programs

baseline-and-credit program. In a baseline-and-credit program (that is, credit- or project-based trading), each participant is provided a baseline against which its performance is measured. If an action is taken to reduce emissions, the difference between the baseline and the actual emissions, where actual emissions are less than the baseline, can be credited and traded. The baseline established for crediting purposes can be fixed or dynamic, decreasing or increasing over time. The key

distinction between a cap-and-trade program and a baseline-and-credit program is that the former regulated sources' emissions are required to remain under an emissions cap, which is a fixed quantity. Such a limit is not necessarily imposed in a baseline-and-credit program. The Kyoto Protocol's CDM, for example, would operate as a baseline-and-credit program.¹

cap-and-trade program. In a cap-and-trade program (that is, allowance-based trading), the maximum level of emissions that can be released from sources is set by the control authority. This level is the cap. All sources are required to have allowances to emit. The allowances are freely transferable; they can be bought or sold. The control authority issues exactly the number of allowances needed to produce the desired emission level. An example of this kind of system is the U.S. Environmental Protection Agency's nationwide Acid Rain Program, under which allowances of SO₂ and NO_x can be traded to comply with an emissions cap.²

Appendix C — Illustrative Management Representation Letter

[Date]

[Name of CPA Firm]

We are providing this letter in connection with your [examination/review] of our assertion(s) that [describe assertion(s), for example, the accompanying schedule of greenhouse gas (GHG) emissions for XYZ Company for the year ended December 31, 20XX, is presented in conformity with (identify criteria used, for example, the Greenhouse Gas Protocol Corporate Accounting and Reporting Standard and the Corporate Value Chain [Scope 3] Accounting and Reporting Standard published by the World Business Council for Sustainable Development and the World Resource Institute)].

We are responsible for [describe assertions and subject matter]. We further confirm that we are responsible for the selection of [identify criteria] as the criteria against which you are evaluating our assertion(s). Further we confirm that we are responsible for determining that [identify criteria] represent appropriate criteria for our purposes.

We confirm, to the best of our knowledge and belief, the following representations made to you during your [examination/review]:

1. We are not aware of any matters contradicting the assertion(s), nor have we received any communications from regulatory agencies or [identify organizations to which the company reports GHG emissions] affecting the subject matter or our assertion(s) on such subject matter.
2. We have disclosed to you all significant emission sources. There are no material emissions that have not been recorded in the greenhouse gas (GHG) emission records underlying our assertion(s) referred to above. GHG emissions have been reported for the entities where the Company has operational control.
3. There has been no (a) fraud involving management or employees who have significant roles in the Company's processes and procedures relating to measurements of emissions in conformity with the criteria specified above or (b) fraud involving others that could have a material effect on measurements of emissions in conformity with the selected criteria.
4. There are no significant deficiencies in the design or operation of the Company's internal control over its GHG inventory.
5. We have made available to you all records relevant to your [examination/review] of the aforementioned subject matter or assertion(s).
6. We have responded fully to all inquiries made by you during the engagement.
7. [Add additional representations as deemed appropriate.]

We are not aware of any events that occurred subsequent to the period being reported on and through the date of this letter that would have a material effect on the aforementioned subject matter or assertion(s).

[Name of chief executive officer and title]

[Name of corporate environmental officer and title]

[The following illustrates an example of a written assertion and additional representations that should be obtained in connection with GHG emission reductions:]

Example assertion in connection with an emission reduction:

XYZ Company reduced GHG emissions in connection with project ABC by 50,000 tons of CO₂ equivalents for the year ended December 31, 20XX, based on *[identify criteria selected by the responsible party]*.

Additional representations:

The GHG emission reduction project was undertaken for the purpose of *[describe business purpose]*. The GHG emission reductions were achieved as a direct result of the project and not as a result of any changes in activity level. The GHG emission reductions related to the project are both real and additional to any requirements. Further, we have satisfactory title to all GHG emission reduction credits related to the project, and there are no liens or encumbrances on such GHG emission reduction credits, nor have any GHG emission reduction credits been pledged as collateral.

Appendix D — Illustrative Examination Reports on GHG Emissions Information

The examination report examples illustrated herein are for general use. See paragraphs .78–.83 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), for requirements and guidance on restricting the use of an attest report.

Example 1—Examination Report on Subject Matter

Independent Accountant’s Report

We have examined the accompanying schedule of greenhouse gas emissions of XYZ Company for [*identify period, for example, the year ended December 31, 20XX*]. XYZ Company’s management is responsible for the schedule. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of the nature of the company’s greenhouse gas emissions; examining, on a test basis, evidence supporting the company’s schedule of greenhouse gas emissions; and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

In our opinion, the schedule referred to above presents, in all material respects, the greenhouse gas emissions of XYZ Company for [*identify period, for example, the year ended December 31, 20XX*] in conformity with [*identify criteria*].

[*Signature*]

[*Date*]

Example 2—Examination Report on Management’s Assertion

Independent Accountant’s Report

We have examined management’s assertion that [*identify the assertion, for example, the accompanying schedule of greenhouse gas emissions for XYZ Company for the year ended December 31, 20XX, is presented in conformity with (identify criteria)*]. XYZ Company’s management is responsible for the assertion. Our responsibility is to express an opinion on the assertion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of the nature of the company’s greenhouse gas emissions; examining, on a test basis, evidence supporting management’s assertion; and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but

acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

In our opinion, management's assertion referred to above is fairly stated, in all material respects, based on *[identify criteria]*.

[Signature]

[Date]

Example 3—Examination Report on Subject Matter; Includes Reference to the Examination Report of Another Practitioner

Independent Accountant's Report

We have examined the accompanying schedule of greenhouse gas emissions of XYZ Company and subsidiaries for the year ended December 31, 20XX. XYZ Company's management is responsible for the schedule. Our responsibility is to express an opinion based on our examination. We did not examine the schedule of greenhouse gas emissions for ABC Company, a wholly owned subsidiary, which reflected 20 percent of the related consolidated emissions. This schedule was examined by other accountants, whose report has been furnished to us and our opinion, insofar as it relates to the amounts included for ABC Company, is based solely on the report of the other accountants.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of the nature of the company's greenhouse gas emissions; examining, on a test basis, evidence supporting the company's schedule of greenhouse gas emissions; and performing such other procedures as we considered necessary in the circumstances. We believe that our examination and the report of the other accountants provide a reasonable basis for our opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

In our opinion, based on our examination and the report of the other accountants, the schedule referred to above presents, in all material respects, the greenhouse gas emissions of XYZ Company for the year ended December 31, 20XX, in conformity with *[identify criteria]*.

Appendix E — Illustrative Examination Reports on GHG Emission Reduction Information

The examination report examples illustrated herein are for general use. See paragraphs .78–.83 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), for requirements and guidance on restricting the use of an attest report.

Example 1—Examination Report on Subject Matter

Independent Accountant’s Report

We have examined the schedule of reductions of greenhouse gas emissions of XYZ Company related to the ABC project for the year ended December 31, 20XX, from its GHG emissions in the prior year. XYZ Company’s management is responsible for the schedule. Our responsibility is to express an opinion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and, accordingly, included obtaining an understanding of the nature of the company’s greenhouse gas emissions; examining, on a test basis, evidence supporting the greenhouse gas emission reduction information; and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Our engagement related to the specific project identified above. We were not engaged to, and did not, examine XYZ Company’s entity-wide greenhouse gas emissions inventory or whether XYZ Company has reduced its entity-wide greenhouse gas emissions inventory. Accordingly, we do not express an opinion or any other form of assurance on its entity-wide greenhouse gas emissions inventory or changes from prior periods.

In our opinion, the schedule of reductions of greenhouse gas emissions of XYZ Company related to ABC project for the year ended December 31, 20XX is presented, in all material respects, in conformity with [*identify criteria*].

[*Signature*]

[*Date*]

Example 2—Examination Report on Management’s Assertion

Independent Accountant’s Report

We have examined management’s assertion that [*identify the assertion, for example, XYZ Company reduced GHG emissions in connection with project ABC by 50,000 tons of CO2 equivalents for the year ended December 31, 20XX, from its GHG emissions in the prior year*] based on [*identify criteria selected by management*]. XYZ Company’s management is responsible for the assertion. Our responsibility is to express an opinion on the assertion based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and,

accordingly, included obtaining an understanding of the nature of the company's greenhouse gas emissions; examining, on a test basis, evidence supporting management's assertion; and performing such other procedures as we considered necessary in the circumstances. We believe that our examination provides a reasonable basis for our opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Our engagement related to the specific project identified above. We were not engaged to, and did not, examine XYZ Company's entity-wide greenhouse gas emissions inventory or whether XYZ Company has reduced its entity-wide greenhouse gas emissions inventory. Accordingly, we do not express an opinion or any other form of assurance on its entity-wide greenhouse gas emissions inventory or changes from prior periods.

In our opinion, management's assertion referred to above is fairly stated, in all material respects, based on the *[identify criteria]*.

[Date]

Appendix F — Illustrative Review Reports on GHG Emissions Information

The review report examples illustrated herein are for general use. See paragraphs .78–.83 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), for requirements and guidance on restricting the use of an attest report.

Example 1—Review Report on Subject Matter

Independent Accountant’s Report

We have reviewed the accompanying schedule of greenhouse gas emissions of XYZ Company for [*identify period, for example, the year ended December 31, 20XX*]. XYZ Company’s management is responsible for the schedule.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review consists principally of applying analytical procedures and making inquiries of persons responsible for the greenhouse gas emission information. A review is substantially less in scope than an examination, the objective of which is the expression of an opinion on the company’s schedule of greenhouse gas emissions. Accordingly, we do not express such an opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Based on our review, nothing came to our attention that caused us to believe that the schedule referred to above is not presented, in all material respects, in conformity with [*identify criteria*].

[*Signature*]

[*Date*]

Example 2—Review Report on Management’s Assertion

Independent Accountant’s Report

We have reviewed management’s assertion that [*identify the assertion, for example, the accompanying schedule of greenhouse gas emissions for XYZ Company for the year ended December 31, 20XX, is presented in conformity with (identify criteria)*]. XYZ Company’s management is responsible for the assertion.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review consists principally of applying analytical procedures and making inquiries of persons responsible for the assertion. A review is substantially less in scope than an examination, the objective of which is the expression of an opinion on management’s assertion. Accordingly, we do not express such an opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Based on our review, nothing came to our attention that caused us to believe that management's assertion referred to above is not fairly stated, in all material respects, based on the [*identify criteria*].

[*Signature*]

[*Date*]

Example 3—Review Report on Subject Matter; Includes Reference to the Review Report of Another Practitioner

Independent Accountant's Report

We have reviewed the accompanying schedule of greenhouse gas emissions of XYZ Company and subsidiaries for the year ended December 31, 20XX. XYZ Company's management is responsible for the schedule. We have not reviewed the schedule of greenhouse gas emissions for ABC Company, a wholly owned subsidiary, which reflected 20 percent of the related consolidated emissions. That schedule was reviewed by other accountants, whose report has been furnished to us, and our conclusion, insofar as it relates to the amounts included for ABC Company, is based solely on the report of the other accountants.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review consists principally of applying analytical procedures and making inquiries of persons responsible for the greenhouse gas emission information. A review is substantially less in scope than an examination, the objective of which is the expression of an opinion on the company's schedule of greenhouse gas emissions. Accordingly, we do not express such an opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Based on our review and the report of the other accountants, nothing came to our attention that caused us to believe that the schedule referred to above is not presented, in all material respects, in conformity with [*identify criteria*].

Appendix G — Illustrative Review Reports on GHG Emission Reduction Information

The review report examples illustrated herein are for general use. See paragraphs .78–.83 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*), for requirements and guidance on restricting the use of an attest report.

Example 1—Review Report on Subject Matter

Independent Accountant’s Report

We have reviewed the schedule of reductions of greenhouse gas emissions of XYZ Company related to the ABC project for the year ended December 31, 20XX, from its GHG emissions in the prior year. XYZ Company’s management is responsible for the schedule.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review consists principally of applying analytical procedures and making inquiries of persons responsible for the greenhouse gas emission reduction information. A review is substantially less in scope than an examination, the objective of which is the expression of an opinion on the company’s schedule of reductions of greenhouse gas emissions. Accordingly, we do not express such an opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Our engagement related to the specific project identified above. We were not engaged to, and did not, review XYZ Company’s entity-wide greenhouse gas emissions inventory or whether XYZ Company has reduced its entity-wide greenhouse gas emissions inventory. Accordingly, we do not express any conclusion on its entity-wide greenhouse gas emissions inventory or changes from prior periods.

Based on our review, nothing came to our attention that caused us to believe that the schedule of reductions of greenhouse gas emissions of XYZ Company related to ABC project for the year ended December 31, 20XX, is not presented, in all material respects, in conformity with *[identify criteria]*.

[Signature]

[Date]

Example 2—Review Report on Management’s Assertion

Independent Accountant’s Report

We have reviewed management’s assertion that *[identify the assertion, for example, XYZ Company reduced GHG emissions in connection with project ABC by 50,000 tons of CO2 equivalents for the year ended December 31, 20XX from its GHG emissions in the prior year]* based on *[identify criteria selected by management]*. XYZ Company’s management is responsible for the assertion.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review consists principally of applying analytical procedures and making inquiries of persons responsible for the assertion. A review is substantially less in scope than an

examination, the objective of which is the expression of an opinion on management's assertion. Accordingly, we do not express such an opinion.

As described in footnote X, environmental and energy use data are subject to measurement uncertainties resulting from limitations inherent in the nature and methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Our engagement related to the specific project identified above. We were not engaged to, and did not, review XYZ Company's entity-wide greenhouse gas emissions inventory or whether XYZ Company has reduced its entity-wide greenhouse gas emissions inventory. Accordingly, we do not express any conclusion on its entity-wide greenhouse gas emissions inventory or changes from prior periods.

Based on our review, nothing came to our attention that caused us to believe that management's assertion referred to above is not fairly stated, in all material respects, based on *[identify criteria]*.

Section 14,470

Statement of Position 13-2 — Performing Agreed-Upon Procedures Engagements That Address the Completeness, Mapping, Consistency, or Structure of XBRL-Formatted Information

September 2013

NOTE

This AICPA Statement of Position (SOP) has been developed by the AICPA XBRL Assurance Task Force of the AICPA Assurance Services Executive Committee to provide guidance regarding the application of Statements on Standards for Attestation Engagements (SSAEs) to engagements in which a practitioner performs and reports on agreed-upon procedures related to the completeness of the XBRL files, mapping of the source information consistency of the XBRL files with the source information or structure of the XBRL files. In this SOP, the source information consists of the financial statements (including notes) and required schedules to be formatted in XBRL. The terms *completeness*, *mapping*, *consistency*, and *structure* as used in this SOP are defined in paragraph .07 of this SOP. This SOP supersedes SOP 09-1, *Performing Agreed-Upon Procedures Engagements That Address the Completeness, Accuracy, or Consistency of XBRL-Tagged Data*.

This SOP is recognized as an attestation interpretation as defined in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). Attestation interpretations are recommendations on the application of SSAEs in specific circumstances, including engagements for entities in specialized industries. Attestation interpretations are issued under the authority of the Auditing Standards Board (ASB). The members of the ASB have found this SOP to be consistent with existing SSAEs.

A practitioner should be aware of and consider attestation interpretations applicable to his or her attestation engagement. If the practitioner does not apply the guidance included in this SOP, the practitioner should be prepared to explain how he or she complied with the SSAE provisions of this SOP.

Introduction and Background

.01 This Statement of Position (SOP) provides practitioners with guidance on performing agreed-upon procedures engagements for issuers submitting exhibits to the SEC containing eXtensible Business Reporting Language (XBRL) files¹ and is based on the application guidance of the principles and criteria in the exhibit of *Principles and Criteria for XBRL-Formatted Information*.² However,

¹ Information formatted in interactive data is referred to herein as “XBRL files.”

² *Principles and Criteria for XBRL-Formatted Information* provides preparers, reviewers, practitioners, and users of information formatted in XBRL with criteria for evaluating the completeness of the XBRL files, mapping of the source information, consistency of the XBRL files with the source information, or structure of the XBRL files.

this SOP also may be considered for performing agreed-upon procedures engagements for other applications of XBRL. This SOP supersedes SOP 09-1, *Performing Agreed-Upon Procedures Engagements That Address the Completeness, Accuracy, or Consistency of XBRL-Tagged Data*.

SEC Rules

.02 The SEC issued a release, “Interactive Data to Improve Financial Reporting,” adopting final rules (SEC rules) that require issuers to submit their financial statements and the related notes and required schedules in interactive data format using XBRL, as an exhibit to their financial statements submitted to the SEC via the Electronic Data-Gathering, Analysis, and Retrieval (EDGAR) system and to provide these XBRL files on their corporate websites.

.03 In order for XBRL to be a useful tool for investors and other users of business information, the data contained in XBRL files needs to be accurate and reliable. Preparers of XBRL-formatted information are responsible for providing complete and accurate information in their XBRL files on which investors and other users of business information may rely. For issuers, the SEC rules emphasize the SEC’s expectation that preparers of XBRL-formatted information take the initiative to develop practices to promote tagging processes that result in complete and accurate XBRL files.

.04 The SEC rules³ state that, “an auditor will not be required to apply AU section 550, *Other Information in Documents Containing Audited Financial Statements*, AU section 722, *Interim Financial Information*, or AU section 711, *Filings under Federal Securities Statutes*, to the interactive data provided as an exhibit in a company’s reports or registration statements, or to the viewable interactive data.” Although the SEC rules do not require auditor involvement with the XBRL files, issuers may voluntarily obtain third-party services to assist them in assessing the quality of their XBRL files.

XBRL Terminology

.05 In this SOP, the term *XBRL-formatted information* (commonly referred to as *tagged information*) means information that has been represented using XBRL and included in one or more electronic files. XBRL is a global standard that provides unique electronically readable codes (tags) representing each item in the financial statements or other business reports.

.06 Taxonomies are dictionaries that contain the terms used in financial statements and other business reports and their corresponding XBRL tags. Taxonomies specify the elements to be used for individual items of information, such as the element for the line item “cash and cash equivalents,” and for a group of items, such as narrative disclosures. Taxonomies also identify relationships among terms, (for example, the term *cash and cash equivalents* is related to the term *current assets*). Business rules may be expressed within a taxonomy, such as “gross assets less accumulated depreciation should equal the net assets.” Reporting companies may add to the dictionaries of terms, relationships, and business rules (that is, they may extend the taxonomy).

³ The AU section numbers in the SEC rules refer to *PCAOB Standards and Related Rules*, “Interim Standards.”

Agreed-Upon Procedures Engagements

.07 Given that management of an entity is responsible for the accuracy and reliability of the XBRL files, including identification of and compliance with the SEC's requirements, management (or other specified parties, such as the audit committee) may decide to engage a practitioner to provide attestation services to assist it in assessing the quality of its XBRL files, which may include assessing the completeness of the XBRL files (completeness), the mapping of the source information (mapping), the consistency of the XBRL files with the source information (consistency), or the structure of the XBRL files (structure) as defined here:

Completeness of the XBRL files. All required information is formatted at the required level of detail, as defined by the SEC's requirements. Only permitted information is included in the XBRL files.

Mapping of the source information. The elements selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the SEC's requirements.

Consistency of the XBRL files with the source information. All formatted information in the XBRL files is consistent with the source information and formatted in accordance with the SEC's requirements.

Structure of the XBRL files. XBRL files are structured in accordance with the SEC's requirements.

.08 The engagement is performed under AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*). Not all of the provisions of AT section 201 are discussed in this SOP. Rather, this SOP includes guidance to assist practitioners in applying certain aspects of AT section 201 to the subject matter of XBRL files.

.09 The specified parties are responsible for the sufficiency (nature, timing, and extent) of the agreed-upon procedures because they best understand their own needs. The practitioner performs the procedures and reports his or her findings. Because the procedures are intended to meet the needs of the specified parties and may not be appropriate for others, use of these reports is restricted to the specified parties.

.10 To avoid misunderstanding, it is not appropriate for the entity to refer to services obtained from a practitioner in connection with an agreed-upon procedures engagement in a document that is available to anyone other than the specified parties (for example, general use audited financial statements or SEC filings).

Conditions for Engagement Performance

.11 A practitioner may perform an agreed-upon procedures engagement described in this SOP provided that

- a. the practitioner is independent.
- b. management acknowledges its responsibilities for the XBRL files and provides the practitioner with one or more written assertions about its XBRL files. (Illustrative assertions are presented in appendix A of this SOP.)
- c. the practitioner and the specified parties agree upon the procedures to be performed by the practitioner.

- d. the specified parties take responsibility for the sufficiency of the agreed-upon procedures for their purposes.
- e. criteria for the determination of findings are agreed upon among the practitioner and the specified parties.
- f. the procedures to be applied with respect to the completeness, mapping, consistency, or structure of the XBRL files are expected to result in reasonably consistent measurement using the criteria agreed upon by the specified parties.
- g. evidential matter related to the completeness, mapping, consistency, or structure of the XBRL files is expected to exist to provide a reasonable basis for expressing the findings in the practitioner's report.
- h. when applicable, the practitioner and the specified parties agree on any materiality limits for reporting purposes. (See the materiality discussion in paragraph .27.)
- i. use of the report is restricted to the specified parties.

.12 There are audit committee preapproval requirements applicable to acceptance of agreed-upon procedures engagements. Such requirements have been established by the SEC, PCAOB, and other regulatory bodies.

Agreement on and Sufficiency of Procedures

.13 To satisfy the requirement that the practitioner and the specified parties agree upon the procedures performed or to be performed, and that the specified parties take responsibility for the sufficiency of those procedures for their purposes, ordinarily the practitioner should communicate⁴ directly with and obtain affirmative acknowledgment from each of the specified parties. For example, this may be accomplished by meeting with the specified parties or distributing a draft of the anticipated report or a copy of an engagement letter to the specified parties and obtaining their agreement.

.14 AT section 201 permits an agreed-upon procedures report to be used by multiple specified parties. However, because the objective of the engagement described in this SOP generally is to provide information to management or the audit committee of the entity about its XBRL files, ordinarily it is anticipated that the only specified parties will be management or the audit committee.

.15 The practitioner should not report on an engagement if the specified parties do not agree upon the procedures performed or to be performed and do not take responsibility for the sufficiency of the procedures for their purposes.

Subject Matter and Related Assertions

.16 XBRL files subject to agreed-upon procedures engagements are typically as of a specified date and for a specified period (for example, for SEC purposes the XBRL files may be for comparative financial statements in a

⁴ Paragraph .07 of AT section 201, *Agreed-Upon Procedures Engagements* (AICPA, *Professional Standards*), does not require a written communication with the specified parties; it requires only that the practitioner communicate with and obtain affirmative acknowledgment from each of the specified parties. It generally is preferable that the agreement be in writing to avoid any misunderstandings regarding the procedures to be performed and responsibility for the sufficiency of the procedures.

specific Form 10-K annual report or Form 10-Q quarterly report). It is common for the agreed-upon procedures to be performed on draft, rather than final XBRL files.

.17 Because management may engage a third party to assist in the preparation of the XBRL files, assertions also may be made by a third party, as per paragraph .13 of AT section 101, *Attest Engagements* (AICPA, *Professional Standards*). For example, a service organization may make assertions that the XBRL files comply with specified SEC EDGAR Filer Manual (EFM) guidelines. Management, however, is responsible for all assertions, including any that are made by third parties.

.18 Criteria are the standards or benchmarks used to measure, present, and evaluate the subject matter. Suitable criteria must be objective, measurable, complete, and relevant. Criteria to be used in the determination of findings are agreed upon between the practitioner and the specified parties. The specific procedures to be performed are dependent on the relevant criteria against which the XBRL files are to be evaluated. Examples of criteria include those in the exhibit in *Principles and Criteria for XBRL-Formatted Information*, the SEC rules, and sections of the EFM⁵ that are agreed upon by the specified parties.

.19 Appendix D of this SOP presents certain illustrative procedures aligned with the criteria presented in the exhibit of the *Principles and Criteria for XBRL-Formatted Information* that a practitioner might perform and findings that might be reported as part of an agreed-upon procedures engagement related to the completeness, mapping, consistency, or structure of XBRL-formatted information. *Principles and Criteria for XBRL-Formatted Information* focuses on areas that require judgment. The principles and criteria are not designed for measuring compliance with all of the applicable SEC rules and regulations (that is, the EFM includes additional requirements that are not included in this SOP; for example, certain requirements that are checked in an automated manner and those using the SEC's EDGAR XBRL validation process are excluded as well as some SEC requirements related to structure of the XBRL files and format of the information). Therefore, the procedures herein are illustrative and do not represent a complete set of procedures that might be performed in an agreed-upon procedures engagement relating to XBRL-formatted information.

Establishing an Understanding With the Client

.20 In accordance with paragraph .10 of AT section 201, the practitioner should establish an understanding with the client regarding the services to be performed. Such an understanding reduces the risk that the client may misinterpret the objectives and limitations of an agreed-upon procedures engagement. The understanding also reduces the risk that the client will misunderstand its responsibilities and the responsibilities of the practitioner. When the practitioner documents the understanding through a written communication with the client (an engagement letter), such communication should be addressed to the client and might include statements

- confirming that an agreed-upon procedures engagement will be performed.
- identifying

⁵ Certain sections of the SEC's EDGAR Filer Manual (EFM) may not be objective enough to be considered suitable criteria.

- the subject matter of the engagement (that is, the XBRL-formatted information that the specified parties are evaluating and to which the practitioner is to apply agreed-upon procedures) and any written assertion(s) related thereto.
- the responsible party (for example, management).
- the criteria for evaluating the XBRL-formatted information (for example, *Principles and Criteria for XBRL-Formatted Information*).
- the specified parties.
- any timing sensitivities in the performance of the procedures or delivery of the report.
- indicating that the objective of the practitioner's agreed-upon procedures is to present specific findings to assist the specified parties in evaluating the completeness, mapping, consistency, and structure of the entity's XBRL files.
- acknowledging the specified parties' responsibility for the sufficiency of the enumerated procedures.
- acknowledging management's responsibility for
 - compliance with the SEC's requirements including those related to the completeness, mapping, consistency, and structure of the entity's XBRL files and its assertions thereon.
 - providing accurate and complete information to the practitioner.
- identifying the practitioner's responsibilities, which include, but are not limited to
 - performing the enumerated procedures.
 - providing management with a report and the circumstances under which the practitioner may decline to issue a report.
- indicating that the engagement will be conducted in accordance with attestation standards established by the AICPA.
- enumerating the procedures to be performed.
- acknowledging that
 - the practitioner makes no representation regarding the sufficiency of the enumerated procedures for the specified parties' purposes.
 - the practitioner has no responsibility for the completeness or accuracy of the information provided to the practitioner.
 - an agreed-upon procedures engagement does not constitute an examination, the objective of which would be the expression of an opinion on the completeness, mapping, consistency, and structure of the entity's XBRL files. The report will not express an opinion or any other form of assurance and, if additional procedures were performed, other matters might come to the practitioner's attention.
- identifying any assistance to be provided to the practitioner.
- describing any arrangements to involve a specialist.

- where applicable, agreeing upon materiality limits.
- indicating that use of the report will be restricted to the specified parties.

An illustrative engagement letter is presented in appendix B of this SOP.

Nature, Timing, and Extent of Procedures

Responsibilities of Management

.21 Management is responsible for both the completeness and accuracy of the source information and compliance with the SEC's requirements, including those related to the completeness, mapping, consistency, and structure of its XBRL-formatted information. That responsibility encompasses

- a. identifying the applicable XBRL-formatted information filing requirements of the SEC.
- b. establishing and maintaining controls relating to the preparation and submission of the entity's XBRL-formatted information to the SEC.
- c. evaluating the completeness, mapping, consistency, and structure of the entity's XBRL-formatted information.
- d. providing XBRL-formatted information in a form and manner that satisfies the SEC's requirements.

Responsibilities of the Practitioner

.22 The practitioner is responsible for carrying out the procedures and reporting the findings in accordance with the general, fieldwork, and reporting standards for attestation engagements as established in AT section 50, *SSAE Hierarchy* (AICPA, *Professional Standards*). In order to accomplish this, the practitioner should have adequate knowledge of the specific subject matter to which the agreed-upon procedures are to be applied. That knowledge would include an understanding of XBRL and a familiarity with the applicable XBRL taxonomies used, knowledge of the SEC rules and requirements (including permitted taxonomies, such as the permitted version of the U.S. GAAP Taxonomy), as well as knowledge of the source information and supporting records.⁶

Procedures to Be Performed

.23 The procedures that the practitioner and specified parties agree upon may be as limited or as extensive as the specified parties desire. However, mere reading of an assertion or specific information about the XBRL-formatted information does not constitute a procedure sufficient to permit a practitioner to report on the results of applying agreed-upon procedures. Because of the nature of agreed-upon procedures engagements related to XBRL files, procedures may be modified during the engagement. According to paragraph .15 of AT section 201, in general, there is flexibility in determining the procedures as long as the specified parties acknowledge responsibility for the sufficiency of such procedures for their purposes. However, paragraph .16 of AT section 201 states that the practitioner should not agree to perform procedures that are

⁶ Practitioners performing engagements for audit clients may have specific knowledge of the underlying source information and supporting records and may possess a level of expertise that would significantly lessen the range of judgment needed in performing procedures related to the XBRL-formatted information.

overly subjective and thus possibly open to varying interpretations. Examples of appropriate procedures are included in appendix D of this SOP. Examples of inappropriate procedures include the following:

- Merely reading a description of the services performed by a third party involved in the preparation of XBRL-formatted information (for example, by a service provider)
- Evaluating the competence or objectivity of another party involved in preparing or in providing assistance in the preparation of the XBRL-formatted information
- Obtaining an understanding about XBRL-related requirements⁷

Involvement of a Specialist⁸

.24 Generally, the use of a specialist would not be necessary. However, if specialized matters were included in the engagement that required expertise beyond that possessed by the practitioner (such as compliance with certain highly technical aspects of the EFM), the practitioner and the specified parties should explicitly agree to the involvement of the specialist in assisting the practitioner in the performance of those agreed-upon procedures. This agreement may be reached when obtaining agreement on the procedures performed or to be performed and acknowledgment of responsibility for the sufficiency of the procedures, as discussed in paragraph .13. The practitioner's report should describe the nature of the assistance provided by the specialist.

.25 A practitioner may agree to apply procedures to the report or work product of a specialist that does not constitute assistance by the specialist to the practitioner in an agreed-upon procedures engagement. For example, the practitioner may make reference to information contained in a report of a specialist in describing an agreed-upon procedure. However, it is inappropriate for the practitioner to agree to merely read the specialist's report solely to describe or repeat the findings or to take responsibility for all or a portion of any procedures performed by a specialist or the specialist's work product.

Reporting Considerations

.26 A practitioner's report on agreed-upon procedures should be in the form of procedures and findings. The practitioner should not provide negative assurance in his or her report about the completeness, mapping, consistency, or structure of the XBRL files. For example, the practitioner should not include a statement that "nothing came to our attention that caused us to believe that the assertion is not fairly stated in accordance with the criteria."

.27 The practitioner should report all findings from the application of the agreed-upon procedures. The concept of materiality does not apply to findings to be reported in an agreed-upon procedures engagement unless the definition of materiality is agreed to by the specified parties. Any agreed-upon materiality limits should be described in the practitioner's report.

⁷ Although the practitioner may need to obtain an understanding of XBRL-related requirements, obtaining such an understanding is not in itself an agreed-upon procedure (see paragraph .22 of this SOP).

⁸ A practitioner's specialist is an individual or organization possessing expertise in a field other than accounting or attestation, whose work in that field is used by the practitioner to assist the practitioner in the performance of the agreed-upon procedures engagement. A practitioner's specialist may be either a practitioner's internal specialist (who is a partner or staff, including temporary staff, of the practitioner's firm or a network firm) who does not participate in the engagement or a practitioner's external specialist.

.28 The practitioner's report on agreed-upon procedures should include all of the following elements:

- a. A title that includes the word *independent*
- b. Identification of the specified parties
- c. Identification of the subject matter (and any written assertion related thereto) and the character of the engagement
- d. Identification of the party responsible for the XBRL files (for example, management)
- e. A statement that the subject matter (and any written assertions related thereto) is the responsibility of the responsible party (for example, management)
- f. A statement that the procedures performed were those agreed to by the specified parties identified in the report
- g. A statement that the agreed-upon procedures engagement was conducted in accordance with the attestation standards established by the AICPA
- h. A statement that the sufficiency of the procedures is solely the responsibility of the specified parties and a disclaimer of responsibility for the sufficiency of those procedures
- i. A list of the procedures performed (or reference thereto) and related findings
- j. Where applicable, a description of any agreed-upon materiality limits (Refer to the materiality discussion in paragraph .27.)
- k. A statement that the practitioner was not engaged to examine and did not conduct an examination of the subject matter (or the written assertion related thereto), the objective of which would be the expression of an opinion, a disclaimer of opinion on the subject matter (or the written assertion related thereto), and a statement that if the practitioner had performed additional procedures, other matters might have come to his or her attention that would have been reported
- l. A statement restricting the use of the report to the specified parties and that the report is intended solely for the use of the specified parties
- m. Where applicable, reservations or restrictions concerning procedures or findings
- n. Where applicable, a description of the nature of the assistance provided by a specialist
- o. The manual or printed signature of the practitioner's firm
- p. The date of the report

An illustrative report is presented in appendix E of this SOP.

.29 The date of completion of the agreed-upon procedures should be used as the date of the practitioner's report.

Explanatory Language in the Practitioner's Agreed-Upon Procedures Report

.30 The practitioner may include explanatory language in his or her agreed-upon procedures report related to matters such as the following:

- Disclosure of stipulated facts, assumptions, or interpretations (including the source thereof) used in the application of agreed-upon procedures.
- Description of the condition of records, controls, or data to which the procedures were applied.
- Explanation that the practitioner has no responsibility to update his or her report.
- Explanation of sampling risk.
- Explanation that the procedures performed do not address all of the SEC's requirements for XBRL submissions.
- Explanation that the XBRL files and source information may be updated prior to filing with the SEC. Accordingly, the findings in the report may not correspond to the final XBRL files submitted.

Adding Specified Parties (Nonparticipant Parties)

.31 Subsequent to the completion of the agreed-upon procedures engagement, a practitioner may be requested to consider the addition of another party as a specified party (a nonparticipant party). The practitioner may agree to add a nonparticipant party as a specified party, based on consideration of such factors as the identity of the nonparticipant party and the intended use of the report. If the practitioner does agree to add the nonparticipant party, he or she should obtain affirmative acknowledgment, normally in writing, from the nonparticipant party agreeing to the procedures performed and taking responsibility for the sufficiency of the procedures. If the nonparticipant party is added after the practitioner has issued his or her report, the report may be reissued or the practitioner may provide other written acknowledgment that the nonparticipant party has been added as a specified party. If the report is reissued, the report date should not be changed. If the practitioner provides written acknowledgment that the nonparticipant party has been added as a specified party, such written acknowledgment ordinarily should state that no procedures have been performed subsequent to the date of the report.

.32 Many companies hire a third party entity to create the XBRL files or assist them with the tagging process. When a third party does not agree to the procedures and, therefore, does not become a specified party, use of the report by the third party is inappropriate. Such a party, typically, is not considered a specified party to the engagement because it performs this work under the direction of management and is not intending to evaluate the XBRL files based on the agreed-upon procedures and related findings. As a result, the practitioner's findings should be communicated directly to management (and the audit committee) for its evaluation and consideration, which may result in management providing direction to the third party service provider to make changes to the XBRL files.

Written Representations

.33 During an attest engagement, the responsible party (for example, management) makes many representations to the practitioner, both oral and written, in response to specific inquiries or through the presentation of the subject matter or an assertion. A practitioner may find a representation letter to be a useful and practical means of obtaining representations from the responsible party. An illustrative representation letter is presented in appendix C of this SOP.

.34 If management refuses to furnish all written representations that the practitioner deems necessary, the practitioner should consider whether to disclose in his or her report the inability to obtain representations from the responsible party, withdraw from the engagement, or change the engagement to another form of engagement.

Knowledge of Matters Outside Agreed-Upon Procedures

.35 The practitioner need not perform procedures beyond the agreed-upon procedures. However, in connection with the application of agreed-upon procedures, if matters come to the practitioner's attention by other means that significantly contradict the subject matter (or written assertions related thereto) referred to in the practitioner's report, the practitioner should include this matter in his or her report (for example, if during the course of performing agreed-upon procedures that address XBRL-formatted financial statements and the related notes and required schedules submitted as an exhibit to the SEC, the practitioner becomes aware by means other than performing the agreed upon procedures that a calculation linkbase has been omitted, the practitioner should include this matter in his or her report).

Effective Date

.36 This SOP is effective for any XBRL agreed-upon procedures engagements accepted subsequent to the issuance of this SOP.

Appendix A — Illustrative Management Assertions

This appendix presents illustrative management assertions for the agreed-upon procedures engagement described in this SOP (agreed-upon procedures that address XBRL-formatted financial statements and the related notes and required schedules submitted as an exhibit to the SEC). These assertions are illustrative only and are not intended to apply to, or be sufficient for, any particular engagement. Management should tailor its assertions to the specific facts and circumstances of the particular engagement.

Management should develop assertions and agreed-upon procedures that meet its objectives. Management's assertions may align with the principles identified in the exhibit of *Principles and Criteria for XBRL-Formatted Information* or may be broader or more detailed as outlined here.

The XBRL files related to the [identify source information and period (for example, the Company's [Quarterly or Annual] Report) on Form [10-K or 10-Q] for the period ended [identify date] to be submitted to the Securities Exchange Commission (SEC)] are in compliance with the SEC's requirements including, but not limited to, the following:

1. **Completeness of the XBRL files.** All required information is formatted at the required levels of detail, as defined by the SEC's requirements. Only permitted information is included in the XBRL files.
2. **Mapping of the source information.** The elements selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the SEC's requirements.
3. **Consistency of the XBRL files with the source information.** All formatted information in the XBRL files is consistent with the source information and formatted in accordance with the SEC's requirements.
4. **Structure of the XBRL files.** XBRL files are structured in accordance with the SEC's requirements.

Appendix B — Illustrative Engagement Letter

This appendix presents an illustrative engagement letter⁹ for the agreed-upon procedures engagement described in this SOP (engagement described in this SOP addresses the completeness, mapping, consistency, or structure of an entity's XBRL-formatted financial statements and the related notes and required schedules submitted as an exhibit to the SEC). It is intended to be illustrative only.

In this illustrative engagement letter, management and the audit committee of XYZ Company are the specified parties.

[CPA Firm Letterhead]

[Client's Name and Address]

To Management and the Audit Committee of XYZ Company:

This will confirm our understanding of the arrangements for our performance of certain agreed-upon procedures to assist management and the audit committee of XYZ Company in evaluating [identify subject matter and criteria (for example, the completeness of the XBRL files, mapping of the source information to the XBRL files, consistency of the XBRL files)] with the source information and the structure of the XBRL files related to the [identify source information and period (for example, the Company's [Quarterly or Annual] Report on Form [10-K or 10-Q] for the period ended [identify date] to be submitted to the Securities Exchange Commission [SEC])] in accordance with the *Principles and Criteria for XBRL-Formatted Information* [AICPA, *Technical Practice Aids*].

The procedures enumerated in the attachment to this letter, which were specified by management and the audit committee of XYZ Company, are the procedures to be performed. Our responsibility is to carry out these procedures and report our findings. We will conduct our engagement in accordance with attestation standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of management and the audit committee of XYZ Company. Consequently, it is understood that we make no representation regarding the sufficiency of the procedures described in the attachment for the purpose for which this report has been requested or for any other purpose.

Management is responsible for both the completeness and accuracy of the source information and compliance with the SEC's requirements including those related to the completeness of the XBRL files, mapping of the source information to the XBRL files, consistency of the XBRL files with the source information, structure of the XBRL files, and for the information provided to us. Management also is responsible for the design, implementation, effectiveness, and monitoring of controls over the preparation and submission of XYZ Company's XBRL files. It is understood that we make no representation regarding the completeness or accuracy of the source information provided to us during this engagement.

⁹ It should be noted that although paragraph .10 of AT section 201 requires the practitioner to establish an understanding with the client regarding the services to be performed, that understanding is not required to be in writing. It may be preferable that the understanding be in writing to avoid any misunderstandings regarding the services to be performed. paragraph .20 of this SOP describes additional matters that may be appropriate to include in the engagement letter.

Our engagement to perform agreed-upon procedures is substantially less in scope than an examination, the objective of which is the expression of an opinion on management's assertion regarding the XBRL files. Accordingly, the report will not express an opinion or any other form of assurance thereon and if additional procedures were to be performed, other matters might have come to our attention.

At the completion of the agreed-upon procedures, we expect to issue a report that will state the procedures performed and the findings from those procedures. If, however, we are not able to complete all of the specified procedures, we will so advise you.

Distribution and use of our agreed-upon procedures report is restricted to the audit committee and management of the Company.

[Discuss other practitioner-specific matters, such as billing arrangements.]

If this letter correctly expresses your understanding of this engagement, please sign the enclosed copy where indicated and return it to us.

Sincerely,

[Firm Name or Firm Representative's Signature]

Accepted and agreed to by XYZ Company

[Date]

Appendix C — Illustrative Representation Letter

Paragraph .33 of this SOP indicates that a practitioner may find a representation letter to be a useful and practical means of obtaining representations from management. This appendix includes an illustrative representation letter for the agreed-upon procedures engagement described in this SOP (agreed-upon procedures that address the completeness, mapping, consistency, or structure of an entity's XBRL-formatted financial statements and the related notes and required schedules submitted as an exhibit to the SEC). This representation letter is illustrative only and is not intended to be applicable to all engagements. In addition, it may not include items that are relevant to a specific engagement.

[Date]

To [CPA Firm]:

We are providing this letter in connection with the performance of certain agreed-upon procedures to assist management and the audit committee of XYZ Company in evaluating [identify subject matter and criteria (for example, the completeness of the XBRL files, mapping of the source information to the XBRL files, consistency of the XBRL files)] with the source information and structure of the XBRL files related to the [identify source document and period (for example, the Company's [Quarterly or Annual] Report on Form [10-K or 10-Q] for the period ended [identify date] to be submitted to the Securities Exchange Commission [SEC])]. We confirm that we are responsible for the XBRL files relating to our financial statements and the related notes and required schedules, the related assertions (attached hereto)¹⁰ and for compliance with the SEC's requirements including those related to the completeness, mapping, consistency, and structure of XYZ Company's XBRL files and its assertions thereon, and for the completeness and accuracy of information provided to you, including the source information. We also confirm that we are responsible for selecting the criteria specified in the procedures and for determining that such criteria and procedures are sufficient for our purposes.

We confirm, to the best of our knowledge and belief, as of [identify date of agreed-upon procedures report], the following representations made to you during your agreed-upon procedures engagement.

1. All known matters with respect to the XBRL-formatted information relating to our financial statements or the assertions have been disclosed to you.
2. We have made available to you all—
 - a. Financial records and related data requested by you.
 - b. Documents used in the preparation of the XBRL files, such as information provided to a third party and tagging worksheets.
 - c. Output of all validation reports.
3. All of the data in the [identify the source information; for example, financial statements and the related notes and required schedules] that is required to be formatted in XBRL has been accurately and completely formatted and included in the XBRL files using [identify the taxonomy used; for example, U.S. GAAP Financial Reporting Taxonomy,

¹⁰ Management assertions may be incorporated in the representation letter or may be provided separately.

Version X] in accordance with the SEC rules, and except as communicated to you, the tags have been consistently applied from the prior submission as applicable.

4. There have been no communications from regulatory agencies affecting the XBRL-formatted information relating to our financial statements or previously submitted XBRL exhibits.¹¹
5. We have no knowledge of any fraud or suspected fraud affecting the entity's XBRL-formatted information.
6. We have no knowledge of any matters contrary to your findings.
7. *[Add other matters as the practitioner deems appropriate, such as:* We have limited the use of extension elements to cases where an appropriate element does not exist in the standard taxonomy.]

[Name of Chief Executive Officer and Title]

[Name of Chief Financial Officer and Title]

¹¹ If this representation letter is obtained subsequent to the issuance of the underlying financial statements, a representation such as the following may be appropriate: "We are not aware of any communication from any regulatory agencies regarding the financial statements or previously submitted XBRL exhibits, and no material modifications exist that need to be made to the financial statements."

Appendix D — Illustrative Procedures and Findings

This appendix presents a table that includes illustrative procedures that a practitioner might perform and findings that a practitioner might report as part of the agreed-upon procedures engagement described in this SOP (agreed-upon procedures that address the completeness, mapping, consistency, or structure of XBRL-formatted financial statements (including notes) and required schedules submitted as an exhibit to the SEC). These procedures are illustrative only and do not represent a complete set of procedures that might be performed in any specific engagement. In addition, they do not necessarily address every attribute associated with a particular management assertion.

The following items provide additional information about the procedures, the reporting of findings, and sources of information about SEC requirements regarding XBRL-formatted information.

1. Certain agreed-upon procedures may appear in the following table under one assertion, but may be relevant to more than one assertion; however, each procedure would only need to be performed once.
2. As indicated in paragraph .27 of this SOP, the practitioner should report and describe all differences, exceptions, and other findings noted during the application of the agreed-upon procedures as part of his or her findings, unless they are below any agreed-upon materiality limits described in the practitioner's report.
3. In planning for the execution of such an agreed-upon procedures engagement, the practitioner may find it useful to perform additional activities to assist in gaining an understanding of the entity's formatting approach. Examples of such activities may include
 - inquiring of management to gain an understanding of its overall formatting and validation process,¹² including software applications or third-party providers used, and relevant experience and knowledge of those involved with the XBRL reporting process.
 - requesting management to provide a list of known differences between its XBRL files and the SEC requirements.
4. Certain of these procedures may be performed using XBRL software (for example, analysis, querying, validation). Accordingly, as part of tailoring the procedures to a specific agreed-upon procedures engagement, management might agree to or specify the use of a particular XBRL software product and version for performing such procedures.
5. The SEC provides requirements for the proper formatting of the XBRL files and maintains electronic systems to receive, validate, and process the XBRL files. Filers are responsible for compliance with these requirements and are encouraged to make a test submission of the XBRL files prior to submission to the SEC to reduce the likelihood of the exhibit not being accepted by the SEC systems.¹³

¹² Various software applications or third party providers used may produce different reports or present information in a different manner, which may affect the timing, nature, and performance of procedures.

¹³ The SEC's validation system checks only a subset of the requirements and should not be considered a method to measure compliance with all of the requirements.

6. This table provides some references to relevant guidance in the SEC's EDGAR Filer Manual (EFM) Version 23.¹⁴ The most current document is available on the SEC's website at <http://xbrl.sec.gov> and is updated frequently.

Illustrative Procedures and Findings for an Agreed-Upon Procedures Engagement that Addresses the Completeness, Mapping, Consistency, or Structure of XBRL-Formatted Information

	Principles and Criteria ¹⁵		Procedure		Finding
Completeness of the XBRL Files—All required information is formatted at the required levels of detail as defined by the SEC's requirements. Only permitted information¹⁶ is included in the XBRL files.					
A	All information that is required to be formatted as defined by the SEC's requirements is formatted at the appropriate levels of detail in the XBRL files	C1	Inspect the XBRL files ¹⁷ to ascertain whether each of the following items in the source information is included in the XBRL files and is formatted at the level of detail noted in the following list:	C1	All such items in the [<i>identify source information</i>] that were required to be formatted as defined by the SEC's requirements were included in the XBRL files and formatted at the level of detail indicated [except as follows: <i>list facts</i>].
A (1)	All information (including parenthetical information) on the face of the financial statements in the		<ul style="list-style-type: none"> Each amount on the face of the financial statements (including "0" and amounts represented by 		

¹⁴ Future updates to the EFM could result in changes to the requirements, which could affect the procedures that the client might request be performed.

¹⁵ Principles and criteria listed herein are the same as those listed in the application guidance of the principles and criteria in the exhibit of the *Principles and Criteria for XBRL-Formatted Information*. In some cases, footnotes to these principles and criteria have been modified for improved readability or to provide practitioners with more information.

¹⁶ In a case in which an entity elects to format permitted information in addition to the required information, preparers should consider the level of detail to format such information so that it is not misleading to the user of the XBRL files.

¹⁷ Inspection of the XBRL files may take different forms (for example, different XBRL analysis software may be used to view, manipulate or export the data into various forms for analysis). Alternatively, a mapping worksheet that is prepared by the entity prior to finalizing the XBRL files for submission may be used; in this case additional procedures would be necessary to ascertain whether the selected elements in the mapping worksheet are the same as those included in the final XBRL files.

	Principles and Criteria ¹⁵		Procedure		Finding
	source information ¹⁸ is formatted in the XBRL files, including facts that represent zero or do not have amounts.		numbers or words and including amounts in parentheses and amounts in superscript ¹⁹ footnotes) <ul style="list-style-type: none"> • Each line item on the face of the financial statements that represents no value (for example, commitments and contingencies²⁰ for which there is only disclosure and no value) • Each heading in the financial statements is formatted as an abstract element 		
A (2)	All required document and entity information (DEI) is formatted in the XBRL files.		<ul style="list-style-type: none"> • Each required document and entity information concept is formatted 		
A (3)	Each complete note and required schedule under Regulation S-X are formatted separately using a text block element.		<ul style="list-style-type: none"> • Each note to the financial statements is formatted using a text block element • Each schedule required by Regulation S-X 		

(continued)

¹⁸ Source information for purposes of submission to the SEC is the electronic or paper-based financial statements, including the notes; required schedules under Regulation S-X; and document and entity information (DEI) (which includes document type, document period end date, registrant name, central index key [CIK], fiscal year end date, public float, fiscal year, fiscal period, filer category, and reporting status as well as an indication of whether an amendment flag exists [if so, include a description of the reason for the amendment], whether the filer is not required to file reports, and whether the filer is a well-known seasoned issuer).

¹⁹ Text that is included at the bottom of the page or table that is preceded by a superscript number or symbol which represents a footnote.

²⁰ Business reporting concepts that have no value for all periods, such as commitments and contingencies, must have the nil attribute set to "true."

	Principles and Criteria¹⁵		Procedure		Finding
			is formatted using a text block element		
A (4)	Each significant accounting policy (whether included in the accounting policies note or elsewhere within the notes to the financial statements) is formatted separately using a text block ²¹ element.		<ul style="list-style-type: none"> Each significant accounting policy, identified by management (whether included in the accounting policies note or other notes to the financial statements), is formatted using a text block element 		
A (5)	Each table within each note is formatted separately using a text block element.		<ul style="list-style-type: none"> Each table within each note is formatted using a text block element 		
A (6)	Each amount ²² disclosed in the notes and required schedules under Regulation S-X (including amounts written as words) is formatted separately.		<ul style="list-style-type: none"> Each amount²³ in the notes that is represented in numbers or words (including "0" and amounts in parentheses and amounts in superscript footnotes) Each amount in the schedules (including "0" and amounts in parentheses and amounts in superscript footnotes) that is represented in numbers or words 		

²¹ The U.S. GAAP Taxonomy has adopted a convention for distinguishing among text block elements intended for use in tagging accounting policies, tables, and disclosures.

²² Not all amounts are required to be formatted (for example, there is no need to format the "2" in "2 percent milk") (See SEC Compliance and Disclosure Interpretation 146.16 located on the SEC's website for additional examples).

²³ Optional information may be formatted to provide more context to individual amounts.

	Principles and Criteria¹⁵		Procedure		Finding
A (7)	Each amount included in the superscript footnotes is formatted separately.		<i>Preceding bullets address this criterion.</i>		
A (8)	Text that is shown on the face of the financial statements at the bottom of the page or bottom of a table preceded by a superscript is formatted using XBRL footnote links. ²⁴		<ul style="list-style-type: none"> Text immediately following each superscript footnote number on the face of the financial statements or in tables is formatted using a footnote link 		
B	The XBRL files contain only facts or presentation or calculation relationships that are included in the source information and other required or permitted information (such as DEI ²⁵ required by the SEC) and contain only unused elements and linkbase information that are used intermittently unless otherwise prohibited. ²⁶	C2	Compare the tagged facts in the XBRL files to the source information and identify any tagged facts that are not included in the source information other than other required (for example, DEI) or permitted information (for example, definitions for extension elements).	C2	All tagged facts that were included in the XBRL files were in the source information or otherwise permitted [except as follows: <i>describe elements and relationships</i>].

(continued)

²⁴ The EFM requires this only for the face of the financial statements.

²⁵ DEI includes information that may be outside of the financial statements such as the number of outstanding shares of a company's stock that is in the hands of public investors, as opposed to company officers, directors, or controlling-interest investors (public float) and CIK.

²⁶ The entity may carry forward unused elements or presentation, definition, or calculation relationships in the taxonomy that are used intermittently in the instance document (for example, taxonomies may reflect elements or relationships used in instance documents for annual financial statements [Form 10-K] but not used in the instance documents for quarterly financial statements [Form 10-Q]). Used elements or relationships refer to those used in the instance document.

	Principles and Criteria ¹⁵		Procedure		Finding
Mapping of the source information—The elements²⁷ selected are consistent with the meaning of the corresponding business reporting concepts in the source information in accordance with the SEC’s requirements.					
C	Elements used in the XBRL files, considering their attributes; ²⁸ definitions (for example, documentation labels in the label linkbase); and references are consistent with the corresponding business reporting concepts in the underlying source information.	M1	For each element used in the XBRL files, compare the following aspects of the element to the nature of the business reporting concept in the source information: <ul style="list-style-type: none"> • Abstract (that is, true, false) • Data type (for example, block text, monetary value, or other numeric value) • Period type (that is, instant, duration) • Other definitional aspects (that is, documentation labels and standard labels in the label linkbase, and references) 	M1	All such aspects of the elements used in the XBRL files reflect the nature of the business reporting concepts in the [<i>identify: source information</i>] [except for the following: <i>list elements and describe differences</i>].
C (1)	Headings in the source information are represented as abstract elements.		<i>Procedures C1 and M1, listed previously, address this criterion.</i>		<i>See findings under C1 and M1, listed previously.</i>

²⁷ Elements include line items and combinations of line items, domain members, and axes.

²⁸ The “basic element attributes” include (a) abstract, (b) data type (that is, whether the content is expected to conform to a certain type of content, such as block text, a monetary value, or other numeric value), (c) period type (that is, whether it is a point in time or a period of time), and (d) balance type (that is, whether it is normally a debit or a credit). The balance attribute is currently not a primary consideration in selecting elements in the SEC program.

	Principles and Criteria ¹⁵		Procedure		Finding
D	The most specific elements or dimensional combination of elements across the entire taxonomy whose attributes; definitions (for example, documentation labels in the label linkbase); and references are consistent with the corresponding business reporting concepts have been used.	M2	Search the taxonomy for any elements and any combination of elements for which element aspects (that is, documentation labels and standard labels in the label linkbase, and references) that reflect more specifically ²⁹ the corresponding business reporting concept without violating the criteria for element selection (aspects of elements as listed previously in procedure M1).	M2	No elements from the [<i>specify taxonomy</i>] ³⁰ for which definitions and standard labels in the label linkbase, and references may more specifically reflect the corresponding business reporting concepts in the [<i>identify: source information</i>] were noted. Or The following elements from the [<i>specify taxonomy</i>] for which definitions and standard labels in the label linkbase, and references more specifically reflect the corresponding business reporting concepts in the [<i>identify: source information and list the elements and the business reporting concepts</i>].

(continued)

²⁹ This may include identifying more detailed elements. For example, in the case of a concept on the financial statements for short-term investments available for sale, the entity used the short-term investments element in the XBRL files; however, the practitioner may identify short-term investments available for sale as a more specific element. There may be some situations that require the exercise of a level of judgment that may not be appropriate for an agreed-upon procedure engagement. In such cases, the practitioner should not make the judgment but should lay out the facts for the specified parties.

³⁰ This procedure may be performed against the standard taxonomy (for example, U.S. GAAP Taxonomy as documented in the EFM) or against the extension taxonomy of the instance document (incorporating extension elements).

	Principles and Criteria¹⁵		Procedure		Finding
D (1)	Certain elements required for use by the SEC (for example, DEI elements or elements for reporting consolidating entities) have been used if applicable.	M3	From the list of required elements per the SEC's EFM (sections 6.5.20, 6.5.21, and 6.6.3 through 6.6.10) pertaining to <ul style="list-style-type: none"> • consolidations and legal entities, • stock classes, and • document and entity-related information trace the required elements for business reporting concepts included in the source information to inclusion in the XBRL files.	M3	Required elements for business reporting concepts pertaining to consolidations and legal entities, stock classes, and document and entity-related information included in the source information were included in the XBRL files [except for the following elements: <i>list elements not included</i>].
E	Use of selected elements is permitted (for example, the selected element is not deprecated)	M4	Search the XBRL files to identify the elements ³¹ in the XBRL files that have a deprecated label in the standard taxonomy.	M4	The XBRL files do not contain any elements that have deprecated labels in the standard taxonomy [except the following elements used in the XBRL files: <i>list elements</i>].
F	The same business reporting concepts appearing multiple times in the source information are formatted once using the same elements or combination of elements throughout the	M5	For business reporting concepts appearing more than once in the source information (including those concepts with values reported for more than one period), search the XBRL files for use	M5	No items were noted in which a different element was used for the same business reporting concept appearing more than once or for different periods [except as follows: <i>describe, for</i>

³¹ The procedure to be performed addresses the situation of deprecated elements; however, there may be other conditions where elements are not permitted. Procedures to address other examples are not included in this SOP because they may be automatically tested with software.

	Principles and Criteria¹⁵		Procedure		Finding
	XBRL files, when appropriate ³²		of more than one element for the same business reporting concept except when alternative line item and domain member combinations are prescribed by related guidance.		<i>example, cash appearing on the balance sheet was tagged with a different element (or combination of elements) than cash appearing on the cash flow statement].</i>
G	The same elements are used consistently to report the same business reporting concepts, including for each period for which such concepts appear in the underlying source information. ³³		<i>Procedure M5, listed previously, addresses this criterion.</i>		<i>See findings in M5, listed previously.</i>
H	Extension elements are created only when both of the following conditions are met: no suitable elements exist in the selected taxonomy, and extensions are permitted in accordance with the SEC's rules.		<i>Procedures M1, M2, and M3, listed previously, address this criterion.</i>		<i>See findings from M1, M2, and M3, listed previously.</i>

(continued)

³² Exceptions exist when business reporting concepts will be formatted using different line item and domain member combinations, or when the related guidance requires different elements to be used based on the level of granularity of the source data being formatted (for example, in situations where concepts must use both dimensional and nondimensional approaches, such as Treasury stock presented on the balance sheet without dimensions and then presented on the statement of stockholders' equity with dimensions). The appropriate use of duplicate elements should be considered, and redundantly formatted facts should be eliminated.

³³ Although the source information may contain different values (for example, positive, negative, or zero) in one period as compared with another (for example, net income [loss]) or represent an ending balance in one period and the beginning balance in the next, the same element should be used in all periods presented. Notwithstanding, there may be certain situations in which the taxonomy may include different elements to reflect positive and negative values (for example, certain elements relating to tax assets and tax liabilities in the U.S. GAAP Taxonomy).

	Principles and Criteria¹⁵		Procedure		Finding
I	Definitions, if provided (for example, documentation labels in the label linkbase) for extension elements used in the instance document, are consistent with the source information.		<i>Procedure M1, listed previously, addresses this criterion.</i>		<i>See findings from M1, listed previously.</i>
Consistency of the XBRL Files With the Source Information—All formatted information³⁴ in the XBRL files is consistent with the source information and formatted in accordance with the SEC's requirements.					
J	Formatted amounts in the XBRL files reflect the entire numbers of the corresponding business reporting concepts (that is, the XBRL amounts are not scaled ³⁵).	CO1	For each amount tagged in the XBRL files, compare such information with the amount of the corresponding business reporting concept in the source information to identify any amount that does not reflect the entire number.	CO1	All amounts in the XBRL files reflect the entire number of the corresponding business reporting concept [except for the following elements: <i>list elements and describe differences</i>].
K	Formatted amounts have the appropriate signs based on the nature of the values in the source information, balance attributes, and definitions (documentation labels in the label	CO2	For negative amounts in the instance document, that have been tagged with elements whose definitions or standard labels do not include terminology identified in the table in the SEC's	CO2	The signs for negative amounts for elements with definitions or standard labels that do not include terminology from the SEC table are consistent with the nature of the value of the

³⁴ Formatted information includes data (for example, amounts, text, dates); contextual information (for example, monetary units); and relationships (for example, presentation order and calculations).

³⁵ Amounts in financial statements are often presented in various formats (for example, rounded to millions) and may represent a different scale. However, amounts formatted in XBRL must be entered without such presentational formatting. For example, 23.5 million would be entered as 23500000, 14.3 percent would be entered as .143.

	Principles and Criteria ¹⁵		Procedure		Finding
	linkbase) of the elements.		Staff Observations (SEC table) ³⁶ (for example, increase/decrease, gain/loss, provided by/used in) within the definition (documentation label in the label linkbase) or standard label, compare the sign ³⁷ to the nature of the value of the corresponding business reporting concepts in the source information.		corresponding business reporting concepts in the [identify: source information] [except for the following: list elements].
		CO3	For elements for which the definition (documentation label in the label linkbase) or standard label includes terminology identified in the SEC table, compare the sign for each amount in the XBRL files to the nature of the value of the corresponding business reporting concept in the source information.	CO3	The signs for the formatted amounts in the XBRL files of elements for which the definitions or standard labels includes terminology in the SEC table are consistent with the nature of the value of the corresponding business reporting concepts in the [identify: source information] [except for the following: list elements and describe differences in signs].

(continued)

³⁶ Under the heading “Negative Values” in the SEC’s *Staff Observations from the Review of Interactive Data Financial Statements (from December 13, 2011)* is a table in which the SEC staff provides examples of language included in definitions or standard labels of elements that can be negative. This is not necessarily a complete list, therefore, the practitioner and preparer may agree to extend this procedure beyond the elements that have definitions or labels that contain specified language included in the table.

³⁷ Identified negative amounts may not be an error; however, they likely require further assessment by management.

	Principles and Criteria¹⁵		Procedure		Finding
L	All text, dates, and uniform resource identifiers in the XBRL files are consistent with the underlying source information.	CO4	For text, dates, and uniform resource identifiers (URIs) tagged in the XBRL files, compare such information with the corresponding concepts in the source information.	CO4	No differences for text, dates, and URIs in the XBRL files as compared with [<i>identify source information</i>] were noted [except for the following elements: <i>list elements and describe differences</i>].
L (1)	Nil attribute ³⁸ is used only to convey business reporting concepts reported that have no amounts associated but are not zero (for example, commitments and contingencies).	CO5	For each business reporting concept in the source information that represents no value (associated with it) inspect whether the nil attribute for the corresponding element is set to true in the XBRL files.	CO5	Nil attributes were set to true in the XBRL files for each concept in the [<i>identify source information</i>] for which no value is associated [except for the following elements: <i>list elements</i>].
		CO6	For each element in the instance document for which the nil attribute is set to true, identify those elements that represent business reporting concepts other than commitments and contingencies and preferred stock. ³⁹	CO6	For none of the elements in the instance document other than commitments and contingencies and preferred stock was the nil attribute set to true. Or Elements in the instance document other than commitments and contingencies and preferred stock for which the nil

³⁸ A nil attribute is used only for elements in the instance document and presentation to convey business reporting concepts that have no amounts, text, dates, or uniform resource identifiers in the source information.

³⁹ Management may specify other appropriate concepts for which the nil attribute would be set to true and modify this procedure to include such other appropriate concepts.

	Principles and Criteria ¹⁵		Procedure		Finding
					attribute is set to true include <i>[list elements]</i> .
M	Extension elements included in the instance document of the XBRL files for monetary amounts include debit or credit balance attributes or documentation labels with an indication of the meaning of positive or negative values, when applicable, that are consistent with the nature of the business reporting concepts in the underlying source information.	CO7	<p>For each line item in the instance document that has an extension element with a monetary type</p> <ul style="list-style-type: none"> • and a balance (debit / credit) attribute, compare the balance attribute to the nature of the business reporting concept in the source information. • and not a balance (debit / credit) attribute, inspect the elements for a definition (that is, documentation label) that includes an indication of the meaning of a positive or negative value (for example, “A positive adjustment value indicates a net increase in accounts receivable”) and compare such definition to the nature of the business reporting concept in the source information. 	CO7	No monetary type line item extension elements were noted that contain a balance attribute (or definition, as applicable) that is inconsistent with the nature of the business reporting concepts in the <i>[identify source information]</i> [except for the following elements: <i>list elements and describe differences from the source information</i>].

(continued)

	Principles and Criteria¹⁵		Procedure		Finding
M (1)	Extension elements included in the XBRL files for monetary amounts of balance sheet or income statement concepts include balance attributes (debit or credit) that are consistent with the nature of the underlying source information.	CO8	Identify the monetary type extension elements included in the XBRL files for monetary amounts presented in the balance sheet or income statement that do not include balance attributes. <i>[Procedure CO7 (first bullet), in combination with this procedure addresses this criterion.]</i>	CO8	No such items were noted for monetary amounts presented on the balance sheet and income statement that do not include balance attributes [except the following elements: <i>list extension elements and describe differences</i>]. <i>Also see findings for CO7.</i>
N	The context periods ⁴⁰ are consistent with the source information (for example, second calendar quarter 2012 is expressed as “2012-04-01 to 2012-06-30”).	CO9	For each business reporting concept that appears on the face of the financial statements or in tables in the source information, compare the reporting period (implied and explicitly stated) to the corresponding context period in the XBRL files.	CO9	No differences were noted in the XBRL files relating to context periods for concepts appearing on the face of the financial statements or in tables in the <i>[identify source information]</i> [except for the following elements: <i>list elements and describe differences</i>].
		CO10	For business reporting concepts within narrative text (for example, in the notes), compare the “as of” or period dates in the source information to the dates ⁴¹ in the	CO10	No differences were noted in the XBRL files relating to context periods for business reporting concepts included with narrative text in the

⁴⁰ Context periods for a roll-forward format use the same “instant” context for the beginning balance as for the ending balance of the previous period.

⁴¹ Procedures may be tailored, as appropriate, for application to periods included in the source information in addition to those listed.

	Principles and Criteria ¹⁵	Procedure	Finding
		<p>context period of the corresponding elements in the XBRL files.</p> <ul style="list-style-type: none"> • For amounts with a period type of instant <ul style="list-style-type: none"> — if a date is specified in the notes (for example, “as of” or “on”), ascertain whether the date for the context period in the XBRL files is the date specified in the source information. — if the month is specified (for example, March), ascertain whether the date for the context period in the XBRL files is the last day of that month. — if the quarter is specified (for example, in the second quarter), ascertain whether the date for the context period in the XBRL files is the end date for that quarter. 	<p><i>[identify source information]</i> <i>[except the following context periods: list elements and describe differences]</i></p>

(continued)

	Principles and Criteria ¹⁵		Procedure		Finding
			<ul style="list-style-type: none"> • For amounts that have a period type of duration <ul style="list-style-type: none"> — if the month is specified (for example, March), ascertain whether the date for the context period in the XBRL files is first and last day of the month. — if the quarter is specified (for example, in the second quarter), ascertain whether the date for the context period in the XBRL files is the first and last day of the quarter. 		
N (1)	The required DEI elements use the Required Context. ⁴²	CO11	Compare the contexts used in the XBRL files for DEI to those required by the SEC's EFM (sections 6.5.20 and 6.5.21) pertaining to DEI.	CO11	The context in the XBRL files used for DEI elements agreed with the context required by sections 6.5.20 and 6.5.21 of the SEC's EFM [except the following elements for which the context did not use the Required Context: <i>list elements</i>].

⁴² The *Required Context* is defined in the EFM as the context when the dates cover the current reporting period and no segment or scenario information (that is, dimensional information) is included.

	Principles and Criteria¹⁵		Procedure		Finding
O	The decimal attribute values are consistent with the degree of accuracy of the amounts as represented in source information (for example, 23.5 million is rounded to the hundred thousandths).	CO12	For each amount in the XBRL files compare the value of the decimal attribute (for example, “-6”) to the corresponding degree of accuracy represented in the source information.	CO12	No differences were noted between the decimal attribute values in the XBRL files and the degree of accuracy represented in the [identify source information] [except for the following decimal attributes in the XBRL files: list elements and describe differences].
P	The units defined in the instance document are consistent with the measurements represented in the source information (for example, U.S. dollars are defined as “iso4217:USD”, as properly defined in XBRL Specification 2.1).	CO13	For each amount included in the instance document, compare the units (including custom units) to the standard list of units specified by the SEC (for example, in the International Organization for Standardization (ISO) currency codes, or the XBRL International Unit Registry).	CO13	No differences were noted in the units used in the instance document as compared to the standard list of units specified by the SEC [except for the following units in the XBRL files: list elements and describe any differences].
		CO14	For each amount included in the instance document of the XBRL files, compare the units (including custom units) to the nature of the corresponding unit in the source information.	CO14	No differences were noted in the units used in the instance document of the XBRL files as compared to the source information [except for the following units in the instance document of the XBRL files: list elements and describe any differences].

(continued)

	Principles and Criteria¹⁵		Procedure		Finding
Q	The entity identifier in the instance document properly represents the reporting entity [for example, central index key (CIK)] in accordance with the SEC requirements.	CO15	Compare the identifier(s) used in the instance document to the registrant's unique CIK code.	CO15	The CIK code used in the XBRL files agrees with the registrant's CIK code. Or The following [identify CIK code(s)] were used in the XBRL files that did not agree with the registrant's CIK code.
Q (1)	Only one CIK code is used throughout the XBRL files.	CO16	Search the contexts for the use of more than one CIK code in the XBRL files.	CO16	Only one CIK code was used in the XBRL files. Or The following [identify CIK codes] were used in the XBRL files.
R	The format and layout of the text block information are consistent ⁴³ with the format and layout of the content in the source information.	CO17	Compare the format and layout of the text block information in the XBRL files to the form and layout in the source information (for example, content, indentations, italics, bold, color, order).	CO17	No differences were noted in the format and layout of text block information in the XBRL files as compared to the [identify source information] [except for the following elements: <i>list elements and describe differences</i>].
S	The order and hierarchy (that is, arrangement of appropriate abstracts and line items) reflected in the presentation linkbase are	CO18	Compare the order and hierarchy of the elements in the presentation linkbase with the source information.	CO18	No differences were noted in the order and hierarchy of the elements in the presentation linkbase as compared to the

⁴³ The EFM requires the same format and layout in text blocks as in the source information.

	Principles and Criteria¹⁵		Procedure		Finding
	consistent ⁴⁴ with the SEC's requirements.				[<i>identify source information</i>] [except for the following: <i>list elements and describe differences</i>].
T	Labels ⁴⁵ are consistent ⁴⁶ with the captions or meanings in the source information, as applicable.	CO19	Compare labels for line item elements (with no dimensions) reflecting business reporting concepts on the face of the financial statements or in tables in the source information to the captions in the source information Compare labels for all other tagged facts with the corresponding business reporting concept in the source information.	CO19	No differences other than those permitted ⁴⁷ were noted with the label information of elements appearing in the rendering as compared to the [<i>identify source information</i>] [except for the following: <i>list elements and describe differences</i>].
		CO20	Compare standard "en-US" labels used for each extension element in the XBRL files to the labels of other elements in the XBRL files and the standard taxonomy to ascertain whether duplicate standard English labels "en-US" are used.	CO20	No duplicate standard "en-US" labels were noted [except for the following extension elements: <i>list elements with duplicate standard en-US labels</i>].

(continued)

⁴⁴ When using dimensions to format information, it may not be possible to present this information in the same order and hierarchy (for example, transposed or intermingled axes for line items and domain members may occur).

⁴⁵ Labels in the label linkbase under the SEC rules must be the same as the captions in the source information, including parenthetical information.

⁴⁶ *Consistent* means the same as the printed captions in the source information, when required, or within the scope of variances otherwise permitted.

⁴⁷ EFM 6.11.3 requires additional information be included in the label for certain elements within a presentation group to distinguish the units in those elements where the majority of the elements within the group use a different unit.

	Principles and Criteria¹⁵		Procedure		Finding
T (1)	The appropriate label roles (in the label linkbase) are specified in presentation groupings and are consistent with the source information, as applicable. (For example, negated labels are used to reverse the sign of numeric values for presentation purposes.)	CO21	<p>Compare the preferred label roles in the XBRL files with the presentation of the corresponding business reporting concept in the source information and the following requirements:</p> <ul style="list-style-type: none"> • For period type of “instant”: <ul style="list-style-type: none"> — A Period Start label role was used when concepts were presented as a beginning of a roll forward (for example, cash balances) — A Period End label role was used when concepts were presented as an ending of a roll forward (for example, cash balances) • Total label role must be used when representing concepts presented as a summation of other line items • Negated label roles were used when necessary to reverse the sign of the numeric value for presentation purposes to correspond to the business reporting concept 	CO21	No differences were noted for the preferred label roles as compared to the presentation of the corresponding business reporting concept in the source information and the label requirements [except for the following: <i>list elements and labels and describe differences</i>].

	Principles and Criteria ¹⁵		Procedure		Finding
			as presented in the source information.		
U	Calculations reflected in the source information are included in the calculation linkbase in accordance with the SEC's requirements to the extent possible within the technical limitations ⁴⁸ of XBRL.	CO22	For those subtotals/totals that have two or more line items in the source information with amounts in the same context and within the dates represented by the period of the Required Context ⁴⁹ (no dimensional information), compare such relationships with the corresponding calculation relationship in the XBRL files.	CO22	No differences in the calculation relationships were noted in the XBRL files as compared to the source information [except for the following business reporting concepts: <i>list business reporting concepts and describe differences</i>].
Structure of the XBRL files—XBRL files are structured⁵⁰ in accordance with the following listed criteria.					
V	Taxonomies, including versions, referenced in the XBRL files are permitted by the SEC's requirements.	S1	Compare the standard taxonomy used in the XBRL files to the list of permitted taxonomies at www.sec.gov/info/edgar/edgartaxonomies.shtml .	S1	We noted that the standard taxonomy(ies) [<i>identify taxonomy(ies)</i>] used in the XBRL files is (are) permitted according to the SEC website. Or We noted that the standard taxonomy(ies) [<i>identify taxonomy(ies)</i>]

(continued)

⁴⁸ Due to current limitations of XBRL, calculations cannot be performed across different contexts; accordingly, it is currently not possible to include such calculations in the XBRL files.

⁴⁹ See definition of Required Context in footnote 42. Although not required, additional calculations outside of the required context are permitted.

⁵⁰ It is beyond the scope of these principles and criteria to include all applicable rules, regulations and technical requirements related to the intended purpose of the XBRL submissions. Notwithstanding, preparers are responsible for identification of and compliance with all of the SEC's requirements and a preparer may choose to request that a practitioner perform procedures with respect to such requirements.

	Principles and Criteria¹⁵		Procedure		Finding
					used in the XBRL files is (are) not permitted according to the SEC website.
W	Presentation groupings are consistent with the titles and order of the components of the underlying source information and in accordance with the SEC's requirements.		<i>Procedures S2 and S3, listed subsequently, address this criterion</i>		<i>See findings under S2 and S3.</i>
W (1)	Separate note presentations groupings (base sets) are created for each required level (I, II, III, and IV) and ordered in accordance with the SEC's requirements	S2	Compare the existence and order of the base sets in the presentation linkbase to the financial statement and note whether they appear in order of the source information and the ordering requirements as described in the SEC's EFM (section 6.7.12) as follows: <ol style="list-style-type: none"> 1. Each financial statement followed by a base set for the parentheticals within the statement [<i>in order of statements</i>] 2. Notes (text block) [order of notes] 3. Schedules (text block) 4. Significant accounting policies (policies) 	S2	The order of the presentation base sets in the presentation linkbase agreed to the [<i>identify source information</i>] and the EFM requirements [except for the following base sets: <i>list base sets and describe differences</i>].

	Principles and Criteria ¹⁵		Procedure		Finding
			5. Notes (tables) 6. Notes (detail) 7. Schedules (detail)		
W (2)	Titles of presentation groupings are in accordance with the SEC's formatting requirements.	S3	Compare base set titles (role type definition link) in the presentation linkbase to the SEC formatting requirements ⁵¹ for the following: 1. Formatting pattern: {Sort-Code} - {Type} - {Title} (for example: 01 - Statement - Statement of Income) 2. Titles of statements and notes in the source information	S3	No differences were noted with respect to the base set titles [except the following: <i>list base sets and describe how they did not conform to or agree with the SEC formatting requirements</i>].
X	The entity scheme (for example, www.sec.gov/CIK) for each context throughout the instance document is in accordance with the SEC's requirements.	S4	For each context, compare the entity scheme to http://www.sec.gov/CIK .	S4	We noted that the entity scheme http://www.sec.gov/CIK was used in all contexts [except for the following: <i>list contexts and describe differences</i>].
Y	New table structures are only created when no suitable table structure exists in the applicable standard	S5	Compare the table structures in the definition linkbase (that is, table, axis, domain member, line item) to the predefined table	S5	No new table structures were created when a suitable table structure existed [except for the following: <i>list</i>

(continued)

⁵¹ This is not a complete list of all SEC formatting requirements. Refer to EFM for requirements.

	Principles and Criteria¹⁵		Procedure		Finding
	taxonomy's definition linkbase.		structures ⁵² in the standard taxonomy's definition linkbase.	S5	<i>contexts and describe differences</i>]. No differences were noted in table structures as compared to the predefined table structures in the <i>[specify taxonomies]</i> [except for the following tables: <i>list tables and describe differences</i>].
Z	The names of extension elements contain no prohibited information.		<i>Procedure S6, in the following row, addresses this criterion.</i>		<i>See findings under S6.</i>
Z (1)	The names of extension elements (excluding domain members) do not include company- or period-specific information.	S6	Search the element name of each extension element (excluding domain members) for company or period specific information within the element name.	S6	No such elements were noted that have company or period specific information within the element name [except for the following elements: <i>list elements and describe differences</i>].
AA	The XBRL files include all files required by the SEC (for example, an instance, schemas and linkbases).	S7	Inspect the XBRL files to ascertain whether there is only one of each of the following files ⁵³ included: <ul style="list-style-type: none"> • Instance document • Presentation linkbase 	S7	Only one of each of the required files was included. Or The following files were missing: <i>[list files]</i> Or

⁵² Dimensional structures in the definition linkbase of the standard taxonomy contain ordered combinations of tables, axes, line items, and domain members. Definition linkbases for extension taxonomies should include dimensional structures from the standard taxonomy's definition linkbase when they exist.

⁵³ Although the EFM permits multiple linkbases and schema files, in most cases there will only be one included with the submission.

	Principles and Criteria ¹⁵		Procedure		Finding
			<ul style="list-style-type: none"> • Label linkbase • Calculation linkbase • Schema • Definition linkbase 		Multiple schema files were included.
BB	The language of the information in the XBRL files uses a permitted (or required) language (for example, English).		<i>Procedures S8 and S9, in the following rows, address this criterion.</i>		<i>See findings under S8 and S9.</i>
BB (1)	Elements must include fact values and labels expressed in U.S. English.	S8	For each fact in the source information in a language other than U.S. English, ascertain whether the corresponding formatted information in the XBRL files has values and labels expressed in U.S. English.	S8	No items were noted in which business reporting concepts in the source information in a language other than U.S. English were not formatted in the XBRL files with values and labels expressed in U.S. English [except for the following concepts: <i>list concepts and describe differences</i>].
		S9	Search extension elements in the XBRL files for any that do not have a standard English “en-US” label.	S9	No elements were noted in the XBRL files that did not have a standard “en-US” label [except for the following elements: <i>list elements and describe differences</i>].

Appendix E — Illustrative Agreed-Upon Procedures Report

The following is an illustrative practitioner's report for an agreed-upon procedures engagement described in this SOP (agreed-upon procedures that address the completeness, mapping, consistency, or structure of an entity's XBRL-formatted financial statements [and related notes] and required schedules submitted as an exhibit to the SEC). It is illustrative only and is not intended to be applicable to, or comprehensive for, all engagements. A practitioner should tailor the report to the specific facts and circumstances of each engagement.

Independent Accountant's Report on Applying Agreed-Upon Procedures

To Management and the Audit Committee of XYZ Company:

We have performed the procedures enumerated in Attachment A, which were agreed to by the audit committee and management of XYZ Company, solely to assist you in evaluating the completeness of the XBRL files, mapping of the source information to the XBRL files, consistency of the XBRL files with the source information, and structure of XYZ Company's XBRL files related to the [identify source information and period]⁵⁴ (for example, the Company's [Quarterly or Annual] Report on Form [10-K or 10-Q] for the period ended [identify date] to be submitted to the U.S. Securities Exchange Commission [SEC]). XYZ Company's management is responsible for its XBRL files.

This agreed-upon procedures engagement was performed in accordance with attestation standards established by the American Institute of Certified Public Accountants. The sufficiency of these procedures is solely the responsibility of those parties specified in this report. Consequently, we make no representation regarding the sufficiency of the procedures described in Attachment A either for the purpose for which this report has been requested or for any other purpose.

[Additional explanatory language may be added, such as the following].⁵⁵

The procedures performed do not address all of the SEC's requirements for XBRL submissions.

The XBRL files and source information may be updated prior to submitting to the SEC, therefore, the findings in this report may not correspond to the final XBRL files submitted.]

The findings relating to the procedures are included in Attachment A.

We were not engaged to and did not conduct an examination, the objective of which would be the expression of an opinion on the XBRL files. Accordingly, we do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of the audit committee and management of XYZ Company and is not intended to be and should not be used by anyone other than these specified parties.

[Signature]

[Date]

[Include as an attachment an enumeration of the procedures and findings.]

⁵⁴ It is common that these engagements are performed on DRAFT XBRL files and source information (prior to the submission to the SEC). The agreed-upon procedures report should indicate the specific version of the source information and files used.

⁵⁵ Refer to paragraph .30 of this SOP for additional examples.

Appendix F – Glossary

abstract. An attribute of an element to primarily indicate that the element is used only in a hierarchy to group related elements together or to provide headings in a rendering. An abstract element cannot be used to tag data in an instance document.

attribute. A property of an element that indicates the kind of data that can be tagged to the concept, such as its data type, period type, and whether the element is abstract.

axis (pl. axes). An instance document contains facts; an axis (and domain member) differentiates facts, and each axis represents a way the facts may be classified. For example, revenue for a period might be reported along a business unit axis, country axis, product axis, and so forth.

balance type. An attribute of a monetary item type designated as debit or credit; a designation, should be the natural or most expected balance of the element—credit or debit—and, thus, indicates how calculation relationships involving the element may be assigned a weight attribute (–1 or 1), as well as how numbers should be entered into the instance document.

calculation linkbase. A taxonomy file that defines weighted summation, aggregating relationships between numeric items expressed as parent-child hierarchies.

caption. Explanatory text provided to describe facts presented in a report.

context. Entity- and report-specific information (reporting period, segment information, and so forth) required by eXtensible Business Reporting Language (XBRL) that allows tagged data to be understood in relation to other information.

decimal. Fact attribute used to express the number of decimal places to which numbers have been rounded.

deprecated element. An element within a taxonomy that has been declared not to be used in instance documents for various reasons (for example, superseded, redundant, or incorrect).

domain. An element that represents an entire set of other elements that are used to further describe line items; the domain and its members are used to classify facts along the axis of a table. For example, “Arkansas” could be a domain member in the domain “States” and would be used to classify elements, such as revenues and assets, in Arkansas as distinct from other states. When a fact does not have any domain member specified, that means it applies to the entire domain.

domain member. An element representing one of the classifications within a domain. A domain member categorizes the information to which it is applied.

element. An XBRL component, such as a line item, domain member, and dimension (a dimension is called an axis in the U.S. GAAP Taxonomy). The representation of a business reporting concept, including line items in the face of the financial statements, important narrative disclosures, and rows and columns in tables are all examples of elements in a taxonomy. The terms *concept*, *element*, and *tag* (noun) are often used interchangeably in XBRL.

- element definition.** A description of a reporting concept, most commonly a documentation label in the label linkbase.
- extension element.** An element that is created in an extension taxonomy to define business reporting concepts that have not previously been defined in a standard taxonomy.
- extension taxonomy.** A taxonomy in which users can add additional entity-specific elements and indicate additional relationships to a standard taxonomy in order to define business reporting concepts or element relationships and aspects (presentation, calculation, labels, and so forth) to reflect their own unique reporting characteristics.
- fact.** The occurrence of an amount or other information tagged in an instance document by a taxonomy element or combination of elements.
- formatted information.** Information represented using XBRL and included in one or more electronic files. Commonly referred to as tagged data or structured data.
- hierarchy.** An organizational treelike structure to present relationships between elements (such as order and indentation of elements in linkbases).
- instance or instance document.** A file that contains business reporting information and represents a collection of business facts and report-specific information using elements from one or more XBRL taxonomies.
- label.** Name or description for an element for presentation purposes; under the SEC mandate, for example, each element has, at a minimum, a standard label in U.S. English (such as, cash and cash equivalents) and is unique across the taxonomy.
- label type.** A distinguishing name for each distinct label indicating the circumstances in which it should be used; each is given a separate defining role to use in different presentation situations (for example, beginning, ending, and so forth).
- line item.** Elements that conventionally appear on the vertical axis (rows) of a table or columnar presentation. Line items represent the primary business reporting concepts of tagged data in the instance document.
- linkbase.** A taxonomy file that contains additional defining information and relationships for taxonomy elements. The primary taxonomy linkbases in XBRL are calculation, definition, label, presentation, and reference.
- mapping.** Process of identifying the elements that correspond to lines, columns, and tables in the source information to elements in the taxonomy.
- name.** An attribute that uniquely identifies an element in a schema.
- namespace.** Every element is associated with a universal resource identifier that may identify the organization that maintains the taxonomy. In the 2012 US GAAP Financial Reporting Taxonomy, namespaces start with <http://xbrl.fasb.org/us-gaap/2012>.
- negated label.** A negated label is a special label type that can be referenced in the presentation linkbase. A negated label role is a convention used to indicate that the sign for a tagged amount should be reversed when presented in a rendering.
- nil.** An attribute of an element that, when marked as “true” in an instance document, reflects a concept tagged without a value.
- period type.** An attribute of an element that reflects whether it is reported as a point in time (an instant) or period of time (duration).

- presentation linkbase.** A taxonomy file that defines presentation order of elements in the taxonomy. The presentation linkbase also suggests which label type should be used at each point of presentation.
- render or rendering.** To process an instance document into a layout that facilitates readability and understanding of its contents.
- scaling.** A process that automatically adjusts numeric data to present a specific format, thus saving time of entering zeros during the entry or creation process. The XBRL specification does not support the scaling of numeric values (all values must be reported in their entirety); however, it is a feature commonly found in instance document creation software.
- segment.** Tag that allows additional information to be included in the context of an instance document; this information captures segment information, such as an entity's business units, type of debt, and type of other income.
- sign value.** Denotes whether a numeric fact in an instance has an implied positive (no sign) or a negative (–) value.
- source information.** The information (which may be in electronic format) that is to be formatted in XBRL files (for example, financial statements, including the notes, and required schedules; sustainability reports; or the “Risk/Return Summary” section of the mutual fund prospectuses).
- table.** Generally, a presentation of rows and columns also known as a hypercube. In the presentation linkbase, an element that organizes a set of axes and set of line items to indicate that each fact of one of the line items could be further characterized along one or more of its axes. For example, if a line item is “Sales,” and an axis is “Scenario,” this means that an instance document could have facts that are either for an unspecified scenario or a specific scenario, such as “forecast.”
- tag (noun).** The terms *element* and *tag* are often used interchangeably in XBRL. The tag is the structure that brings together the content being tagged with the associated element from the taxonomy and additional attributes to related contexts, units, and other information.
- tag (verb).** To apply tags to business reporting concepts.
- taxonomy(ies).** Electronic “dictionary” of elements used to report business data, their definitions, and interrelationships.
- type or data type.** Attribute that defines type (for example, monetary, string, share, decimal) of data that an element represents.
- unit of measure.** The units in which numeric items have been measured, such as U.S. dollars (iso4217:USD); shares (xbri:shares); euros (iso4217:EUR); or compound units, such as U.S. dollars per share.
- validation.** Process of checking that instance documents and taxonomies correctly meet the rules of the XBRL specification and certain requirements of the entity's reporting environment.
- XBRL files.** Electronic files that may include the instance document, taxonomy extension schema, label linkbase, calculation linkbase, presentation linkbase, and definition linkbase documents (or other linkbases)
- XBRL footnote link.** Additional information that is attached to an element used to tag information in superscript footnotes.

AICPA Online Professional Library

AICPA's Online Professional Library is a Web-based research tool which provides the technical knowledge that accounting and auditing professionals need. Choose from individual titles, bundled sets for certain industries, or collections containing a full array of titles. The Online Professional Library includes powerful tools and user-friendly functions to facilitate research and productivity, including:

- Robust Search
- Extensive linkages within and between titles
- User notes, saved search, and bookmarking capabilities
- Ability to open multiple documents and navigate between them
- Cross-reference tools
- Ability to download certain forms and checklists in MS Word or Excel

The *Premium A&A Research Collection* includes the following:

- AICPA Professional Standards
- AICPA Technical Practice Aids
- AICPA Audit & Accounting Manual
- PCAOB Standards & Related Rules
- U.S. GAAP Financial Statements: Best Practices in Presentation and Disclosure
- IFRS Financial Statements: Best Practices in Presentation and Disclosure
- All current AICPA Audit and Accounting Guides
- All current Audit Risk Alerts
- All current Checklists and Illustrative Financial Statements
